West Godavari Dt., Andhra Pradesh

Introduction:

The prime objective of this project is bolstering the current activities for technological upliftment of the club members and other students thereof directly or indirectly, alongside cultivating their interests and creativity with Ethical values. We would like to present our continuous endeavors in shaping the next generation engineers and paving a floral way into prestigious organizations.

In this highly competitive and fast-growing world, excellence in academics is just sufficient to prove oneself. Uniqueness in terms of sound technical knowledge, intra and inter-personal skills, teamwork, leadership qualities, professional ethics, time-management, project planning, multi-tasking etc., At the crossroad of these skills and academics, co-curricular activities are key to win the race.

To cater the technological needs of the students, our club “SPACE Club” was established on Engineers Day and has been constantly rendering service to the members as well as non-members with an intention to ignite the young minds, energize the interests and creative ideas and turn them into solutions for real-time problems. To accomplish this, we undertake various kinds of activities like

- Guest lectures and Seminars by Experts
- In-House Hands-on workshops
- Project Exhibitions
- Support for National and International level Tech Challenges by leading companies
- MoUs with renowned organizations
- Mini project competitions
- Guidance for Major projects
- Design and development of technological solutions for campus level problems or needs
- Developing Proof of Concept (POCs) as required
- Short talks by Alumni members
- Industry oriented training and many more.
