CO2	Illustrate the importance of the linking functional and visualization aspects in the preparation of the part drawings	K3
CO3	Apply limits and tolerances to assemblies and choose appropriate fits for given assemblies.	K3
CO4	Interpret the Machining and surface finish symbols on the component drawings.	K3
CO5	Develop the part or assembly drawings as per the conventions.	K3

INTRODUCTION: (AUTO CAD or any other drafting Software)
Review of graphic interface of the software. Review of basic sketching commands and navigational commands. Starting a new drawing sheet. Sheet sizes. Naming a drawing, Drawing units, grid and snap. Conversion of pictorial views into orthographic projections of simple machine parts (with and without section). Hidden line conventions. Precedence of lines

PART-A

SECTIONS OF SOLIDS: Sections of Pyramids, Prisms, Cubes, Tetrahedrons, Cones and Cylinders resting only on their bases (No problems on axis inclinations, spheres and hollow solids). True shape of sections. Conversion of pictorial views into orthographic projections of simple machine parts. Hidden line conventions. Precedence of lines. Conversion of pictorial views into orthographic projections of simple machine parts (with section planes indicated on the part).

THREAD FORMS: Thread terminology, sectional views of threads. ISO Metric (Internal & External), BSW (Internal & External) square and Acme. Sellers thread, American Standard thread.

FASTENERS: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut. Flanged nut, slotted nut, taper and split pin for locking, counter sunk head screw, grub screw, Allen screw.

KEYS: Parallel key, Taper key, Feather key, Gib-head key and Woodruff key.

JOINTS: Cotter joint (socket and spigot), knuckle joint (pin joint) for two rods. Couplings: Split Muff coupling, Protected type flanged coupling, pin (bush) type flexible coupling, and universal coupling (Hooks' Joint)

PART-B

Limits, Fits and Tolerances: Introduction, Fundamental tolerances, Deviations, Methods of placing limit dimensions, machining symbols, types of fits with symbols and applications, geometrical tolerances on drawings. Standards followed in industry.

Assembly Drawings (Any modeling software)

1. Plummer block (Pedestal Bearing)
2. Stuffing box
3. Propeller Blade
4. Spur Gear
5. Tailstock of lathe
6. Machine vice
7. Tool head of shaper

TEXT BOOKS:

1. Machine drawing _ K.L. Narayana, P. Kannaiah& K.Venkata reddy, 1st edition, Radiant, 2016
2. Tool Engineering & Design _ G.R. Nagpal/Khanna publishers, 1st edition, Khanna Publishers,2009
3. Machine Drawing with Auto CAD- Pohit and Ghosh, 1st edition, Pearso, 2017

REFERENCE BOOKS:

1. Machine Drawing by Nagpal,1st edition, khanna publishers, 2009
2. Machine drawing, Ajeet Singh, 2nd edition, TMH, 2016
3. Machine drawing with autocad, Pohit; Goutam, 1st edition, Pearson, 2017.

IV Semester

Semester	IV	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET07
Name of the Course	Kinematics of Machinery					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student willbe able to:	Knowledge Level
CO1	Explain the inversion of the four bar, slider crank and double slider chains.	K2
CO2	Analyze and perform the velocities and accelerations in mechanisms by graphical method.	K4
CO3	Explain the working of copying mechanism, straight line motion mechanisms, steering gears and Hooke's joint.	K2
CO4	Develop the cam profiles for given follower motions.	K3
CO5	Describe tooth profiles for gears, gear trains and compute the velocity ratio and torque in gear trains and calculate various parameters related to belts.	K3

UNIT – I

MECHANISMS : Introduction, terminology, definitions and assumptions, planar, spherical and spatial mechanisms, mobility, classification of mechanisms, kinematic inversion, inversions of four bar chain, slider crank chain and double slider chain, Grashoff's law, mechanical advantage.

UNIT – II

VELOCITY ANALYSIS : Introduction, Absolute and relative motions, Vectors, Addition and subtraction of vectors, Motion of a link, Four-link mechanism, Velocity diagrams, Angular velocity of links, Velocity of rubbing, Slider-crank mechanism, crank and slotted lever mechanism, Instantaneous center, Kennedy's theorem, Locating I-centers, Angular velocity ratio theorem.

ACCELERATION ANALYSIS: Introduction -Acceleration, four-link mechanism, Acceleration of intermediate and offset points, Slider-crank mechanism, Coriolis component, Crank and slotted lever mechanism using graphical method, Klein's Construction.

UNIT – III

LOWER PAIRS: Pantograph, Exact straight line mechanism condition, Peaucellier, Hart Scott-Russel mechanisms. Approximate straight line mechanisms, Grasshopper, Watt, Chebyshev, Robert mechanisms. Steering gears-condition for correct steering, Davis, Ackerman steering gears, Hooke's joint-velocity ratio, angular acceleration of driven shaft, double Hooke's joint.

UNIT – IV

CAMS: Types of cams and followers, types of follower motion, velocity and acceleration diagrams, profile of cams.

UNIT – V

GEARS: Classification of gears, spur gears- terminology, fundamental law of toothed gearing, involute and cycloidal profile, Path of contact, arc of contact, contact ratio, minimum number of teeth, interference and methods of avoiding interference, rubbing velocity.

GEAR TRAINS: Introduction, Types - Simple , compound and reverted gear trains , Epicyclic gear train.

BELT DRIVES: Belt and rope drives, open and crossed belt drives, velocity ratio, slip, material for belts and ropes, crowning of pulleys, ratio of friction tensions, power transmitted, centrifugal effect on belts, maximum power transmitted by a belt, initial tension.

TEXT BOOKS:

1. Theory of Machines/ Rattan SS, Tata McGraw Hill Education Publishers, 4th Edition 2015.
2. Theory of Machines / Beven Thomos / CBS publication, 3rd edition /2005

REFERENCE BOOKS:

1. Theory of Machines / R.K.Bansal/ Laxmi Publications 5th edition /2016
2. Mechanisms of Machines, V Ramamurthy, Narosa publishing House, Reprint ,2019
3. Theory of Machines by R S Khurmi, S Chand Publications, 1st Edition, 2011.
4. Theory of Machines and Mechanisms, Ballaney P, Khanna publications,1st Edition,2011.

Semester	IV	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET08
Name of the Course	ManufacturingScience with Artificial Intelligence					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student willbe able to:	Knowledge Level
CO1	Understandfundamentalsofcasting-patternsandits materials,GatingSystem	K2
CO2	Distinguishvariousweldingprocessesandselectasuitabl eprocessbasedontheapplicationand requirements, explain advanced welding techniques, testing methods	K2
CO3	ExplaintheknowledgeonHotworkingandCold WorkingProcess	K3
CO4	Describe various bulk forming processes, sheet metal formingand processingof plastics.	K2
CO5	Apply the concepts of Artificial intelligence in manufacturing processes.	K3

UNIT – I

CASTING-Stepsinvolvedinmakingacasting, types of sands–Advantageofcastinganditsapplications.
PATTERNSANDPATTERNMAKING–Typesofpatterns–Materialsusedforpatterns,patternallowancesandtheirconstruction, risers, Centrifugal, Die, Investment castings.
PRINCIPLESOFGATING – Gatingratioanddesignof Gatingsystems.
METHODSOFMELTING– Cruciblemeltingandcupolaoperation.
SOLIDIFICATIONOFCASTING–Concept–Solidificationofpuremetalandalloys.

UNIT – II

WELDING: Classification of welding process types of welds and welded joints andtheir characteristics, design of welded joints Gas welding, ARC welding, Forgewelding,resistancewelding,Thermitwelding, InertGaswelding-TIG&MIG,welding, Laserwelding,Soldering&Brazing. weldingdefects, destructivenon-destructivetestingofwelds.

UNIT – III

HOT&COLD WORKING: strain hardening, recovery, re-crystallization and graingrowth,ComparisonofpropertiesofColdandHotworkedparts.
ROLLINGFUNDAMENTALS–Theoryofrolling,typesofRollingmillsandproducts
EXTRUSION OF METALS: Basic extrusion process and its characteristics. Hotextrusionandcoldextrusion-Forwardextrusionandbackward extrusion–ImpactextrusionHydrostaticextrusion
DRAWING–WiredrawingandTubedrawing

UNIT – IV

BULK FORMING PROCESSES: Principles of forging – Tools and dies – Types Forging –Smithforging,DropForging–Rollforging–Forginghammers:Rotary forging – forgingdefects.

SHEETMETALFORMING:StretchForming,DeepDrawing,Coining,Spinning,Blank ingandPiercing–BendingandForming,Stamping dies,SpringBack effect.

PROCESSINGOFPLASTICS:
TypesofPlastics,Properties,applicationsandtheirProcessingmethods&Equipment(blow&injectionmoulding)

UNIT – V

ARTIFICIAL INTELLIGENCE IN MANUFACTURING INDUSTRY: Introduction, developments of Artificial intelligence in manufacturing Industry; Advantages, limitations and applications of Artificial Intelligence in Manufacturing industry- fault diagnosis, Quality inspection, inventory control, industrial safety and maintenance.

TEXT BOOKS:

1. Manufacturing Engineering and Technology/ Kalpakjian, Serope;Steven,SchmidR./ Pearson,1st Edition2013.
2. ManufacturingTechnology/P.N.Rao/TataMcGrawHill,4th Edition2016.
3. Russell, S. and Norvig, P. 2015. Artificial Intelligence - A Modern Approach, 3rd edition, Prentice Hall.

REFERENCE BOOKS

1. ProductionTechnology/R.K.Jain/Khannapublishers,17th edition2004.
2. PrinciplesofMetalCastings/RichardWHeineandRoenthal.McGrawHillEducation, 2ndEdition2017.
3. WeldingProcessandtechnology/Dr.Paramar/KhannaPublishers,3rdEdition.
4. ProductionTechnology/SarmaPC/S.ChandPublications,4th Edition2014.

Semester	IV	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET09
Name of the Course	Mechanical Measurements and Metrology					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student willbe able to:	Knowledge Level
CO1	Discuss the basic concepts of measurement system and Linear measuring Instruments.	K2
CO2	Explain various types of Temperature, Pressure and Flow measuring Instruments.	K2
CO3	Understand the working of Acceleration, Vibration and Strain measuring devices.	K2
CO4	Apply tolerances and fits for selected product quality and explain various Linear, Angular and Optical measuring instruments and their applications	K3
CO5	Explain the measurement of surface finish with various comparators	K2

UNIT – I

BASICCONCEPTS: Introduction,FundamentalMeasuringProcessesandmethods,Generalizedmeasurementsystemanditsfunctionalelements,Performancecharacteristics.

DISPLACEMENT MEASUREMENT: Principle and construction of various transducers – piezo electric, inductive, capacitance, resistance, ionization and photo electric transducers, calibration procedures.

UNIT – II

TEMPERATURE MEASUREMENT: Thermometry, scales of temperature, electrical resistance – thermister, RTD, thermocouple, pyrometers.

PRESSURE MEASUREMENT: Working of Various instruments - dead weight pressure gauge , bourdon pressure gauges, bellows , diaphragm gauges.

FLOW MEASUREMENT- Rota meter, Magnetic, Ultrasonic, hot – wire anemometer, Laser Doppler Anemometer (LDA).

UNIT – III

ACCELERATION AND VIBRATION MEASUREMENT: Principles of seismic instruments – Vibrometer and Accelerometer

STRAIN MEASUREMENTS: Various types of strain measuring instruments – electrical strain gauge – gauge factor – use of resistance strain gauge for measuring bending compressive and tensile strains, strain gauge rosettes.

UNIT – IV

LIMITS AND FITS: Introduction, Normal size, Tolerance limits, Deviations, Allowance,Fitsandtheirtypes–unilateralandbilateraltolerancesystem,holeandshaftbasissystems–interchangeabilityandselectiveassembly.IndianstandardInstitutionsystem.

LINEAR MEASUREMENT: Standards of measurements- line and end standard. Basicprincipleandapplicationsofslipgauges,dialindicatorandmicrometers.
ANGULAR MEASUREMENTS: Bevel protractor – angle slip gauges – sine bar, rollersandspheresusedtodeterminethetapers,Applicationsofangularmeasurement.
OPTICAL MEASURING INSTRUMENTS: Tool maker's microscope and its uses – collimators,opticalprojector–
opticalflatsandtheiruses,interferometer,andthoseapplications.

UNIT – V
SURFACE TEXTURE: Factors effecting surface roughness, reasons for controlling surfacetexture, Differences between surface roughness and surface waviness, Elements of surfacetexture-Numericalassessmentofsurfacefinish–CLA,R,R.M.SValues–Ravalues,andRzvalues. Basic principle of profile meter and Talysurf.ISI symbols forindicationofsurfacefinish,Applicationssurfacetexture.
COMPARATORS: Types– Mechanical,Optical, Electrical and Electronic,PneumaticComparatorsandTheirUses.

TEXT BOOKS:
1. Measurement Systems: Applications & design / D.S Kumar/ Metropolitan/1st/2015
2. Mechanical Measurements / BeckWith, Marangoni, Linehard/ Pearson/6th/2018
3. Engineering Metrology by R.K.Jain / Khanna Publishers

REFERENCE BOOKS
1. Dimensional Metrology, Connie Dotson, Cengage Learning.
2. Engineering Metrology by I.C.Gupta / DhanpatRai Publishers.
3. Precision Engineering in Manufacturing by R.L.Murthy / New Age.
4. Engineering Metrology and Measurements by NV Raghavendra, L Krishna murthy, Oxford publishers.
5. Engineering Metrology by KL Narayana, Scitech publishers.
6. Mechanical and Industrial Measurements / R.K. Jain/ Khanna Publishers/2008
7. Measurement systems: Application and design/Doeblin Earnest. O. Adaptation/ TMH/ 6th edition, 2018

Semester	IV	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET10
Name of the Course	Applied Thermodynamics					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student willbe able to:	Knowledge Level
CO1	Illustrate the working of various IC engines and associated systems such as lubricating system, cooling system, fuel feed system and ignition system.	K2
CO2	Explain the working of boilers and its performance parameters.	K2
CO3	Compute the performance of steam nozzles and steam turbines.	K3
CO4	Analyze the working of steam condensers and their performance parameters.	K4
CO5	Compute the performance of gas turbines.	K3

UNIT – I

I. C. ENGINES: Classification, Working principles of Four & Two stroke engine- SI & CI engines, Valve and Port Timing Diagrams, Engine systems- Carburetor, Fuel injection systems for CI engines, Ignition, Cooling and Lubrication system.

UNIT – II

STEAM BOILERS: Classification, working principles Cochran, Locomotive, Babcock and Wilcox, Benson and Loeffler boiler with sketches, mountings and accessories- working principles, boiler horse power, equivalent evaporation, efficiency and heat balance, Draught: classification, height of chimney for given draught and discharge, condition for maximum discharge, efficiency of chimney.

UNIT – III

STEAM NOZZLES: Applications and Types, Flow through nozzles, Thermodynamic analysis – assumptions -velocity of fluid at nozzle exit, Ideal and actual expansion in a nozzle, velocity coefficient, Condition for maximum discharge, critical pressure ratio, Super saturated flow in nozzles- its effects, Wilson's line.

STEAM TURBINES: Classification, Impulse turbine- mechanical details- velocity diagram- effect of friction- power developed, axial thrust, blade or diagram efficiency- condition for maximum efficiency. Methods to reduce rotor speed-Velocity compounding, Pressure compounding and velocity & pressure Compounding, - Velocity and Pressure variation along the flow – Combined velocity diagram for a velocity compounded impulse turbine.

UNIT – IV

REACTION TURBINE: Mechanical details, principle of operation, thermodynamic analysis of a stage, degree of reaction, velocity diagram, Parson's reaction turbine, condition for maximum efficiency.

STEAM CONDENSERS: Classification of condensers- working principles of Jet, Evaporative and surface condensers, Vacuum and its Measurement, Vacuum efficiency and condenser efficiency, Sources of air leakage and its affects in condensers- Condenser Efficiency, Daltons law of partial pressures, Determination of mass of cooling water.

UNIT – V

GAS TURBINES: Simple gas turbine plant- Ideal cycle, essential components, parameters of performance, actual cycle, regeneration, inter cooling and reheating, closed and open cycles, merits and demerits.

TEXT BOOKS:

1. Engineering Thermodynamics, PK Nag 4th Edn, TMH.
2. Thermodynamics. An engineering Approach with student resources/ DVD. Y.A. Cengel & M.A. Boles/ 8th Edn-McGrawHill/2016.
3. Gas Turbines / V Ganesan/3rd edition, TMH/2016.

REFERENCE BOOKS

1. Thermal Engineering/ R.K.Rajput/4th edition/ Laxmi Publications/2010
2. Applied Thermodynamics-II / R. Yadav./6th edition, Central Publishing House/2016
3. Gas turbines and Propulsive Systems/1st edition, DhanpatRai/2014
4. Tables of the properties of steam and other vapours and temperature-Entropy table by Cecil H Peabody by Forgotten books
5. Steam tables by C.P Kodandaraman – New age International

Semester	IV	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL05
Name of the Course	Mechanical Measurements and Metrology Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student willbe able to:	Knowledge Level
CO1	Experimentandexamineerrorsincalibrationofvariousinstruments	K3
CO2	Explaintheworkingprincipleofmetrologyandmeasuringequipments.	K2
CO3	Computedistance,angleandsurfacefinishbyusingstandardmeasuring equipments	K3

Listof experiments:

METROLOGY

1. Measurementoflength,height anddiameterby verniercalipers,micrometerandheightgauge.
2. Surfaceroughnessmeasurementusingtalysurf.
3. Taperanglemeasurement.
4. Toolmaker'smicroscope.
5. Measurementofboresusingdialboreindicator.
6. Measurementof thicknessof geartoothbyverniertooth caliper.

INSTRUMENTATION&CONTROLSYSTEMSLAB

Listof experiments:

1. StudyandcalibrationofLVDTtransducerfordisplacementmeasurement.
2. Calibrationofpressuregauge.
3. AngularMeasurementusingangularsensor.
4. Measurementofspeedusingopto-couplerpickup.
5. Calibrationofstraingauge.
6. Study&calibrationofresistancetemperaturedetector(RTD)transducerfortemperaturemeasurement.
7. Studyandcalibrationof arota meterforwaterflowmeasurement.
8. Vibrationmeasurementtrainer.

Semester	IV	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL06
Name of the Course	Manufacturing Process Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO 1	DesignandMakeapattern, testthepropertiesofsandandprepareacasting.	K3
CO 2	PerformArcwelding,Spotwelding,TIG,MIGweldingandPlasmaArcCuttingoperations	K3
CO 3	Performblanking,piercing,Drawingandbendingoperations.	K3
CO 4	Operate injection and blow moulding machines to manufactureplasticcomponents	K3

METALCASTING:
PatternDesignandpatternmakingusingwoodturninglathe
SandpropertiestestingforCompressionstrengthandpermeability.Mouldpreparation,meltingandcasting.

WELDING:
ARCWeldingLap,Butt&T-JointSpotWelding–Lap&ButtJoint
TIGWelding-ButtJoint
MIGWelding-ButtJointPlasmaArcCutting

METALFORMING:
Blanking&PiercingoperationbyusingProgressive die

PROCESSINGOFPLASTICS:
InjectionMolding, Blow molding

Semester	IV	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL07
Name of the Course	Thermal Engineering Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Evaluate the performance of I.C.Engines.	K4
CO2	Evaluate the performance of compressors.	K4
CO3	Describe the working of Boilers.	K2

1. I.C. Engines valve and port timing diagrams.
2. I.C. Engines performance test and Exhaust emission measurements (4 -stroke diesel engine).
3. I.C. Engines Performance Test for 2 Stroke SI engines
4. Evaluation of engine friction by conducting Morse test on 4-stroke multi cylinder petrol engine.
5. Draw the heat balance sheet for 4- stroke multi cylinder petrol engine.
6. I.C. Engines Retardation Test
7. Economical speed test of an IC engine.
8. Performance test on variable compression ratio engines.
9. Performance test on reciprocating air compressor unit.
10. Dis-assembly / Assembly of Engines
11. Study of Boilers

Syllabi for the courses offered in M. Tech under V21 Regulation for the Academic Year 2021-2022

I Semester

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET01
Name of the Course	AdvancedFluidMechanics					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Level
CO1	Apply equations of motion for fluid flow and in viscid flow problems	K3
CO2	Analyze fluid flow using Navier stokes equation	K4
CO3	Explain Boundary layer concepts to flow over flat plate	K2
CO4	Analyze turbulent layer equations and internal flow	K4
CO5	Illustrate Compressible flow	K3

UNIT– I

INVISCID FLOW OF INCOMPRESSIBLE FLUIDS: Lagrangian and Eulerain Descriptionsof fluid motion, Path lines, Stream lines, Streak lines, stream tubes – velocity of a fluid particle,typesofflows,Equationsofthreedimensionalcontinuityequation,StreamandVelocitypotentialfunctions.

BASIC LAWS OF FLUID FLOW: Condition for irrotationality, circulation & vorticity Accelerations inCartesystemsnormalandtangentialaccelerations,Euler's,Bernouliequationsin3D–Continuityand Momentum Equations.

UNIT– II

VISCOUS FLOW: Derivation of Navier,Stoke's Equations for viscous compressible flow – Exactsolutions to certain simple cases: Plain Poisoulle flow, Coutte flow with and without pressuregradient, Hagen Poisoulleflow,Blasius solution.

UNIT– III

BOUNDARY LAYER CONCEPTS : Prandtl's contribution toreal fluid flows – Prandtl's boundarylayer theory , Boundary layer thicknessfor flow over a flat plate – Approximate solutions –Creeping motion (Stokes) – Oseen's approximation,Von,Karman momentum integral equationfor laminar boundary layer — Expressions for local and mean drag coefficients for differentvelocityprofiles.

UNIT– IV

INTRODUCTIONTOTURBULENTFLOW: Fundamentalconceptofturbulence–TimeAveragedEquations – Boundary Layer Equations , Prandtl Mixing Length Model , Universal VelocityDistributionLaw:VanDriestModel–Approximatesolutionsfordragcoefficients–MoreRefined Turbulence Models – k,epsilon model , boundary layer separation and form drag –KarmanVortex Trail, Boundarylayer control, liftoncircular cylinders.

INTERNALFLOW:Smoothandroughboundaries– EquationsforVelocityDistributionandfrictional Resistance in smooth and rough Pipes – Roughness of Commercial Pipes – Moody'sdiagram.

UNIT– V

COMPRESSIBLE FLUID FLOW– I: Thermodynamicbasics– Equations ofcontinuity, Momentumand Energy , Acoustic Velocity, Derivation of Equation for Mach Number – Flow Regimes –MachAngle– Mach Cone – Stagnation State.

COMPRESSIBLEFLUIDFLOW–II: AreaVariation,PropertyRelationshipsintermsofMachnumber, Nozzles, Diffusers – Fanno and Releigh Lines, Property Relations – Isothermal Flow inLongDucts– NormalCompressibleShock,ObliqueShock:ExpansionandCompressibleShocks– SupersonicWaveDrag.

TEXTBOOKS:

1. FluidMechanics/L.VictorSteeter/TMH
2. FluidMechanics/ FrankM.White/MGH

REFERENCE BOOKS:

7. Dynamics&Theoryand DynamicsofCompressibleFluidFlow/Shapiro.
8. FluidDynamics/WilliamF.Hughes&JohnA.Brighton/TMH
9. FluidMechanics/ K.L Kumar/S Chand &Co.

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET02
Name of the Course	ComputationalFluidDynamics					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Level
CO1	Explain various finite element formulations/methods	K2
CO2	Apply Hyperbolic equations for non linear problems	K3
CO3	Differentiate formulations of Compressible and incompressible flows	K4
CO4	Differentiate various formulations for 2D & 3D problems	K4
CO5	Illustrate various formulations for steady state and transient problems	K3

UNIT– I

INTRODUCTION: Finite difference method, finite volume method, finite element method,governingequations andboundary conditions.Derivation offinite differenceequations.

SOLUTIONMETHODS:Solutionmethodsofellipticalequations– finitedifferenceformulations,interactive solution methods,directmethod withGaussian elimination.
Parabolic equations, explicit schemes and Von Neumann stability analysis, implicit schemes,alternating direction implicit schemes, approximate factorization, fractional step methods, directmethodwith tridiagonal matrix algorithm.

UNIT– II

HYPERBOLIC EQUATIONS: Explicit schemes and Von Neumann stability analysis, implicitschemes, multi step methods, nonlinear problems, second order one-dimensional wave equations.Burgersequations: Explicit and implicitschemes, Runge-Kutta method.

UNIT– III

FORMULATIONS OF INCOMPRESSIBLE VISCOUS FLOWS: Formulations of incompressible viscous flows by finite difference methods, pressure correction methods, vortexmethods.

TREATMENTOFCOMPRESSIBLEFLOWS:Potentialequation,Eluerequations,Navier-Stokessystemof equations,flow-field,dependentvariationmethods, boundaryconditions.

UNIT– IV

FINITEVOLUMEMETHOD:Finitevolumemethodviafinitedifferencemethod,formulationsfortwo andthree, dimensional problems.

UNIT– V

STANDARDVARIATIONALMETHODS: Linearfluidflowproblems,steadystateproblems,Transient problems.

TEXTBOOKS:
1. Computationalfluiddynamics,T.J.Chung,Cambridge University press, 2002.

1. Textbookoffluiddynamics,FrankChorlton,CBSPublishers&distributors,1985.
2. Computational Techniques for Fluid Dynamics, Volume 1& 2 by C. A. J. Fletcher, SpringerPublication,2012.

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE01
Name of the Course	**AdvancedI.CEngine Electric and HybridVehicles** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Level
CO1	Explain static and dynamic effects of gas exchange process	K2
CO2	Illustrate motion of charge inside the cylinder	K3
CO3	Differentiate between the phenomena of combustion in IC engines	K4
CO4	Explain Electric vehicles and types of Batteries	K2
CO5	Analyze Hybrid and Fuel Cell Vehicles	K3

UNIT – I

GAS EXCHANIGING PROCESSES: Inlet and exhaust processes in thefour stroke cycle volumetric efficiency quasi staticeffectscombinedquasistaticanddynamiceffectsvariationwithspeedandvalvearealiftandtiming –flow through valvespoppetvalve geometryand timing flow rateand discharge coefficients,residualgas fraction , exhaust gas flow rate and temperature variation,scavenging in two strokecyclic engines, scavenging parameters andmodels actual scavenging processes , flow throughports, super charging and turbo changing – methods of power boostingbasic relationshipscompressors,turbines wavecompression devices.

UNIT – II

CHARGEMOTIONWITHINTHECYLINDER: Intake Jet Flow, Mean velocity and turbulence characteristics definitionsapplication to enginevelocity data swirl – swirl measurement, swirl generationduring inductionswirl modificationwithin the cylindersquish pre chamber engine flows crevice flows and blowby flows generatedbypiston –cylinder wall interaction.

UNIT – III

COMBUSTIONIN S.IANDC.I ENGINES: Review of normal and abnormal combustion in SI and CI enginecyclic variation in combustionof SI engine , analysis of cylindrical pressure data in SI and CI engine ,MPFI in SI enginescommonrail fuel injection system inCIengines fuel spraybehavior inCIengines.

UNIT – IV

ELECTRICVEHICLES:

Introduction:LimitationsofICEnginesasprimemover,HistoryofEVs,EVsystem,components of EV-DC and AC electric machines: Introduction and basic structure, Electricvehicledrivetrain,advantagesandlimitations,Permanentmagnetandswitchedreluctance motors

BATTERIES: Battery: lead, acid battery, cell discharge and charge operation, construction,advantages of lead, acid battery, Battery parameters: battery capacity, discharge rate, state ofcharge,state ofdischarge, depthof discharge, Technicalcharacteristics, Ragoneplots.

UNIT –V

HYBRIDVECHILES: Configurationsofhybrids,SeriesandParallel,advantagesandlimitations, Hybrid drive trains, sizing of components Initial acceleration, rated vehicle velocity,Maximumvelocityandmaximumgradeability,Hydrogen:Production,Hydrogenstoragesystems,reformers.

FUEL CELL VECHILES: Introduction, Fuel cell characteristics, Thermodynamics of fuelcells,Fuel cell types: emphasis on PEM fuel cell.

TEXTBOOKS:

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE02
Name of the Course	**GasDynamics** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain equations governing compressible flows	K2
CO2	Explain one dimensional compressible flow concepts	K2
CO3	Explain Two dimensional compressible flow concepts	K2
CO4	Illustrate equations governing quasi one dimensional flows	K3
CO5	Illustrate Unsteady wave motions	K3

UNIT – I

BASICCONCEPTS: Introduction tocompressible flow, A briefreview of thermodynamicsandfluidmechanics,Integralformsofconservationequations,Differentialconservationequations, Continuum Postulates, Acoustic speed and Mach number, Governing equations forcompressibleflows.

UNIT – II

ONE-DIMENSIONAL COMPRESSIBLE FLOW: One dimensional flow concept, Isentropicflows, Stagnation/Total conditions, Characteristic speeds of gas dynamics, Dynamic pressure andpressure coefficients, Normal shock waves, Rankine , Hugonoit equations, Rayleigh flow, Fannoflow,Crocco's theorem.

UNIT – III

TWO-DIMENSIONALFLOWS: Obliqueshockwaveanditsgoverningequations,θ,B,Mrelations, The Hodograph and Shock Polar, Supersonic flow over wedges and cones, Mach line,Attached and Detached shock, Reflections and interaction of oblique shock waves, Expansionwaves, Prandtl , Meyer flow and its governing equations, Supersonic flow over convex andconcavecorners, Approximationofcontinuous expansionwaves by discretewaves.

UNIT – IV

QUASI-ONEDIMENSIONALFLOWS: Governingequations,Areavelocityrelations,Isentropic flow through variable, area ducts, convergent, divergent (or De Laval) nozzles, Over,expandedand under,expanded nozzles, Diffusers.

UNIT – V

UNSTEADYWAVEMOTIONS:
Movingnormalshockwaves,Reflectedshockwaves,Physicalfeaturesofwavepropagation,Elementsofacoustictheory,Incidentandreflectedwaves, Shock tube relations, Piston analogy, Incident and reflected expansion waves, Finitecompressionwaves, Shock tube relations.

INTRODUCTION TO EXPERIMENTAL FACILITIES: Subsonic wind tunnels, Supersonicwind tunnels, Shock tunnels, Free, piston shock tunnel, detonation, driven shock tunnels, andExpansiontubes.

TEXTBOOKS:
1. GasDynamicsbyS.MYahya,2017
2. GasDynamicsbyE.RadhaKrishnan,PrenticeHallIndiaLearningPrivateLimited

4. FundamentalsofGasDynamics byV. Babu,JohnWiley & Sons.
5. ModernCompressibleFlowbyJohn D.Anderson, Jr./McGraw Hill.

Semester	**I**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE03**
Name of the Course	**CryogenicEngineering** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain Vapour compression Refrigeration System and its components	K2
CO2	Illustrate Multiple stage Refrigeration system	K3
CO3	Explain concepts of Cryogenics	K2
CO4	Illustrate the applications of Cryogenics	K3
CO5	Explain insulation to low temperatures	K2

UNIT – I

VAPOURCOMPRESSIONREFRIGERATIONSYSTEMS:
Analysis of vapor compression refrigeration cycle,Second law of Thermodynamics, Carnotrefrigerator,VaporCompressionRefrigerationCycle,components,PropertiesofRefrigerants.

UNIT – II

MULTIPLESTAGEREFRIGERATIONSYSTEM:
Introduction,MethodsofimprovingCOPofMultiStageCompressionwithIntercooling,Multistageevaporator System,CascadeRefrigerationSystem,DryiceManufacturing,AutoCascadeSystem, Joule-Thomson Coefficient.

UNIT – III

CRYOGENICS: Liquefactionof air,Lindesystem,Analysis,LiquefactionofNeon,HydrogenandHelium.

UNIT – IV

APPLICATIONOF LOWER TEMPERATURES: Effects on the properties of metal strength, Thermal properties, super conductivity, super fluidity.Applications, such as expansion fitting, cryobiology, cryosurgery, space research, computers ,undergroundpower lines.

UNIT – V

LOWTEMPERATURE INSULATION: Reflective insulation, Evacuated powders, Rigid foams, Super insulation. Cooling by adiabaticde-magnetization,Gasseparationandcryogenicsystems,separationofgases,Rectifyingcolumns,Air separating, singleanddouble columns Air separation plant.Storageandhandlingofcryogenicliquids, Dewarsandothertypesofcontainers.

Semester	I	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE04**
Name of the Course	**AdvancedThermodynamics** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain availability and irreversibility	K2
CO2	Explain relations of thermodynamic properties	K2
CO3	Differentiate between properties of mixtures of gases and liquids	K4
CO4	Illustrate equilibrium of vapour and liquid mixtures	K3
CO5	Explain combustion phenomena and reactions involved in combustion	K2

UNIT – I
AVAILABILITY AND IRREVERSIBILITY: Quality ofEnergy, available and unavailableenergy, availability,surroundingswork,reversible workandirreversibility,availabilityinaclosed system, availability in a SSSF process in an open system, second law efficiencies ofprocesses,second lawefficiency ofcycles andexergy balanceequations.

UNIT – II
THERMODYNAMICPROPERTYRELATIONS: HelmholtzandGibbsFunctions,twoMathematicalConditionsforExactDifferentials,MaxwellRelations,ClapeyronEquation,RelationsforChangesinEnthalpy,InternalEnergyandEntropy,SpecificHeatRelations,GeneralizedRelations/ChartsforResidualEnthalpyandEntropy,GibbsFunctionatzeroPressure:AMathematicalAnomaly,Fugacity,FugacityCoefficientandResidualGibbsFunction,TheJoule, ThomsonCoefficientandInversionCurve, Thermodynamicsimilarity.

UNIT – III
NON-REACTING MIXTURES OF GASES AND LIQUIDS: Measures of Composition inMultiComponent Systems.
GASMIXTURES: Mixturesof idealGases,Gas-Vapor Mixtures,Applicationof FirstLaw toPsychometricProcesses,Real Gas Mixtures.
LIQUIDMIXTURES/SOLUTIONS: IdealSolutions,RealSolutions.
THERMODYNAMIC RELATIONS FOR REAL MIXTURES: Partial Properties, Relation for FugacityandFugacity Coefficient in Real Gas Mixtures, Relations for Activity and Activity Coefficient inRealLiquid Mixtures/Solutions.

UNIT – IV
PHASEEQUILIBRIUM: V A P O U R LIQUIDEQUILIBRIUMOFMIXTURES: Phase DiagramsforBinaryMixtures,Vapor,LiquidEquilibriuminIdealSolutions,CriteriaforEquilibrium, Criterion foe phase Equilibrium, Calculation of Standard State Fugacity of

PureComponent,VaporLiquidEquilibriumatLowtoModeratePressures,DeterminationofConstantsof Activity Coefficient Equations, and Enthalpy Calculations.

UNIT – V

CHEMICALREACTIONSANDCOMBUSTION: Thermochemistry,MeasuresofComposition in Chemical Reactions, Application of First Law of Thermodynamics to chemicalReactions, the Combustion Process-Standard Heat/Enthalpy of Combustion, Reactions at actualTemperatures, adiabatic Flame Temperature, Entropy Change of Reacting Systems, ApplicationofsecondLawofThermodynamicstochemicalReactions, chemicalequilibrium-Advancementof Chemical Reactions, Equilibrium Criterion in Chemical Reactions, equilibrium Constant andLawofMass Action,Equilibrium Constant forGas PhaseReactionsin thestandardstate.

TEXTBOOKS:

1. BasicandAppliedThermodynamics,P.K.Nag,TMH,2019.
2. Thermodynamics,J.PHolman,McGrawHill,2017.
3. Thermodynamics, CPArora,McGrawHilleducation(Indiapvtlimited),2016.

5. ThermalEngineering,Soman,PHI,2011.
6. ThermalEngineering,Rathore,TMH,2010.
7. EngineeringThermodynamics,Chatopadyaya,2010.

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE05
Name of the Course	**GasTurbines** Program Elective – II					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain turbo machines and cycles used in gas turbines	K2
CO2	Apply the concepts of rotating machines and centrifugal compressors	K3
CO3	Analyze Axial flow compressors and design concepts	K4
CO4	Illustrate Gas turbine combustion systems	K3
CO5	Illustrate Axial and Radial flow turbines	K3

UNIT – I

INTRODUCTION: Review of the fundamentals, Classification of turbo machines, Applicationsofgas turbines.

GAS TURBINE CYCLES FOR SHAFT POWER: Ideal shaft power cycles and their analysis,Practicalshaft powercycles and theiranalysis.

UNIT – II

FUNDAMENTALS OF ROTATING MACHINES: Euler's energy equation, Components ofenergy transfer, Impulse and reaction machines,Degree of reaction, Flow over an airfoil, Liftanddrag.

CENTRIFUGAL COMPRESSORS: Construction and principle of operation, Factors affectingstagepressureratio,Compressibilityeffects,Surgingandchoking,Performance characteristics.

UNIT – III

AXIAL FLOW COMPRESSORS: Construction and principle of operation, Factors affectingstage pressure ratio, Degree of reaction, Three dimensional flow, Design process, Blade design,Stageperformance, Compressibility effects,Off,design performance.

UNIT – IV

GASTURBINECOMBUSTIONSYSTEMS:Operationalrequirements,Factorsaffectingcombustionchamber design,Combustionprocess,Flame stabilization,Combustionchamberperformance,Practical problems, Gas turbine emissions.

UNIT – V

AXIAL AND RADIAL FLOW TURBINES: Construction and operation of axial flow turbines,Vortex theory, Estimation of stage performance, Overall turbine performance, Turbine bladecooling,Radial flow turbines.

TEXTBOOKS:
1. Sarvanamuttoo,H.I.H.,Rogers,G.F.C.andCohen,H.,GasTurbineTheory,7thEdition,Pearson PrenticeHall, 2017.

Semester	**I**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE06**
Name of the Course	**AlternativeFuelTechnologies** Program Elective – II					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain alternative fuels	K2
CO2	Explain production methods of alternative fuels	K2
CO3	Illustrate performance characteristics of liquid alternative fuels	K3
CO4	Illustrate performance characteristics of gaseous alternative fuels	K3
CO5	Analyze performance characteristics of alternative fuels and methods to improve efficiency	K4

UNIT – I
Fossil fuels and their limitations Engine requirements; Potential alternative liquid and gaseousfuels.

UNIT – II
Methods of production; Properties, safety aspects, handling and distribution of various liquidalternativefuels like alcohols, vegetableoils,Di, methyl and Di, ethyl ether etc.

UNIT – III
Differentwaysofusingalternativeliquidfuelsinengines,performanceandemissioncharacteristics;Conversionofvegetableoilstotheirestersandeffectonengineperformance.

UNIT – IV
Use of gaseous fuels like biogas, LPG, hydrogen, natural gas, producer gas etc. in SI/CI engines;Production,storage, distrbution and safetyaspects of gaseous fuels.

UNIT – V
Different approaches like duel fuel combustion and surface ignition to use alternative fuels inengines; Use of additives to improve the performance with alternative fuels; Hybrid power plantsandfuel cell.

Name of the Course	THERMALENGINEERINGLAB –I					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Determination of fuel properties	K4
CO2	Investigate the exhaust emissions of IC Engines	K4
CO3	Test the Performance of compressors & IC Engines	K4

1. Abel'sapparatus: Determinationofflashandfire pointsofagivenoilsample
2. RedwoodViscometerNo.1:Determination ofkinematicandabsolute viscositiesofanoilsamplegiven
3. Measurement of Viscosity by Sayboltz's Viscometer.
4. Determination of Calorific Value of fuel.
5. Two-StageReciprocatingAir-Compressor - Determinationofvolumetricefficiencyofthecompressoras afunctionof receiverpressure.
6. I.C. Engines performance test and Exhaust emission measurements (4 -stroke diesel engine)
7. I.C. Engines performance test and Exhaust emission measurements (2-stroke petrol engine)
8. Evaluation of engine friction by conducting Morse test on 4-stroke multi cylinder petrol engine.
9. I.C. Engines heat balance at different loads and show the heat distribution curve.
10. Performance test on variable compression ratio engines.
11. Performance test on Rotary Air Compressor.

II Semester

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET03
Name of the Course	Advanced Heat and Mass Transfer					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain Equations governing heat conduction heat transfer	K2
CO2	Illustrate finite difference methods for heat conduction and convection problems	K3
CO3	Analyze heat and mass transfer in internal and external flows	K4
CO4	Explain concepts related to free convection, boiling & condensation and Heat exchangers	K2
CO5	Explain concepts of Radiation heat transfer and mass transfer.	K2

UNIT – I

BRIEF INTRODUCTION TO DIFFERENT MODES OF HEAT TRANSFER: Conduction: General heat Conduction equation, initial and boundary conditions.

Transient heat conduction: Lumped system analysis, Heisler charts, semi infinite solid,use of shape factors in conduction,2D transient heat conduction, product solutions.

UNIT – II

FINITE DIFFERENCE METHODS FOR CONDUCTION: ID & 2D steady state and simple transient heat conduction problems, implicit and explicit methods.

FORCED CONVECTION: Equations of fluid flow, concepts of continuity, momentum equations, derivation of energy equation, methods to determine heat transfer coefficient: Analytical methods, dimensional analysis and concept of exact solution. Approximate method, ntegral analysis.

UNIT – III

EXTERNAL FLOWS: Flow over a flat plate: Integral method for laminar heat transfer coefficient for different velocity and temperature profiles. Application of empirical relations to variation geometries for laminar and turbulent flows.

INTERNAL FLOWS: Fully developed flow: Integral analysis for laminar heat transfer coefficient, types of flow, constant wall temperature and constant heat flux boundary conditions, hydrodynamic &thermal entry lengths; use of empirical correlations.

UNIT – IV

FREE CONVECTION: Approximate analysis on laminar free convective heat transfer, boussinesque approximation, different geometries, and combined free and forced convection.

BOILING AND CONDENSATION: Boiling curve, correlations, Nusselts theory of film condensation on a vertical plate, assumptions & correlations of film condensation for different geometries.

HEAT EXCHANGERS Types of Heat Exchangers, LMTD and NTU methods

UNIT – V
RADIATION HEAT TRANSFER: Radiant heat exchange in grey, non, grey bodies, with transmitting, Reflecting and absorbing media, specular surfaces, gas radiation, from flames.
MASS TRANSFER: Concepts of mass transfer, diffusion & convective mass transfer analogies, significance of non-dimensional numbers.

TEXT BOOKS:
1. Principles of Heat Transfer / Frank Kreith / Cengage Learning
2. Heat Transfer / Necati Ozisik / TMH

REFERENCE BOOKS:
1. Fundamentals of Heat and Mass Transfer,5th Ed. / Frank P. Incropera/John Wiley
2. Elements of Heat Transfer/E. Radha Krishna/CRC Press/2012
3. Introduction to Heat Transfer/SK Som/PHI
4. Heat Transfer / Nellis& Klein / Cambridge University Press / 2012.
5. Heat Transfer/ P.S. Ghoshdastidar/ Oxford Press
6. Engg. Heat & Mass Transfer/ Sarat K. Das/DhanpatRai
7. Heat Transfer/ P.K.Nag /TMH
8. Heat Transfer / J.P Holman/MGH

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET04
Name of the Course	Thermal Measurements and Process Controls					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain elements of measuring instruments	K2
CO2	Explain flow measuring devices	K2
CO3	Explain temperature measurement methods	K2
CO4	Illustrate various indicating, recording and data acquisition systems	K3
CO5	Analyze various process control systems	K4

UNIT – I

GENERAL CONCEPTS: Fundamental elements of a measuring instruments. Static and dynamic characteristics – errors in instruments – Different methods of measurement and their analysis – Sensing elements and transducers. Measurement of pressure – principles of pressure measurement, static and dynamic pressure, vacuum and high pressure measurement – Measurement of low pressure, Manometers, Calibration methods, Dynamic characteristics, design principles.

UNIT – II

MEASUREMENT OF FLOW: Obstruction meters, variable area meters, Pressure probes, compressible fluid flow measurement, Thermal anemometers, calibration of flow measuring instruments. Introduction to design of flow measuring instruments.

UNIT – III

TEMPERATURE MEASUREMENT: Different principles of Temperature Measurement, use of bimetallic thermometers – Mercury thermometers, Vapor Pressure thermometers, Thermo positive elements, thermocouples in series & parallel, pyrometry, measurement of heat flux, calibration of temperature measuring instruments. Design of temperature measuring instruments.

MEASURMENT OF : Velocity, moisture content , humidity and thermal conductivity .

UNIT – IV

VOLTAGE INDICATING, RECORDING AND DATA ACQUISITION SYSTEMS: Standards and calibration, analog volt meters and potentiometers. Electrical instruments. Digital voltmeters and multimeters. Signal generation. Electro mechanical servo type XT and XY recorders. Thermal array recorders and data acquisition systems. Analog and digital CROs.

Displays and liquid crystals flat panel displays. Displays. Virtual instruments. Magnetic tape and disk recorders/reproducers. Fiber optic sensors.

UNIT – V

PROCESS CONTROL: Introduction and need for process control principles, transfer functions, block diagrams, signal flow graphs, open and closed loop control systems – Analysis of First & Second order systems with examples of mechanical and thermal systems. Control System Evaluation – Stability, steady state regulations, transient regulations.

TEXT BOOK:

1. Measurement System, Application & Design – E.O. Doeblin, MGH

REFERENCE BOOKS:

1. Mechanical and Industrial Measurements – R.K. Jain – Khanna Publishers.
2. Mechanical Measurements – Buck & Beckwith – Pearson.
3. Control Systems, Principles & Design, 2nd Edition – M. Gopal – TMH.
4. Mechanical Measurements – J.P Holman

Semester	**II**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE09**
Name of the Course	**Equipment Design for Thermal Systems** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various Heat Exchangers and methods of designing them	K2
CO2	Illustrate design of double pipe heat exchanger	K3
CO3	Demonstrate condensation of vapours	K3
CO4	Explain concepts of vaporizers, evaporators and reboilers	K3
CO5	Outline concepts of designing of direct contact heat exchangers	K4

UNIT – I

CLASSIFICATION OF HEAT EXCHANGERS: Introduction, Recuperation & regeneration, Tabular heat exchangers, Double pipe, shell & tube heat exchanger, Plate heat Exchangers, Gasketedplate heat exchanger. Spiral plate heat exchanger, Lamella heat exchanger, Extended surface heat exchanger, Plate fin and Tabular fin.

BASIC DESIGN METHODS OF HEAT EXCHANGER: Introduction, Basic equations in design, Overall heat transfer coefficient, LMTD method for heat exchanger analysis, Parallel flow, Counter flow. Multipass, cross flow heat exchanger design calculations:

UNIT – II

DOUBLE PIPE HEAT EXCHANGER: Film coefficient for fluids in annulus, fouling factors, Calorific temperature, Average fluid temperature, The calculation of double pipe exchanger, Double pipe exchangers in series parallel arrangements.

Shell & Tube Heat Exchangers: Tube layouts for exchangers, Baffle heat exchangers, Calculation of shell and tube heat exchangers, Shell side film coefficients, Shell side equivalent diameter, The true temperature difference in a 1,2 heat exchanger. Influence of approach temperature on correction factor. Shell side pressure drop, Tube side pressure drop, Analysis of performance of 1,2 heat exchanger and design of shell & tube heat exchangers, Flow arrangements for increased heat recovery, the calculation of 2,4 exchangers.

UNIT – III

CONDENSATION OF SINGLE VAPOURS: Calculation of horizontal condenser, Vertical condenser, De,Super heater condenser, Vertical condenser,sub,Cooler, Horizontal Condenser,Sub cooler, Vertical reflux type condenser. Condensation of steam.

UNIT – IV

VAPORIZERS, EVAPORATORS AND REBOILERS: Vaporizing processes, Forced circulation vaporizing exchanger, Natural circulation vaporizing exchangers, Calculations of a reboiler. Extended Surfaces: Longitudinal fins. Weighted fin efficiency curve, Calculation of a Double pipe fin efficiency curve. Calculation of a double pipe finned exchanger, Calculation of a longitudinal fin shell and tube exchanger.

UNIT – V

DIRECT CONTACT HEAT EXCHANGER: Cooling towers, relation between wet bulb & dew point temperatures, The Lewis number and Classification of cooling towers, Cooling tower internals and the roll of fill, Heat Balance. Heat Transfer by simultaneous diffusion and convection, Analysis of cooling tower requirements, Deign of cooling towers, Determination of the number of diffusion units, Calculation of cooling tower performance.

TEXT BOOK:

1. Process Heat Transfer/D.Q.Kern/ TMH
2. Design of Thermal Systems / Wilbert F. Stoecker / McGrawHill 1. Heat Exchanger Design/
   A.P.Fraas and M.N.Ozisicj/ John Wiely& sons, New York.
3. Cooling Towers / J.D.Gurney and I.A. Cotter/ Maclaren
4. Design & Optimization of Thermal Systems / Yogesh Jaluria / CRC Press

REFERENCE BOOKS:

3. Design & Optimization of Thermal Systems / Yogesh Jaluria / CRC Press

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE10
Name of the Course	**Solar Energy Technologies** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various elements of solar energy systems	K2
CO2	Illustrate the design of solar water heating system	K3
CO3	Illustrate solar energy storage systems	K3
CO4	Explain performance characteristics and energy conversion systems	K2
CO5	Explain economics of solar energy systems	K2

UNIT – I

INTRODUCTION: Solar energy option, specialty and potential – Sun – Earth – Solar radiation, beam and diffuse – measurement – estimation of average solar radiation on horizontal and tilted surfaces – problems – applications.
Capturing solar radiation – physical principles of collection – types – liquid flat plate collectors – construction details – performance analysis – concentrating collection – flat plate collectors with plane reflectors– cylindrical parabolic collectors – Orientation and tracking – Performance Analysis.

UNIT – II

DESIGN OF SOLAR WATER HEATING SYSTEM AND LAYOUT: Power generation – solar central receiver system – Heliostats and Receiver – Heat transport system – solar distributed receiver system – Power cycles, working fluids and prime movers, concentration ratio.

UNIT – III

THERMAL ENERGY STORAGE: Introduction – Need for – Methods of sensible heat storage using solids and liquids – Packed bed storage – Latent heat storage – working principle – construction – application and limitations. Other solar devices – stills, air heaters, dryers, Solar Ponds & Solar Refrigeration, active and passive heating systems.

UNIT – IV

DIRECT ENERGY CONVERSION: Solid, state principles – semiconductors – solar cells – performance – modular construction – applications. conversion efficiencies calculations.

UNIT – V

ECONOMICS: Principles of Economic Analysis – Discounted cash flow – Solar system – life cycle costs – cost benefit analysis and optimization – cost based analysis of water heating and photo voltaic applications.

TEXT BOOK:
1. Principles of solar engineering/ Kreith and Kerider/Taylor and Franscis/2nd edition

REFERENCE BOOKS:
1. Solar energy thermal processes/Duffie and Beckman/John Wiley & Sons
2. Solar energy: Principles of Thermal Collection and Storage/Sukhatme/TMH/2nd edition
3. Solar energy/Garg/TMH
4. Solar energy/Magal/McGraw Hill
5. Solar Thermal Engineering Systems /Tiwari and Suneja/Narosa
6. Power plant Technology/ El Wakil/TMH

Semester	**II**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE11**
Name of the Course	**Adavanced Power Plant Engineering** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various components of Steam power plant	K2
CO2	Explain various components of Gas turbine & Hydro power plant	K2
CO3	Explain Nuclear power station and types of reactors	K2
CO4	Illustrate operation of combined power plants	K3
CO5	Outline economics and environmental considerations of power plants	K4

UNIT – I

Introduction to the sources of energy – resources and development of power in India.

STEAM POWER PLANT: Plant layout, working of different circuits, fuel handling equipments, types of coals, coal handling, choice of handling equipment, coal storage, ash handling systems. Combustion: properties of coal – overfeed and underfeed fuel beds, traveling grate stokers, spreader stokers, retort stokers, pulverized fuel burning system and its components, combustion needs and draught system, cyclone furnace, design and construction, dust collectors, cooling towers and heat rejection. corrosion and feed water treatment.

UNIT – II

GAS TURBINE PLANT: Introduction – classification , construction – layout with auxiliaries, combined cycle power plants and comparison. Cogeneration of Power and Process heat. Waste heat recovery systems.

HYDRO PROJECTS AND PLANT: Classification – typical layouts – plant auxiliaries – plant operation pumped storage plants.

UNIT – III

NUCLEAR POWER STATION: Nuclear fuel – breeding and fertile materials – nuclear reactor – reactor operation.

TYPES OF REACTORS: Pressurized water reactor, boiling water reactor, sodium,graphite reactor, fast breeder reactor, homogeneous reactor, gas cooled reactor, radiation hazards and shielding – radioactive waste disposal.

UNIT – IV

COMBINED OPERATIONS OF DIFFERENT POWER PLANTS: Introduction, advantages of combined working, load division between power stations, storage type hydro, electric plant in combination with steam plant, run of river plant in combination with steam plant, pump storage plant in combination with steam or nuclear power plant, co ordination of hydro, electric and gas turbine stations, co ordination of hydro,electric and nuclear power stations, co ordination of different types of power plants.

POWER PLANT INSTRUMENTATION AND CONTROL: Importance of measurement and instrumentation in power plant, measurement of water purity, gas analysis, O2 and CO2 measurements, measurement of smoke and dust, measurement of moisture in carbon dioxide circuit, nuclear measurements.

UNIT – V

POWER PLANT ECONOMICS AND ENVIRONMENTAL CONSIDERATIONS: Capital cost, investment of fixed charges, operating costs, general arrangement of power distribution, load curves, load duration curve, definitions of connected load, maximum demand, demand factor, average load, load factor, diversity factor – related exercises. effluents from power plants and Impact on environment – pollutants and pollution standards – methods of pollution control.

TEXT BOOKS:

1. A course in Power Plant Engineering /Arora and Domkundwar/Dhanpatrai & Co.
2. Power Plant Engineering /P.C.Sharma / S.K.Kataria Pub

REFERENCES BOOKS:

1. Power Plant Engineering: P.K.Nag/ II Edition /TMH.
2. Power station Engineering – ElWakil / McGrawHill.
3. An Introduction to Power Plant Technology / G.D. Rai/Khanna Publishers

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE12
Name of the Course	**Combustion, Emissions and Environment** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain principles of combustion	K2
CO2	Illustrate the combustion phenomena	K3
CO3	Differentiate the laminar and turbulent flame propagation	K4
CO4	Illustrate the measurement and control of pollution	K3
CO5	Explain environmental considerations of pollution	K2

UNIT – I

PRINCIPLES OF COMBUSTION: Chemical composition , Flue gas analysis, dew point of products, Combustion stoichiometry, Chemical kinetics, Rate of reaction, Reaction order, Molecularity, Zeroth, first, second and third order reactions , complex reactions, chain reactions, Theories of reaction Kinetics, General oxidation behavior of HCs.

UNIT – II

THERMODYNAMICS OF COMBUSTION: Enthalpy of formation, heating value of fuel, Adiabatic flame Temperature, Equilibrium composition of gaseous mixtures.

UNIT – III

LAMINAR AND TURBULENT FLAMES PROPAGATION AND STRUCTURE: Flame stability, burning velocity of fuels, Measurement of burning velocity, factors affecting the Burning velocity. Combustion of fuel droplets and sprays, Combustion systems, Pulverized fuel furnaces- fixed, entrained and fluidized bed systems.

UNIT – IV

POLLUTION FORMATION MEASUREMENT AND CONTROL: Causes for Formation of NOx, SOx, COx, Smoke and UBHC. Different methods of measurement of pollutants. Methods of controlling the formation of pollutants, BHARAT and EURO standards of emissions.

UNIT – V

ENVIRONMENTAL CONSIDERATIONS: Air pollution, effects on environment, human health etc. Principal pollutants, Legislative measures, methods of emission control.

TEXT BOOK:
1. Fuels and combustion, Sharma and Chandra Mohan, Tata McGraw Hill, 1984..

REFERENCE BOOKS:
1. Combustion Fundamentals , Roger A strehlow , McGraw Hill.
2. Combustion Engineering and Fuel Technology , Shaha A.K., Oxford and IBH.
3. Principles of Combustion , KannethK.Kuo, Wiley and Sons.
4. Combustion , Samir Sarkar , Mc. Graw Hill, 2009.
5. An Introduction to Combustion , Stephen R. Turns, Mc. Graw Hill International Edition.
6. Combustion Engineering , Gary L. Berman & Kenneth W. Ragland, Mc. Graw Hill

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE13
Name of the Course	**Jet Propulsion and Rocket Engineering** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain Turbo Jet propulsion systems	K2
CO2	Outline the principles and characteristic parameters of jet propulsion and rockets	K4
CO3	Illustrate chemical formulations of combustion products	K2
CO4	Differentiate solid and liquid propellant rocket systems	K4
CO5	Explain Ramjet propellant rocket system	K2

UNIT – I

TURBO JET PROPULSION SYSTEMS: Gas turbine cycle analysis, layout of turbo jet engine. Turbo machinery, compressors and turbines, combustor, blade aerodynamics, engine off design performance analysis.

FLIGHT PERFORMANCE: Forces acting on vehicle, Basic relations of motion, multi stage vehicles.

UNIT – II

PRINCIPLES OF JET PROPULSION AND ROCKETRY: Fundamentals of jet propulsion, Rockets and air breathing jet engines,Classification,turbo jet , turbo fan, turbo prop, rocket (Solid and Liquid propellant rockets) and Ramjet engines.

NOZZLE THEORY AND CHARACTERISTICS PARAMETERS: Theory of one dimensional convergent, divergent nozzles, aerodynamic choking of nozzles and mass flow through a nozzle, nozzle exhaust velocity, thrust, thrust coefficient, Ac / At of a nozzle, Supersonic nozzle shape, non, adapted nozzles, Summerfield criteria, departure from simple analysis, characteristic parameters,1) characteristic velocity, 2) specific impulse 3) total impulse 4) relationship between the characteristic parameters 5) nozzle efficiency, combustion efficiency and overall efficiency.

UNIT – III

AERO THERMO CHEMISTRY OF THE COMBUSTION PRODUCTS: Review of properties of mixture of gases, Gibbs, Dalton laws, Equivalent ratio, enthalpy changes in reactions, heat of reaction and heat of formation, calculation of adiabatic flame temperature and specific impulse, frozen and equilibrium flows.

SOLID PROPULSION SYSTEM: Solid propellants, classification, homogeneous and heterogeneous propellants, double base propellant compositions and manufacturing methods. Composite propellant oxidizers and binders. Effect of binder on propellant properties. Burning rate and burning rate laws, factors influencing the burning rate, methods of determining burning rates.

UNIT – IV

SOLID PROPELLANT ROCKET ENGINE: Internal ballistics, equilibrium motor operation and equilibrium pressure to various parameters. Transient and pseudo equilibrium operation, end burning and burning grains, grain design. Rocket motor hard ware design. Heat transfer considerations in solid rocket motor design. Ignition system, simple pyro devices.

LIQUID ROCKET PROPULSION SYSTEM: Liquid propellants, classification, Mono and Bi propellants, Cryogenic and storage propellants, ignition delay of hypergolic propellants, physical and chemical characteristics of liquid propellant. Liquid propellant rocket engine,system layout, pump and pressure feed systems, feed system components. Design of combustion chamber, characteristic length, constructional features, and chamber wall stresses. Heat transfer and cooling aspects. Uncooled engines, injectors,various types, injection patterns, injector characteristics, and atomization and drop size distribution, propellant tank design.

UNIT – V

RAMJET AND INTEGRAL ROCKET RAMJET PROPULSION SYSTEM: Fuel rich solid propellants, gross thrust, gross thrust coefficient, combustion efficiency of ramjet engine, air intakes and their classification, critical, super critical and sub,critical operation of air intakes, engine intake matching, classification and comparison of Integral Rocket Ramjet (IRR) propulsion systems.

TEXT BOOKS:

1. Mechanics and Dynamics of Propulsion/ Hill and Peterson/John Wiley & Sons
2. Rocket propulsion elements/Sutton/John Wiley & Sons/8th Edition

REFERENCE BOOKS:

1. Gas Turbines/Ganesan /TMH
2. Gas Turbines & Propulsive Systems / Khajuria & Dubey / Dhanpat Rai& Sons
3. Rocket propulsion/Bevere/
4. Jet propulsion /Nicholas Cumpsty/University of Cambridge

Semester	**II**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE14**
Name of the Course	**Automotive Engineering** Program Elective – IV					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain classification of automobiles	K2
CO2	Illustrate Fuel, ignition and electrical systems of automobile	K3
CO3	Illustrate Cooling and lubrication systems of automobile	K3
CO4	Illustrate Steering system of automobile	K3
CO5	Explain automation in automobiles	K2

UNIT – I

INTRODUCTION: Overview of the course, Examination and Evaluation patterns, History of Automobiles, Classification of Automobiles.

POWER PLANT: Classification, Engine Terminology, Types of Cycles, working principle of and IC engine, advanced classification of Engines, Multi cylinder engines, Engine balance, firing order.

UNIT – II

FUEL SYSTEM, IGNITION SYSTEM AND ELECTRICAL SYSTEM: spark Ignition engines, Fuel tank, fuel filter, fuel pump, air cleaner/filter, carburetor, direct injection of petrol engines. Compression Ignition engines, Fuel Injection System, air & solid injection system, Pressure charging of engines, super charging and turbo charging, Components of Ignition systems, battery ignition system, magneto ignition system, electronic ignition and ignition timing. Main electrical circuits, generating & stating circuit, lighting system, indicating devices, warning lights, speedometer.

UNIT – III

LUBRICATING SYSTEMS AND COOLING SYSTEMS: Functions & properties of lubricants, methods of lubrication, splash type, pressure type, dry sump, and wet sump & mist lubrication. Oil filters, oil pumps, oil coolers. Characteristics of an effective cooling system, types of cooling system, radiator, thermostat, air cooling & water cooling.

TRANSMISSION, AXLES, CLUTCHES, PROPELLER SHAFTS AND DIFFERENTIAL: Types of gear boxes, functions and types of front and rear axles, types and functions, components of the clutches, fluid couplings, design considerations of Hotchkiss drive torque tube drive, function and parts of differential and traction control.

UNIT – IV

STEERING SYSTEM: Functions of steering mechanism, steering gear box types, wheel geometry. Braking and suspension system: Functions and types of brakes, operation and principle of brakes, constructional and operational classification and parking brake. Types of springs shock observers, objectives and types of suspension system, rear axles suspension, electronic control and proactive suspension system.

WHEELS AND TYRES : Wheel quality, assembly, types of wheels, wheel rims,construction of tyres and tyre specifications.

UNIT – V

AUTOMATION IN AUTOMOBILES: Sensors and actuators, electronic fuel injection system, electronic management system, automatic transmission, electronic transmission control, Antilock Braking System (ABS).

TEXT BOOKS:

1. Joseph Heitner, Automotive Mechanics, CBS publications,2017.
2. Srinivasan. S, Automotive Mechanics, 2nd Edition, Tata McGraw,Hill, 2003

REFERENCE BOOKS:

1. Crouse and Anglin, Automotive Mechanism, 9th Edition. Tata McGraw,Hill, 2003.
2. Jack Erjavec, A Systems Approach to Automotive Technology, Cengage Learning Pub.2009

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE15**
Name of the Course	**Modelling of IC Engines** Program Elective – IV					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain fundamentals of IC Engine modeling	K2
CO2	Analyze thermodynamic combustion models of IC Engines	K4
CO3	Illustrate spray behavior of fuels	K3
CO4	Illustrate modeling of charging system	K3
CO5	Explain mathematical models of SI Engines	K2

UNIT – I

FUNDAMENTALS: Governing equations, Equilibrium charts of combustion chemistry, chemical reaction rates, and approaches of modeling, model building and integration methods, gas exchange through valves, engine and porting geometry, exhaust gas recirculation, valve lift curves.

UNIT – II

THERMODYNAMIC COMBUSTION MODELS OF CI ENGINES: Single zone models, premixed and diffusive combustion models, combustion heat release using wiebe function, wall heat transfer correlations, ignition delay, internal energy estimations, two zone model, application of heat release analysis.

UNIT – III

FUEL SPRAY BEHAVIOR: Fuel injection, spray structure, fuel atomization, droplet turbulence interactions, droplet impingement on walls.

UNIT – IV

MODELING OF CHARGING SYSTEM: Constant pressure and pulse turbo charging, compressor and turbine maps, charge air cooler.

UNIT – V

MATHEMATICAL MODELS OF SI ENGINES: Simulation of Otto cycle at full throttle, part throttle and supercharged conditions. Progressive combustion, Autoignition modeling, single zone models, mass burning rate estimation, SI Engine with stratified charge. Friction in pumping, piston assembly, bearings and valve train etc. friction estimation for warm and warm up engines

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE16
Name of the Course	**Renewable Energy Technologies** Program Elective – IV					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain solar energy and its applications	K2
CO2	Explain Geothermal energy and techniques of harnessing it	K2
CO3	Illustrate energy conversion systems and application of hydrogen as fuel	K3
CO4	Illustrate Bio energy systems	K3
CO5	Illustrate Wind and Tidal energy systems	K3

UNIT – I

INTRODUCTION: Energy Scenario, Survey of energy resources. Classification and need for conventional energy resources.

SOLAR ENERGY: Sun , Earth relationship, Basic matter to waste heat energy circuit, Solar Radiation, Attention, Radiation measuring instruments.

SOLAR ENERGY APPLICATIONS: Solar water heating. Space heating, Active and passive heating. Energy storage. Selective surface. Solar stills and ponds, solar refrigeration, Photovoltaic generation.

UNIT – II

GEOTHERMAL ENERGY: Structure of earth, Geothermal Regions, Hot springs. Hot Rocks, Hot Aquifers. Analytical methods to estimate thermal potential. Harnessing techniques, Electricity generating systems.

UNIT – III

DIRECT ENERGY CONVERSION: Nuclear Fusion,Fusion, Fusion reaction, P,P cycle, Carbon cycle, Deuterium cycle, Condition for controlled fusion, Fuel cells and photovoltaic. Thermionic & thermoelectric generation, MHD generator.

HYDROGEN GAS AS FUEL: Production methods, Properties, I.C. Engine applications, Utilization strategy, Performance.

UNIT – IV

BIO,ENERGY: Biomass energy sources. Plant productivity, Biomass wastes, aerobic and Anaerobic bioconversion processes, Raw material and properties of bio,gas, Bio,gas plant technology and status, the energetic and economics of biomass systems, Biomass gasification

UNIT – V

WIND ENERGY: Wind, Beaufort number, Characteristics, Wind energy conversion systems, Types, Betz model. Interference factor. Power coefficient, Torque coefficient and Thrust coefficient, Lift machines and Drag machines. Matching, Electricity generation.

ENERGY FROM OCEANS: Tidal energy, Tides, Diurnal and semi, diurnal nature, Power from tides, Wave Energy, Waves, Theoretical energy available. Calculation of period and phase velocity of waves, Wave power systems, submerged devices. Ocean thermal Energy, Principles, Heat exchangers, Pumping requirements, Practical considerations.

TEXT BOOK:
1. Renewable Energy Resources/ John Twidell& Tony Weir/Taylor & Francis/2nd edition

REFERENCE BOOKS:
1. Renewable Energy Resources, Basic Principles and Applications/ G.N.Tiwari and M.K.Ghosal/ Narosa Publications
2. Biological Energy Resources/ Malcolm Fleischer & Chris Lawis/ E&FN Spon

Semester	II	L	T	P	C	Course Code
Regulation	V21	0	0	3	2	V21TEL03
Name of the Course	Computational Fluid Dynamics Lab – II					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Analyze the 3D laminar flow through pipe, internal & external flow and rectangular duct.	K4
CO2	Determine the variation of various parameters of rotor & rotary compressor and various losses in pipe flow due to variation of cross section	K4
CO3	Analyze Steady and transient state analysis of solids	K4
CO4	Analyze structural analysis of rectangular plate with hole and orifice in cylinder	K4
CO5	Analyze structural analysis of pressure and velocity in convergent divergent nozzle	K4

1. Static Structural Analysis of a Rectangular Plate with Circular hole
2. Steady State Analysis of a Composite Slab
3. Analysis of Laminar flow in a 3D Circular Pipe
4. Analysis of Pressure and Velocity in a Convergent Divergent Nozzle
5. Study of Variation of various losses in a sudden contraction in pipes
6. External flow analysis of a Cylinder
7. 3 D analysis of a Rectangular Duct
8. Internal Flow 3D analysis
9. Study of Variation of various parameters in a Rotor
10. Study of Variation of various parameters in a Rotary Compressor
11. Transient State Analysis of a Sphere
12. Analysis of Orifice in a Cylinder

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**0**	**0**	**3**	**2**	**V21TEL04**
Name of the Course	**Thermal Engineering Lab – II**					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Determination of Heat transfer coefficient in convective heat transfer	K4
CO2	Examine the emissivity of test plate	K4
CO3	Test the performance of heat exchanger, Solar flat plate collector and water cooler	K4

1. CompositeSlab Apparatus:Determinationof theoreticalendexperimentalvalues ofequivalent thermal resistanceofacompositeslab.
2. NaturalConvectionApparatus:Determinationofexperimentaland empiricalvaluesofconvection heat transfer coefficient from a Vertical Heated Cylinder losing heat toquiescentair
3. ForcedConvectionApparatus:Determinationoftheoretical,experimentalandempiricalvalues of convection heat transfer coefficient for internal forced convection through acircularGIpipe
4. Pin-FinApparatus:Determinationoftemperaturedistribution,efficiencyand effectivenessof the fin working in Natural &forcedconvectionenvironment.
5. Emissivity Apparatus: Determination of surface emissivity of a given aluminium testplateat a given absolute temperature.
6. HeatPipeDemonstrator:Demonstrationofnearisothermalcharacteristicexhibitedbyaheatpipein comparison to stainless steeland copper pipes
7. Performance evaluation of Shell and Tube heat exchanger.
8. Determination of COP of water cooler test rig
9. Measurement of Dryness Fraction by using Throttling Calorimeter.
10. Performance evaluation of Solar Flat Plate Collector.
11. Determination of convective heat transfer coefficient in drop wise and film wise condensation.

Syllabi for the courses offered in M. Tech under V21 Regulation
III Semester

Semester	III	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE17
Name of the Course	**Optmization Techniques & Applications** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various single variable optimization techniques	K2
CO2	Illustrate various multi variable optimization techniques	K3
CO3	Explain various linear programming methods	K2
CO4	Explain various non traditional optimization algorithms	K2
CO5	Analyze various applications of optimization techniques to thermal systems	K4

UNIT – I

SINGLE VARIABLE NON,LINEAR UNCONSTRAINED OPTIMIZATION: One dimensional Optimization methods:, Uni, modal function, elimination methods, Fibonacci method, golden section method, interpolation methods, quadratic & cubic interpolation methods.

UNIT – II

MULTI VARIABLE NON LINEAR UNCONSTRAINED OPTIMIZATION: Direct search method, Univariant method , pattern search methods, Powell's, Hook ,Jeeves, Rosenbrock search methods, gradient methods, gradient of function, steepest decent method, Fletcher Reeves method, variable metric method.

UNIT – III

LINEAR PROGRAMMING: Formulation, Sensitivity analysis. Change in the constraints, cost coefficients, coefficients of the constraints, addition and deletion of variable, constraints. Duality, importance of duality, solution of primal from dual.

UNIT – IV

NON TRADITIONAL OPTIMIZATION ALGORITHMS: Genetics Algorithm, Working Principles, Similarities and Differences between Genetic Algorithm & Traditional Methods. Simulated Annealing, Working Principle, Simple Problems.

UNIT – V

APPLICATIONS TO THERMAL SYSTEMS: Optimal design of heat exchangers, condensers, evaporator and IC Engines.

TEXT BOOKS:
1. Optimization theory & Applications / S.S.Rao / New Age International.
2. Optimization for Engineering Design, Kalyanmoy Deb, PHI

REFERENCE BOOKS:
1. S.D.Sharma / Operations Research
2. Optimization Techniques /Benugundu & Chandraputla / Pearson Asia.
3. Design of Thermal Systems / W.F Stoecker/Mc Graw Hill Education

Semester	III	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE18
Name of the Course	**Design and Analysis of Experiments** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various strategy of experimentation	K2
CO2	Illustrate various factorial design	K3
CO3	Illustrate various two level factorial design	K3
CO4	Analyze various regression models	K4
CO5	Illustrate the Response surface methods	K3

UNIT – I
STRATEGY OF EXPERIMENTATION: Guidelines for designing experiments, sampling and sampling distributions, hypothesis testing, choice of sample size. Experiments with single factor**:** Analysis of variance, analysis of the fixed effects model, model adequacy checking, sample computer output, regression approach to the analysis of variance.
UNIT – II
FACTORIAL DESIGNS: Principles, advantage of factorials, two-factor factorial design, general factorial design, fitting response curves and surfaces.2k factorial design: 22 design, 23 design, General 2kdesign, single replicate of 2k design.
UNIT – III
TWO-LEVEL FRACTIONAL FACTORIAL DESIGNS: one-half fraction of 2K design, one-quarter fraction of 2K design, blocking replicated 2K factorial design, confounding in 2K factorial design. Three-level and mixed-level factorial design: 3K factorial design, confounding in 3K factorial design, fractional replication of 3K factorial design, factorials with mixed levels.
UNIT – IV
REGRESSION MODELS: Linear regression models, estimation of the parameters, hypothesis testing in multiple regression, confidence intervals in multiple regression, prediction of new response observations, regression model diagnostics.
UNIT – V
RESPONSE SURFACE METHODS: Introduction, method of steepest ascent, analysis of second-order response surface, experimental designs for fitting response surfaces.

TEXT BOOK:
1. D.C. Montgomery, “Design and Analysis of Experiments”, 5th edition, John Wiley and sons, 2009.

REFERENCE BOOKS:
1. D.C. Montgomery,” Introduction to Statistical Quality Control”, 4th edition, John Wiley and sons, 2001.

2. Angela Dean and Daniel Voss, "Design and Analysis of Experiments", Springer, 1999

Semester	III	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE19**
Name of the Course	**Convective Heat Transfer** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain free, forced convection and equations governing the phenomena	K2
CO2	Illustrate convection heat transfer in laminar, turbulent flows both internal & external	K3
CO3	Illustrate equations of natural convection laminar flow heat transfer	K3
CO4	Analyze equations of combined convection heat transfer in laminar and turbulent flows	K4
CO5	Explain convection heat transfer in porous media	K3

UNIT – I

Introduction to free, forced combined convection,convective heat transfer coefficient,Application of dimensional analysis to convection,Physical interpretation of dimensionless numbers.

EQUATIONS OF CONVECTIVE HEAT TRANSFER: Continuity, Navier,Strokes equation & energy equation for steady state flows,similarity,Equations for turbulent convective heat transfer,Boundary layer equations for laminar, turbulent flows,Boundary layer integral equations.

UNIT – II

EXTERNAL LAMINAR FORCED CONVECTION: Similarity solution for flow over an isothermal plate,integral equation solutions,Numerical solutions,Viscous dissipation effects on flow over a flat plate.

EXTERNAL TURBULENT FLOWS: Analogy solutions for boundary layer flows,Integral equation solutions,Effects of dissipation on flow over a flat plate.

INTERNAL LAMINAR FLOWS: Fully developed laminar flow in pipe, plane duct & ducts with other cross,sectional shapes,Pipe flow & plane duct flow with developing temperature field,Pipe flows & plane duct flow with developing velocity & temperature fields.

INTERNAL TURBULENT FLOWS: Analogy solutions for fully developed pipe flow –Thermally developing pipe & plane duct flow.

UNIT – III

NATURALCONVECTION: Boussineq approximation,Governingequations,Similarity,Boundary layer equations for free convective laminar flows, Numerical solution of boundary layer equations. Free Convective flows through a vertical channel across a rectangular enclosure,Horizontal enclosure,Turbulent natural convection.

UNIT – IV

COMBINED CONVECTION: Governing parameters & equations,laminar boundary layer flow over an isothermal vertical plate,combined convection over a horizontal plate,correlations for mixed convection,effect of boundary forces on turbulent flows,internal flows , internal mixed convective flows,Fully developed mixed convective flow in a vertical plane channel & in a horizontal duct.

UNIT – V

CONVECTIVE HEAT TRANSFER THROUGH POROUS MEDIA: Area weighted velocity,Darcy flow model, energy equation, boundary layer solutions for 2D forced convection, Fully developed duct flow, Natural convection in porous media, filled enclosures, stability of horizontal porous layers.

TEXT BOOK:

1. Convective Heat & Mass Transfer /Kays& Crawford/TMH

REFERENCE BOOKS:

1. Introduction to Convective Heat Transfer Analysis/ Patrick H. Oosthuigen & David Naylor, MGH.
2. Convection Heat Transfer / Adrian Bejan / Wiley
3. Principles of Convective Heat Transfer / Kaviany, Massoud /Springer

Semester	**III**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE20**
Name of the Course	**Extraction of Energy from Waste** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain energy from waste, types of waste and energy conversion devices.	K2
CO2	Explain the methods of yield of biomass	K2
CO3	Illustrate various gasifiers of biomass	K3
CO4	Illustration various combustors of biomass	K3
CO5	Explain concepts of biogas technology	K2

UNIT – I

INTRODUCTION TO ENERGY FROM WASTE: Classification of waste as fuel, Agro based, Forest residue, Industrial waste, MSW, Conversion devices, Incinerators, gasifiers, digesters

UNIT – II

BIOMASS PYROLYSIS: Pyrolysis, Types, slow fast, Manufacture of charcoal, Methods Yields and application, Manufacture of pyrolytic oils and gases, yields and applications.

UNIT – III

BIOMASS GASIFICATION: Gasifiers, Fixed bed system, Downdraft and updraft gasifier– Fluidized bed gasifiers, Design, construction and operation, Gasifier burner arrangement for thermal heating, gasifier engine arrangement and electrical power Equilibrium and kinetic consideration in gasifier operation.

UNIT – IV

BIOMASS COMBUSTION: Biomass stoves, Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation , Operation of all the above biomass combustors.

UNIT – V

BIOGAS: Properties of biogas (Calorific value and composition) , Biogas plant technology and status , Bio energy system , Design and constructional features , Biomass resources and their classification , Biomass conversion processes , Thermo chemical conversion , Direct combustion ,biomass gasification , pyrolysis and liquefaction , biochemical conversion , anaerobic digestion ,Types of biogas Plants, Applications , Alcohol production from biomass, Bio diesel production ,Urban waste to energy conversion , Biomass energy programmed in India.

TEXT BOOKS:

Semester	III	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE21
Name of the Course	**Advanced Finite Elements Methods** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various approaches to finite element formulations	K2
CO2	Illustrate the displacement, stresses of ID elements used in Finite element analysis	K3
CO3	Differentiate various 2D elements used in Finite element analysis	K4
CO4	Illustrate the iso parametric formulation and convergence criteria	K3
CO5	Analyze the various elements in structural analysis	K4

UNIT – I

FORMULATION TECHNIQUES: Methodology, Engineering problems and governing differential equations, finite elements., Variational methods-potential energy method, Raleigh Ritz method, strong and weak forms, Galerkin and weighted residual methods, calculus of variations, Essential and natural boundary conditions.

UNIT – II

ONE-DIMENSIONAL ELEMENTS: Bar, trusses, beams and frames, displacements, stresses and temperature effects.

UNIT – III

TWO DIMENSIONAL PROBLEMS: CST, LST, four nodded and eight nodded rectangular elements, Lagrange basis for triangles and rectangles, serendipity interpolation functions.
Axisymmetric Problems: Axisymmetric formulations, Element matrices, boundary Conditions. Heat Transfer problems: Conduction and convection, examples: - two-Dimensional fin.

UNIT – IV

ISOPARAMETRIC FORMULATION: Concepts, sub parametric, super parametric elements, numerical integration, Requirements for convergence, h-refinement and p-refinement, complete and incomplete interpolation functions, Pascal's triangle, Patch test.

UNIT – V

FINITE ELEMENTS IN STRUCTURAL ANALYSIS: Static and dynamic analysis, eigen value problems, and their solution methods, case studies using commercial finite element packages.

ANALYSIS OF NON LINEAR ELASTIC SYSTEMS: Introduction to nonlinear FEM, Nonlinear elastic analysis, Numerical integration for elastoplasticity.

TEXT BOOK:
1. Finite element methods by Chandrubatla & Belagondu.
2. The Finite Element Method in Engineering By Singiresu S. Rao, 5th Edition, Publisher: Butterworth-Heinemann.

REFERENCE BOOKS:

Department of Electronics and Communication Engineering

Date: 04.09.2021

Minutes of the 5th meeting of BOS
(Held on 03.09.2021)

The ECE Department 5thmeeting of Board of Studies (BOS) was conducted through online mode on 03.9.2021 at 11.00 A.M using ZOOM Application with following given link address.
https://us02web.zoom.us/j/83132873142.
Following external members have attended the meeting along with internal faculty members. The ECE HOD, Dr E. KusumaKumari, BOS Chairman headed the meeting.

Details of members attended:

S.N	Name of the BOS Member	Nominee	Address
1.	Dr.E.KusumaKumari	Chair person	Professor & Head, ECE, SVEC
2.	Prof.I. SanthiPrabha	University Nominee	Prof. in ECE Dept., University College of Engg., JNTUK, Kakinada
3.	Prof. NVSN. Sarma	Subject Expert	Director, IIIT Trichy Tiruchirapalli, Tamilnadu.
4.	Prof. M. VenugopalaRao	Subject Expert	Prof., ECE Dept., K.L.University, Vijayawada.
5.	Sri. Sunkavalli Siva Kumar	Alumni Nominee	Sr.Engineer, Qualcomm, Bangalore.
6.	ll Faculty Members in Dept.	Members	ECE Dept., SVEC

The following are the key points discussed in the meeting.

- **Item No.1 : Chairperson, BOS has welcomed all the members and given the Opening Remarks.**

- **Item No.2: Review & Approval of the VII& VIII Sem of B. Tech ECE of V18 Reg.**

  BOS members Reviewed the Course Structure and given Following Suggestions
  - Change the Course title of Radar Systems to Radar Engineering (V18ECT20) in VII semester
  - Change the Professional Elective course title from IoT: Concepts & Applications to IoT: Use cases(V18ECT24) in VII semester.
  - Removal of topic of “Efficiency of Non Matched Filter in the syllabus of Radar Engg. Course(V18ECT20) in VII Semester.
  - Rearrange the syllabus for course titled Optical Communication (V18ECT21) in VII semester.
  - Add One more Text book for the Bio-Medical Instrumentation Course (V18ECT35) in VIII semester.

  The approved course structure & Syllabus for the VII & VIII semesters of B. Tech ECE of V18 regulation was given in**Annexure-01**

- **Item No.3: Review & Approval the List of Open Elective Courses offered by ECE Dept., in VII &VIII Semesters B. Tech ECE of V18 Reg.**

  BOS Members suggested that toChange the Open elective course title in VII Semester “Principles of Wireless, Cellular Mobile Comm. is to “ Principles of Wireless Communication” (V18ECTOE4) and approved the Syllabus.

  Approved List of Courses and Syllabus was given in **Annexure -02**

- **Item No. 4: Review &Approval of the Proposed Course Structure and Syllabi for the III and IV Semester of B. Tech ECE under V20 Regulation.**

- BOS members reviewed and suggested that try to include Machine Learning Topics in Course titled as Skill Oriented Course (V20ECSOC01) in the III and IV Semester of B. Tech ECE under V20 Regulation and approved the Syllabus.
- In the III semester, the Course titled Probability Theory & Stochastic Processes can be approved in the Basic Science BOS meeting. ECE BOS members were accepted to that proposal.
- Approved the Proposed Course Structure and Syllabi for the III and IV Semester of B. Tech ECE under V20 Regulation.

  Approved List of Courses and Syllabus was given in **Annexure-03**

1. **Item No. 5: Approval of List of Courses offered to EEE Department in III Semester of B. Tech EEE under V20 Regulation.**

   BOS members approved the Syllabus and details are given in **Annexure-04**

2. **Item No. 6: Approval of Proposed course structure &syllabi for the courses offered in III & IV semesters of B. Tech ECT under V20 Regulation.**

   BOS members approved the Syllabus and details are given in**Annexure -05**.

3. **Item No. 7: Approval of Proposed course structure and Syllabi for M. Tech Programme with specialization of Embedded Systems & VLSI underV21 Regulations.**

   BOS Members Suggested that to include the MOOCS courses in III semester of the M. Tech Programme, approved the Course Structure and Syllabus. The details are given in **Annexure -06**.

Finally, the chairperson thanked all the BOS members and faculty. The meeting was ended at 12.30 P.M

Dr. E. Kusuma Kumari,
Chairperson, BOS

Annexure-01

Approved Course Structure &Syllabus for VII& VIII Semesters

			L	T	P	C
VII Sem.	**Radar Engineering**	**Course Code:V18ECT20**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Derive the radar range equation and to solve some analytical problems. **[K2]**
- CO2: Describe the operation of CW and FMCW Radar systems. **[K2]**
- CO3: Illustrate the principle of each and every block of MTI and Pulse Doppler Radar **[K2]**
- CO4: Distinguish the different methods used for tracking targets. **[K2]**
- CO5: Relate the Noise Figure and Noise Temperature in Radar Receivers **[K2]**
- CO6: Explain the various components of radar receiver and its performance. **[K2]**

UNIT–I:

Basics of Radar: Introduction, Maximum Unambiguous Range, simple Radar range Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications.

Radar Equation : Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise, Modified Radar Range Equation, SNR, Probability of Detection, Probability of False Alarm, Integration of Radar Pulses, Radar Cross Section of Targets (simple targets-sphere, cone-sphere), Transmitter Power, PRF and Range Ambiguities, System Losses.

UNIT–II:

CW and Frequency Modulated Radar: Doppler Effect, CW Radar – Block Diagram, Isolation between Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirements, Applications of CW radar.

FM-CW Radar: Range and Doppler Measurement, Block Diagram and Characteristics, FM-CW altimeter, Multiple Frequency CW Radar.

UNIT-III:

MTI and Pulse Doppler Radar: Introduction, Principle, MTI Radar with - Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers – Filter Characteristics, Blind Speeds, Double Cancellation, Nth Cancellation Staggered PRFs. Range Gated Doppler Filters. MTI Radar Parameters, Limitations to MTI Performance, MTI versus Pulse Doppler Radar.

UNIT –IV:

Tracking Radar: Tracking with Radar, Sequential Lobing, Conical Scan, Mono pulse Tracking Radar – Amplitude Comparison Mono pulse (one- and two- coordinates), Phase Comparison Mono pulse, Tracking in Range, Acquisition and Scanning Patterns, Comparison of Trackers.

UNIT –V:

Detection of Radar Signals in Noise: Introduction, Matched Filter Receiver – Response Characteristics and Derivation, Correlation Detection and Cross-correlation Receiver, Matched Filter with Non-white Noise, Noise Figure and Noise Temperature.

UNIT –VI:

Radar Receivers –Displays – types. Duplexers – Branch type and Balanced type, Circulators as Duplexers.

Introduction to Phased Array Antennas – Basic Concepts, Radiation Pattern, Beam Steering and Beam Width changes, Series versus parallel feeds, Applications, Advantages and Limitations.

TEXT BOOKS:

1. Introduction to Radar Systems – Merrill I. Skolnik, TMH Special Indian Edition, 2ndEd., 2007.
2. Radar Principles – Peebles, Jr., P.Z., Wiley, New York, 1998.
3. Microwave & Radar Engineering – G. SasibhushanaRao, Pearson Publications

REFERENCE BOOKS:

1. Introduction to Radar Systems, 3rd edition – M.I. Skolnik, TMH Ed., 2005
2. Microwave & Radar Engineering – M. Kulkarni, Umesh Publications, 3rd edition
3. Radar Engineering – GSN Raju, IK International.

VII Sem.	Optical Communication	Course Code:V18ECT21	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the overview of optical fiber communication, ray theory transmission and Concepts of modes.**[K2]**
CO2: Explain thoroughly the operation of optical sources, Quantum efficiency and power. **[K2]**
CO3:Classify different types of optical detectors and also explain the operation of optical Receiver.**[K2**
CO4:Illustrate the concept of power launching and power coupling for optical fibers. Discuss splicing techniques and connector losses. **[K3]**
CO5: Explain the types of fiber materials with their properties and fiber losses. **[K2]**
CO6:Construct optical link and becomes familiar with WDM concepts and measurement Techniques.**[K3]**

UNIT I
Introduction - Historical development, the general system, advantages of optical fiber communications. Optical fiber wave guides - Ray theory transmission, Total Internal Reflection, Acceptance angle, Numerical Aperture, Skew rays, Cylindrical fibers- Modes, V-number, Mode coupling, Step Index fibers, Graded Index fibers, Single mode fibers - Cut off wavelength, Mode Field Diameter, Effective Refractive Index, Related problems.

UNIT II
Optical sources-LEDs,Structures, Materials, Quantum efficiency, Power, Modulation, Power bandwidth product. Injection Laser Diodes- Modes, Threshold conditions, Laser diode rate equations, External quantum efficiency, resonant frequencies, Reliability Considerations.

UNIT III
Optical detectors- Physical principles of PIN and APD, Detector response time, Temperature effect on Avalanche gain, Comparison of Photo detectors, Optical receiver operation - Fundamental receiver operation, Digital signal transmission, error sources, Receiver configuration, Digital receiver performance, Probability of Error, Quantum limit, Analog receivers. Relatedproblems.

UNIT IV
Fiber materials - Glass, Halide, Active glass, Chalgenide glass, Plastic optical fibers. Signal Degradation in optical fibers - Attenuation, Absorption, Scattering and Bending losses, Core and Cladding losses, Information capacity determination, Group delay, Types of Dispersion: Material dispersion, Wave-guide dispersion, Polarization-Mode dispersion, Intermodal dispersion, Pulse broadening in Graded index fiber, Related problems.

UNIT V

Source to fiber power launching-Output patterns, Power coupling, Power launching, Equilibrium Numerical Aperture, Lensing Schemes for Coupling, Laser diode to fiber coupling. Fiber to Fiber joints – Mechanical misalignment, Fiber related losses, End face preparation, Fiber Splicing-Splicing techniques, Splicing single mode fibers, Optical fiber Connectors-Connector types, Single mode fiber connectors, Connector return loss, Multimode fiber joints, Singlemode fiber joints.

UNIT VI

Optical system design - Point-to- point links- System considerations, Link power budget, Rise time budget with examples, Line coding in Optical links, Operational Principles of WDM, Measurement of Attenuation and Dispersion, Eye pattern.

TEXT BOOKS:

1. Optical Fiber Communications – Gerd Keiser, McGraw-Hill International edition, 3rd Edition, 2000.
2. Fiber Optic Communication Systems – Govind P. Agarwal, John Wiley, 3rd Edition, 2004.

RERFERENCES:

1. Fiber Optic Communications – D.K. Mynbaev, S.C. Gupta and Lowell L. Scheiner, Pearson Education,2005.
2. Text Book on Optical Fiber Communication and its Applications – S.C.Gupta, PHI, 2005.
3. Fiber Optic Communications – Joseph C. Palais, 4th Edition, Pearson Education, 2004.

VII Sem.	Digital Image Processing	Course Code:V18ECT22	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Illustrate the different Transforms Techniques & their use in Image Processing Applications**(K3)**
CO2. Examine Spatial & frequency domain filtering like smoothing & sharpening Operation sonImages **(K4)**
CO3. Analyze Restoration operations/techniques on Images**(K4)**
CO4. Describe the Image compression Techniques and multi-resolution processing on Images**(K3)**
CO5. Analyze morphological operations on Images & Image segmentation**(K4)**
CO6. Illustrate the different color Image Processing Techniques on Images**(K3)**

UNIT-I

Introduction: Introduction to Image Processing, Fundamental steps in digital image processing, components of an image processing system, image sensing and acquisition, image sampling and quantization, some basic relationshipsbetweenpixels, an introductionto themathematicaltools used indigital imageprocessing.

Image Transforms: Need for image transforms, Discrete Fourier transform (DFT) of one variable, Extension tofunctions of two variables, some properties of the 2-D Discrete Fourier transform, Walsh Transform. Hadamard transform, Haar Transform, Slant transform, Discrete Cosine transform, Discrete Sine Transform,Comparison ofdifferent imagetransforms.

UNIT-II

Intensity Transformations and Spatial Filtering: Some basic intensity transformation functions,histogramprocessing,fundamentalsofspatialfiltering,smoothingspatialfilters , and sharpeningspatialfilters.

Filtering in the Frequency Domain: The Basics of filtering in the frequency domain, image Smoothingusingfrequencydomainfilters,Image Sharpeningusing frequencydomain filters, Selective filtering.

UNIT-III

Image Restoration and Reconstruction: A model of the image degradation / Restoration process, Noise models,restoration in the presence of noise only-Spatial Filtering, Periodic Noise Reduction by frequency domain filtering,Linear, Position – Invariant Degradations, Estimating the degradation function, Inverse filtering, Minimum mean square error (Wiener) filtering, geometric mean filter .

UNIT-IV

Image compression: Fundamentals, Basic compression methods: Huffman coding, Arithmeticcoding,LZWcoding,Run-Lengthcoding,Symbol-Basedcoding,Bit-Planecoding,BlockTransformcoding,

Wavelets and Multiresolution Processing: Image pyramids, subband coding, Multiresolution expansions, wavelettransformsin onedimensions &two dimensions, Wavelet coding.

UNIT-V

Image segmentation: Fundamentals, point, line, edge detection, thresholding and region –based segmentation.

MorphologicalImageProcessing: Erosion and dilation, opening and closing, basicmorphologicalalgorithmsforboundaryextraction,thinning,gray scale morphology.

UNIT-VI

Color image processing: color fundamentals, color models, pseudo color image processing, basics of full colorimage processing, color transformations, smoothing and sharpening. Image segmentation based on color, noise in colorimages, colorimagecompression.

TextBooks:

1. R.C.GonzalezandR.E.Woods,DigitalImageProcessing,3rdedition,PrenticeHall,2008.
2. Jayaraman,S.Esakkirajan,andT.Veerakumar,”DigitalImageProcessing”,TataMcGraw-Hill Education,2011.

ReferenceBooks:

1. AnilK.Jain,“FundamentalsofDigitalImageProcessing”,PrenticeHallofIndia,9thEdition,IndianReprint,2002.
2. B.Chanda,D.DuttaMajumder,“Digital ImageProcessingandAnalysis”,PHI,2009.

VII Sem.	IOT: Use Cases (Professional Elective-III)	Course Code:V18ECT24	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe M2M and IOT Technologies. **[K2]**
- CO2: Explain the layers and protocols in IOT. **[K2]**
- CO3: Describe various communication technologies used in IOT. **[K2]**
- CO4: Illustrate various hardware components required for IOT applications. **[K2]**
- CO5: Discuss the cloud technologies and their services. **[K2]**
- CO6: Explain the IoT Applications. **[K2]**

UNIT I – INTRODUCTION [1]
Introduction from M2M to IoT - An Architectural Overview, building architecture, Main design principles and needed capabilities, An IoT architecture outline, M2M and IoT Technology Fundamentals - Devices and gateways.

UNIT II – IOT PROTOCOLS [2]
Functionality of Layers in IoT –Study of protocols - Wireless HART, Z-Wave, 6LoWPAN, RPL, CoAP, MQTT.

UNIT III - COMMUNICATION TECHNOLOGIES IN IOT [2, 4]
Study of IoT Connectivity –IEEE 802.15.4,Zigbee, LPWAN, Wi-Fi, Bluetooth, 5G Era.

UNIT IV - SYSTEM HARDWARE [3, 4]
Sensors, Actuators, Radio Frequency Identification, Introduction to Embedded Devices for IoT - RASPBERRY PI, BeagleBone black.

UNIT V – Cloud Computing [3, 4]
Data Collection, Storage and Computing Using a Cloud Platform for IoT Applications/Services, AWS for IoT-Introduction to Amazon EC2.

UNIT VI - IOT APPLICATIONS [2, 3]
Applications - Smart and Connected Cities, Public Safety, Agriculture, and Healthcare.

TEXTBOOKS:
1. “From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence”, Jan Holler, VlasiosTsiatsis, Catherine Mulligan, Stefan Avesand, StamatisKarnouskos, David Boyle, 1st Edition, Academic Press, 2014.
2. IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things, David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry, and Cisco Press 800 East 96th Street Indianapolis, Indiana 46240 USA.
3. “Internet of Things (A Hands-on- Approach)”, Vijay Madisetti and ArshdeepBahga, 1stEdition, VPT, 2014.

4. Internet of Things - By Raj Kamal, McGraw-Hill Education. Copyright.

REFERENCE BOOKS:

1. From Internet of Things to Smart Cities: Enabling Technologies - edited by Hongjian Sun, Chao Wang, Bashar I. Ahmad, CRC Press -2018.

			L	T	P	C
VII Sem.	**CMOS ANALOG IC DESIGN (Professional Elective-III)**	**Course Code:V18ECT25**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe the Large and Small signal models of different Analog Devices**(K2)**
- CO2: Analyse the various types of current mirrors**.(K3)**
- CO3: Analyse the different types of single stage MOS amplifiers**.(K3)**
- CO4: Describe the Noise modelling of Various Circuit Elements**.(K2**)
- CO5: Illustrate the construction and working of OP-AMP**.(K3)**
- CO6: Illustrate the types of CMOS Comparators **.(K3)**

UNIT -I: Integrated circuit Devices and Modelling

Semiconductors and p-n junction: diodes reverse biased diodes, graded junctions, large signal junction capacitance and forward biased junctions small signal model of forward biased diode

The MOS Transistor**:** symbol for MOS Transistors, basic Operation, and Large signal modelling small signal modelling.

Bi-Polar Transistors: basic Operation, Large signal modelling small signal modelling

UNIT -II: Basic Current Mirrors

Basic CMOS current Mirrors, source Degenerated current mirror, Cascade current Mirror and Wilson Current Mirror, bipolar current mirror and Current mirror with Beta Helper.

UNIT -III: Single Stage Amplifiers

Common source amplifier, Source follower, common gate Amplifier, Cascode Gain stage amplifier and MOS Differential Amplifiers. Frequency response of Amplifiers.

UNIT -IV: Noise Analysis and Modelling

Time Domain Analysis of Noise**:** RMS, SNR, Units of dBm& Noise summation**.**

Frequency Domain Analysis of Noise**:** Noise spectral Density, White Noise, Flicker Noise, Noise filtering & Noise bandwidth**.**

Noise models for circuit elements**:** Resistors, Diodes, Transistors and MOSFETS

UNIT -V: CMOS Operational Amplifiers & Compensation

Block diagram of Op-amp, op-amp gain, frequency response &Slew Rate, op-amp Compensation

UNIT -IV: Comparators

Characterization of Comparator, Two-Stage,Open-Loop Comparators, Other Open-Loop Comparators, Improving the Performance of Open-Loop Comparators, Discrete- Time Comparators.

TEXT BOOKS:

1. Analog Integrated Circuit Design- David A.Johns, Ken Martin, Wiley Student Edn,2013.
2. CMOS Analog Circuit Design - Philip E. Allen and Douglas R. Holberg, Oxford University Press, International Second Edition/Indian Edition,2010.

REFERENCES:

VII Sem.	Digital TV Engineering (Professional Elective-III)	Course Code:V18ECT26	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Illustrate the fundamentals of television engineering. **[K2]**
- CO2:Explain the colour TV transmission and reception **[K2]**
- CO3: Compare Digital TV transmission standards **[K4]**
- CO4: Discuss factors affecting system noise and transmission errors **[K2]**
- CO5: Explain the Digital TV transmission and reception. **[K2]**
- CO6: Describe the operation of LCD and Plasma screens **[K2]**

UNIT I

Introduction: TV transmitter and receivers, synchronization

Television Pictures: Geometric form and aspect ratio, image continuity, interlaced scanning, picture resolution

Composite video signal: Horizontal and vertical sync details

TV Signal Transmission: VSB transmission, standard channel BW, TV transmitter

UNIT II

Colour Television: Perception of brightness and colours, additive colour mixing, video signals for colours, luminance signal, colour difference signals, encoding of colour difference signals, formation of chrominance signals, PAL encoder, PAL colour receiver

UNIT III

Digital Television Transmission Standards: ATSC terrestrial transmission standard, vestigial sideband modulation, DVB -T transmission standard, ISDB-T transmission standard, channel allocations, antenna height and power, MPEG-2.

UNIT IV

Performance Objectives for Digital Television: System noise, external noise sources, transmission errors, error vector magnitude, eye pattern, interference, co-channel interference, adjacent channel interference, analog to digital TV, transmitter requirements.

UNIT V

Digital Television: Digital System Hardware, Signal Quantization and Encoding, Digital Satellite Television, Direct to Home Satellite Television, Digital TV Receiver, Merits of Digital TV Receivers

UNIT VI

LCD and Plasma Screens: LCD Technology, LCD Matrix types and operation, LCD Screens for Television, Plasma and conduction of charge, Plasma TV Screens, Plasma Color Receiver, LCD color receiver

Text Books:

1. Modern Television Practice: Transmission, Reception and Applications- R. R.Gulati, 4th
Revised edition, New Age International Publishers.
2. Television and Video Engineering – A.M.Dhake, 2nd Edition, Tata McGraw Hill Publishers.
3. Fundamentals of Digital Television Transmission- Gerald W. Collins, John Wiley & Sons.
4. Television engineering and video systems – R G Gupta, Tata McGraw Hill Publishers.

References

1. Basic Television and Video Systems – Bernard Grob, McGrawHill Publishers.
2. Monochrome and Colour Television - R RGulati, New Age International Publishers.
3. Colour Television, Theory and Practice - S.P.Bali, Tata McGraw-Hill Publishers.

VII Sem.	Low Power IC Design (Professional Elective-IV)	Course Code:V18ECT27	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain theneedofLowpowercircuit design **(K2)**.
- CO2: Describe thedifferent architectural approaches **(K2)**.
- CO3: AnalyzeLow-PowerDesignApproaches**(K4).**
- CO4: AnalyzeanddesignLow-VoltageLow-PowerAdders circuits**(K4).**
- CO5: AnalyzeanddesignLow-VoltageLow-PowerMultiplier circuits**(K4).**
- CO6: Analyze and designofLow-Voltage Low-Power Memories**(K4).**

UNIT–I:
Fundamentals: Need for Low Power CircuitDesign,Sources of Power Dissipation–Switching Power Dissipation, Short Circuit Power Dissipation, Leakage Power Dissipation,Glitching Power Dissipation, Short Channel Effects.

UNIT–II:
SupplyVoltageScalingfor LowPower: DeviceFeatureSize Scaling,Constant-FieldScaling, Constant-Voltage Scaling, Architectural-Level Approaches: Parallelism for LowPower, Pipelining for Low Power, Combining Parallelism with Pipelining.
VoltageScalingUsingHigh-LevelTransformations: MultilevelVoltageScalingChallengesinMVSVoltageScalingInterfaces,StaticTimingAnalysisDynamicVoltageandFrequencyScaling.

UNIT-III
Low-PowerDesignApproaches: Low-PowerDesignthroughVoltageScaling VTCMOScircuits,MTCMOScircuits,ArchitecturalLevelApproach–PipeliningandParallelProcessing Approaches. Power Gating, Clock Gating Versus Power Gating, Power-Gating Issues.

UNIT–IV:
Low-Voltage Low-Power Adders: Introduction, Standard Adder Cells, CMOS Adder’sArchitectures – Ripple Carry Adders, Carry Look- Ahead Adders, Carry Select Adders,Carry Save Adders, Low-Voltage Low-Power Design Techniques –Trends of TechnologyandPowerSupplyVoltage.

UNIT-V
Low-Voltage Low-Power Multipliers: Introduction, Overview of Multiplication, Types ofMultiplierArchitectures,BraunMultiplier,Baugh-WooleyMultiplier,IntroductiontoWallace TreeMultiplier.

UNIT–VI:

Low-Voltage Low-Power Memories: Basics of ROM,Low-Power ROM Technology,Future Trend and Development of ROMs, Basics of SRAM, Memory Cell, Pre-charge andEqualization Circuit, Low-Power SRAM Technologies, Basics of DRAM, Self-RefreshCircuit,FutureTrendandDevelopmentofDRAM.

TEXTBOOKS:

1. CMOSDigitalIntegratedCircuits–AnalysisandDesign–Sung-Mo Kang,Yusuf Leblebici, TMH,2011.
2. Low-Voltage,Low-PowerVLSISubsystems–Kiat-SengYeo,KaushikRoy,TMH ProfessionalEngineering,1st edition,2004

REFERENCEBOOKS:

1. IntroductiontoVLSISystems:ALogic,CircuitandSystemPerspective–Ming-BO Lin,CRCPress,2011
2. Low Power CMOS VLSI Circuit Design – Kaushik Roy, Sharat C. Prasad,JohnWiley&Sons,2000.
3. PracticalLowPowerDigitalVLSI Design–GaryK.Yeap,Kluwer AcademicPress,2002.
4. LeakageinNanometerCMOSTechnologies–SivaG.Narendran,AnathaChandrakasan, Springer,2005.

VII Sem.	System on Chip (Professional Elective-IV)	Course Code:V18ECT28	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe SOC System Approach, design and its Architecture.**[K2]**
- CO2: Discuss the selection of processor and its microarchitecture for SOC**[K2]**
- CO3: Describe Memory Design for SOC **[K2]**
- CO4: Explain the concepts of bus models and Interconnect Architectures **[K2]**
- CO5: Describe the overview of Zynq SOC**[K2]**
- CO6: Explain the SOC based Applications. **[K2]**

UNIT – I: Introduction to the System Approach: System Architecture, Components of the system, Hardware & Software, Processor Architectures, Memory and Addressing. System level interconnection, an approach for SOC Design, SystemArchitecture and Complexity.

UNIT – II : Processors: Introduction , Processor Selection for SOC, Basic concepts in Processor Architecture, Basic concepts in Processor Micro Architecture, Basic elements in Instruction handling. Buffers: minimizing Pipeline Delays, Branches, More Robust Processors, Vector Processors and Vector Instructions extensions, VLIW Processors, Superscalar Processors.

UNIT – III : Memory Design for SOC: Overview of SOC external memory, Internal Memory, Size, Scratchpads and Cache memory, Cache Organization, Cache data, Write Policies, Strategies for line replacement at miss time, Types of Cache, Split – I, and D – Caches, Multilevel Caches, Virtual to real translation , SOC Memory System, Models of Simple Processor – memory interaction.

UNIT – IV : Interconnect Customization and Configuration: Inter Connect Architectures, Bus: Basic Architectures, SOC Standard Buses , Analytic Bus Models, Using the Bus model, Effects of Bus transactions and contention time. SOC Customization: An overview, Customizing Instruction Processor, Reconfiguration Technologies, Mapping design onto Reconfigurable devices, Instance Specific design, Customizable Soft Processor.

UNIT-V: Zynq system on chip design overview: interfacing and signals, interconnects, Memory and interrupts.

UNIT – VI: Application Studies / Case Studies: SOC Design approach, Design and evaluation - AES algorithms, Image compression – JPEG compression.

TEXT BOOKS:

1. Computer System Design System-on-Chip - Michael J. Flynn and Wayne Luk, Wiely India Pvt. Ltd.
2. Embedded Processing with the ARM Cortex-A9 on the Xilinx Zynq-7000 All Programmable SoC-Louise H. Crockett Ross A. Elliot Martin A. Enderwitz Robert W. Stewart
3. Design of System on a Chip: Devices and Components – Ricardo Reis, 1st Ed., 2004, Springer

REFERENCE BOOKS:

1. Co-Verification of Hardware and Software for ARM System on Chip Design (Embedded Technology) – Jason Andrews – Newnes, BK and CDROM.

2. System on Chip Verification – Methodologies and Techniques – PrakashRashinkar, Peter Paterson and Leena Singh L, 2001, Kluwer Academic Publishers.

			L	T	P	C
VII Sem.	System Design Through VERILOG (Professional Elective-IV)	Course Code:V18ECT29	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Outline basic concepts of RTL code for digital circuits **K2**
- CO1: Model RTL codes for digital circuit at gate level **K3**
- CO1: Model RTL codes for digital circuit at behavioural level **K3**
- CO1: Model RTL codes for digital circuit at data flow and switch level **K3**
- CO1: Ouline the concepts of task, function and complier directives **K2**
- CO1: Analyze Synthesize of Combinational and Sequential Circuits **K4**

UNIT-I

INTRODUCTIONTOVERILOG:

Verilog as HDL, Levels of design description, concurrency, module, simulation and synthesis, testbench,functional verification,programminglanguageinterface (PLI),simulationand synthesistools.

LANGUAGECONSTRUCTSANDCONVENTIONS:

Introduction,keywords, identifiers, whitespace characters, comments, numbers, strings, logic values, data types,scalarsandvectors,parameters,memory,operators,systemtasks.

UNIT-II

GATELEVELMODELLING:

Introduction, and gate primitive, module structure, other gate primitives, illustrative examples, tristate gates, arrayof instances of primitives, design of Flip flops with gate primitives, delays, strengths and contention resolution, nettypes,designofbasic circuits.

UNIT-III

BEHAVIORALMODELLING:

Introduction,operationsandassignments,initial construct,alwaysconstruct,examples,assignmentswith delays, wait construct, multiple always blocks, designs at behavioral level, blocking and non-blocking assignments, the case statement, if and if else constructs, assign-De assign construct,repeat construct, FOR loop, the disable construct, While loop, Forever loop, parallel blocks, force-release construct,event.

UNIT-IV

DATA FLOWLEVEL MODELLING

Introduction, continuous assignment structures, delays and continuous assignments, assignment to vectors.

SWITCHLEVELMODELLING

Basictransistor switches, CMOS switch, Bidirectional gates and time delays with switch primitives, instantiations withstrengthsanddelays,strengthcontentionwithtriregnets, switch level modeling for NAND, NOR and XOR.

UNIT-V

SYSTEM TASKS, FUNCTIONS, AND COMPILER DIRECTIVES: Introduction, System Tasks and Functions, File based Tasks and Functions, Compiler Directives, Hierarchical Directives, User-defined Primitives (UDP), FSM Design (Moore and Melay Machines).

UNIT-VI

SYNTHESISOFCOMBINATIONAL ANDSEQUENTIAL LOGIC USINGVERILOG: SynthesisofCombinational logic: Net list of structured primitives, a set of continuous assignment statements and level sensitivecyclic behavior with examples, Synthesis of priority structures, exploiting logic don't care conditions.

Synthesis ofsequential logic with latches: Accidental synthesis of latches and Intentional synthesis of latches, Synthesis ofsequentiallogicwithflip-flops,Synthesisofexplicitstatemachines.

TEXTBOOKS:

1. DesignthroughVerilogHDL—T.R.PadmanabhanandB. BalaTripuraSundari, WSE,IEEEPress,2004.
2. AdvancedDigitalDesignwithVerilog HDL—MichaelD.Ciletti,PHI,2005.

REFERENCES:

1. FundamentalsofLogicDesignwithVerilog—Stephen.BrownandZvonkoVranesic,TMH,2005.
2. AVerilogPrimier—J.Bhasker,BSP,2003.

VII Sem.	Microwave & Optical Comm. Lab	Course Code:V18ECL11	L	T	P	C
			0	0	3	1

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Sketch the characteristics of various Microwave & Optical sources **(K3)**

CO2. Compute the various Parameters of Microwave & Optical Components **(K3)**

CO3. Measure the radiation pattern of Horn antenna and reflector antenna. **(K5)**

CO4. Analyzea rectangular microstrip patch antenna using HFSS software **(K4)**

Minimum Twelve Experiments to be conducted:

Part – A (Any 7 Experiments):

1. Reflex Klystron Characteristics.
2. Gunn-Diode Characteristics.
3. Attenuation Measurement.
4. Directional Coupler Characteristics.
5. Impedance and Frequency Measurement.
6. Scattering parameters of Circulator.
7. Scattering parameters of Magic Tee.
8. Radiation Pattern of Horn and Parabolic Antennas.
9. Synthesis of Microstrip antennas (Rectangular Structure) Using HFSS.

Part – B (Any 5 Experiments):

10. Characterization of LED.
11. Characterization of Laser Diode.
12. Intensity modulation of Laser output through an optical fiber.
13. Measurement of Data rate for Digital Optical link.
14. Measurement of NA.
15. Measurement of losses for Analog Optical link.

Equipment required for Laboratories:

1. Klystron Power Supply, Klystron mount
2. VSWR Meter
3. Micro Ammeter
4. Multi meter
5. CRO
6. GUNN Power Supply, Pin Modulator
7. Crystal Diode detector
8. Attenuator
9. Frequency Meter
10. Slotted line carriage
11. Probe detector

12. Wave guide shorts
13. SS Tuner
14. Directional Coupler
15. E, H, Magic Tees
16. Circulators, Isolator
17. Matched Loads
18. Pyramidal Horn and Parabolic Antennas
19. Turntable for Antenna Measurements
20. HFSS Software
21. Fiber Optic Analog Trainer based LED
22. Fiber Optic Analog Trainer based laser
23. Fiber Optic Digital Trainer
24. Fiber cables - (Plastic, Glass)

VIII-Semester Syllabus

VIII Sem.	Cellular & Mobile Communication	Course Code:V18ECT30	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the limitations of conventional mobile telephone systems; Understand the concepts of cellular systems. **[K2]**
CO2:Illustrate the concept of frequency Reuse channels, deduce Co- channel Interference reductionfactor **[K2]**
CO3: Understand the frequency management, channel assignment strategies and Antennas in cellular systems.**[K2]**
CO4:DiscusstheconceptsofHandoff,droppedcallsandcellsplitting,Intersystem Handoff. **[K2]**
CO5:Explain theknowledgeaboutGSM architecture and GSM channels,multiple Accessschemes like FDMA,TDMA and CDMA. **[K2]**
CO6: Summarize the concepts of upcoming technologies like 3G, 4G etc. **[K2]**

UNIT-I CELLULAR MOBILE RADIO SYSTEMS: Introduction to Cellular Mobile System, uniqueness of mobile radio environment, operation of cellular systems, consideration of the components of Cellular system, Hexagonal shaped cells, Analog and Digital Cellular systems.

CELLULAR CONCEPTS: Evolution of Cellular systems, Concept of frequency reuse, frequency reuse ratio, Number of channels in a cellular system, Cellular traffic: trunking and blocking, Grade of Service; Cellular structures: macro, micro, pico and femto cells; Cell splitting, Cell sectoring.

UNIT-II INTERFERENCE: Types of interferences, Introduction to Co-Channel Interference, real time Co-Channel interference, Co-Channel measurement, Co-channel Interference Reduction Factor, desired C/I from a normal case in a Omni directional Antenna system, design of Antenna system, antenna parameters and their effects, diversity receiver, non-cochannel interference-different types.

UNIT-III FREQUENCY MANAGEMENT AND CHANNEL ASSIGNMENT: Numbering and grouping, setup access and paging channels, channel assignments to cell sites and mobile units: fixed channel and non-fixed channel assignment, channel sharing and borrowing, overlaid cells. CELL COVERAGE FOR SIGNAL AND TRAFFIC: Signal reflections in flat and hilly terrain, effect of human made structures, phase difference between direct and reflected paths, straight line path loss slope, and general formula for mobile propagation over water and flat open area, near and long distance propagation, antenna height gain, form of a point to point model.

UNIT-IV HANDOFF STRATEGIES Concept of Handoff, types of handoff, handoff initiation, delaying handoff, forced handoff, mobile assigned handoff, intersystem handoff, vehicle locating methods, dropped call rates and their evaluation.

UNIT-V DIGITAL CELLULAR NETWORKS: GSM architecture, GSM channels, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;

UNIT-VI HIGHER GENERATION CELLULAR STANDARDS: 3G System architecture (UMTS) enhancements in 4G standard, Architecture and representative protocols, introduction to 5G.

TEXTBOOKS:

1. Mobile Cellular Telecommunications – W.C.Y. Lee, Tata McGraw Hill, 2rd Edn,
2006.
2. Principles of Mobile Communications – Gordon L. Stuber, Springer International
2ndEdition, 2007.

REFERENCES:

1. Wireless Communications – Theodore. S. Rapport, Pearson education, 2nd Edn, 2002.
2. Wireless and Mobile Communications – Lee McGraw Hills, 3rd Edition, 2006. 3. MobileCellular Communication – G SasibhushanaRao PearsonWireless Communication and Networking – Jon W. Mark and WeihuaZhqung, PHI,
2005.
4. Wireless Communication Technology – R. Blake, Thompson Asia Pvt. Ltd., 2004.

			L	T	P	C
VIII Sem.	**Electronics Measurements & Instrumentation (Professional Elective-V)**	**Course Code:V18ECT31**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Select the instrument to be used based on the requirements.**[K2]**
CO2. Understand the design of oscilloscopes for different applications.**[K2]**
CO3. Explain different signal generators and analyzers.**[K2]**
CO4. Understand the design of different types of Bridge circuits for different Applications.**[K2]**
CO5. Explain and Design different types of transducers for differentApplications. **[K2]**
CO6. Explain different types of transducers for measurement of Physical parameters. **[K2]**

UNIT-I
Performance characteristics ofinstruments, Static characteristics, Accuracy, Resolution, Precision, Expected value, Error, Sensitivity.Errors in Measurement, Dynamic Characteristics-speed of response, Fidelity, Lag and Dynamicerror. DC Voltmeters- Multi-range, Range extension/Solid state and differential voltmeters, AC voltmeters- multirange, range extension, shunt. Thermocouple type RF ammeter, Ohmmeters series type, and shunt type, Multi-meter for Voltage, Current and resistance measurements.

UNIT-II
Oscilloscopes CRT features, vertical amplifiers, horizontal deflection system, sweep, trigger pulse, delay line, sync selector circuits, simple CRO, triggered sweep CRO, Dual beam CRO, Dual trace oscilloscope, sampling oscilloscope, storage oscilloscope, digital readout oscilloscope, digital storage oscilloscope, Lissajous method of frequency measurement, standard specifications of CRO, Probes for CRO-Active & Passive, attenuator types.

UNIT-III
Signal Generator- fixed and variable, AF oscillators, Standard and AF sine and square wave signal generators, Function Generators, Square pulse, Random noise, sweep, Arbitrary waveform. Wave Analyzers, Harmonic Distortion Analyzers, Spectrum Analyzers, Digital Fourier Analyzers.

UNIT-IV
DC Bridges: Measurement of Resistance-Wheatstone's Bridge, Kelvin's Bridge. AC Bridges: Measurement of inductance- Maxwell's bridge, Hay's bridge, Anderson Bridge. Measurement of capacitance-Schering's Bridge. Measurement of Frequency-Wien Bridge, Errors and precautions in using bridges.Q-meter.

UNIT-V

Transducers- active & passive transducers : Resistance, Capacitance, inductance; Strain gauges, LVDT, Piezo Electric transducers, Resistance Thermometers, Thermocouples, Thermistors, Sensistors.

UNIT-VI

Measurement of physical parameters- Force,Pressure, Velocity, Acceleration, Humidity, Moisture, Proximity, Displacement.Data acquisition systems.

TEXTBOOKS:

1. Electronic Instrumentation, second edition-H.S. Kalsi, Tata McGrawHill,2004.
2. Modern Electronic Instrumentation and Measurement Techniques–A.D. Helfrick and W.D.Cooper, PHI, 5thEdition, 2002.

REFERENCES:

1. Electronic Instrumentation &Measurements- David A. Bell, PHI, 2ndEdition,2003.
2. Electronic Test Instruments, Analog and Digital Measurements-Robert A. Witte, Pearson Education, 2ndEdition, 2004.
3. Electronic Measurements & Instrumentations by K. LalKishore, Pearson Education-2005.
4. Electronic Measurements & Instrumentation by UdayA.Bakshi& Ajay V. Bakshi
Technical Publications

			L	T	P	C
VIII Sem.	**FPGA Architecture (Professional Elective-IV)**	**Course Code:V18ECT32**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Low end programmable devices.**[K2]**
CO2: Explain FPGA basics.**[K2]**
CO3: Comprehend Spartan 6 basics.**[K2]**
CO4: Use Virtex 5 clock sources and FIFO. Comprehend various I/O standards.**[K2]**
CO5: Use Memory, DSP blocks in complex designs. Comprehend SerDes.**[K2]**
CO6: Comprehend JTAG. Distinguish RISC based Soft processors from Xilinx, Aletra.**[K2]**

UNIT-I
DESIGNING WITH PROGRAMMABLE LOGIC DEVICES:
Read only Memories, Programmable logic Arrays (PLA), Programmable Array logic (PAL), Programmable logic Devices (PLD) Skew, setup, hold time.

UNIT-II
DESIGNING WITH FPGA:
Logic implementation options, Technology trends, Simple SRAM programmable FPGA architecture, Xilinx 3000 series FPGAs, Programmable interconnects, Xilinx 4000 series FPGAs, Programming the FPGA.

UNIT-III
SPARTAN 6 ARCHITECUTUTE:
Spartan 6 Device features- 6 input LUT, Slice, Single Port RAM, Dual Port RAM, ROM, Distributed RAM, 32 x 6, 64 x 1, 128 x 1, Distributed RAM timings, Shift Registers, Multiplexers, Interconnect, PLL, DCM, DSP Slice.

UNIT-IV
VIRTEX 5 ARCHITECTURE:
Clock resources-Global clocks, regional clocks, Clock buffer, Clock Gating.Clock Tree, Clock De-skew, True Dual port RAM. Write modes, FIFO architecture, empty flags, almost empty flags, almost fill flags, full flag, cascading FIFOS, connecting FIFOs in parallel, designing Large multiplexer 4xl, 8xl, 16xl. Control impedance, I/O primitives. I/O supported standards, LVDS.

UNIT-V
STARATIX V ARCHITECTURE:
ALM Block diagram, ALM operating modes, ALM in Arithmetic mode, Types of embedded memory, Control clocking, Memory features, Memory modes, DSP block features, operational modes, DSP block architecture in 27 X 27 mode, independent complex multiplier mode, I/O features mixing voltage referenced and non-voltage referenced standard I/O features standards. Dynamic OCT.LVDS SerDes block diagram and features, Differential Receiver Block diagram and features.

UNIT-VI
SOFT PROCESSORS:
JTAG, programming through JTAG, IEEE 1149.1 Boundary scan testing, programmable power technology, Features of Soft processors, Nios-II, Microblaze.

TEXT BOOKS:

1. Charles H Roth Jr "Digital System Design using VHDL", second edition, 2008.
2. Spartan 6 family overview.
3. Virtex 5- User Guide.
4. Staratix V Device Hand Book.
5. Nios-II, Microblaze Features – Altera, Xilinx.

REFERENCES:

1. J. Old Field,R.Dorf, "Field Programmable Gate Arrays", John Wiley & Sons, New York, 1995.
2. S. Trimberger, Edr."Field Programmable Gate Arrays Technology", Kluwer Academic Publications, 1994.
3. Bob Zeidman, "Designing with FPGAs & CPLDs", CMP Books, 2002.

			L	T	P	C
VIII Sem.	**Principles ofModern Wireless Communication Systems (Professional Elective-V)**	**Course Code:V18ECT33**	**3**	**0**	**0**	**3**

Syllabus Details

CO1: Describe how to measure the performance of wireless system, in multipath Environment **[K2]**
CO2:Summarize about Wireless Channel. **[K2]**
CO3:Explain Principle and properties of CDMA. **[K2]**
CO4:Discuss the working and advantages of MIMO wireless communication systems**[K2]**
CO5:Explain the principle and advantages of OFDM system**[K2]**
CO6: Describe of various modern wireless communication technologies**[K2]**

UNIT-I

Principles of Wireless Communication: The wireless communication environment, modelling of wireless systems, system model for narrowband signals, Rayleigh fading wireless channel, BER performance of wireless systems, channel estimation in wireless systems, Diversity in wireless communication, multiple antenna receive model, BER in multiple antenna system, channel estimation in multiple antenna system.

UNIT-II

Wireless Channel: Basics of Wireless Channel Modelling, Maximum Delay Spread, RMS Delay Spread, RMS Delay Based on Average Power Profile, Average Delay Spread in Outdoor Cellular Channels, Coherence Bandwidth in Wireless Communications, Relation between ISI and Coherence Bandwidth.

UNIT-III

Code Division Multiple Access: Fundamentals of CDMA codes, Spreading codes based on Pseudo-Noise sequences, correlation properties of random CDMA spread sequences, Multi-user CDMA, Advantages of CDMA, CDMA near far problem and power control.

UNIT-IV

Multiple Input Multiple Output Wireless Communications: Introduction to MIMO wireless Communications, MIMO System model, MIMO zero forcing (ZF) receiver, MIMO MMSE receiver, Singular Value Decomposition (SVD) of theMIMO channel, MIMO capacity, Asymptotic MIMO capacity, MIMO beam forming.

UNIT-V

Orthogonal Frequency Division Multiplexing: Introduction to OFDM, multicarrier transmission, cyclic prefix in OFDM, BER for OFDM, MIMO-OFDM, effect of frequency offset in OFDM, Peak to Average Power ratio in OFDM, SC-FDMA.

UNIT-VI

Recent advancements in wireless technology: Introduction to 4G LTE, VoLTE, 5G Technology, NOMA and Massive MIMO.

Text Books:

1. Aditya K. Jagannatham, “Principle of Modern Wireless Communication Systems: Theory and practice” 1st Edition, McGrawHill Publication
2 Theodore S. Rappaport, “Wireless Communications: Principles and Practice” Second Edition, Pearson Education

Reference Books:

1. Simon Haykin, MichaleMoher, “Modern Wireless Communications”, Pearson.
2. Xiaodong Wang, H. Vincent Poor, “Wireless Communication Systems: Advanced Techniques for Signal Reception”, Pearson 5 Proakis J.J.,D Wozencraft J.M. and Jacobs I.M., Principles of Communication Engineering, John Wiley

VIII Sem.	Satellite Communication (Professional Elective-VI)	Course Code:V18ECT34	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Describe the basic concepts of Satellite Communications & analyze the concepts of
Orbital mechanics & Launchers**(K4)**

CO2.Discuss the major Sub-Systems of a Satellite**(K2)**

CO3.Design the Communication Link for Satellite**(K4)**

CO4.Compare the various Multiple Access Techniques**(K3)**

CO5.Analyze the various sub-systems used in Earth stations & review the different orbits**(K4)**

CO6.Analyze the Satellite Navigation & the Global positioning system **(K4)**

UNIT-I

Introduction: Origin of Satellite Communications, Historical Back-ground, Basic Concepts of Satellite Communications, Frequency allocations for Satellite Services, Applications, Future Trends of Satellite Communication.

Orbital Mechanics and Launchers: Orbital Mechanics, Look Angle determination, Orbital perturbations, Orbit determination, launches and launch vehicles, Orbital effects in communication systems performance.

UNIT-II

Satellite Subsystems: Attitude andorbit control system, telemetry, tracking, Command &monitoring, power systems, communication subsystems, Satellite antenna Equipment reliability and Spacequalification.

UNIT-III

Satellite Link Design: Basic transmission theory, system noise temperature and G/T ratio, Design of down links, up link design, Design of satellite links for specified C/N, System design example.

UNIT-IV

Multiple Access: Frequency division multiple access (FDMA), Intermodulation, Calculation of C/N. Time division Multiple Access (TDMA), Frame structure, Examples. Satellite Switched TDMA Onboard processing, DAMA, Code Division Multiple access (CDMA), Spread spectrum transmission and reception.

UNIT-V

Earth Station Technology: Introduction, Transmitters, Receivers, Antennas, Tracking systems, Terrestrial interface, Primary power test methods.

Low Earth Orbit and Geo-Stationary Satellite Systems: Orbit consideration, coverage and frequency considerations, Delay & Throughput considerations, System considerations, Operational NGSO constellation Designs

UNIT-VI
Satellite Navigation & The Global Positioning System: Radio and Satellite Navigation, GPS Position Location principles, GPS Receivers and codes, Satellite signal acquisition, GPS Navigation Message, GPS signal levels, GPS receiver operation, GPS C/A code accuracy, Differential GPS.

Text Books:

1. Satellite Communications – Timothy Pratt, Charles Bostian& Jeremy Allnutt, WSE, Wiley Publications, 2nd Edition, 2003.
2. Satellite Communications Engineering – Wilbur L. Pritchard, Robert A Nelson & Henri G.Suyderhoud, 2nd Edition, Pearson Publications, 2003.

References:

1. Satellite Communication: Design Principles – M. Richharia, BS Publications, 2nd Edition, 2003.
2. Satellite Communication - D.C Agarwal, Khanna Publications, 5th Ed.
3. Fundamentals of Satellite Communications – K.N. Raja Rao, PHI, 2004
4. Satellite Communications – Dennis Roddy, McGraw Hill, 2nd Edition, 1996.

			L	T	P	C
VIII Sem.	**Bio-Medical Engineering (Professional Elective-VI)**	**Course Code:V18ECT35**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain the basics concepts of Bio-Medical Instrumentation. **[K2]**
- CO2: Explain the concepts of electrode theory, classification of Electrodes and Transducers used in Bio-Medical Applications.**[K2]**
- CO3: Explainhe Anatomy and Physiology of Cardiovascular system and Illustrate the application of Bio-Medical Instruments to measure the Physiological parameters of Cardiovascular System.**[K2]**
- CO4: Discuss the processing methods in elements used for Patient's Health care & monitoring.**[K2]**
- CO5: Explain the Principles of Diagnostic Techniques and the concepts of Bio-Telemetry.**[K2]**
- CO6: Classify different types of monitors, discuss the principles of recorders and Illustrate the methods of accident preventions i.e. Shock Hazards from different Electrical Equipment.**[K2]**

UNIT-I:

INTRODUCTIONTOBIOMEDICALINSTRUMENTATION: AgeofBiomedicalEngineering, Development of Biomedical Instrumentation, Man Instrumentation System, Components of the Man-InstrumentSystem, Physiological System of the Body, Problems Encountered in Measuring a Living System, Sources ofBioelectric Potentials, Muscle, Bioelectric Potentials, Sources of Bioelectric Potentials, Resting and ActionPotentials,BioelectricPotentials-ECG,EEGandEMG,EvokedResponses.

UNIT-II:

ELECTRODES AND TRANSDUCERS: Introduction, Electrode Theory, Biopotential Electrodes, ExamplesofElectrodes,BasicTransducerPrinciples ,TheTransducerandTransductionPrinciples, Active Transducers, Passive Transducers, Transducers for Biomedical Applications, Pulse Sensors,RespirationSensor, Transducers with Digital Output.

UNIT-III:

CARDIOVASCULAR SYSTEM AND MEASUREMENTS: The Heart and Cardiovascular System, ElectroCardiography, Blood Pressure Measurement, Measurement of Blood Flow and Cardiac Output, Measurement ofHeartSounds, Plethysmography.

MEASUREMENTSINTHERESPIRATORYSYSTEM: ThePhysiologyofTheRespiratorySystem,TestsandInstrumentationfortheMechanicsofBreathing,RespiratoryTherapyEquipment.

UNIT-IV:

PATIENTCAREANDMONITORING: ElementsofIntensive-CareMonitoring,PatientMonitoringDisplays, Diagnosis, Calibration and Repair ability of Patient-Monitoring Equipment, Other Instrumentation forMonitoring Patients, Organization of the Hospitalfor Patient-Care Monitoring, Pacemakers, Defibrillators.

UNIT-V:

DIAGNOSTIC TECHNIQUES AND BIO-TELEMETRY: Principles of Ultrasonic Measurement, UltrasonicImaging,UltrasonicApplicationsofTherapeuticUses,UltrasonicDiagnosis,X-RayandRadio-IsotopeInstrumentations,CATScan,EmissionComputerizedTomography,MRI,IntroductiontoBiotelemetry,Physiological Parameters Adaptable to Biotelemetry, The Components of Biotelemetry System, ImplantableUnits,TelemetryforECGMeasurementsduring Exercise, Telemetryfor EmergencyPatient Monitoring

UNIT-VI:

MONITORS,RECORDERSANDSHOCKHAZARDS:
BiopotentialAmplifiers,Monitors,Recorders,Shock Hazards and Prevention, Physiological Effects and Electrical Current, Shock Hazards from ElectricalEquipment,Methods ofAccident Prevention,IsolatedPowerDistribution System.

TextBooks:

1. "Bio-MedicalElectronicsand Instrumentation", OnkarN.Pandey,RakeshKumar, KatsonBooks.
2. "Bio-MedicalInstrumentation",Cromewell,Wiebell,Pfeiffer

References:

1. "HandBookofBio-MedicalInstrumentation",Khandapur.McGrawHill

2. "IntroductiontoBio-medicalEquipmentTechnology",4thEdition,JosephJ.Carr,JohnM.Brown,Pearson Publications.

VIII Sem.	Wireless Sensor Networks (Professional Elective-VI)	Course Code:V18ECT36	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain the concepts of Wireless Sensor Networks, its Architecture. **[K2]**
- CO2: Describe the Networking Technologies. **[K2]**
- CO3: Explain the MAC Protocols. **[K2]**
- CO4: Illustrate the Routing Protocols. **[K2]**
- CO5: Describe the Transport Layer Protocols. **[K2]**
- CO6: Explain the Security Layer Protocols and Applications of WSN. **[K2]**

UNIT-I –Introduction to Wireless Sensor Networks:
Key definitions of sensor networks, Advantages of sensor Networks, Unique constraints and challenges, Driving Applications, Enabling Technologies for Wireless Sensor Networks. Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, Operating Systems and Execution Environments, Network Architecture - Sensor Network Scenarios, Gateway Concepts.

UNIT-II - Networking Technologies:
Physical Layer and Transceiver Design Considerations, Personal area networks (PANs), hidden node and exposed node problem, Topologies of PANs, MANETsand WANETs.

UNIT-III - MAC Protocols for Wireless Sensor Networks:
Issues in Designing a MAC protocol for Ad Hoc Wireless Networks, Design goals of a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC Protocols - Contention - Based Protocols, with reservation Mechanisms, and with Scheduling Mechanisms.

UNIT-IV - Routing Protocols:
Introduction, Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks, Classification of Routing Protocols, Table–Driven Routing Protocols, On – Demand Routing Protocols, Hierarchical Routing Protocols, Proactive Routing.

UNIT-V - Transport Layer Protocols:
Introduction, Issues in Designing a Transport Layer Protocol for Ad Hoc Wireless Networks, Design Goals of a Transport Layer Protocol for Ad Hoc Wireless Networks, Classification of Transport Layer Solutions, TCP Over Ad Hoc Wireless Networks.

UNIT- VI - Security, Platforms & Applications:
Security in Ad Hoc Wireless Networks, Network Security Requirements, Issues and Challenges in Security Provisioning; Sensor Node Hardware – Berkeley Motes, Programming Challenges; Applications - Home Automation, Smart Metering.

TEXT BOOKS:

1. Ad Hoc Wireless Networks: Architectures and Protocols, C. Siva Ram Murthy and B.S.Manoj, 2004, PHI.
2. Wireless Adhoc and Sensor Networks: Protocols, Performance and Control, JagannathanSarangapani, CRC Press.
3. Holger Karl & Andreas Willig, “Protocols and Architectures for Wireless Sensor Networks", John Wiley, 2005.

REFERENCES:

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the cellular system evolution of mobile radio systems **[K2]**
CO2:Illustrate the basic cellular concepts. **[K2]**
CO3: Explain the Various Propagation models. **[K2]**
CO4:Discuss the need of modulation, diversity and equalization in cellular & Mobile Communication. **[K2]**
CO5: Demonstrate the knowledgeaboutGSM architecture,multipleaccessschemes like FDMA,TDMA, CDMA. **[K2]**
CO6: Summarize the concepts of upcoming technologies like 3G, 4G etc. **[K2]**

UNIT-I: Introduction of Wireless Communication
History and evolution of mobile radio systems: Types of mobile wireless services/systems-Cellular, WLL, Paging, Satellite systems, Future trends in personal wireless systems.

UNIT-II: Cellular Concepts and System Design Fundamentals
Cellular concept and frequency reuse, channel assignment, handoff strategies, Interference and system capacity, Trunking and GOS, cell splitting,cell sectoring.

UNIT-III: Mobile radio Propagation Models

Radio wave propagation issues in personal wireless systems, Propagation models, Multipath fading, parameters of mobile multipath channels and Antenna systems in mobile radio.

UNIT-IV: Overview analog and digital modulation techniques
Need For Modulation. Different Analog and Digital modulation techniques used in Cellular and mobile communication systems.

UNIT-V DIGITAL CELLULAR NETWORKS: GSM architecture, GSM Services, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;

UNIT-VI Higher Generation Cellular Standards: 3G System architecture (UMTS), 4G System Architecture, Introduction to 5G.

Text Books

1. Theodore S. Rappaport, “wireless communications Principles and Practices”, PHI, 2005
2. Jochen Schiller, “Mobile Communications”, Pearson Education, second edition, 2009.

Reference Book

2. Theory and Applications”, 2/e McGraw-Hill,New York, 2003
3. Andreas F. Molisch, “Wideband Wireless Digital Communication”, Pearson Education 2001.
4. Blake, “Wireless Communication Technologies,” Thomson Delmer, 2003

VII Sem.	Medical Electronics (Open Elective-II)	Course Code:V18ECTOE5	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain the basics concepts of Bio-Medical Instrumentation.**[K2]**
- CO2: Explain the concepts of electrode theory, classification of Electrodes and Transducers used in Bio-Medical Applications.**[K2]**
- CO3: Explainthe Anatomy and Physiology of Cardiovascular system and Illustrate the application of Bio-Medical Instruments to measure the Physiological Parameters of Cardiovascular System. **[K2]**
- CO4: Discuss the elements used for Patient's Health care & monitoring.**[K2]**
- CO5: Explain the Principles of Diagnostic Techniques and the concepts of Bio-Telemetry.**[K2]**
- CO6: Classify different types of monitors, discuss the principles of recorders and Illustrate the methods of accident preventions.**[K2]**

UNIT-I:

INTRODUCTIONTOBIOMEDICALINSTRUMENTATION: AgeofBiomedicalEngineering, Development of Biomedical Instrumentation, Man Instrumentation System, Components of the Man-InstrumentSystem, Physiological System of the Body, Problems Encountered in Measuring a Living System, Sources ofBioelectric Potentials, Muscle, Bioelectric Potentials, Sources of Bioelectric Potentials, Resting and ActionPotentials, BioelectricPotentials-ECG,EEGandEMG,

UNIT-II:

ELECTRODES AND TRANSDUCERS: Introduction, Electrode Theory, Biopotential Electrodes, ExamplesofElectrodes,BasicTransducerPrinciples, Active Transducers, Passive Transducers, Transducers for Biomedical Applications, Pulse Sensors,RespirationSensor, Transducers with Digital Output.

UNIT-III:

CARDIOVASCULAR SYSTEM AND MEASUREMENTS: The Heart and Cardiovascular System, ElectroCardiography, Blood Pressure Measurement,

Measurement of Blood Flow and Cardiac Output, Measurement ofHeartSounds, Plethysmography.

UNIT-IV:

PATIENTCAREANDMONITORING: ElementsofIntensive-CareMonitoring,PatientMonitoringDisplays, Diagnosis, Calibration and Repair ability of Patient-Monitoring Equipment, Other Instrumentation forMonitoring Patients, Organization of the Hospitalfor Patient-Care Monitoring, Pacemakers, Defibrillators.

UNIT-V:

DIAGNOSTIC TECHNIQUES AND BIO-TELEMETRY: Principles of Ultrasonic Measurement, UltrasonicImaging,UltrasonicApplicationsofTherapeuticUses,UltrasonicDiagnosis,X-RayandRadio-IsotopeInstrumentations,CATScan,EmissionComputerizedTomography,MRI,IntroductiontoBiotelemetry,Physiological Parameters Adaptable to Biotelemetry, The Components of Biotelemetry System, ImplantableUnits,TelemetryforECGMeasurementsduring Exercise, Telemetryfor EmergencyPatient Monitoring.

UNIT-VI:

MONITORS,RECORDERSANDSHOCKHAZARDS: BiopotentialAmplifiers,Monitors,Recorders,Shock Hazards and Prevention, Physiological Effects and Electrical Current, Shock Hazards from ElectricalEquipment,Methods ofAccident Prevention.

TextBooks:

1. “Bio-MedicalElectronicsand Instrumentation”, OnkarN.Pandey,RakeshKumar,Katson Books.
2. “Bio-MedicalInstrumentation”,Cromewell,Wiebell,Pfeiffer

References:

1. “HandBookofBio-MedicalInstrumentation”, Khandapur. McGrawHill
2. “IntroductiontoBio-MedicalEquipmentTechnology”,4th Edition,JosephJ.Carr,JohnM.Brown,PearsonPublications.

VII Sem.	Concepts of Embedded Systems (Open Elective-II)	Course Code:V18ECTOE6	L	T	P	C
			3	0	0	3

Syllabus Details

COs	Course outcomes
CO1	Describe the Basic Concepts of embedded systems- **(K2).**
CO2	Describe the characteristics of Embedded Systems - **(K2)**
CO3	Explain the Architecture and Pin Description of 8051- **(K2)**
CO4	Explain various Addressing Modes and Instructions of 8051- **(K2)**
CO5	Discuss the various Interrupts , Modes of Timers/Counters in 8051**-(K2)**
CO6	Discuss the fundamentals of RTOS based embedded firmware design - **(K2)**

UNIT-I - INTRODUCTION TO EMBEDDED SYSTEMS:

Introduction to Embedded Systems, Embedded Systems vs. General Computing Systems, Classification of Embedded systems, Major application areas of embedded systems, Purpose of embedded Systems, The Typical embedded system - core of the embedded system, Difference between RISC and CISC, Types of Memories.

UNIT-II - CHARACTERISTICS OF EMBEDDED SYSTEM:

Characteristics of an embedded system,Quality attributes of embedded systems, Application-specific and Domain-Specific examples of an embedded system.

UNIT-III-8051 Micro Controller – Architecture, Pin Description

Introduction, 8051 Architecture, Registers in 8051, Pin Diagram – Description, Parallel I/O Ports and Memory Organization

UNIT-IV - 8051 Micro Controller – Addressing Modes and Instructions:

8051 Addressing Modes, 8051 Instruction Set, Instructions and Sample Programs, Stack Pointer

UNIT-V - 8051 Micro Controller – Interrupts, Timer/ Counter:

Interrupts in 8051, Timers and Counters, Timer/ Counter Modes, Serial Communication – Modes

UNIT-VI- REAL TIME OPERATING SYSTEM:

Operating System basics, Types of operating systems, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling, Inter Task communication.

Text Books:

1. Embedded Systems-By Shibu.K.V-Tata McGraw Hill Education Private Limited,2013.
2. Micro Controllers [Theory and Applications] – Ajay V Deshmukh – Tata McGraw-Hill Education Private Limited,2012

References:

1. The 8051 Micro Controller- Kenneth Ayala – CENGAGE- 3rd Edition
2. Embedded/Real Time Systems by KVKK Prasad by Dreamtech Publication

VIII Sem.	Fundamentals of Digital Image & Video Processing (Open Elective-III)	Course Code:V18ECTOE7	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Analyse Image transforms for various Image processing operations**(K4)**
- CO2: Examine Spatial & frequency domain filtering like smoothing & sharpening Operations on Images**(K4)**
- CO3: Estimate Image degradation functions and Analyze various Image Restoration
  Techniques on Images**(K4)**
- CO4: Analyze various Image segmentation techniques**(K4)**
- CO5: Describe various Image compression techniques**(K3)**
- CO6: Explain basicconceptsregardingtomotion estimation, videofilteringand Videostandards.**(K2)**

UNIT-I

IMAGEFUNDAMENTALS&TRANSFORMS: Fundamental steps in digital image processing, components of animage processing system, image sensing and acquisition, image sampling and quantization.Twodimensionalorthogonaltransforms:DFT,WHT,Haar transform, DCT and DST

UNIT-II

Intensity Transformations, Spatial Filtering and frequency domain filtering: Some basic intensity transformation functions,histogramprocessing,fundamentalsofspatialfiltering,smoothingspatialfilters,sharpeningspatialfilters, `Image smoothing and sharpening in frequency domain filtering

UNIT-III

IMAGE RESTORATION: Degradation Models, Linear Position –Invariant Degradations, Estimating the degradation function, inverse filtering, Minimum mean square error (Wiener) filtering and geometric mean filter.

UNIT-IV

IMAGESEGMENTATION: Pixelclassification,Bi-levelThresholding,Multi-levelThresholding,AdaptiveThresholding,Spectral& spatialclassification,Edgedetection,Hough transform, Regiongrowing.

UNIT-V

IMAGECOMPRESSION:Compressionmodels,Huffman Coding, Arithmetic coding, Bit plane coding, run lengthcoding,Lossycompression: Transformcoding,Imagecompressionstandards.

UNIT-VI

VIDEO PROCESSING: Representation of Digital Video, Spatio-temporal sampling, MotionEstimation.Video Filtering, Video Compression, Videocodingstandards.

Text Books:

1. R.C.Gonzalez,R.E.Woods,"DigitalImageProcessing",PearsonEducation. 2nd edition,2002
2. M.Tekalp,"DigitalVideoProcessing",Prentice-Hall,1995

Reference Books:

1. AnilK.Jain,"FundamentalsofDigitalImageProcessing",PrenticeHallofIndia,9th Edition,IndianReprint,2002.
2. B.Chanda,D.DuttaMajumder,"Digital ImageProcessingandAnalysis",PHI,2009.
3. Bovik,"HandbookofImage&Videoprocessing",AcademicPress,2000.
4. Khalid Sayood,Introduction to data compression ,third edition, The Morgan Kaufmann publishers,2005

VIII Sem.	Embedded RTOS (Open Elective-III)	Course Code:V18ECTOE8	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe the basics of Real time OS. **[K2]**
- CO2: Explain the tasks, Interrupts, Security. **[K2]**
- CO3: Describe the basics of µCOS-II RTOS. **[K2]**
- CO4: Describe the basics of µCOS-II RTOS. **[K2]**
- CO5: Illustrate the mechanism of target image creation and porting. **[K2]**
- CO6: Explain the Application of RTOS. **[K2]**

UNIT-I: Introduction
OS Basics, Task, Process, Threads, Multiprocessing & Multitasking, Process Management, Timer Functions, Event Functions, Memory Management, Device, File and IO Systems Management, Interrupt Routines in RTOS Environment and Handling of Interrupt Source Calls.

UNIT-II: RTOS
Basic Design Using an RTOS, RTOS Task Scheduling Models, Interrupt Latency and Response of the Tasks as Performance Metrics, OS Security Issues. Basic Functions and Types of RTOS.

UNIT-III: RTOS µCOS-II
Introduction, Task Service, Task Scheduling, Memory Allocation, IPC – Semaphore, Mailbox, Queue, Interrupt Handling.

UNIT-IV: RTOS Vx Works
Introduction, Task Service, Task Scheduling, Memory Allocation, IPC – Semaphore, Mailbox, Queue, Interrupt Handling.

UNIT-V: Embedded OS & Target Image Creation
Off-The-Shelf Operating Systems, Embedded OS, Handheld OS, Operating System Software, Target Image Creation for Window XP Embedded, Porting RTOS on a Micro Controller based Development Board.

UNIT-VI: Program Modeling – Case Studies
Case study of embedded system design and coding for an Automatic Chocolate Vending Machine (ACVM) Using µCOS-II RTOS, Case study of digital camera hardware and software architecture, Using RTOS Vx Works, Case Study of Embedded System for an

Adaptive Cruise Control (ACC) System in Car, Case Study of Embedded System of Mobile Phone Software for Key Inputs.

TEXT BOOKS:

1. Shibu K V: "Introduction to Embedded Systems", Tata McGraw Hill Publications, Second Edition.
2. Dr. K.V.K.K. Prasad: "Embedded/Real-Time Systems", Dream Tech Publications, Black pad.
3. Raj Kamal: "Embedded Systems-Architecture, Programming and Design", Tata McGraw Hill Publications, Second Edition.

REFERENCES:

2. Rob Williams," Real time Systems Development", Butterworth Heinemann Publications.

VIII Sem.	Principles of Digital TV Engineering (Open Elective-III)	Course Code:V18ECTOE9	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1:	Illustrate the fundamentals of television engineering	**[K2]**
CO2:	Explain about TV signal transmission	**[K2]**
CO3:	Explain the colour TV fundamentals	**[K2]**
CO4:	Classify Digital TV transmission standards	**[K2]**
CO5:	Explain the operation of Digital TV receiver	**[K2]**
CO6:	Describe the working of LCD and Plasma screens	**[K2]**

UNIT-I

Introduction: TV transmitter and receivers, synchronization **Television Pictures**: Geometric form and aspect ratio, image continuity, interlaced scanning, picture resolution

UNIT-II

Composite video signal: Horizontal and vertical sync details **TV Signal Transmission:** VSB transmission, standard channel BW, TV transmitter

UNIT-III

Colour Television: Perception of brightness and colours, additive colour mixing, video signals for colours, luminance signal, colour difference signals, encoding of colour difference signals, formation of chrominance signals, PAL encoder, PAL colour receiver

UNIT-IV

Digital Television Transmission Standards: ATSC terrestrial transmission standard, vestigial sideband modulation, DVB -T transmission standard, ISDB-T transmission standard

UNIT-V

Digital Television: Digital Satellite Television, Direct to Home Satellite Television, Digital TV Receiver, Merits of Digital TV Receivers

UNIT-VI

LCD Screens: LCD Technology, LCD Matrix types and operation, LCD Screens for Television, LCD color receiver

Plasma Screens: Plasma and conduction of charge, Plasma TV Screens, Plasma Color Receiver

Text Books:

1. Television engineering and video systems – R G Gupta, Tata McGraw Hill Publishers.
2. Television and Video Engineering – A.M.Dhake, 2nd Edition, Tata McGraw Hill Publishers.
3. Modern Television Practice: Transmission, Reception and Applications- R RGulati, 4th revised edition, New Age International Publishers.
4. Fundamentals of Digital Television Transmission- Gerald W. Collins, John Wiley & Sons.

References

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the cellular system evolution of mobile radio systems **[K2]**
CO2:Illustrate the basic cellular concepts. **[K2]**
CO3: Explain the Various Propagation models. **[K2]**
CO4:Discuss the need of modulation, diversity and equalization in cellular & Mobile Communication. **[K2]**
CO5: Demonstrate the knowledgeaboutGSM architecture,multipleaccessschemes like FDMA,TDMA, CDMA. **[K2]**
CO6: Summarize the concepts of upcoming technologies like 3G, 4G etc. **[K2]**

UNIT-I:
Introduction of Wireless Communication
History and evolution of mobile radio systems: Types of mobile wireless services/systems-Cellular, WLL, Paging, Satellite systems, Future trends in personal wireless systems.

UNIT-II:
Cellular Concepts and System Design Fundamentals
Cellular concept and frequency reuse, channel assignment, handoff strategies, Interference and system capacity, Trunking and GOS, cell splitting,cell sectoring.

UNIT-III:
Mobile radio Propagation Models

Radio wave propagation issues in personal wireless systems, Propagation models, Multipath fading, parameters of mobile multipath channels and Antenna systems in mobile radio.

UNIT-IV:
Overview analog and digital modulation techniques
Need For Modulation. Different Analog and Digital modulation techniques used in Cellular and mobile communication systems.

UNIT-V

DIGITAL CELLULAR NETWORKS: GSM architecture, GSM Services, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;

UNIT-VI

Higher Generation Cellular Standards: 3G System architecture (UMTS), 4G System Architecture, Introduction to 5G.

***Skill Oriented Course:**

The Student shall be given an option to choose either the skill courses being offered by the college or to choose a certificate course being offered by industries/ professional bodies/ APSSDC or any other accredited bodies as approved by the concerned BoS.

List of Skill Oriented Courses:

S. No	Name of the Proposed Course
1	PCB Design
2	Programming in Scilab
3	Programming with Arduino
4	Circuit Design & Simulation using Multisim
5	Concepts of Embedded systems
6	Internet of Things
7	Robotics
8	Hands on Graphical Programming Using Labview

III Semester SYLLABUS

III Sem.	Electronic Devices Circuits & Analysis	Course Code:V20ECT02	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

- CO1: Explain the formation of p-n Junction, Discuss special semi-conductor Diodes & Explain the working principle of rectifiers with and without filters With relevant expressions and necessary comparisons**[K2]**
- CO2: Understand the construction, principle of operation of transistors, BJT and FET with their V-I characteristics in different configurations.**[K2]**
- CO3: Explain the need of transistor biasing, various biasing techniques for BJT.**[K2]**
- CO4: Analyze small signal low frequency transistor amplifier circuits using BJT In Single & Multistage.**[K2]**
- CO5: Explain the operation & Analysis of Feedback and Power amplifiers.**[K2]**

UNIT-I: Junction diode characteristics: p-n junction diode, energy band diagram of PN junction Diode, current components in PN junction Diode, law of junction, derivation of diode equation, V-I Characteristics, Diode resistance, Diode capacitance. Zener Diode, Breakdown mechanisms, UJT, Construction and characteristics

Rectifiers and Filters: Rectifier Classification, characteristics of rectifiers, Filters-Capacitor filter, Inductor filter, derivation for ripple factor in eachcase.

UNIT- II: Transistor Characteristics: BJT: Junction transistor, transistor current components, Transistor equation,Characteristics of transistor in Common Base, Common Emitter and Common Collector configurations, Early Effect.

FET: Comparison between BJT and FET.FET types, construction, operation, characteristics, MOSFET- types, construction, operation, characteristics.

UNIT- III: Transistor Biasing &Thermal Stabilization

BJT: Need for biasing, operating point, Load line analysis, BJT biasing- methods, fixed bias, collector to base bias, self-bias, Stabilization against variations in VBE, Ic, and β,Stability factors(S, S", S"'),Bias compensation.

UNIT-IV: Small Signal Analysis of BJT

Two port network, Transistor hybrid model, determination of h- parameters, Generalized Analysis of CB, CE and CC amplifiers using exact and approximate analysis,Low frequency analysis of Cascade and Cascode amplifiers.

UNIT-V: Feedback Amplifiers, Oscillators & Power Amplifiers

Feedback principle and concept, types of feedback, classification of amplifiers, feedbacktopologies Generalizedanalysis of Voltage series, current series, voltage shunt, current shunt feedback amplifiers,

Oscillators: Basic concept, Barkhausen criterion, RC oscillators (phase shift, Wien bridge), LC oscillators (Hartley, Colpitts)various classes of operation (Class A, B, AB), power efficiency calculations.

Text Books:

1. Electronic Devices and Circuits- J. Millman, C. Halkias,TMH.
2. Integrated Electronics- Jacob Millman, C. Halkies, C.D.Parikh,TMH.
3. Electronic Circuit Analysis - B.V.Rao, K.R.Rajeswari, P.C.R.Pantulu, K.B.R.Murthy, Pearson Publications

References:

1. Electronic Devices and Circuits Theory – Robert L. Boylestad and Louis Nashelsky, Pearson/Prentice Hall.
2. ElectronicCircuitAnalysisandDesign–Donald A.Neaman,McGrawHill.

III Sem.	Probability Theory & Stochastic Processes	Course Code: V20ECT03	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO-1: Explain basic concepts of probability theory through Sets and Relative Frequency **(K2)**

CO-2: Explain the concept of a random variable, functions based on random variable like Distribution and density functions (**K2)**

CO-3: Compute the expected value, moments on one random variable **(K3)**

CO-4: Illustrate the concepts of joint distribution & density functions on multiple random Variables**(K3)**

CO-5: Compute the Temporal and Spectral characteristics of stochastic processes **(K3)**

UNIT I PROBABILITY : Probability introduced through Sets and Relative Frequency: Experiments and Sample Spaces, Discrete and Continuous Sample Spaces, Events, Probability Definitions and Axioms, Mathematical Model of Experiments, Probability as a Relative Frequency, Joint Probability, Conditional Probability, Total Probability, Bayes Theorem, Independent Events

UNIT II THE RANDOM VARIABLE: Definition of a random variable, Discrete, continuous and mixed random Variables. Distribution & density functions and its properties of arandom variable.Binomial, Poisson, Uniform, Gaussian, Exponential and Rayleigh random variables.Conditional distribution and density functions and its properties.

UNIT III OPERATION ON ONE RANDOM VARIABLE – EXPECTATIONS : Introduction, expected value of a random variable, function of a random variable, moments about the origin, central moments, variance, characteristic function, moment generating function, transformations of a random variable: Monotonic transformations for a continuous random variable

UNIT IV MULTIPLE RANDOM VARIABLES : Vector random variables, joint distribution function, properties of joint distribution, marginal distribution functions, conditional distribution and density, statistical independence, sum of two random variables, sum of several random variables, central limit theorem: unequal distribution, equal distributions.
OPERATIONS ON MULTIPLE RANDOM VARIABLES: Joint moments about the origin, joint central moments, joint characteristic and moment generating functions.

UNIT V RANDOM PROCESSES – TEMPORAL CHARACTERISTICS: The random process concept, classification of processes, deterministic and nondeterministic processes, distribution and density functions, concept of Stationarity and statistical independence. First-order stationary processes, second-order and wide-sense Stationarity, nth-order and strict-sense Stationarity, time averages and Ergodicity, autocorrelation function and its properties, cross-correlation function and its properties, covariance functions.

SPECTRAL CHARACTERISTICS: The power density spectrum: properties, relationship between power density spectrum and autocorrelation function, the cross-power density spectrum, properties, relationship between cross-power density spectrum and cross-correlation function.

TEXT BOOKS:

1. Probability, Random Variables & Random Signal Principles, Peyton Z. Peebles, TMH,
4th Edition, 2001.
2. Probability, Random Variables and Stochastic Processes, Athanasios Papoulis and S.UnniKrishnaPillai, PHI, 4th Edition, 2002.
3. Probability Theory and Stochastic Processes, Y. Mallikarjuna Reddy, 4th Edition, Universities Press

Reference Books:

1. Probability Theory and Stochastic Processes – B. PrabhakaraRao, BS Publications
2. Probability and Random Processes with Applications to Signal Processing, Henry Stark
And John W. Woods, Pearson Education, 3rd Edition.
3. Schaum's Outline of Probability, Random Variables, and Random Processes.
4. An Introduction to Random Signals and Communication Theory, B.P. Lathi, International Textbook, 1968.
5. Random Process – Ludeman, John Wiley
6. Probability Theory and Random Processes, P. Ramesh Babu, McGrawHill, 2015.

III Sem.	Network Theory	Course Code: V20ECT04	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

- CO1: Apply network theorems to solve the electrical circuits. **[K3]**
- CO2: Describe the steady state analysis of RLC circuits. **[K2]**
- CO3: Analyze the resonance circuits. **[K4]**
- CO4: Solve the two port network parameters. **[K3]**
- CO5: Explain RLC transient circuits. **[K2]**

UNIT – I - ELECTRICAL CIRCUITS FUNDEMENTALS AND THEOREMS:
Electric circuits: Network elements classification, Source transformation, Kirchhoff's laws, Mesh analysis and Nodal analysis problem solving with resistances only including dependent sources. **Network theorems:**Thevenin's, Norton's, Milliman's, Reciprocity, Compensation, Substitution, Superposition, Max Power Transfer, - Problem solving using dependent sources also.

UNIT – II - STEADY STATE ANALYSIS OF A.C CIRCUITS
Response to sinusoidal excitation: - pure resistance, pure inductance, pure capacitance, series R-L, R-C, R-L-C circuits, parallel R-L, R-C, R-L-C circuits. Impedance concept, phase angle, problem solving for R-L, R-C and R-L-C circuits using mesh and nodal analysis.

UNIT-III RESONANCE
Series Resonance: resonance frequency, impedance, current, power factor, bandwidth, cutoff frequencies &Q-factor.
Parallel Resonance: resonance frequency, impedance, current, power factor, bandwidth, cutoff frequencies Q-factor.Comparison of series and parallel resonance circuits and solving problems.

UNIT – IV - TWO-PORT NETWORKS
Z-parameters, Y-parameters, Transmission parameters, h-parameters, series connection, Parallel connection, Cascade connection of two port networks. Relationship of two port networks, problem solving

UNIT – V – TRANSIENTS
Initial and final condition in capacitor and inductor, Definition of time constants, R-L, R-C, R-L-C circuits with DC excitation, problem solving using R-L-C elements with DC excitation. Solutions using Laplace transform method.

TEXT BOOKS:
1. Electric Circuit Analysis by Hayt and Kimmarle, TMH.
2. Network Analysis by Van-Valkenberg, PHI.
3. Circuit Theory (Analysis and Synthesis) by ABHIJIT Chakrabarti,DhanpatRai&Co.

REFERENCES:
1. Basic Circuit Analysis by DR Cunninghan, Jaico Publishers.
2. Network Analysis and Filter Design by Chadha, Umesh Publications.

3. Circuits & Network Analysis & Synthesis - A.Sudhakar&Shyam MohanS.Pillai, TMH.

III Sem.	Signals & Systems	Course Code: V20ECT05	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1 Classify the signals and various operations on signals.**[K2]**
CO2 Determinethe responseofLTIsystem to any arbitraryinput signal usingconvolution**[K2]**
CO3 Analyze the spectral characteristics of signals using Fourier series and Fourier transforms.**[K3]**
CO4 Apply the various sampling techniques on continuous time signals.**[K3]**
CO5 ApplytheconceptsofLaplacetransform/Z-transformtoanalyzecontinuous-time/discrete-timesignalsincomplexplane. **[K3]**

UNIT-I

SignalsandSystems: Continuous-timeandDiscrete-timesignals,Transformationsoftheindependentvariable,Exponential and Sinusoidal signals, the unit impulse and unitstepfunctions,Continuous-timeandDiscrete-time systems and BasicSystemproperties.

UNIT-II

Linear Time Invariant Systems (LTI systems): Discrete-timeLTIsystems,theconvolutionsum,ContinuoustimeLTIsystems,theconvolutionIntegral,PropertiesofLinearTime-InvariantSystems.

UNIT-III

Fourier series: Fourier series representation of Continuous-time periodic signals, Convergence of the Fourier series, Properties of Continuous time Fourier series.
Fourier transform: Representation of periodic signals: The Continuous-time Fourier transform, The Fourier transform for periodic signals, Properties of the continuous time Fourier transform.

UNIT-IV

Sampling Theorem: Introduction, Sampling theorem for band limited signals-explanation, NY Quist rate, Reconstruction of a signal from its samples using Interpolation, The effect of under sampling: Aliasing, sampling techniques- impulse, natural and flat top sampling.

UNIT-V

Analysis of Continuous time and discrete time signals usingLaplace Transform and Z Transform: The Laplace Transform:The Region of convergence for Laplace transforms, the InverseLaplace transform, Properties of the Laplace transform. TheZ-

Transform:TheRegionofConvergencefortheZ-transform,The InverseZ-transform,Propertiesofthe Z-transform.

TEXT BOOKS:

1. Signals and Systems, A.V. Oppenheim and A.S. Will sky with S. H. Nawab, Second Edition, and PHI Private limited.
2. Signals and Systems, Second Edition, S. Haykin and B. Van Veen, John Wiley & Sons.
3. B.P. Lathi, “Principles of Linear Systems and Signals”, Second Edition, Oxford, 2009.

REFERENCES:

1. R.E.Zeimer, W.H.Tranter and R.D.Fannin, “Signals & Systems - Continuous and Discrete”, Pearson, 2007.
2. John Alan Stuller, “An Introduction to Signals and Systems”, Thomson, 2007. 40.
3. M.J.Roberts, “Signals & Systems Analysis using Transform Methods & MATLAB”, Tata McGraw

III Sem.	Electronic Devices, Circuits & Analysis Lab	Course Code: V20ECL01	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1-Identify,Test and Describe the specifications of various components.**[K2]**

CO2-Interpret the Characteristics of various Semiconductor Devices.**[K2]**

CO3-Sketch the Regulation Characteristics of Zener Diode.**[K3]**

CO4-Examine the Performance of Rectifiers with and without Filters.**[K3]**

CO5-Sketch the Frequency Response of Amplifiers and Compute Bandwidth.**[K3]**

CO6- Construct different RC and LC oscillators using BJT based on theFrequency range.**[K3]**

PART A ELECTRONIC WORKSHOP PRACTICE

1. Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Coils, Gang Condensers, Relays, Bread Boards.
2. Identification, Specifications and Testing of Active Devices, Diodes, BJTs, JFETs, LEDs, UJT.
3. Study and operation of Ammeters, Voltmeters, Transformers,Analog and digital Multimeter,Functiongenerator, Regulated power supply and CRO.

PART B: List of Experiments

1. PN Junction diode characteristics
2. Zener diode characteristics
3. Rectifier (without and with c-filters)
   Part-A Half- wave Rectifier Part-B Full- wave Rectifier
4. BJT characteristics (CB Configuration Input & Output characteristics)
5. BJT characteristics (CE Configuration Input & Output characteristics)
6. FET Characteristics (CS Configuration Drain&Transfer Characteristics
7. BJT-CE Amplifier
8. RC Phase Shift Oscillator
9. Colpit's Oscillator
10. Complementary Symmetry Class B Power Amplifier

Equipment required for EDC&Analysis Laboratory

1. Ammeters (Analog or Digital)
2. Voltmeters (Analog or Digital)
3. Active & Passive Electronic Components
4. Regulated Power supplies
5. Cathode Ray Oscilloscopes
6. Analog/ Digital function Generators
7. Digital multimeter
8. Decade resistance Boxes/Rheostats
9. Bread Boards

III Sem.	Signals & Systems Lab	Course Code: V20ECL02	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1. Understand basics of MATLAB syntax, functions and programming. **[K2]**

CO2. Describe continuous-time and discrete time signals and systems. **[K2]**

CO3. Analyze the spectral characteristics of signals using Fourier analysis. **[K4]**

CO4. Analyze the systems using Laplace transform and Z-transform. **[K4]**

LIST OF EXPERIMENTS:

1. Basic operations on matrices.

2. Generation on various signals and Sequences (periodic and aperiodic), such as unit impulse,

Unit step, square, saw tooth, triangular, sinusoidal, ramp, sinc.

3. Operations on signals and sequences such as addition, multiplication, scaling, shifting,

Folding, computation of energy and average power.

4. Finding the even and odd parts of signal/sequence and real and imaginary part of signal.

5. Convolution between signals and sequences.

6. Auto correlation and cross correlation between signals and sequences.

7. Verification of linearity and time invariance properties of a given continuous /discrete

System.

8. Computation of unit sample, unit step and sinusoidal response of the given LTI system and verifying its physical Reliability and stability properties.

9. Gibbs phenomenon.

10. Finding the Fourier transform of a given signal and plotting its magnitude and phase

Spectrum.

11. Waveform synthesis using Laplace Transform.

12. Locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane for the Given transfer function.

IV Semester SYLLABUS

IV Sem.	Analog & Digital Communication	Course Code:V20ECT07	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1:Explainthespectralcharacteristics,generationanddetectionTechniques of Amplitude modulation techniques**(K2)**
CO2: Explain the spectral characteristics, generation andDetectiontechniquesofanglemodulationtechniques**(K2)**
CO3:Illustrate different types of noise and predict its effect onAnalogcommunicationSystems.**(K3)**
CO4: Describe the generation and detection methods of various digitalModulationschemes.**(K2)**
CO5: Analyze the concepts of error control coding**(K4).**

UNIT-I

AnalogModulation – Needformodulation, AM, DSB-SC, SSB, VSB - Time domain andfrequencydomaindescription,singletoNE modulation,powerrelations,Generation&Detection techniques, AM Transmitters,AMReceivers-Super-heterodynereceiver,IF,AGC.

UNIT-II

Angle Modulation: Phase and Frequency Modulation, Narrow band and WidebandFM,Carson'srule,IndirectanddirectmethodofFMgeneration,DetectionofFM, Phaselockedloop,ComparisonofFMandAM, FM Transmitters,FMSuper-heterodynereceiver.

UNIT-III

Noise in Analog Communication system: Noise in DSB &SSB system, Noise inAMsystem,NoiseinAngleModulationsystem, Pre-emphasisandde-emphasis.

Pulse Modulation: Time Division Multiplexing, PAM, PWM, PPM-Generation andDetection.

UNIT-IV

DigitalModulationSystems: PulseModulation:Basebandsignals.Samplingprocess;QuantizationProcess;QuantizationNoise;Pulse-CodeModulation;NoiseConsiderationsinPCMSystems; Differential Pulse-Code Modulation,Delta modulation, adaptive delta modulation, Amplitude, phase and frequencyshiftkeyingschemes(ASK,PSK,FSK),introduction toM-arraymodulationschemes, Matchedfilterreceivers and optimumreceiver

UNIT-V

InformationtheoryandErrorcontrolCoding: Measureofinformation, Entropy,Informationrate, Sourcecodingtheorem, Channelcapacity–Shannon-Hartleylaw,controlCodes–Linearcodes,Cycliccodes,ConvolutionCoding-encoder, decoder-Exhaustive search and sequential method.

TEXTBOOKS:

IV Sem.	Digital IC Applications	Course Code:V20ECT08	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

- CO1: Explain the structure of commercially available digital integrated circuit families. **[K2]**
- CO2:Learn the IEEE Standard 1076 Hardware Description Language (VHDL).**[K2]**
- CO3: Model complex digital systems at several levels of abstractions, behavioural, Structural,simulation, synthesis and rapid system prototyping.**[K2]**
- CO4: Analyze and design basic digital circuits with combinatorial and sequential logic Circuitsusing VHDL.**[K2]**
- CO5:Develop Programmable logic devices and memories with relevant ICs.**[K2]**

UNIT-I

Digital Logic Families and Interfacing: Introduction to logic families, CMOS logic, CMOS steady state and dynamic electrical behavior, CMOS logic families. Bipolar logic, transistor-transistor logic, TTL families, CMOS/TTL interfacing, Emitter coupled logic.

UNIT-II

Introduction to VHDL: Design flow, program structure, levels of abstraction, Elements of VHDL: Data types, data objects, operators and identifiers. Packages, Libraries and Bindings, Subprograms.VHDL Programming using structural and data flow modeling.

Behavioral Modeling: Process statement, variable assignment statement, signal assignment statement, wait statement , if statement, case statement ,null statement, loop statement, exit statement, next statement ,assertion statement, Inertial Delay Model, Transport Delay Model, Logic Simulation, Logic Synthesis, Inside a logic Synthesizer.

UNIT-III

Combinational Logic Design: Half adder, Full Adder, Ripple Adder, Binary Adder-Subtractor, Look Ahead Carry Generator, ALU, Decoders, encoders, multiplexers and DE multiplexers, parity circuits, comparators, Barrel Shifter, Simple Floating Point Encoder, Dual Priority Encoder, Design considerations of the above combinational logic circuits with relevant Digital ICs, modeling of above ICs using VHDL.

UNIT-IV

Sequential Logic Design: SSI Latches and flip flops, Shift Registers, Universal Shift Registers, Ring Counter, Johnson Counter, Ripple Counter, Design of Modulus N Synchronous Counters, Design considerations of the above sequential logic circuits with relevant Digital ICs, modelling of above ICs using VHDL.

UNIT-V

Memories:
ROM: Internal structure, 2D-Decoding, Commercial ROM types, timing and applications. Static RAM: Internal structure, SRAM timing, standard synchronous SRAMS. Dynamic RAM: Internal structure, timing, synchronous DRAMs.

Text Books:

1. Digital Design Principles & Practices – John F. Wakerly, PHI/ PearsonEducation Asia, 3rd

Ed., 2005.

2. VHDL Primer – J. Bhasker, Pearson Education/ PHI, 3rd Edition.

References:

1. Fundamentals of Digital Logic with VHDL Design- Stephen Brown, ZvonkoVranesic,

McGrawHill, 3rd Edition.

			L	T	P	C
IV Sem.	**Electro Magnetic Waves & Transmission Lines**	**Course Code:V20ECT09**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1:Find static electric field intensity by using various laws of electrostatics. **[K3]**

CO2:Find static magnetic field intensity by using various laws of magneto statics and Develop the Maxwell's equations for time varying fields. **[K3]**

CO3:Calculate the Propagation Characteristics of the EM Waves in different mediums

And find Brewster angle, critical angle and total internal reflection. **[K3]**

CO4:Compute Primary and Secondary constants for a given transmission line. **[K3]**

CO5:Calculate reflection coefficient, VSWR etc. using smith chart. **[K3]**

Prerequisites: Review of Co-ordinate Systems.

UNIT-I: Electrostatics:

Coulomb's Law, Electric Field Intensity, Electric Flux Density, Gauss Law and Applications, Electric Potential, Relation between E and V, Energy Density, Convection and Conduction Currents, Dielectric Constant, Poisson's and Laplace's Equations; Capacitance – Parallel Plate, Coaxial Capacitors, Illustrative Problems.

UNIT-II: Magneto Statics:

Biot-Savart Law, Ampere's Circuital Law and Applications, Magnetic FluxDensity, Magnetic Scalar and VectorPotentials, Forces due to Magnetic Fields, Inductances and MagneticEnergy. Illustrative Problems.

Maxwell's Equations (Time Varying Fields):

Faraday's Law and Transformer EMF, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Final Forms and Word Statements. Conditions at a Boundary Surface.

UNIT-III: EM Wave Characteristics:

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves – Definition, Relation Between E & H, Sinusoidal Variations, Wave Propagation in Lossy dielectrics, lossless dielectrics, free space, wave propagation in good conductors, Good Dielectrics, skin depth, Polarization & Types, Illustrative Problems.

Reflection and Refraction of Plane Waves – Normal and Oblique Incidences for Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection, Surface Impedance. Poynting Vector and Poynting Theorem.Illustrative Problems.

UNIT-IV: Transmission Lines - I:

Types, Applications of Transmission Lines, Equivalent Circuit, Primary & Secondary Constants, Transmission Line Equations for Finite and Infinite Lines, Characteristic Impedance, Propagation Constant, Phase and Group Velocities, , Lossless lines, Distortion less Lines, Illustrative Problems.

UNIT-V: Transmission Lines – II:

Input Impedance Relations, SC and OC Lines, Reflection Coefficient, VSWR. UHF Lines as Circuit Elements; λ/8, λ/4 and λ /2 Lines, Smith Chart – Construction and Applications, Single Stub Matching, Illustrative Problems.

TEXT BOOKS:

1. Elements of Electromagnetic – Matthew N.O. Sadiku, Oxford Univ. Press, 3rd ed., 2001.
2. Electromagnetic Waves and Radiating Systems – E.C. Jordan and K.G. Balmain, PHI,
2nd Edition, 2000.
3. Transmission Lines and Networks – UmeshSinha, SatyaPrakashan (Tech. India Publications), New Delhi, 2001.

REFERENCES:

1. Electromagnetic Fields and Wave Theory –GSN Raju, Pearson Education 2006
2. Engineering Electromagnetics – William H. Hayt Jr. and John A. Buck, TMH, 7th ed., 2006.
3. Electromagnetic Waves andTransmission Lines by Y. Mallikarjuna Reddy, Universities Press

IV Sem.	Analog & Digital Communication Lab	Course Code: V20ECL04	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO-1- Demonstrate the operation of various pulse modulation and demodulation Techniques.**[K3]**
CO-2 -Construct the pre-emphasis and de-emphasis circuits and verify its frequency Response.**[K3]**
CO-3 -Demonstrate the spectrum analysis of modulated signal using spectrum analyser,Operation of AGC and PLL **[K3]**
CO-4- Distinguish the Time division multiplexing and DE multiplexing, Pulse digital Modulation Techniques **[K2]**
CO-5- Distinguish generation and detection of digital modulation techniques **[K2]**
CO-6- Verify the Source encoding and decoding (Huffman Coding) technique and channel Encoding and decoding techniques. **[K3]**

List of Experiments (Twelve experiments to be done)

A. Analog Communications

1. Amplitude Modulation - Mod. &Demod.
2. AM - DSB SC - Mod. &Demod.
3. Spectrum Analysis of Modulated signal using Spectrum Analyser
4. Pre-emphasis & De-emphasis
5. Frequency Modulation - Mod. &Demod, PLL.
6. Sampling Theorem - Pulse Amplitude Modulation - Mod. &Demod.
7. PWM, PPM - Mod. &Demod.

B. Digital Communications

1. Pulse code modulation, Differential pulse code modulation.
2. Delta modulation, Companding.
3. ASK, FSK, PSK.
4. Differential phase shift keying.
5. Source Encoder and Decoder
6. Channel coding-
    i. Linear Block Code-Encoder and Decoder
    ii. Binary Cyclic Code – Encoder and Decoder
    iii. Convolution Code – Encoder and Decoder

IV Sem.	Digital IC Application Lab	Course Code: V20ECL05	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1: Identify the importance of various tools available in XILINX ISE12.2.**[K2]**
CO2: Develop VHDL/Verilog HDL Source code and perform simulation for various Combinationallogic circuits using XILINX ISE12.2.**[K3]**
CO3: Develop VHDL/Verilog HDL Source code and perform simulation for various Sequential logic circuits using XILINX ISE12.2.**[K3]**

Note: The students are required to design and draw the internal logical structure of the following Digital Integrated Circuits and to develop VHDL/Verilog HDL Source code, perform simulation using relevant simulator and analyse the obtained simulation results using necessary synthesizer.

All the experiments are required to verify and implement the logical operations on the latest FPGA Hardware in the Laboratory.

List of Experiments:

(Minimum of Ten Experiments has to be performed)

1. Realization of Logic Gates
2. Design of Full Adder
3. Design of 3 to 8 Decoder –IC 74138
4. Design of 8 to 3 Encoder (with and without priority)
5. Design of 8 x 1 Multiplexer-IC 74151 and Dual 1x 4 De-multiplexer-IC 74155
6. Design of 4-Bit comparator-IC 7485
7. Design of D-Flip-Flop-IC 7474
8. Design of 4-Bit Ripple Counter.
9. Design of Decade counter –IC 7490
10. Design of Universal Shift register.
11. Design of RAM
12. Design of ALU.

Equipment/Software required:

1. Xilinx Vivado software / Equivalent Industry Standard Software
2. Xilinx Hardware / Equivalent hardware
3. Personal computer system with necessary software to run the programsand Implement.

Semester III (Second Year)

Approved List of Courses offered to EEE Department by ECE Dept.

Sl. No.		Course Code	Course Title	Hours per Week			Credits
1.	Professional Core Course	V20ECT06	Analog Electronics	3	0	0	3
2.	Professional Core Course lab	V20ECL03	Analog Electronics lab	0	0	3	1.5

			L	T	P	C
III Sem.	**Analog Electronics**	**Course Code:V20ECT06**	**3**	**0**	**0**	**3**

Syllabus

Course Outcomes:
After Successful completion of the Course, the student will be able to:

CO-1: Explain the working principle of diode and Diode rectifier circuits with and without Filters.**(K2)**

CO-2: Sketch V-I characteristics of BJT and FET in different configurations (**K3)**

CO-3: Construct wave shaping circuits for various applications **(K3)**

CO-4: Construct circuits for different applications using ICs **(K3)**

CO-5: Explain the operation of Data Converters using IC 741 OP-AMP **(K2)**

UNIT-I Junction Diode Characteristics: p-n junction diode, current components in PN junction Diode, diode current equation, V-I Characteristics, Diode resistances, Breakdown mechanisms, Zener Diode.
Rectifiers: Basic Rectifier setup**,** half wave rectifier, full wave rectifier, bridge rectifier, derivations of characteristics of rectifiers, Filters- Inductor filter, Capacitor filter, derivation for ripple factor in each case, Zener diode as Voltage Regulator.

UNIT-II Transistor Characteristics: BJT: Junction transistor, transistor current components, transistor equation, transistor configurations and characteristics of transistor in Common Base, Common Emitter and Common Collector configurations, punch through/ reach through, transistor as an amplifier.
FET: FET types, construction, operation, characteristics, parameters, MOSFET-types, construction, operation, characteristics, comparison between JFET and MOSFET.

UNIT-III Wave shaping circuits: Response of high pass and low pass RC circuits to step, pulse, Square inputs. High pass RC circuit as differentiator, low pass RC circuit as integrator. Series and shunt clippers, clipping at two independent levels, Positive and Negative Clampers.

UNIT-IV Integrated Circuits and applications: Op-amp Block Diagram, Ideal Op-amp, Equivalent Circuit, Ideal voltage transfer curve, open loop op-amp configurations. Inverting and non-inverting amplifiers, summing, scaling, averaging amplifier, integrator and differentiator, 555 timer functional block diagram, A stable and Monostablemultivibrators.

UNIT-V Data Converters: Weighted resistor DAC, R-2R ladder DAC. Flash Type ADC;counter type ADC, Successive approximation ADC, Dual slope ADC, Specifications of DAC&ADC.

TEXT BOOKS:

1. Integrated Electronics- J. Millman and C.C. Halkias, TMH
2. Electronic Devices and Circuits- Salivahanan, N.Suresh Kumar, A. Vallavaraj, TMH
3. Pulse, Digital and Switching Waveforms - J. Millman and H. Taub, TMH
4. Linear Integrated Circuits – D. Roy Choudhury, 4th edition, New Age International (p) Ltd.
5. Op-Amps & Linear Integrated Circuits - Ramakanth A. Gayakwad,3rd edition, PHI.

REFERENCE BOOKS:

1. Electronic Devices and Circuits Theory – Robert L. Boylestad and Louis Nashelsky,
Pearson/Prentice Hall.
3. Pulse & Digital Circuits-BN Yoga Narasimhan, 2000,SriMaruthi Publishers, Bangalore.
4. Operational Amplifiers & Linear Integrated Circuits –Sanjay Sharma; SKKataria& Sons;2nd Edition,2010

III Sem.	Analog Electronics Lab	Course Code: V20ECL03	L	T	P	C
			0	0	3	1.5

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1:Interpret the Characteristics of various semiconductor devices. **(K2)**

CO-2: Examine the Performance of Rectifiers with and without Filters. **(K3)**

CO-3: Construct circuit for linear wave shaping circuits. **(K3)**

CO-4: Construct circuits for verifying linear and nonlinear applications using IC741op-ampAnd IC 555 timer **(K3)**

CO-5:Verify the Characteristics of 4 bit Digital to Analog Converter **(K3)**

List of Experiments: (Any 10 Experiments to be done)

1. PN Junction diode characteristics
2. Rectifiers with and without filters
   Part A: Half Wave Rectifier, Part B: Full Wave Rectifier
3. Zener diode Characteristics
   Part A: V-I characteristics, Part B: Zener diode as Voltage Regulator
4. BJT Characteristics (CE Configuration)
   Part A: Input characteristics, Part B: Input characteristics
5. JFET Characteristics (CS Configuration)
   Part A: Drain characteristics, Part B: Transfer characteristics
6. Linear Wave Shaping
   Part A: High Pass RC Circuit, Part B: Low Pass RC Circuit
7. Non-linear Wave Shaping - Clippers
   Part A: Unbiased Clippers, Part B: Biased Clippers
8. Non-linear Wave Shaping - Clampers
   Part A: Unbiased Clampers, Part B: Biased Clampers
9. Summing, Scaling, Averaging amplifiers using IC 741.
10. Differentiator and Integrator Circuits using IC 741.
11. A stable Multi vibrator using IC 555
12. . 4 bit Digital to Analog to Digital Converter

I Semester
SYLLABUS

I Sem.	SYSTEM DESIGNTHROUGH VERILOG	Course Code: V21ESVT01	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes:

- CO1: Outline basic concepts of RTL code for digital circuits **[K2]**
- CO2: Model RTL codes for digital circuit at gate and data flow level **[K3]**
- CO3: Model RTL codes for digital circuit at behavioural level **[K3]**
- CO4: Model RTL codes for digital circuit at switch level modelling and outline the concepts of task, function and complier directives **[K3]**
- CO5: Analyze Synthesize of Combinational and Sequential Circuits **[K4]**

UNIT-I

INTRODUCTIONTOVERILOG:

Verilog as HDL, Levels of design description, concurrency, module, simulation and synthesis, testbench, functional verification,programminglanguageinterface (PLI),simulationand synthesistools.

LANGUAGECONSTRUCTSANDCONVENTIONS:

Introduction,keywords, identifiers, whitespace characters, comments, numbers, strings, logic values, data types,scalarsandvectors,parameters,memory,operators,systemtasks.

UNIT-II

GATELEVELMODELLING:

Introduction,AND gate primitive, module structure, other gate primitives, illustrative examples, tristate gates, arrayof instances of primitives, design of Flip flops with gate primitives, delays, strengths and contention resolution, nettypes,designofbasic circuits.

DATA FLOWLEVEL MODELLING

Introduction, continuous assignment structures, delays and continuous assignments, assignment to vectors.

UNIT-III

BEHAVIORALMODELLING:

Introduction,operationsandassignments,initial construct,alwaysconstruct,examples,assignmentswith delays, wait construct, multiple always blocks, designs at behavioral level, blocking and non-blocking assignments, the case statement, if and if else constructs, assign-De assign construct,repeat construct, FOR loop, the disable construct, While loop, Forever loop, parallel blocks, force-release construct,event.

UNIT-IV

SWITCHLEVELMODELLING

Basictransistor switches, CMOS switch, Bidirectional gates and time delays with switch primitives, instantiations withstrengthsanddelays,strengthcontentionwithtriregnets, switch level modeling for NAND, NOR and XOR.

SYSTEM TASKS, FUNCTIONS, AND COMPILER DIRECTIVES: Introduction, System Tasks and Functions, File based Tasks and Functions, Compiler Directives, Hierarchical Directives, User-defined Primitives (UDP), FSM Design (Moore and Melay Machines).

UNIT-V

SYNTHESISOFCOMBINATIONAL ANDSEQUENTIAL LOGIC USINGVERILOG: Synthesisof combinational logic: Net list of structured primitives, a set of continuous assignment statements and level sensitivecyclic behavior with examples, Synthesis of priority structures, Exploiting logic don't care conditions. Synthesis ofsequential logic with latches: Accidental synthesis of latches and Intentional synthesis of latches, Synthesis ofsequentiallogicwithflip-flops,Synthesisofexplicitstatemachines.

TEXTBOOKS:

1. DesignthroughVerilogHDL—T.R.PadmanabhanandB. BalaTripuraSundari,WSE, IEEEPress,2004.
2. AdvancedDigitalDesignwithVerilog HDL—MichaelD.Ciletti,PHI,2005.

REFERENCES:

1. FundamentalsofLogicDesignwithVerilog—Stephen.BrownandZvonkoVranesic,TMH,2005.
2. AVerilogPrimier—J.Bhasker,BSP,2003.

I Sem.	EMBEDDED SYSTEM DESIGN	Course Code: V21ESVT02	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:

The student will be able to

- CO1: Illustrate the ARM architecture and its memory management.**(K2)**
- CO2: Describe the ARM instruction set for ARM programming.**(K2)**
- CO3: Describe Thumb instruction set for ARM programming.**(K2)**
- CO4: Explain the basics of ARM Cortex-M3**(K2)**
- CO5: Explain ARM Cortex-M3 interfacing.**(K2)**

UNIT-I:

ARM Architecture ARM Design Philosophy, Registers, PSR, Pipeline, Interrupts and Vector Table, Architecture Revision, ARM Processor Families. Introduction to ARM Cortex.

UNIT-II:

ARM Programming Model-I Instruction Set**:** Data Processing Instructions, Branch, Load, Store Instructions, PSR Instructions, Conditional Instructions.

UNIT-III:

ARM Programming Model-II Thumb Instruction Set**:** Register Usage, Other Branch Instructions, Data Processing Instructions, Single-Register and Multi Register Load-Store Instructions, Stack, Software Interrupt Instructions.

UNIT-IV

Introduction to ARM Cortex-M3 Processor-What Is the ARM Cortex-M3 Processor,Background of ARM and ARM Architecture,Instruction Set Development, The Thumb-2 Technology and Instruction Set Architecture, Cortex-M3 Processor Applications.

Cortex-M3 Basics-Registers, Operation Mode, Exceptions and Interrupts, Vector Tables, Stack Memory Operations, Reset Sequence

UNIT-V

Exceptions, Types, Priority, Vector Tables, Interrupt Inputs and Pending behavior, Fault
Exceptions, Supervisor call and Pendable Service Call, Nested Vectored Interrupt Controller, Basic Interrupt Configuration.

Cortex-M3 Implementation Overview-the Pipeline, A detailed block diagram, Bus Interfaces on the Cortex-M3,Other Interfaces on the Cortex-M3, the External PPB, Typical Connections,Reset Types and Reset Signals.

TEXT BOOKS:

1. ARM Systems Developer's Guides- Designing & Optimizing System Software – Andrew N. Sloss, Dominic Symes, Chris Wright, 2008, Elsevier.
2. The Definitive Guide to the ARM® Cortex-M3 Second Edition-Joseph Yiu
3. ARM System-on-chip Architecture- Stephen Bo Furber - Addison-Wesley, 2000

REFERENCE BOOKS:

1. Embedded Microcomputer Systems, Real Time Interfacing – Jonathan W. Valvano – Brookes / Cole, 1999, Thomas Learning.

			L	T	P	C
I Sem.	**Programming Languages for Embedded Systems (Elective-I)**	**Course Code: V21ESVT03**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes:
At the end of this course, students will be able to

- CO1: Write an embedded C application of moderate complexity.
- CO2: Develop and Analyze algorithms in C++.
- CO3: Differentiate interpreted languages from compiled languages.

UNIT-I: Embedded „C" Programming Bitwise operations, Dynamic memory allocation, OS services.Linked stack and queue, sparsematrices, Binary tree. Interrupt handling in C, Code optimization issues.Embedded Software Development Cycle and Methods (Waterfall, Agile)

UNIT-II: Object Oriented Programming Introduction to procedural, modular, object-oriented and genericprogramming techniques, Limitations of procedural programming, objects, classes, data members,methods, data encapsulation, data abstraction and information hiding, inheritance, polymorphism

UNIT-III: CPP Programming: „cin", „cout", formatting and I/O manipulators, new and deleteoperators, Defining a class, data members and methods, „this" pointer, constructors, destructors, friendfunction, dynamic memory allocation

UNIT-IV: Overloading and Inheritance: Need of operator overloading, overloading the assignment,Overloading using friends, type conversions, single inheritance, base and derived classes, friendClasses, types of inheritance, hybrid inheritance, multiple inheritance, virtual base class,Polymorphism, virtual functions.

UNIT-V: Templates: Function template and class template, member function templates and templatearguments, Exception Handling: syntax for exception handling code: try-catch- throw,Multiple Exceptions.Scripting Languages:

Overview of Scripting Languages – PERL, CGI, VB Script, Java Script.
PERL: Operators, Statements Pattern Matching etc. Data Structures, Modules, Objects, TiedVariables, Inter process Communication Threads, Compilation & Line Interfacing.

Text Books:

1. Michael J. Pont, "Embedded C", Pearson Education, 2nd Edition, 2008
2. Randal L. Schwartz, "Learning Perl", O"Reilly Publications, 6th Edition 2011

Reference Books:

1. A. Michael Berman, "Data structures via C++", Oxford University Press, 2002
2. Robert Sedge wick, "Algorithms in C++", Addison Wesley Publishing Company, 1999
3. Abraham Silberschatz, Peter B, Greg Gagne, "Operating System Concepts", John
Willey& Sons, 2005Kaufmann.

I Sem.	Parallel Processing (Elective I)	Course Code: V21ESVT04	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes:
At the end of this course, students will be able to

- CO1: Identify limitations of different architectures of computer
- CO2: Analysis quantitatively the performance parameters for different Architectures
- CO3: Investigate issues related to compilers and instruction set based on type of Architectures.

UNIT-I: Overview of Parallel Processing and Pipelining, Performance analysis, Scalability

UNIT-II: Principles and implementation of Pipelining, Classification of pipelining processors, Advanced pipelining techniques, Software pipelining

UNIT-III: VLIW processors Case study: Superscalar Architecture- Pentium, Intel Itanium Processor and Ultra SPARC,MIPS on FPGA, Vector and Array Processor, FFT Multiprocessor Architecture

UNIT-IV: Multithreaded Architecture, Multithreaded processors, Latency hiding techniques, Principles of multithreading, Issues and solutions

UNIT-V: Parallel Programming Techniques: Message passing program development, Synchronous and asynchronous message passing, Shared Memory Programming, Data Parallel Programming, Parallel Software Issues. Operating systems for multiprocessors systems customizing applications on parallel processing platforms

Text Books:

1. Kai Hwang, Faye A. Briggs, “Computer Architecture and Parallel Processing”, MGH International Edition
2. Kai Hwang, “Advanced Computer Architecture”, TMH
3. V. Rajaraman, L. Sivaram Murthy, “Parallel Computers”, PHI.

Reference Books:

1. William Stallings, “Computer Organization and Architecture, Designing for Performance“Prentice Hall, Sixth edition
2. Kai Hwang, ZhiweiXu, “Scalable Parallel Computing”, MGH
3. David Harris and Sarah Harris, “Digital Design and Computer Architecture”, Morgan

I Sem.	System on Chip & Applications (Elective I)	Course Code: V21ESVT05	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:
The student will be able to

- CO1: Describe SOC System Approach, design and its Architecture –**[K2]**
- CO2: Discuss the selection of processor and its micro architecture for SOC – **[K2]**
- CO3: Discuss Memory Design for SOC –**[K2]**
- CO4: Explain the concepts of bus models and Interconnect Architectures –**[K2]**
- CO5: Explain SOC based Applications –**[K2]**

UNIT-I

Introduction to the System Approach System Architecture, Components of the system, Hardware& Software, Processor Architectures, Memory and Addressing.System level interconnection, an approach for SOC Design, System Architecture and Complexity.

UNIT-II

Processors Introduction , Processor Selection for SOC, Basic concepts in Processor Architecture, Basic concepts in Processor Micro Architecture, Basic elements in Instruction handling. Buffers: minimizing Pipeline Delays, Branches, More Robust Processors, Vector Processors and Vector Instructions extensions, VLIW Processors, Superscalar Processors.

UNIT-III

Memory Design for SOC Overview of SOC external memory, Internal Memory, Size, Scratchpads and Cache memory, Cache Organization, Cache data, Write Policies, Strategies for line replacement at miss time, Types of Cache, Split – I, and D – Caches, Multilevel Caches, Virtual to real translation , SOC Memory System, Models of Simple Processor – memory interaction.

UNIT-IV

Interconnect Customization and Configuration Inter Connect Architectures, Bus: Basic Architectures, SOC Standard Buses, Analytic Bus Models, Using the Bus model, Effects of Bus transactions and contention time. SOC Customization: An overview, Customizing Instruction Processor, Reconfiguration Technologies, Mapping design onto Reconfigurable devices, Instance- Specific design, Customizable Soft Processor, Reconfiguration - overhead analysis and trade-off analysis on reconfigurable Parallelism.

UNIT-V

Application / Case Studies:
Zynq system on chip design – Secure Boot, Analog Data Acquisition, System Monitoring using the Zynq-7000 AP SOC Processing System with the XADC AXI Interface.

Cypress- PSoC4- Architecture, GPIO Pins and its applications - down counter, sine wave Generator using PSOC 4 device.

TEXT BOOKS:

1. Computer System Design System-on-Chip - Michael J. Flynn and Wayne Luk, Wiely India Pvt. Ltd.
2. ARM System on Chip Architecture – Steve Furber –2nd Ed., 2000, Addison Wesley Professional.
3. Embedded Processing with the ARM Cortex-A9 on the Xilinx Zynq-7000 All Programmable SoC-Louise H. Crockett Ross A. Elliot Martin A. Enderwitz Robert W. Stewart
4. Cypress PSoC User Manual

REFERENCE BOOKS:

1. Design of System on a Chip: Devices and Components – Ricardo Reis, 1st Ed., 2004, Springer
2. Co-Verification of Hardware and Software for ARM System on Chip Design (Embedded Technology) – Jason Andrews – Newnes, BK and CDROM.
3. System on Chip Verification – Methodologies and Techniques – PrakashRashinkar, Peter Paterson and Leena Singh L, 2001, Kluwer Academic Publishers.

I Sem.	**Digital System Design (Elective II)**	**Course Code: V21ESVT06**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Syllabus Details

Course Outcome:

The student will be able to

- CO1: Describe the algorithms for minimization of functions
- CO2: Describe the algorithms for minimization of PLDs.
- CO3: Design large scale digital systems.
- CO4: Discuss the fault model and diagnosis in combinational and sequential Circuits.

UNIT-I: Minimization Procedures and CAMP Algorithm
Review on minimization of switching functions using tabular methods, k-map, QM algorithm, CAMP-I algorithm, Phase-I: Determination of Adjacencies, DA, CSC, SSMs and EPCs, CAMPI algorithm, Phase-II: Passport checking, Determination of SPC, CAMP-II algorithm: Determination of solution cube, Cube based operations, determination of selected cubes are wholly within the given switching function or not, Introduction to cube based algorithms.

UNIT-II: PLA Design, PLA Minimization and Folding Algorithms
Introduction to PLDs, basic configurations and advantages of PLDs, PLA-Introduction, Block diagram of PLA, size of PLA, PLA design aspects, PLA minimization algorithm (IISc algorithm), PLA folding algorithm(COMPACT algorithm)-Illustration of algorithms with suitable examples.

UNIT -III: Design of Large Scale Digital Systems
Algorithmic state machine charts-Introduction, Derivation of SM Charts, Realization of SM Chart, control implementation, control unit design, data processor design, ROM design and PAL design aspects, digital system design approaches using CPLDs, FPGAs and ASICs.

UNIT-IV: Fault Diagnosis in Combinational Circuits
Faults classes and models, fault diagnosis and testing, fault detection test, test generation, testing process, obtaining a minimal complete test set, circuit under test methods- Path sensitization method, Boolean difference method, properties of Boolean differences, Kohavi algorithm, faults in PLAs, DFT schemes, built in self-test.

UNIT-V: Fault Diagnosis in Sequential Circuits

Fault detection and location in sequential circuits, circuit test approach, initial state identification, Haming experiments, synchronizing experiments, machine identification, distinguishing experiment, adaptive distinguishing experiments.

TEXT BOOKS:

1. Logic Design Theory-N. N. Biswas, PHI
2. Switching and Finite Automata Theory-Z. Kohavi, 2nd Edition, 2001, TMH
3. Digital system Design using PLDd-Lala

REFERENCE BOOKS:

1. Fundamentals of Logic Design – Charles H. Roth, 5th Ed., Cengage Learning.
2. Digital Systems Testing and Testable Design – MironAbramovici, Melvin A. Breuer and Arthur D. Friedman- John Wiley & Sons Inc.

			L	T	P	C
I Sem.	**CPLD & FPGA Architectures and Applications (Elective II)**	**Course Code: V21ESVT07**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcome:

The student will be able to

- CO1: Describe the Programmable Logic Devices
- CO2: Distinguish the various types of Field Programmable Gate Arrays
- CO3: Apply the typical applications on FPGAs

UNIT-I: Introduction to Programmable Logic Devices

Introduction, Simple Programmable Logic Devices – Read Only Memories, Programmable Logic Arrays, Programmable Array Logic, Programmable Logic Devices/Generic Array Logic; Complex Programmable Logic Devices –Architecture of Xilinx Cool Runner XCR3064XL CPLD, CPLD Implementation of a Parallel Adder with Accumulation.

UNIT-II: Field Programmable Gate Arrays

Organization of FPGAs, FPGA Programming Technologies, Programmable Logic Block Architectures, Programmable Interconnects and Programmable I/O blocks in FPGAs, Dedicated Specialized Components of FPGAs and Applications of FPGAs.

UNIT –III: SRAM Programmable FPGAs:

Introduction, Programming Technology, Device Architecture, the Xilinx XC2000, XC3000 and XC4000 Architectures.

UNIT –IV: Anti-Fuse Programmed FPGAs

Introduction, Programming Technology, Device Architecture, theActel ACT1, ACT2 and ACT3 Architectures.

UNIT –V: Design Applications

General Design Issues, Counter Examples, a Fast Video Controller, A Fast DMA Controller and Designing Counters with ACT devices, Designing Adders and Accumulators with the ACT Architecture.

TEXT BOOKS:

1. Field Programmable Gate Array Technology - Stephen M. Trimberger, Springer
International Edition.
2. Digital Systems Design - Charles H. Roth Jr, LizyKurian John, Cengage Learning.

REFERENCE BOOKS:

1. Field Programmable Gate Arrays - John V. Oldfield, Richard C. Dorf, Wiley India.
2. Digital Design Using Field Programmable Gate Arrays - Pak K. Chan/ SamihaMourad, Pearson Low Price Edition.
3. Digital Systems Design with FPGAs and CPLDs - Ian Grout, Elsevier, Newnes.
4. FPGA based System Design - Wayne Wolf, Prentice Hall Modern Semiconductor
Design Series.

I Sem.	VLSI Signal Processing (Elective II)	Course Code:V21ESVT08	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes
On successful completion of the module, students will be able to:

CO1:Ability to modify the existing or new DSP architectures suitable for VLSI.
CO2:Understand the concepts of folding and unfolding algorithms and applications.
CO3:Ability to implement fast convolution algorithms.
CO4:Low power design aspects of processors for signal processing and wireless Applications.

UNIT -I
Introduction to DSP: Typical DSP algorithms, DSP algorithms benefits, Representation of DSPalgorithms Pipelining and Parallel ProcessingIntroduction, Pipelining of FIR Digital filters, Parallel Processing, Pipelining and Parallel Processing forLow Power Retiming Introduction, Definitions and Properties, Solving System of Inequalities, RetimingTechniques

UNIT –II
Folding and Unfolding: Folding- Introduction, Folding Transform, Register minimization Techniques,Register minimization in folded architectures, folding of Multirate systems
Unfolding**-** Introduction, An Algorithm for Unfolding, Properties of Unfolding, critical Path, Unfoldingand Retiming, Applications of Unfolding

UNIT -III
Systolic Architecture Design: Introduction, Systolic Array Design Methodology, FIR Systolic Arrays,Selection of Scheduling Vector, Matrix Multiplication and 2D Systolic Array Design, Systolic Design forSpace Representations contain Delays.

UNIT -IV
Fast Convolution: Introduction – Cook-Toom Algorithm – Winogard algorithm – Iterated Convolution –Cyclic Convolution – Design of Fast Convolution algorithm by Inspection

Unit V: Digital lattice filter structures, bit level arithmetic, architecture, redundant arithmetic.Numerical strength reduction, synchronous, wave and asynchronous pipe lines, lowpower design.Low Power Design: Scaling Vs. Power Consumption, Power Analysis, Power Reduction techniques,Power Estimation Approaches

Text Books:

1. Keshab K. Parthi[A1], VLSI Digital signal processing systems, design and Implementation [A2],Wiley, Inter Science, 1999.
2. Mohammad Isamail and Terri Fiez, Analog VLSI signal and information processing,
McGrawHill, 1994
3. S.Y. Kung, H.J. White House, T. Kailath, VLSI and Modern Signal Processing,
Prentice Hall,1985.

I Sem.	System Design through Verilog Lab	Course Code: V21ESVL01	L	T	P	C
			0	0	4	2

Syllabus Details

COURSE OUTCOMES:

- CO1: Develop the simulation of combinational and sequential circuits using HDL Language.**[K3]**
- CO2: Develop the synthesis of combinational and sequential circuits using HDL Language.**[K3]**
- CO3: Analyze the implemented of digital logics with hardware module kit FPGA **[K4]**

The students are required to design the Verilog codes to perform the following experiments using necessary simulator (Xilinx ISE Simulator) to verify the logic functional operation and to perform the analysis with appropriate synthesizer (Xilinx ISE Synthesizer) and then verify the implemented logic function with hardware kits (FPGA kits).

The students are required to acquire the knowledge in the platform Xilinx by perform at least 10 experiments.

List of Experiments:

1) Logic gates
2) Adder-Subtractor
3) Multiplexer and DE multiplexer
4) Encoder and Decoder
5) ALU
6) Fire detection and control system using Combinational Logic Circuits
7) Flip Flops
8) LFSR
9) Up counter/Down counter
10) Synchronous RAM
11) Pattern detector using Moore/Melay machine
12) Traffic light controller using sequential logic circuit.
13) UART

I Sem.	Embedded Systems Design Lab	Course Code: V21ESVL02	L	T	P	C
			0	0	4	2

Syllabus Details

Course Outcomes:

At the end of the laboratory work, students will be able to:

- **CO1:** Develop applications based on ARM Cortex-M3 processor using Cortex-M3 Development boards on the platform of co-coox and Arduino IDE.-**K3**
- **CO2:** Develop the applications based on DSP C6713 evaluation kits and using Code
  Composer Studio (CCS).-**K3**

List of Assignments:
Part A:

Experiments to be carried out on Cortex-M3 development boards and using GNU Tool chain

1. Blink an LED with software delay, delay generated using the SysTick timer.
2. Control intensity of an LED using PWM implemented in software and hardware.
3. Control an LED using switch by polling method, by interrupt method and flash the LED once every five switch presses.
4. UART Echo Test.
5. Take Analog readings on rotation of rotary potentiometer connected to an ADC channel.
6. Temperature indication on an RGB LED.
7. Mimic light intensity sensed by the light sensor by varying the blinking rate of an LED.
8. Evaluate the various sleep modes by putting core in sleep and deep sleep modes.
9. System reset using watchdog timer in case something goes wrong.
10. Sample sound using a microphone and display sound levels on LEDs.

Part B:
Experiments to be carried out on DSP C6713 evaluation kits and using Code Composer Studio (CCS)

1. To develop a C code to compute Euclidian distance between any two Points.
2. To develop a C code for implementation of convolution operation.
3. To develop a C code to compute FFT.
4. To design and implement filters in C to enhance the features of given input sequence/signal.

Lab Requirements:

1. Coo-coX Software PlatForm.
2. Arduino IDE
3. Code Composer Studio(CCS)

Hardware:

1. The Development kits of ARM-Cortex Boards
2. DSP C6713 evaluation kits
3. Sensors for Interfacing
4. Serial cables, Network Cables and Recommended power Supply for the board.

II Semester SYLLABUS

II Sem.	Analog and Digital CMOS VLSI Design	Course Code: V21ESVT09	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes:
At the end of the laboratory work, students will be able to:

CO1: Describe the concept of MOS structure and physical design of CMOS **(K2)**

CO2: Design the CMOS Inverters and various CMOS combinational logic circuits **(K4)**

CO3: Design the CMOS different Sequential logic circuits **(K4)**

CO4: Describe the concept of modelling of MOS and Analog CMOS Sub-Circuits **(K2)**

CO5: Describe the CMOS Op-Amps & it's Applications. **(K2)**

UNIT-I: **Review of MOS structures and Physical design flow:**
Basic MOS structure and its static behaviour, Quality metrics of a digital design: Cost,Functionality, Robustness, Power, and Delay, Stick diagram and Layout, Wire delay models.Physical design flow: Floor planning, Placement, Routing, CTS, Power analysis and IR drop estimation-static and dynamic.

UNIT-II CMOS INVERTER AND COMBINATIONAL LOGIC:
Inverter: Static CMOS inverter, Switching threshold and noise margin concepts and theirEvaluation, Dynamic behaviour, Power consumption. Combinational logic: Static CMOSdesign, Logic effort, Rationed logic, Pass transistor logic, Dynamic logic, Speed and powerdissipation in dynamic logic, Cascading dynamic gates, CMOS transmission gate logic.

UNIT-III SEQUENTIAL LOGIC:
Static latches and registers, Bi-stability principle, MUX based latches, Static SR flip-flops, Master-slave edge-triggered register, Dynamic latches and registers, Concept of pipelining, Pulse registers, and Non-bistable sequential circuit.

UNIT -IV CMOS MODELING AND ANALOG SUB- CIRCUITS
CMOS Device Modelling - Simple MOS Large-Signal Model, Other Model Parameters,Small-Signal Model for the MOS Transistor, Sub-threshold MOS Model. MOS Switch, MOSDiode, MOS Active Resistor, Current Sinks and Sources, Current Mirrors-Cascode currentMirror and Wilson Current Mirror, Current and Voltage References, Band gap Reference.

UNIT-V CMOS AMPLIFIERS:
Inverters- Active load inverter, current source inverter, push-pull inverter, DifferentialAmplifiers- large signal analysis, small signal analysis, Cascode Amplifiers, CurrentAmplifiers, Output Amplifiers, Design of CMOS Op Amps, Compensation of Op Amps,Design of Two-Stage Op Amps, Power- Supply Rejection Ratio of Two-Stage Op Amps,Cascode Op Amps, Characterization of Comparator, Two-Stage comparator design.

II Sem.	Real Time Operating Systems	Course Code: V21ESVT10	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes
Upon the completion of the course student will be able to

- CO1: Illustrate real time programming concepts.
- CO2: Apply RTOS functions to implement embedded applications
- CO3: Understand fundamentals of design consideration for embedded Applications.

UNIT-I

Introduction to Real-Time Operating Systems - Defining an RTOS, The scheduler, Kernel Objects and services, Key characteristics of an RTOS

Task- Defining a Task, Task States and Scheduling, Typical Task Operations, Typical Task Structure, Synchronization, Communication and Concurrency

UNIT-II

Semaphores - Defining Semaphores, Typical Semaphore Operations, Typical Semaphore Use

Message Queues - Defining Message Queues, Message Queue States, Message Queue Content, Message Queue Storage, Typical Message Queue Operations, Typical Message Queue Use, Pipes, Event Registers, Signals and condition Variables

UNIT-III

Exceptions and Interrupts - Exceptions and Interrupts, Applications of Exceptions and Interrupts, Closer look at exceptions and interrupts, processing general Exceptions, Nature of Spurious Interrupts

Timer and Timer Services - Real-Time clocks and System Clocks, Programmable Interval Timers, Timer Interrupt Service Routines.

I/O Subsystems - I/O concepts, I/O subsystems

UNIT-IV

Memory Management - Dynamic Memory Allocation in Embedded Systems, Fixed-Size Memory management in Embedded Systems, Blocking VS. Non-Blocking Memory Functions, Hardware Memory Management Units

Modularizing an application for concurrency- An outside-in approach to decompose
Applications, Guidelines and Recommendations for Identifying Concurrency, Scheduleability Analysis

UNIT-V

Synchronization and Communication - Synchronization, Communication, Resource Synchronization Methods, Critical section, Common practical design patterns, Specific Solution Design Patterns,

Common Design Problems - Resource Classification, Deadlocks, Priority Inversion.

Text Books

1. Qing Li, Caroline Yao (2003), “Real-Time Concepts for Embedded Systems”, CMP Books.

Reference Books

1. Albert Cheng, (2002), “Real-Time Systems: Scheduling, Analysis and Verification”, WileyInterscience.
2. Hermann Kopetz, (1997), “Real-Time Systems: Design Principles for Distributed EmbeddedApplications”, Kluwer.
3. Insup Lee, Joseph Leung, and Sang Son, (2008) “Handbook of Real-Time Systems”, Chapman andHall.Krishna and Kang G Shin, (2001), “Real-Time Systems”, McGraw Hill.

II Sem.	MEMS Technology and its Applications (Elective-III)	Course Code: V21ESVT11	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:
The student will be able to

- CO1: Describe the concepts of MEMS and Microsystems.
- CO2: Describe various possible materials for MEMS based devices.
- CO3: Describe various process steps involved in fabrication of MEMS devices.
- CO4: Describe various micro sensors and micro actuators.
- CO5: Describe various MEMS devices and their applications.

UNIT-I:

MEMS AND MICROSYSTEM
Introduction to MEMS, Microsystems and microelectronics, Multidisciplinary nature of MEMS, Miniaturization and its Benefits, Scaling laws in Miniaturization, MEMS Design Considerations, Advantages of MEMS Technology, Applications of MEMS

UNIT-II:

MATERIALS FOR MEMS
Introduction, Substrates & wafers, Active Substrate Materials, Silicon as a Substrate Material, Silicon Compounds, Piezoelectric Crystals, Polymers, Packaging Materials.

UNIT-III:

MICROFABRICATION
Introduction, Fabrication Process – Wafer processing, Photolithography, Ion implantation, Oxidation, Chemical vapor deposition (CVD), Physical vapor deposition, Deposition by Epitaxy, Etching, Manufacturing Process -Bulk Micromachining, Surface Micromachining and LIGA Process, Packaging technology, System level packaging, single and multichip packaging. Microsystem packaging, interfacingsin Microsystem packaging.

UNIT-IV:

MEMS BASED SENSORS AND ACTUATORS
Introduction, working principles of Microsystem - Micro Sensors, Micro Actuators and MEMS with Micro sensors: Pressure sensors, Temperature sensors, Humidity sensors, Accelerometers, Gyroscopes, Biomedical Sensors, Chemical sensors, MEMS with micro

actuators: Microgrippers, Micromotors, Micro gears and Micropumps. Microfluidics.

UNIT-V:
RF MEMS
RF MEMS devices: Switch parameters- Basics of switching - Mechanical Switches- Electronic switches for RF and microwave applications – Approaches for low-actuation-voltage switches, MEMS based Reconfigurable Antennas, Reconfigurable Filters and Phase shifters.

Textbooks:

1. Tai-Ran Hsu, MEMS and Microsystems: Design, Manufacture, and Nanoscale Engineering, 2nd Edition, John Wiley & Sons, Inc., Hoboken, New Jersey, 2008.
2. Gabriel M Rebeiz, "RF MEMS - Theory Design and Technology", John Wiley, 2004
3. Microsystem Design by Stephen D. Senturia, Springer International, Edition,2010.

Reference Books:

1. Marc Madou, ―Fundamentals of Micro Fabrication‖ CRC Press
2. Mohamed Gad-el-Hak, ―The MEMS Handbook‖, CRC Press
3. Julian W.Gardner, Vijay K.Varadan, Osama O. AwadelKarim, “Micro sensors MEMS and Smart Devices”, John Wiby& sons Ltd., 2001.
4. Iannacci, J. (2013). *Practical guide to RF-MEMS*. John Wiley & Sons.

II Sem.	Design for Testability (Elective-III)	Course Code: V21ESVT12	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:

The students will be able to

3. CO1: Interpret the concepts of modelling digital circuits and simulation.
4. CO2: Describe modelling of faults and its testing for SSF.
5. CO3:Explain various techniques of testing.

UNIT-I: Modeling:

Modeling digital circuits at logic level, register level and structural level. Levels of modeling.

Logic Simulation: Types of simulation, delay models, element evaluation, hazard detection, gate level event driven simulation.

UNIT-II: Fault Modeling:

Logic fault models, fault detection and redundancy, fault equivalence and fault location. Single stuck and multiple stuck – fault models. Fault simulation applications, general techniques for combinational circuits.

UNIT-III: Testing for Single Stuck Faults (SSF):

Automated test pattern generation (ATPG/ATG) for SSFs in combinational and sequential circuits, functional testing with specific fault models. Vector simulation – ATPG vectors, formats, compaction and compression, selecting ATPG tool.

UNIT-IV: Design for Testability:

Testability trade-offs techniques. Scan architectures and testing – controllability and observeability, generic boundary scan, fully integrated scan, storage cells for scan design. Board level and system level DFT approaches. Boundary scans standards. Compression techniques – different techniques, syndrome test and signature analysis.

UNIT-V: Built-in-Self-Test (BIST):

BIST concepts and test pattern generation, specific BIST architectures – CSBL, BEST, RTS, LOCST, STUMPS, CBIST, RTD, SST, CATS, CSTP, BILBO. Brief ideas on some advanced BIST concepts and design for self-test at board level.

<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcome:

The students will be able to

13. CO1: Describe concepts of volatile and non-volatile memory technologies.

14. CO2: Discuss the fault modeling and testing memory devices.

15. CO3: Explain the reliability and radiation effects of memory devices.

16. CO4: Describe the advanced memory technologies.

UNIT-I: Random Access Memory Technologies

SRAM – SRAM Cell structures, MOS SRAM Architecture, MOS SRAM cell and peripheral circuit operation, Bipolar SRAM technologies, SOI technology, Advanced SRAM architectures and technologies, Application specific SRAMs, DRAM – DRAM technology development, CMOS DRAM, DRAM cell theory and advanced cell structures, BICMOS DRAM, soft error failure in DRAM, Advanced DRAM design and architecture, Application specific DRAM.

UNIT-II: Non-volatile Memories

Masked ROMs, High density ROM, PROM, Bipolar ROM, CMOS PROMS, EPROM, Floating gate EPROM cell, One time programmable EPROM, EEPROM, EEPROM technology and architecture, Non-volatile SRAM, Flash Memories (EPROM or EEPROM), advanced Flash memory architecture.

UNIT-III: Memory Fault Modeling Testing and Memory Design for Testability and Fault Tolerance

RAM fault modeling, Electrical testing, Pseudo Random testing, Megabit DRAM Testing, nonvolatile memory modeling and testing, IDDQ fault modeling and testing, Application specific memory testing, RAM fault modeling, BIST techniques for memory.

UNIT-IV: Semiconductor Memory Reliability and Radiation Effects

General reliability issues RAM failure modes and mechanism, Non-volatile memory reliability, reliability modeling and failure rate prediction, Design for Reliability, Reliability Test Structures, Reliability Screening and qualification, Radiation effects, Single Event Phenomenon (SEP), Radiation Hardening techniques, Radiation Hardening Process and Design Issues, Radiation Hardened Memory characteristics, Radiation Hardness Assurance and Testing, Radiation. Dosimetry, Water Level Radiation Testing and Test structures.

UNIT-V: Advanced Memory Technologies and High-density Memory Packing Technologies

Ferroelectric RAMs (FRAMs), GaAs FRAMs, Analog memories, magneto resistive RAMs (MRAMs), Experimental memory devices, Memory Hybrids and MCMs (2D), Memory Stacks and MCMs (3D), Memory MCM testing and reliability issues, Memory cards, High Density Memory Packaging Future Directions.

TEXT BOOKS:

2. Advanced Semiconductor Memories – Architecture, Design and Applications - Ashok
K. Sharma- 2002, Wiley.
3. Modern Semiconductor Devices for Integrated Circuits – Chenming C Hu, 1st Ed,
Prentice Hall.

II Sem.	**Hardware Software Co-Design (Elective-IV)**	**Course Code:V21ESVT14**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Syllabus Details

Course Outcome:

The students will be able to

- CO1: Describe co-design architectures, methods and algorithms.

- CO2: Describe prototyping emulation and target architecture using embedded Systems.
- CO3: Explain the compilation techniques.
- CO4: Distinguish the various design specifications and verifications.
- CO5: Describe the system level specifications and design using languages.

UNIT-I: Co- Design Issues:

Co- Design Models, Architectures, Languages, A Generic Co-design Methodology.

Co- Synthesis Algorithms Hardware software synthesis algorithms: hardware – software partitioning distributed system co-synthesis.

UNIT-II:

Prototyping and Emulation Prototyping and emulation techniques, prototyping and emulation environments, future developments in emulation and prototyping architecture specialization techniques, system communication infrastructure

Target Architectures Architecture Specialization techniques, System Communication infrastructure, target Architecture and Application System classes, Architecture for control dominated systems (8051-Architectures for High performance control), Architecture for Data dominated systems (ADSP21060, TMS320C60) and Mixed Systems.

UNIT-III:

Compilation Techniques and Tools for Embedded Processor Architectures Modern embedded architectures, embedded software development needs, compilation technologies and practical consideration in a compiler development environment.

UNIT-IV:

Design Specification and Verification Design, co-design, the co-design computational model, concurrency coordinating con current computations, interfacing components, design verification, implementation verification, verification tools, interface verification.

UNIT-V:

Languages for System-Level Specification and Design-I System-level specification, design representation for system level synthesis, system level specification languages.

Languages for System-Level Specification and Design-II

Heterogeneous specifications and multi-language co-simulation, the cosyma system and lycos system.

TEXT BOOKS:

1. Hardware / Software Co- Design Principles and Practice – JorgenStaunstrup, Wayne Wolf – 2009, Springer.
2. Hardware / Software Co- Design - Giovanni De Micheli, MariagiovannaSami, 2002, Kluwer Academic Publishers.

Syllabus Details

Course Outcome:
The students will be able to

- CO1: Understand the concepts of Linux OS programming –**[K2]**
- CO2: Describe the different software development tools **[K2]**
- CO3: Explain different interfacing modules – **[K2]**
- CO4: Discuss the networking basics –**[K2]**
- CO5: Explain the basic concepts of LPC17xx Microcontroller –**[K2]**

UNIT-I
Programming on Linux Platform:
System Calls, Scheduling, Memory Allocation, Timers, Basics of Embedded Linux, Root File System, Busy Box.
UNIT-II
Introduction to Software Development Tools
GNU GCC,make, gdb, static and dynamic linking, C libraries, compiler options, code optimization switches.
UNIT-III
Interfacing Modules
Sensor and actuator interface, data transfer and control, GSM module interfacing with data processing and display.
UNIT-IV
Networking Basics
Sockets, ports, UDP, TCP/IP, client server model, socket programming.
UNIT-V
LPC 17xx microcontroller- Internal memory, GPIOs, Timers, ADC, UART and other serial interfaces, PWM, RTC, WDT.

TEXT BOOKS:

1. Modern Embedded Computing - Peter Barry and Patrick Crowley, 1st Ed., Elsevier/Morgan Kaufmann, 2012.
2. Linux Application Development - Michael K. Johnson, Erik W. Troan, Adission Wesley, 1998.
3. Assembly Language for x86 Processors by Kip R. Irvine

</table>

Syllabus Details

Course Outcomes:
At the end of the course, students will be able to:

- CO1: Select a particular serial bus suitable for a particular application.
- CO2: Develop APIs for configuration, reading and writing data onto serial bus.
- CO3: Design and develop peripherals that can be interfaced to desired serial bus.

UNIT-I
Serial Busses- Cables, Serial busses, serial versus parallel, Data and Control Signal-data frame, data rate, features Limitations and applications of RS232, RS485, I2C , SPI

UNIT-II: CAN
ARCHITECTURE- ISO 11898-2, ISO 11898-3, Data Transmission- ID allocation, Bit timing, Layers- Application layers, Object layer, Transfer layer, Physical layer, Frame formats- Data frame, Remote frame, Error frame, Over load frame, Ack slot, Inter frame spacing, Bit spacing, Applications.

UNIT-III: PCIe
Revision, Configuration space- configuration mechanism, Standardized registers, Bus enumeration, Hardware and Software implementation, Hardware protocols, Applications.

UNIT-IV: USB
Transfer Types- Control transfers, Bulk transfer, Interrupt transfer, isochronous transfer. Enumeration- Device detection, Default state, addressed state, Configured state, enumeration sequencing. Descriptor types and contents- Device descriptor, configuration descriptor, Interface descriptor, Endpoint descriptor, String descriptor.Device driver.

UNIT-V
Data streaming Serial Communication Protocol- Serial Front Panel Data Port(SFPDP) configurations, Flow control, serial FPDP transmission frames, fiber frames and copper cable.

TEXTBOOKS

1. A Comprehensive Guide to controller Area Network – Wilfried Voss, Copperhill Media

Corporation, 2nd Ed., 2005.
2. Serial Port Complete-COM Ports, USB Virtual Com Portsand Ports for Embedded
Systems- JanAxelson, Lakeview Research, 2nd Ed.,

REFERENCES

1. USB Complete – Jan Axelson, Penram Publications.
2. PCI Express Technology – Mike Jackson, Ravi Budruk, Mindshare Press.

II Sem.	Analog and Digital CMOS VLSI Design Lab	Course Code: V21ESVL03	L	T	P	C
			0	0	4	2

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1 -Analyse the Characteristics of MOS Device **(K3)**
- CO2 -Analyse the basic MOS Amplifiers and current mirrors **(K3)**
- CO3 -Design the various MOS Amplifiers. **(K4)**
- CO4 -Demonstrate various CMOS combinational Digital circuits **(K2)**
- CO5- Demonstrate various CMOS Sequential Digital circuits **(K2)**

The students are required to design and implement the Circuit and Layout of any 10Experiments using CMOS 130nm Technology with Mentor Graphics Tool/Cadence/ Synopsys/Industry Equivalent Standard Software.

List of Experiments:

1. MOS Device Characterization and parametric analysis
2. Common Source Amplifier
3. Common Source Amplifier with source degeneration
5. Simple current mirror
6. Cascade current mirror.
7. Wilson current mirror.
8. Differential Amplifier.

8. Full Adder
9. RS-Latch
10. Clock Divider
11. JK-Flip Flop
12. Synchronous Counter
13. Asynchronous Counter
14. Static RAM Cell

II Sem.	Real Time Operating Systems Lab	Course Code:V21ESVL04	L	T	P	C
			0	0	4	2

Syllabus Details

- The Students are required to write the programs using C-Language according to the Experimentrequirements using RTOS Library Functions and macros ARM-926 developer kits and ARMCortex.
- The following experiments are required to develop the algorithms, flow diagrams, source codeand perform the compilation, execution and implement the same using necessary hardware kitsfor verification. The programs developed for the implementation should be at the level of anembedded system design.
- The students are required to perform at least SIX experiments from Part-I and TWO experimentsfrom Part-II.

List of Experiments:
Part-I:
Experiments using ARM-926 with PERFECT RTOS

1. Register a new command in CLI.
2. Create a new Task.
3. Interrupt handling.
4. Allocate resource using semaphores.
5. Share resource using MUTEX.
6. Avoid deadlock using BANKER"S algorithm.
7. Synchronize two identical threads using MONITOR.
8. Reader'sWrite's Problem for concurrent Tasks.

Part-II
Experiments on ARM-CORTEX processor using any open source RTOS. (Coo-Cox-Software-Platform)

1. Implement the interfacing of display with the ARM- CORTEX processor.
2. Interface ADC and DAC ports with the Input and Output sensitive devices.

3. Simulate the temperature DATA Logger with the SERIAL communication With PC.
4. Implement the developer board as a modem for data communication using Serial port communication between two PC"s.

Lab Requirements:
Software:

- Eclipse IDE for C and C++ (YAGARTO Eclipse IDE), Perfect RTOS Library, COO-COX Software Platform, YAGARTO TOOLS, and TFTP SERVER.
- LINUX Environment for the compilation using Eclipse IDE & Java with latest

Version.
Hardware:

- The development kits of ARM-926 Developer Kits and ARM-Cortex Boards.
- Serial Cables, Network Cables and recommended power supply for the board.

III Semester

SYLLABUS

III Sem.	IoT and its Applications	Course Code: V21ESVT17	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome: The student will be able to

- CO1: Describe M2M and IOT Technologies. **[K2]**
- CO2: Explain the layers, protocols and communication technologies in IOT. **[K2]**
- CO3: Illustrate various hardware components required for IOT applications**. [K2]**
- CO4: Discuss the cloud technologies and their services. **[K2]**
- CO5: Explain the IoT Applications. **[K2]**

UNIT-I INTRODUCTION [1, 2]
Introduction from M2M to IoT - An Architectural Overview, building architecture, Main design principles and needed capabilities, An IoT architecture outline, M2M and IoT Technology Fundamentals; Sensors, Actuators, RFID, Wireless Sensor Networks, Devices and gateways.

UNIT-II IOT PROTOCOLS & COMMUNICATION TECHNOLOGIES [2, 4]
Functionalityof Layers in IoT, IoT Connectivity – IEEE 802.15.4, Wi-Fi, Bluetooth, Zigbee, LPWAN, 5G.
Study of protocols - 6LoWPAN, CoAP, MQTT.

UNIT-III DESIGN AND DEVELOPMENT [3, 4]
Design Methodology, Embedded computing logic, IoT system building blocks, Raspberry Pi - Board details, sensor/actuator Interface using Python Programming.

UNIT-IV Cloud Computing [3, 4]
Structured Vs. Unstructured Data and Data in Motion Vs. Data in Rest, Role of Machine Learning; Data Collection, Storage and Computing Using a Cloud Platform for IoT Applications/Services, AWS for IoT – Introduction to Amazon EC2.

UNIT-V IOT APPLICATIONS [2, 3]
CASE STUDIES/INDUSTRIAL APPLICATIONS: Case Studies - Home appliances, Smart and Connected Cities, Public Safety, Agriculture, Introduction to Industry 4.0.

<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcome:

The students will be able to

- CO1: Identify various sources of power consumption
- CO2: Estimate the power consumption sing simulation and probabilistic

Approaches.

- CO3: Discuss low power design at various levels of abstraction.
- CO4: Discuss clock distribution for low power dissipation.

UNIT-I: Introduction

Need for low power VLSI chips, Sources of power dissipation. Emerging Low power approaches. Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

UNIT-II: Power estimation Simulation Power analysis:

SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems. Monte Carlo simulation.

Probabilistic power analysis:

Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

UNIT-III: Low Power Design Circuit level:

Power consumption in circuits. Flip Flops & Latches design, high capacitance nodes, low power digital cells library

Logic level:

Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic

UNIT-IV: Low power Architecture & Systems:

Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components, low power memory design.

UNIT-V: Low power Clock Distribution:

Power dissipation in clock distribution, single driver vs. distributed buffers, Zero skew vs. tolerable skew, chip & package co design of clock network

Algorithm &architectural level methodologies: Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

TEXTBOOKS:

SRI VASAVI ENGINEERING COLLEGE (AUTONOMOUS)

(Sponsored by Sri Vasavi Educational Society)

(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)

(Accredited by NAAC with 'A' Grade ,Recognized by UGC under section 2(f) & 12(B))

Pedatadepalli, **TADEPALLIGUDEM – 534 101.** W.G.Dist**. (A.P)**

Department of Computer Science & Engineering (Accredited by NBA)

Dt: 03.09.2021

The 5th Meeting of Board of Studies in Department of Computer Science and Engineering is held at 02.00 PM on 02-09-2021 through online mode using,

https://us02web.zoom.us/j/86328881824

The following members attended the meeting:

S.No.	Name of the Member	Designation	Role
1.	Dr. D Jaya Kumari	Professor, HoD-CSE, SVEC	Chairperson
2.	Dr.Krishna Mohan Ankala	Professor, UCEK, Kakinada	University Nominee
3.	Dr. R.B.V. Subramanyam	Professor, Department of CSE, NIT Warangal	Academic Expert
4.	Dr. S Pallam Setty	Professor, Department of CSE, Andhra University, Vishakapatnam	Academic Expert
5.	Sri. Srinivasa Raju Vuppalapati	Senior Consultant, MSR IT Services LLP, Hitech City, Hyderabad.	Industry Expert
6.	Mr.EEdala Rambabu	microfocus, Bangalore	Alumni
7.	Sri Ch. Apparao	Technical Director	Invited Member
8.	Dr. V. Venkateswara Rao	Professor	Member
9.	Dr. G Loshma	Professor	Member
10.	Dr. V S Naresh	Professor	Member
11.	Ch. Raja Ramesh	Associate Professor	Member
12.	Dr.K. ShirinBhanu	Associate Professor	Member
13.	A. Leelavathi	Sr. Assistant Professor	Member

14.	D Anjani Suputhri Devi	Sr. Assistant Professor	Member
15.	R. LeelaPhani Kumar	Assistant Professor	Member
16.	D Sasi Rekha	Assistant Professor	Member
17.	B.SriRamya	Assistant Professor	Member
18.	G.Sriram Ganesh	Assistant Professor	Member
19.	N.V.Murali Krishna Raja	Assistant Professor	Member
20.	N. Hiranmayee	Assistant Professor	Member
21.	A Rajesh	Assistant Professor	Member
22.	Y.DivyaVani	Assistant Professor	Member
23.	K Lakshmi Narayana	Assistant Professor	Member
24.	M NageswaraRao	Assistant Professor	Member
25.	B Kiran Kumar	Assistant Professor	Member
26.	D.S L Manikanteswari	Assistant Professor	Member
27.	P Uma Sankar	Assistant Professor	Member
28.	M V V Krishna	Assistant Professor	Member
29.	M. Anantha Lakshmi	Assistant Professor	Member
30.	K Venkatesh	Assistant Professor	Member
31.	M. Satyanarayana Reddy	Assistant Professor	Member
32.	J.N. Chandra Sekhar	Assistant Professor	Member
33.	David Raju. K	Assistant Professor	Member
34.	P Suneetha	Assistant Professor	Member
35.	M Sree Radha Mangamani	Assistant Professor	Member
36.	Ch Hemanandh	Assistant Professor	Member
37.	M Chilaka Rao	Assistant Professor	Member
38.	G V Lakshmi Narayana	Assistant Professor	Member
39.	A Nageswara Rao	Assistant Professor	Member
40.	A NagaJyothi	Assistant Professor	Member
41.	G Prashanthi	Assistant Professor	Member

The following are the Minutes of the Meeting

Item No.1: Welcome note by the Chairperson BOS.

Chairperson BOS extended a formal welcome and introduced the members.

Item No.2: Progress Report of the Department

Chairperson BOS had given the Brief Progress Report of the Department.

Item No.3: Review of Course Structure for VII and VIII Semesters of B.Tech(CSE) Programme under V18 Regulation.

Reviewed the Course Structure of VII & VIII Semesters of B.Tech (CSE) Programme under V18 Regulation**.** The approved Course Structure is given in **Annexure-I.**

Item No.4: Approval of Syllabi for the Proposed Courses offered in VII and VIII Semesters of B.Tech(CSE) Programme under V18 Regulation.

Approved the Syllabi for the courses offered in VII & VIII semesters of B.Tech(CSE) Programme under V18 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
VII	V18CST27	In AJWT Course it was suggested that AngularJS need to be replaced by Angular.	AngularJS concepts modified as Angular.

The Modified and Approved Syllabus is given in **Annexure-II.**

Item No.5: Approval of Course Structure for V to VIII Semesters of B.Tech(CST) Programme under V18 Regulation.

Approved Course Structure for VII & VIII Semesters for B.Tech (CST) Programme under V18 Regulation. The approved Course Structure is given in **Annexure-III**.

Item No.6: Approval of Syllabi for Proposed Courses offered in V to VIII Semesters of B.Tech(CST) Programme under V18 Regulation..

Approved the syllabi for the courses offered in V to VIII semesters of B.Tech(CST) Programme under V18 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
VII	V18CST27	In AJWT Course it was suggested that AngularJS need to be replaced by Angular.	AngularJS concepts modified as Angular.

The Modified and Approved Syllabus is given in **Annexure-IV.**

Item No.7: Approval of list of Courses offering under Open Elective-II & Open Elective-III in VII and VIII Semesters respectively under V18 Regulation for all other branches and the approval of their Syllabi.

Approved the list of Courses and Syllabi offered under Open Elective-II & Open Elective-III in VII and VIII Semesters respectively under V18 Regulation for all other branches. The approved Courses and Syllabi are given in **Annexure-V.**

Item No.8:Approval of Course Structure for III to VIII Semesters of B.Tech(CSE) and B.Tech(CST) Programme under V20 Regulation.

Reviewed the Course Structure for III to VIII Semesters for B.Tech(CSE) and B.Tech(CST) Programme under V20 Regulation and suggested the following changes:

Suggestions	Inclusions / Modifications
Suggested to include UML Lab in V Semester	Incorporated UML Lab in V Semester and Merged the AI & DM Labs
In Pool of Skill Oriented Courses add Secure DevOps and remove Source Code Management Using Git & Github.	Included Secure DevOps in pool of Skill Oriented Courses.
In Open Elective replace Computer Organization and Architecture course with Some other course.	Replaced the Open Elective Computer Organization and Architecture course with Information Retrieval Systems.

The Modified and Approved Course Structure is given in **Annexure-VI**.

Item No.9: Approval of Syllabi for Proposed Courses offered in III and IV Semesters of B.Tech (CSE) and B.Tech(CST) Programme under V20 Regulation.

Approved the syllabi for the courses offered in III and IV Semesters of B.Tech (CSE) and B.Tech(CST) Programme under V20 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
III	V20CSL03	In OOP through C++ Lab add concepts like how to debug and create libraries using GDB	Included GDB Lab Task in OOP through C++ Lab.
IV	V20CST07	In DAA Course add NP Hard & NP	Included Basic

		Complete Introduction Concepts	Concepts of NP-Hard and NP-Complete problems in UNIT-V.

The Modified and Approved Syllabus is given in **Annexure-VII**.

Item No.10: Approval of Proposed Courses and Syllabi for other branches under V20 Regulation.

Approved the Proposed Courses and Syllabi for other branches under V20 Regulation. The approved Courses and Syllabi are given in**Annexure-VIII**.

Item No.11: Approval of Course Structure and Syllabi for I to IV Semesters of M.Tech(CS) Programme under V21 Regulation.

Approved the Course Structure and Syllabi for I to IV Semesters of M.Tech(CS) Programme under V21 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
I	V21CTT06 **(Program Elective-II)**	**Advanced Databases:** - Add Graph Databases / neo4j : Real Time Case Studies - Add Time series Databases: Real Time Case Studies.	Included, as per the suggestions given by the BOS Members
I	V21CTT07 **(Program Elective-II)**	**Advanced computer networks:** - Add SDN - Software Defined Networks - Real Time Case Study	Included, as per the suggestions given by the BOS Members

The Modified and Approved Course Structure and Syllabus is given in **Annexure-IX.**

Dr.D Jaya Kumari

Chairperson of BOS

VII Sem	**Advanced Java and Web Technologies**	Course Code: VI8CST27	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the basic concepts of HTML and CSS (K2)

CO2: Develop dynamic webpages and validate with java Script. (K3)

CO3: Illustrate Extensible markup language (K2)

CO4: Illustrate the basic concepts of NODE JS and Angular. (K2)

CO5: Build database driven web applications using JSP (K3)

CO6: Develop web applications using PHP and MySQL (K3)

UNIT-I :HTML: Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Frames Forms.CSS: Cascading style sheets, Levels of Style Sheets, Style Specification Formats, Selector Forms.

UNIT-II: JavaScript & DHTML: Overview of JavaScript, General Syntactic Characteristics, Primitives Operations and Expressions, Screen output and Keyboard Input, Control Statements, Object creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions, Events and Event Handling.

UNIT-III: Working with XML: Introduction, The syntax of XML, XML Document Structure, Document Type Definition (DTD), Namespaces, XML schemas, XSLT, XML Parsers - DOM and SAX.

UNIT-IV: Fundamentals of NODE JS and Angular: Understanding Node.js, Installing Node.js, Working with Node Packages, Creating a Node.js Application, Understanding Angular, Modules, Directives, Data Binding, Dependency Injection, Services, Separation of Responsibilities, Creating a Basic Angular Application.

UNIT-V: Introduction to Servlets & JSP: Introduction to servlets, Life cycle of Servlet, Limitations of servlets, Java Server Pages: JSP Overview, Components of a JSP Page: Directives, comments, Expressions, Scriptlets, Declarations, implicit objects, Database Access, session tracking.

UNIT-VI: PHP Programming: Overview of PHP, General syntactic characteristics, Primitives, operations, Expressions, Output, Control statements, Arrays, Functions, Pattern Matching, Form Handling, Cookies, Session Tracking. PHP with MySQL connectivity.

Text Books:

1. Programming the World Wide Web, 7th Edition, Robet W Sebesta, Pearson, 2013.
2. Node.js, MongoDB and Angular Web Development, 2nd Edition,Brad Dayley Brendan Dayley Caleb Dayley,Pearson Education,2018
3. JSP:The Complete reference,Phil Hanna,The McGraw-Hill Copanies,2001

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.

2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning

3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

VII Sem	Advanced Operating Systems (**Elective – III)**	Course Code: VI8CST28	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectures of Distributed Systems and Distributed Mutual Exclusion. **(K2)**
CO2: Illustrate the concepts of Deadlock Handling Strategies in Distributed Systems. **(K3)**
CO3: Explain the various Resource Management Techniques for Distributed Systems. **(K2)**
CO4: Discuss Fault Tolerance and Fault Recovery concepts in Distributed Systems . **(K2)**
CO5: Interpret the concepts of Cryptography and Data Security in Distributed Systems. **(K3)**
CO6: Describe Multiprocessor Operating System, Process Synchronization, Scheduling. **(K2)**

UNIT I: Architectures of Distributed Systems –System Architecture types - issues in distributed operating systems - communication networks - communication primitives. Distributed Mutual Exclusion - introduction - the classification of mutual exclusion and associated algorithms

UNIT II: Distributed Deadlock Detection -Introduction - deadlock handling strategies in distributed systems - issues in deadlock detection and resolution - control organizations for distributed deadlock detection - centralized and distributed deadlock detection algorithms -hierarchical deadlock detection algorithms.

UNIT III: Distributed Resource Management- Algorithms for implementing DSM - memory coherence and protocols - design issues. Distributed Scheduling - introduction - issues in load distributing - components of a load distributing algorithm - stability - load distributing algorithm – performance comparison - selecting a suitable load sharing algorithm - requirements for load distributing.

UNIT IV: Failure Recovery and Fault tolerance: Introduction- basic concepts - classification of failures - backward and forward error recovery, backward error recovery- recovery in concurrent systems - consistent set of check points - synchronous and asynchronous check pointing and recovery - check pointing for distributed database systems- recovery in replicated distributed databases.

UNIT V: Protection and Security - Preliminaries, the access matrix model and its implementations.-safety in matrix model, advanced models of protection. Data security - cryptography: Model of cryptography, conventional cryptography- modern cryptography, multipleencryptions - authentication in distributed systems.

UNIT VI: Multiprocessor Operating Systems - Basic multiprocessor system architectures - inter connection networks for multiprocessor systems .Multiprocessor Operating System - structures of multiprocessor operating system, operating system design issues- threads- process synchronization and scheduling.

Text Books:

1. Advanced Concepts in Operating Systems: Distributed, Database and Multiprocessor Operating Systems, MukeshSinghal, NiranjanG.Shivaratri,TMH, 2001.

2. Distributed Operating System-Concepts and Design,PradeepK.Sinha ,PHI, 2003.

Reference Books:

1. Modern operating system, Andrew S.Tanenbaum, PHI, 2003

2. Distributed operating system,Andrew S.Tanenbaum,Pearson education, 2003.
3. Operating System Concepts, Abraham Silberschatz; Peter Baer Galvin; Greg Gagne, Seventh Edition, John Wiley & Sons, 2004.

VII Sem	Statistics with R Programming (**Elective – III)**	Course Code: VI8CST29	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate different data structures in R. **(K2)**
CO2: Demonstrate about control statements and functions in R. **(K3)**
CO3: Compute different mathematical operations using R pre defined functions. **(K3)**

CO4: Construct and edit visualizations with R. **(K3)**
CO5: Identify appropriate statistical tests using R. **(K2)**
CO6: Examine linear and non linear models to create testable hypotheses. **(K3)**

UNIT I: Introduction and Data Structures: Introduction, How to install and run R, R Sessions, Functions, Basic Math, constants, Variables, Expressions, Reserved words in R, Arithmetic, and Boolean Operators and values, Data Types, Vectors, Advanced Data Structures: Data Frames, Lists, Matrices, Arrays, Classes.

UNIT II: Control Statements and Functions in R: R Programming Structures, Control Statements, Loops, – Looping Over Nonvector Sets,- If-Else, Default Values for Argument, return values, Deciding Whether to explicitly call return- returning Complex Objects, Functions are Objects, No Pointers in R, Recursion, A Quick sort Implementation- Extended Example: A Binary Search Tree.

UNIT III: Math and Simulation and Input/output in R: Doing Math and Simulation in R, Math Function, Extended Example Calculating Probability Cumulative Sums and Products-Minima and Maxima- Calculus, Functions for Statistical Distribution, Sorting, Linear Algebra, Operations on Vectors and Matrices, Extended Example: Vector cross Product, Set Operations. **Input /output:** Accessing the Keyboard and Monitor, Reading and writing Files

UNIT IV: Graphics: Graphics, Creating Graphs, The Workhorse of R Base Graphics, the plot() Function ,Customizing Graphs, Saving Graphs to Files.

UNIT V: Probability Distributions and Basic Statistics: Probability Distributions, Normal Distribution- Binomial Distribution- Poisson Distributions Other Distribution, Basic Statistics, Correlation and Covariance, T-Tests,-ANOVA.

UNIT VI: Linear Models in R: Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression, - Poisson Regression, Nonlinear Models, Splines- Decision- Random Forests.

Text Books:

1. R for Everyone, Lander, Pearson, 2nd edition 2018.
2. The Art of R Programming, Norman Matloff, Cengage Learning, 2nd edition, 2017.

Reference Books:

1. R Cookbook, PaulTeetor, Oreilly, 2nd edition, 2017.
2. R in Action, Rob Kabacoff, Manning, 3rd edition, 2019.

VII Sem	Information Retrieval Systems (**Elective – III)**	Course Code: VI8CST30	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Identify the basic concepts of information retrieval. **(K2)**
CO2: Describe the Capabilities of IRS, cataloging and indexing. **(K2)**
CO3: Explain the data structures and retrieving documents. **(K2)**
CO4: Describe the difficulty of representing and retrieving documents. **(K2)**
CO5: Explain the latest technologies for describing and searching the web. **(K2)**
CO6: Illustrate searching procedure for user-text and Information System Evaluation. **(K2)**

UNIT I: Introduction: Definition, Objectives, Functional Overview, Relationship to DBMS, Digital libraries and Data Warehouses.

UNIT II: Information Retrieval System Capabilities: Search, Browse, Miscellaneous **Cataloging and Indexing:** Objectives, Indexing Process, Automatic Indexing, Information Extraction.

UNIT III: Data Structures: Introduction, Stemming Algorithms, Inverted file structures, N-gram data structure, PAT data structure, Signature file structure, Hypertext data structure.

UNIT IV:Automatic Indexing: Classes of automatic indexing, Statistical indexing, Natural language, Concept indexing, Hypertext linkages. **Document and Term Clustering:** Introduction, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT V: User Search Techniques: Search statements and binding, Similarity measures and ranking, Relevance feedback, Selective dissemination of information search, weighted searches of Boolean systems, Searching the Internet and hypertext. **Information Visualization:** Introduction, Cognition and perception, Information visualization technologies.

UNIT VI: Text Search Algorithms: Introduction, Software text search algorithms, Hardware text search systems. **Information System Evaluation:** Introduction, Measures used in system evaluation, Measurement example – TREC results.

Text Books:

1. Information Storage and Retrieval System: Theory and Implementation, Gerald J. Kowalski, Mark T. Maybury, 2nd edition, 2002, Kluwer Academic Press.

Reference Books:

1. Information Retrieval Data Structures and Algorithms, Frakes, W.B., Ricardo Baeza-Yates Prentice Hall.
2. Information Storage & Retrieval by Robert Korfhage – John Wiley & Sons, Wiley computer publisher, 1997.

VII Sem	Human Computer Interaction (**Elective – III)**	Course Code: VI8CST31	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the principles and characteristics of GUI. **(K2)**
CO2: Recognize how a computer system may be modified to include human diversity. **(K2)**
CO3: Select an effective style for a specific application. **(K2)**
CO4: Discuss Screen Designing mock-ups and carry out user and expert evaluation of interfaces.**(K2)**
CO5: Explain System Menus & Navigation Schemes. **(K2)**
CO6: Discuss Device and Screen based controls. **(K2)**

UNIT I: The User Interface: Introduction, Importance of the User Interface, Importance and benefits of Good Design History of Human Computer Interface. Characteristics of Graphical and Web User Interface: Graphical User Interface, popularity of graphics, concepts of Direct Manipulation, Graphical System advantage and disadvantage, Characteristics of GUI. Web User Interface, popularity of web, Characteristics of Web Interface, Merging of Graphical Business systems& the Web, Principles of User Interface Design.

UNIT II: The User Interface Design Process: Obstacles and Pitfall in the development Process, Usability, The Design Team, Human Interaction with Computers, Important Human Characteristics in Design, Human Consideration in Design, Human Interaction Speeds, Performance versus Preference, Methods for Gaining and Understanding of Users.

UNIT III: Understanding Business Functions: Business Definitions & Requirement analysis, Determining Business Functions, Design standards or Style Guides, System Training and Documentation.

UNIT IV: Principles of Good Screen Design: Human considerations in screen Design, interface design goals, test for a good design, screen meaning and purpose, Technological considerations in Interface Design.

UNIT V: System Menus and Navigation Schemes: Structure, Functions, Context, Formatting, Phrasing and Selecting, Navigating of Menus, Kinds of Graphical Menus

Windows Interface: Windows characteristic, Components of Window, Windows Presentation Styles, Types of Windows, Window Management, Websystems

UNIT VI: Device and Screen-Based Control: Device based controls, Operable Controls, Text entry/read-Only Controls, Section Controls, Combining Entry/Selection Controls, Other Operable Controls and Presentation Controls, Selecting proper controls

Text Books:

1. “The Essential Guide to User Interface Design”, Wilbert O. Galitz, 2nd edition,2002,Wiley India Edition.
2. Prece, Rogers, “Sharps Interaction Design”, Wiley India.
3. ”Designing the user interfaces”. Ben Shneidermann 3rd Edition, Pearson Education Asia.

.**Reference Books:**

1. “User Interface Design” , SorenLauesen, Pearson Education
2. “Essentials of Interaction Design”, Alan Cooper, Robert Riemann, David Cronin, Wiley
3. ”HumanComputer Interaction”, Alan Dix, Janet Fincay, GreGoryd, Abowd, Russell, Bealg, Pearson Education.

VII Sem	Distributed Systems (**Elective – IV)**	Course Code: VI8CST32	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe distributed system and desired properties of such systems. **(K2)**
CO2: Discuss the theoretical concepts, namely, virtual time and agreement. **(K2)**
CO3: Discuss the basic concepts of distributed systems and Characteristics of IPC protocols. **(K2)**
CO4: Explain the mechanisms such as Remote procedure call (RPC/RMI) and OSS . **(K2)**
CO5: Explain the mechanisms such as file systems and P2P algorithms. **(K2)**
CO6: Discuss the Transactions and Replications in distributed systems. **(K2)**

UNIT I: Characterization of Distributed Systems: Introduction, Examples of Distributed Systems, Resource Sharing and the Web, Challenges. **System Models:** Introduction, Architectural Models- Software Layers, System Architecture, Variations, Interface and Objects, Design Requirements for Distributed Architectures, Fundamental Models- Interaction Model, Failure Model, Security Model.

UNIT II: Time and Global States: Introduction, Clocks Events and Process States, Synchronizing Physical Clocks, Logical Time and Logical Clocks, Global States, Distributed Debugging.

Coordination and Agreement: Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication, Consensus and Related Problems.

UNIT III: Inter process Communication: Introduction, The API for the Internet Protocols- The Characteristics of Inter process communication, Sockets, UDP Datagram Communication, TCP Stream Communication; External Data Representation and Marshalling; Client Server Communication; Group Communication, Case Study: MPI.

UNIT IV:: Remote Invocation: Introduction, Request-reply protocols, Remote Procedure Call, Events and Notifications, **Case Study:** JAVA RMI.. **Operating System Support:** Introduction, The Operating System Layer, Protection, Processes and Threads –Address Space, Creation of a New Process, Threads.

UNIT V: Distributed File Systems: Introduction, File Service Architecture; Peer-to-Peer Systems: Introduction, Napster and its Legacy, Peer-to-Peer Middleware, Routing

Overlays. **Case Study1:** Sun Network File system. **Case Study 2:** The Andrew File System.

UNIT VI: Transactions & Replications: Introduction, System Model and Group Communication, Concurrency Control in Distributed Transactions, Distributed Dead Locks, Transaction Recovery; Replication-Introduction, Passive (Primary) Replication, Active Replication.

Text Books:

1. "Distributed Systems- Concepts and Design", George Coulouris, Jean Dollimore, Tim Kindberg, Fourth Edition, Pearson Publication
2. "Distributed Computing, Principles, Algorithms and Systems", Ajay D Kshemkalyani, MukeshSighal, Cambridge.

Reference Books:

1. "Distributed Systems, Principles and Paradigms", Andrew S. Tanenbaum, Maarten Van Steen, 2d Edition, PHl.
2. "Distributed Systems, An Algorithm Approach," Sukumar Ghosh, Chapman & HalyCRC, Taylor & Fransis Group, 2007.

VII Sem	Scripting Languages (**Elective – IV)**	Course Code: VI8CST33	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concepts of scripting languages. **(K2)**

CO2: Develop Scripting for application using Ruby. **(K3)**

CO3: Explain the concepts of Programming in Perl. **(K2)**

CO4: Construct programs using Perl. **(K3)**

CO5: Describe TCL Scripting and their applications. **(K2)**

CO6: Discuss features of Groovy when compare with other Scripting Languages. **(K2)**

UNIT I: Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services. RubyTk – Simple Tk Application, widgets, Binding events, Canvas, scrolling.

UNIT II: Extending Ruby: Ruby Objects in C, the Jukebox extension, Memory allocation, Ruby TypeSystem, Embedding Ruby to Other Languages, Embedding a Ruby Interpreter.

UNIT III: Introduction to PERL and Scripting: Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting Languages, Uses for Scripting Languages, Web Scripting, and the universe of Scripting Languages. PERL- Names and Values, Variables, Scalar Expressions, Control Structures, arrays, list, hashes, strings, pattern and regular expressions, subroutines.

UNIT IV: Advanced Perl: Finer points of looping, pack and unpack, file system, eval, data structures, packages, modules, objects, interfacing to the operating system, Creating Internet ware applications, Dirty Hands Internet Programming, security Issues.

UNIT V:TCL: TCL Structure, syntax, Variables and Data in TCL, Control Flow, Data Structures, input/output, procedures, strings, patterns, files, Advance TCL- eval, source, exec and uplevel commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts Internet Programming, Security Issues, C Interface.

UNIT VI: Groovy: Features of Groovy, Environment, Basic Syntax, data types, variables, operators, loops, decision making, methods, File i/o, Optionals , numbers, strings, ranges, lists, maps, date and time, Regular expressions, Exception Handling, OO concepts.

Text Books:

1. The World of Scripting Languages, David Barron, Wiley Publications.
2. Ruby Programming language by David Flanagan and Yukihiro Matsumoto O'Reilly.
3. "Programming Ruby" The Prammatic programmers guide by Dabve Thomas Second edition.

Reference Books:

1. Open Source Web Development with LAMP using Linux, Apache, MySQL, Perl and PHP, J.Lee and B.Ware (Addison Wesley) Pearson Education.
2. Perl by Example, E.Quigley, Pearson Education.
3. Programming Perl, Larry Wall T.Christiansen and J.Orwant, O'Reilly, SPD.
4. Tcl and the Tk Toolkit, Ousterhout, Pearson Education.
5. Pearl Power, J.P. Flynt, Cengage Learning.

VII Sem	Deep Learning (**Elective – IV)**	Course Code: VI8CST34	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basics of machine learning. **(K2)**

CO2: Demonstrate the working of an artificial neural network. **(K2)**

CO3: Identify various parameters and issues while training a deep neural network. **(K2)**

CO4: Explain the working of convolution neural networks. **(K2)**

CO5: Explain the working of recurrent neural networks. **(K2)**

CO6: Recognize the ways of applying deep learning techniques for complex problem-solving. **(K2)**

UNIT I: Machine Learning Basics: Learning Algorithms, Capacity, Overfitting and Underfitting, Hyper parameters and Validation Sets, Estimators, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Descent.

UNIT II: Introduction to Neural Networks: The Basic Architecture of Neural Networks- Single Computational Layer: The Perceptron, Multilayer Neural Networks; Training a Neural Network with Backpropagation, Practical Issues in Neural Network Training-The Problem of Overfitting, The Vanishing and Exploding Gradient Problems, Difficulties in Convergence, Local and Spurious Optima;

UNIT III: Training Deep Neural Networks: Introduction, Backpropagation: Backpropagation with the Computational Graph Abstraction, Dynamic Programming to the Rescue, Backpropagation with Post-Activation Variables and Pre-activation Variables, Setup and Initialization Issues, The Vanishing and Exploding Gradient Problems, Parameter-Specific Learning Rates- AdaGrad, RMSProp, AdaDelta, Adam.

UNIT IV: Convolutional Neural Networks: Introduction, The Basic Structure of a Convolutional Network- Padding, Strides, Typical Settings, The ReLU Layer, Pooling, Fully Connected Layers, The Interleaving Between Layers, Local Response Normalization, Hierarchical Feature Engineering; Training a Convolutional Network- Backpropagating Through Convolutions.

UNIT V: Recurrent Neural Networks: Introduction, The Architecture of Recurrent Neural Networks- Language Modeling Example of RNN, Backpropagation Through Time, Bidirectional Recurrent Networks, Multilayer Recurrent Networks; Long Short-Term Memory (LSTM), Gated Recurrent Units (GRUs).

UNIT VI: Applications Deep Learning: Applications of Convolutional Networks: Content-Based Image Retrieval, Object Localization, Object Detection, Natural Language and Sequence Learning; Application of Recurrent Neural Networks: Application to Automatic Image Captioning, Time-Series Forecasting and Prediction, End-to-End Speech Recognition, Handwriting Recognition.

Text Books:

1. Deep Learning, Ian Goodfellow, Ian Goodfellow, and Aaron Courville, MIT Press.
2. Neural Networks and Deep Learning, Charu C. Aggarwal, Springer.

Reference Books:

1. Neural Networks: A Systematic Introduction, Raúl Rojas, Springer.
2. Introduction to Deep Learning, Eugene Charniak, MIT Press.

			L	T	P	C
VII Sem	Social Networks and semantic web (**Elective – IV)**	Course Code: VI8CST35	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate knowledge by explaining the three different "named" generations of the web. **(K3)**
CO2: Construct a social network. **(K3)**
CO3: Relate knowledge representation methods for semantic web. **(K3)**
CO4: Explain the key aspects of Web Architecture. **(K2)**
CO5: Describe web services and its Applications. **(K2)**
CO6: Develop "Linked Data" Applications using Semantic Web Technologies. **(K3)**

UNIT-I: The Semantic web: Limitations of the current Web, The semantic solution, Development of the Semantic Web, The emergence of the social web.

UNIT-II: Social Network Analysis: What is network analysis? Development of Social Network Analysis, Key concepts and measures in network analysis. Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities, Web-based networks.

UNIT-III: Knowledge Representation on the Semantic Web: Ontologies and their role in the Semantic Web, Ontology languages for the semantic Web.

UNIT-IV: Modeling and Aggregating Social Network Data: State of the art in network data representation, Ontological representation of Social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data.

UNIT-V: Developing social semantic applications: Building Semantic Web applications with social network features, Flink- the social networks of the Semantic Web community, Open academia: distributed, semantic-based publication management.

UNIT-VI: Evaluation of Web-Based Social Network Extraction: Differences between survey methods and electronic data extraction, context of the empirical study, Data collection, Preparing the data, optimizing goodness of fit, Comparison across methods and networks, Predicting the goodness of fit, Evaluation through analysis.

Text Books:

1. Social Networks and the Semantic Web, PeterMika, Springer,2007.
2. Semantic Web Technologies, Trends and Research in Ontology basedsystems, J.Davies,RudiStuder,PaulWarren,JohnWiley&Sons.

Reference Books:

1. Semantic Web and Semantic Web Services –Liyang Lu Chapman and Hall/CRC Publishers, (Taylor & Francis Group)
2. Information Sharing on the semantic Web – Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications

<tr><td>0</td><td>0</td><td>2</td><td>1</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop static web pages using HTML, CSS. **(K3)**

CO2: Demonstrate the concepts of JavaScript, DHTML & XML **(K3)**

CO3: Develop Web Applications using JSP. **(K3)**

CO4: Develop dynamic Web Applications using PHP & MySQL. **(K3)**

List of Experiments

1) Design the following static web pages required for an online book store web site:

(a) **HOME PAGE:**

The static home page must contain three **frames**.

Top frame: Logo and the college name and links to Home page, Login page, Registration page, Catalogue page and Cart page (the description of these pages will be given below). Left frame: At least four links for navigation, which will display the catalogue of respective links. For e.g.: When you click the link **"MCA"** the catalogue for MCA Books should be displayed in the Right frame. Right frame: The *pages to the links in the left frame must be loaded here*. Initially this page contains description of the web site

<table>
<tr><td>Logo</td><td colspan="4">Web Site Name</td></tr>
<tr><td>Home</td><td>Login</td><td>Registration</td><td>Catalogue</td><td>Cart</td></tr>
<tr><td>mca
mba
BCA</td><td colspan="4">Description of the Web Site</td></tr>
</table>

(b) **LOGIN PAGE:**

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
MCA MBA BCA	Login : 11a51f0003 Password: ******** Submit Reset			

(c) **CATALOGUE PAGE:**

The catalogue page should contain the details of all the books available in the web site in a table: The details should contain the following:

1. Snap shot of Cover Page.

2. Author Name.

3. Publisher.

4. Price.

5. Add to cart button.

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
MCA MBA		Book : XML Bible Author : Winston Publication : Wiely	$ 40.5	Add to cart
BCA		Book : AI Author : S.Russel Publication : Princeton hall	$ 63	Add to cart
		Book : Java 2 Author : Watson Publication : BPB publications	$ 35.5	Add to cart
		Book : HTML in 24 hours Author : Sam Peter Publication : Sam	$ 50	Add to cart

(d). **REGISTRATION PAGE:**

Create a "*registration form* "with the following fields

1) Name (Text field)

2) Password (password field)

3) E-mail id (text field)

4) Phone number (text field)

5) Sex (radio button)

6) Date of birth (3 select boxes) 7) Languages known (check boxes – English, Telugu, Hindi, Tamil)

2) Design a web page using **CSS (C**ascading **S**tyle **S**heets**)** which includes the following: Use different font, styles:

In the style definition you define how each selector should work (font, color etc.).

3) Design a login page and Make use of Events to perform validation using JavaScript.

4) Demonstrate a JavaScript program to perform On Mouse over event.

5) Demonstrate the concept of Mouse events (Ex:ng-click) with the help of Angular JS.

6) Design a simple Angular JS form.

7) Write an XML file which will display the Book information which includes the following:

1) Title of the book

2) Author Name

3) ISBN number

4) Publisher name

5) Edition

6) Price

a) Write a Document Type Definition (DTD) to validate the above XML file.

b) Write a XML Schema Definition (XSD)

8) Create a simple JSP to print the current Date and Time.

9)Create JSP to insert the details of 3 or 4 users using a registration form store these values in the data base and then check the authentication of the user by entering the name and password using a login form.

10) Assume four users user1, user2, user3 and user4 having the passwords pwd1, pwd2, pwd3 and pwd4 respectively. Write a PHP for doing the following.

A)

1. Create a Cookie and add these four user id's and passwords to this Cookie.

2. Read the user id and passwords entered in the Login form (week1) and authenticate with the values (user id and passwords) available in the cookies.

If he is a valid user (i.e., user-name and password match) you should welcome him by name (user-name) else you should display "You are not an authenticated user ".

B) Use init-parameters to do the same.

11) Create a table which should contain at least the following fields: name, password, email id, phone number (these should hold the data from the registration form).

Write a PHP program to connect to that database and extract data from the tables and display them. Experiment with various SQL queries. Insert the details of the users who register with the web site, whenever a new user clicks the submit button in the registration page.

12) Insert the details of the 3 or 4 users who register with the web site by using registration form. Authenticate the user when he submits the login form using the user name and password from the database.

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.

2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning

3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

			L	T	P	C
VIII Sem	Software Project Management (**Elective – V**)	Course Code: VI8CST36	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software Project Management Terminology. **(K2)**
CO2: Explain various Software development process Models and software Life cycle phases. **(K2)**
CO3: Illustrate various Effort Estimation Techniques and activity network models for Software Project Planning. **(K3)**
CO4: Demonstrate Risk Management Concepts and resource allocation. **(K3)**
CO5: Explain the importance of Project monitoring and control for accomplishing project goals.**(K2)**
CO6: Describe Software Quality models. **(K2)**

UNIT I: Introduction to Software Project Management: Software Project versus other types of projects, Activities covered by Software Project Management, Categorizing projects ,Stakeholders, Objectives& goals, what is management. **Project Planning:** Step-wise planning, Identify Project Scope and objectives, Infrastructure, Project Products &deliverables, Project activities, Effort estimation.

UNIT II: Project Approach: Build or buy, **process models**: waterfall model, Prototyping, Incremental delivery model, **Agile methods**: Extreme Programming, Atern method, selecting an appropriate process model. **Lifecycle phases:** Engineering and Production stages, Inception, Elaboration, Construction, Transition phases.

UNIT III: Software effort estimation and Activity planning: Overview of Effort Estimation techniques, Function Point analysis, COCOMO. **Activity planning:** Objectives, Network planning models, forward pass and backward pass, Identify Critical path and activities.

UNIT IV: Risk Management and Resource Allocation: Introduction, Risk and its categories, Identification, Assessment, Risk Planning and management, applying PERT technique. Resource Allocation: Types of Resources, Identifying resource requirements, Resource scheduling.

UNIT V: Project Monitoring and Control: Creating framework for monitoring& control, Collecting Data, Visualizing Progress, Cost monitoring, Earned value Analysis.

UNIT VI: Software Quality: Defining Quality, Importance of quality, ISO 9126, Product Quality Vs Process Quality management. **Process Capability Models:** Capability Maturity Model, Enhancing software Quality.

Text Books:

1. Software Project Management, Bob Hughes & Mike Cotterell, 6th edition, TATA Mcgraw-Hill
2. Software Project Management, Walker Royce 2nd edition, Pearson Education.

.

Reference Books:

1. Software Project Management in practice, Pankaj Jalote, 9th edition, Pearson Education.
2. Software Project Management, Joel Henry, 3rd edition, Pearson Education.

VIII Sem	Big Data Analytics (**Elective – V)**	Course Code: VI8CST37	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the challenges of Big Data using Hadoop. **(K2)**

CO2: Interpret Hadoop's architecture and core components of Hadoop Distributed File System. **(K2)**

CO3: Apply data modelling techniques to large data sets using map reduce programs. **(K3)**

CO4: Describe the Hadoop I/O classes. **(K2)**

CO5: Examine the use of Pig Framework to work with big data. **(K3)**

CO6: Develop a data analytical system using HIVE. **(K3)**

UNIT I: Introduction to Big Data: What is Big Data, Why Big Data is Important, Data Storage and Analysis, Comparison with other systems, Grid Computing. **Introduction to Hadoop:** A brief history of Hadoop, Meet Hadoop Data, Apache Hadoop and the Hadoop Ecosystem.

UNIT II: Working with Big Data & HDFS: Google File System, Hadoop Distributed File System (HDFS) –Building blocks of Hadoop (Namenode, Datanode, Secondary Namenode, JobTracker, and TaskTracker). **Introducing and Configuring Hadoop cluster:** Local distributed mode, Pseudo-distributed mode, Fully Distributed mode, Configuring XML files.

UNIT III: Writing Map Reduce Programs: A Weather Dataset –Data Format, Analyzing Data with UNIX Tools, Analyzing the Data with Hadoop-Map Reduce. **Basic programs of Hadoop Map Reduce:** Driver code,Mapper code, Reducer code, RecordReader, Combiner functions. Map Reduce Types, Input Formatclass Hierarchy, other map reduce examples (word count).

UNIT IV: Hadoop I/O: The Writable Interface, Writable Comparable and Comparators. **Writable Classes:** Writable wrappers for Java primitives, Text & Bytes Writable, NullWritable, ObjectWritable and Generic Writable, Writable collections. **Implementing a Custom Writable:** Implementing a Raw Comparator for speed, Custom comparators

UNIT V: Pig - Hadoop Programming Made Easier: Admiring the Pig Architecture, Going with the Pig Latin Application Flow, Working through the ABCs of Pig Latin, Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.

UNIT VI: Applying Structure to Hadoop Data with Hive: Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive, Examining the Hive Clients, Working with Hive Data Types, Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.

Text Books:

1. Hadoop: The Definitive Guide, Tom White, O'Reilly, 3rd Edition, 2012.
2. Hadoop in Action, Chuck Lam, MANNING Publ., 2016.
3. Hadoop for Dummies, Dirk deRoos, Paul C.Zikopoulos, Roman B.Melnyk, Bruce Brown, Rafael Coss, 2014.

.

Reference Books:

1. Hadoop in Practice, Alex Holmes, MANNING Publ., 2014.
2. Hadoop Map Reduce Cookbook, Srinath Perera, Thilina Gunarathne, PACKT, 2013.

VIII Sem	Soft Computing (**Elective – V**)	Course Code: VI8CST38	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss about Soft Computing, Requirements and Applications of Soft Computing. **(K2)**
CO2: Discuss about various Supervised and Unsupervised Learning Networks. **(K2)**
CO3: Illustrate various Fuzzy Logic, Fuzzy Sets, Crisp sets, Fuzzification and De-fuzzification Principles. **(K2)**
CO4: Discuss about Fuzzy Arithmetic and Fuzzy measures. **(K2)**
CO5: Discuss about Genetic Algorithms and its Operators. **(K2)**
CO6: Discuss about Various Hybrid Soft Computing Techniques.**(K2)**

UNIT I: Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirements of Soft computing, Major Areas of Soft Computing, Applications of Soft Computing.

UNIT II: Associative Memory Networks: (Supervised Learning): Introduction, Training Algorithms for Pattern Association, Auto-associative Memory Network, Hetero-associative Memory Network, Bidirectional Associative Memory (BAM),Hopfield Networks, Iterative Auto-associative Memory Networks, Temporal Associative Memory Network. **Unsupervised Learning Networks:** Introduction, Fixed Weight Competitive Nets, Kohonen Self-Organizing Feature Maps, Learning Vector Quantization, Counter propagation Networks, Adaptive Resonance Theory Network.

UNIT III: Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets: Introduction to Fuzzy Logic, Classical Sets (Crisp Sets), Fuzzy Sets and Operations on Fuzzy sets-Compliment, Intersections, Unions.

Membership Function: Introduction, Features of the Membership Functions, Fuzzification, Methods of Membership Value Assignments. **Defuzzification:** Introduction, Lambda-Cuts for Fuzzy Sets (Alpha-Cuts), Lambda-Cuts for Fuzzy Relations, Defuzzification Methods

UNIT IV: Fuzzy Arithmetic and Fuzzy Measures: Introduction, Fuzzy Arithmetic, Extension Principle, Fuzzy Measures, Measures of Fuzziness, Fuzzy Integrals.

UNIT V: Genetic Algorithm: Introduction to genetic algorithm, operators in genetic algorithm, stopping condition for genetic algorithm flow.

UNIT VI: Hybrid Soft Computing Techniques: Introduction, Neuro-Fuzzy Hybrid Systems, Genetic Neuro-Hybrid Systems.

Text Books:

1. Principles of Soft Computing, S.N. Sivanandam and S.N. Deepa, 3-edition, Wiley India, 2007.
2. "Fuzzy Sets & Fuzzy Logic", G.J. Klir & B. Yuan, PHI, 1995.
3. "An Introduction to Genetic Algorithm", Melanie Mitchell, PHI, 1998.

Reference Books:

1. Neural Networks, Fuzzy Logic and Genetic Algorithms, S. Rajasekaran and G.A.V.Pai, PHI, 2003.

2. Fuzzy Logic with Engineering Applications, Timothy J.Ross, McGraw-Hill, 1997.

3. Neuro-Fuzzy and Soft Computing, J.S.R.Jang, C.T.Sun and E.Mizutani, PHI, 2004, Pearson Education.

VIII Sem	Cloud Computing (**Elective – V)**	Course Code: VI8CST39	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Outline the concepts of cloud computing architecture. **(K2)**
CO2: Describe the Virtualization concepts in different scenarios. **(K2)**
CO3: Explain the best policies for cloud deployment. **(K2)**
CO4: Illustrate the design issues of Cloud computing. **(K2)**
CO5: Illustrate the security and privacy of the data in cloud computing. **(K2)**
CO6: Demonstrate cloud instances in Amazon Web Services. **(K3)**

UNIT I: Introduction to Cloud Computing: Trends in Computing - Distributed Computing, Grid Computing, Cluster Computing, Utility Computing, Cloud Computing, Definition of Cloud Computing, Characteristics, Service Models, Deployment Models, Cloud Service Models Providers, Advantages and Disadvantages of Cloud Computing, Cloud-based Services &Applications.

UNIT II: Cloud Concepts & Technologies: Virtualization and its types, Software Defined Networking, Network Function Virtualization (NFV). **Cloud Services:** Compute Services, Storage Services, Database Services, Application Services

UNIT III: Cloud Application Design: Design Considerations for Cloud Applications, Reference Architectures for Cloud Applications, Cloud Application Design Methodologies: SOA, Cloud Component Model and MVC, Data Storage Approaches.

UNIT IV: Cloud Security: Cloud Security Architecture (CSA), Authentication, Authorization, Identity & Access Management, Data Security, Key Management.

UNIT V: Migrating into a Cloud: Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud, Migration Risks and mitigation, Phases of Migrating to Cloud, benefits and risks of Migrating to Cloud.

UNIT VI: SLA Management in Cloud Computing: Service Level Agreements (SLA), Considerations for SLA, SLA Requirements, Types of SLA, Life Cycle of

SLA, SLA Management in Cloud. **Case Study:** Amazon AWS: EC2, Amazon Simple DB, Amazon S3, Amazon Cloud Front and Amazon SQS.

Text Books:

1. Cloud Computing: A Hands-on Approach, ArshdeepBahga, Vijay Madisetti,Universities Press.
2. Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, Andrzej Goscinski, Wiley Publication.

Reference Books:

1. Cloud Computing – Web-Based Applications That Change the way you Work and Collaborate Online, Michael Miller, Pearson Education.
2. Cloud Computing: A Practical Approach, Anthony T. Velte, Toby J. Velte, Robert Elsenpeter, McGraw-Hill, (2010).

			L	T	P	C
VIII Sem	Software Architecture & Design Patterns (**Elective – VI**)	Course Code: VI8CST40	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectural Structures and Quality Attributes. (K2)

CO2: Explain the mechanism of Evaluating Architecture. (K2)

CO3: Demonstrate Creational Patterns. (K3)

CO4: Construct Structural Patterns for a given Scenario. (K3)
CO5. Construct Behavioural Patterns for a given Scenario. (K3)
CO6. Examine various Case Studies in utilizing Software Architectures. (K3)

UNIT-I: Envisioning Architecture The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating and Architecture Quality Attributes, Achieving qualities, Designing the Architecture.

UNIT-II: Analyzing Architectures Architecture Evaluation, Architecture design decision making, ATAM, CBAM. Software Product Lines, Software architecture in future.

UNIT-III: Pattern Description, role in solving design problems, Selection and usage.**Creational Patterns**: Abstract factory, Builder, Factory method, Prototype, Singleton.

UNIT-IV:Structural Patterns: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, PROXY.

UNIT-V:Behavioural Patterns: Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.

UNIT-VI: Case Studies **A-7E – A case study** in utilizing architectural structures, The **World Wide Web** - a case study in Interoperability, **Air Traffic Control** – a case study in designing for high availability, **Celsius Tech** – a case study in product line development.

Text Books:

1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003.

2. Design Patterns, Erich Gamma, Pearson Education, 1995.

Reference Books:

1. Beyond Software architecture, Luke Hohmann, Addison wesley, 2003.

2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall PTR, 2001

3. Software Design, David Budgen, second edition, Pearson education, 2003

4. Head First Design patterns, Eric Freeman & Elisabeth Freeman, O'REILLY, 2007.

5. Design Patterns in Java, Steven John Metsker & William C. Wake, Pearson education, 2006.

.

VIII Sem	Middleware Technologies (**Elective – VI)**	Course Code: VI8CST41	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Middleware, E- Business, IT architecture, RPC, RDC. **(K2)**
CO2: Demonstrate Internet Applications and Web services. **(K2)**
CO3: Summarize Technical issues in Middleware. **(K2)**
CO4: Demonstrate the Use of Middleware in Building Distributed Technologies. **(K2)**
CO5: Identify Security Issues with Distributed Applications. **(K3)**
CO6: Apply Appropriate Middleware Technology to Develop Real Time Applications.**(K3)**

UNIT I: Introduction: Moving to e-business, what is IT architecture? Why is this different from what we did before? Rewrite or evolve?, Who develops the architecture?, Early days, Preliminaries, Remote procedure calls, Remote database access, Distributed transaction processing, Message queuing, Message queuing versus distributed transaction processing, what happened to all this technology.

UNIT II: Objects, Components and the Web: Using object middleware, Transactional component middleware- COM+, EJB, Final comments on TCM, Internet Applications. WEB SERVICES: Service concepts, Web services, and Using Web services: A pragmatic approach.

UNIT III: A Technical Summary Of Middleware: Middleware elements- The communications link, The middleware protocol, The programmatic interface, Data presentation, Server control, Naming and directory services, Security, System management, Comments on Web services, Vendor architectures- Vendor platform architectures, Vendor-distributed architectures, Using vendor architectures, Positioning, Strawman for user target architecture, Marketing, Implicit architectures, Middleware interoperability.

UNIT IV: Using Middleware to Build Distributed Applications: What is middleware for? -Support for business processes, Information retrieval, Collaboration, Tiers- The presentation tier, The processing tier, The data tier, Services versus tiers, Architectural choices - Middleware bus architectures, Hub architectures, Web services architectures, Loosely coupled versus tightly coupled.

UNIT V: Security: What security is needed, Traditional distributed system security, Web services security, Architecture and security. **Application Design and It's Architecture :** Problems with today's design approaches, Design up front or as needed?- The role of business rules, Existing systems, Reuse, Silo and monolithic development, The role of architecture, Levels of design, Reconciling design approaches.

UNIT VI: Building an IT Architecture: Case Studies – Providing an integration infrastructure, creating a service-oriented architecture, Developing a new application. What does the future hold? , The key points to remember-Middleware technology alternatives, IT architecture guideline guidelines, Distribute systems technology principals and Distribute systems implementation design.

Text Books:

1. IT Architectures and Middleware: Strategies for Building Large, Integrated Systems, Chris Britton and Peter Eye, 2nd Edition, Pearson Education.

Reference Books:

1. Middleware for Communications, Qusay H. Mahmoud,1st Edition, John Wiley and Sons.
2. Middleware Networks: Concept, Design and Deployment of Internet Infrastructure, Michah Lerner, 1st Edition, Kluwer Academic Publishers.
3. Middleware and Enterprise Integration Technologies, G. Sudha Sadasivam and Radha Shankarmani, 1st edition, Wiley, 2009.

VIII Sem	Natural Language Processing (**Elective – VI)**	Course Code: VI8CST42	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the Syntax and semantics and Language models of Natural Language Processors. **(K2)**
CO2: Classify Morphology and Finite State Transducers, Markov Models and Entropy Models. **(K2)**
CO3: Explain about Statistical parsing and probabilistic CFGs. **(K2)**
CO4: Demonstrate semantic analysis. **(K2)**
CO5: Explain Discourse Analysis and Lexical Resources. **(K2)**
CO6: DevelopaStatisticalMethodsforRealWorldApplicationsandexploredeeplearning-basedNLP. **(K3)**

UNIT I: Introduction: Natural Language Processing tasks in syntax,semantics,andpragmatics–Issues–Applications-Theroleofmachinelearning-ProbabilityBasics–Informationtheory–Collocations-N-gram Language Models - Estimating parameters and smoothing - Evaluating language models.

UNIT II: Morphology And Part Of Speech Tagging: Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields.

UNIT III: Syntax Parsing: Syntax Parsing - Grammar formalisms and tree banks - Parsing with Context Free Grammars- Features and Unification-Statistical parsing and probabilisticCFGs(PCFGs)-LexicalizedPCFGs.

UNIT IV: Semantic Analysis: Representing Meaning – Semantic Analysis - Lexical semantics –Word-sense disambiguation- Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing – Discourse Analysis.

UNIT V: Discourse Analysis and Lexical Resources: Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brills Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC).

UNIT VI: NLP Applications: Named entity recognition and relation extraction- IE using sequence labeling-Machine Translation (MT) - Basic issues in MT-Statistical translation-word alignment- phrase-based translation – Question Answering.

Text Books:

1. Daniel Jurafsky and James H. Martin Speech and Language Processing (2nd Edition), Prentice Hall; 2nd edition,2008
2. FoundationsofStatisticalNaturalLanguageProcessingbyChristopherD.Manningand Hinrich Schuetze, MIT Press,1999
3. Steven Bird, Ewan Klein and Edward Loper Natural Language Processing with Python, O'Reilly Media; 1 edition,2009
4. Roland R. Hausser, Foundations of Computational Linguistics: Human-Computer Communication in Natural Language, Paperback, MIT Press,2011

References:

1. Pierre M. Nugues, An Introduction to Language Processing with Perl and Prolog: An Outline of Theories, Implementation, and Application with Special Consideration of English, French, and German (Cognitive Technologies) Softcover reprint,2010
2. James Allen, Natural Language Understanding, Addison Wesley; 2 edition 1994

VIII Sem	Cyber Security (**Elective – VI)**	Course Code: VI8CST43	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe about Cybercrimes. **(K2)**
CO2: Explain Cyber criminals and their attacks. **(K2)**
CO3: Illustrate Cybercrimes and security in mobile devices **(K2)**
CO4: Discuss about the Tools and methods used to overcome Cybercrimes. **(K2)**
CO5: Discuss about Cyber Laws and IT Acts. **(K2)**
CO6: Explain about Computer Forensics. **(K2)**

UNIT I: Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security Who are Cybercriminals? , Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

UNIT II: Cyber offenses: How Criminals Plan Them –Introduction, How Criminals Plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector Cloud Computing.

UNIT III: Cybercrime Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/CellPhones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

UNIT IV: Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **Phishing and Identity Theft:** Introduction, Phishing, Identity Theft (ID Theft).

UNIT V: Cybercrimes and Cyber security: The Legal Perspectives, Introduction, Why Do We Need Cyber laws: The Indian Context, The Indian IT Act, Challenges to Indian Law and Cybercrime Scenario in India, Consequences of Not Addressing the Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act,· Cybercrime and Punishment.

UNIT VI: Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.

Text Books:

1. Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, NinaGodbole, SunitBelapure, 1stedition, Wiley.

Reference Books:

1. Principles of Information Security, MichealE.Whitman and Herbert J.Mattord, 4th edition, Cengage Learning.
2. Information Security the complete reference, Mark Rhodes, Ousley, 2ndedition, MGH.

Annexure-IV

V Sem	**Database Management Systems**	Course Code:V18CST10	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Database Systems, various Data Models and Database Architecture. (K2)

CO2: Apply ER Modeling to Design Relational Databases for Real Time Applications. (K3)

CO3: Apply SQL Constructs to Perform Database Operations. (K3)

CO4: Apply Normalization Techniques to Refine Schema. (K3)

CO5: Explain Transaction Management and Concurrency Control. (K2)

CO6: Experiment with various database indexing techniques. (K3)

UNIT-I: An Overview of Database Systems: Managing Data, File Systems verses DBMS, Advantages of DBMS, Data Independence. **Database System Architecture:** Three Levels of Architecture, External Level, Conceptual Level, Internal Level, Structure of DBMS, The Database Management Systems and Client/Server Architecture.

UNIT-II: Database Design: The E/R Models, Database Design and Er Diagrams, Entities, Attributes, Entity Sets, Relationships and Relationship Sets, Conceptual Design with ER Models. **Relational Model:** Integrity Constraints Over Relations, Key Constraints ,Foreign Key Constraints, General Constraints, Relational Algebra-Selection and Projection, Set Operation, Renaming, Joins, Division, Relational Calculus- Tuple Relational Calculus, Domain Relational Calculus.

UNIT-III: SQL Queries, Constraints and Triggers: The Form of Basic SQL Query, Union, Intersect, Except, Nested Queries, Aggregate Operators, Null Values, Complex Integrity Constraints in SQL, Triggers and Active Database.

UNIT-IV: Schema Refinement (Normalization): Purpose of Normalization or Schema Refinement, Concept of Functional Dependency, Normal Forms based on Functional Dependency (1NF, 2NF and 3NF), Concept of Surrogate Key, Boyce-Codd Normal Form (BCNF), Lossless Join and Dependency Preserving Decomposition, Fourth Normal Form(4NF).

UNIT-V:Transaction Management: Transaction, Properties of Transactions, Transaction Log, and Transaction Management with SQL Commit, Rollback and Savepoint. Concurrency Control: Concurrency Control for Lost Updates, Uncommitted Data, Inconsistent Retrievals and the Scheduler. **Concurrency Control with Locking Methods :** Lock Granularity, Lock Types, Two Phase Locking for Ensuring Serializability, Deadlocks, Concurrency Control with Time Stamp Ordering, Transaction Recovery.

UNIT-VI: Storage and Indexing: Overview of Storages and Indexing, Data on External Storage, File Organization and Indexing, Clustered Indexing, Primary and Secondary Indexes, Index Data Structures, Hash based Indexing, Tree based Indexing, Comparison of File Organization

Text Books:

1. **Introduction to Databse Systems, CJ Date,8th Edition, Pearson Education.**
2. **Data base Management Systems, Raghurama Krishnan, Johannes Gehrke, 3rd Edition TATA McGraw Hill.**

Reference Books:

1. **Data base Systems design, Implementation, and Management, Peter Rob & Carlos Coronel 7th Edition, Course Technology.**
2. **Fundamentals of Database Systems, ElmasriNavrate , 7th Edition, Pearson Education.**
3. **Database Systems - The Complete Book, H G Molina, J D Ullman, J Widom, 2nd Edition, Pearson.**

			L	T	P	C
V Sem	**Computer Networks**	Course Code: V18CST11	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss fundamentals of network concepts and Reference Models.(K2)

CO2: Discuss Communication media and switching techniques.(K2)

CO3: Demonstrate Error control and protocols.(K3)

CO4: Apply Routing algorithms and congestion control algorithms.(K3)

CO5: Discuss Transport layer services and protocols. (K2)

CO6: Describe Application layer protocols.(K2)

UNIT-I: Introduction: Reference models: The OSI Reference Model- the TCP/IP Reference Model, Examples of Networks: Novell Networks, Arpanet, Internet, Network Topologies WAN, LAN, MAN.

UNIT– II: Physical Layer: Transmission Media, Multiplexing: FDM, WDM and TDM- LAN Technologies, introduction to switching: Circuit Switched Networks, Datagram Networks, and Virtual Circuit Networks.

UNIT–III: Data link layer: Design issues, Framing, Flow control, error control, error detection and correction, CRC, Checksum: idea, one's complement internet checksum, MAC: ALOHA, CSMA. Elementary Data Link Layer protocols: simplex protocol, Simplex stop and wait, Simplex protocol for Noisy Channel. Sliding window protocol: One bit, Go back N, Selective repeat-Stop and wait protocol, HDLC, point to point protocol (PPP).Piggybacking.

UNIT-IV : Network Layer : Network layer design issues- Algorithm shortest path routing, Flooding, Hierarchical routing, Broad cast, Multi cast Routing algorithms-Congestion control and algorithms, Internet Protocol (IP) Addresses, Subnet masking

UNIT–V :Transport Layer: Services, Primitives and sockets, Elements of transport protocols, Internet Transport protocols(TCP,UDP,RPC,RTTP/RTP,RTCP) Segment headers, Primitives, Control, Congestion control, Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.

UNIT–VI: Application layer: DNS, SMTP, POP,FTP HTTP Presentation formatting. Network security: Introduction to Cryptography, Authentication, Basics of Public key and private key cryptography, digital signatures and certificates firewalls and wireless security.

Text Books:

1. Computer Networks — Andrew S Tanenbaum, 4th Edition. Pearson Education/PHI
2. Data Communications and Networks – Behrouz A. Forouzan.Third Edition TMH

References:

1. An Engineering Approach to Computer Networks-S.Keshav, 2nd Edition, Pearson Education
2. Understanding communications and Networks, 3rd Edition, W.A. Shay, Thomson

V Sem	**Operating Systems**	Course Code: V18CST12	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Operating System Services and System Calls (K2).

CO2: Illustrate Process Management Concepts and CPU Scheduling Algorithms (K3).

CO3: Demonstrate Process Synchronization primitives (K3).

CO4: Demonstrate Deadlock Prevention, Avoidance and Detection methods (K3).

CO5: Illustrate Memory Management Techniques and Page Replacement Algorithms (K3).

CO6: Describe File System Concepts and Mass Storage Structures (K2) .

UNIT-I: Introduction: Operating-System Structure, Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls.

UNIT-II: Process Management: Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication. **Threads:** Overview, Multithreading Models. **CPU Scheduling:** Basic Concepts, Scheduling Criteria, Scheduling Algorithms

UNIT-III : Process Synchronization: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors

UNIT-IV: Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock

UNIT-V: Memory Management Main Memory: Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table

Virtual Memory: Introduction, Demand Paging, Page Replacement, Allocation of Frames, Thrashing

UNIT-VI:Storage Management: Overview of Mass-Storage Structure, Disk Scheduling, File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Allocation Methods

Text Book:

1. Operating System Concepts, AbrahamSilberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012

Reference Books:

1. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition, Prentice Hall, 2012
2. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,2007

V Sem	Design and Analysis of Algorithms	Course Code: V18CST13	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe asymptotic notation and basic concepts of algorithms (K2).

CO2: Apply divide and conquer paradigm to solve various problems (K3).

CO3: Use greedy technique to solve various problems (K3).

CO4: Apply dynamic programming technique to various problems (K3).

CO5: Employ backtracking technique to various problems (K3).

CO6: Apply branch and bound technique to various problems (K3).

UNIT-I: Introduction: What is an Algorithm, Algorithm Specification-Pseudo code Conventions Recursive Algorithm, Performance Analysis-Space Complexity, Time Complexity, Amortized Complexity, Amortized Complexity, Asymptotic Notation, Practical Complexities, Performance Measurement.

UNIT-II: Divide and Conquer: General Method, Defective Chessboard, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quick Sort-Performance Measurement, Randomized Sorting Algorithms.

UNIT-III: The Greedy Method: The General Method, Knapsack Problem, Job Sequencing with Deadlines, Minimum-cost Spanning Trees-Prim's Algorithm, Kruskal's Algorithms, An Optimal Randomized Algorithm, Optimal Merge Patterns, Single Source Shortest Paths.

UNIT-IV: Dynamic Programming: All Pairs Shortest Paths, Single Source Shortest paths General Weights, Explain Optimal Binary Search Trees, String Edition, 0/1 Knapsack, Reliability Design.

UNIT-V: Backtracking: The General Method, The 8-Queens Problem, Sum of Subsets, Graph Coloring, Hamiltonian Cycles.

UNIT-VI: Branch and Bound: The Method-Least cost (LC) Search, The 15-Puzzle: an Example, Control Abstraction for LC-Search, Bounding, FIFO Branch-and-Bound, LC

Branch and Bound, 0/1 Knapsack Problem-LC Branch-and Bound Solution, FIFO Branch-and-Bound Solution, Traveling Salesperson.

Text Books:

1. Fundamentals of computer algorithms E. Horowitz S. Sahni, University Press

Reference Books:

1. Introduction to Algorithms Thomas H. Cormen, PHI Learning.
2. The Design and Analysis of Computer Algorithms, Alfred V. Aho, John E. Hopcroft, JeffreyD.Ullman.
3. Algorithm Design, Jon Kleinberg, Pearson.

V Sem	**Unix programming**	Course Code: V18CST14	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the UNIX basics and the working of the built in commands in Unix (K2).

CO2: Demonstrate the file system and change the permissions associated with files (K2).

CO3: Develop basic programs using shell script (K3).

CO4: Demonstrate the grep family and data transforming programs sed, and awk (K2).

CO5: Construct programs for process system calls (K3).

CO6: Explain the concept of signals and its system call (K2).

UNIT I: Introduction to UNIX: The UNIX Operating System, A brief history of UNIX, The UNIX Architecture, Basic features of UNIX. General Purpose Utilities- cal, date, man, echo, bc, clear, passwd, who, whoami,unameDirectory Handling Commands: pwd, cd, mkdir, rmdir. File Handling Utilities - cat, touch, cp, ls, rm, mv, nl, pg,tar,wc Displaying Commands: more,head,tail, simple filters and commands: cmp, comm., ulink, diff, head, tail, find, cut, paste,sort, uniq, tr, finger. Disk Utilities– du, df, mount, umount.Process Utilities–ps, kill. Networking Utilities– ping, telnet, rlogin, ftp.

UNIT II : THE FILE SYSTEM : Types of Files, Directories and Files, UNIX File System, Absolute and relative pathnames, File Attributes and Permissions ,The File Command - knowing the File Type, Chmod Command- Changing File Permissions, Chown Command- Changing the Owner of a File, Chgrp Command- Changing the Group of a File. Vi editor- editing with vi, moving the cursor, editing, copying and moving text, pattern searching.

UNIT III : Introduction to Shell Programming : Shell Variables-The Export Command-The Profile File a Script Run During Starting-The First Shell Script-The read Command-Positional parameters-The $? Variable knowing the exit Status-More about the Set Command-The Exit Command-Branching Control Structures-Loop Control Structures-The Continue and Break Statement-The Expr Command: Performing Integer Arithmetic-Real Arithmetic in Shell Programs-The here Document(<<)-I/O Redirection, The Sleep Command-Debugging Scripts-The Script Command-The Eval Command-The Exec Command. Command Line Structure - Met characters.

UNIT-IV : Regular Expressions: grep, egrep, fgrep, Sed- line addressing, context addressing, text editing,substitution. **Programming with awk**: syntax of awk programming statement, structure of awk script, variables ,records fields, and special variables, patterns, operators ,simple input files, awk programming- simple awk programming, awk control structures, looping, functions in awk.

UNIT-V: Unix process: What is a process, process structure, process identifiers, starting new process, waiting for a process, zombie process, system call interface for process management - fork, vfork, exit, wait, waitpid, exec system call.

UNIT VI: Signals: Signal functions, unreliable signals, interrupted system calls, kill and raise functions, alarm, pause functions, abort, sleep functions

Text Books:

1. Introduction to Unix and shell programming, M G Venkateshmurthy, Pearson education
2. Advanced programming in the unix environment, W. Richard Stevens, 3rd Edition, Pearson
Education.

References:

1. Unix and shell Programming, B.A. Forouzan& R.F. Giberg, Thomson, First Edition, NewDelhi,

2003.

V Sem	**Advanced Computer Architecture (Elective-I)**	Course Code: V18CST15	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the basics of quantitative design and analysis (K2).

CO2: Illustrate memory hierarchy schemes (K2).

CO3: Illustrate concepts of Instruction-Level Parallelism (K2).

CO4: Explain concepts of Data-Level Parallelism (K2).

CO5: Explain concepts of Thread-Level Parallelism (K2).

CO6: Describe architectural aspects of Warehouse-Scale Computers (K2).

UNIT I: Fundamentals of Quantitative Design and Analysis: Classes of Computers, Defining Computer Architecture, Designing the Organization and Hardware to Meet Goals and Functional Requirements, Quantitative Principles of Computer Design

UNIT II: Memory Hierarchy Design: Basics of Memory Hierarchies, Advanced Optimizations of Cache Performance, Memory Technology and Optimizations, Virtual Memory and Virtual Machines.

UNIT III : Instruction-Level Parallelism: Concepts and Challenges, Basic Compiler Techniques, Reducing Branch Costs with Advanced Branch Prediction, Overcoming Data Hazards with Dynamic Scheduling, Tomasulo's Approach, Hardware-Based Speculation, Multiple Issue and Static Scheduling

UNIT IV: Data-Level Parallelism: Vector Architecture, VMIPS, Vector Processors, SIMD Instruction Set Extensions for Multimedia

UNIT V: Thread-Level Parallelism: Introduction, Centralized Shared-Memory Architectures-Multiprocessor Cache Coherence, Basic Schemes for Enforcing Coherence, Snooping Coherence Protocols

UNIT VI: Warehouse-Scale Computers: Introduction, Programming Models and Workloads for Warehouse-Scale Computers, Computer Architecture of Warehouse-Scale Computers

Text Book:

1. Computer Architecture: A Quantitative Approach, John L. Hennessy, David A. Patterson, 5th Edition, Morgan Kaufmann, Elsevier.

Reference Books:

1. Advanced Computer Architectures: A Design Space Approach, D Sima, T

Fountain, P Karsuk, 1st Edition, Pearson
2. Advanced Computer Architecture, K Hwang, N Jotwani, 2nd Edition, McGraw-Hill

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain external sorting method (K2).

CO2: Discuss pattern matching Algorithms (K2).

CO3: Illustrate various hash functions with appropriate examples (K3).

CO4: Illustrate various priority queues with appropriate examples (K3).

CO5: Construct self balanced tree with appropriate examples (K3).

CO6: Discuss Multiway search trees (K2).

UNIT I: SORTING: Introduction - External Sorting- K-way Merging - Buffer Handling for parallel Operation- Run Generation- Optimal Merging of Runs.

UNIT II: STRING MATCHING ALGORITHMS: The Navi String matching algorithms – The Robin-Krap algorithm – String Matching algorithm using finite automata – The Knuth Morris Pratt algorithm.

UNIT III: SKIP LIST AND HASHING: Dictionaries – ADT- Linear List representation - Skip List representation: Ideal case – Insertion and Deletion –Assigning levels – The struct skip node – The class skip list – complexity of skipList methods. Hash Table Representation: Ideal hashing – Hash functions and tables -Linear probing- Hashing with Chains

UNIT IV: PRIORITY QUEUES (HEAPS) : Definition and Applications – ADT – Linear lists – Heaps : Definition – Max heap and Min heap operations, Applications – Heap Sort – Huffman Codes.

UNIT V: EFFICIENT BINARY SEARCH TREES : Introduction to AVL Trees- Red-Black Trees- Definition- Representation of a Red- Black Tree- Searching a Red-Black Tree- Inserting into a Red Black Tree- Deletion from a Red-Black Tree- Joining Red-Black Trees, Splitting a Red-Black tree – Splay Trees – Introduction – operation – Amortized complexity.

UNIT VI: MULTIWAY SEARCH TREES : ISAM - M-Way Search Trees, Definition and Properties- Searching an M-Way Search Tree, B-Trees, Definition and Properties- search Elements in a B-tree- Insertion into B-Tree- Deletion from a B-Tree- Node Structure.

Text Books:

1. Data Structures, Algorithms and Applications in C++; SartajSahni; UniverstiyPress ; 2nd Edition.

2. Introduction to Algorithms By Thomas H Cormen, Charless E leiserson, Ronald L Rivest and

Cliford Stein PHI publication Third Edition (UNIT – II)

References:

1. Data Structures, a Pseudocode Approach, Richard F Gilberg, BehrouzA Forouzan, Cengage.
2. An Introduction to Data Structures with applications By Jean Paul Trembly and Paul G Sorenson Tata McGraw Hill Second Edition
3. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, IK Publications, new Delhi.

V Sem	**Artificial Intelligence (Elective-I)**	Course Code: V18CST17	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concept of intelligent systems and current trends in AI. (K2)

CO2: Apply Problem solving, Problem reduction and Game Playing techniques in AI. (K3)

CO3: Illustrate the Logic concepts in AI. (K2)

CO4: Explain the Knowledge representation techniques in AI. (K2)

CO5: Describe Expert systems and their applications. (K2)

CO6: Illustrate Uncertainty Measures. (K2)

UNIT-I: Introduction to Artificial Intelligence: Introduction, history, intelligent systems, foundations of AI, applications, tic-tac-toe game playing, current trends in AI

UNIT-II: Problem solving: State-space Search and Control Strategies: Introduction, General Problem Solving, Characteristics of problem, Exhaustive searches, Heuristic search techniques, Iterative deepening a*, constraint satisfaction

Problem reduction and game playing: Introduction, problem reduction, game playing, alpha beta pruning, two-player perfect information games

UNIT-III:Logic concepts: Introduction, Propositional Calculus, Proportional Logic, Natural Deduction system, Axiomatic system, Semantic tableau system in proportional logic, Resolution Refutation in Propositional logic, Predicate Logic

UNIT-IV: Knowledge representation: Introduction, approaches to Knowledge representation, Knowledge representation using Semantic Networks, Extended Semantic Networks for KR, Knowledge representation using Frames

UNIT-V: Expert Systems and Applications: Introduction phases in building Expert Systems, Expert System versus Traditional Systems, Rule-based Expert Systems, Blackboard systems, Truth maintenance systems, applications of Expert Systems.

UNIT-VI: Uncertainty measure: Probability theory- Introduction, Probability Theory, Bayesian Belief networks, Certainty Factor Theory, Dempster-Shafer theory

Text Book:

1. Artificial Intelligence, Saroj Kaushik, 1st Edition, Cengage Learning.

Reference Books:

1. Artificial Intelligence, Elaine Rich, Kevin Knight, Shivashankar B Nair, 3rd Edition, Tata McGraw Hill Education Private Limited., 2009
2. Artificial Intelligence- A modern Approach, 3rd Edition, Stuart Russel, Peter Norvig, Pearson Education.

V Sem	Computer Graphics (Elective-I)	Course Code: V18CST18	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Understand the applications of computer graphics and learn basic algorithms (K2).
CO2: Analyze the concepts of 2D graphics along with transformation techniques (K3).
CO3: Understand 2D Views of objects and clipping algorithms (K2).
CO4: Illustrate 3D graphics and will get an idea about projections views of objects (K2).

CO5: Determine different visible surface detection methods (K2).
CO6: Understand different animation sequences and Color Models (K2).

UNIT I:Introduction: Application of Computer Graphics, raster scan systems, random scan systems, raster scan display processors. Output Primitives : Points and lines, line drawing algorithms(Bresenham's and DDA Line derivations and algorithms), mid-point circle and ellipse algorithms.

UNIT II: Filled area primitives: Boundary-fill and flood-fill algorithms. **2-D geometrical transforms:** Translation, scaling, rotation, reflection and shear transformations, and homogeneous coordinates, composite transforms.

UNIT III:2-D viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland, Sutherland – Hodgeman polygon clipping algorithm.

UNIT IV:3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations. 3D Viewing pipeline, clipping, projections (Parallel and Perspective). **3-D object representation:** Polygon surfaces, quadric surfaces, spline representation, Bezier curve and B-Spline curves.

Unit V:Visible surface detection methods: Classification, back-face detection, depth-buffer, scan-line, BSPtree methods, area sub-division.

Unit VI:Computer animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages. **Color Models** – RGB, YIQ, CMY, HSV.

Text Books:

1. Computer Graphics C version, Donald Hearn, M.Pauline Baker, Pearson

2. Computer Graphics, Schaum's outlines", Zhigand xiang,Roy Plastock, 2nd Edition,Tata Mc-Graw Hill.

3. Principles of Computer Graphics, S. Govil-Pai, 1st Edition, Springer International Edtion,2005.

Reference Books:

1. Computer Graphics Principles & practice, 2/e, Foley, VanDam, Feiner, Hughes, Pearson

2. Computer Graphics, Peter, Shirley, CENGAGE

3. Principles of Interactive Computer Graphics, Neuman , Sproul, TMH.

.

V Sem	Data Base Management System Lab	Course Code:V18CSL06	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Build SQL Queries and Constraints (K3).

CO2: Experiment with various Database Indexing Techniques.(K3).

CO3: Construct PL/SQL Cursors and Exceptions (K3).

CO4: Develop application programs using PL/SQL (K3).

CO5: Develop PL/SQL Functions, Procedures, Packages (K3).

CO6: Apply projections and aggregation on collection of MongoDB database (K3).

List of Experiments

Part-A

1. Queries to facilitate acquaintance of Built-In Functions, String Functions, Numeric Functions, Date Functions and Conversion Functions.

2. Queries using operators in SQL

3. Queries to Retrieve and Change Data: Select, Insert, Delete, and Update

4. Queries using Group By, Order By, and Having Clauses

5. Queries on Controlling Data: Commit, Rollback, and Save point

6. Queries to Build Report in SQL *PLUS

7. Queries for Creating, Dropping, and Altering Tables, Views, and Constraints

8. Queries on Joins and Correlated Sub-Queries

9. Queries on Working with Index, Sequence, Synonym, Controlling Access, and Locking Rows for Update, Creating Password and Security features PL/SQL.

10. Write a PL/SQL Code using Basic Variable, Anchored Declarations, and Usage of Assignment Operation.

11. Write a PL/SQL Code Bind and Substitution Variables. Printing in PL/SQL

12. Write a PL/SQL block using SQL and Control Structures in PL/SQL

13. Write a PL/SQL Code using Cursors, Exceptions and Composite Data Types

14. Write a PL/SQL Code using Procedures, Functions, and Packages FORMS

Part-B

1. Install and start MongoDB
2. Create and drop database and collection
3. Insert,update ,delete,query document
4. Projection, limiting records, sorting records and aggregation in MongoDB

Text Books:

1. Oracle Database 11g The Complete Reference by Oracle Press, Kevin Loney
2. Database Systems Using Oracle, Nilesh Shah, 2nd Edition ,PHI.
3. Introduction to SQL, Rick F Vander Lans, 4th Edition, Pearson Education.

Reference Books:

1. Introduction to SQL, Rick F. Vander Lans, 4th Edition, Pearson education.
2. Oracle PL/SQL Interactive Workbook, B. Rosenzweig and E. Silvestrova,2nd Edition, Pearson education.
3. SQL & PL/SQL for Oracle 10 g, Black Book, Dr. P. S. Deshpande, Dream Tech.

V Sem	Operating System and Unix Lab	Course Code: V18CSL07	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate CPU scheduling algorithms (K3)

CO2: Apply Bankers Algorithm for Deadlock Avoidance and Deadlock Prevention (K3)

CO3: Use Page replacement algorithms for memory management (K3)

CO4: Demonstrate the basic knowledge of Linux commands and file handling utilities by using Linux shell environment. (K3)

CO5: Experiment with the concept of shell scripting programs. (K3)

CO 6: Illustrate the process of how the parent and child relationships (K3)

List of Experiments:

Part-A: OS Lab

1. Simulate the following CPU scheduling algorithms:
   a) FCFS b) SJF c) Round Robin d) Priority
2. Implement : fork (), wait (), exec() and exit () system calls
3. Simulate Producer and Consumer problem using Semaphores
4. Simulate Bankers Algorithm for Dead Lock Avoidance
5. Simulate Bankers Algorithm for Dead Lock Prevention
6. Simulate the following page replacement algorithms:
   a) FIFO b) LRU c) LFU
7. Simulate the following File allocation strategies:
   a) Sequenced b) Indexed c) Linked

Part-A: UNIX Lab

8. **Study of Unix Commands:** General Purpose Utilities, Directory Handling Commands, File Handling Utilities, Displaying Commands, Filters, Disk Utilities
9. Shell Script to list all of the directory files in a directory.
10. Shell Script to find the factorial of a given number
11. Shell Script to generate a Multiplication table.
12. Shell Script to Perform arithmetic operations
13. Implement an AWK script to count the number of lines in a file that do not contain vowels
14. Design an awk script to find the number of characters, words and lines in a file?
15. Design a C program to create a child process and allow the parent to display

"parent" and the child to display "child" on the screen

16. Demonstration of GDB tool to understand process programme.
17. Design a C program to create a Zombie Process.
18. Design a C program that illustrates how an orphan is created.

2. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition, Prentice Hall, 2012
3. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,2007
4. M G venkateshmurthy Introduction to Unix and shell programming Pearson education
5. W. Richard Stevens, Advanced programming in the unix environment, 3rd Edition,Pearson education.

V Sem	**Technical Skills-III**	Course Code: V18CST62	L	T	P	C
			0	0	4	MNC

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Apply fundamental data structures like List, Stack to solve real work problems in linear time i.e. O(n). (K3)

CO2: Make use of advanced data structures like queue, to solve complex problems in linear time , logarithmic time i.e. O(n) or O(nlogn).(K3)

CO3: Develop programs to solve problems by with the help of searching and sorting techniques. (K3)

CO4: Analyze linked list by comparing with Array List and develop programs to solve optimization Problems. (K4)

CO5: Experiment with types of Linked List to solve complex combinatorial problems. (K3)

CO6: Develop programs to solve complex problems by using combination of stack, Queue and List. (K3)

Data Structures

1. Problem solving using ArrayList
2. Problem solving using LinkedList
3. Problem solving using Stack
4. Problem solving using Queue
5. Problem solving using Searching
6. Problem solving using Sorting

Text Books:

1. Introduction to Algorithms, Second Edition, Thomas H. Cormen Charles E. Leiserson.
2. Data Structures and Algorithms Made Easy: Narasimha Karumanchi .
3. The Algorithm Design Manual, Springer series, Steven Skiena.

VI Sem	**Compiler Design**	Course Code: V18CST19	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the compilation process and lexical analyzer (K2)
CO2: Construct top down parsing Techniques (K3)
CO3: Construct bottom up parsing techniques (K3)
CO4: Construct syntax directed translation (K3)
CO5: Produce intermediate code generation process and run time environments (K3)
CO6: Explain the code generation process. (K2)

UNIT-I: Introduction: Language Processors, the Structure of a Compiler. Lexical Analysis: The Role of the Lexical Analyzer, Specification of Tokens, Recognition of Tokens and the Lexical-Analyzer Generator Lex.

UNIT-II: Syntax Analysis: Definition of CFG, Lexical Versus Syntactic Analysis, Writing a Grammar- Elimination of Left Recursion, Left Factoring. Top Down Parsing: Recursive Descent Parsing, First and Follow, LL(1) Grammars, Non recursive Predictive Parsing, Error Recovery in Predictive Parsing.

UNIT-III: Bottom-Up Parsing: Bottom Up Parser Classification, Reductions, Handle Pruning, Shift-Reducing, Conflicts During Shift Reduce Parsing. Introduction to LR Parsing: Difference between LR and LL Parsers, Why LR Parsers?, Items and the LR(0) automaton, The LR-Parsing Algorithm, Constructing SLR Parsing Tables

UNIT-IV: More powerful LR parsers: construction of CLR (1), LALR Parsing tables, Comparison of all Bottom Up approaches. Semantic Analysis: Syntax Directed Definitions, Evaluation Orders for SDD's, Applications of SDT.

UNIT-V: Intermediate Code Generation: Variants of Syntax Trees, Three-Address Code, Control Flow, Back-patching. Run-Time Environments: Storage Organization, Stack Allocation of Space, Heap Management.

UNIT-VI: Code Generation: Basic Blocks and Flow Graphs, Optimization of Basic Blocks, Peephole Optimization, Register Allocation and Assignment. Machine-Independent optimizations: The Principal Sources of Optimizations, Introduction to Data-Flow Analysis.

Text Books:
1. Compilers, Principles Techniques and Tools- Alfred V Aho, Monica S Lam, Ravi Sethi, Jeffrey D. Ullman,2nded, Pearson,2007

Reference Books:
1. Principles of compiler design, V. Raghavan, 2nd ed, TMH, 2011
2. Compiler Design, K. Muneeswaran, Oxford

VI Sem	**Data Mining**	Course Code:	L	T	P	C
		V18CST20	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the concept of Data Mining and its functionalities (K2)

CO2: Discuss various Data Preprocessing Techniques (K3)

CO3: Demonstrate Association Analysis Techniques (K3)

CO4: Illustrate various Classification Techniques (K3)

CO5: Demonstrate Alternative techniques for Classification (K3)

CO6: Use different Clustering techniques to cluster data (K3)

UNIT-I : Introduction: Need for Data Mining, Knowledge Discovery from Data, Kinds of Data mined, Kinds of Patterns mined, Technologies used, Kinds of Applications targeted, Major Issues in Data Mining, Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Measuring Data Similarity and Dissimilarity

UNIT-II: Data Preprocessing: Overview of Data Preprocessing, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

UNIT-III: Mining Frequent Patterns, Associations, and Correlations: Basic Concepts, Frequent Itemset Mining Methods- Apriori Algorithm: Finding Frequent Itemsets by Confined Candidate Generation, Generating Association Rules from Frequent Itemsets, Improving the Efficiency of Apriori, Pattern-Growth Approach for Mining Frequent Itemsets

UNIT-IV: Classification: Basic Concepts, Decision Tree Induction, Attribute Selection Measures, Tree Pruning

UNIT-V: Bayes Classification Methods: Bayes' Theorem, Naive Bayesian Classification. **Bayesian Belief Networks:** Concepts and Mechanisms, Training Bayesian Belief Networks

UNIT-VI: Cluster Analysis: Basic Concepts and Methods, Partitioning Methods, Hierarchical Methods, Density Based Method-DBSCAN

Text Books:

1. Data Mining Concepts and Techniques, Jiawei Han, Micheline Kamber, Jian Pei,3rd Edition, Morgan Kaufmann Publishers

Reference Books:

1. Introduction to Data Mining, Pang-Ning Tan, Michael Steinbach, Vipin Kumar, 1st Edition, Pearson Education.
2. Data Mining and Analysis,Mohammed J Zaki, Wagner Meira JR, 1st Edition ,Cambridge University Press.

VI Sem	Object Oriented Analysis and Design Through UML	Course Code: V18CST21	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss importance of modeling. [K2]

CO2: Describe classes and relationships. [K2]

CO3: Develop class diagrams and object diagrams. [K3]

CO4: Develop Interaction, Use case and Activity Diagrams. [K3]

CO5: Illustrate advanced behavioral modeling. [K3]

CO6: Develop component and deployment diagrams.[K3]

UNIT-I: Introduction to UML: Importance of modeling - Principles of modeling - Object oriented modeling - Conceptual model of the UML – Architecture - Software Development Life Cycle.

UNIT-II: Advanced Structural Modeling: Classes – Relationships - Common Mechanisms and diagrams - Advanced classes - Advanced relationships – Interfaces - Types and Roles – Packages.

UNIT-III: Class & Object Diagrams: Terms, concepts - Modeling techniques for Class Diagrams - Modeling techniques for Object Diagrams.

UNIT-IV: Basic Behavioral Modeling-I: Interactions - Interaction diagrams. **Basic Behavioral Modeling-II:** Use cases - Use case Diagrams - Activity Diagrams.

UNIT-V: Advanced Behavioral Modeling: Events and signals - State machines - Processes and Threads - Time and space - State chart diagrams.

UNIT-VI: Architectural Modeling: Component- Deployment - Component diagrams - Deployment diagrams.

Text Book:

1. The Unified Modeling Language User Guide, Grady Booch, James Rumbaugh, Ivar Jacobson, Pearson Education.

Reference Books:

1. UML 2 Toolkit, Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, WILEY-Dreamtech India Pvt. Ltd.
2. Fundamentals of Object Oriented Design in UML, Meilir Page-Jones, Pearson Education.
3. Modeling Software Systems Using UML2, Pascal Roques, WILEY-Dreamtech IndiaPvt. Ltd.

V18CST22</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

<u>Syllabus Details</u>

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1:Describe the fundamentals of networks security, security architecture, threats and vulnerabilities (K2)
CO2: Discuss the mathematical support for both symmetric and asymmetric key cryptography (K2)
CO3: Discuss the concept of developing encryption and decryption algorithms (K2)
CO4: Illustrate various techniques of encryption and message authentication functions (K3)
CO5: Apply various Key management and Distribution techniques and its importance (K3)
CO6: Discuss the Need of Transport level and Email security algorithms (K2)

UNIT-I: Computer Security concepts, security services, and Active vs. Passive attacks, Security mechanisms, OSI Security Architecture, A Model for Network security, Classical Encryption Techniques, Substitution ciphers, Transposition ciphers.

UNIT-II: Introduction to Number Theory, Fermat's and Euler's Theorem, the Chinese Remainder Theorem, Euclidean Algorithm, and Modular Arithmetic.

UNIT-III: Block Ciphers, Data Encryption Standard (DES), Block Cipher Design Principles, Advanced Encryption Standard (AES), Simplified AES, Multiple Encryption and Triple DES, Pseudorandom Number Generators, Pseudorandom Number Generation Using a Block Cipher, Stream Ciphers, RC4.

UNIT-IV: RSA, Diffie-HellmanKeyExchange, Elliptic Curve Cryptography, Message Authentication Code-Message Authentication Functions, Requirements, and Security, HMAC, Hash functions, Secure Hash algorithm,SHA-512.

UNIT-V: Digital Signatures, Digital Signature Standards, Authentication Protocols, Kerberos, Key Management and Distribution, X.509 Digital Certificate, NIST Digital Signature Algorithm.

UNIT-VI: Transport Level Security: Web Security Considerations, Secure Socket Layer, Transport Layer Security. Electronic mail security: Pretty Good Privacy (PGP),S/MIME.

Text Books:

1. "Cryptography and Network Security, Principles and Practices", William Stallings Pearson Education, Sixth Edition.
2. "Network Security Essentials (Applications and Standards)", William Stallings, Pearson Education Fourth Edition.
3. Cryptographyand NetworkSecurity,BehrouzAForouzan,Debdeep Mukhopadhyay,(3e) McGrawHill.

Reference Books:

1. "Network Security – PrivateCommunication in a Public World" Charlie Kaufman, Radia Perlman and Mike Speciner , Pearson/PHI.

VI Sem	**Software Testing Methodologies (Elective-II)**	Course Code: V18CST23	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software testing objectives and methodology. (K2)

CO2: Apply various Software testing techniques. (K3)

CO3: Discuss Static testing techniques for software testing. (K2)

CO4: Differentiate software testing and debugging process. (K2)

CO5: Construct test cases by understanding test suite management. (K3)

CO6: Explain modern software testing tools to support software testing. (K2)

UNIT-I: Introduction to Software Testing: Evolution of software Testing, Myths and Facts, Goals of software Testing, Definitions of Testing, Model for Software Testing, Software Testing Terminology, Software Testing Life Cycle.

UNIT-II: Verification and Validation: Verification & Validation Activities, Verification, Verification of Requirements, Verification of High level and low level designs, How to verify code, Validation. **Dynamic Testing I:** Black Box testing techniques: Boundary Value Analysis, Equivalence Class Testing, Decision Table based Testing,

UNIT-III: Dynamic Testing II: White-Box Testing: Need of White-Box Testing, Logic coverage criteria, Basis path testing, Loop testing. **Static Testing:** Inspections, Structured Walkthroughs, Technical reviews.

UNIT-IV: Regression Testing: Progressive Vs Regressive Testing, Regression testability, Objectives of regression testing, When is Regression Testing done? Regression Testing Types, Regression testing techniques. **Debugging:** Debugging process, Techniques, correcting bugs.

UNIT-V: Efficient Test Suite Management: Why does a Test Suite grow, minimizing the Test suite and its benefits, Test suite prioritization, Types of Test case prioritization, Prioritization techniques, measuring the effectiveness of a prioritized Test Suite.

UNIT-VI: Software Quality Management: Software quality concept, Quality control and Quality Assurance, Software Quality metrics. **Automation and Testing Tools:** Need for automation, categorization of Testing tools, selection of testing tools, Overview of some commercial testing tools.

Text Books:

1. Software Testing, Principles and Practices, Naresh Chauhan, 9th Edition, Oxford Publisher.

Reference Books:

1. Software testing techniques - Boris Beizer, 2nd Edition, Dreamtech publisher.
2. Foundations of Software testing, Aditya P Mathur, 2nd ed, Pearson.
3. Software Testing- Yogesh Singh, CAMBRIDGE.

VI Sem	**Principles of Programming Languages (Elective-II)**	Course Code: V18CST24	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Syntax and Semantics of Programming Languages (K2).

CO2: Illustrate Data, Data Types and basic statements of Programming Languages (K3).

CO3: Explain various sub programming Issues (K2).

CO4: Construct programs using Object Oriented, Concurrency and Event Handling (K3).

CO5: Distinguish Programming Languages, schemes and ML (K2).

CO6: Describe Logic Programming Languages (K2).

UNIT I: SYNTAX AND SEMANTICS: Reasons for studying Programming Languages, Programming Domains, Evolution of programming languages, describing syntax, context free grammars, attribute grammars, describing semantics, lexical analysis, parsing, recursive – decent bottom – up parsing.

UNIT II: DATA TYPES AND BASIC STATEMENTS: Introduction, primitive data types, strings, array types, associative arrays, record types, tuple types , union types, pointers and references, Arithmetic expressions, overloaded operators, type conversions, relational and Boolean expressions, assignment statements , mixed mode assignments, control structures – selection, iterations, branching, guarded Statements.

UNIT III: SUBPROGRAMS AND IMPLEMENTATIONS: Subprograms, design issues, local referencing, parameter passing, overloaded methods, generic methods, design issues for functions, semantics of call and return, implementing simple subprograms, stack and dynamic local variables, nested subprograms, blocks, dynamic scoping.

UNIT IV: OBJECT- ORIENTED PROGRAMMING,EVENT HANDLING: Object Model – Classes, Visibility and Information Hiding, Inheritance, Polymorphism, Abstract Classes, Event Handling- Mouse Clicks, Mouse Motion, Buttons, Labels, Text areas, Combo boxes, Examples.

UNIT V: FUNCTIONAL PROGRAMMING LANGUAGES: Introduction to lambda calculus, fundamentals of functional programming languages, Programming with Scheme, – Programming with ML.

UNIT VI: LOGIC PROGRAMMING LANGUAGES: Introduction to logic and Horn Clauses, logic programming – Programming in Prolog, Prolog Examples-Solving Word Puzzles, Eight Queens Problem.

Text Books:

1. Concepts of Programming Languages, Robert W. Sebesta ,Tenth Edition, Addison Wesley, 2012.
2. Programming Languages, Principles & Paradigms, 2ed, Allen B Tucker, Robert E Noonan, TMH

References:

1. The Scheme programming language, R. Kent Dybvig, Fourth Edition, MIT Press, 2009.
2. Elements of ML programming, Jeffrey D. Ullman, Second Edition, Prentice Hall, 1998.
3. The craft of Prolog, Richard A. O'Keefe MIT Press, 2009.

VI Sem	**Machine Learning (Elective-II)**	Course Code: V18CST25	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate basics of Machine Learning. (K2)

CO2: Explain Various Classification Techniques. (K2)

CO3: Explain Tree Based Learning and Ensemble Learning (K2)

CO4: Demonstrate Neural Networks and Multi Layer Perceptrons. (K2)

CO5: Explain Multi Layer Perceptrons and Back Propagation (K2).

CO6: Demonstrate Dimensionality Reduction Techniques (K2).

Unit-I: Introduction:Learning: Machine Learning, Types Of Machine Learning, Supervised Learning, Regression, Classification, The Machine Learning Process. Some Terminology: Weight Space, The Curse Of Dimensionality. Knowing What You Know: Testing Machine Learning Algorithms, Over fitting, Training, Testing, And Validation Sets. Some Basic Statistics: Averages Variance And Covariance, The Bias-Variance Tradeoff.

UNIT II: Classification: The General Problem, Logistic Regression, K-Nearest Neighbor Classifiers, Support Vector Machines. Assessing Performance Of Classifiers: The Confusion Matrix, Accuracy, 0/1 Loss, Sensitivity And Specificity, The Receiver Operator Characteristic (Roc) Curve. Unbalanced Datasets Measurement: Precision, Recall And F1 Score.

UNIT-III:Ensemble Learning : Boosting, Adaboost, Stumping, Bagging , Subbagging, Random Forests.

UNIT-IV: Neural Networks: The Brain And The Neuron, Hebb's Rule, Mcculloch And Pitts Neurons, Limitations Of The Mcculloch And Pitts Neuron Model, Neural Networks, The Perceptron, The Learning Rate, The Bias Input The Perceptron Learning Algorithm, An Example Of Perceptron Learning: Logic Functions Implementation, Linear Separability, Linear Regression, Linear Regression Examples

UNIT-V: The Multi Layer Perceptron(MLP): Going Forwards, Going Backwards(Back Propagation of Errors), The MLP in practice, Examples of using the MLP: Classification and Regression, Deriving Back-Propagation.

UNIT-VI: Dimensionality Reduction: Linear Discriminant Analysis (LDA), Principal Components Analysis (PCA), Relation With The Multi-Layer Perceptron, Kernel PCA, Factor Analysis, Independent Components Analysis (ICA) Locally Linear Embedding.

Text Books:

1. Machine Learning: An Algorithmic Approach.Stephen Marsland, 2nd Edition, CRC Press.

2. A First Course in Machine Learning; Volume in Machine Learning and Pattern Recognition Series –

CRC-Taylor & Francis-Chapman & Hall Rogers S., Girolami M., (2011).

Reference Books:

1. Machine Learning: The art and Science of Algorithms that Make sense of Data. Peter Flach,

Cambridge, First Edition, 2012.

2. Machine Learning: Tom Mitchel, McGraw Hill Learning, 1997

VI Sem	**Image Processing (Elective-II)**	Course Code: V18CST26	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the different Transforms Techniques & their use in Image Processing applications (K3).

CO2: Demonstrate Spatial & frequency domain filtering (like smoothing & sharpening operations) on

Images (K3).

CO3: Describe Restoration operations/techniques on Images (K2).

CO4: Demonstrate the Image compression Techniques and multi-resolution processing on Images (K3).

CO5: Illustrate Morphological operations on Images & Image segmentation (K3).

CO6: Illustrate the different color Image Processing Techniques on Images (K3).

UNIT-I : Introduction: Introduction to Image Processing, Fundamental steps in digital image processing, components of an image processing system, image sensing and acquisition, image sampling and quantization, some basic relationships between pixels, an introduction to the mathematical tools used in digital image processing. **Image Transforms:** Need for image transforms, Discrete Fourier transform (DFT) of one variable, Extension to functions of two variables, some properties of the 2-D Discrete Fourier transform, Importance of Phase, Walsh Transform. Hadamard transform, Haar Transform, Slant transform, Discrete Cosine transform.

UNIT-II: Intensity Transformations and Spatial Filtering: Background, Some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters, sharpening spatial filters. **Filtering in the Frequency Domain:** Preliminary concepts, The Basics of filtering in the frequency domain, image smoothing using frequency domain filters, Image Sharpening using frequency domain filters, Selective filtering.

UNIT-III: Image Restoration and Reconstruction: A model of the image degradation / Restoration process, Noise models, restoration in the presence of noise only-Spatial Filtering, Periodic Noise Reduction by frequency domain filtering, Linear, Position –Invariant Degradations, Estimating the degradation function, Inverse filtering, Minimum mean square error (Wiener) filtering, constrained least squares filtering ,geometric mean filter .

UNIT-IV: Image compression: Fundamentals, Basic compression methods: Huffman coding, Arithmetic coding, LZW coding, Run-Length coding, Bit-Plane coding. **Wavelets and**

Multiresolution Processing: Image pyramids, subband coding, Multiresolution expansions, wavelet transforms in one dimensions & two dimensions, Wavelet coding.

UNIT-V: Image segmentation: Fundamentals, point, line, edge detection, thresholding, region –based segmentation. **Morphological Image Processing:** Preliminaries, Erosion and dilation, opening and closing, basic morphological algorithms for boundary extraction, thinning, gray-scale morphology.

UNIT-VI: Color image processing: color fundamentals, color models, pseudo color image processing, basics of full color image processing, color transformations, smoothing and sharpening. Image segmentation based on color, noise in color images, color image compression.

Text Books:

1. Digital Image Processing, R. C. Gonzalez and R. E. Woods, 3rd edition, Prentice Hall, 2008.

2. Digital Image Processing, Jayaraman, S. Esakkirajan, and T. Veerakumar, Tata McGraw-Hill Education, 2011.

Reference Books:

1. Fundamentals of Digital Image Processing, Anil K.Jain, Prentice Hall of India, 9th Edition, Indian Reprint, 2002.

2. Digital Image Processing and Analysis, B.Chanda, D.Dutta Majumder, PHI, 2009.

<tr><td>0</td><td>0</td><td>3</td><td>1.5</td></tr>
</table>

<u>Syllabus Details</u>

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop OOAD and UML concepts to identify Classes, Use Cases and their relationships (K3).

CO2: Develop Class diagrams (K3).

CO3: Develop Use case diagrams (K3).

CO4: Construct Interaction diagrams (K3).

CO5: Develop State chart, Activity diagrams (K3).

CO6: Develop Component and Deployment diagrams (K3).

List of Experiments

1. Draw basic class diagrams to identify and describe key concepts like classes, and their relationships.
2. Draw one or more Use Case diagrams for capturing and representing requirements of the system. Use case diagrams must include template showing description and steps of the Use Case for various scenarios.
3. Draw sequence diagrams OR communication diagrams with advanced notation for system to show objects and their message exchanges.
4. Draw activity diagrams to display either business flows or like flow charts.
5. Develop State chart diagrams.
6. Draw component diagrams assuming that build the system reusing existing components along with a few new ones.
7. Draw deployment diagrams to model the runtime architecture of system.
8. Design Case study on Library Management System
9. Design Case Study on Hospital Management System
10. Case study-Railway Reservation System
11. Design Case study on Library Management System using C4 Model.

Text Books:

1. The Unified Modeling Language User Guide, Grady Booch, James Rumbaugh, Ivar Jacobson, Pearson Education.

. **Reference Books:**

1. UML 2 Toolkit, Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, WILEY-Dreamtech India Pvt. Ltd.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Data Preprocessing techniques.(K3)

CO2: Demonstrate Association Rule Mining techniques.(K3)

CO3: Demonstrate Classification techniques. (K3)

CO4: Demonstrate the Clustering techniques. (K3)

List of Experiments (Using Weka Tool):

1. Demonstrate Data Preprocessing on predefined Weka dataset labor.arff
2. Create a student.arff dataset and Demonstrate Data Preprocessing on it
3. Demonstrate Association rule process on predefined Weka dataset contactlenses.arff using apriori algorithm.
4. Create an employee.arff dataset and demonstrate Association rule process on it using apriori algorithm
5. Demonstrate Classification process on student.arff dataset using j48 algorithm
6. Create a customer.arff dataset and demonstrate Classification process on it using j48 algorithm
7. Demonstrate Classification process on employee.arff dataset using id3 algorithm
8. Demonstrate Classification process on employee.arff dataset using Naïve Bayes algorithm
9. Demonstrate Clustering process on predefined Weka dataset iris.arff using simple k-means algorithm.
10. Demonstrate Clustering process on dataset student.arff using simple k- means algorithm.

Reference Books:

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate java fundamentals to solve real world computational problems.(K2)

CO2: Illustrate object orientated concepts in solving problems with reusability feature. (K2)

CO3: Apply collections on java to solve complex problems in linear time. (K3)

CO4: Make use of StringBuffer and StringBuilder to solve problems in linear and logarithmic time. (K3)

CO5: Experiment with Object Oriented concepts toreduce complexity of problems.(K3)

CO6: Develop programs to solve robust programs by using Exception Handling. (K3)

Java Programming

1. Problem solving using Control Statements
2. Problem solving using Arrays
3. Problem solving using Strings ,StringBuffer, StringBuilder
4. Problem solving using OOP Concepts
5. Problem solving using Inheritance
6. Problem solving using Polymorphism
7. Problem solving Collections (includes all)
8. Problem solving using Exception Handling

Text Books:

1. Thinking on Java - O'Reilly.
2. Java Complete Reference.
3. Effective Java. Third Edition. Joshua Bloch .

VII Sem	**Advanced Java and Web Technologies**	Course Code: VI8CST27	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the basic concepts of HTML and CSS (K2)

CO2: Develop dynamic webpages and validate with java Script. (K3)

CO3: Illustrate the basic concepts of NODE JS and Angular. (K2)

CO4: Illustrate Extensible markup language & AJAX (K2)

CO5: Build database driven web applications using JSP (K3)

CO6: Develop web applications using PHP and MySQL (K3)

UNIT-I :HTML: Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Frames Forms.**CSS:** Cascading style sheets, Levels of Style Sheets, Style Specification Formats, Selector Forms, Property value forms, Font Properties, List Properties, color, Alignment of Text.

UNIT-II: JavaScript: Overview of JavaScript, General Syntactic Characteristics, Primitives Operations and Expressions, Screen output and Keyboard Input, Control Statements, Object creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions, Events and Event Handling. **DHTML:** Positioning Moving and Changing Elements.

UNIT-III: Fundamentals of NODE JS and Angular : Understanding Node.js, Installing Node.js, Working with Node Packages, Creating a Node.js Application, Understanding Angular, Modules, Directives, Data Binding, Dependency Injection, Services, Separation of Responsibilities, Creating a Basic Angular Application.

UNIT-IV: Working with XML: Introduction, The syntax of XML,XML Document Structure, Document type Definition (DTD), Namespaces, XML schemas, XSLT, XML Processors - DOM and SAX. **AJAX A New Approach**: Overview of AJAX, Basics of AJAX.

UNIT-V: Introduction to Servlets & JSP: Introduction to servlets, Life cycle of Servlet, Limitations of servlets, Java Server Pages: JSP Overview, Components of a JSP Page: Directives, comments, Expressions, Scriptlets , Declarations, implicit objects, Database Access, session tracking.

UNIT-VI: PHP Programming: Overview of PHP, General syntactic characteristics, Primitives, operations, Expressions, Output, Control statements, Arrays, Functions, Pattern Matching, Form Handling, Cookies, Session Tracking. PHP with MySQL connectivity. Integrating PHP and AJAX.

Text Books:

4. Programming the World Wide Web, 7th Edition, Robet W Sebesta, Pearson, 2013.
5. Node.js, MongoDB and Angular Web Development, 2nd Edition,Brad Dayley Brendan Dayley Caleb Dayley,Pearson Education,2018
6. JSP:The Complete reference,Phil Hanna,The McGraw-Hill Copanies,2001

Reference Books:

2. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.

2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage

Learning

3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectures of Distributed Systems and Distributed Mutual Exclusion. **(K2)**
CO2: Illustrate the concepts of Deadlock Handling Strategies in Distributed Systems. **(K3)**
CO3: Explain the various Resource Management Techniques for Distributed Systems. **(K2)**
CO4: Discuss Fault Tolerance and Fault Recovery concepts in Distributed Systems . **(K2)**
CO5: Interpret the concepts of Cryptography and Data Security in Distributed Systems. **(K3)**
CO6: Describe Multiprocessor Operating System, Process Synchronization, Scheduling. **(K2)**

UNIT I: Architectures of Distributed Systems –System Architecture types - issues in distributed operating systems - communication networks - communication primitives. Distributed Mutual Exclusion - introduction - the classification of mutual exclusion and associated algorithms

UNIT II: Distributed Deadlock Detection -Introduction - deadlock handling strategies in distributed systems - issues in deadlock detection and resolution - control organizations for distributed deadlock detection - centralized and distributed deadlock detection algorithms - hierarchical deadlock detection algorithms.

UNIT III: Distributed Resource Management- Algorithms for implementing DSM - memory coherence and protocols - design issues. Distributed Scheduling - introduction - issues in load distributing - components of a load distributing algorithm - stability - load distributing algorithm – performance comparison - selecting a suitable load sharing algorithm - requirements for load distributing.

UNIT IV: Failure Recovery and Fault tolerance: Introduction- basic concepts - classification of failures - backward and forward error recovery, backward error recovery- recovery in concurrent systems - consistent set of check points - synchronous and asynchronous check pointing and recovery - check pointing for distributed database systems- recovery in replicated distributed databases.

UNIT V: Protection and Security - Preliminaries, the access matrix model and its implementations.-safety in matrix model, advanced models of protection. Data security -

cryptography: Model of cryptography, conventional cryptography- modern cryptography, multipleencryptions - authentication in distributed systems.

UNIT VI: Multiprocessor Operating Systems - Basic multiprocessor system architectures - inter connection networks for multiprocessor systems .Multiprocessor Operating System - structures of multiprocessor operating system, operating system design issues- threads- process synchronization and scheduling.

TEXT BOOKS:

1. Advanced Concepts in Operating Systems: Distributed, Database and Multiprocessor Operating Systems, MukeshSinghal, NiranjanG.Shivaratri,TMH, 2001.

2. Distributed Operating System-Concepts and Design,PradeepK.Sinha ,PHI, 2003.

REFERENCE BOOKS:

1. Modern operating system, Andrew S.Tanenbaum, PHI, 2003

2. Distributed operating system,Andrew S.Tanenbaum,Pearson education, 2003.
3. Operating System Concepts, Abraham Silberschatz; Peter Baer Galvin; Greg Gagne, Seventh Edition, John Wiley & Sons, 2004.

VII Sem	Statistics with R Programming (**Elective – III)**	Course Code: VI8CST29	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate different data structures in R. **(K2)**
CO2: Demonstrate about control statements and functions in R. **(K3)**
CO3: Compute different mathematical operations using R pre defined functions. **(K3)**

CO4: Construct and edit visualizations with R. **(K3)**
CO5: Identify appropriate statistical tests using R. **(K2)**
CO6: Examine linear and non linear models to create testable hypotheses. **(K3)**

UNIT I: Introduction and Data Structures: Introduction, How to install and run R, R Sessions, Functions, Basic Math, constants, Variables, Expressions, Reserved words in R, Arithmetic, and Boolean Operators and values, Data Types, Vectors, Advanced Data Structures: Data Frames, Lists, Matrices, Arrays, Classes.

UNIT II: Control Statements and Functions in R: R Programming Structures, Control Statements, Loops, – Looping Over Nonvector Sets,- If-Else, Default Values for Argument, return values, Deciding Whether to explicitly call return- returning Complex Objects, Functions are Objects, No Pointers in R, Recursion, A Quick sort Implementation- Extended Example: A Binary Search Tree.

UNIT III: Math and Simulation and Input/output in R: Doing Math and Simulation in R, Math Function, Extended Example Calculating Probability Cumulative Sums and Products-Minima and Maxima- Calculus, Functions for Statistical Distribution, Sorting, Linear Algebra, Operations on Vectors and Matrices, Extended Example: Vector cross Product, Set Operations. **Input /output:** Accessing the Keyboard and Monitor, Reading and writing Files

UNIT IV: Graphics: Graphics, Creating Graphs, The Workhorse of R Base Graphics, the plot() Function ,Customizing Graphs, Saving Graphs to Files.

UNIT V: Probability Distributions and Basic Statistics: Probability Distributions, Normal Distribution- Binomial Distribution- Poisson Distributions Other Distribution, Basic Statistics, Correlation and Covariance, T-Tests,-ANOVA.

UNIT VI: Linear Models in R: Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression, - Poisson Regression, Nonlinear Models, Splines- Decision- Random Forests.

TEXT BOOKS:

3. R for Everyone, Lander, Pearson, 2nd edition 2018.
4. The Art of R Programming, Norman Matloff, Cengage Learning, 2nd edition, 2017.

REFERENCE BOOKS:

3. R Cookbook, PaulTeetor, Oreilly, 2nd edition, 2017.
4. R in Action, Rob Kabacoff, Manning, 3rd edition, 2019.

VII Sem	Information Retrieval Systems (**Elective – III**)	Course Code: VI8CST30	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Identify the basic concepts of information retrieval. **(K2)**
CO2: Describe the Capabilities of IRS, cataloging and indexing. **(K2)**
CO3: Explain the data structures and retrieving documents. **(K2)**
CO4: Describe the difficulty of representing and retrieving documents. **(K2)**
CO5: Explain the latest technologies for describing and searching the web.**(K2)**
CO6: Illustrate searching procedure for user-text and Information System Evaluation. **(K2)**

UNIT I: Introduction: Definition, Objectives, Functional Overview, Relationship to DBMS, Digital libraries and Data Warehouses.

UNIT II: Information Retrieval System Capabilities: Search, Browse, Miscellaneous **Cataloging and Indexing:** Objectives, Indexing Process, Automatic Indexing, Information Extraction.

UNIT III: Data Structures: Introduction, Stemming Algorithms, Inverted file structures, N-gram data structure, PAT data structure, Signature file structure, Hypertext data structure.

UNIT IV:Automatic Indexing: Classes of automatic indexing, Statistical indexing, Natural language, Concept indexing, Hypertext linkages. **Document and Term Clustering:** Introduction, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT V: User Search Techniques: Search statements and binding, Similarity measures and ranking, Relevance feedback, Selective dissemination of information search, weighted searches of Boolean systems, Searching the Internet and hypertext. **Information Visualization:** Introduction, Cognition and perception, Information visualization technologies.

UNIT VI: Text Search Algorithms: Introduction, Software text search algorithms, Hardware text search systems. **Information System Evaluation:** Introduction, Measures used in system evaluation, Measurement example – TREC results.

Text Books:

2. Information Storage and Retrieval System: Theory and Implementation, Gerald J. Kowalski, Mark T. Maybury, 2nd edition, 2002, Kluwer Academic Press.

Reference Books:

3. Information Retrieval Data Structures and Algorithms, Frakes, W.B., Ricardo Baeza-Yates Prentice Hall.
4. Information Storage & Retrieval by Robert Korfhage – John Wiley & Sons, Wiley computer publisher, 1997.

VII Sem	Human Computer Interaction (**Elective – III)**	Course Code: VI8CST31	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the principles and characteristics of GUI. **(K2)**
CO2: Recognize how a computer system may be modified to include human diversity. **(K2)**
CO3: Select an effective style for a specific application. **(K2)**
CO4: Discuss Screen Designing mock-ups and carry out user and expert evaluation of interfaces.**(K2)**
CO5: Explain System Menus & Navigation Schemes. **(K2)**
CO6: Discuss Device and Screen based controls. **(K2)**

UNIT I: The User Interface: Introduction, Importance of the User Interface, Importance and benefits of Good Design History of Human Computer Interface. Characteristics of Graphical and Web User Interface: Graphical User Interface, popularity of graphics, concepts of Direct Manipulation, Graphical System advantage and disadvantage, Characteristics of GUI. Web User Interface, popularity of web, Characteristics of Web Interface, Merging of Graphical Business systems& the Web, Principles of User Interface Design.

UNIT II: The User Interface Design Process: Obstacles and Pitfall in the development Process, Usability, The Design Team, Human Interaction with Computers, Important Human Characteristics in Design, Human Consideration in Design, Human Interaction Speeds, Performance versus Preference, Methods for Gaining and Understanding of Users.

UNIT III: Understanding Business Functions: Business Definitions & Requirement analysis, Determining Business Functions, Design standards or Style Guides, System Training and Documentation.

UNIT IV: Principles of Good Screen Design: Human considerations in screen Design, interface design goals, test for a good design, screen meaning and purpose, Technological considerations in Interface Design.

UNIT V: System Menus and Navigation Schemes: Structure, Functions, Context, Formatting, Phrasing and Selecting, Navigating of Menus, Kinds of Graphical Menus Windows Interface: Windows characteristic, Components of Window, Windows Presentation Styles, Types of Windows, Window Management, Websystems

UNIT VI: Device and Screen-Based Control: Device based controls, Operable Controls, Text entry/read-Only Controls, Section Controls, Combining Entry/Selection Controls, Other Operable Controls and Presentation Controls, Selecting proper controls

Text Books:

1. “The Essential Guide to User Interface Design”, Wilbert O. Galitz, 2nd edition,2002,Wiley India Edition.
2. Prece, Rogers, “Sharps Interaction Design”, Wiley India.

3. ”Designing the user interfaces”. Ben Shneidermann 3rd Edition, Pearson Education Asia.

.**Reference Books:**

1. “User Interface Design” , SorenLauesen, Pearson Education
2. “Essentials of Interaction Design”, Alan Cooper, Robert Riemann, David Cronin, Wiley
3. ”HumanComputer Interaction”, Alan Dix, Janet Fincay, GreGoryd, Abowd, Russell, Bealg, Pearson Education.

VII Sem	Distributed Systems (**Elective – IV)**	Course Code: VI8CST32	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe distributed system and desired properties of such systems. **(K2)**
CO2: Discuss the theoretical concepts, namely, virtual time and agreement. **(K2)**
CO3: Discuss the basic concepts of distributed systems and Characteristics of IPC protocols. **(K2)**
CO4: Explain the mechanisms such as Remote procedure call (RPC/RMI) and OSS . **(K2)**
CO5: Explain the mechanisms such as file systems and P2P algorithms. **(K2)**
CO6: Discuss the Transactions and Replications in distributed systems. **(K2)**

UNIT I: Characterization of Distributed Systems: Introduction, Examples of Distributed Systems, Resource Sharing and the Web, Challenges. **System Models:** Introduction, Architectural Models- Software Layers, System Architecture, Variations, Interface and Objects, Design Requirements for Distributed Architectures, Fundamental Models- Interaction Model, Failure Model, Security Model.

UNIT II: Time and Global States: Introduction, Clocks Events and Process States, Synchronizing Physical Clocks, Logical Time and Logical Clocks, Global States, Distributed Debugging.

Coordination and Agreement: Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication, Consensus and Related Problems.

UNIT III: Inter process Communication: Introduction, The API for the Internet Protocols- The Characteristics of Inter process communication, Sockets, UDP Datagram Communication, TCP Stream Communication; External Data Representation and Marshalling; Client Server Communication; Group Communication, Case Study: MPI.

UNIT IV:: Remote Invocation: Introduction, Request-reply protocols, Remote Procedure Call, Events and Notifications, **Case Study:** JAVA RMI.. **Operating System Support:** Introduction, The Operating System Layer, Protection, Processes and Threads –Address Space, Creation of a New Process, Threads.

UNIT V: Distributed File Systems: Introduction, File Service Architecture; Peer-to-Peer Systems: Introduction, Napster and its Legacy, Peer-to-Peer Middleware, Routing Overlays. **Case Study1:** Sun Network File system. **Case Study 2:** The Andrew File System.

UNIT VI: Transactions & Replications: Introduction, System Model and Group Communication, Concurrency Control in Distributed Transactions, Distributed Dead Locks, Transaction Recovery; Replication-Introduction, Passive (Primary) Replication, Active Replication.

Text Books:

1. "Distributed Systems- Concepts and Design", George Coulouris, Jean Dollimore, Tim Kindberg, Fourth Edition, Pearson Publication
2. "Distributed Computing, Principles, Algorithms and Systems", Ajay D Kshemkalyani, MukeshSighal, Cambridge.

Reference Books:

1. "Distributed Systems, Principles and Paradigms", Andrew S. Tanenbaum, Maarten Van Steen, 2d Edition, PHl.
2. "Distributed Systems, An Algorithm Approach," Sukumar Ghosh, Chapman & HalyCRC, Taylor & Fransis Group, 2007.

VII Sem	Scripting Languages (**Elective – IV**)	Course Code: VI8CST33	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concepts of scripting languages. **(K2)**

CO2: Develop Scripting for application using Ruby. **(K3)**

CO3: Explain the concepts of Programming in Perl. **(K2)**

CO4: Construct programs using Perl. **(K3)**

CO5: Describe TCL Scripting and their applications. **(K2)**

CO6: Discuss features of Groovy when compare with other Scripting Languages. **(K2)**

UNIT I: Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services. RubyTk – Simple Tk Application, widgets, Binding events, Canvas, scrolling.

UNIT II: Extending Ruby: Ruby Objects in C, the Jukebox extension, Memory allocation, Ruby TypeSystem, Embedding Ruby to Other Languages, Embedding a Ruby Interpreter.

UNIT III: Introduction to PERL and Scripting: Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting Languages, Uses for Scripting Languages, Web Scripting, and the universe of Scripting Languages. PERL- Names and Values, Variables, Scalar Expressions, Control Structures, arrays, list, hashes, strings, pattern and regular expressions, subroutines.

UNIT IV: Advanced Perl: Finer points of looping, pack and unpack, file system, eval, data structures, packages, modules, objects, interfacing to the operating system, Creating Internet ware applications, Dirty Hands Internet Programming, security Issues.

UNIT V:TCL: TCL Structure, syntax, Variables and Data in TCL, Control Flow, Data Structures, input/output, procedures, strings, patterns, files, Advance TCL- eval, source, exec and uplevel commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts Internet Programming, Security Issues, C Interface.

UNIT VI: Groovy: Features of Groovy, Environment, Basic Syntax, data types, variables, operators, loops, decision making, methods, File i/o, Optionals , numbers, strings, ranges, lists, maps, date and time, Regular expressions, Exception Handling, OO concepts.

Text Books:

1. The World of Scripting Languages, David Barron, Wiley Publications.

2. Ruby Programming language by David Flanagan and Yukihiro Matsumoto O'Reilly.

3. "Programming Ruby" The Prammatic programmers guide by Dabve Thomas Second edition.

Reference Books:

1. Open Source Web Development with LAMP using Linux, Apache, MySQL, Perl and PHP, J.Lee and

B.Ware (Addison Wesley) Pearson Education.

2. Perl by Example, E.Quigley, Pearson Education.

3. Programming Perl, Larry Wall T.Christiansen and J.Orwant, O'Reilly, SPD.

4. Tcl and the Tk Toolkit, Ousterhout, Pearson Education.

5. Pearl Power, J.P. Flynt, Cengage Learning.

(Elective – IV)</td><td rowspan="2">Course Code:
VI8CST34</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basics of machine learning. **(K2)**

CO2: Demonstrate the working of an artificial neural network. **(K2)**

CO3: Identify various parameters and issues while training a deep neural network. **(K2)**

CO4: Explain the working of convolution neural networks. **(K2)**

CO5: Explain the working of recurrent neural networks. **(K2)**

CO6: Recognize the ways of applying deep learning techniques for complex problem-solving. **(K2)**

UNIT I: Machine Learning Basics: Learning Algorithms, Capacity, Overfitting and Underfitting, Hyper parameters and Validation Sets, Estimators, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Descent.

UNIT II: Introduction to Neural Networks: The Basic Architecture of Neural Networks- Single Computational Layer: The Perceptron, Multilayer Neural Networks; Training a Neural Network with Backpropagation, Practical Issues in Neural Network Training-The Problem of Overfitting, The Vanishing and Exploding Gradient Problems, Difficulties in Convergence, Local and Spurious Optima;

UNIT III: Training Deep Neural Networks: Introduction, Backpropagation: Backpropagation with the Computational Graph Abstraction, Dynamic Programming to the Rescue, Backpropagation with Post-Activation Variables and Pre-activation Variables, Setup and Initialization Issues, The Vanishing and Exploding Gradient Problems, Parameter-Specific Learning Rates- AdaGrad, RMSProp, AdaDelta, Adam.

UNIT IV: Convolutional Neural Networks: Introduction, The Basic Structure of a Convolutional Network- Padding, Strides, Typical Settings, The ReLU Layer, Pooling, Fully Connected Layers, The Interleaving Between Layers, Local Response Normalization, Hierarchical Feature Engineering; Training a Convolutional Network- Backpropagating Through Convolutions.

UNIT V: Recurrent Neural Networks: Introduction, The Architecture of Recurrent Neural Networks- Language Modeling Example of RNN, Backpropagation Through Time, Bidirectional Recurrent Networks, Multilayer Recurrent Networks; Long Short-Term Memory (LSTM), Gated Recurrent Units (GRUs).

UNIT VI: Applications Deep Learning: Applications of Convolutional Networks: Content-Based Image Retrieval, Object Localization, Object Detection, Natural Language and Sequence Learning; Application of Recurrent Neural Networks: Application to Automatic Image Captioning, Time-Series Forecasting and Prediction, End-to-End Speech Recognition, Handwriting Recognition.

Text Books:

1. Deep Learning, Ian Goodfellow, Ian Goodfellow, and Aaron Courville, MIT Press.
2. Neural Networks and Deep Learning, Charu C. Aggarwal, Springer.

Reference Books:

1. Neural Networks: A Systematic Introduction, Raúl Rojas, Springer.
2. Introduction to Deep Learning, Eugene Charniak, MIT Press.

VII Sem	Social Networks and semantic web (**Elective – IV**)	Course Code: VI8CST35	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate knowledge by explaining the three different "named" generations of the web. **(K3)**
CO2: Construct a social network. **(K3)**
CO3: Relate knowledge representation methods for semantic web. **(K3)**
CO4: Explain the key aspects of Web Architecture. **(K2)**
CO5: Describe web services and its Applications. **(K2)**
CO6: Develop "Linked Data" Applications using Semantic Web Technologies. **(K3)**

UNIT-I: The Semantic web: Limitations of the current Web, The semantic solution, Development of the Semantic Web, The emergence of the social web.

UNIT-II: Social Network Analysis: What is network analysis? Development of Social Network Analysis, Key concepts and measures in network analysis. Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities, Web-based networks.

UNIT-III: Knowledge Representation on the Semantic Web: Ontologies and their role in the Semantic Web, Ontology languages for the semantic Web.

UNIT-IV: Modeling and Aggregating Social Network Data: State of the art in network data representation, Ontological representation of Social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data.

UNIT-V: Developing social semantic applications: Building Semantic Web applications with social network features, Flink- the social networks of the Semantic Web community, Open academia: distributed, semantic-based publication management.

UNIT-VI: Evaluation of Web-Based Social Network Extraction: Differences between survey methods and electronic data extraction, context of the empirical study, Data collection, Preparing the data, optimizing goodness of fit, Comparison across methods and networks, Predicting the goodness of fit, Evaluation through analysis.

Text Books:

1. Social Networks and the Semantic Web, PeterMika, Springer,2007.
2. Semantic Web Technologies, Trends and Research in Ontology basedsystems,

J.Davies,RudiStuder,PaulWarren,JohnWiley&Sons.

Reference Books:

1. Semantic Web and Semantic Web Services –Liyang Lu Chapman and Hall/CRC Publishers, (Taylor & Francis Group)
2. Information Sharing on the semantic Web – Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications

VII Sem	Advanced Java and Web Technologies Lab	Course Code: VI8CSL10	L	T	P	C
			0	0	2	1

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop static web pages using HTML, CSS. **(K3)**

CO2: Demonstrate the concepts of JavaScript, DHTML and XML. **(K3)**

CO3: Develop Web Applications using JSP. **(K3)**

CO4: Develop dynamic Web Applications using PHP & MySQL. **(K3)**

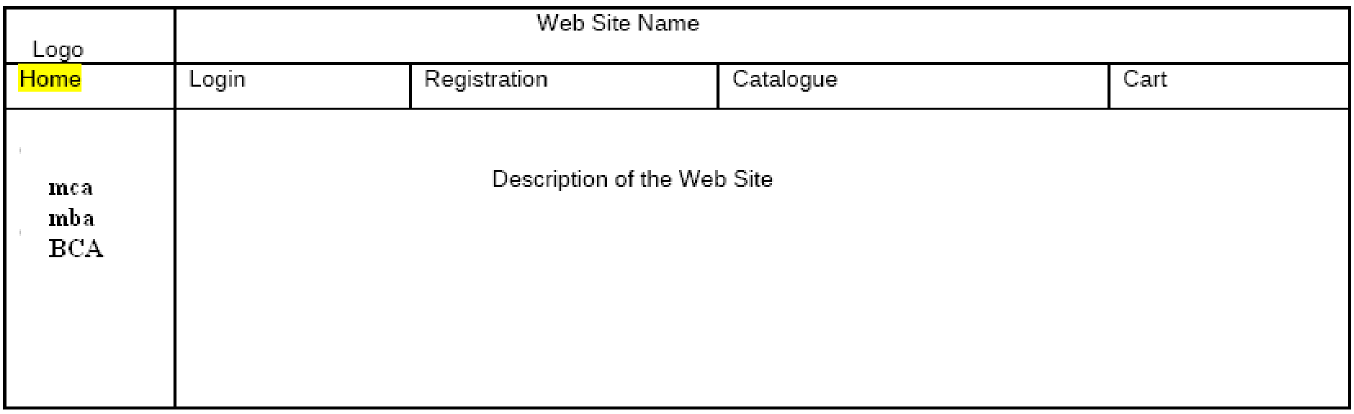
List of Experiments

1) Design the following static web pages required for an online book store web site:

(a) **HOME PAGE:**

The static home page must contain three **frames**.

Top frame: Logo and the college name and links to Home page, Login page, Registration page, Catalogue page and Cart page (the description of these pages will be given below). Left frame: At least four links for navigation, which will display the catalogue of respective links. For e.g.: When you click the link **“MCA”** the catalogue for MCA Books should be displayed in the Right frame. Right frame: The *pages to the links in the left frame must be loaded here.* Initially this page contains description of the web site



(b) **LOGIN PAGE:**

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
MCA MBA BCA	Login : 11a51f0003 Password: ******** Submit Reset			

(c) **CATOLOGUE PAGE:**

The catalogue page should contain the details of all the books available in the web site in a table: The details should contain the following:

1. Snap shot of Cover Page.

2. Author Name.

3. Publisher.

4. Price.

5. Add to cart button.

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
MCA MBA		Book : XML Bible Author : Winston Publication : Wiely	$ 40.5	Add to cart
BCA		Book : AI Author : S.Russel Publication : Princeton hall	$ 63	Add to cart
		Book : Java 2 Author : Watson Publication : BPB publications	$ 35.5	Add to cart
		Book : HTML in 24 hours Author : Sam Peter Publication : Sam	$ 50	Add to cart

(d). **REGISTRATION PAGE:**

Create a "*registration form* "with the following fields

1) Name (Text field)

2) Password (password field)

3) E-mail id (text field)

4) Phone number (text field)

5) Sex (radio button)

6) Date of birth (3 select boxes) 7) Languages known (check boxes – English, Telugu, Hindi, Tamil)

2) Design a web page using **CSS (C**ascading **S**tyle **S**heets**)** which includes the following: Use different font, styles:

In the style definition you define how each selector should work (font, color etc.).

5) Design a login page and Make use of Events to perform validation using JavaScript.

6) Demonstrate a JavaScript program to perform On Mouse over event.

5) Demonstrate the concept of Mouse events (Ex:ng-click) with the help of Angular JS.

6) Design a simple Angular JS form.

7) Write an XML file which will display the Book information which includes the following:

1) Title of the book

2) Author Name

3) ISBN number

4) Publisher name

5) Edition

6) Price

a) Write a Document Type Definition (DTD) to validate the above XML file.

b) Write a XML Schema Definition (XSD)

8) Create a simple JSP to print the current Date and Time.

9)Create JSP to insert the details of 3 or 4 users using a registration form store these values in the data base and then check the authentication of the user by entering the name and password using a login form.

10) Assume four users user1, user2, user3 and user4 having the passwords pwd1, pwd2, pwd3 and pwd4 respectively. Write a PHP for doing the following.

A)

1. Create a Cookie and add these four user id's and passwords to this Cookie.

2. Read the user id and passwords entered in the Login form (week1) and authenticate with the values (user id and passwords) available in the cookies.

If he is a valid user (i.e., user-name and password match) you should welcome him by name (user-name) else you should display "You are not an authenticated user ".

C) Use init-parameters to do the same.

11) Create a table which should contain at least the following fields: name, password, email id, phone number (these should hold the data from the registration form).

Write a PHP program to connect to that database and extract data from the tables and display them. Experiment with various SQL queries. Insert the details of the users who register with the web site, whenever a new user clicks the submit button in the registration page.

12) Insert the details of the 3 or 4 users who register with the web site by using registration form. Authenticate the user when he submits the login form using the user name and password from the database.

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.
2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning
3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

VIII Sem	Software Project Management (**Elective – V**)	Course Code: VI8CST36	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software Project Management Terminology. **(K2)**
CO2: Explain various Software development process Models and software Life cycle phases. **(K2)**
CO3: Illustrate various Effort Estimation Techniques and activity network models for Software Project Planning. **(K3)**
CO4: Demonstrate Risk Management Concepts and resource allocation. **(K3)**
CO5: Explain the importance of Project monitoring and control for accomplishing project goals. **(K2)**
CO6: Describe Software Quality models. **(K2)**

UNIT I: Introduction to Software Project Management: Software Project versus other types of projects, Activities covered by Software Project Management, Categorizing projects ,Stakeholders, Objectives& goals, what is management. **Project Planning:** Step-wise planning, Identify Project Scope and objectives, Infrastructure, Project Products &deliverables, Project activities, Effort estimation.

UNIT II: Project Approach: Build or buy, **process models**: waterfall model, Prototyping, Incremental delivery model, **Agile methods**: Extreme Programming, Atern method, selecting an appropriate process model. **Lifecycle phases:** Engineering and Production stages, Inception, Elaboration, Construction, Transition phases.

UNIT III: Software effort estimation and Activity planning: Overview of Effort Estimation techniques, Function Point analysis, COCOMO. **Activity planning:** Objectives, Network planning models, forward pass and backward pass, Identify Critical path and activities.

UNIT IV: Risk Management and Resource Allocation: Introduction, Risk and its categories, Identification, Assessment, Risk Planning and management, applying PERT technique. Resource Allocation: Types of Resources, Identifying resource requirements, Resource scheduling.

UNIT V: Project Monitoring and Control: Creating framework for monitoring& control, Collecting Data, Visualizing Progress, Cost monitoring, Earned value Analysis.

UNIT VI: Software Quality: Defining Quality, Importance of quality, ISO 9126, Product QualityVs Process Quality management. **Process Capability Models:** Capability Maturity Model, Enhancing software Quality.

Text Books:

1. SoftwareProjectManagement, Bob Hughes & Mike Cotterell, 6th edition, TATA Mcgraw-Hill

2. Software Project Management, WalkerRoyce 2nd edition, Pearson Education.

.

Reference Books:

1. Software Project Management in practice, PankajJalote, 9th edition, Pearson Education.

2. Software Project Management, Joel Henry, 3rd edition, Pearson Education.

VIII Sem	Big Data Analytics (**Elective – V**)	Course Code: VI8CST37	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the challenges of Big Data using Hadoop. **(K2)**

CO2: Interpret Hadoop's architecture and core components of Hadoop Distributed File System. **(K2)**

CO3: Apply data modelling techniques to large data sets using map reduce programs. **(K3)**

CO4: Describe the Hadoop I/O classes. **(K2)**

CO5: Examine the use of Pig Framework to work with big data. **(K3)**

CO6: Develop a data analytical system using HIVE. **(K3)**

UNIT I: Introduction to Big Data: What is Big Data, Why Big Data is Important, Data Storage and Analysis, Comparison with other systems, Grid Computing. **Introduction to Hadoop:** A brief history of Hadoop, Meet Hadoop Data, Apache Hadoop and the Hadoop Ecosystem.

UNIT II: Working with Big Data & HDFS: Google File System, Hadoop Distributed File System (HDFS) –Building blocks of Hadoop (Namenode, Datanode, Secondary Namenode, JobTracker, and TaskTracker). **Introducing and Configuring Hadoop cluster:** Local distributed mode, Pseudo-distributed mode, Fully Distributed mode, Configuring XML files.

UNIT III: Writing Map Reduce Programs: A Weather Dataset –Data Format, Analyzing Data with UNIX Tools, Analyzing the Data with Hadoop-Map Reduce. **Basic programs of Hadoop Map Reduce:** Driver code,Mapper code, Reducer code, RecordReader, Combiner functions. Map Reduce Types, Input Formatclass Hierarchy, other map reduce examples (word count).

UNIT IV: Hadoop I/O: The Writable Interface, Writable Comparable and Comparators. **Writable Classes:** Writable wrappers for Java primitives, Text & Bytes Writable, NullWritable, ObjectWritable and Generic Writable, Writable collections. **Implementing a Custom Writable:** Implementing a Raw Comparator for speed, Custom comparators

UNIT V: Pig - Hadoop Programming Made Easier: Admiring the Pig Architecture, Going with the Pig Latin Application Flow, Working through the ABCs of Pig Latin, Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.

UNIT VI: Applying Structure to Hadoop Data with Hive: Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive, Examining the Hive Clients, Working with Hive Data Types, Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.

Text Books:

1. Hadoop: The Definitive Guide, Tom White, O'Reilly, 3rd Edition, 2012.
2. Hadoop in Action, Chuck Lam, MANNING Publ., 2016.
3. Hadoop for Dummies, Dirk deRoos, Paul C.Zikopoulos, Roman B.Melnyk, Bruce Brown, Rafael Coss, 2014.

.

Reference Books:

1. Hadoop in Practice, Alex Holmes, MANNING Publ., 2014.
2. Hadoop Map Reduce Cookbook, Srinath Perera, Thilina Gunarathne, PACKT, 2013.

VIII Sem	Soft Computing (**Elective – V**)	Course Code: VI8CST38	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss about Soft Computing, Requirements and Applications of Soft Computing. **(K2)**
CO2: Discuss about various Supervised and Unsupervised Learning Networks. **(K2)**
CO3: Illustrate various Fuzzy Logic, Fuzzy Sets, Crisp sets, Fuzzification and De-fuzzification Principles. **(K2)**
CO4: Discuss about Fuzzy Arithmetic and Fuzzy measures. **(K2)**
CO5: Discuss about Genetic Algorithms and its Operators. **(K2)**
CO6: Discuss about Various Hybrid Soft Computing Techniques. (**K2)**

UNIT I: Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirements of Soft computing, Major Areas of Soft Computing, Applications of Soft Computing.

UNIT II: Associative Memory Networks: (Supervised Learning): Introduction, Training Algorithms for Pattern Association, Auto-associative Memory Network, Hetero-associative Memory Network, Bidirectional Associative Memory (BAM),Hopfield Networks, Iterative Auto-associative Memory Networks, Temporal Associative Memory Network. **Unsupervised Learning Networks:** Introduction, Fixed Weight Competitive Nets, Kohonen Self-Organizing Feature Maps, Learning Vector Quantization, Counter propagation Networks, Adaptive Resonance Theory Network.

UNIT III: Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets: Introduction to Fuzzy Logic, Classical Sets (Crisp Sets), Fuzzy Sets and Operations on Fuzzy sets-Compliment, Intersections, Unions.

Membership Function: Introduction, Features of the Membership Functions, Fuzzification, Methods of Membership Value Assignments. **Defuzzification:** Introduction, Lambda-Cuts for Fuzzy Sets (Alpha-Cuts), Lambda-Cuts for Fuzzy Relations, Defuzzification Methods

UNIT IV: Fuzzy Arithmetic and Fuzzy Measures: Introduction, Fuzzy Arithmetic, Extension Principle, Fuzzy Measures, Measures of Fuzziness, Fuzzy Integrals.

UNIT V: Genetic Algorithm: Introduction to genetic algorithm, operators in genetic algorithm, stopping condition for genetic algorithm flow.

UNIT VI: Hybrid Soft Computing Techniques: Introduction, Neuro-Fuzzy Hybrid Systems, Genetic Neuro-Hybrid Systems.

Text Books:

1. Principles of Soft Computing, S.N. Sivanandam and S.N. Deepa, 3-edition, Wiley India, 2007.
2. "Fuzzy Sets & Fuzzy Logic", G.J. Klir & B. Yuan, PHI, 1995.
3. "An Introduction to Genetic Algorithm", Melanie Mitchell, PHI, 1998.

Reference Books:

1. Neural Networks, Fuzzy Logic and Genetic Algorithms, S. Rajasekaran and G.A.V.Pai, PHI, 2003.

2. Fuzzy Logic with Engineering Applications, Timothy J.Ross, McGraw-Hill, 1997.

3. Neuro-Fuzzy and Soft Computing, J.S.R.Jang, C.T.Sun and E.Mizutani, PHI, 2004, Pearson Education.

VIII Sem	Cloud Computing (**Elective – V)**	Course Code: VI8CST39	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Outline the concepts of cloud computing architecture. **(K2)**
CO2: Describe the Virtualization concepts in different scenarios. **(K2)**
CO3: Explain the best policies for cloud deployment. **(K2)**
CO4: Illustrate the design issues of Cloud computing. **(K2)**
CO5: Illustrate the security and privacy of the data in cloud computing. **(K2)**
CO6: Demonstrate cloud instances in Amazon Web Services. **(K3)**

UNIT I: Introduction to Cloud Computing: Trends in Computing - Distributed Computing, Grid Computing, Cluster Computing, Utility Computing, Cloud Computing, Definition of Cloud Computing, Characteristics, Service Models, Deployment Models, Cloud Service Models Providers, Advantages and Disadvantages of Cloud Computing, Cloud-based Services &Applications.

UNIT II: Cloud Concepts & Technologies: Virtualization and its types, Software Defined Networking, Network Function Virtualization (NFV). **Cloud Services:** Compute Services, Storage Services, Database Services, Application Services

UNIT III: Cloud Application Design: Design Considerations for Cloud Applications, Reference Architectures for Cloud Applications, Cloud Application Design Methodologies: SOA, Cloud Component Model and MVC, Data Storage Approaches.

UNIT IV: Cloud Security: Cloud Security Architecture (CSA), Authentication, Authorization, Identity & Access Management, Data Security, Key Management.

UNIT V: Migrating into a Cloud: Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud, Migration Risks and mitigation, Phases of Migrating to Cloud, benefits and risks of Migrating to Cloud.

UNIT VI: SLA Management in Cloud Computing: Service Level Agreements (SLA), Considerations for SLA, SLA Requirements, Types of SLA, Life Cycle of SLA, SLA Management in Cloud. **Case Study:** Amazon AWS: EC2, Amazon Simple DB, Amazon S3, Amazon Cloud Front and Amazon SQS.

Text Books:

1. Cloud Computing: A Hands-on Approach, ArshdeepBahga, Vijay Madisetti,Universities Press.

2. Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, Andrzej Goscinski, Wiley Publication.

Reference Books:

1. Cloud Computing – Web-Based Applications That Change the way you Work and Collaborate Online, Michael Miller, Pearson Education.
2. Cloud Computing: A Practical Approach, Anthony T. Velte, Toby J. Velte, Robert Elsenpeter, McGraw-Hill, (2010).

VIII Sem	Software Architecture & Design Patterns (**Elective – VI)**	Course Code: VI8CST40	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectural Structures and Quality Attributes. (K2)

CO2: Explain the mechanism of Evaluating Architecture. (K2)

CO3: Demonstrate Creational Patterns. (K3)

CO4: Construct Structural Patterns for a given Scenario. (K3)
CO5. Construct Behavioural Patterns for a given Scenario. (K3)
CO6. Examine various Case Studies in utilizing Software Architectures. (K3)

UNIT-I: Envisioning Architecture The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating and Architecture Quality Attributes, Achieving qualities, Designing the Architecture.

UNIT-II: Analyzing Architectures Architecture Evaluation, Architecture design decision making, ATAM, CBAM. Software Product Lines, Software architecture in future.

UNIT-III: Pattern Description, role in solving design problems, Selection and usage.**Creational Patterns**: Abstract factory, Builder, Factory method, Prototype, Singleton.

UNIT-IV:Structural Patterns: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, PROXY.

UNIT-V:Behavioural Patterns: Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.

UNIT-VI: Case Studies **A-7E – A case study** in utilizing architectural structures, The **World Wide Web** - a case study in Interoperability, **Air Traffic Control** – a case study in designing for high availability, **Celsius Tech** – a case study in product line development.

Text Books:

1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003.

2. Design Patterns, Erich Gamma, Pearson Education, 1995.

Reference Books:

1. Beyond Software architecture, Luke Hohmann, Addison wesley, 2003.

2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall PTR, 2001

3. Software Design, David Budgen, second edition, Pearson education, 2003

4. Head First Design patterns, Eric Freeman & Elisabeth Freeman, O'REILLY, 2007.

5. Design Patterns in Java, Steven John Metsker & William C. Wake, Pearson education, 2006.

VIII Sem	Middleware Technologies (**Elective – VI**)	Course Code: VI8CST41	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Middleware, E- Business, IT architecture, RPC, RDC. **(K2)**
CO2: Demonstrate Internet Applications and Web services. **(K2)**
CO3: Summarize Technical issues in Middleware. **(K2)**
CO4: Demonstrate the Use of Middleware in Building Distributed Technologies. **(K2)**
CO5: Identify Security Issues with Distributed Applications. **(K3)**

CO6: Apply Appropriate Middleware Technology to Develop Real Time Applications.**(K3)**

UNIT I: Introduction: Moving to e-business, what is IT architecture? Why is this different from what we did before? Rewrite or evolve?, Who develops the architecture?, Early days, Preliminaries, Remote procedure calls, Remote database access, Distributed transaction processing, Message queuing, Message queuing versus distributed transaction processing, what happened to all this technology.

UNIT II: Objects, Components and the Web: Using object middleware, Transactional component middleware- COM+, EJB, Final comments on TCM, Internet Applications. WEB SERVICES: Service concepts, Web services, and Using Web services: A pragmatic approach.

UNIT III: A Technical Summary Of Middleware: Middleware elements- The communications link, The middleware protocol, The programmatic interface, Data presentation, Server control, Naming and directory services, Security, System management, Comments on Web services, Vendor architectures- Vendor platform architectures, Vendor-distributed architectures, Using vendor architectures, Positioning, Strawman for user target architecture, Marketing, Implicit architectures, Middleware interoperability.

UNIT IV: Using Middleware to Build Distributed Applications: What is middleware for? - Support for business processes, Information retrieval, Collaboration, Tiers- The presentation tier, The processing tier, The data tier, Services versus tiers, Architectural choices - Middleware bus architectures, Hub architectures, Web services architectures, Loosely coupled versus tightly coupled.

UNIT V: Security: What security is needed, Traditional distributed system security, Web services security, Architecture and security. **Application Design and It's Architecture :** Problems with today's design approaches, Design up front or as needed?- The role of business rules, Existing systems, Reuse, Silo and monolithic development, The role of architecture, Levels of design, Reconciling design approaches.

UNIT VI: Building an IT Architecture: Case Studies – Providing an integration infrastructure, creating a service-oriented architecture, Developing a new application. What does the future hold? , The key points to remember-Middleware technology alternatives, IT architecture guideline guidelines, Distribute systems technology principals and Distribute systems implementation design.

Text Books:

1. IT Architectures and Middleware: Strategies for Building Large, Integrated Systems, Chris Britton and Peter Eye, 2nd Edition, Pearson Education.

Reference Books:

1. Middleware for Communications, Qusay H. Mahmoud, 1st Edition, John Wiley and Sons.
2. Middleware Networks: Concept, Design and Deployment of Internet Infrastructure, Michah Lerner, 1st Edition, Kluwer Academic Publishers.
3. Middleware and Enterprise Integration Technologies, G. Sudha Sadasivam and Radha Shankarmani, 1st edition, Wiley, 2009.

VIII Sem	Natural Language Processing (**Elective – VI**)	Course Code: VI8CST42	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the Syntax and semantics and Language models of Natural Language Processors. **(K2)**
CO2: Classify Morphology and Finite State Transducers, Markov Models and Entropy Models. **(K2)**
CO3: Explain about Statistical parsing and probabilistic CFGs. **(K2)**
CO4: Demonstrate semantic analysis. **(K2)**
CO5: Explain Discourse Analysis and Lexical Resources. **(K2)**
CO6: DevelopaStatisticalMethodsforRealWorldApplicationsandexploredeeplearning-basedNLP. **(K3)**

UNIT I: Introduction: Natural Language Processing tasks in syntax,semantics,andpragmatics–Issues–Applications-Theroleofmachinelearning-ProbabilityBasics–Informationtheory–Collocations-N-gram Language Models - Estimating parameters and smoothing - Evaluating language models.

UNIT II: Morphology And Part Of Speech Tagging: Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields.

UNIT III: Syntax Parsing: Syntax Parsing - Grammar formalisms and tree banks - Parsing with Context Free Grammars- Features and Unification-Statistical parsing and probabilisticCFGs(PCFGs)-LexicalizedPCFGs.

UNIT IV: Semantic Analysis: Representing Meaning – Semantic Analysis - Lexical semantics –Word-sense disambiguation- Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing – Discourse Analysis.

UNIT V: Discourse Analysis and Lexical Resources: Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brills Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC).

UNIT VI: NLP Applications: Named entity recognition and relation extraction- IE using sequence labeling-Machine Translation (MT) - Basic issues in MT-Statistical translation-word alignment- phrase-based translation – Question Answering.

Text Books:

1. Daniel Jurafsky and James H. Martin Speech and Language Processing (2nd

Edition), Prentice Hall; 2nd edition,2008
2. FoundationsofStatisticalNaturalLanguageProcessingbyChristopherD.Manningand Hinrich Schuetze, MIT Press,1999
3. Steven Bird, Ewan Klein and Edward Loper Natural Language Processing with Python, O'Reilly Media; 1 edition,2009
4. Roland R. Hausser, Foundations of Computational Linguistics: Human-Computer Communication in Natural Language, Paperback, MIT Press,2011

References:

1. Pierre M. Nugues, An Introduction to Language Processing with Perl and Prolog: An Outline of Theories, Implementation, and Application with Special Consideration of English, French, and German (Cognitive Technologies) Softcover reprint,2010
2. James Allen, Natural Language Understanding, Addison Wesley; 2 edition 1994

			L	T	P	C
VIII Sem	Cyber Security (**Elective – VI**)	Course Code: VI8CST43	3	0	0	3

<u>Syllabus Details</u>

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe about Cybercrimes. **(K2)**
CO2: Explain Cyber criminals and their attacks. **(K2)**
CO3: Illustrate Cybercrimes and security in mobile devices **(K2)**
CO4: Discuss about the Tools and methods used to overcome Cybercrimes. **(K2)**
CO5: Discuss about Cyber Laws and IT Acts. **(K2)**
CO6: Explain about Computer Forensics. **(K2)**

UNIT I: Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security Who are Cybercriminals? , Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

UNIT II: Cyber offenses: How Criminals Plan Them –Introduction, How Criminals Plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack VectorCloud Computing.

UNIT III: Cybercrime Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/CellPhones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

UNIT IV: Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoSAttacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **Phishing and Identity Theft:** Introduction, Phishing, Identity Theft (ID Theft).

UNIT V: Cybercrimes and Cyber security: The Legal Perspectives, Introduction, Why Do We Need Cyber laws: The Indian Context, The Indian IT Act, Challenges to Indian Law and Cybercrime Scenario in India, Consequences of Not Addressing the Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act,· Cybercrime and Punishment.

UNIT VI: Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.

Text Books:

1. Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, NinaGodbole, SunitBelapure, 1st edition, Wiley.

Reference Books:

1. Principles of Information Security, MichealE.Whitman and Herbert J.Mattord, 4th edition, Cengage Learning.
2. Information Security the complete reference, Mark Rhodes, Ousley, 2ndedition, MGH.

Annexure-V

List of Open Elective Courses offered by CSE for Other Branches

SEM	Course Code	Course
Open Elective-II		
VII SEM	V18CSTOE04	1. Operating Systems
	V18CSTOE05	2. Artificial Intelligence
	V18CSTOE06	3. Java Programming
Open Elective-III		
VIII SEM	V18CSTOE07	1.Software Testing Methodologies
	V18CSTOE08	2. Cyber Security
	V18CSTOE09	3. Computer Graphics

VII Sem	Operating Systems **(Open Elective-II)**	Course Code: V18CSTOE04	L	T	P	C
			3	0	0	3

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Operating System Services and System Calls. **(K2)**

CO2: Illustrate Process Management Concepts and CPU Scheduling Algorithms. **(K3)**

CO3: Demonstrate Process Synchronization primitives. **(K3)**

CO4: Demonstrate Deadlock Prevention, Avoidance and Detection methods. **(K3)**

CO5: Illustrate Memory Management Techniques and Page Replacement Algorithms. **(K3)**

CO6: Describe File System Concepts and Mass Storage Structures. **(K2)**

UNIT-I: Introduction: Operating-System Structure, Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls.

UNIT-II: Process Management: Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication. **Threads:** Overview, Multithreading Models. **CPU Scheduling:** Basic Concepts, Scheduling Criteria, Scheduling Algorithms

UNIT-III : Process Synchronization: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors

UNIT-IV: Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock

UNIT-V: Memory Management Main Memory: Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table

Virtual Memory: Introduction, Demand Paging, Page Replacement, Allocation of Frames, Thrashing

UNIT-VI: Storage Management : Overview of Mass-Storage Structure, Disk Scheduling, File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Allocation Methods

Text Book:

1. Operating System Concepts, Abraham Silberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012

Reference Books:

1. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition, Prentice Hall, 2012

2. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,2007

			L	T	P	C
VII Sem	Artificial Intelligence **(Open Elective-II)**	Course Code: V18CSTOE05	3	0	0	3

<u>Syllabus Details</u>

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concept of intelligent systems and current trends in AI. **(K2)**

CO2: Apply Problem solving, Problem reduction and Game Playing techniques in AI. **(K3)**

CO3: Illustrate the Logic concepts in AI. **(K2)**

CO4: Explain the Knowledge representation techniques in AI. **(K2)**

CO5: Describe Expert systems and their applications. **(K2)**

CO6: Illustrate Uncertainty Measures. **(K2)**

UNIT-I: Introduction to Artificial Intelligence: Introduction, history, intelligent systems, foundations of AI, applications, tic-tac-toe game playing, current trends in AI

UNIT-II: Problem solving: State-space Search and Control Strategies: Introduction, General Problem Solving, Characteristics of problem, Exhaustive searches, Heuristic search techniques, Iterative deepening a*, constraint satisfaction

Problem reduction and game playing: Introduction, problem reduction, game playing, alpha beta pruning, two-player perfect information games

UNIT-III:Logic concepts: Introduction, Propositional Calculus, Proportional Logic, Natural Deduction system, Axiomatic system, Semantic tableau system in proportional logic, Resolution Refutation in Propositional logic, Predicate Logic

UNIT-IV: Knowledge representation: Introduction, approaches to Knowledge representation, Knowledge representation using Semantic Networks, Extended Semantic Networks for KR, Knowledge representation using Frames

UNIT-V: Expert Systems and Applications: Introduction phases in building Expert Systems, Expert System versus Traditional Systems, Rule-based Expert Systems, Blackboard systems, Truth maintenance systems, applications of Expert Systems.

UNIT-VI: Uncertainty measure: Probability theory- Introduction, Probability Theory, Bayesian Belief networks, Certainty Factor Theory, Dempster-Shafer theory

Text Book:

Artificial Intelligence, Saroj Kaushik, 1st Edition, Cengage Learning.

Reference Books:

Artificial Intelligence, Elaine Rich, Kevin Knight, Shivashankar B Nair, 3rd Edition, Tata McGraw Hill Education Private Limited., 2009

Artificial Intelligence- A modern Approach, 3rd Edition, Stuart Russel, Peter Norvig, Pearson Education.

VII Sem	**JAVA PROGRAMMING (Open Elective-II)**	Course Code:**V18CSTOE06**	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Java Virtual Machine and Type casting.(**K2**)
CO2: Demonstrate Concepts like Constructors, Arrays, Nested Classes and Command Line Arguments.(**K3**)
CO3: Implement Concepts of Inheritance and Exception Handling. (**K3**)
CO4: Develop programs on Multi-Threading and Files. (**K3**)
CO5: Demonstrate Applet Programming and AWT Components. (**K3**)
CO6: Describe Event Handling and Swings. (**K3**)

UNIT-I: Introduction to Java: Introduction to Object Oriented Paradigm, Concepts of OOP, Applications of OOP, History of Java, Java Features, JVM, Program Structure. Variables, Primitive Data Types, Constants, Operators, Expressions, Precedence rules and Associativity, Primitive type conversion and Casting, Control Structures.

UNIT-II: Classes and Objects: Classes and objects, Class declaration, Creating objects, Methods, Constructors and Constructor Overloading, Importance of Static Keyword and Examples, this Keyword, Arrays, Command Line Arguments, Nested Classes.

UNIT-III: Inheritance and Exception Handling: Inheritance, super Keyword, final Keyword, Method Overriding and Abstract Class. Interfaces, Creating Packages, Using Packages, Importance of Class path. Exception Handling, Importance of try, catch, throw, throws and finally Block.

UNIT-IV: Multithreading and Files: Introduction, Thread Lifecycle, Creation of Threads, Thread Priorities, Thread Synchronization, Communication between Threads. Reading Data from Files and Writing Data to Files, Random Access Files.

UNIT-V: Applet Programming and AWT: Applet Class, Applet Lifecycle, Applet Programs. Introduction to AWT, Components and Containers, Button, Label, Checkbox, Radio Buttons, List Boxes, Layouts, Menu and Scrollbar.

UNIT-VI: Event Handling and Swings: Event Handling : Event Delegation Model, Sources of Events, Event Listeners, Adapter Classes, InnerClasses. Introduction to Swings.

Text Books:

1. Java Proramming, E.Balagurusamy, 4th Edition , TMH.
2. The complete Reference Java, 8th Edition, Herbert Schildt, TMH.
3. Introduction to java programming ,Y Daniel Liang, 7th Edition, Pearson.

Reference books:

1. Core Java: An Integrated Approach , R Nageswara Rao, 7th Edition, Dream Tech
2. Head First Java , Kathy Sierra and Bert Bates, 2nd Edition O'reilly

VIII Sem	Software Testing Methodologies **(Open Elective-III)**	Course Code: V18CSTOE07	L	T	P	C
			3	0	0	3

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software testing objectives and methodology. **(K2)**

CO2: Apply various Software testing techniques. **(K3)**

CO3: Discuss Static testing techniques for software testing. **(K2)**

CO4: Differentiate software testing and debugging process. **(K2)**

CO5: Construct test cases by understanding test suite management. **(K3)**

CO6: Explain modern software testing tools to support software testing. **(K2)**

UNIT-I: Introduction to Software Testing: Evolution of software Testing, Myths and Facts, Goals of software Testing, Definitions of Testing, Model for Software Testing, Software Testing Terminology, Software Testing Life Cycle.

UNIT-II: Verification and Validation: Verification & Validation Activities, Verification, Verification of Requirements, Verification of High level and low level designs, How to verify code, Validation. **Dynamic Testing I:** Black Box testing techniques: Boundary Value Analysis, Equivalence Class Testing, Decision Table based Testing,

UNIT-III: Dynamic Testing II: White-Box Testing: Need of White-Box Testing, Logic coverage criteria, Basis path testing, Loop testing. **Static Testing:** Inspections, Structured Walkthroughs, Technical reviews.

UNIT-IV: Regression Testing: Progressive Vs Regressive Testing, Regression testability, Objectives of regression testing, When is Regression Testing done? Regression Testing Types, Regression testing techniques. **Debugging:** Debugging process, Techniques, correcting bugs.

UNIT-V: Efficient Test Suite Management: Why does a Test Suite grow, minimizing the Test suite and its benefits, Test suite prioritization, Types of Test case prioritization, Prioritization techniques, measuring the effectiveness of a prioritized Test Suite.

UNIT-VI: Software Quality Management: Software quality concept, Quality control and Quality Assurance, Software Quality metrics. **Automation and Testing Tools:** Need for automation, categorization of Testing tools, selection of testing tools, Overview of some commercial testing tools.

.

Text Books:

1. Software Testing, Principles and Practices, Naresh Chauhan, 9th Edition, Oxford Publisher.

Reference Books:

1. Software testing techniques - Boris Beizer, 2nd Edition, Dreamtech publisher..
2. Foundations of Software testing, Aditya P Mathur, 2nd ed, Pearson.
3. Software Testing- Yogesh Singh, CAMBRIDGE.

VIII Sem	Cyber Security **(Open Elective – III)**	Course Code: VI8CSTOE08	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe about Cybercrimes. **(K2)**
CO2: Explain Cyber criminals and their attacks. **(K2)**
CO3: Illustrate Cybercrimes and security in mobile devices **(K2)**
CO4: Discuss about the Tools and methods used to overcome Cybercrimes. **(K2)**
CO5: Discuss about Cyber Laws and IT Acts. **(K2)**
CO6: Explain about Computer Forensics. **(K2)**

UNIT I: Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security Who are Cybercriminals? , Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

UNIT II: Cyber offenses: How Criminals Plan Them –Introduction, How Criminals Plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector Cloud Computing.

UNIT III: Cybercrime Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/CellPhones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

UNIT IV: Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **Phishing and Identity Theft:** Introduction, Phishing, Identity Theft (ID Theft).

UNIT V: Cybercrimes and Cyber security: The Legal Perspectives, Introduction, Why Do We Need Cyber laws: The Indian Context, The Indian IT Act, Challenges to Indian Law and Cybercrime Scenario in India, Consequences of Not Addressing the Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act,· Cybercrime and Punishment.

UNIT VI: Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.

Text Books:

1. Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, NinaGodbole, SunitBelapure, 1stedition, Wiley.

Reference Books:

1. Principles of Information Security, MichealE.Whitman and Herbert J.Mattord, 4th edition, Cengage Learning.
2. Information Security the complete reference, Mark Rhodes, Ousley, 2ndedition, MGH.

			L	T	P	C
VII Sem	Computer Graphics **(Open Elective-III)**	Course Code: V18CSTOE09	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Understand the applications of computer graphics and learn basic algorithms. **(K2)**
CO2: Analyze the concepts of 2D graphics along with transformation techniques. **(K3)**
CO3: Understand 2D Views of objects and clipping algorithms. **(K2)**
CO4: Illustrate 3D graphics and will get an idea about projections views of objects. **(K2)**

CO5: Determine different visible surface detection methods. **(K2)**
CO6: Understand different animation sequences and Color Models. **(K2)**

UNIT I:Introduction: Application of Computer Graphics, raster scan systems, random scan systems, raster scan display processors. Output Primitives : Points and lines, line drawing algorithms(Bresenham's and DDA Line derivations and algorithms), mid-point circle and ellipse algorithms.

UNIT II: Filled area primitives: Boundary-fill and flood-fill algorithms. **2-D geometrical transforms:** Translation, scaling, rotation, reflection and shear transformations, and homogeneous coordinates, composite transforms.

UNIT III:2-D viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland, Sutherland – Hodgeman polygon clipping algorithm.

UNIT IV:3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations. 3D Viewing pipeline, clipping, projections (Parallel and Perspective). **3-D object representation:** Polygon surfaces, quadric surfaces, spline representation, Bezier curve and B-Spline curves.

Unit V:Visible surface detection methods: Classification, back-face detection, depth-buffer, scan-line, BSP tree methods, area sub-division.

Unit VI:Computer animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages. **Color Models** – RGB, YIQ, CMY, HSV.

Text Books:

1. Computer Graphics C version, Donald Hearn, M.Pauline Baker, Pearson

2. Computer Graphics, Schaum's outlines", Zhigand xiang,Roy Plastock, 2nd Edition,Tata Mc-Graw Hill Edition.

3. Principles of Computer Graphics, S. Govil-Pai, 1st Edition, Springer International Edtion,2005.

Reference Books:

1. Computer Graphics Principles & practice, 2/e, Foley, VanDam, Feiner, Hughes, Pearson
2. Computer Graphics, Peter, Shirley, CENGAGE
3. Principles of Interactive Computer Graphics, Neuman , Sproul, TMH.

Open Elective -IV	V18CSTOE10 V18CSTOE11 V18CSTOE12	i) Database Management Systems ii) Human Computer Interaction iii) Information Retrieval System

Annexure-VII

			L	T	P	C
III Sem	**OOPs Through C++**	**Course Code:** V20CST03	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Differentiate Procedural Oriented Programming and Object-Oriented Programming. **(K2)**
CO2: Develop programs using Classes and Objects. **(K3)**
CO3: Demonstrate Constructors, destructors & Operator-Overloading. **(K3)**
CO4: Construct Classes using inheritance and Exceptions. **(K3)**
CO5: Demonstrate Files and Generic Programming. **(K3)**

Syllabus

Unit-I: Introduction to Object-Oriented Programming – Programming Paradigms, Data Types, Variables, Constants, Operators,Decision Statements &Control Structures, Arrays, Namespace, Default Arguments, Constant Arguments, Parameter passing techniques, Features of Object-Oriented Programming.

Unit-II: Introduction to Classes and Objects :Defining Classes & Objects, Access specifiers, Scope Resolution Operator, Static Member variables, Static Member Functions, Array of Objects. Inline Functions, Overloading Member Functions, Objects as Function Arguments, Friend Functions, Friend Class, Local Class, Empty Class, Nested Classes, Return by Reference.

Unit-III: Introduction to Constructors: Characteristics, Constructor with Default Arguments, Parameterized Constructors, Overloading Constructors, Copy Constructor, Dynamic Constructors and Destructors, Anonymous Objects. Introduction to operator Overloading, Rules for Overloading Operators, Overloading Unary & Binary Operators, this keyword, Constraint on Increment and Decrement Operators, Overloading with Friend Functions, Type Conversions.

Unit-IV: Inheritance: Base class and Derived class, Single Inheritance, Multiple Inheritance, Multilevel Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual Base Classes, Constructor in Derived Classes. qualifier classes, Significance of Virtual Functions, Early Vs Late Binding, Pure Virtual Functions, Virtual Destructor. **Exception handling:** Principles of Exception Handling, Keywords, Exception Handling Mechanism, Multiple Catch Statements, Catching Multiple Exceptions, Re-throwing Exception.

Unit-V: Files: File Opening Modes, File Stream Classes, I/O manipulators, Classes for File Handling, Sequential Access Files, Random Access Files, Error Handling Functions.
Generic Programming with Templates: Need for Templates, Class Templates, Function Templates, overloading Template Functions. Introduction to Standard Template Library, Sequential Containers & Associative Containers.

Text Books:

1. Programming in C++, Ashok N Kamthane, 2nd Edition, Pearson.
2. C++ How to Program, Paul J. Deitel, Harvey Deitel, 6th edition, PHI publication.

.
Reference Books:

1. Object Oriented Programming C++, Joyce Farrell, Cengage.
2. Mastering C++, Venugopal, Raj Kumar, Ravi Kumar, TMH.
3. The Complete Reference C++, HerbertSchildt, 4th Edition, Mcgraw Hill.
4. Object Oriented Programming With C++, R. Subburaj, Vikas Publishing House.

III Sem	**Data Structures**	Course Code:V20CST04	L	T	P	C
			3	1	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the time and space complexities for searching and sorting algorithms. **(K2)**

CO2: Demonstrate linked lists and their applications. **(K3)**

CO3: Demonstrate Stacks and Queues. **(K3)**

CO4: Illustrate basic operations on binary trees. **(K3)**

CO5: Demonstrate Graphs and their applications. **(K3)**

Syllabus

Unit-I: Introduction, searching and sorting: Introduction to Data Structures, Types of Data Structures, Performance Analysis: Space complexity, time complexity, asymptotic notation. **Searching:** Linear, Binary and Fibonacci search. **Sorting**: Bubble sort, Selection sort, Insertion sort, radix sort, quick sort, and merge sort.

Unit-II: Single linked list: Representation of node, operations on single linked list, **Double linked list:** Representation of node, operations on double linked list. **Circular linked List:** Representation of node and its operations.

Unit-III: Stacks: Definition, Stack ADT, array representation, linked list representation, Towers of Hanoi, infix to postfix conversion, expression evaluation. **Queues:** definition, Queue ADT, Array representation, linked list representation, operations on queues, Applications of Queues, Circular Queue.

Unit-IV: Trees:Introduction: Terminology, representation of trees, **Binary trees:** abstract data type, Properties of binary trees, binary tree representation, **Tree Traversals:** Inorder, Preorder, Postorder. **Binary search trees:** Definition, searching BST, insert into BST, delete from a BST, Height of a BST.

Unit-V: Graph: Introduction, definition, types of Graphs, Graph Representation, operations. **Graph Traversal Techniques:** Breadth First Search, Depth First Search **Spanning Trees:** minimum cost spanning tree, Prim's and Kruskal's algorithms, Single source shortest Path and all pair shortest path algorithms.

Text Books:

1. Data Structures, algorithms and applications in C, SartajSahni, Universities press, Second Edition.

2. Fundamentals of Data Structures in C, Ellis Horowitz, SartajSahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

III Sem	**Computer Organization and Architecture**	Course Code: V20CST05	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Basic structure of Computers, Instruction types and their addressing modes. **(K2)**
CO2: Describe the different modes of Input / Output transfer. **(K2)**
CO3: Illustrate different types of Memory. **(K2)**
CO4: Describe the different types of Control Unit techniques. **(K2)**
CO5: Explain the Concepts of Pipelining and Parallel Processing **(K2)**

Syllabus

Unit-I: Introduction: Functional Units, Basic Operational Concepts, Bus Structures.
Instruction Sequencing and Addressing Modes: Instructions and Instruction Sequencing, Addressing modes, Basic Input/output Operations.

Unit-II: Input/output Organization: Accessing Input/output devices, Interrupts-Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Direct Memory Access, Buses- Synchronous and Asynchronous.

Unit-III: Memory Organization: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative memory, Cache Memory. (Morris Mano)

Unit-IV: Processing Unit: Fundamental Concepts, Execution of a Complete Instruction, Multiple-Bus Organization, Hardwired Control, Microprogrammed Control-Microinstructions, Microprogram Sequencing.

Unit-V: Pipelining: Basic Concepts, Data Hazards, Instruction Hazards
Parallelism: Parallel processing challenges – Flynn‘s classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

Text Books:

1. Computer Organization, Carl Hamacher, ZvonkoVranesic, SafwatZaky, 5th Edition, McGraw Hill Education.Computer System Architecture, M. Morris Mano, 3rd Edition, Pearson Education..

David A. Patterson and John L. Hennessy, Computer Organization and Design: The Hardware/Software Interface, Fifth Edition, Morgan Kaufmann / Elsevier, 2014.

Reference Books:

1. Computer Organization and Architecture, William Stallings, 10th Edition, Pearson Education.
2. Computer Architecture and Organization, John P. Hayes, 3rd Edition, McGraw Hill Education.

III Sem	**OOPs Through C++ Lab**	Course Code: V20CSL03	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: DevelopPrograms onClasses and Objects. (K3)

CO2: Demonstrate Constructors, Destructors and Operator-Overloading, Inheritance and Polymorphism. (K3)

CO3: Develop programs to handle Exceptions & Files. (K3)

CO4: Demonstrate Generic Programming. (K3)

LIST OF EXPERIMENTS:

1. Demonstrate how to debug basic programs using GDB compiler.
2. Develop programs on control structures.
3. Construct programs for following concepts.
   a) Default Arguments b) Constant Arguments c)Reference Arguments
4. Construct programs for following concepts.
   a) Classes & Objects b) Inline functions
   c) Static Member functions d) Overloading of Member Functions
5. Develop programs for following concepts.
   a) Objects as Function Arguments b) Friend Functions, Friend class
   c) Local class d) Empty Class& Nested Classes
6. Develop programs for following concepts.
   a) Default constructor b) Constructor with arguments c) Copy constructor
7. Construct programs for following concepts.
   a) Binary b) Unary c) new d) delete
8. Construct programs for following concepts.
   a) Single b) Multilevel c) Hierarchical d) Hybrid
9. Demonstrate the use of Virtual Functions &Virtual Base class.
10. Develop programs to handle following Exceptions.

a) Division-by-zero b) Overflow in an array

11. Develop programs for following file handling operations.

    a) Copying text files b) Displaying the contents of the file

12. Demonstrate Class template and Function Template.
13. Demonstrate Sequential Containers & Associative Containers.

Text Books:

1. Programming in C++, Ashok N Kamthane, 2nd Edition, Pearson.
2. C++ How to Program, Paul J. Deitel, Harvey Deitel, 6th Edition, PHI publication.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Construct Programs on Sorting and Searching Techniques. **[K3]**

CO2: Illustrate Various Operations On Linked Lists. **[K3]**

CO3: Develop Programs On Stacks, Queues and Their Applications. **[K3]**

CO4: Develop Various Operations on Trees and Graphs **[K3]**

LIST OF EXPERIMENTS:

1. Practice following Sorting Techniques
   (A) Selection Sort (B) Quick Sort (C)Merge Sort
2. Practice following Searching Methods
   (A) Linear Search (B) Binary Search.
3. Develop program for
   Single Linked List and Its Operations. (Create, Insert, Delete, Display)
4. Develop program for Double Linked List and Its Operations.
5. Construct Stack along with their operations using Arrays.
6. Construct Queue along with their operations using Arrays.
7. Develop Circular Queue using Arrays.
8. Construct Queue along with their operations using Single Linked List.
9. Construct Binary Search Tree and Its Operations using double linked list.
10. Demonstrate Depth First Search and Breadth First Search Algorithm.
11. Develop Minimum Spanning Tree using Prim's Algorithm.
12. Develop Minimum Spanning Tree Kruskal's Algorithm.

Text books:

1. Data Structures, algorithms and applications in C++, SartajSahni, Universities press, Second Edition.

2. Fundamentals of Data Structures in C++, Ellis Horowitz, SartajSahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, RakeshNayak, Ch. Raja Ramesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

III Sem	**Linux Shell Scripting Lab**	Course Code: V20CSL05	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the basic knowledge of Linux commands and utilities by using Linux shell environment **(K3)**

CO2: Experiment with the Concept of shell Programming on Files and Directories **(K3)**

CO3: Experiment with the Concept of shell Programming on File Permissions **(K3)**

CO4: Experiment with the Concept of shell Programming on Conditional Statements **(K3)**

CO5: Experiment with the Concept of shell Programming on Looping Statements **(K3)**

LIST OF EXPERIMENTS:

1. Experiment the following Unix Commands:
   a) **General Purpose Utilities:** cal, date,man,who.
   b) **Directory Handling Commands:** pwd,cd,mkdir,rmdir.
   c) **File Handling Utilities:** cat,cp,ls,rm,nl,wc
   d) **Displaying Commands:** head, tail
   e) **Filters:** cmp,comm.,diff,sort,uniq
   f) **Disk Utilities:** du,df
2. Develop a Shell Program to Display all the words which are entered as command line arguments.
3. Develop a shell script that Changes Permissions of files in PWD as rwx for users.
4. Develop a shell script to print the list of all sub directories in the current directory.
5. Develop a Shell Program which receives any year from the keyboard and determine whether the year is leap year or not. If no argument is supplied the current year should be assumed.
6. Develop a shell script which takes two file names as arguments-If their contents are same then delete the second file.
7. Develop a shell script to print the given number in the reversed order.
8. Develop a shell script to print first 25 Fibbonacci numbers.

9. Develop a shell script to print the Prime numbers between the specified range.
10. Develop a shell script to delete all lines containing the word 'unix' in the files supplied as arguments.
11. Develop a shell script Menu driven program which has the following options.

    i) contents of /etc/passwd

    ii) list of users who have currently logged in.

    iii) present working directory. iv) exit.

Text Books:

1. UNIX and Shell Programming: A Textbook, Behrouz A. Forouzan | Richard F. Gilberg, Cengage Learning
2. UNIX : Concepts and Applications, Sumithaba Das, 4th Edition, Tata McGrawHill.
3. Unix & Shell Programming, M.G.Venkatesh Murthy, Pearson Education
4. Unix shells by example,4th Edition Ellie Quigley, Pearson Education.

IV SEM	**Design and Analysis of Algorithms**	Course Code: V20CST07	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: At the end of the Course student will be able to:

CO1: Demonstrate asymptotic notation and divide and conquer technique. **(K3)**
CO2: Use greedy technique to solve various problems. **(K3)**
CO3: Demonstrate dynamic programming technique to various problems. **(K3)**
CO4: Develop algorithms using backtracking technique. **(K3)**
CO5: Demonstrate branch and bound technique to various problems. **(K3)**

Unit-I: Introduction: What is an Algorithm, Algorithm Specification-Pseudo code Conventions Recursive Algorithms, Performance Analysis-Space Complexity, Time Complexity, Asymptotic Notation, Practical Complexities, Performance Measurement.

Divide and Conquer: General Method, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quick Sort-Performance Measurement,

Unit-II: The Greedy Method: The General Method, Knapsack Problem, Job Sequencing with Deadlines, Minimum-cost Spanning Trees-Prim's Algorithm, Kruskal's Algorithms, Optimal Merge Patterns, Single Source Shortest Paths.

Unit-III: Dynamic Programming: All Pairs Shortest Paths, Single Source Shortest paths General Weights, Explain Optimal Binary Search Trees, String Edition, 0/1 Knapsack, Reliability Design.

Unit-IV: Backtracking: The General Method, 8-Queens Problem, Sum of Subsets, Graph Coloring, and Hamiltonian Cycles.

UNIT-V: Branch and Bound: The Method-Least cost (LC) Search, The 15-Puzzle: an Example, Control Abstraction for LC-Search, Bounding, FIFO Branch-and-Bound, LC Branch and Bound, 0/1 Knapsack Problem-LC Branch-and Bound Solution, FIFO Branch-and-Bound Solution, Traveling Salesperson. Basic Concepts of NP-hard and NP-complete problems.

Text Books:

1. Fundamentals of computer algorithms E. Horowitz S. Sahni, University Press.

Reference Books:

1. Introduction to Algorithms Thomas H. Cormen, PHI Learning.

2. The Design and Analysis of Computer Algorithms, Alfred V. Aho, John E. Hopcroft, Jeffrey D.Ullman.

3. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh,

Distributed by WILEY publications, New Delhi.

4. Algorithm Design, Jon Kleinberg, Pearson.

IV Sem	Software Engineering	Course Code:	L	T	P	C
		V20CST08	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the Software Development life cycle Models. **(K3)**

CO2: Illustrate the Requirements engineering process and SRS document. **(K3)**

CO3: Develop the Software Architecture and Design Modeling. **(K3)**

CO4: Apply the Coding & Testing techniques and Risk management strategies. **(K3)**

CO5: Describe Project estimation techniques and Quality Management& Metrics.**(K2)**

Unit-I: Software and Software Engineering: The Nature of Software, Software Engineering, Software Process, Software Engineering Practice, Software Myths. **Software process models:** Waterfall model, Prototyping, Iterative development, Unified process, RAD model, Spiral model, and agile process.

Unit-II: Software Requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, SRS document. **Requirements engineering process:** Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.

Unit-III: Software Architecture: Role of software architecture, Architecture views, components and connector view, Cohesion and Coupling, documenting architecture design. **Design:** Design concepts, Function-oriented design, object-oriented design, UML diagrams, and Data flow diagram.

Unit-IV: Coding and Testing: Programming principles and guidelines, incrementally developing code. Testing concepts, testing process, Black-box & White-box testing.**Risk management**: Reactive vs. Proactive Risk strategies, Software risks, Risk identification, Risk projection, Risk refinement, RMMM Plan.

Unit-V: Software Project Estimation& Maintenance: Decomposition techniques, Empirical Estimation Models, Maintenance Process, Reengineering, Configuration Management. Metrics for Products & Quality Management: Software Measurement, Metrics for software quality, Quality concepts, Software Reviews, Formal technical reviews, SEI-CMM Model, Six Sigma and ISO 9000 quality standards.

Text Books:

1. Software Engineering, A practitioner's Approach- Roger S.Pressman, 7th Edition, McGrawHill International Edition.
2. Software Engineering- Ian Sommerville, 9th Edition, Pearson education.Software Engineering, A Precise approach, PankajJalote, Wiley

Reference Books:

1. CMMI and Six Sigma: Partners in Process Improvement, Jeannine M. Siviy,M. Lynn Penn, Robert W. Stoddard, 1st edition, Addison Wesley;
2. SoftwareEngineeringprinciplesandpractice,WSJawadekar, 3rdEdition,TMH.

			L	T	P	C
VSem	**DatabaseManagementSystems**	Course Code: V20CST09	3	0	0	3

CourseOutcomes: AfterSuccessfulcompletionoftheCourse,thestudentwillbeableto:

CO1: DescribeDatabasesystems, variousDatamodelsandDatabasearchitecture. (K2)
CO2: Develop variousreal timeapplications using Relational algebra and Relational calculus. (K3)
CO3: Apply various Normalizationtechniquestorefineschema. (K3)
CO4: ExplainTransactionmanagementandConcurrencycontrol. (K2)
CO5: IllustratevariousDatabaseindexingtechniques. (K2)

UNIT-I:An Overview of Database Systems: Managing data, File systems verses DBMS, Advantages of DBMS, Data models, Levels of abstraction in a DBMS, Data independence, Structure of a DBMS, Client/Server Architecture, E.F.Codd Rules.

Database Design: Database design and ER Diagrams, Entities, Attributes, Entity sets, Relationships and Relationship sets, Conceptual design with ER Models.

UNIT-II:Relational Model: Integrity constraints over relations, Key constraints, Foreign key constraints, General constraints, Enforcing integrity constraints, Querying relational data

Relational Algebra: Selection and Projection, set operation, renaming, Joins, Division, Introduction to Views, destroying/altering Tables and Views

Relational Calculus: Tuple Relational Calculus, Domain Relational Calculus.

UNIT-III: SQL Queries, Constraints and Triggers: The Form of Basic SQL Query, Union, Intersect, Except, Nested Queries, Aggregate Operators, Null Values, Complex Integrity Constraints in SQL, Triggers and active data bases.

Schema Refinement (Normalization): Problems caused by redundancy, Decompositions, purpose of Normalizion, Schema refinement, Concept of functional dependency, Normal forms based on functional dependency (1NF, 2NF and 3NF), Concept of Surrogate key, Boyce-Codd Normal Form (BCNF), Lossless Join and Dependency preserving decomposition, Fourth Normal Form(4NF).

UNIT-IV: Transaction Management: Transaction, Properties of Transactions, Transaction Log, and Transaction management with SQL commit, rollback and savepoint.

Concurrency Control: Concurrency Control for Lost updates, Uncommitted data, Inconsistent retrievals and the Scheduler.

Concurrency Control with Locking Methods : Lock granularity, Lock types, Two phase locking for ensuring serializability, Deadlocks, Concurrency control with Time stamp ordering, Transaction recovery.

UNIT-V: Storage and Indexing: Overview of Storages and Indexing, Data on external storage, File organization and indexing, Clustered indexing, Primary and secondary indexes, Index data structures, Hash based indexing, Tree based indexing, Comparison of file organization

Text Books:

1. Database Management Systems, Raghu Ramakrishnan, Johannes Gehrke, 3rd Edition TATA McGraw Hill.
2. An Introduction to Database Systems, C.J Date,A.Kannan,S.J Swamynathan 8th Edition, Pearson Education

Reference Books:

1. Database Systems-Design, Implementation and Management, Peter Rob &Carlos Coronel 7th Edition, Course Technology Inc.
2. Fundamentals of Database Systems, Ramez Elmasri,Shamkant B. Navathe ,7th Edition, Pearson Education.
3. Database Systems - The Complete Book, Hector Garcia- Molina, Jeffry D Ullman, Jennifer Widom, 2nd Edition, Pearson.

IV Sem	**Java Programming**	Course Code: **V20CST08**	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Java Virtual Machine and Type casting. [K2]

CO2: Demonstrate Concepts like Constructors, Arrays, Nested Classes and Command Line Arguments. [K3]

CO3: Implement Concepts of Inheritance and Exception Handling [K3]

CO4: Develop programs on Multi-Threading and Files [K3]

CO5: Implement Event Handling and Swings. [K3]

Syllabus

UNIT-I: Introduction to Java: Introduction to Object Oriented Paradigm, Concepts of OOP, Applications of OOP, History of Java, Java Features, JVM, Program Structure. Variables, Primitive Data Types, Constants, String class, Primitive type conversion and Casting, Control Structures.

UNIT-II:ClassesandObjects: Classesandobjects,Classdeclaration,Creatingobjects, Methods, Constructors and Constructor Overloading, Importance of Static Keyword and Examples, this Keyword, Arrays, Command Line Arguments, Nested Classes, Garbage Collector.

UNIT-III: Inheritance and Exception Handling: Inheritance, super Keyword, final Keyword, Method Overriding and Abstract Class. Interfaces, Creating Packages, Using Packages, Importance of Class path. Exception Handling, Importance of try, catch, throw, throws and finally Block.

UNIT-IV: Multithreading and Files: Introduction, Thread Lifecycle, Creation of Threads, Thread Priorities, Thread Synchronization, Communication between Threads. Reading Data from Files and Writing Data to Files, Random Access Files.

UNIT-V: Event Handling and Swings: Introduction to AWT and Applets. Swings: Introduction, Components, Button, Label, Checkbox, List Boxes, Menu and Scrollbar, Layout Managers. **Event Handling :** Event Delegation Model, Sources of Events, Event Listeners, Adapter Classes.

Text Books:

1. Java Programming, E. Balagurusamy, 4thEdition, TMH.

2. The complete Reference Java, 8th Edition, Herbert Schildt,TMH.
3. Introduction to java programming, Y Daniel Liang, 7 Edition,Pearson.

Reference books:

1. Core Java: An Integrated Approach , R Nageswara Rao, 7thEdition, Dream Tech
2. Head First Java , Kathy Sierra and Bert Bates, 2nd Edition O'reilly

IV Sem	**Statistical Visualization using R Lab**	Course Code:	L	T	P	C
		V20CSL06	0	0	3	1.5

Syllabus Details

Course Outcomes: At the end of the Course student will be able to:

CO1: Employ math and simulation in R[**K2]**
CO2: Demonstrate various types of data structures in R**[K3]**
CO3: Apply appropriate control structures to solve a particular Programming problem**[K3]**

CO4: Use R to graphically visualize data and results of statistical calculations **[K3]**

LIST OF EXPERIMENTS:

1. Demonstrate the basic math functions in R
2. Demonstrate Vector operations in R
3. Demonstrate Matrix operations in R
4. Demonstrate Array operations in R
5. Demonstrate Data frames in R
6. Demonstrate Lists in R
7. Illustrate the following controls statements in R
   a. if and else b. ifelse c. switch
8. Demonstrate for and while loops in R
9. Demonstrate importing and exporting data using R
10. Illustrate the descriptive statistics using summary() in R
11. Demonstrate the following statistical distribution functions in R:
    a. Normal Distribution
    b. Binomial Distribution
    c. Poisson Distribution
    d. Chi Square Distribution
12. Illustrate the following basic graphics in R:
    a. Bar plots
    b. Pie Charts
    c. Histograms
    d. Kernel density plots
    e. Boxplots
    f. Dotplots
13. Illustrate the Correlation and Covariance analysis using R
14. Illustrate the different types of t-tests using R
15. Illustrate the ANOVA test using R

Text Books:

1. R for Everyone, Jared P Lander, Pearson
2. R in Action,Rob I Kabacoff, Manning

Reference Book:

1. The Art of R Programming, Norman Matloff, No Starch Press

IV Sem	**DataBaseManagementSystemLab**	Course Code:	L	T	P	C
		V20CSL07	0	0	3	1.5

CourseOutcomes: AfterSuccessfulcompletionoftheCourse,thestudentwill beableto:

CO1:	Construct SQLqueries to perform different database operations.	(K3)
CO2:	Experimentwithvarious constraints and DatabaseIndexingTechniques.	(K3)
CO3:	ConstructPL/SQLCursorsandExceptions	(K3)
CO4:	DevelopPL/SQLFunctions,Procedures and Packages	(K3)
CO5:	Applybasic operations oncollectionsofMongo DB database	(K3)

ListofExperiments

Part-A

1. Construct SQL queriestofacilitateacquaintanceofBuilt-In Functions,String Functions, NumericFunctions,DateFunctionsand ConversionFunctions.
2. Construct SQL queriesusingOperators.
3. Construct SQL queriestoRetrieveandChangeData:Select,Insert,Delete,andUpdate
4. Construct SQL queriesusingGroupBy,OrderBy,andHavingClauses.
5. Construct SQL queriesonControllingdata:commit,rollback,and savepoint
6. Construct reportusingSQL*PLUS
7. Construct SQL queriesforCreating,Dropping,and AlteringTables,Views,andConstraints
8. Construct SQL queriesonJoinsandCorrelatedSubqueries
9. DemonstrateIndex,Sequence and Synonym.
10. Demonstrate Controllingaccess,lockingrowsforupdate and securityfeatures.

PL/SQL

11. DemonstrateBasicVariables,AnchoredDeclarations,andUsageofAssignmentOperation Using PL SQL block
12. Demonstrate BindandSubstitutionVariables using PL SQL block
13. Demonstrate ControlStructures in PL SQL
14. Demonstrate Cursors,ExceptionsandCompositeDataTypes in PL SQL.
15. Demonstrate Procedures,Functions,and Packages in PLSQL.

Part-B

1. Demonstrate the installation of Mongo DB database.
2. Demonstrate Creatingand droppingdatabase, collection in Mongodb.
3. Demonstrate Insertion, updation and deletion operations in Mongodb database.
4. Construct queries for Projection,limitingrecords,sortingrecordsandaggregationinMongodb database.

TextBooks:

1. OracleDatabase11gTheCompleteReferencebyOraclePress,Kevin Loney

2. DatabaseSystemsUsingOracle,NileshShah,2ndEdition, PHI.
3. IntroductiontoSQL,RickFVan derLans,4thEdition,PearsonEducation.

ReferenceBooks:

1. OraclePL/SQLInteractiveWorkbook,B.RosenzweigandE.Silvestrova,2ndEdition,Pearsoneducation.
2. SQL&PL/SQLforOracle10 g,BlackBook, Dr.P.S.Deshpande, DreamTech.

IV Sem	Java Programming Lab	Course Code: V20CSL08	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Programs on Classes, Objects, Constructors and Arrays. **(K3)**

CO2: Demonstrate Inheritance and Exception Handling. **(K3)**

CO3: Implement programs on Multi-Threading and File Handling. **(K3)**

CO4: Implement Event handling using Swings. **(K3)**

List of Experiments

1. Develop programs on Control Structures and Type Conversions in java.
2. Develop programs using various String handling functions
3. Construct programs using the following concepts:
   a) Classes & Objects b) Usage of static c)Constructors
4. Construct programs using the following concepts.
   a) Arrays b) Nested Classes c) Command Line Arguments
5. Construct programs using the following concepts.
   a) Inheritance b) Usage of super c)Method Overriding
6. Construct programs using the following concepts.
   a) Usage of final b) Abstract class c)Interfaces
7. Implement the programs using the concepts
   a) Packages b) Exception Handling.
8. Implement the programs on Multi-Threading.
   a) Multiple Threads on Single Object b) Thread Deadlock
9. Construct a program that shows Inter-thread Communication
10. Construct programs to perform read and write operations on files.
    a) Sequential Files b) Random Access files
11. Develop GUI using Swings.
12. Construct programs on Event Handling using Listener Interfaces.

Text books:

1. The complete Reference Java, 8th Edition, Herbert Schildt, TMH.
2. Introduction to java programming, Y Daniel Liang, 7 Edition, Pearson.

Annexure-VIII

Proposed Courses and Syllabi for other Branches under V20 Regulation

S.No.	Course Code	Course Name
1	V20CSL31	Data Structures Lab
2	V20CSL33	Python Programming Lab
3	V20CSL32	Object-Oriented Programming Through Java Lab

Syllabus Details

	DATA STRUCTURES LAB	Course Code: V20CSL31	L	T	P	C
			0	1	3	1.5
Branch	Common to ECE, EEE,ECT, CIVIL and MECH					

Course Outcomes:

CO1: ConstructSorting and searching methods. (K3)
CO2: Implement programs using Singly Linked Lists, Double Linked List. (K3)
CO3: Construct Basic Data Structures, Stacks, Queues and Applications. (K3)

CO4: construct Binary search tree (K3)
CO5: Implement various graph operations and shortest path algorithm. (K3)

List of Experiments

1. Bubble sort, Insertion sort, Selection sort, Quick sort, Merge sort.

   Programs to implement the following sorting techniques
   a) Selection sort b) Quick sort c) Merge sort

2. Linear search and Binary search.
   Programs to implement the following searching methods
   a) Linear search b) Binary search.

3. Basic Terminology, Classification of Data Structures, Operation on Data Structures. **Arrays**: Representation of arrays - Polynomial representation, Addition of two polynomials.

   A Program to implement addition of two polynomials. (using arrays).

4. single linked list Representation of node, operations on single linked list,
   A Program to implement single linked list and its operations. (create, insert, delete, display, reverse list)

5. **Double linked list**: operations like insert delete and display.
   A Program to implement double linked list and its operations.

6. **Stacks:** Introduction, Array representation, Operations, linked list representation, operation on linked stacks
   A Program to implement stack operations using arrays.
7. **Queues:** Introduction, Array representation, linked list representation, operation on queues, types of queues
   A Program to implement queue operations using arrays.
8. Applications of Stacks
   A Program to convert infix expression to postfix expression.

9. Introduction, Terminology, Representation of Trees, types of trees, **Binary Trees:** Properties of Binary Trees, Tree Traversals. **Binary Search Tree:** Introduction, Creation, insertion, delete, display.

   A Program to implement Binary search Tree and its operations.
10. **Graphs:** Introduction, Terminology, **Graph Traversal techniques**: Depth First Search, Breadth First Search
    A Program to implement graph traversal algorithms (BFS & DFS).

Text Books:

1. Data Structures, algorithms and applications in C++, Sartaj Sahni, Universities press, Second Edition.
2. Fundamentals of Data Structures in C++, Ellis Horowitz, Sartaj Sahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

	PYTHON PROGRAMMING LAB	Course Code: V20CSL32	L	T	P	C
			0	1	3	1.5
Branch	Common to ECE, EEE,ECT, CIVIL and MECH					

Syllabus Details

1. **Course Outcomes:Upon completion of the course, students will be able to**

   CO1: Demonstrate Basic Python Programs (K3)
   CO2: Construct control structures in python (K3)
   CO3: Demonstrate functions and packages. (K3)
   CO4: Construct python programs using structured data types. (K3)
   CO5: Demonstrate Text Files (K3)

2. **Syllabus**

Basics of python programming: Features of python – History of Python - The Future of Python installation and execution - Data types – Identifiers - variables – type conversions- Literal Constants – Numbers – Strings. I/O statements.Operators and expressions, operator precedence – expression evaluation.

Exercise 1 - Basics
a) A sample Python Script using command prompt, Python Command Line and IDLE
b) A program to purposefully raise an Indentation Error and correct it

Exercise 2 - Operations
a) A program to compute distance between two points taking input from the user (Pythagorean Theorem)
b) A program on add.py that takes 2 numbers as command line arguments and prints its sum.

Decision Control statements: conditional (if), alternative (if-else), chained conditional (if-elif-else); **Iteration:** while loop, for loop, nested for loop, range function, break, continue and pass statements.

Exercise - 3 Control Flow
a) A Program to implement for checking whether the given number is a even number or not.
b) A program to construct reverse the digits of a given number and add it to the original, If the sum is not a palindrome repeat this procedure.
c) A program using a while loop that asks the user for a number, and prints a countdown from that number to zero.

Exercise 4 - Control Flow – Continued

a) A program to construct the following pattern, using a nested for loop.

```
*
* *
```

* * *
* * * *
* * * * *
* * * *
* * *
* *
*

b) By considering the terms in the Fibonacci sequence whose values do not exceed four million, find the sum of the even-valued terms.

Functions and modules : Introduction - Function Definition - Function Call – argument types- Scope and Lifetime - The return statement - More on Defining Functions - Lambda Functions or Anonymous Functions.

Exercise - 5 – Problem Solving using Functions
a) Find mean, median, mode for the given set of numbers passed as arguments to a function
b) Develop a function nearly_equal to test whether two strings are nearly equal. Two strings a and b are nearly equal when a can be generated by a single mutation on b.
c) Develop a Recursive Function to find the Factorial of a given number .
d) Develop function to compute gcd, lcm of two numbers. Each function shouldn't exceed one line.

Lists: list operations, list slices, list methods, mutability, cloning lists, list parameters. **Tuples**: tuple assignment, tuple as return value. **Set:** Set Creation, Set Operations. **Dictionaries**: Creation, operations; comprehension, operations on strings.

Exercise - 6 Structured Data types
a) a program to count the number of strings where the string length is 2 or more and the first and last character are same from a given list of strings.
b) a program to develop unzip a list of tuples into individual lists and convert them into dictionary.

Exercise – 7 Structured Data types Continued
a) A program to count the numbers of characters in the string and store them in a dictionary data structure
b) a program to use split and join methods in the string and trace a birthday with a dictionary data structure.

Documentation Strings- Modules – Packages

Exercise - 8– Modules
a) Install packages requests, flask and explore them using (pip)
b) A program to implement a script that imports requests and fetch content from the page. Eg. (Wiki)
c) Develop a simple script that serves a simple HTTP Response and a simple HTML Page

Introduction - Types of files - Text files - reading and writing files

Exercise - 9 Files
a) a program to count frequency of characters in a given file. Can you use character frequency to tell whether the given file is a Python program file, C program file or a text file?
b) a program to compute the number of characters, words and lines in a file.

Classes, Methods, Constructor, Inheritance, Overriding Methods, Data hiding

Exercise - 10 OOP
a) Class variables and instance variable and illustration of self variable
i) Robot
ii) ATM Machine

Text Books:

1. "Python Programming using problem solving Approach" ReemaThareja, Oxford University Press – 2017.
2. Python with Machine Learning by A.Krishna Mohan, Karunakar & T.Murali Mohan by S. Chand Publisher-2018.

	OBJECT-ORIENTED PROGRAMMING THROUGH JAVA LAB	Course Code: V20CSL33	L	T	P	C
			0	1	3	1.5
Branch	Common to ECE, EEE,ECT, CIVIL and MECH					

Syllabus Details

Course Outcomes: After the completion of this course, students will be able to

CO1: Use code editors and JDK tools to write, compile, and run Java programs.
CO2: Use control statements and arrays while programming.
CO3: Develop programs using classes and objects.
CO4: Use inheritance, interfaces and packages while developing programs in Java.
CO5: Apply exception-handling mechanism.
CO6: Develop multithreaded programs.

Syllabus:

CYCLE–I:Overview of Object-oriented Programming: Introduction to Object-oriented Programming, Principles of Object-oriented Programming Languages, and Applications of OOP.

Introduction to Java: History of Java, Java Features, Java Virtual Machine, Java Program Structure, Literals, Identifiers, Primitive Data types, Variables, Operators and Expressions, Operator Precedence and Associativity, Type Conversion and Casting.

Exercises

a) Develop a Java program to display the default values of all primitive data types of Java.
b) Construct a Java program that calculates the area of a triangle, given the lengths of all three sides.

Area =$\sqrt{(S(S-a)(S-b)(S-c))}$, where S = (a+b+c)/2.

CYCLE– II: Control Statements: Conditional Statements - if, switch; Iteration Statements - while, do-while, for, for-each version of for; Jump Statements - break, continue, return.

Arrays: Introduction to Arrays, Array Declaration and Initialization, One-Dimensional Arrays, Multi-Dimensional Arrays, Basic String Handling.

Exercises

a) Develop a Java program that displays
   i) The roots of a quadratic equation $ax^2+bx+c=0$
   ii) The nature of roots by calculating the discriminate D.
b) N bikers compete in a race such that they drive at a constant speed, which may or may not be the same as the other. To qualify the race, the speed of a racer must be more than the average speed of all N racers. Take as input, the speed of each racer and print back the speed of qualifying racers.
c) Develop a Java program that displays the name of the day, based on the value of day, using the switch statement.
d) Develop a Java program to search for an element in a given list of elements using Linear Search.
e) Develop a Java program to perform multiplication of two matrices.
f) Develop a Java program using StringBuffer to perform various operations on a string.

CYCLE– III: Introduction to Classes and Objects: General Form of a Class, Methods, Declaring Objects using new, Constructors, this Keyword, Understanding static, Method and Constructor Overloading, Using Command-Line Arguments, Garbage Collection.

Exercises

a) Construct a Java program to demonstrate class mechanism - Create a class that contains variables, methods, constructors and invoke those methods inside main().
b) Develop a Java program demonstrating the use of static variables, methods.
c) Develop a Java program demonstrating the use of this keyword.
d) Develop a Java program that implements method overloading.
e) Develop a Java program that implements constructor overloading.
f) Develop a Java program demonstrating the use of command-line arguments.

CYCLE– IV: Inheritance: Access Control, Introduction to Inheritance, Types of Inheritance, Using super, Method Overriding and Dynamic Method Dispatch, Using final, Abstract Classes.
Interfaces: Defining and Implementing Interfaces.**Packages:** Creating Packages, Importing Packages, Importance of CLASSPATH.

Exercises

a) Construct a Java program to demonstrate single inheritance.
b) Construct a Java program to demonstrate multi-level inheritance.
c) Construct a Java program that illustrates the use of super.
d) Develop a Java program that illustrates runtime polymorphism.
e) Develop a Java program that uses an abstract class to find areas of different shapes.
f) Develop a Java program using interfaces. In addition, use interfaces to achieve multiple inheritance.
g) Construct a Java program that creates a user-defined package. Use the package by importing it in another Java program.

CYCLE– V: Exception Handling: Exception-Handling Fundamentals, Using try and catch, Using throw, Using throws and finally, User-defined Exceptions.

Exercises

a) Develop a Java program to demonstrate exception-handling mechanism using try/catch. Use multiple catch clauses.
b) Construct a Java program for illustrating the use of throw.
c) Construct a Java program for illustrating the use of finally.
d) Construct a java program for demonstrating the creation and use of user-defined exceptions.

CYCLE– VI: Multithreading: Introduction to Multithreading, Creation of Threads, Thread Life Cycle, isAlive() and join(), Thread Synchronization, and Interthread Communication.

Exercises

a) Construct a Java program that creates threads by extending Thread class. The first thread displays “Good Morning” every 1 second, the second thread displays “Hello” every 2 seconds and thethird displays “Welcome” every 3 seconds.
b) Use Runnable to develop a Java program for the above problem.
c) Construct a java program illustrating isAlive() and join().

d) Develop a Java program to solve producer consumer problem using thread synchronization.

TEXT BOOKS:

1. Java: The Complete Reference; 8th edition; Herbert Schildt; TMH.
2. Programming in Java;2nd edition; SachinMalhotra, SaurabhChoudhary; Oxford University Press.
3. Core JAVA, An Integrated Approach; Dr. R. Nageswara Rao; Dreamtech Press.

S.No.	Course Code	Course	L	T	P	C
1	V21CTP0 2	Dissertation-II	-	-	-	16
		TotalCredits				16

I-I	**Mathematical Foundations of Computer Science**	Course Code: **V21CTT01**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate skills in solving mathematical problems, mathematical principles and logic. (K3)
CO2: Demonstrate the basic concepts associated with set theory, relations, functions and their applications (K3)
CO3: Illustrate algebraic structures and concepts associated with Number Theory and their applications in computer science. (K3)
CO4: Manipulate and consider data numerically by using combinatorics.(K3)
CO5: Solve recurrence relations using various methods apply techniques of graphs for real-time problems(K3)

UNIT I: **Mathematical Logic**-Propositional Calculus: Statements and Notations, Connectives, Well Formed Formulas, Truth Tables, Tautologies, Equivalence of Formulas, Duality Law, Tautological Implications, Normal Forms, Theory of Inference for Statement Calculus, Consistency of Premises, Indirect Method of Proof. Predicate Calculus: Predicative Logic, Statement Functions, Variables and Quantifiers, Free and Bound Variables, Inference Theory for Predicate Calculus.

UNIT II: **Set Theory-**Introduction, Operations on Binary Sets, Principle of Inclusion and Exclusion, *Relations:* Properties of Binary Relations, Relation Matrix and Digraph, Operations on Relations, Partition and Covering, Transitive Closure, Equivalence, Compatibility and Partial Ordering Relations, Hasse Diagrams, *Functions:* Bijective Functions, Composition of Functions, Inverse Functions, Permutation Functions, Recursive Functions, Lattice and its Properties.

UNIT III: **Algebraic Structures and Number Theory-** *Algebraic Structures:* Algebraic Systems, Examples, General Properties, Semi Groups and Monoids, Homomorphism of Semi Groups and Monoids, Group, Subgroup, Abelian Group, Homomorphism, Isomorphism, *Number Theory:* Properties of Integers, Division Theorem, The Greatest Common Divisor, Euclidean Algorithm, Least Common Multiple, Testing for Prime Numbers, The Fundamental Theorem of Arithmetic, Modular Arithmetic (Fermat's Theorem and Euler's Theorem).

UNIT IV: **Combinatorics-** Basic of Counting, Permutations, Permutations with Repetitions, Circular Permutations, Restricted Permutations, Combinations, Restricted Combinations, Generating Functions of Permutations and Combinations, Binomial and Multinomial Coefficients, Binomial and Multinomial Theorems, The Principles of Inclusion–Exclusion, Pigeonhole Principle and its Application.

UNIT V: **Recurrence Relations-**Generating Functions, Function of Sequences, Partial Fractions, Calculating Coefficient of Generating Functions, Recurrence Relations, Formulation as Recurrence Relations, Solving Recurrence Relations by Substitution and Generating Functions, Method of Characteristic Roots, Solving Inhomogeneous Recurrence Relations, **Graph Theory:** Basic Concepts of Graphs, Sub graphs, Matrix Representation of Graphs: Adjacency Matrices, Incidence Matrices, Isomorphic Graphs, Paths and Circuits, Eulerian and Hamiltonian Graphs, Multigraphs, Planar Graphs, Euler's Formula, Graph Colouring and Covering, Chromatic Number, Spanning Trees, Algorithms for Spanning Trees (Problems Only and Theorems without Proofs).

Text Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J.P. Tremblay and P. Manohar, Tata McGraw Hill.
2. Elements of Discrete Mathematics-A Computer Oriented Approach, C. L. Liu and D. P. Mohapatra, 3rd Edition, Tata McGraw Hill.
3. Discrete Mathematics and its Applications with Combinatorics and Graph Theory, K. H. Rosen, 7th Edition, Tata McGraw Hill.

Reference Books:

1. Discrete Mathematics for Computer Scientists and Mathematicians, J. L. Mott, A. Kandel, T. P. Baker, 2nd Edition, Prentice Hall of India.
2. Discrete Mathematical Structures, Bernand Kolman, Robert C. Busby, Sharon Cutler Ross, PHI.
3. Discrete Mathematics, S. K. Chakraborthy and B.K. Sarkar, Oxford, 2011.

I-I	**Advanced Data Structures**	Course Code: **V21CTT02**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Select appropriate data structures as applied to specified problem definition.(**K2)**

CO2: Apply data structures such as linked list and trees on necessary applications.(**K3)**

CO3: Practice all data structures like stacks, queues, trees, graphs and compare their performance. (**K3)**

CO4: Discuss operations like searching, insertion, deletion and traversing on various data structures.(**K2)**

CO5: Apply data structures into the applications such as binary search trees, AVL, Red black trees. (**K3)**

UNIT I: **Arrays** Abstract Data Types and the C++ Class, The Array as an Abstract Data Type, The Polynomial Abstract Data type, Spares Matrices, Introduction- Sparse Matrix Representation- Transposing a Matrix- Matrix Multiplication, Representation of Arrays. **Stacks And Queues-** Templates in C++, The Stack Abstract Data Type, The Queue Abstract Data Type, Subtyping and Inheritance in C++, Evaluation of Expressions, Expression- Postfix Notation- Infix to Postfix.

UNIT II: **Linked Lists** Single Linked List and Chains, Representing Chains in C++, The Template Class Chain, Circular Lists, Available Space Lists, Linked Stacks and Queues, Polynomials, Equivalence Classes, Sparse Matrices, Doubly Linked Lists, Generalized Lists, Representation of Generalized Lists, **Trees** Introduction, Binary Trees, Binary Tree Traversal and Tree Iterators- Introduction, In order, Preorder, Post order Traversal, Thread Binary Trees, Heaps, Binary Search Trees.

UNIT III: **Graphs** The Graph Abstract Data Type, Elementary Graph Operation, Minimum Cost Spanning Trees, Shortest Paths and Transitive Closure, **Hashing**-Introduction, Static Hashing, Dynamic Hashing.

UNIT IV: **Priority Queues** Binomial heaps, Fibonacci Heaps, Symmetric Min-Max Heaps, **Efficient Binary Search Trees** Optimal Binary Search Trees, AVL trees, Red-Black Trees, Splay Trees.

UNIT V: **Multiyway Search Trees** m-way Search Trees, B- Trees, B+- Trees **Digital Search Trees** Digital Search Trees, Binary Tries and Patricia, Multiway Tries

Text Books:

1. Data structures, Algorithms and Applications in C++, S.Sahni, 2nd edition, Universities Press, Pvt. Ltd.
2. Data structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education. Ltd., Second Edition.
3. Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley student edition, John Wiley and Sons.

Reference Books:

1. Data structures and algorithms in C++, 3rd Edition, Adam Drozdek, Thomson
2. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
3. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

I-I	**Advanced Operating Systems** (Elective-I)	Course Code: **V21CTT03**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Explain architectures and issues in Distributed Operating Systems.(K2)

CO2: Illustrate different Distributed Mutual Exclusion Algorithms and Distributed Deadlock Algorithms. (K3)

CO3: Demonstrate Distributed Scheduling Algorithm and Distributed Shared Memory.(K3)

CO4: Apply various Cryptographic Algorithms for the protection of given data.(K3)

CO5: Demonstrate Multiprocessor Scheduling Algorithms and Concurrency Control Algorithms.(K3)

UNIT-I: **Architectures of Distributed Systems**: System Architecture Types, Distributed Operating Systems, Issues in Distributed Operating Systems. **Theoretical Foundations:** Inherent Limitations of a Distributed System, Lamport's Logical clocks, Vector Clocks, Global State, and Termination Detection.

UNIT-II: **Distributed Mutual Exclusion:** The classification of Mutual Exclusion Algorithms, Preliminaries, Non-Token-Based Algorithms, Lamport's Algorithm, The Ricart-Agrawala Algorithm, Token-Based Algorithms, Suzuki-kasami's Broadcast Algorithm, Singhal's Heuristic Algorithm. **Distributed Deadlock Detection:** Resource Vs Communication Deadlocks, A graph– theoretic Model, Deadlock handling strategies in Distributed Systems, Control Organizations for Distributed Deadlock Detection, Centralized Deadlock Detection Algorithms, Distributed Deadlock Detection Algorithms- A Path-Pushing, Edge-Chasing, Hierarchical Deadlock Detection Algorithms. **Agreement protocols**: The System Model, The Byzantine Agreement Problem, The Consensus Problem.

UNIT-III: **Distributed File Systems**: Mechanisms for Building Distributed File Systems, Design Issues. **Distributed Shared Memory**: Algorithms for Implementing DSM, Memory Coherence, Coherence Protocols, Design Issues. **Distributed Scheduling:** Issues in Load Distributing, Components of a Load Distributing Algorithm, Stability, Load Distributing Algorithms, Performance Comparison.

UNIT-IV: **Failure Recovery**: Backward and Forward Error Recovery, Consistent Set of Checkpoints, Synchronous and Asynchronous check Pointing and Recovery. **Fault Tolerance**: Commit Protocols, Non-blocking Commit Protocols, Voting Protocols. **ResourceProtection and Security:** The Access Matrix Model.

Cryptography: Private Key: Data Encryption Standard, Public Key Cryptography.

UNIT-V: **Multiprocessor System Architectures**: Basic Multiprocessor System Architectures, Interconnection Networks for Multiprocessor Systems, Caching, Hypercube Architectures. **Multiprocessor Operating Systems:** Threads, Process Synchronization, Processor Scheduling. **Database Operating Systems:** Concurrence Control Model of Database systems, Problem of Concurrency Control, Distributed Database Systems. **Concurrency Control Algorithms**: Lock Based Algorithms, Timestamp Based Algorithms.

TEXT BOOKS:

1. "Advanced concepts in operating systems: Distributed, Database and multiprocessor operating systems", Mukesh Singhal, Niranjan G.Shivaratri, TMH, 2001.

REFERENCE BOOKS:

1. "Modern operating system", Andrew S.Tanenbaum, PHI, 2003
2. "Distributed operating system-Concepts and design", Pradeep K.Sinha, PHI, 2003.
3. "Distributed operating system", Andrew S.Tanenbaum, Pearson education, 2003.

I-I	**Advanced Computer Architecture** (Elective-I)	Course Code: **V21CTT04**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Classify the types of computers, and new trends and developments in computer architecture. **(K2)**
CO2: Describe pipelining, instruction set architectures, memory addressing. **(K2)**
CO3: Demonstrate exploiting ILP using dynamic scheduling, multiple issue, and speculation. **(K3)**
CO4: Demonstrate the various techniques to enhance a processors ability to exploit Instruction level parallelism (ILP), and its challenges. **(K3)**
CO5: Illustrate multithreading by using ILP and supporting thread-level parallelism (TLP). **(K3)**

UNIT I: **Fundamentals of Computer Design**-Fundamentals of Computer design, Changing faces of computing and task of computer designer, Technology trends, Cost price and their trends, Measuring and reporting performance, Quantitative principles of computer design, Amdahl's law, Instruction set principles and examples- Introduction, Classifying instruction set- Memory addressing- type and size of operands, Operations in the instruction set.

UNIT II: **Pipelines-** Introduction, Basic RISC instruction set, Simple implementation of RISC instruction set, Classic five stage pipe lined RISC processor, Basic performance issues in pipelining, Pipeline hazards, Reducing pipeline branch penalties, **Memory Hierarchy Design-** Introduction, Review of ABC of cache, Cache performance, Reducing cache miss penalty, Virtual memory.

UNIT III: **Instruction** Level Parallelism the Hardware Approach: Instruction-Level parallelism, Dynamic scheduling, Dynamic scheduling using Tomasulo's approach, Branch prediction, high performance instruction delivery- hardware based speculation.

UNIT IV: ILP Software
Approach Basic compiler level techniques, Static branch prediction, VLIW approach, Exploiting ILP, Parallelism at compile time, Cross cutting issues - Hardware versus Software.

UNIT V: **Multi Processors and Thread Level Parallelism:**
Multi Processors and Thread level Parallelism- Introduction, Characteristics of application domain, Systematic shared memory architecture, Distributed shared– memory architecture, Synchronization, **Inter Connection and Networks-** Introduction, Interconnection network media, Practical issues in interconnecting networks, Examples of inter connection, Cluster, Designing of clusters, **Intel Architecture-** Intel IA-64 ILP in embedded and mobile markets Fallacies and pit falls.

Text Books:

1. JohnL. Hennessy, David A.Patterson –Computer Architecture: A Quantitative Approach, 3rd Edition, An Imprint of Elsevier.

References:

1. John P.Shen and Miikko H.Lipasti – Modern Processor Design: Fundamentals of Super Scalar Processors
2. Computer Architecture and Parallel Processing – Kai Hwang, Faye A.Brigs., MC Graw Hill.
3. Advanced Computer Architecture – A Design Space Approach – Dezso Sima, Terence Fountain, Peter Kacsuk , Pearson Ed

I-I	**Parallel Computing** (Elective-I)	Course Code: **V21CTT05**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe different parallel architectures; inter-connect networks, programming models, and algorithms for common operations such as matrix-vector multiplication. **(K2)**
CO2: Develop an efficient parallel algorithm to solve it. **(K3)**
CO3: Illustrate a parallel algorithm time complexity as a function of the problem size and number of processors. **(K3)**
CO4: Illustrate Matrix Multiplication and Sorting Techniques. **(K3)**
CO5: Explain parallel algorithm using MPI, Open MP, pthreads, or a combination of MPI and Open MP. **(K2)**

UNIT I: **History-** Introduction, Modern Scientific Method, Evolution of Supercomputing, Modem Parallel Computers, Seeking Concurrency, Data Clustering, Programming Parallel Computers. **Parallel Architectures:** Introduction, Interconnection Networks, Processor Arrays, Multiprocessors, Multi computers, Flynn's Taxonomy

UNIT II: **Parallel Algorithm Design-** Introduction, The Task/Channel Model, Foster's Design Methodology, Boundary Value Problem ,Finding the Maximum, The n-Body Problem, Adding Data Input, **Message-Passing Programming-** Introduction, The Message-Passing Model, The Message-Passing Interface , Circuit Satisfiability, Introducing Collective Communication, Benchmarking Parallel Performance.

UNIT III: **The Sieve of Eratosthenes-**Introduction, Sequential Algorithm, Sources of Parallelism, Data Decomposition options, Developing the Paralle1 Algorithm, Analysis of Parallel Sieve Algorithm, Documenting the Parallel Program, Benchmarking, Improvements, **Performance Analysis-** Introduction, Speedup and Efficiency, Amdahl's Law, Gustafson-Barsis's Law, The Karp-Flatt Metric, The Iso-efficiency Metric.

UNIT IV: **Matrix Multiplication,** Introduction, Sequential Matrix Multiplication, Row wise Block-Striped Parallel Algorithm, Cannon's Algorithm, Solving Linear Systems, Back Substitution, Gaussian Elimination, Iterative Methods, **Sorting** Introduction, Quick sort, A Parallel Quick sort Algorithm, Hyper quick sort Algorithm, Parallel Sorting by Regular Sampling.

UNIT V: **Shared-Memory Programming –** Introduction, The Shared-Memory Model, Parallel for Loops, Declaring Private Variables, Critical section, Reductions, Performance Improvements, More General Data Parallelism, Functional Parallelism, **Combining MPI and OpenMP** -Introduction, Conjugate Gradient Method, Jacobi Method.

Text Books:

1. Parallel Programming in C with MPI and OpenMP Michael J, Quinn Oregon State University.

Reference books:

1. Distributed and Cloud Computing: From Parallel Processing to the Internet of Things 1st Edition, Kai Hwang , Jack Dongarra, Geoffrey C. Fox

I-I	**Advanced Databases** (Elective-II)	Course Code: **V21CTT06**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Explain Distributed Database Process, Architecture, and Design Principles. **(K2)**
CO2: Apply Distributed Query Optimization Techniques and Algorithms. **(K3)**
CO3: Illustrate and apply Concurrency Control and Reliability Techniques. **(K3)**
CO4: Illustrate Need of Complex Data type like ORDBMS and OODBMS. **(K3)**
CO5: Identify Emerging Database Models and case study on Time Series Database. **(K2)**

UNIT I: Database Analysis and Design Techniques: Review of basic Database Concepts, Database Design Methodologies. ER Modeling: Specialization, Generalization, Aggregation, Normalization Theory. Database Implementation using UML: Introduction to UML, Structure diagrams, behavioral diagrams, object oriented analysis, class diagram, Advanced Transaction Processing and Concurrency Control: Transaction Concepts, Concurrency Control: Locking Methods, Time stamping Methods, Optimistic Methods for Concurrency Control, Concurrency Control in Distributed Systems.

UNIT II: Query Compiler: Introduction, parsing, generating logical query plan from parse tree. Query Processing: Physical-Query-plan Operators. Operations: selection, sorting, join, project, set. Query Evaluation: Introduction, Approaches to QE, Transformation of relational expressions in Query optimization, heuristic optimization, cost estimation for various operations, transformation rule.

UNIT III: Distributed Database Centralized DBMS and Distributed DBMS, functions and architecture of a DDBMS, Distributed Data Storage, Transparency issues in DDBMS, Query Processing DDBMS, Distributed transaction Management and Protocols, Distributed Concurrency Control and Deadlock Management.

UNIT IV: Object Oriented Database Limitations of RDBMS, Need of Complex Datatype, Data Definition, ODBMS Fundamentals, issues in OODBMS, Object- oriented database design. Comparison of ORDBMS and OODBMS.

UNIT V: Emerging Database Models, Technologies and Applications Multimedia database-Emergence, difference from other data types, structure, deductive databases, GIS and spatial databases, Knowledge database, Information

Visualization, Wireless Networks and databases, Personal database, Digital libraries, web databases, case studies.

Time Series Database(TSD): Time Series Database, Importance of TSD, TSD Vs Relational DB, RTA and TSD, TSD as stream processing solution.

Text Books:

1. Advanced database management system by RiniChkrabarti and Shibhadra Dasgupta, Dreamtech.
2. Distributed Databases by Ozsu and Valduriez ,Pearson Education.

Reference Books:

1. Fundamentals of Database Systems by Ramez Elmasri, Shamkant Navathe, Pearson Education
2. Database System Concepts by Abraham Silberschatz, Henry F. Korth, S. Sudarshan, Tata McGraw-Hill.
3. https://www.xenonstack.com/insights/time-series-databases-in-real-time-analytics

I-I	**Advanced Computer Networks** (Elective-II)	Course Code: **V21CTT07**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe the functionalities and services provided by the network layer. (K2)

CO2: Apply IP addressing for the given network. (K3)

CO3: Select the transport protocol appropriate for a given application. (K3)

CO4: Discriminate between different types of multimedia communications. (K2)

CO5: Describe the working, types and challenges involved in Adhoc networks & SDN. (K2)

UNIT I: **Network layer-**Network Layer design issues: store-and forward packet switching, services provided transport layers, implementation connection less services, implementation connection oriented services, comparison of virtual – circuit and datagram subnets. **Routing Algorithm** –shortest path routing, flooding, distance vector routing, link state routing, Hierarchical routing, Broadcast routing, Multicasting routing, routing for mobiles Hosts, routing in Adhoc networks, **Congestion control algorithms**-Load shedding, Congestion control in Data gram Subnet.

UNIT II: **IPV4 Address** address space, notations, classful addressing, classless addressing network addressing translation(NAT) , **IPV6 Address** structure address space, **Internetworking** need for network layer internet as a data gram, internet as connection less network. **IPV4** datagram, Fragmentation, checksum, options. **IPV6** Advantages, packet format, extension Headers, Transition form IPV4 to IPV6

UNIT III: **Process to process delivery:** client/server paradigm, multiplexing and demultiplexing, connectionless versus connection oriented services, reliable versus reliable. **UDP:** well known ports for UDP, user data gram, check sum, UDP operation, and uses of UDP **TCP:** TCP services, TCP features, segement, A TCP connection, Flow control, error control, congestion control. **SCTP:** SCTP services SCTP features, packet format, An SCTP association, flow control, error control. **Congestioncontrol**: open loop congestion control, closedloop congestion control, Congestion control in TCP, frame relay, **Quality Of Service**: flow characteristics, flow classes **Techniques To Improve QOS**: scheduling, traffic shaping, resource reservation, admission control.

UNIT IV: **Multimedia-** introduction digital a audio , Audio compression, streaming audio, internet radio, voice over IP, introduction to video, video compression, video on demand, the MBone-the multicast back bone

UNIT V: **Emerging trends Computer Networks- Mobile Ad hoc networks**: applications of Ad hoc networks, challenges and issues in MANETS,MAC layers issues, routing protocols in MANET, transport layer issues, Ad Hoc networks security. **Wireless sensors networks:** WSN functioning, operation system support in sensor

devices, WSN Characteristics, sensor network operation, sensor Architecture: cluster management; **Wireless mesh networks** WMN design, Issues in WMNs;

Software-defined networking (SDN): importance of SDN, working principle of SDN, Benefits of SDN, SDN vs Traditional Networking, Different models of SDN.

Text Books:

1. Data communications and networking 4th edition Behrouz A Fourzan, TMH.
2. Computer networks 4th edition Andrew S Tanenbaum, Pearson.
3. Computer networks, Mayank Dave, CENGAGE.

Reference Books:

1. Computer Networks, A system Approach, 5th ed, Larry L Peterson and Bruce S Davie, Elsevier.
2. https://www.vmware.com/topics/glossary/content/software-defined-networking.

I-I	**Object Oriented Software Engineering** (Elective-II)	Course Code: **V21CTT08**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Apply the Object Oriented Software-Development Process to design software. (K3)
CO2: Illustrate the Object Oriented Software Architecture & Design patterns. (K3)
CO3: Examine theDesign and Plan software solutions to problems using an object-oriented Testing strategies. (K4)
CO4: Illustrate the Object Oriented metrics for designing the projects. (K3)
CO5: Develop the CASE Tools & Integrated CASE environments for Object Oriented Software. (K3)

UNIT I: Introduction to Software Engineering: Software, Software Crisis, Software Engineering definition, Evolution of Software Engineering Methodologies, Software Engineering Challenges. Software Processes: Software Process, Process Classification, Phased development life cycle, Software Development Process Models- Process, use, applicability and Advantages/limitations.

UNIT II: Object oriented Paradigm, Object oriented Concepts, Classes, Objects, Attributes, Methods and services, Messages, Encapsulation, Inheritance, Polymorphism, Identifying the elements of object model, management of object oriented Software projects, Object Oriented Analysis, Domain Analysis, Generic Components of OOA model,, OOA Process, Object Relationship model, Object Behavior Model, Object Oriented Design: Design for Object- Oriented systems, The Generic components of the OO design model, The System design process, The Object design process, Design Patterns, Object Oriented Programming.

UNIT III: Object Oriented testing: Broadening the view of Testing, Testing of OOA and OOD models, Object-Oriented testing strategies, Test case design for OO software, testing methods applicable at the class level, Interclass test case design

UNIT IV: Technical Metrics for Object Oriented Systems: The Intent of Object Oriented metrics, The distinguishing Characteristics, Metrics for the OO Design model, Class-Oriented metrics, Operation-Oriented Metrics, Metrics foe Object Oriented testing, Metrics for Object Oriented projects

UNIT V: Computer-Aided Software Engineering: What is CASE?, Building blocks for CASE, A taxonomy of CASE tools, Integrated CASE environments, The Integration Architecture, The CASE Repository

Text Books:

1. Object Oriented and Classical Software Engineering, 7/e, Stephen R. Schach, TMH.
2. Object oriented and Classical Software Engineering, Timothy Lethbridge, Robert Laganiere, TMH
3. Software Engineering by Roger S Pressman, Tata McGraw Hill.

Reference Books:

1. Component based Software Engineering: ivica Crnkovic, Springer.

I-I	**Advanced Data Structures Lab**	Course Code: **V21CTL01**	**L**	**T**	**P**	**C**
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Develop solutions for a range of problems using object oriented programming. (**K3)**

CO2: Practice complex problems using advanced data structures like arrays, stacks, queues, linked lists, graphs and trees. **(K3)**

CO3: Practice operations like searching, insertion, deletion and traversing on various data structures. (**K3)**

CO4: Apply data structures into the applications such as binary search trees, AVL, Red black trees. (**K3)**

CO5: Differentiate various hash functions. (**K2)**

List of Experiments

Experiment 1:

Develop a program to implement Polynomial additions using Arrays.

Experiment 2:

Develop a program to implement Polynomial additions using linked lists.

Experiment 3:

Develop a program to implement Multi Stack ADT using Arrays with the basic operations as Create(), IsEmpty(), Push(), Pop(), IsFull() with appropriate prototype to a functions.

Experiment 4:

Develop a program to implement Queue ADT using Linked list with the basic functions of Create(), IsEmpty(), Insert(), Delete() and IsFull() with suitable prototype to a functions.

Experiment 5:

Develop a program to transfer data from stack to queue.

Experiment 6:

Develop a program to implement the following ADT using Linked list with the basic functions of Create(), IsEmpty(), Insert(), Delete() and IsFull() with suitable prototype to a functions.

i) Double Ended Queue (Dequeues)
ii) Circular Queues

Experiment 7:

Develop a program to generate the binary tree from the given inorder, preorder and post order traversal.

Experiment 8:

Develop a program to implement insertion, deletion and display operation in Min- Max Heap for the given data as integers.

Experiment 9:

Develop a program for Binary Search Tree to implement following operations:

a) Insertion
b) Deletion
   i. Delete node with only child
   ii. Delete node with both children
c) Finding an element
d) Finding Min element
e) Finding Max element
f) Left child of the given node
g) Right child of the given node
h) Finding the number of nodes, leaves nodes, full nodes, ancestors, descendants

Experiment 10:

Develop a program to implement BFS and DFS for a Graph.

Experiment 11:

Develop a program to implement to generate a min-cost spanning tree

a) Kruskal's algorithm
b) Prim's algorithm

Experiment 12:

Develop a program to store k keys into an array of size n at the location computed using a hash function, loc = key % n, where k<=n and k takes values from [1 to m], m>n. To handle the collisions use the following collision resolution techniques,

a) Linear probing
b) Quadratic probing
c) Double hashing/rehashing

Experiment 13:

Develop a program for AVL Tree to implement following operations: (For nodes as integers)

a) Insertion: Test program for all cases (LL, RR, RL, LR rotation)
b) Deletion: Test Program for all cases (R0, R1, R-1, L0, L1, L-1)
c) Display: using set notation

Experiment 14:

Develop a program to generate the B-tree of order 2-3 for a given list of integers.

Experiment 15:

Develop a program to perform string matching using Boyer-Moore algorithm.

Text Books:

1. Data structures, Algorithms and Applications in C++, S.Sahni, 2nd edition, Universities Press,
   Pvt. Ltd.
2. Data structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education. Ltd.,
   Second Edition.
3. Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley
   student edition, John Wiley and Sons.

Reference Books:

1. Data structures and algorithms in C++, 3rd Edition, Adam Drozdek, Thomson
2. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
3. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

Advanced Computing Lab-1

NOTE:**Lab programs based on elective taken by student may be offered.**

I-I	Advanced Operating Systems Lab	Course Code: **V21CTL02**	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate deadlock avoidance and detection algorithms in a distributed environment (K3)
CO2: Demonstrate efficient clock synchronization and election algorithms. (K3)
CO3: Describe Client server architecture (K2)

List of Experiments

Experiment 1: **Develop a program to implement Deadlocks through Simulation.**

Experiment 2: **Develop a Case Study of 3 tier client server architecture.**

Experiment 3: **Develop a Case study on Client and RMI Server.**

Experiment 4: **Develop a program to implement any one Election algorithms.**

Experiment 5: **Develop a program to show the software simulation for Clock Synchronization in Distributed System using Lamport's Algorithm.**

Experiment 6: **Develop a program to implement Banker's Algorithm for avoiding Deadlock.**

TEXT BOOKS:

1. "Advanced concepts in operating systems: Distributed, Database and multiprocessor operating systems", Mukesh Singhal, Niranjan G.Shivaratri, TMH, 2001.

REFERENCE BOOKS:

I-I	**Parallel Computing Lab**	Course Code: **V21CTL03**	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Develop an efficient parallel algorithm to solve it. (K3)

CO2: Use parallel algorithm using MPI, OpenMP, pthreads, or a combination of MPI and OpenMP.(K3)

List of Experiments

Experiment 1: Develop a parallel program that computes the sum 1+2+------+ in the following

Manner. Each process I assigns the value i+1 to an integer, and then the processes perform a sum reduction. As a way of double-checking the result, process 0 should also compute and print the value p(p+1)/2.

Experiment 2: Implement A print number is a positive integer evenly divisible by exactly two positive integers: itself and .The first five prime numbers are 2,3,5,7 and 11. Sometimes two consecutive odd numbers are both prime. For example, the odd integers following 3,5 and 11 are all prime numbers. However, the odd integer following 7 is not a prime number. Write a parallel program to determine, for all integers less then 1,000,000, the number of times that two consecutive odd integers are both prime.

Experiment 3: Develop a program implementing the parallel matrix multiplication algorithm.

Experiment 4: Develop a MPI program implementing consecutive gradient.

Experiment 5: Develop a MPI program to implementing Quick sort.

Text Books:

1. Parallel Programming in C with MPI and OpenMP Michael J, Quinn Oregon State University.

Reference books:

2. Distributed and Cloud Computing: From Parallel Processing to the Internet of Things 1st Edition, Kai Hwang , Jack Dongarra, Geoffrey C. Fox

I-I	**Advanced Computer Networks Lab**	Course Code: **V21CTL04**	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate various routing protocols. (K3)

CO2: Develop sub netting and addressing IP. (K3)

CO3: Develop emerging trends and security issues in computer Networks. (K3)

List of Experiments

Experiment 1:

Configuration of IP addressing for a given scenario for a given set of topologies.

Experiment 2:

Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address.

Experiment 3:

Configure, implement and debug the following: Use open source tools for debugging and diagnostics.

a) ARP/RARP protocols

b) RIP routing protocols

c) BGP routing

d) OSPF routing protocols

e) Static routes (check using netstat)

Text Books:

1. Data communications and networking 4th edition Behrouz A Fourzan, TMH

2. Computer networks 4th edition Andrew S Tanenbaum, Pearson
3. Computer networks, Mayank Dave, CENGAGE

Reference Books:

1. Computer Networks, A system Approach, 5th ed, Larry L Peterson and Bruce S Davie, Elsevier

I-I	Object Oriented Software Engineering Lab	Course Code: V21CTL05	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Apply software solutions to problems using an object-oriented strategy. **(K3)**

CO2: Construct the object oriented software systems Model using Unified Modeling Language (UML). **(K3)**

List of Experiments

Experiments 1:

Develop the following for the given project

a) Define the problem statement, Software Requirement Specification, entity relationship diagram,

b) Dataflow diagrams for level 0 and level 1,

c) Draw use-case diagram

d) Draw the activity diagram of all use cases.

e) Draw sequence diagram of all use cases

f) Draw collaboration diagram of all use cases, and Assign objects in Sequence diagram to classes and make class diagrams.

Text Books:

1. Object Oriented and Classical Software Engineering, 7/e, Stephen R.

Schach, TMH.

2. Object oriented and Classical Software Engineering, Timothy Lethbridge, Robert Laganiere, TMH
3. Software Engineering by Roger S Pressman, Tata McGraw Hill.

Reference Books:

1. Component based Software Engineering: ivica Crnkovic, Springer.

I-II	**Web Technologies**	Course Code: **V21CTT09**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate the basics of JavaScript. (K3)

CO2: Illustrate the concepts of XML and AJAX. (K3)

CO3: Produce Dynamic web pages with PHP and MySQL. (K3)

CO4: Use PERL to retrieve documents from the web. (K3)

CO5: Describe the fundamentals of RUBY Programming. (K2)

Syllabus:

UNIT-I: **Java script-** The Basic of Java script: Objects, Primitives Operations and Expressions, Screen Output and Keyboard Input, Control Statements, Object Creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions

UNIT-II: **XML-** Document type Definition, XML schemas, Document object model, XSLT, DOM and SAX Approaches, **AJAX A New Approach:** Introduction to AJAX, Integrating PHP and AJAX.

UNIT-III: **PHP Programming- Introducing PHP:** Creating PHP script, Running PHP script. **Working with variables and constants:** Using variables, Using constants, Data types, Operators. **Controlling program flow:** Conditional statements, Control statements, Arrays, functions. Working with forms and Databases such as MySQL.

UNIT-IV: PERL- Introduction to PERL, Operators and if statements, Program design and control structures, Arrays, Hashs and File handling, Regular expressions, Subroutines, Retrieving documents from the web with Perl.

UNIT-V: RUBY: Introduction to Ruby, Variables, types, simple I/O, Control, Arrays, Hashes, Methods, Classes, Iterators, Pattern Matching. Overview of Rails.

TEXT BOOKS:

1. Programming the World Wide Web, Robet W Sebesta, 7ed, Pearson.
2. Web Technologies, Uttam K Roy, Oxford

Reference Book:

1. The Web Warrior Guide to Web Programming, Bai, Ekedahl, Farrelll, Gosselin, Zak, Karparhi, Maclntyre, Morrissey, Cengage.
2. Programming world wide web-Sebesta, Pearson Education, 2007.
3. Core SERVLETS AND JAVA SERVER PAGES VOLUME 1: CORE TECHNOLOGIES

By Marty Hall and Larry Brown Pearson Internet and World Wide Web – How to program by Dietel and Nieto PHI/Pearson Education Asia.

I-II	**Data Science through Python Programming**	Course Code: **V21CTT10**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Illustrate the python basics and the working of various built-in objects in Python. (K2)

CO2: Describe the process of data collection using python. (K2)

CO3: Manipulate data using Pandas and NumPy libraries of python. (K3)

CO4: Apply various techniques for cleaning and pre-processing the data. (K3)

CO5: Demonstrate data visualization techniques using python matplotlib. (K3)

Syllabus:

UNIT I: **PYTHON Basics and Programming Concepts:** Introducing Python, Types and Operations - Numbers, Strings, Lists, Tuples, Dictionaries, Files, Numeric Types, Dynamic Typing; Statements and Syntax - Assignments, Expressions, Statements, Loops, iterations, comprehensions; Functions - Function Basics, Scopes, Arguments, Advanced Functions; Modules - Module Coding Basics, Module Packages, Advanced Module Topics; Classes and OOP - Class, Operator Overloading, Class Designing; Exceptions and Tools - Exception Basics, Exception Coding Details, Exception Objects, Designing With Exceptions, Parallel System Tools

UNIT II: **GUI Programming:** Graphical User Interface - Python gui development options, Adding Widgets, GUI Coding Techniques, Customizing Widgets; Internet Programming - Network Scripting, Client-Side scripting, Pymailgui client, server-side scripting, Pymailcgi server; Tools and Techniques - databases and persistence, data structures, text and language, python/c integration

UNIT III: **Pandas and NumPy:** Numpy Basics - Fast Element wise array functions, Multidimensional Array, Data Processing using arrays, file i/o with arrays; Pandas - Data Structures, Essential Functionality, Summarizing and Computing Descriptive Statistics, Handling Missing Data, Hierarchical Indexing

UNIT IV: **Data Preprocessing:** Data Loading, Storage, and FileFormats - Reading and Writing data in text format, binary data formats, interacting with html and web apis, interacting with databases; Data Wrangling: Clean, Transform, Merge, Reshape - Combining and Merging Data Sets, Reshaping and Pivoting, Data Transformation, String Manipulation; Data Aggregation and Group Operations – Group by Mechanics, Data Aggregation, Groupby Operations and and Transformations, Pivot Tables and Cross- Tabulation

UNIT V: **Data Visualization:** A Brief matplotlib API Primer, Plotting Functions in pandas, Time Series, Financial and Economic Data Applications

Text Books:

1. Learning Python , O’Reilly, Mark Lutz
2. Programming Python, O’Reilly, Mark Lutz
3. Python For Data Analysis (O’Reilly, Wes Mckinney)

Reference Text Books:

1. Python: The Complete Reference, Martin C. Brown, McGraw Hill Education
2. Head First Python, Paul Barry, O'Reilly

I-II	**Machine Learning** (Elective –III)	Course Code: **V21CTT11**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe Knowledge for Productive use of Machine Learning and Diversity of Data (K2)
CO2: Demonstrate on Supervised and Computational Learning (K3)
CO3: Illustrate on Statistics in learning techniques and Logistic Regression (K3)
CO4: Illustrate on Support Vector Machines and Perceptron Algorithm (K3)
CO5: Construct a Multilayer Perceptron Networks and classification of decision tree (K3)

UNIT-I: **Introduction-**Towards Intelligent Machines, Well posed Problems, Example of Applications in diverse fields, Data Representation, Domain Knowledge for Productive use of Machine Learning, Diversity of Data: Structured / Unstructured, Forms of Learning, Machine Learning and Data Mining, Basic Linear Algebra in Machine Learning Techniques.

UNIT-II: **Supervised Learning-** Rationale and Basics: Learning from Observations, Bias and Why Learning Works: Computational Learning Theory, Occam's Razor Principle and Overfitting Avoidance Heuristic Search in inductive Learning, Estimating Generalization Errors, Metrics for assessing regression, Metris for assessing classification.

UNIT-III: **Statistical Learning-** Machine Learning and Inferential Statistical Analysis, Descriptive Statistics in learning techniques, Bayesian Reasoning: A probabilistic approach to inference, K-Nearest Neighbor Classifier. Discriminant functions and regression functions, Linear Regression with Least Square Error Criterion, Logistic Regression for Classification Tasks, Fisher's Linear Discriminant and Thresholding for Classification, Minimum Description Length Principle.

UNIT-IV: **Support Vector Machines (SVM)-** Introduction, Linear Discriminant Functions for Binary Classification, Perceptron Algorithm, Large Margin Classifier for linearly seperable data, Linear Soft Margin Classifier for Overlapping Classes, Kernel Induced Feature Spaces, Nonlinear Classifier, Regression by Support vector Machines.

Learning with Neural Networks: Towards Cognitive Machine, Neuron Models, Network Architectures, Perceptrons, Linear neuron and the Widrow-Hoff Learning Rule, The error correction delta rule.

UNIT -V: Multilayer Perceptron Networks and error back propagation algorithm, Radial Basis Functions Networks. **Decision Tree Learning**: Introduction, Example of classification decision tree, measures of impurity for evaluating splits in decision trees, ID3, C4.5, and CART decision trees, pruning the tree, strengths and weakness of decision tree approach.

Textbooks:

1. Applied Machine Learning,1e, M.Gopal, Mc Graw Hill Education, 2018

Reference Books

1. Kevin Murphy, Machine Learning: A Probabilistic Perspective, MIT Press, 2012
2. Trevor Hastie, Robert Tibshirani, Jerome Friedman, The Elements of Statistical Learning, Springer 2009 (freely available online)
3. Christopher Bishop, Pattern Recognition and Machine Learning, Springer, 2007.

Course Outcomes: After completion of course, students would be able to

CO1: Explain the Fundamental Concepts and applications of ad hoc and wireless sensor networks (K2)
CO2 : Describe the MAC protocol issues of ad hoc networks (K2)
CO3 : Describe routing protocols for ad hoc wireless networks with respect to TCP design issues (K2)
CO4 : Explain the concepts of network architecture and MAC layer protocol for WSN (K2)
CO5 : Discuss the WSN routing issues by considering QoS measurements (K2)

UNIT I: **Introduction :** Fundamentals of Wireless Communication Technology, The Electromagnetic Spectrum, Radio propagation Mechanisms ,Characteristics of the Wireless channel mobile ad hoc networks (MANETs), **Wireless Sensor Networks (WSNs):** concepts and architectures, Applications of Ad Hoc and Sensor Networks, Design Challenges in Ad hoc and Sensor Networks.

UNIT II: **MAC Protocols For Ad Hoc Wireless Networks:** Issues in designing a MAC Protocol, Issues in Designing a MAC Protocol for Ad Hoc Wireless Networks, Design Goals of a MAC Protocol for Ad Hoc Wireless Networks, Classification of MAC Protocols, Contention based protocols, Contention based protocols with Reservation Mechanisms, Contention based protocols with Scheduling Mechanisms, Multi channel MAC - IEEE 802.11.

UNIT III: **Routing Protocols And Transport Layer In Ad Hoc Wireless Networks**: Routing Protocol: Issues in designing a routing protocol for Ad hoc networks, Classification, proactive routing, reactive routing (on-demand), hybrid routing, Transport Layer protocol for Ad hoc networks, Design Goals of a Transport Layer Protocol for Ad Hoc Wireless Networks, Classification of Transport Layer solutions- TCP over Ad hoc wireless, Network Security, Security in Ad Hoc Wireless Networks, Network Security Requirements.

UNIT IV: **Wireless Sensor Networks (WSNS) And Mac Protocols**: Single node architecture - hardware and software components of a sensor node, **WSN Network architecture:** typical network architectures, data relaying and aggregation strategies, **MAC layer protocols:** self-organizing, Hybrid TDMA/FDMA and CSMA based MAC -IEEE 802.15.4.

UNIT V: **WSN Routing, Localization & Qos:** Issues in WSN routing, OLSR, Localization, Indoor and Sensor Network Localization, absolute and relative localization, triangulation, QOS in WSN, Energy Efficient Design, Synchronization.

Text Books:

2. "Wireless Sensor Networks", Feng Zhao and LeonidesGuibas,Elsevier Publication 2nd edition-2004
3. “Protocols and Architectures for Wireless Sensor Networks”, Holger Karl and Andreas Willig,Wiley, 2005 (soft copy available)
4. “Wireless Sensor Networks Technology, Protocols, and Applications”, KazemSohraby, Daniel Minoli, &TaiebZnati, John Wiley, 2007. (soft copy available)

I-II	**Internet of Things** (Elective –III)	Course Code: **V21CTT13**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe the term 'internet of things' in different contexts. (K2)
CO2: Develop various protocols for IoT. (K3)
CO3: Develop a PoC of an IoT system using Rasperry Pi/Arduino (K3)
CO4: Apply data analytics and use cloud offerings related to IoT. (K3)
CO5: Demonstrate applications of IoT in real time scenario (K3)

UNIT I: **FUNDAMENTALS OF IoT:** Evolution of Internet of Things, Enabling Technologies, IoT Architectures,oneM2M, IoT World Forum (IoTWF) and Alternative IoT models, Simplified IoT Architecture and Core IoT Functional Stack, Fog, Edge and Cloud in IoT, Functional blocks of an IoT ecosystem, Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II: **IoT PROTOCOLS:** IT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and Lora WAN, Network Layer: IP versions, Constrained Nodes and Constrained Networks, Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks, Application Transport Methods: Supervisory Control and Data Acquisition, Application Layer Protocols: CoAP and MQTT. Bluetooth Smart Connectivity-Overview, Key Versions, BLE-Bluetooth Low Energy Protocol, Low Energy Architecture.

UNIT III: **DESIGN AND DEVELOPMENT:** Design Methodology, Embedded computing logic,Microcontroller, System on Chips, IoT system building blocks, Arduino, Board details, IDE programming, Raspberry Pi, Interfaces and Raspberry Pi with Python Programming.

UNIT IV: **Arm Based Embedded System Design:** ARM Cortex-A class processor, Embedded Devices-ARM Cortex-M Class processor, Networking-Bluetooth Smart Technology **Introduction to embedded systems**: CPUs vs MCU's vs Embedded Systems, Examples, Options for Building Embedded Systems, Features of Embedded Systems, Building Embedded Systems, Building Embedded Systems using MCUs, Introduction to mbedTM Platform

UNIT V: **CASE STUDIES/INDUSTRIAL APPLICATIONS:** Cisco IoT system, IBM Watson IoT platform, Manufacturing, Converged Plant wide Ethernet Model (CPwE), Power Utility Industry, Grid Blocks Reference Model, Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control.

Text Books:

1. IoT Fundamentals: Networking Technologies, Protocols and Use Cases for Internet of Things, David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Rob

Barton and Jerome Henry, Cisco Press, 2017
2. The Definitive Guide to ARM Cortex-M3 and M4 Processors, 3rd Edition, Joseph Yiu

Reference Books:

1. Internet of Things – A hands-on approach, Arshdeep Bahga, Vijay Madisetti, Universities Press, 2015
2. The Internet of Things – Key applications and Protocols, Olivier Hersent, David Boswarthick, Omar Elloumi and Wiley, 2012 (for Unit 2).
3. “From Machine-to-Machine to the Internet of Things – Introduction to a New Age of Intelligence”, Jan Ho¨ ller, Vlasios Tsiatsis, Catherine Mulligan, Stamatis, Karnouskos, Stefan Avesand. David Boyle and Elsevier, 2014.
4. Architecting the Internet of Things, Dieter Uckelmann, Mark Harrison, Michahelles and Florian (Eds), Springer, 2011.
5. Recipes to Begin, Expand, and Enhance Your Projects, 2nd Edition, Michael Margolis, Arduino Cookbook and O’Reilly Media, 2011.
6. Cortex–A series Programmer’s Guide for ARMv7-A by Arm http://infocenter.arm.com/help/index.jsp?topic=/com.arm.doc.den0013d/inde x.htmlc

I-II	**Principles of Cyber Security** (Elective-IV)	Course Code: **V21CTT14**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Apply cyber security architecture principles. (K3)

CO2: Describe risk management processes and practices (K2).

CO3: Construct cyber security incidents to apply appropriate response (K3)

CO4: Differentiate system and application security threats and vulnerabilities. (K2)

CO5: Identify security tools and hardening techniques. (K1)

UNIT–I: **Introduction to Cyber security-** Cyber security objectives**,** Cyber security roles**,** Differences between Information Security & Cyber security, **Cyber security Principles-**Confidentiality, integrity, &availability Authentication & non- repudiation.

UNIT–II: **Information Security (IS) within Lifecycle Management-**Lifecycle management landscape, Security architecture processes, Security architecture tools, Intermediate lifecycle management concepts, **Risks & Vulnerabilities-**Basics of risk management**,** Operational threat environments**,** Classes of attacks.

UNIT–III: **Incident Response-** Incident categories**,** Incident response Incident recovery, and **Operational security protection**: Digital and data assets, ports and protocols, Protection technologies, Identity and access Management, configuration management.

UNIT–IV: **Threat Detection and Evaluation (DE): Monitoring-** Vulnerability Management, Security Logs and Alerts, Monitoring Tools and Appliances**. Analysis-** Network traffic Analysis, packet capture and analysis .

UNIT–V: **Introduction to backdoor System and security-**Introduction to metasploit, Backdoor, demilitarized zone(DMZ),Digital Signature, Brief study on Hardening of operating system.

Text Books:

1. NASSCOM: Security Analyst Student Hand Book Dec 2015.
2. Information Security Management Principles Updated Edition by David Alexander, Amanda Finch, David Sutton ,Published by BCS, June 2013.

Reference Books:

1. CSX- cyber security fundamentals 2nd edition, Published by ISACA, Cyber security, Network Security, Data Governance Security.

I-II	**Cloud Computing** (Elective –IV)	Course Code: **V21CTT15**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Interpret the key dimensions of the challenge of Cloud Computing (K2)

CO2: Examine the economics, financial and technological implications for selecting cloud computing for own organization. (K3)

CO3: Explain the financial, technological, and organizational capacity of employer's for actively initiating and installing cloud-based applications (K2)

CO4: Examine the own organizations' needs for capacity building and training in cloud computing- related IT areas. (K3)

CO5: Illustrate Virtualization for Data-Center Automation. (K2)

SYLLABUS:

UNIT I: **Introduction:** Network centric computing, Network centric content, peer-to –peer systems, cloud computing delivery models and services, Ethical issues, Vulnerabilities, Major challenges for cloud computing. **Parallel and Distributed Systems:** Introduction, architecture, distributed systems, communication protocols, logical clocks, message delivery rules, concurrency, model concurrency with Petri Nets.

UNIT II: **Cloud Infrastructure:** At Amazon, The Google Perspective, Microsoft Windows Azure, Open Source Software Platforms, Cloud storage diversity, Inter cloud, energy use and ecological impact, responsibility sharing, user experience, Software licensing, **Cloud Computing:** Applications and Paradigms: Challenges for cloud, existing cloud applications and new opportunities, architectural styles, workflows, The Zookeeper, The Map Reduce Program model, HPC on cloud, biological research.

UNIT III: **Cloud Resource virtualization:** Virtualization, layering and virtualization, virtual machine monitors, virtual machines, virtualization-full and para, performance and security isolation, hardware support for virtualization, Case Study: Xen, vBlades, **Cloud Resource Management and Scheduling**: Policies and Mechanisms, Applications of control theory to task scheduling, Stability of a two-level resource allocation architecture, feedback control based on dynamic thresholds, coordination, resource bundling, scheduling algorithms, fair queuing, start time fair queuing, cloud scheduling subject to deadlines, Scheduling Map Reduce applications, Resource management and dynamic application scaling.

UNIT IV: **Storage Systems:** Evolution of storage technology, storage models, file systems and database, distributed file systems, general parallel file systems. Google file system. Apache Hadoop, Big Table, Megastore (text book 1), Amazon Simple Storage Service(S3) (Text book 2), **Cloud Security:** Cloud security risks, security – a top concern for cloud users, privacy and privacy impact assessment, trust, OS security, Virtual machine security, Security risks.

UNIT V: **Cloud Application Development:** Amazon Web Services : EC2 – instances, connecting clients, security rules, launching, usage of S3 in Java, Installing Simple Notification Service on Ubuntu 10.04, Installing Hadoop on Eclipse, Cloud based simulation of a Distributed trust algorithm, Cloud service for adaptive data streaming (Text Book 1), **Google:** Google App Engine, Google Web Toolkit (Text Book 2), **Microsoft:** Azure Services Platform, Windows live, Exchange Online, Share Point Services, Microsoft Dynamics CRM (Text Book 2).

Text Books:

1. Cloud Computing, Theory and Practice, Dan C Marinescu, MK Elsevier
2. Cloud Computing, A Practical Approach, Anthony T Velte, Toby J Velte, Robert Elsenpeter, TMH

Reference book:

Mastering Cloud Computing, Foundations and Application Programming, Raj Kumar Buyya, Christen vecctiola, S Tammarai selvi, TMH

I-II	**Natural Language Processing** (Elective –IV)	Course Code: **V21CTT16**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Explain approaches to syntax and semantics in NLP. (K2)
CO2: Demonstrate approaches to discourse, generation, dialogue and summarization within NLP. (K3)
CO3: Explain current methods for statistical approaches to machine translation. (K2)
CO4: Identify machine learning techniques used in NLP, including hidden Markov models and probabilistic (K2)
CO5: Explain context-free grammars, clustering and unsupervised methods, log-linear and discriminative models, and the EM algorithm as applied within NLP (K2)

UNIT-I: **Introduction:** NLP tasks in syntax, semantics, and pragmatics. Applications such as information extraction, question answering, and machine translation. The problem of ambiguity. The role of machine learning. Brief history of the field.

UNIT-II: **N-gram Language Models:** The role of language models, Simple Ngram models. Estimating parameters and smoothing. Evaluating language models. **Part of Speech Tagging and Sequence Labeling:** Lexical syntax. Hidden Markov Models. Maximum Entropy Models. Conditional Random Fields

UNIT-III: **Syntactic parsing:** Grammar formalisms and tree banks. Efficient parsing for context-free grammars (CFGs). Statistical parsing and probabilistic CFGs (PCFGs). Lexicalized PCFGs.

UNIT-IV: **Semantic Analysis:** Lexical semantics and word-sense disambiguation. Compositional semantics. Semantic Role Labeling and Semantic Parsing.

UNIT- V: **Information Extraction (IE) and Machine Translation (MT):** Named entity recognition and relation extraction. IE using sequence labeling. Basic issues in MT. Statistical translation, word alignment, phrase based translation, and synchronous grammars. Dialogues: Turns and utterances, grounding, dialogue acts and structures Natural Language Generation: Introduction to language generation, architecture, discourse planning (text schemata, rhetorical relations).

Text Books:

1. D. Jurafsky & J. H. Martin – “Speech and Language Processing – An introduction to Language processing, Computational Linguistics, and Speech Recognition”, Pearson Education

			L	T	P	C
I-II	**Advanced Web Technologies Lab**	Course Code: **V21CTL06**	**0**	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Develop static web pages using HTML, CSS. **(K3)**

CO2: Demonstrate the concepts of JavaScript and DHTML. **(K2)**

CO3: Demonstrate the basic concepts of PHP and JSP. **(K2)**

CO4: Demonstrate the concepts of Extensible markup language & AJAX. **(K2)**

CO5: Develop dynamic Web Applications using PHP & MySQL. **(K3)**

List of Experiments

1. a) Create a Simple HTML home page provides links to move to other pages like hobbies, educational info, personal info etc.
   b) Create a HTML program to illustrate the use of frame and frameset tags of HTML.
   c) Create a HTML Program which use a HTML controls to create a student information form to collect student‘s information like name, address, phone, email, sex, birth date, hobbies etc.
2. a) Create a webpage which displays "Hello World" with font size 20 pixels, bold format, in "Times New Roman" font and green in color using inline CSS, embedded CSS and external CSS.
   b) Create a webpage which displays the class time table and apply the following effects on the table:

   - For the table header apply *blue* as the background color and *white* for the color of the text in the table header.
   - Display *day names* (Mon, Tue etc...) in bold format with the first letter in the day name in uppercase.
   - Display *lunch* slightly in bigger font other than the remaining text.

   c) Create a webpage to manage personal details like name, class, qualifications, photo, address etc., using tables and other suitable HTML tags. Apply the following style information:

   - Display the heading of the page in *Times New Roman* font and with 24px size.
   - Align all the field names like Name, Class, Photo etc to *right* in the table.
   - Apply *light blue* as background color for the left side cells in the table which contains field names like Name, Class etc...
   - Also display your college logo as background image in the top right position of the web page.

d) Create a web page containing two images, where one image overlaps another image by using the *z-index* CSS property.

3. a) Create a HTML Program which demonstrates loops like for loop, do while, while in java script.
   b) Create a HTML Program which demonstrates the use of functions in java script.
   c) Create a HTML Program which demonstrates various events like onclick, ondbclick, onfocus, onblur, onchange, onmouseover, onmouseover, window event, onload, onunload event.
   d) Create a HTML Program to create various functions and sub routines to validate the data entered by user in form.
4. a) Create a program to illustrate the concept of associative array in PHP.
   b) Create PHP program to implement the concept of Session management.
   c) Create a PHP program to display student information in webpage. Student‘s data is stored in My SQL database.

   d) Create a PHP program to insert student information from HTML form. Student‘s data is stored in My SQL database.
5. a) Create a well-formed XML document.
   b) Create a valid XML document using DTD.
   c) Create a valid XML document using XML Schema.
   d) Create a XML document which contains details of cars and display the same as a table using XSLT.
   e) Write a Java program to parse the XML document containing car details using SAX API.

6. a) Create a servlet to display "Hello World" in the browser.
   b) Create a servlet to store email-id as an initialization parameter and print the same email-id by reading the initialization parameter from the web.xml file.
   c) Create a servlet to retrieve name and branch details from a html page and print the same using the servlet.
   e) Create a HTML page which accepts book id, book name and book price and a submit button. When the user clicks the submit button, all the values assigned to the previous text fields must be stored in a session object and the control forwards to another servlet where the values stored in the session are retrieved and displayed.

7. a) Create a JSP page to display "Hello World" in the browser.
   b) Create a JSP page to store email-id as an initialization parameter and print the same email-id by reading the initialization parameter from the web.xml file.
   c) Create a JSP page to retrieve name and branch details from a html page and print the same using a servlet.
   d) Create a HTML page which accepts book id, book name and book price and a submit button. When the user clicks the submit button, all the values assigned to the previous text fields must be stored in a session object and the control forwards to a JSP page where the values stored in the session are retrieved and displayed.

8. Create a HTML page which accepts student regd.no. and prints the results of that student by retrieving the results from the database. Use AJAX to display the "please wait..." while the server is processing the request and print the

result of the student when the server returns the result. Server resource can be either servlet or JSP or PHP

I-II	**Data Science Applications with Python Lab**	Course Code: **V21CTL07**	**L**	**T**	**P**	**C**
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Use data science operations like data collection, management and storing. (K3)

CO2: Apply Python programming concepts in data science, including their real-world applications. (K3)

CO3: Develop data collection and management scripts using Python Pandas. (K3)

List of Experiments

Experiment 1:
Develop a Python Program to Find the Sum of the Series: 1 + 1/2 + 1/3 + .. + 1/N

Experiment 2:
Develop a Python Program to Split the array and add the first part to the end

Experiment 3:
Develop a Python Program to Create a List of Tuples with the First Element as the Number and Second Element as the Square of the Number

Experiment 4:
Develop a Python program to count number of vowels using sets in given string

Experiment 5:
Develop a program to implement permutation of a given string using inbuilt function.

Experiment 6:
Develop a python program to sort list of dictionaries by values in Python – Using lambda function.

Experiment 7:
Develop a Python Program for following sorting:
i. Quick Sort ii. Heap Sort

Experiment 8:
Develop a Python Program to Reverse a String Using Recursion

Experiment 9:
Develop a Python Program to Count the Number of Words in a Text File

Experiment 10:
Develop a Python Program to Read the Contents of a File in Reverse Order

Experiment 11:
Develop a program to Merge and Join DataFrames with Pandas in Python

Experiment 12:
Develop a program to implement Merge and Join Data Frames with Python Pandas

Experiment 13:
Develop a Python Program to Append the Contents of One File to Another File

Experiment 14:
Explain how to install and Load CSV files to Python Pandas

Text Books:

1. Learning Python , O’Reilly, Mark Lutz
2. Programming Python, O’Reilly, Mark Lutz
3. Python For Data Analysis (O’Reilly, Wes Mckinney)

II-I	**Mobile Applications and Development** (Elective-V)	Course Code: **V21CTT18**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Describe Installation and configuration of Android application development tools. (K2)

CO2: Develop applications using services and publishing android applications. (K3)

CO3: Demonstrate Android software development tools. (K3)

CO4: Illustrate debugging programs running on mobile devices. (K2)

CO5: Develop Android applications using server-less database like SQLite. (K3)

Unit I: **Introduction to Android:** The Android 4.1 jelly Bean SDK, Understanding the Android Software Stack, installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text view Control, Using the Android Emulator, The Android Debug Bridge(ADB), Launching Android Applications on a Handset.

Unit II: **Basic Widgets:** Understanding the Role of Android Application Components, Understanding the Utility of Android API, Overview of the Android Project Files, Understanding Activities, Role of the Android Manifest File, Creating the User Interface, Commonly Used Layouts and Controls, Event Handling, Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit Text Control, Choosing Options with Checkbox, Choosing Mutually Exclusive Items Using Radio Buttons.

Unit III: **Building Blocks for Android Application Design:** Introduction to Layouts, Linear Layout, Relative Layout, Absolute Layout, Using Image View, Frame Layout, Table Layout, Grid Layout, Adapting to Screen orientation. Utilizing Resources and Media Resources, Creating Values Resources, Using Drawable Resources, Switching States with Toggle Buttons, Creating an Images Switcher Application, Scrolling Through Scroll View, playing Audio, Playing Video, Displaying Progress with Progress Bar, Using Assets.

Unit IV: **Using Selection widgets and Debugging:** Using List View, Using the Spinner control, Using the GridView Control, Creating an Image Gallery Using the ViewPager Control, Using the Debugging Tool: Dalvik Debug Monitor Service(DDMS), Debugging Application, Using the Debug Perspective. Displaying And Fetching Information Using Dialogs and Fragments: What Are Dialogs?, Selecting the Date and Time in One Application, Fragments, Creating Fragments with java Code, Creating Special Fragments

Unit V: **Building Menus and Storing Data:** Creating Interface Menus and Action Bars, Menus and Their Types, Creating Menus Through XML, Creating Menus Through Coding, Applying a Context Menu to a List View, Using the Action Bar, Replacing a Menu with the Action Bar, Creating a Tabbed

Action Bar, Creating a Drop-Down List Action Bar Using Databases: Using the SQLiteOpenHelperclasss, Accessing Databases with the ADB, Creating a Data Entry Form, Communicating with SMS and Emails: Understanding Broadcast Receivers, Using the Notification System, Sending SMS Messages with Java Code, Receiving SMS Messages, Sending Email, Working With Telephony Manager.

Text Books

1. Android Programming by B.M Harwani, Pearson Education, 2013.

References Text Books:

1. Android application Development for Java Programmers, James C Sheusi, Cengage Learning
2. Android In Action by w.Frank Ableson, Robi Sen, Chris King, C. Enrique Ortiz., Dreamtech.

4. Beginning Android 4 applications development, Wei- Meng Lee, Wiley India,2013.

<table>
<tr><td rowspan="2">II-
I</td><td rowspan="2">Big Data Analytics (Elective-V)</td><td rowspan="2">Course Code:
V21CTT19</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Course Outcomes: After completion of course, students would be able to

CO1: Illustrate big data and its use cases from selected business domains. (K3)
CO2: Interpret and summarize No SQL and Cassandra (K3)
CO3: Discuss the HADOOP and Map Reduce technologies associated with big data analytics and explore on Big Data applications Using Hive. (K2)
CO4: Define the use of Apache Spark, RDDs etc. to work with datasets. (K1)
CO5: Assess real time processing with Spark Streaming. (K3)

Syllabus:

UNIT I: What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and big data, risk and big data, credit risk management, big data and algorithmic trading, big data and healthcare, big data in medicine, advertising and big data, big data technologies, introduction to Hadoop, open source technologies, cloud and big data, mobile business intelligence, Crowd sourcing analytics, inter and trans firewall analytics.

UNIT II: Introduction to NoSQL, aggregate data models, aggregates, key-value and document data models, relationships, graph databases, schema less databases, materialized views, distribution models, sharding, master-slave replication, peer- peer replication, sharding and replication, consistency, relaxing consistency, version stamps, Working with Cassandra ,Table creation, loading and reading data.

UNIT III: Data formats, analyzing data with Hadoop, scaling out, Architecture of Hadoop distributed file system (HDFS), fault tolerance ,with data replication, High availability, Data locality , Map Reduce Architecture, Process flow, Java interface, data flow, Hadoop I/O, data integrity, compression, serialization. Introduction to Hive, data types and file formats, HiveQL data definition, HiveQL data manipulation, Logical joins, Window functions, Optimization, Table partitioning, Bucketing, Indexing, Join strategies.

UNIT IV: Apache spark- Advantages over Hadoop, lazy evaluation, In memory processing, DAG, Spark context, Spark Session, RDD, Transformations- Narrow and Wide, Actions, Data frames ,RDD to Data frames, Catalyst optimizer, Data Frame Transformations, Working with Dates and Timestamps, Working with Nulls in Data, Working with Complex Types, Working with JSON, Grouping, Window Functions, Joins, Data Sources, Broadcast Variables, Accumulators, Deploying Spark- On-Premises Cluster Deployments, Cluster Managers- Standalone Mode, Spark on YARN , Spark Logs, The Spark UI- Spark UI History Server, Debugging and Spark First Aid

UNIT V: Spark-Performance Tuning, Stream Processing Fundamentals, Event-Time and State full Processing - Event Time, State full Processing, Windows on Event Time- Tumbling Windows, Handling Late Data with Watermarks, Dropping Duplicates in a Stream, Structured Streaming Basics - Core Concepts, Structured Streaming in Action, Transformations on Streams, Input and Output.

Text Books:

1. Big Data, Big Analytics: Emerging, Michael Minnelli, Michelle Chambers, and Ambiga Dhiraj
2. SPARK: The Definitive Guide, Bill Chambers & Matei Zaharia, O'Reilly, 2018 Edition
3. Business Intelligence and Analytic Trends for Today's Businesses", Wiley, 2013
4. P. J. Sadalage and M. Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World Polyglot Persistence", Addison-Wesley Professional, 2012
5. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilly, 2012

Reference Books:

1. "Hadoop Operations", O'Reilly, Eric Sammer, 2012
2. "Programming Hive", O'Reilly, E. Capriolo, D. Wampler, and J. Rutherglen, 2012
3. "HBase: The Definitive Guide", O'Reilly, Lars George, 2011
4. "Cassandra: The Definitive Guide", O'Reilly, Eben Hewitt, 2010
5. "Programming Pig", O'Reilly, Alan Gates, 2011.

ANNEXURE-IX

MINUTES OF THE 5th BOS OF ENGLISH ON 20-09-2021.

The 5th BOS Meeting of English was held online at 11am, 20-09-2021 using the Zoom link :

https://us02web.zoom.us/j/87068834452?pwd=OHk1WHgvdU5SbTVCREdjeEdXd3lLZz09

MINUTES

- The syllabi of Professional Communication Skills-I{**V20ENT02**} Professional Communication Skills- II {**V20ENT03**}& Professional Communication Skills-III{{**V20ENT04**} for III, IV & V Semesters of B.Tech , was approved by the members of BOS of English.
- The syllabus of Constitution of India (V20ENT11) for B.Tech , was approved by the members of BOS of English.
- The syllabi of Audit Courses for M.Tech students namely, Pedagogy Studies(V21PGENT51**)**, Personality Development through Life Enlightenment Skills (V21PGENT52**)**, Stress Management by Yoga Course(V21PGENT53),English for Research Paper Writing (V21PGENT54**)**, Value Education (V21PGENT55) was approved by the BOS members.
- The members of the BOS suggested renaming the audit course " English for Research Paper Writing" as "Research Paper Writing - Conventions & Structures" if possible.

Members Present

English BOS Members

1. Chairperson of BOS

   Dr. T Sujani, Assoc. Professor of English

   Sri Vasavi Engineering College

2. Dr.D.KesavaRao (Council Nominee)

   Professor of English, NIT Warangal

3. Prof.K.Sree Ramesh (Council Nominee)

Professor of English and Principal, College of Arts and Commerce Adikavi Nannaya University

Rajamahendravarm

4. Dr.Purna Chandra Rao (University Nominee)
Assoc.Professor of English,

PVP Siddhartha Institute of Technology,Vijayawada .

Faculty Present

1. Dr.K. Venkata Rao
2. B.AnandaRao
3. K.V.Rama Rao
4. K.Radha Madhavi
5. Tanuja .Ch
6. Aparanjani.U
7. G.Srinivasa Rao
8. A.Kiranmayee
9. M.Naresh

19	K.Lalitha Bhavani	Asst. Professor	Member

The Chairman of the BOS Extended a formal welcome to the members and handed over the proceedings to the Head of the Department.

Minutes of the 4th BOS Meeting

Item No.1:

- **Reviewed and approved the MBA Course Structure under V21 Regulations.**

  The Chairman of BOS proposed the New course structure under V21 Regulations for the Academic year 2021-22. After considering the suggestions made by all BOS members the course structure was modified accordingly and was approved by BOS. The approved course structure was enclosed under Annexure-1

Item No.2:

- **Reviewed and approved the syllabi for the Courses offered in 1st and 2nd Semesters under V21 Regulations.**

  The Chairman of BOS proposed the New Syllabi under V21 Regulations for the Academic year 2021-22. After considering the suggestions made by all BOS members the Syllabi was modified accordingly and was approved by BOS. The approved Syllabi was enclosed under Annexure-2

Item No.3:

- **To design and approve the Syllabus for Managerial Economics and Financial Analysis for Engineering Branches under V20 Regulations.**

  The Syllabi of Managerial Economics and Financial Analysisunder V20 Regulations has been approved by BOS. The approved Syllabi was enclosed under Annexure-3

Item No.4:

- **To design and approve the syllabus for Cost Management of Engineering Projects and Research Methodology and IPR for M.Tech Courses under V21 Regulations.**
  The Syllabi of Cost Management of Engineering Projects and Research Methodology and IPR under V21 Regulations has been approved by BOS. The approved Syllabi was enclosed under Annexure-4

Item No.5:

- **Review of MBA Results**
  The semester wise result of MBA 2018 admitted batch (All semesters) and the results of MBA 2019 admitted batch (1,2 & 3 Semesters) were presented before the BOS and they expressed their satisfaction towards the progress report. The details are attached under Annexure-5.

MBA: First Year - First semester

V21MBT04: LEGAL AND BUSINESS ENVIRONMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Describe the basic concept of Business & its influencing factors. (K2)
2. Understand the implications of various policies and Acts pertaining to Business . (K2)
3. Recognize various sections under IC and NI ACT. (K2)
4. Identify various sections under sale of goods Act. (K2)
5. Understand the insights related to company and Partnership Act. (K2)
6. Interpret problems related to Business by studying practical cases. (K3)

****

Unit-I:

Introduction: Concept of Business Environment-Definition-Characteristics-Micro and Macro Environmental factors. Role of WTO, World Bank and IMF in world trade.

Unit-II:

Economic & Business Environment: Industrial Policy, 1991; Liberalisation, Privatisation and Globalisation- Foreign Trade policy –Consumer Protection Act; Consumer Rights and redressal Mechanism; Disinvestment and privatization of PSUs, Industrial sickness in India .

Unit-III:

Legal Environment: Indian Contract Act, 1872 – Classification of contracts - Essentials of valid contract – Breach of contract and remedies. Negotiable Instruments Act, 1881 – Kinds of Negotiable Instruments – Presentation and discharge of Negotiable Instruments.

Unit-IV:

Sales of Goods Act: Distinction between Sales and Agreement to Sell – Conditions and Warranties – Performance of Contract of Sale –Transfer of Ownership – Rights of an Unpaid Seller..

Unit-V:

Company and Partnership Act: Company Act 2013: Nature and Types of Companies – Formation – Memorandum of Association- Articles of Association –Kinds of Shares –Duties of Directors-Winding up. Indian partnership Act 1932 – Duties and Rights of partners – Dissolution.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT05: BUSINESS COMMUNICATION

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to….

1. Understand the communication process, importance and its classification. (K2)
2. Classify among various organizational communication models. (K2)
3. Identify various influencing factors of interpersonal communication. (K2)
4. Apply various business writing skills. (K3)
5. Prepare reports for different occasions. (K3)
6. Interpret problems related to Communication by studying practical cases. (K3)

****

UNIT 1:
Role of Communication in Business: Objective of Communication – The Process of Human Communication – Media of Communication - Written Communication - Oral Communication – Visual Communication - Audio Visual Communication – Silence - Developing Listening Skills – Improving Non-verbal communication skills – Cross Cultural Communication – problems and challenges.

UNIT 2:
Managing Organization Communication: Formal and Informal Communication - intrapersonal
Communication – Models for Inter Personal Communication - Exchange Theory, Johari Window and Transactional Analysis.

UNIT 3:
Motivational factors to influence Interpersonal Communication: Inter-Personal communication – Role of Emotion in Inter Personal Communication – Communication Styles – Barriers to Communication – gateways to Effective Interpersonal Communication.

UNIT 4:
Business Writing Skills: Significance of Business Correspondence – Preparing agenda for meetings, recording minutes of meeting, Letter Writing (Employment

related correspondence, Correspondence with Govt./Authorities, Office Orders, Enquiries and Replies), Press release, Writing CV - Telephone Communication – email and SMS etiquette.

UNIT 5:

Report Writing – Meaning and Significance-Structure of Reports - Negative, Persuasive and Special Reporting: Informal Report – Proposals, Formal Reports. Techniques of Presentation – Types of Presentation.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBT06: QUANTITATIVE ANALYSIS FOR BUSINESS DECISIONS

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to….

1. Recall their basic knowledge of statistics, probability and probability distributions. (K1)
2. Interpret decisions making process and familiar with various supporting tools for decision making. (K2)
3. Apply Linear Programming models for various managerial problems. (K3)
4. Employ organizational resources using Transportation and Assignment models. Formulate strategies using Game theory. (K3)
5. Apply project management techniques like PERT and CPM. (K3)
6. Interpret problems related to practical assignments. (K3)

****

UNIT 1:
Basic Measures of Central Tendency – Measures of Dispersion –Simple Correlation and Regression analysis - Concept of Probability- Probability Rules – Joint and Marginal Probability – Baye'sTheorem- Probability Distributions-Binomial, Poisson, Normal and Probability Distributions.

UNIT 2:
Introduction to Operations Research. Decision Theory: Steps involved in Decision Making, different environments in which decisions are made, Criteria for Decision Making, Decision making under uncertainty, Decision making under conditions of Risk-Utility as a decision criterion, Decision trees, Graphic displays of the decision making process.

UNIT 3:
Linear Programming: Formation of mathematical modeling, Graphical method, the Simplex Method; Justification, interpretation of Significance of All Elements in the Simplex Tableau. (Simple problems).

UNIT 4:
Transportation, Assignment Models & Game theory: Definition and application of the transportation model, solution of the transportation problem, the Assignment Model, Traveling Salesman Problem. Game Theory: Introduction –

Two Person Zero-Sum Games, Pure Strategies, Games with Saddle Point, Mixed strategies, Rules of Dominance, Solution Methods of Games without Saddle point – Algebraic, matrix and arithmetic methods.

UNIT 5:

Network Analysis: Concepts of PERT & CPM.- Importance and Differences – Procedure for Drawing networks – identifying critical path – probability of completing the project within given time - project crashing –optimum cost and optimum duration..

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBL01:BUSINESSCOMMUNICATIONANDSOFTSKILLSLAB

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
0	0	4	2

Course Outcomes:

Students are able to....

1. Infer the core functioning of a Team and basic flow of communication. (K2)
2. Identify the key gestures and postures of an Individual. (K2)
3. Prepare Business correspondence letters and can prepare reports. (K3)
4. Present a topic before gatherings. (K1)
5. Interpret the importance of basic soft skills in practical context. (K3)

Unit – I

Communication and Team work: Objectives of Communication-Process of Communication- Types of communication; Team work – stages of team formation

LAB: LISTENING AND SPEAKING SKILLS- Conversational skills (formal and informal) – group discussion. Listening to lectures, discussions, talk shows, news programmes, dialogues from TV/radio/Ted talk/Podcast – watching videos on interesting events on YouTube.(Presenting before the class). Team games.

Unit – II

Non verbal communication and Body Language: Kinesics, Proxemics, handshakes, appropriate body language and mannerisms for interviews: business etiquettes- across different cultures.

LAB: Understanding Body Language Aspects and presenting oneself to an interviewer, Proper handshakes.

Unit – III

Written communication: mechanics of writing, report writing- business correspondence-business letter format- Meetings and managing meetings- Resume writing-Formats and Skills.

LAB: Writing job applications – cover letter – resume – emails – letters – memos – reports – blogs – writing for publications.

Unit- IV

Presentation skills: prerequisites of effective presentation, format of presentation; Assertiveness –strategies of assertive behavior; Communication skills for group discussion and interviews, Interview Techniques.

LAB: Designing presentations and enhancing presentation skills.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT07:FINANCIAL MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understood the fundamental concepts of financial Management. (K2)
2. Construct optimal capital structure by identification of financial sources and evaluating cost of capital. (K2)
3. Identify long term investment projects by applying capital budgeting techniques. (K2)
4. Understood the concept of dividend decisions and able to measure the dividend. (K2)
5. Apply the concepts of working capital, cash, and receivables management. (K3)
6. Interpret problems related to Business Finance by studying practical cases.(K3)

****

UNIT 1:
Financial Management: Concept - Nature and Scope - Evolution of financial Management objectives of financial Management - Profit maximization- Wealth maximization and EPS maximization – Major decisions of financial manager Challenges of Financial manager in contemporary scenario.

UNIT-II
Financing Decisions: Sources of finance - Concept of leverages - Operating, Financial and combined leverages - financial effects of leverages –EBIT – EPS analysis. Cost of Capital: Marginal vs Weighted Average Cost of Capital – Theories of Capital Structure.

UNIT -III
Investment Decisions: Concept and Techniques of Time Value of Money – Nature and Significance of Investment Decision – Estimation of Cash flows – Capital Budgeting Process – Techniques of Investment Appraisal – Discounting and Non Discounting Methods.

UNIT-IV

Dividend Decisions: Meaning and Significance – Major forms of dividends – Theories of Dividends – Determinants of Dividend – Dividend Policy and Models of Dividend valuation (Walter& Gordon models) – Bonus Shares –Stock Splits – Dividend policies of Indian Corporate.

UNIT-V

Liquidity Decisions: Meaning - Classification and Significance of Working Capital – Components of Working Capital – Factors determining the Working Capital – Estimating Working Capital requirement – Cash Management Models – Accounts Receivables –Credit Policies.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT08:HUMAN RESOURCE MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the fundamentals of HRM with a global perspective. (K2)
2. Estimate the type and number of personnel required to the organization in future by considering the demand and supply of manpower. (K2)
3. Apply various methods of performance evaluation to assess the performance of employees. (K3)
4. Identify the compensation system that conforms to the legal framework. (K2)
5. Understand the functionality of trade unions and also have ability to balance between work and life. (K2)
6. Interpret problems related to Human Resources by studying practical cases. (K3)

****

UNIT 1:
HRM: Significance - Definition and Functions – evolution of HRM- Principles - Ethical Aspects
of HRM- - HR policies, Strategies to increase firm performance - Role and position of HR department - HRM at global perspective challenges – cross-cultural problems – emerging trends in HRM.

UNIT 2:
Investment perspectives of HRM: HR Planning – Demand and Supply forecasting- Recruitment and Selection- Sources of recruitment - Tests and Interview Techniques – Training and Development – Methods and techniques – Training evaluation - retention - Job Analysis –job description and specifications - Management development - HRD concepts.

UNIT 3:
Performance Evaluation: Importance – Methods – Traditional and Modern methods – Latest trends in performance appraisal - Career Development and Counseling- Compensation, Concepts
and Principles- Influencing Factors-.

UNIT 4:

Wage and Salary Administration: Concept- Wage Structure- Wage and Salary Policies- Legal
Frame Work- Determinants of Payment of Wages- Wage Differentials - Job Evaluation- Incentive Payment Systems. Welfare management: Nature and concepts – statutoryand non-statutory welfare measures – incentive mechanisms-Fringe Benefits-ESOPs - Current Trends in Compensation-Methods of Payments - compensation mechanisms at international level

UNIT 5:

Managing Industrial Relations: Trade Unions - Employee Participation Schemes-Collective Bargaining–Grievances and disputes resolution mechanisms – Safety at work – nature and importance – work hazards – safety mechanisms-Quality of Work Life (QWL).

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT09:MARKETING MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to….

1. Understand the Basic marketing concepts. (K1)
2. Classify between the market Segmentation and Positioning strategies. (K2)
3. Identify various pricing methods and pricing strategies.(K2)
4. Demonstrate the various communication tools in marketing.(K3)
5. Estimate the distribution Strategies required for effective marketing chain.(K2)
6. Apply marketing concepts in solving marketing problems of organizations. (K3)

****

UNIT -I

Introduction to Marketing: Needs - Wants – Demands - Products - Exchange - Transactions - Concept of Market and Marketing and Marketing Mix - Production Concept- Product Concept - Sales and Marketing Concept - Societal Marketing Concept-Green Marketing concept - Indian Marketing Environment.

UNIT -II

Market Segmentation, Targeting and Positioning: Identification of Market Segments - Consumer and Institutional/corporate Clientele - Segmenting Consumer Markets - Segmentation Basis – Evaluation and Selection of Target Markets – Positioning significance - Developing and Communicating a Positioning Strategy.

UNIT -III

Product and Pricing Aspects: Product – Product Mix - Product Life cycle - Branding- Pricing- Objectives of Pricing - Methods of Pricing - Selecting the Final price - Adopting price - Initiating the price cuts - Imitating price increases- Responding to Competitor‘s price changes.

UNIT -IV

Marketing Communication: Communication Process – Communication Mix – Integrated Marketing Communication - Managing Advertising Sales Promotion - Public relations and Direct Marketing - Sales force– Determining the Sales Force Size - Sales force Compensation.

UNIT -V

Distribution, Marketing Organization and Control: Channels of Distribution- Intensive, Selective and Exclusive Distribution- Organizing the Marketing Department - Marketing Implementation - Control of Marketing Performance - Annual Plan Control - Profitability Control - Efficiency Control - Strategic Control.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT10:PRODUCTION & OPERATIONS MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1) Understand theevolution and fundamental concepts of production and operations management. (K2)
2) Understand the production planning and control strategies. (K2)
3) Assess the concepts of Waste Management, Quality Assurance, Quality Circles and application of various Statistical Quality Control techniques. (K3)
4) Understand basic concepts of Quality Improvement tools like six sigma, ISO 9000-2000 clauses and coverage and factors effecting Productivity. (K2)
5) Apply various stores management and Inventory Control techniques. (K3)
6) Interpret problems related to Operations Management by studying practical cases. (K3)

****

UNIT 1:

Introduction: Overview & Definition of Production and Operations Management- Nature and Scope of Production and Operations Management- Historical Evolution –Role & responsibilities of the production manager - Types of Manufacturing Processes.

UNIT 2:

Production Planning and Control: Stages in PPC – Gantt – PPC in Mass, Batch, and Job Order

Manufacturing- Aggregate planning and Master Scheduling, MRP, CRP. Maintenance management & Industrial Safety. Plant Location & Layout Planning- Factors influencing location - types of layouts. Capacity Planning – Optimal Production Strategies: Scheduling and Sequencing of Operations. Work Design: Method Study and Work Measurement – Work Sampling.

UNIT 3:
Managing of Work Environment: –Automation --Technology Management – Waste Management. Quality Assurance and Quality Circles – Statistical Quality Control –Control Charts for Variables- Average, Range and Control charts for Attributes. Acceptance Sampling Plans.

UNIT 4:
Quality Improvement: Basic concepts of quality, dimensions of quality, Juran's quality trilogy,
Deming's 14 principles, Quality improvement and cost reduction, ISO 9000-2000 clauses & coverage. Six Sigma, Productivity –factors affecting productivity, measurement & improvements
in productivity - new product development and design - stages & techniques. Total Productive Maintenance (TPM).

UNIT 5:
Stores Management: Purchase functions and Procedure - Objectives of Stores Management – Requirements for efficient-Management of Stores – safety stock-Different Systems of Inventory Control-Inventory control techniques- EOQ, ABC, VED and FNSD analysis-JIT, VMI

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT11: BUSINESS RESEARCH & STATSTICAL ANALYSIS

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the concept of research, research process in detail. (K1)
2. Understand various scaling techniques and research report preparation process. (K2)
3. Apply various statistical tools to test hypothesis. (K3)
4. Describe Bivariate and Multivariate analysis concepts. (K2)
5. Apply SPSS for Hypothesis testing. (K3)
6. Interpret problems related to Business Research by studying practical cases. (K3)

****

UNIT 1:

Introduction: Nature and Importance of research, the role of business research, Research process, types of research, Defining Research Problem. Research Design –Types of Research design-Sampling and Sampling Design – Sampling Methods –Probability and Non probability sampling.Discussion on primary data and secondary data, tools and techniques of collecting data. Methods of collecting data-Designing of Questionnaire.

UNIT 2:

Measurement and Scaling – Nominal Scale – Ordinal Scale –Interval Scale – Ratio Scale – Guttman Scale – Likert Scale – Schematic Differential Scale. Editing – Coding – Classification of Data – Tabulation and Graphic representation of data.

UNIT 3:

Data Analysis: Formulation of hypothesis-types of hypothesis- Null and Alternate - Type I and Type II errors, Large Sample Vs Small Sample; Procedure for testing of Hypothesis –parametric tests ; Z tests – One mean – Two mean – one Proportion – Two Proportion tests, t- distribution tests – One mean, Two mean & paired tests.

UNIT 4:
F- test and ANOVA – Calculation of F Value - one way (Completely Randomized Design) and two ways tests (Randomized Block Design) - Chi - Square tests - Goodness of fit- test for Independence of attributes – Concepts of Bivariate and Multivariate analysis.

UNIT 5:

Research Report Writing: Structure and components of Research reports, Types of reports, characteristics of good report. Format & common content's in reports. Preparation & Presentation of reports. Introduction to basics of SPSS

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT12: BUSINESS ETHICS & CORPORATE GOVERNANCE

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

Students are able to....

1. Understand the importance of ethics and ethical practices at work place. (K2)
2. Recall various factors influencing Business ethics in India. Also get understanding of various scams. (K1)
3. Understand the ethical practices in functional areas such as Marketing, Hrm & Finance. (K2)
4. Understand the overview of corporate governance in India. (K2)
5. Report various governance issues related to Directors and Auditors. (K2)
6. Interpret problems related to Business Ethics by studying practical cases. (K3)

****

UNIT 1:
Importance of Business Ethics: Values and Ethics- Business Ethics and Law – Ethics in Work Place – Ethical Decision Making- Theories of Business Ethics – Management and Ethics- Indian Ethical Traditions.

UNIT 2:
Impact of Globalization on Indian Business Ethics: Reasons for Unethical Practices among Indian companies – Development of Indian Capital Markets – Various studies on Ethical Attitudes of Managers Major Indian Scams.

UNIT 3:
Ethics in Marketing, HRM and Finance: Product safety and Pricing-Ethical responsibility in Product- Advertising and Target Marketing Ethics of sales, advertising and product placement and Consumer Autonomy. Ethics in HRM & Finance – HR related ethical issues - Institutional Culture – Frauds in Banks - Measures against Bank Frauds – Frauds in Insurance sector.

UNIT 4:
Corporate Governance: An overview – Theory and Practice of Governance- Indian model of Governance- Good Corporate Governance – Land marks in emergence of Governance OECD Principles – Sarbanes-Oxley Act 2002- SEBI Initiatives.

UNIT 5:

Corporate Governance Indian Scenario: Role of Government in Ensuring Corporate Governance – Governance issues relating to Board of Directors – Duties and responsibilities of Auditors – Governance under limited competition – Role of Media – Corporate Governance in Developing and Transiting Economies.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT13: ENTREPRENEURSHIP DEVELOPMENT
(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

CO1: Understand the foundations of Entrepreneurship and its importance. (K1)

CO2: Develop viable business ideas and understand entrepreneurial eco system. (K3)

CO3: Develop new projects and preparation of detailed project report. (K3)

CO4: Understand the importance of MSME's in the economic development of a nation. (K2)

CO5: Identify various sources of Entrepreneurial support organizations. (K2)

CO6: Interpret problems related to Entrepreneurs by studying practical cases. (K3)

UNIT 1

Entrepreneurship: Importance and growth - Characteristics and Qualities of Entrepreneur- Role of Entrepreneurship, Ethics and Social Responsibilities. Women Entrepreneurship: Role & Importance, Problems of Women Entrepreneurs, Opportunities for women entrepreneurs – corporate entrepreneurship – mobility of entrepreneur – entrepreneurial motivation.

UNIT2

Innovation: Sources of business idea-Idea generation- Ideal validation- idea screening process- market sizing techniques- innovation and creativity for aspiring entrepreneurs- incubation- startup eco system

UNIT 3

Planning and Evaluation of Projects: Growth of Firm – Project identification and selection - Factors inducing growth- - Project Feasibility Study – Elements of a project report- preparation of DPR. Post Planning of Project-Project Planning and Control.

UNIT 4

Small and Micro Enterprises: Importance, definition of Tiny, Micro, Small and medium scale units – policies and their support to MSMEs - growth and growth strategies – registration process of MSME- MSMED Act 2006.

UNIT 5

Institutional Support to Entrepreneur and MSMEs: Role of Government - Role of SIDBI, - Central Government Institutions – SIDO, NSIC, EDII, AISSIB, DST. State Government Institutions - DIC, TCOs, Commercial Banks.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBL02:INFORMATION TECHNOLOGY LAB (100% Lab)

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
0	0	4	2

Course Outcomes:

Students are able to...

1. **P**repare various office reports using MS-Office. (K3)
2. **U**nderstand the basics of SPSS and descriptive and inferential Statistical techniques using SPSS (K2)
3. Employ math and simulation in R (K3

UNIT-I:

Introduction to MS-Office: Introduction to various softwares used in business & their significance in the currentbusiness environment. Introduction to MS Office and its application in preparation of reports.

UNIT-II:

Introduction to SPSS: Overview of SPSS:Mouse and keyboard processing, frequently used dialog boxes, Editing output, Printing results, Creating and editing a data file. Managing Data:Listing cases, replacing missing values, computing new variables, recording variables, exploring data, selecting cases, sorting cases, Merging files.

Graphs & Frequencies: Creating and editing graphs and charts -Frequencies, bar charts, histograms, percentiles.

Descriptive Statistics: Measures of central tendency, variability, deviation from normality, size and stability. Cross Tabulation and chi-square analysis, The means Procedure. Bivariate Correlation: Bivariate Correlation, Partial Correlations and the correlation matrix.

UNIT-III:

R Programming:

1. Demonstrate Vector, Matrix & Array operations in R, Demonstrate Data frames and Lists in R
2. Illustrate 'if and else', 'if else', & 'switch' control statements in R
3. Demonstrate 'for and while loops', 'Importing and exporting data' in R
4. Illustrate the descriptive statistics using summary() in R
5. Illustrate Bar Plots, Pie Charts & Histograms using R

Annexure-XII

Amendments to UG V18 Academic regulations

1. **As per V18 regulations vide item no:7.3:**

   A student shall be promoted from II year (IV Semester) to III year (V Semester) if he/she earns 50% of the total credits specified up to and including IV semester examinations.

   This is amended as follows
   No minimum credits required for promotion from IV semester to V semester, for the academic year 2021-2022 only, as a special case due to COVID-19.

2. **Proposed changes for internal evaluations of IV semester and VI semester UG students during academic year 2020-2021.**

   Comprehensive Test: The Comprehensive examination is conducted for 60 marks and scaled down to 10 marks covering the total syllabus.

   Comprehensive marks will be awarded based up on the performance in Mid-I & Mid-II examinations-Best out of II Mid exams will be scaled down to 10 marks.

Minutes of the Sixth Academic Council Meeting held on 05/02/2022 at 10:30 A.M. through online mode.

Sri Vasavi Engineering College (Autonomous)

(Sponsored by Sri Vasavi Educational Society)

(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)

(Accreted by NBA & NAAC with 'A' Grade)

Sixth Meeting of Academic Council

Minutes of the sixth academic council meeting held on 05/02/2002.

Item No.1: Welcoming the members.

Principal **Prof.Guduru VNSR Ratnakara Rao** welcomed the members and chaired the meeting.

Item No.2: Review the progress of the institute

Principal presented the progress of the institute since last council meeting and appreciated by all the members of the committee.

Item No.3: Approve the minutes of the previous meeting.

The council approved the minutes of meeting held on 07/01/2021. The details are given in **Annexure-I** (Page no.07)

Item No.4:

a. Approve V21 regulations for the award of M.Tech degree.
The approved V21 regulations for M.Tech students admitted from 2021-22 academic year are given in **Annexure-II(a).**(Page no.16)

b. Approve course structure for Various Specializations of M.Tech programme under V21 Regulations.
The approved course structure of various specializations of M.Tech are given in **Annexure-II(b).** **(**Page no.27)

c. Approve V21 regulations & course structure for the award of MBA degree.
The approved V21 regualtions for MBA degree admitted from 2021-22 academic year and approved course structure are given in **Annexure-II(c).** **(**Page no.42)

Item No.5: Approve the minutes of the meeting of BOS of various departments.

a. Minutes of 4th BOS meeting of Civil Engineering Department. (Details are given in **Annexure-III**) **(**Page no.58)

b. Minutes of 5th BOS meeting of Electrical & Electronics Engineering. (Details are given in **Annexure-IV**) **(**Page no.203)

c. Minutes of 5th BOS meeting of Mechanical Engineering.(Details are given in **Annexure-V**) **(**Page no.327)

d. Minutes of 5th BOS meeting of Electronics & Communiction Engineering. (Details are given in **Annexure-VI)** **(**Page no.449)

e. Minutes of 5th BOS meeting Computer Science and Engineering. (Details are given in **Annexure-VII**) **(**Page no.579)

f. Minutes of 5th BOS meeting of Mathematics.
(Details are given in **Annexure-VIII)** **(**Page no.807)

g. Minutes of 5th BOS meeting of English.
(Details are given in **Annexure-IX**) **(**Page no.832)

h. Minutes of 4th BOS meeting of MBA.
(Details are given in **Annexure-X)** **(**Page no.871)

The council approved the minutes of meeting of BOS of various departments.

Item No.6: Approve the minutes of Results committee.

The committee reviewed the minutes of result committee meetings held from last council meeting and approved. The details are given in **Annexure-XI** **(**Page no.914)

Item No.7: Amendments to **UG V18 Academic Regulations**

The proposed ammendments are approved by the council, given in **Annexure-XII** **(**Page no.958)

Item No.8: Nominate BOS members for **AI & ML.**

The approved list of BOS members which is already communicated to members of academic council on 11th November 2021 is given in **Annexure-XIII.(**Page no.959)

Item No.9: Minutes of 1st meeting **CSE (AI) and AI&ML.**

The committee approved the minutes of BOS of CSE (AI) and AI&ML.Details are given in **Annexure-XIV.** **(**Page no.960)

Item No.10: Any other item with the permission of the chair.

a. List of eligible students to award MBA degree admitted in 2018 and 2019.

The council approved the students eligible to to award MBA degree admitted in 2018 & 2019. Detals are given in **Annexure-XV(a).** (Page no.981)

b. List of eligible students to award M.Tech degree admitted in 2018 and 2019.

   The council approved the students eligible to to award M.Tech degree admitted in 2018 & 2019. Detals are given in **Annexure-XV(b).** (Page no.984)

The meeting concluded with vote of thanks by the member secretary

Annexure-I

Action taken report on the Minutes of the Fifth Academic Council Meeting held on 07/01/2021.

Item No.1: Welcoming the members.

Principal **Prof. Guduru VNSR Ratnakara Rao** welcomed the members and chaired the meeting.

Item No.2: To approve the minutes of the previous meeting.

The council approved the action taken report presented.

Item No.3: Approval of the minutes of the meeting of joint BOS held on 26/12/2020.

The council approved the minutes of joint BOS meeting held on 26/12/2020.

Item No.4: To approve the minutes of the meeting of BOS of various departments.

The council approved the minutes of the meeting of BOS of Various Departments.

Item No.5: To approve M.Tech & MBA students results (2018 Admitted Batch).

The council approved the results of M.Tech & MBA students(2018 Admitted Batch).

Item No.6: Replacement and Extension of BOS members to another term

(Two Years). The council approved to continue the existing council nominee BOS members for another term(two years)

Item No.7: Any other item with the permission of the chair.

The Council reviewed and approved the Results of IV Semester (2018 admitted batch) and II Semester (2019 admitted batch).

As per the directions of university authorities common academic regulations for all autonomous colleges of JNTUK is followed for the B.Tech programme is followed for the batches admitted from 2020-2021. The detail regulations are already communicated to all the council members on 5th of June 2021 through emails. The detailed regulations are as follows

AUTONOMOUS COLLEGES OF JNTUK

COMMON ACADEMIC REGULATIONS (R20) FOR B. TECH PROGRAMME

(Applicable for from the Academic Year 2020-21)

1. Award of B. Tech. Degree

(a) A student will be declared eligible for the award of B. Tech. Degree if he fulfils the following academic regulations:
(i) A student shall be declared eligible for the award of B. Tech Degree, if he pursues a course of study in not less than four and not more than eight academic years. After eight academic years from the year of their admission, he/she shall **forfeit** their seat in B. Tech course and their admission stands cancelled.
(ii) The candidate shall register for 160 credits and secure all the 160 credits.
(b) The medium of instruction for the entire under graduate programme in Engineering & Technology will be in **English** only.

2. Programme Pattern:

a) Total duration of the of B. Tech (Regular) Programme is four academic years
b) Each Academic year of study is divided into **Two Semesters**.
c) Minimum number of instruction days in each semester is 90.
d) Grade points, based on percentage of marks awarded for each course will form the basis for calculation of SGPA (Semester Grade Point Average) and CGPA (Cumulative Grade Point Average).
e) The total credits for the Programme is 160.
f) Three week induction program is mandatory for all first year UG students and shall be conducted as per AICTE/UGC/APSCHE guidelines.
g) Student is introduced to "Choice Based Credit System (CBCS)".
h) A pool of interdisciplinary and job-oriented mandatory skill courses which are relevant to the industry are integrated into the curriculum of concerned branch of engineering (total five skill courses: two basic level skill courses, one on soft skills and other two on advanced level skill courses)
i) A student has to register for all courses in a semester.
j) All the registered credits will be considered for the calculation of final CGPA.
k) Each semester has - 'Continuous Internal Evaluation (CIE)' and 'Semester End Examination (SEE)'. Choice Based Credit System (CBCS) and Credit Based Semester System (CBSS) as indicated by UGC and course structure as suggested by AICTE are followed.
l) A 10 months industry/field mandatory internship, both industry and social, during the summer vacation and also in the final semester to acquire the skills required for job and make engineering graduates to connect with the needs of the industry and society at large.
m) All the students shall be mandatorily registered for NCC, NSS activities and Community Service Project as per the Government and University norms.
n) Each college shall assign a faculty advisor/mentor after admission to each student or group of students from same department to provide guidance in courses registration/career growth/placements/opportunities for higher studies/GATE/other competitive exams etc.

3. Registration for Courses:

a) In each semester a student shall mandatorily register courses which he/she wishes to pursue within a week from the starting of the class work with the advice of Head of the Department and mentor of the student of the concerned department of the college.

b) If any student wishes to withdraw the registration of the course, he/she shall submit a letter to the Principal of the college through the Head of the Department and mentor within fifteen days.

c) The concerned college shall thoroughly verify and upload the data/courses registered by each student in the university examination center within 20 days. The Principal of the concerned college shall ensure that there no wrong registration courses by the student. The university registration portal will be closed after 20 days.

4. (a) Award of B. Tech. Degree: A student will be declared eligible for the award of B. Tech. Degree if he fulfills the following academic regulations:

i. A student shall be declared eligible for award of the B. Tech Degree, if he pursues a course of study in not less than four and not more than eight academic years. After eight academic years from the year of their admission, he/she shall **forfeit** their seat in B. Tech course and their admission stands cancelled.

ii. The student shall register for 160 credits and must secure all the 160 credits.

iii. All students shall mandatorily register for the courses like Environmental Sciences, Universal Human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge etc., shall be included in the curriculum as non-credit mandatory courses. Environmental Sciences is to be offered compulsorily as mandatory course for all branches. A student has to secure at least 40% of the marks allotted in the internal evaluation for passing the course and shall maintain 75% of attendance in the course.

iv. All students shall mandatorily register for NCC/NSS activities and will be required to participate in an activity specified by NSS officer during second and third semesters. Grade shall be awarded as Satisfactory or Unsatisfactory in the mark sheet on the basis of participation, attendance, performance and behavior. If a student gets an unsatisfactory Grade, he/she shall repeat the above activity in the subsequent years, in order to complete the degree requirements.

v. Credits are defined as per AICTE norms.

(b) Award of B. Tech. (Honor)/B. Tech. (Minor)**:** B. Tech. with Honors or a B. Tech. with a Minor will be awarded if the student earns 20 additional credits are acquired as per the regulations/guidelines. The regulations/guidelines are separately provided. Registering for an Honors/Minor is optional.

5. Attendance Requirements

a) A student is eligible to write the University examinations if he acquires a minimum of 40% in each subject and 75% of attendance in aggregate of all the subjects.

b) Condonation of shortage of attendance in aggregate up to 10% (65% and above, and below 75%) may be granted by the College Academic Committee. However, this condonation concession is applicable only to any two semesters during the entire programme.

c) Shortage of Attendance below 65% in aggregate shall not be condoned.

d) A student who is short of attendance in a semester may seek re-admission into that semester when offered within 4 weeks from the date of commencement of class work.

e) Students whose shortage of attendance is not condoned in any semester are not eligible to write their end semester examination of that class.

f) A stipulated fee of Rs. 500/- in the concerned semester shall be payable towards condonation of shortage of attendance. Students availing condonation on medical ground shall produce a medical certificate issued by the competitive authority.

g) A student will be promoted to the next semester if he satisfies the (i) attendance requirement of the present semester and (ii) minimum required credits.

h) If any candidate fulfills the attendance requirement in the present semester, he shall not be eligible for readmission into the same class.

i) For induction programme attendance shall be maintained as per AICTE norms.

j) For non-credit mandatory courses the students shall maintain the attendance similar to credit courses

6. Evaluation-Distribution and Weightage of marks

(i) Paper setting and evaluation of the answer scripts shall be done as per the procedures laid down by the University Examination section from time to time.

(ii) To maintain the quality, external examiners and question paper setters shall be selected from reputed institutes like IISc, IITs, IIITs, IISERs, NITs and Universities.

(iii) For non-credit mandatory courses, like Environmental Sciences, Universal Human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge, the student has to secure 40% of the marks allotted in the internal evaluation for passing the course. No marks or letter grade shall be allotted for all mandatory non-credit courses.

(iv) A student is deemed to have satisfied the minimum academic requirements if he has earned the credits allotted to each theory/practical design/drawing subject/ project etc by securing not less than 35% of marks in the end semester exam and minimum 40% of marks in the sum total of the internal marks and end semester examination marks together.

(v) Distribution and Weightage of marks:

The assessment of the student's performance in each course will be as per the details given:

S. No	Components	Internal	External	Total
1	Theory	30	70	100
2	Engineering Graphics/Design/Drawing	30	70	100
3	Practical	15	35	50
4	Mini Project/Internship/Industrial Training/ Skill Development programmes/Research Project	- -	50	50
5	Project Work	60	140	200

(vi) Continuous Internal Theory Evaluation:

a) For theory subjects, during a semester, there shall be two mid-term examinations. Each mid-term examination consists of (i) one online objective examination (20 multiple choice questions) for 10 marks for a duration of 20 minutes (ii) one descriptive examination (3 full questions for 5 marks each) for 15 marks for a duration of 90 minutes and (iii) one assignment for marks. All the internal exams shall be conducted as per university norms from first 50% of the syllabi.

b) In the similar lines, the second online, descriptive examinations assignment shall be conducted on the rest of the 50% syllabus.

c) The total marks secured by the student in each mid-term examination are evaluated for 30 marks. The first mid marks (Mid-1) consisting of marks of online objective examination, descriptive examination and assignment shall be submitted to the University examination section within one week after completion of first mid examination.

d) The mid marks submitted to the University examination section shall be displayed in the concerned college notice boards for the benefit of the students.

e) If any discrepancy found in the submitted Mid-1 marks, it shall be brought to the notice of university examination section within one week from the submission.

f) Second mid marks (Mid-2) consisting of marks of online objective examination, descriptive examination and assignment shall also be submitted to University examination section within one week after completion of second mid examination and it shall be displayed in the notice boards. If any discrepancy found in the submitted mid-2 marks, it shall be brought to the notice of university examination section within one week from the submission.

g) Internal marks can be calculated with 80% weightage for better of the two mids and 20% Weightage for other mid exam.

Example:

Mid-1 marks = Marks secured in (online examination-1+descriptive examination 1+one assignment-1)

Mid-2 marks = Marks secured in (online examination-2+descriptive examination-2+one assignment-2)

Final internal Marks = (Best of (Mid-1/Mid-2) marks x 0.8+ Least of (Mid-1/Mid-2) marks x 0.2)

h) With the above criteria, university examination section will send mid marks of all courses in consolidated form to all the concerned colleges and same shall be displayed in the concerned college notice boards. If any discrepancy found, it shall be brought to the notice of university examination section through proper channel within one week with all proofs. Discrepancies brought after the given deadline will not be entertained under any circumstances.

(vii) Semester End Theory Examinations Evaluation:

a) The semester end examinations will be conducted university examination section for 70 marks consists of five questions carrying 14 marks each. Each of these questions is from one unit and may contain sub-questions. For each question there will be an “either” “or” choice, which means that there will be two questions from each unit and the student should answer either of the two questions.

b) For practical courses there shall be continuous evaluation during the semester for 15 internal marks and 35 end examination marks. The internal 15 marks shall be awarded as follows: day to day work - 5 marks, Record-5 marks and the remaining 5 marks to be awarded by conducting an internal laboratory test. The end examination shall be conducted by the teacher concerned and external examiner appointed.

c) For the courses having design and / or drawing, (such as Engineering Graphics, Engineering Drawing, Machine Drawing) and estimation, the distribution shall be 30 marks for internal evaluation (15 marks for continuous Assessment (day–to–day work) and 15 marks for internal tests) and 70 marks for end examination. There shall be two internal tests in a Semester for 15 marks each and final marks can be calculated with 80% weightage for better of the two tests and 20% weightage for other test and these are to be added to the marks obtained in day to day work.

d) Evaluation of the summer internships: It shall be completed in collaboration with local industries, Govt. Organizations, construction agencies, Industries, Hydel and thermal power projects and also in software MNCs in the area of concerned specialization of the UG programme. Students shall pursue this course during summer vacation just before its offering as per course structure. The minimum duration of this course is at least 6 weeks. The student shall register for the course as per course structure after commencement of academic year. A supervisor/mentor/advisor has to be allotted to guide the students for taking up the summer internship. The supervisor shall monitor the attendance of the students while taking up the internship. Attendance requirements are as per the norms of the University. After successful completion, students shall submit a summer internship technical report to the concerned department and appear for an oral presentation before the departmental committee consists of an external examiner; Head of the Department; supervisor of the internship and a senior faculty member of the department. A certificate from industry/skill development center shall be included in the report. The report and the oral presentation shall carry 40% and 60% weightages respectively. It shall be evaluated for 50 external marks at the end of the semester. There shall be no internal marks for Summer Internship. A student shall secure minimum 40% of marks for successful completion. In case, if a student fails, he/she shall reappear as and when semester supplementary examinations are conducted by the University.

e) The job oriented skill courses may be registered at the college or at any accredited external agency. A student shall submit a record/report on the on the list skills learned. If the student completes job oriented skill course at external agency, a certificate from the agency shall be included in the report. The course will be evaluated at the end of the semester for 50 marks (record: 15 marks and viva-voce: 35 marks) along with laboratory end examinations in the presence of external and internal examiner (course instructor or mentor). There are no internal marks for the job oriented skill courses.

f) Mandatory Course (M.C): Environmental Sciences, Universal Human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge etc non-credit (zero credits) mandatory courses. Environmental Sciences shall be offered compulsorily as mandatory course for all branches. A minimum of 75% attendance is mandatory in these courses. There shall be an external examination for 70 marks and it shall be conducted by the college internally. Two internal examinations shall be conducted for 30 marks and a student has to secure at least 40% of the marks for passing the course. There is no online internal exam for mandatory courses. No marks or letter grade shall be printed in the transcripts for all mandatory non-credit courses, but only Completed (Y)/Not-completed (N) will be specified.

g) **Procedure for Conduct and Evaluation of MOOC:** There shall be a Discipline Centric Elective Course through Massive Open Online Course (MOOC) as Program Elective course. The student shall register for the course (Minimum of 12 weeks) offered by SWAYAM/NPTEL through online with the approval of Head of the Department. The Head of the Department shall appoint one mentor for each of the MOOC courses offered. The student needs to register the course in the SWAYAM/NPTEL portal. During the course, the mentor monitors the student's assignment submissions given by SWAYAM/NPTEL. The student needs to submit all the assignments given and needs to take final exam at the proctor center. The student needs to earn a certificate by passing the exam. The student will be awarded the credits given in curriculum only by submission of the certificate. In case if student does not pass courses registered through SWAYAM/NPTEL, the same or alternative equivalent course may be registered again through SWAYAM/NPTEL in the next semester with the recommendation of HOD and shall be pass.

h) ***Major Project*** (Project - Project work, seminar and internship in industry):

In the final semester, the student should mandatorily register and undergo internship and in parallel he/she should work on a project with well-defined objectives. At the end of the semester the candidate shall submit an internship completion certificate and a project report. A student shall also be permitted to submit project report on the work carried out during the internship. The project report shall be evaluated with an external examiner.

Evaluation: The total marks for project work 200 marks and distribution shall be 60 marks for internal and 140 marks for external evaluation. The supervisor assesses the student for 30 marks (Report: 15 marks, Seminar: 15 marks). At the end of the semester, all projects shall be showcased at the department for the benefit of all students and staff and the same is to be evaluated by the departmental Project Review Committee consisting of supervisor, a senior faculty and HOD for 30 marks. The external evaluation of Project Work is a Viva-Voce Examination conducted in the presence of internal examiner and external examiner and is evaluated for 140 marks.

7. Results Declaration:

(i) Before results declaration, an academic council meeting shall be conducted and results shall be placed before the academic council for approval.

(ii) With the approval of academic council, the results shall be submitted to the University to get the approval from Honorable Vice-Chancellor.

(iii) The University may normalize the result, if required, before declaration of the result (Guidelines for normalization will be provided separately)

(iv) A copy of approved results in a CD shall be submitted to the University examination Center.

8. Academic Audit: Academic audit in each semester will be conducted as per norms.

9. Recounting or Re-evaluation of Marks in the End Semester Examination: A student can request for recounting of revaluation of his/her answer book on payment of a prescribed fee as per university norms.

10. Supplementary Examinations: A student who has failed to secure the required credits can appear for a supplementary examination, as per the schedule announced by the University.

11. Malpractices in Examinations: Disciplinary action shall be taken in case of malpractices during Mid/End examinations as per the rules framed by the University.

12. Promotion Rules

The following academic requirements have to be satisfied in addition to the attendance requirements mentioned in item no.5 for promotion to higherclasses

a) A student shall be promoted from first year to second year if he fulfills the minimum attendance requirement as per University norm.

b) A student will be promoted from II year to III year if he fulfills the academic requirement of 40% of credits up to either II year I-Semester or II year II-Semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in II year II semester.

c) A student shall be promoted from III year to IV year if he fulfills the academic requirements of 40% of the credits up to either III year I semester or III year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester.

13. Course Pattern

a) The entire course of study is for four academic years; all years are on semester pattern.

b) A student eligible to appear for the end semester examination in a course, but absent from it or has failed in the end semester examination, may write the exam in that course when conducted next.

c) When a student is detained for lack of credits / shortage of attendance, he may be re-admitted into the same semester/year in which he has been detained. However, the academic regulations under which he was first admitted shall continue to be applicable to him.

14. Earning of Credit:

A student shall be considered to have completed a course successfully and earned the credits if he/she secures an acceptable letter grade in the range A+ to E as given below. Letter grade 'F' in any course implies failure of the student in that course and no credits earned. Absent is also treated as no credits earned. For project same % percentages will be followed for grading.

Marks Range Theory (Max – 100)	**Marks Range Lab (Max – 50)**	**Level**	**Letter Grade**	**Grade Point**
≥ 90	≥ 45	Outstanding	A+	10
≥80 to <89	≥40 to <44	Excellent	A	9
≥70 to <79	≥35 to <39	Very Good	B	8
≥60 to <69	≥30 to <34	Good	C	7
≥50 to <59	≥25 to <29	Fair	D	6
≥40 to <49	≥20 to <24	Satisfactory	E	5
<40	<20	Fail	F	0
-		Absent	AB	0

15. Award of Class

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B. Tech. Degree, he shall be placed in one of the following four classes:

Class Awarded	CGPA to be secured	Remarks
First Class with Distinction	≥ 7.75 (Without any supplementary appearance)	From the CGPA secured from 160 Credits
First Class	≥ 6.75	
Second Class	≥ 5.75 to < 6.75	
Pass Class	≥ 5.00 to < 5.75	

16. Minimum Instruction Days

The minimum instruction days for each semester shall be 90 working days. There shall be no branch transfers after the completion of the admission process. There shall be no transfer from one college/stream to another within the Constituent Colleges and Units of Jawaharlal Nehru Technological University Kakinada.

17. Withholding of Results

If the student is involved in indiscipline/malpractices/court cases, the result of the student will be withheld.

18. Transitory Regulations

a) Discontinued or detained candidates are eligible for re-admission as and when next offered.
b) The re-admitted candidate will be governed by the rules & regulations under which the candidate has been admitted.
c) (i) In case of transferred students from other Universities, credits shall be transferred to JNTUK as per the academic regulations and course structure of JNTUK.
d) The students seeking transfer to colleges affiliated to JNTUK from various other Universities / Institutions have to obtain the credits of any equivalent courses as prescribed by JNTUK. In addition, the transferred candidates have to pass the failed courses at the earlier Institute with already obtained internal/sessional marks to be conducted by JNTUK.

19. Gap – Year

Gap Year concept of Student Entrepreneur in Residence shall be introduced and outstanding students who wish to pursue entrepreneurship are allowed to take a break of one year at any time after I/II/III year to pursue entrepreneurship full time. This period shall be counted for the maximum time for graduation. An evaluation committee at university level shall be constituted to evaluate the proposal submitted by the student and the committee shall decide on permitting the student for availing the Gap Year.

20. General

a) Wherever the words “he”, “him”, “his”, occur in the regulations, they include “she”, “her”, “hers”.
b) The academic regulation should be read as a whole for the purpose of any interpretation.
c) In case of any doubt or ambiguity in the interpretation of the above rules, the decision of the Vice- Chancellor is final.
d) The University may change or amend the academic regulations or syllabi at any time and the changes or amendments made shall be applicable to all the students with effect from the dates notified by the University.

****

ACADEMIC REGULATIONS (R19) FOR B. TECH. (LATERAL ENTRY SCHEME)

Applicable for the students admitted into II year B. Tech. from the Academic Year 2020-21 onwards

1. **Award of B. Tech. Degree**

A student will be declared eligible for the award of B. Tech. Degree if he fulfills the following academic regulations:

a) A student shall be declared eligible for the award of the B. Tech Degree, if he pursues a course of study in not less than three academic years and not more than six academic years. After six academic years from the year of their admission, he/she shall **forfeit** their seat in B. Tech course and their admission stands cancelled.
b) The candidate shall register for 121 credits and secure all the 121 credits.

2. The attendance regulations of B. Tech. (Regular) shall be applicable to B.Tech (lateral entry).

3. **Promotion Rules**
A student shall be promoted from second year to third year if he fulfills the minimum attendance requirement.

A student shall be promoted from III year to IV year if he fulfills the academic requirements of 40% of the credits up to either III year I semester or III year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester.

4. **Award of Class**
After a student has satisfied the requirement prescribed for the completion of the program and is eligible for the award of B. Tech. Degree, he shall be placed in one of the following four classes:

Class Awarded	CGPA to be secured	Remarks
First Class with Distinction	≥ 7.75 (Without any supplementary appearance)	From the CGPA secured from 121 Credits from II Year to IV Year
First Class	≥ 6.75	
Second Class	≥ 5.75 to < 6.75	
Pass Class	≥ 5.00 to < 5.75	

The Grades secured, Grade points and Credits obtained will be shown separately in the memorandum of marks.

5. All the other regulations as applicable to **B. Tech. 4-year degree course (Regular) will hold good for B. Tech. (Lateral Entry Scheme)**

Annexure-II(a)

ACADEMIC REGULATIONS V21 FOR M. Tech DEGREE COURSE

(Applicable for the batch of students admitted from the Academic Year **2021-2022)**

Applicable for the students of M. Tech (Regular) programme from the Academic Year 2020-21 onwards. The M. Tech Degree from Sri Vasavi Engineering college, Tadepalligudem shall be conferred on candidates by the affiliaty university who are admitted to the program and who fulfill all the requirements for the award of the Degree.

1.0 ELIGIBILITY FOR ADMISSIONS

Admission to the above program shall be made subject to eligibility, qualification and specialization as prescribed by the University/ State Government from time to time.

Admissions shall be made on the basis of merit/rank obtained by the candidates at the qualifying Entrance Test conducted by the University or on the basis of any other order of merit as approved by the University/ State Government, subject to reservations as laid down by the Govt. from time to time.

2.0 AWARD OF M. Tech DEGREE

2.1 A student shall be declared eligible for the award of the M. Tech Degree, if he pursues program of study in not less than two and not more than four academic years.

2.2 The student shall register for all 68 credits and secure all the 68 credits.

2.3 The minimum instruction days in each semester are 90.

3.0 PROGRAMME OF STUDY

The following specializations are offered at present for the M. Tech Programme of study.

CE	M.Tech. – CIVIL(Structural Engineering)
EEE	M.Tech- Power Electronics and Power Systems
ME	M.Tech- Thermal Engineering
ECE	M.Tech- Embedded System & VLSI
CSE	M.Tech- Computer Science

and any other course as approved by AICTE/ University from time to time.

4.0 **ATTENDANCE**

4.1 A student shall be eligible to appear for examinations if he acquires a minimum of 75% of attendance in aggregate of all the courses, and with minimum 50% in each and every course including practicals.

4.2 Condonation of shortage of attendance in aggregate up to 10% (65% and above and below 75%) in each semester shall be granted by the College Academic Committee.

4.3 Shortage of Attendance **below** 65% in aggregate shall not be condoned.

4.4 Students whose shortage of attendance is not condoned in any semester are not eligible to write their end semester examination of that semester.

4.5 A prescribed fee shall be payable towards condonation of shortage of attendance.

4.6 A student shall not be promoted to the next semester unless, he satisfies the attendance requirement of the present semester, as applicable. They may seek re-admission into that semester when offered next. If any candidate fulfills the attendance requirement in the present semester, he shall not be eligible for re-admission into the same class.

5.0 EVALUATION

The performance of the candidate in each semester shall be evaluated course-wise, with a maximum of 100 marks for theory and practical, on the basis of InternalEvaluation and End Semester Examination.

5.1 For the theory courses 70 marks shall be awarded based on the performance in the End Semester Examination and 30 marks shall be awarded based on the continuous Internal Evaluation. The internal evaluation shall be made based on the **average** of the marks secured in the two Mid Term-Examinations conducted-one in the middle of the Semester and the other immediately after the completion of instruction. Each mid term examination shall be conducted for a total duration of 120 minutes with 3 questions (without choice) each for 10 marks. End semester examination is conducted for 70 marks for all FIVE (5) questions (one question from one unit) to be answered (either or).

5.2 For practical courses, 70 marks shall be awarded based on the performance in the End Semester Examinations and 30 marks shall be awarded based on the day-to-day performance as Internal Marks. The internal evaluation based on the day to day work-10 marks, record- 10 marks and the remaining 10 marks to be awarded by conducting an internal laboratory test. The end examination shall be conducted by the examiners, with a breakup marks of Procedure-20, Experimentation-20, Results-20, Viva-voce-10.

5.3 For Mini Project with Seminar, a student under the supervision of a faculty member, shall collect the literature on a topic and critically review the literature and submit it to the department in a report form and shall make an oral presentation before the Project Review Committee consisting of Head of the Department, supervisor/mentor and two other senior faculty members of the department. For Mini Project with Seminar, there will be only internal evaluation for 50 marks. A candidate has to secure a minimum of 50% of marksto be declared successful.

5.4 A candidate shall be deemed to have secured the minimum academic requirement in a course if he secures a minimum of 40% of marks in the End semester Examination and a minimum aggregate of 50% of the total marks in the End Semester Examination and Internal Evaluation taken together.

5.5 In case the candidate does not secure the minimum academic requirement in any course (as specified in 5.4) he has to re-appear for the End semester Examination in that course. A candidate shall be given **one** chance to re-register for each course provided the internal marks secured by a candidate **are less than 50% and has failed in the end examination.** In such a case, the candidate must re-register for the course(s) and secure the required minimum attendance. The candidate's attendance in the re-registered course(s) shall be calculated separately to decide upon his eligibility for writing the end examination in those course(s). In the event of the student taking another chance, his internal marks and end examination marks obtained in the previous attempt shall stands cancelled. For re- registration the candidates have to apply to the college by paying the requisite fees and get approval before the start of the semester in which re-registration is required.

5.6 In case the candidate secures less than the required attendance in any re-registered course(s), he shall not be permitted to write the End Examination in that course. He shallagain re-register the course when next offered.

5.7 Laboratory examination for M. Tech. courses must be conducted with two Examiners, one of them being the Laboratory Class Teacher and the second examiner shall be appointed by the principal from the panel of examiners submitted by the respective department.

6.0 EVALUATION OF PROJECT/DISSERTATION WORK

Every candidate shall be required to submit a thesis or dissertation on a topic approved by the Project Review Committee.

6.1 The work on the project shall be initiated at the beginning of the II year and the duration of the project is two semesters. A candidate is permitted to submit Project Thesis only after successful completion of theory and practical course with the approval of PRC not earlier than 40 weeks from the date of registration of the project work. The candidate has to pass all the theory and practical courses before submission of the Thesis.

6.2 A Project Review Committee (PRC) shall be constituted with Head of the Department and two other senior faculty members in the department.

6.3 Registration of Dissertation/Project Work: A candidate is permitted to register for the project work after satisfying the attendance requirement of all the courses, both theory and practical upto 2nd semester

6.4 After satisfying 6.3, a candidate has to submit, in consultation with his project supervisor, the title, objective and plan of action of his project work for approval. The student can initiate the Project work, only after obtaining the approval from the Project Review Committee (PRC).

6.5 If a candidate wishes to change his supervisor or topic of the project, he can do so with the approval of the Project Review Committee (PRC). However, the PRC shall examine whether or not the change of topic/supervisor leads to a major change of his initial plans of project proposal. If yes, his date of registration for the project work will be taken as the date on which the change of Supervisor or topic as the case may be applied.

6.6 Continuous assessment of Dissertation-I and Dissertation-II during the Semester(s) will be monitored by the PRC.

6.7 A candidate shall submit his status report in two stages to the PRC, at least with a gap of3 months between them.

6.8 At the end of the III semester project phase-1 is evaluated for 50 marks by the committee casting of HOD, supervisor and external examiner appointed by principal.

6.9 Three copies of the Project Thesis certified by the supervisor shall be submitted to the department.

6.10 The thesis shall be adjudicated by one examiner selected by the principal. For this, the HOD of the department shall submit a panel of 5 examiners, eminent in that field, with the help of the guide concerned.

6.11 The Head of the Department shall coordinate and make arrangements for the conduct of Viva-Voce examination.

6.12 If the report of the examiner is favorable, Viva-Voce examination shall be conducted by a board consisting of the Supervisor, Head of the Department and the examiner who adjudicated the Thesis. The Board shall jointly evaluate the candidate's work for a maximum of 100 marks.

6.13 If the report of the examiner is not favourable, the candidate shall revise and resubmit the Thesis, in the time frame as decided by the PRC. If the report of the examiner is unfavorable again, the thesis shall be summarily rejected. The candidate has to re- register for the project and complete the project within the stipulated time after taking the approval from the principal.

6.14 If the report of the Viva-Voce is unsatisfactory (ie, < 50 marks), the candidate shall retake the Viva-Voce examination only after three months. If he fails to get a satisfactory report at the second Viva-Voce examination, the candidate has to re-register for the project and complete the project within the stipulated time after taking the approval from the University.

7.0 **Supplementary Examinations**

Supplementary examinations will be conducted twice in a year at the end of odd and even semester.

8.0 **Revaluation**

Recounting of marks in the end semester examinations

8.1 As per the notification issued by the controller of examinations, the students can submit the application for revaluation, along with the requisite fee receipt for revaluation of his/her answer script(s) of the theory course(s), if he /she is not satisfied with the marks obtained.

8.2 The Controller of examinations shall arrange for re-evaluate the answer script(s).

8.3 A new Examiner, other than the first examiner, shall re-evaluate the answer script(s).
8.4 Better marks out of the two shall be taken into consideration.
8.5 If the difference of marks between the two valuations is more than 15%, the answer script will be referred to third valuation. The average of nearest two marks will be awarded.

9.0 Cumulative Grade Point Average (CGPA)

Marks RangeTheory/ Laboratory (Max – 100)	LetterGrade	Level	Grade Point
≥ 90%	O	Outstanding	10
≥80 to <90%	S	Excellent	9
≥70 to <80%	A	Very Good	8
≥60 to <70%	B	Good	7
≥50 to <60%	C	Satisfactory	6
<50%	F	Fail	0
		Absent	0

Computation of SGPA

- The following procedure will be adopted to compute the Semester Grade Point Average(SGPA) and Cumulative Grade Point Average(CGPA):

The **SGPA** is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergoneby a student, i.e SGPA (Si) = $\sum$ (Ci X Gi) / $\sum$ Ci

- Where Ci is the number of credits of the ith course and Gi is the grade point scored by the student in the ith course.

Computation of CGPA

- The **CGPA** is also calculated in the same manner taking into account all the courses undergone by a student over all the semester of a Programme, i.e.
- **CGPA = $\sum$ (Ci X Si) / $\sum$ Ci**
- Where Si is the SGPA of the i^{th} semester and Ci is the total number of credits in that semester.
- The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.
- Equivalent Percentage = (CGPA – 0.75) x 10

10.0 AWARD OF DEGREE AND CLASS

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of M. Tech. Degree he shall be placed in one of the following four classes:

	CGPA to be secured	
First Class with Distinction	≥ 7.75	From the CGPA secured from68 Credits.
First Class	≥ 6.75	
Second Class	≥ 5.75 to < 6.75	
Pass Class	≥ 4.75 to < 5.75	

The Grades secured, Grade points and Credits obtained will be shown separately in the memorandum of marks.

11.0 WITHHOLDING OF RESULTS

If the student is involved in indiscipline/malpractices/court cases, the result of the student will be withheld.

12.0 TRANSITORY REGULATIONS (for V21)

12.1 When a student gets detained due to academic regulations and rejoins the college to complete the programme. However, the academic regulations under which he/she was first admitted shall continue to be applicable to him/her.

12.2 When a student discontinues for some time and rejoins the college to complete the programme. However, the academic regulations under which he/she was first admitted shall continue to be applicable to him/her.

13.0 GENERAL

13.1 Wherever the words “he”, “him”, “his”, occur in the regulations, they include “she”,“her”, “hers”.

13.2 The academic regulation should be read as a whole for the purpose of any interpretation.

13.3 In the case of any doubt or ambiguity in the interpretation of the above rules, the decision of the Vice-Chancellor is final.

13.4 The University may change or amend the academic regulations or syllabi at any time and the changes or amendments made shall be applicable to all the students with effect from the dates notified by the University.

MALPRACTICES RULES

DISCIPLINARY ACTION FOR / IMPROPER CONDUCT IN EXAMINATIONS

	Nature of Malpractices/Improper conduct	**Punishment**
	If the candidate:	
1. (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager, palm computers or any other form of material concerned with or related to the course of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the subject of the examination)	Expulsion from the examination hall and cancellation of the performance in that course only.
(b)	Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hallin respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that subject only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him.

2.	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the subject of the examination (theory or practical) in which the candidate is appearing.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the subjects of that Semester/year. The Hall Ticket of the candidate is to be cancelled and sent to the University.
3.	Impersonates any other candidate in connection with the examination.	The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred and forfeits the seat. The performance of the original candidate who has been impersonated, shall be cancelled in all the subjects of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4.	Smuggles in the Answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted

		for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
5.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that subject.
6.	Refuses to obey the orders of the Chief Superintendent/Assistant – Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that subject and all other subjects the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The candidates also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case is registered against them.

7	Leaves the exam hall taking away answer script or intentionally tears of the script or any part thereof inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
8.	Possess any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat.
9.	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8.	Student of the colleges expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them.

10.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year.
11.	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that subject and all other subjects the candidate has appeared including practical examinations and project work of that semester/year examinations.
12.	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the University for further action to award suitable punishment.	

Annexure-II(b)

COURSE STRUCTURE PROPOSED FOR M.Tech (Structural Engineering)

(From 2021 – 2022 Admitted Batch) – V21 Regulation

I SEMESTER

S.No	Course Code	Course Name	L	T	P	C
1	V21STET01	Theory of Elasticity	3	0	0	3
2	V21STET02	Structural Dynamics	3	0	0	3
3	V21STET03 V21MAT01 V21STET04	Elective I 1. Matrix Analysis of Structures 2. Analytical & Numerical Methods for Structural Engineering (Bos of Maths) 3. Design of RCC Foundations	3	0	0	3
4	V21STET05 V21STET06 V21STET07	Elective II 1. Bridge Engineering 2. Repair and Rehabilitation of Structures 3. Structural Optimization	3	0	0	3
5	V21STET08	Advanced Concrete Technology	2	0	0	2
6	V21STEL01	Advanced Concrete Technology Laboratory	0	0	4	2

Annexure-II(c)

ACADEMIC RULES & REGULATIONS (V21) FOR MBA

Applicable for the batch of students admitted from the Academic Year **2021-2022**

ACADEMIC REGULATIONS V21 FOR MBA PROGRAMME

Applicable for the students of MBA (Regular) Course from the Academic Year 2021-22 onwards. The MBA Degree of Sri Vasavi Engineering College, Tadepalligudem shall be conferred on candidates who are admitted to the program and who fulfil all the requirements for the award of the Degree.

1.0 ELIGIBILITY FOR ADMISSIONS

Admission to the above program shall be made subject to eligibility, qualification and specialization as prescribed by the University/ State Government from time to time.

Admissions shall be made on the basis of merit/rank obtained by the candidates at the qualifying Entrance Test conducted by the University or on the basis of any other order of merit as approved by the University/ State Government, subject to reservations as laid down by the Govt. from time to time.

2.0 AWARD OF MBA DEGREE

2.1 A student shall be declared eligible for the award of the MBA Degree, if he pursues a course of study in not less than two and not more than four academic years.

2.2 The student shall register for all 106 credits and secure all the 106 credits.

2.3 The minimum instruction days in each semester are 90.

3.0 ATTENDANCE

3.1 A student shall be eligible to write end examinations if he acquires a minimum of 75% of attendance in aggregate of all the courses, and with minimum 50% in each and every course including practicals.

3.2 Condonation of shortage of attendance in aggregate up to 10% (65% and above and below 75%) in each semester shall be granted by the College Academic Committee.

3.3 Shortage of Attendance **below** 65% in aggregate shall not be condoned and not eligible to write their end semester examination of that class.

3.4 Students whose shortage of attendance is not condoned in any semester are not eligible to write their end semester examination of that class.

3.5 A prescribed fee shall be payable towards condonation of shortage of attendance.

3.6 A student shall not be promoted to the next semester unless, he satisfies the attendance requirement of the present semester, as applicable. They may seek re-admission into that semester when offered next. If any candidate fulfills the attendance requirement in the present semester, he shall not be eligible for re-admission into the same class.

4.0 Examination and Scheme of Evaluation

The distribution of marks for internal and external examinations shall be evaluated course -wise as follows:

Sl.No.	Component	Internal	External	Total
1	Theory	30	70	100
2	Laboratory	20	30	50
3	Project & viva-voce	40	60	100

4.1 Internal assessment

i) 30 marks for internal assessment. 10 marks are based on the sum of average of **two mid-term** seminar/presentation and 20 marks are based on **average** of **two mid-term examinations**.

ii) 10 marks for presentation (5 marks are for report content and 5 marks are for presentation)

iii) Each mid-term examination is conducted for 20 marks with two hours duration. Each mid-term examination consists of four questions, each for 5 marks. All questions need to be answered.

iv) The final marks are the sum of average of two mid-term examinations for 20 marks and the sum of average of **two mid-term** seminar/presentation for 10marks.

4.2 External Assessment

The semester end examination shall be conducted for a duration of three hours with A, B & C sections (Section A consists of 5 questions out of which Three questions are to be answered. Each question carries 5 marks, Section B consists of 5 eassy questions with internal choice, each for 8 marks & Section C case study for 15 marks) All Sections are to be answered.

4.3 Laboratory Course

i) For practical courses distribution shall be 20 marks for internal evaluation and 30 marks for the end semester examinations. There shall be continuous evaluation by the internal course teacher during the semester for 20 internal marks. Out of 20 marks for internal, 10 marks shall be for lab record and 10 marks shall be evaluated by conducting an internal test conducted at the end of semester.

ii) End semester laboratory examination shall be conducted for 30 marks with two examiners, one of them being the Laboratory Class Teacher and second examiner shall be appointed by the Principal.

5.0 EVALUATION OF PROJECT WORK:

5.1 **A Project Review Committee** (PRC) will be constituted with Head of the Department, and two other senior faculty members of the department.

5.2 **Registration of Project work**: A Candidate is permitted to register for the project work after satisfying the attendance requirement up to II semester.

5.3 Every candidate shall work on projects approved by the PRC.

5.4 A student has to undergo practical training for a period of 5 weeks in a Corporate Enterprise (as a part of the project) after the Second Semester. In training period, the candidates should work on a specific problem related to the elective course.

At the end of practical training, the student should submit a certificate obtained from the organization.

The student should prepare a Project Report under the supervision of a guide from the faculty of management of the college. However, the students who prepare Project Report in the area of systems can also work under the guidance of a Faculty member from Computer Science Department.

5.5 The progress of the project work shall be periodically reviewed by PRC. The PRC shall authorize/approve change of guide/topic/title as deemed fit. A student shall submit status report in line with the recommended project calendar as approved by PRC. Three copies of Project dissertation certified by the Project Supervisor shall be submitted to the College.

5.6 The project is evaluated for 100 Marks at the end of IV Semester. A student shall engage a minimum of 2 hours per week in III and IV semester in consolidating the data, report writing, results & analysis, conclusions etc. Evaluation shall comprise of internal and external assessment.

Internal: 40 Marks

External: 60 Marks

Out of a total of 100 Marks for the Project and viva voce 40 Marks shall be for internal evaluation and 60 Marks for the end semester project and viva voce. The internal evaluation shall be made by the departmental committee on the basis of the two seminars given by the student on the topic of his/her dissertation. The end semester project and viva voce shall be adjudicated by one external examiner selected from a panel of 5 examiners outside the college. For this Head of the department shall submit a 5 member panel who are eminent in the field of study.

5.7 An internal departmental committee consisting of HOD, Supervisor and one senior faculty shall monitor the progress of the project work.

5.8 The project and viva voce examination shall be conducted by a board consisting of External examiner, HOD and Supervisor. A Candidate shall be allowed to take project and viva voce examination after fulfilling the attendance requirements.

5.9 The Candidate should secure minimum 40% marks in External assessment of project and viva voce. If the candidate fails to secure minimum 50% of marks in project internal and End semester project and viva voce together, the candidate should retake the project and viva voce examination after three months. If he fails to get minimum marks at the second project and viva voce examination, he will not be eligible for the award of the degree, unless the candidate is asked to revise and resubmit. If the candidate fails to secure minimum marks again, the project shall be summarily rejected.

6.0 Course Pattern

a) The entire course of study is for two academic years (four semesters); all the years are in semester pattern

b) A student eligible to appear for the end semester examination in a course, but absent from it or has failed in the end semester examination, may write the exam in that course as and when college conducted next.

c) When a student has shortage of attendance, he/she may be re-admitted into the same semester/year in which he has been detained. However, the academic regulations under which he was **first admitted** shall continue to be applicable to him.

7.0 Criteria for passing a course and award of grades

a) Criteria for passing a course

i) A Candidate shall be declared to have passed in individual theory/laboratory/project and viva voce if he secures a minimum of 50% aggregate marks (internal & semester end examination marks put together), course to a minimum of 40% marks in the semester end examination.

ii) In case the candidate does not secure the minimum academic requirement in any course (as specified in (i) above) he/she has to re-appear for the end semester examination in that course. A candidate shall be given **one** chance to re-register for each course provided the internal marks secured by a candidate **are less than 50% and has failed in the end examination**. In such a case, the candidate must re-register for the course (s) and secure the required minimum attendance. The attendance in the re-registered course (s) shall be calculated separately to decide upon his eligibility for writing the end examination in those course (s). In the event of the student taking another chance, his internal marks and end examination marks obtained in the previous attempt shall **stands cancelled**. For re-registration the candidates have to apply to the Dean Academics by paying the requisite fees and get approval from College before start of semester in which re-registration is sought.

iii) In case the candidate secures less than the required attendance in any re-registered course (s), he shall not be permitted to write the End Examination in that course. He shall again re-register the course when next offered.

b) Award of grades: Method of awarding grade point and grade in each course based on his performance is given below.

Marks Range Theory / Laboratory/ Project and viva -voce (Max-100)	Letter Grade	Level	Grade Point
≥ 90%	O	Out standing	10
≥80 to <90%	S	Excellent	9
≥70 to <80%	A	Very Good	8
≥60 to <70%	B	Good	7
≥50 to <60%	C	Satisfactory	6
<50	F	Fail	0
	AB	Absent	0

c) **Computation of Cumulative and Semester Grade Point Averages**

Computation of SGPA

- The following procedure is to be adopted to compute the Semester Grade PointAverage(SGPA) and Cumulative Grade Point Average(CGPA):

- The **SGPA** is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses under gone by a student, i.e
  SGPA (Si) = ∑ (Ci X Gi) / ∑ Ci

- Where Ci is the number of credits of the ith course and Gi is the grade point scored by thestudent in the ith course.

Computation of CGPA

- The **CGPA** is also calculated in the same manner taking into account all the coursesundergone by a student over all the semester of a Programme, i.e. CGPA = ∑ (Ci X Si) / ∑ Ci
- Where Si is the SGPA of the i^{th} semester and Ci is the total number of credits in thatsemester.
- The SGPA and CGPA shall be rounded off to 2 decimal points and reported in thetranscripts.
- Equivalent Percentage = (CGPA – 0.75) x 10

8.0 AWARD OF DEGREE AND CLASS

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of MBA Degree he shall be placed in one of the following three classes:

	CGPA to be secured	
First Class with Distinction	≥ 7.75	**From the CGPA secured from 106 Credits.**
First Class	≥ 6.75	
Second Class	≥ 5.75 to < 6.75	
Pass Class	≥ 4.75 to < 5.75	

The Grades secured, Grade points and Credits obtained will be shown separately in the memorandum of marks.

9.0 WITHHOLDING OF RESULTS

If the student is involved in indiscipline/malpractices/court cases, the result of the student will be withheld.

10.0 Supplementary Examinations

i) Supplementary examinations will be conducted twice in a year at the end of odd and even semesters.
ii) Semester end supplementary examinations shall be conducted till next regulation comes into force for that semester after the conduct of the last set of regular examinations under the present regulation.
iii) Thereafter, supplementary examinations will be conducted in the equivalent courses as decided by the Board of Studies concerned.

11.0 Revaluation

Recounting of marks in the end semester examinations, A student can request for revaluation ofhis /her answer book on payment of a prescribed fee.

12.0 TRANSITORY REGULATIONS (for V21)

12.1 When a student gets detained due to academic regulations and rejoins the college to complete the programme.However, the academic regulations under which he/she was first admitted shall continue to be applicable to him/her.

12.2 When a student discontinues for some time and rejoins the college to complete the programme. However, the academic regulations under which he/she was first admitted shall continue to be applicable to him/her.

13.0 GENERAL

13.1 Wherever the words “he”, “him”, “his”, occur in the regulations, they include “she”, “her”, “hers”.
13.2 The academic regulation should be read as a whole for the purpose of any interpretation.
13.3 In the case of any doubt or ambiguity in the interpretation of the above rules, the decision of the Chairman of the Academic Council is final.
13.4 The College may change or amend the academic regulations or syllabi at any time and the changes or amendments made shall be applicable to all the students with effect from the dates notified by the College.

MALPRACTICES RULES

DISCIPLINARY ACTION FOR / IMPROPER CONDUCT IN EXAMINATIONS

	Nature of Malpractices/Improper conduct	Punishment
	If the candidate:	
1. (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager,palm computers or any other form of material concerned with or related to the subject of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the subject of the examination)	Expulsion from the examination hall and cancellation of the performance in that subject only.
(b)	Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that subject only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him.
2.	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the subject of the examination (theory or practical) in which the candidate is appearing.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the subjects of that Semester/year.The Hall Ticket of the candidate is to be cancelled and sent to the University.

3.	Impersonates any other candidate in connection with the examination.	The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred and forfeits the seat. The performance of the original candidate who has been impersonated, shall be cancelled in all the subjects of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4.	Smuggles in the Answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
5.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that subject.

6.	Refuses to obey the orders of the Chief Superintendent/Assistant – Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that subject and all other subjects the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The candidates also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case is registered against them.
7.	Leaves the exam hall taking away answer script or intentionally tears of the script or any part thereof inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
8.	Possess any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that

		semester/year. The candidate is also debarred and forfeits the seat.
9.	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8.	Student of the colleges expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them.
10.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year.
11.	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that subject and all other subjects the candidate has appeared including practical examinations and project work of that semester/year examinations.
12.	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the University for further action to award suitable punishment.	

Course Structure MBA (Regular)

(Effective for the students admitted into first year from the Academic Year 2021-2022)

Semester-I

SNo	Course Code	Course	L	P	C	I	E	TM
1	V21MBT01	Management Theory & Organizational Behaviour	4	--	4	30	70	100
2	V21MBT02	Managerial Economics	4	--	4	30	70	100
3	V21MBT03	Accounting for Managers	4	--	4	30	70	100
4	V21MBT04	Legal & Business Environment	4	--	4	30	70	100
5	V21MBT05	Business Communication	4	--	4	30	70	100
6	V21MBT06	Quantitative Analysis for Business Decisions	4	--	4	30	70	100

L-LECTURE HOURS, P-PRACTICAL HOURS, C-CREDITS, I-INTERNAL MARKS, E-EXTERNAL MARKS, TM-TOTAL MARKS

Dual Specialization:

The Specialization papers will be offered in the areas of Marketing, Finance, and Human Resource Management (HRM). The students should choose any **Two** of the listed Specialization areas in the beginning of the third semester of MBA. Specialization will be offered subject to a minimum of 20 students.

Semester-III

Specialization I: Marketing

S.No.	***Course Code***	***Course***
1	V21MBT15	Consumer Behavior
2	V21MBT16	Retail Management
3	V21MBT17	Digital & Social Media Marketing

Specialization II: Finance

S.No.	***Course Code***	***Course***
1	V21MBT18	Security Analysis & Portfolio Management
2	V21MBT19	Banking & Insurance Management
3	V21MBT20	Advance Management Accounting

Specialization III: HRM

S.No.	***Course Code***	***Course***
1	V21MBT21	Leadership & Change Management
2	V21MBT22	Performance Evaluation & Compensation Management
3	V21MBT23	Strategic Human Resource Management

Semester-IV

Specialization I: Marketing

S.No.	***Course Code***	***Course***
4	V21MBT25	Sales and Distribution Management
5	V21MBT26	Services Marketing
6	V21MBT27	Advertising & Brand Management

Specialization II: Finance

S.No.	***Course Code***	***Course***
4	V21MBT28	Financial Derivatives
5	V21MBT29	Financial Markets & Services
6	V21MBT30	Business Taxation & Planning

Specialization III: HRM

S.No.	Course Code	Course
4	V21MBT31	Human Resource Metrics & Analytics
5	V21MBT32	Management of Industrial Relations
6	V21MBT33	Labour Welfare & Legislations

Pedatadepalli, **TADEPALLIGUDEM – 534 101,** W.G. Dist, (A.P.)

Department of Civil Engineering

Dt: 30.08.2021

Fourth BOS Meeting of Civil Engineering Department is held in online mode on 28.08.2021 at 10:30 AM with the following members were present.

Sl.No	Name	Position
1	Dr.G.Radhakrishnan	Chairperson
2	Dr.G.V.R.Prasada Raju	Member
3	Dr.C.B.Kameswara Rao	Member
4	Dr.M.Kumar	Member
5	Mr.T.Raj kumar	Member
6	Mr.T Naga Seshu Babu	Faculty of CE
7	Mr.A Sudheer	Faculty of CE
8	Mr.B Hema Sundar	Faculty of CE
9	Mr.J Pavan Kumar	Faculty of CE

Minutes of the BOS Meeting:

The following points have been suggested/discussed by the committee in BOS meeting and the same has been approved.

1. The proposed course structure and syllabus of VII & VIII semesters V18 Regulation is approved given in **Annexure – CE – I**
2. The list of courses mentioned below have to be offer under open elective in VII & VIII semesters of B.Tech under V18 Regulation for other branches

Open Elective - II	VII Sem	1. Environmental Pollution and Control 2. Disaster Management
Open Elective - III	VIII Sem	1. Solid Waste Management 2. Water Quality and Conservation

The detailed syllabus of above courses is given in the **Annexure – CE – II**

3. The proposed course structure and syllabus of III & IV semesters V20 Regulation is approved is given in **Annexure – CE – III**
4. The comment made by Dr.C.B.Kameswara Rao in the course structure of III & IV semester under Skill Oriented Course which includes Parent Institution in addition to Industries/Professional bodies/APSSDC and other accredited bodies.
5. Approval of course structure and syllabus for I to IV semester of M.Tech CIVIL (Structural Engineering) under V 21 regulations.
   The approved course structure and syllabus is given in **Annexure – CE – IV**
6. Approval of syllabus for Audit Course (Diaster Management V21STEAC1) offered in I& II semester M.Tech .
   The approved course structure and syllabus is given in **Annexure – CE – V**
7. Few comments made by Dr.C.B.Kameswara Rao in the course structure and syllabus of I to IV semesters of V21 Regulation M.Tech Structural Engineering were acknowledged, approved and suitable modification have to be made.
8. **Comments**
   a) Advanced Reinforced Concrete Design course in I semester is elective it could be made mandatory.
   b) The course **Theory of Plates and Shells** & **Stability of Structures** could be interchanged from Elective to mandatory.
   c) Computer Aided Design Laboratory & **Structural Design Laboratory** courses are similar and both could be joined as one laboratory only.

   Modifications have to be made by making **Advanced Reinforced Concrete Design** as mandatory in II semester. New course **Structural Optimization** is included in I Semester II Elective.

   Theory of Plates and Shells have to be made elective and **Stability of Structures** have to be made as mandatory course. **Computer Aided Design Laboratory & Structural Design Laboratory** have to be joined as one Laboratory only.

CHAIRPERSON OF BOS

ANNEXURE – CE- I

COURSE STRUCTURE APPROVED IN PREVIOURS BOS MEETINGS

(For 2018 – 2019 Admitted Batch) - V18 Regulation

I SEMESTER

SYLLABI OF VII & VIII SEMESTER OF B.TECH COURSES FOR THE

ACADEMIC YEAR 2021-2022

VII SEMESTER – SYLLABUS

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET25
Name of the Course	**ESTIMATION, SPECIFICATION & CONTRACTS**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Explain to student for understanding different construction works and can estimate approximate cost required for a building (K2)
- Develop the student to a position for finding the cost of various building components (K3)
- Illustrate the calculation of quantities for earthwork of roads and canals to students (K3)
- Discuss to students about contracts and their types ,value a property(K2)
- Describe the students in calculating the approximate costs of building using various techniques(K2)
- Demonstrate the students in determining the quantities of different components of buildings(K3)

SYLLABUS

UNIT I

Introduction: General items of work in Building – Standard Units Principles of working out quantities for detailed and abstract estimates.

UNIT II

Rate Analysis: Working out data for various items of work over head and contigent charges.

UNIT III

Earthwork: Introduction to earthwork, Lead and lift, Earthwork volume calculation by mid-sectional area method, Mean sectional area method, Trapezoidal rule, Prismoidal rule estimation of quantities for canals

UNIT IV

Contracts: Types of contracts – Contract Documents – Conditions of contract, Valuation of buildings- Standard specifications for different items of building construction.

UNIT V

Approximate estimation of building: Introduction to approximate estimation of building, Advantages of estimating building by approximate estimation- Types of approximate estimation –problems on approximate estimation

UNIT VI

Detailed Estimation of Buildings: Estimation of quantities for one roomed building, two roomed building.

Text Books:

1. Estimating and Costing' by B.N. Dutta, UBS publishers, 2000.
2. Civil Engineering Contracts and Estimates' by B. S. Patil, Universities Press (India) Pvt.Ltd. Hyd.
3. Construction Planning and Technology' by Rajiv Gupta, CBS Publishers & Distributors Pvt.Ltd. New Delhi.
4 Estimating and Costing' by G.S. Birdie.

References:

1. 1'Standard Schedule of rates and standard data book' by public works department.
2. IS 1200 (Parts I to XXV-1974/ Method of Measurement of Building & Civil Engg Works – B.I.S.)
3. 'Estimation, Costing and Specifications' by M. Chakraborthi; Laxmi publications.
4. National Building Code

Year/Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET26
Name of the Course	**ENVIRONMENTAL ENGINEERING-II**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to:

- Estimate the sewage and storm water flow and design the sewerage system (K3)
- Relate the appropriate pumps in the sewerage systems (K3)
- Analyze sewage quality and design suitable primary treatment units (K3)
- Employ the secondary treatment units (K3)
- Employ miscellaneous treatment units (K3)
- Identify suitable disposable method with respect to effluent standards.(K2)

SYLLABUS

UNIT I

Introduction: Sanitation – Systems of sanitation – relative merits & demerits – collection and conveyance of waste water – sewerage – classification of sewerage systems- Estimation of sewage flow and storm water drainage – fluctuations – types of sewers - Hydraulics of sewers and storm drains– design of sewers – appurtenances in sewerage – cleaning and ventilation of sewers

UNIT II

Pumping of Wastewater: Pumping stations – location – components– types of pumps and their suitability with regard to wastewaters – Problems in sewage pumping.

House Plumbing: Systems of plumbing-sanitary fittings and other accessories–one pipe and two pipe systems – Design of building drainage

UNIT III

Characteristics and Treatment of sewage: Sampling and analysis of wastewater - Physical, Chemical and Biological Examination-Measurement of BOD and COD - BOD equations

Primary treatment of sewage - Screens-grit chambers-grease traps–floatation–sedimentation – design of preliminary and primary treatment units.

UNIT IV

Secondary Treatment: Aerobic and anaerobic treatment process-comparison. Suspended growth process: Activated Sludge Process, principles, designs, and operational problems, modifications of Activated Sludge Processes, Oxidation ponds, Aerated Lagoons, Fluidized bed reactors.

Attached Growth Process: Trickling Filters–mechanism of impurities removal- classification–design-operation and maintenance problems, Rotating Biological Contactors.

UNIT V

Miscellaneous Treatment Methods: Nitrification and Denitrification – Removal of Phosphates –UASB–Membrane reactors-Integrated fixed film reactors. Anaerobic Processes: Septic Tanks and Imhoff tanks- working Principles and Design–Reuse and disposal of septic tank effluent.

UNIT VI

Sludge Management: Characteristics-SVI, handling and treatment of sludge-thickening – anaerobic digestion of sludge, Sludge Drying Beds. Centrifuge.

Disposal of sewage: Methods of disposal – disposal into water bodies-Oxygen Sag Curve-Disposal into sea, disposal on land- sewage sickness.

Text Books:

1. Wastewater Engineering Treatment and Reuse, Metcalf & Eddy, Tata McGraw-Hill edition.
2. Industrial Water and Wastewater Management, K.V.S.G. Murali Krishna.
3. Elements of Environmental Engineering, K. N. Duggal, S. Chand & Company Ltd. New Delhi, 2012.

References:

1. Environmental Engineering, Howard S. Peavy, Donald R. Rowe, Teorge George Tchobanoglus – Mc-Graw-Hill Book Company, New Delhi, 1985
2. Wastewater Treatment for Pollution Control and Reuse, Soli. J Arceivala, Sham R Asolekar, Mc-GrawHill, NewDelhi; 3rd Edition
3. Environmental Engineering –II: Sewage disposal and Air Pollution Engineering, Garg, S. K., Khanna Publishers
4. Sewage treatment and disposal, P. N. Modi & Sethi.
5. Environmental Engineering, Ruth F. Weiner and Robin Matthews – 4th Edition Elsevier, 2003
6. Environmental Engineering, D. Srinivasan, PHI Learning Private Limited, New Delhi, 2011.

Year/Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET27
Name of the Course	PAVEMENT ANALYSIS AND DESIGN					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Understand the factors influencing the design methodologies.(K2)
- Analyze stresses and strains in a flexible pavement using multi-layered elastic theory (K3)
- Analyze stresses and strains in a rigid pavement using Westergaard's theory (K3)
- Design a flexible pavement using IRC, Asphalt Institute, and AASHTO methods (K3)
- Design a rigid pavement using IRC, and AASHTO methods (K3)
- Design of joints, Dowel & tie bars.(K3)

SYLLABUS

UNIT I

Factors Affecting Flexible Pavement Design: Variables Considered in Pavement Design, Types of Pavements, Functions of Individual Layers, EAL and ESWL Concepts, Traffic Analysis: ADT, AADT, Truck Factor, Growth Factor, Lane Distributions & Vehicle Damage Factors, Effect of Transient & Moving Loads.

UNIT II

Factors Affecting Rigid Pavement Design : Rigid pavement layers**,** Classification of Axle Types of Rigid Chassis and Articulated Commercial Vehicles, Legal Axle and Gross Weights on Single and Multiple Units, Tire Pressure, Contact Pressure,

UNIT III

Stresses in Flexible Pavement: Vehicle-Pavement Interaction: Transient, Random & Damping Vibrations, Steady State of Vibration, Experiments on Vibration, Stress Inducing Factors in Flexible and Rigid pavements; Stress In Flexible Pavements: Visco-Elastic Theory and Assumptions, Layered Systems Concepts, Stress Solutions for One, Two and Three Layered Systems, Fundamental Design Concepts;.

UNIT IV

Stresses in Rigid Pavements: Westergaard's Theory and Assumptions, Stresses due to Curling, Stresses and Deflections due to Loading, Frictional Stresses, and Stresses in Dowel Bars & Tie Bars

UNIT V

Design of Flexible Pavements: Factors effecting Design. Deflection studies in Flexible Pavements. Present Serviceability Index.IRC guidelines for Flexible Pavements. Pavement Performance and methods- AASHTO and Asphalt Institute Method. Need for Overlays, Overlays design methods for Flexible and Rigid pavements.

UNIT VI

Design of Rigid Pavements: Factors effecting Design – Wheel load & its repetition, subgrade strength & proportion, strength of concrete- modulus of elasticity. Reinforcement in slab. Design of joints. Design of Dowel bars. Design of Tie bars. IRC and AASHTO methods of Rigid Pavement design.

Text Books:

1. Principles of Pavement Design, Yoder.J. &Witzorac Mathew, W. John Wiley & Sons Inc
2. Pavement Analysis & Design, Yang H. Huang, Prentice Hall Inc.
3. AASHTO Pavement Design Guide (1993)

References:

1. Design of Functional Pavements, Nai C. Yang, McGraw Hill Publications
2. Concrete Pavements, AF Stock, Elsevier, Applied Science Publishers.
3. Pavement and Surfacing for Highway & Airports, Micheal Sargious, Applied Science Publishers Limited.
4. IRC: 37 & 58 Codes for Flexible and Rigid Pavements Design.

Year/Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET28
Name of the Course	**AIR POLLUTION AND CONTROL**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to:

- Understand the ambient air quality based on the analysis of air pollutants
- employ particulate and gaseous control measures for an industry
- Illustrate the plume behavior in a prevailing environmental condition
- Estimate carbon credits for various day to day activities
- operate air pollution gases methods(K3)
- Classify the air pollution controlling methods(K4)

SYLLABUS

UNIT I

Air Pollution: Sampling and analysis of air pollutants, conversion of ppm into µg/m3. Definition of terms related to air pollution and control - secondary pollutants – Indoor air pollution – Ozone holes and Climate Change and its impact - Carbon Trade.

UNIT II

Thermodynamics and Kinetics of Air-pollution: Applications in the removal of gases like SOx, NOx, CO and HC - Air-fuel ratio- Computation and Control of products of combustion, Automobile pollution. Odour pollution control, Flares.

UNIT III

Meteorology and Air Pollution: Properties of atmosphere: Heat, Pressure, Wind forces, Moisture and relative Humidity, Lapse Rates - Influence of Terrain and Meteorological phenomena on plume behaviour and Air Quality - Wind rose diagrams and Isopleths Plume Rise Models

UNIT IV

Ambient Air Quality Management: Monitoring of SPM - RPM SO2; NOx and CO - Stack Monitoring for flue gases - Micro-meteorological monitoring – Noise Monitoring - Weather Station. Emission Standards- Gaussian Model for Plume Dispersion

UNIT V

Air Pollution Control: Control of particulates – Control at Sources, Process Changes, Equipment modifications, Design and operation of control Equipments – Settling Chambers, Cyclone separators –Fabric filters– Scrubbers, Electrostatic precipitators

UNIT VI

Air Pollution Control Methods: Control of NOx and SOx emissions – Environmental friendly fuels - In-plant Control Measures, process changes, methods of removal and recycling. Environmental criteria for setting industries and green belts.

Text Books:

1. Air Pollution and Control, K.V.S.G. Murali Krishna, Laxmi Publications, New Delhi, 2015

2. Air Pollution, M. N. Rao and H. V. N. Rao, Tata McGraw Hill Company.

3. Environmental Science and Engineering by J.G. Henry and G.W. Heinke – Pearson Education.

References:

1. An Introduction to Air pollution, R. K. Trivedy and P.K. Goel, B.S. Publications.

2. Air Pollution by Wark and Warner - Harper & Row, New York.

Year/Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET29
Name of the Course	**IRRIGATION ENGINEERING**					
Branch	CIVIL ENGINEERING					

COURSE OUTCOMES:

Upon successful completion of the course, the student will be able to:

- Explain the importance, type and quality of Irrigation Water (K2)
- Estimate the Irrigation water requirements (K2)
- Asses different parameters needed for the design of irrigation canal networks (K3)
- Asses different irrigation canal structures (K3)
- Asses different diversion head works (K3)
- Assess the stability of gravity and earth dams (K3)

SYLLABUS

UNIT I

Introduction: Definition – Importance of Irrigation in India – Advantages and Dis advantages – Types of Irrigation – Quality of Irrigation water- Different types techniques used for water distribution in field.

UNIT II

Irrigation and Water Requirement of Crops: Different types of crops and crop seasons- Soil, water and plant relationship- Irrigation efficiencies-Consumptive use –Estimation of consumptive use-Crop water requirement-Duty and Delta-Factors affecting duty-Depth and Frequency of Irrigation-Water logging and Drainage-crop rotation.

UNIT III

Canals: Classification-Alluvial and Non Alluvial canals-Design of non-erodible canals-Different command areas-Methods of economic section and maximum permissible velocity-Design of erodible canals-Kennedy's silt theory and Lacey's regime theory.

UNIT IV

Canal structures: Falls-Types and location- Design principle of Sarda type wall and straight glacis wall

Regulators: Head and cross regulators –design principles

Cross Drainage works: Design principles of aqueduct- siphon aqueduct- super passage

Outlets: Types-proportionality-sensitivity and flexibility

UNIT V

Diversion Head Works: Types of diversion head works-Weirs and Barrages-Layout of diversion head works-components- causes and failures of weirs on permeable foundations-Bligh's creep theory-Khosla's theory-exit gradient.

UNIT VI

Reservoir planning: Site selection-zones of storage-yield and storage capacity of reservoir and reservoir sedimentation-Types of dams- selection of type of dam-selection of site for a dam.

Gravity Dams: Forces acting on gravity dam-causes of failure of gravity dam-elementary profile and practical profile of gravity dam-limiting height of dam-stability analysis-drainage galleries-grouting.

Earthen Dams: Types of earthen dams-causes of failure-criteria for safe design-seepage-measures of control of seepage filters.

Text Books:

1. Irrigation Engineering and Hydraulic structures, Santosh Kumar Garg, Khanna Publishers.
2. Irrigation and Water power Engineering, B.C. Punmia, Pande B.B. Lal, Ashok Kumar Jain, Arun Kumar Jain, Lakshmi Publications Ltd.
3. Water resources and Irrigation engineering by Sri Krishna publications.

References:

1. Irrigation and Water Resources Engineering, Asawa G L (2013), New Age International Publishers.
2. Irrigation Water Resources and Water Power Engineering, Modi P N (2011), Standard book House, New Delhi.
3. Irrigation and Drainage Engineering" by Peter Waller and Muluneh Yitayew

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET30
Name of the Course	**BRIDGE ENGINEERING**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion the course the student will be able to

- Generalize different types of Bridges with diagrams and Loading standards (K2)
- Asses the moments in the girders (K3)
- Illustrate different sub structural works of bridges (K3)
- Illustrate different parameters of Well Foundations (K3)
- Report the effectiveness of different Bearings of a Bridge (K2)
- Generalize the suspension bridge and cable stayed bridge (K2)

SYLLABUS

UNIT I

Introduction: Bridges- Types- Slab bridges, T Beam, Arch bridges, Cable Stayed bridges, prestressed concrete bridges, Truss Bridges, Culverts, - Nomenclature- Selection of Bridge Site- Economical span- Abutments pier and end connections- types of foundations- Open, Pile, Well Foundations, Bearings – Types- Introduction to Loading standards- Railway and IRC Loading

UNIT II

T-Beam Bridge: Pigeaud's method for computation of slab moments; Courbon's method for computation of moments in girders; Design of simply supported T-beam bridge.

UNIT III

Sub Structure for Bridges: Pier and abutment caps; Materials for piers and abutments, Design of pier; Design of abutment; Backfill behind abutment; approach slab.

UNIT IV

Foundations For Bridges: scour at abutments and piers; Grip length; Types of foundations; Design of well foundation.

Box Culverts: Loading – Analysis and Design- Reinforcement detailing

UNIT V

Bearings for Bridges: Importance of bearings; bearings for slab bridge; bearings for girder bridges; Expansion bearings; Fixed bearings; Design of elastomeric pad bearing.

UNIT VI

Cable Supported Bridge: Different types of cable supported bridge, difference between suspension bridge and cable stayed bridge. Different components and factors considered for design of a) suspension bridge, b) cable stayed bridge.

Text Books:

1. Essentials of Bridge Engineering by Dr. Johnson Victor; Oxford & IBH publishing Co. Pvt.Ltd
2. Cable supported bridges, concepts and design by N J Gimsing. John Willey and Sons
3. Design of Bridges, N. Krishna Raju, Tata McGraw Hill

References:

1. Design of Bridge Structures by T. R Jagadeesh, M.A Jayaram, Prentice Hall of India Pvt. Ltd.
2. Design of Concrete Bridges, Aswini, Vazirani, Ratwani
3. Bridge Engineering by S.Ponnuswamy

Year/Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET31
Name of the Course	**ADVANCED FOUNDATION ENGINEERING**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the student will be able to

- Illustrate the safe bearing capacity of footings subjected to different types of loading on varied soil strata using different methods (K3)
- Compute the settlements of foundations using advanced methods (K3)
- Employ different techniques for proportioning of foundations laid on different soils strata (K3)
- Assess the forces acting on Earth Retaining Structures using different Earth Pressure Theories (K3)
- Predict the load carrying capacity, pull-out capacity, negative skin friction of piles and their settlements (K3)
- Interpret different foundation practices in expansive soils (K3)

SYLLABUS

UNIT I

Bearing capacity of Foundation susing general bearing capacity equation–Meyerhof's, Brinch Hansen's and Vesic's methods-Bearing capacity of Layered Soils:Strong layer over weak layer, Weak layer on strong layer – Bearing capacity of foundations on at opof slope– Bearing capacity of foundations at theedge of the slope.

UNIT II

Settlement analysis: Immediate settlement of footings resting on granular soils –Schmertmann& Hartman method – De Beer and Martens method - Immediate settlement inclays–Janbu'smethod–correction for consolidation settlement using Skempton and Bjerrum's method – Correction for construction period

UNIT III

Mat foundations – Purpose and types of isolated and combined footings – Mats/Rafts – Proportioning of footings – Ultimate bearing capacity of mat foundations – allowable bearing capacity of mats founded in clays and granular soils– compensated rafts.

UNIT IV
Earth-retaining structures – cantilever sheet piles – anchored bulkheads – fixed and free earth support methods – design of anchors – braced excavations – function of different components– forces in ties – stability against bottom heave.

UNIT V
Pile foundations – single pile versus group of piles – load-carrying capacity of pile groups – negative skin friction (NSF) -settlement of pile groups in sands and clays – laterally loaded piles in granular soils – Reese and Matlock method – laterally loaded piles in cohesive soils– Davisson and Gill method – Broms'analysis.

UNIT VI
Foundationsinexpansivesoils–definitionsofswellpotentialandswellingpressure – determination of free swell index – factors affecting swell potential and swelling pressure – foundation practices – sand cushion method – CNS layer - drilled piers and belled piers– under-reamed piles – moisture control methods.

Text Books:
1. Principles of Foundation Engineering, B M Das, CENTAG Learning
2. Soil Mechanics and Foundation Engineering, V N S Murthy, CBS Publishers
3. Basic and applied soil mechanics by Gopal Ranjan and ASR Rao, New Age Publishers

References:
1. Foundation Analysis and Design, J.E.Bowles, JohnWiley
2. Foundation Design, W.C.Teng, PrenticeHallPublishers
3. Analysis and Design of Foundations and Retaining Structures by Prakash S edited by Saritha Prakashan

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation / Year	V18 / 2021-2022	3	0	0	3	V18CET32
Name of the Course	**TRAFFIC ENGINEERING & MANAGEMENT**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of the course the student will be able to:

- Understand basics principles of Traffic Engineering(K2)
- Analyze parking data and model accidents(K3)
- Determine capacity and LOS(K3)
- Design of Signalized systems at congested intersections(K3)
- Design of interchanges and Rotary Intersections(K3)
- To provide engineering techniques to achieve Safe and efficient movement of people
  and goods on roadways(K2)

SYLLABUS

UNIT I

Traffic Studies (Part- I) : Basic principles of Traffic, Volume, Speed and Density; Definitions and their interrelationships; Traffic Volume studies - Objectives, Methods of Volume counts, Presentation of Volume Data; Speed studies- Types of Speeds, Objectives, Methods of speed studies, Statistical Methods for speed data Analysis, Presentation of speed data. Delay Studies; Head ways and Gap Studies - Headway and Gap acceptance, Origin and Destination Studies.

UNIT II

Traffic Studies (Part-II) : Parking Studies: parameters of parking, definitions, Parking inventory study, Parking survey by Patrolling method; Analysis of Parking Survey data; Accident studies - Causative factors of Road accidents, Accident data collection: Accident analysis and modeling; Road Safety Auditing, Measures to increaseRoadsafety.

UNIT III

Capacity and LOS Analysis: Introduction to Traffic capacity, Analysis concepts, Level of Service, Basic definitions, Factors affecting Capacity and LOS, Capacity of Urban/Rural Highway, With or without access control, Basic freeway segments - Service flow rate of LOS, Lane width or Lateral clearance adjustment; Heavy vehicle adjustment; Driver population adjustment.

UNIT IV

Signal Designing: Fixed Time signals, Determination of Optimum Cycle length and Signal setting for Fixed Time signals, Warrants for Signals, Time Plan Design for Pre-Timed Control- Lane group analysis, Saturation flow rate, and Adjustment factors, Uniform and Incremental Delay, Vehicle Actuated Signals, Signal Coordination.

UNIT V

Design of Intersections: Rotary Design, Weaving angles, Entry width, Exit Radius, Capacity of Rotary, Types of interchanges, Implementation.

UNIT VI

Transportation System Management: Measures for Improving vehicular flow – one way Streets, Signal Improvement, Transit Stop Relocation, Parking Management, Reversible lanes- Reducing Peak Period Traffic - Strategies for working hours, Congestion Pricing, Differential Toll Policies.

Text Books:

1. Traffic Engineering and Transportation Planning – L.R. Kadiyali, Khanna Publishers
2. Principles of Highways Engineering and Traffic Analysis - Fred Mannering & Walter Kilareski, John Wiley & Sons Publication.
3. Transportation Engineering - An Introduction - C. Jotin Khisty, Prentice Hall Publication.

References:

1. Fundamentals of Transportation Engineering - C. S. Papacostas, Prentice Hall India.
2. Traffic Engineering - Theory & Practice - Louis J. Pignataro, Prentice Hall Publication.
3. Traffic Engineering by Roger P. Roess, William R. Mc. Shane, Elena S. Prassas , Prentice Hall, 1977.
4. Relevant IRC Codes

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET33
Name of the Course	**CONSTRUCTION PROJECT PLANNING & SYSTEMS**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Identify the importance of Project Manager, Project Planning & scheduling and different charts (K3)
- Solve the networks by using different network analysis methods such as PERT & CPM (K2)
- Discuss the functioning of various Construction equipment & Earthwork equipment (K2)
- Discuss the functioning of various Hoisting equipment (K2)
- Discuss the methods of production of Aggregate products and concreting (K2)
- Describe the Quality control, Safety Engineering and construction techniques (K2)

SYLLABUS

UNIT I

Introduction: Construction project management and its relevance – qualities of a project manager – project planning – coordination –scheduling - monitoring – bar charts – milestone charts

UNIT II

PERT & CPM: Project Evaluation and Review Technique – Critical Path Method – Applications- cost analysis - updating – crashing for optimum cost – crashing for optimum resources – allocation of resources

UNIT III

Construction & Earthwork equipment: Economical considerations – earthwork equipment – Trucks and handling equipment – rear dump trucks – capacities of trucks and handling equipment – calculation of truck production – compaction equipment – types of compaction rollers.

UNIT IV

Hoisting Equipment: Hoists – cranes – tractors - bulldozers – graders – scrapers– draglines - clamshell buckets

UNIT V

Concreting Equipment: Crushers – jaw crushers – gyratory crushers – impact crushers – selection of crushing equipment - screening of aggregate – concrete mixers – mixing and placing of concrete – consolidating and finishing

UNIT VI

Construction methods: Earthwork – piling – placing of concrete – form work – fabrication and erection – quality control and safety engineering

Text Books:

1. Construction Engineering and Management by Dr. S. Seetharaman, Umesh Publications.
2. Project planning and control with PERT and CPM by Dr. B. C. Punmia and K.K. Khandelwal, Laxmi Publications (P) Ltd.
3. Construction planning, Equipment and Methods by Peurifoy and Schexnayder, Shapira,TataMc.Grawhill.

References:

1. Construction project management theory and practice by Kumar NeerajJha, Pearson.
2. Construction Technology by Subir K. Sarkar and SubhajitSaraswati, Oxford University press.

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET34
Name of the Course	**SOLID WASTE MANAGEMENT**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Generalize Solid Waste and its management (K2)
- Assess different elements for managing Solid Waste (K3)
- Employ different methods for transfer and transport of solid waste (K3)
- Employ different methods for Separation and Transformation of Solid waste (K3)
- Organize different methods for processing and treatment of municipal solid waste (K3)
- Identify suitable disposal methods with respect to solid waste (K2)

SYLLABUS

UNIT I

Introduction to Solid Waste Management: Goals and objectives of solid waste management, Classification of Solid Waste – Factors Influencing generation of solid waste – sampling and characterization –Future changes in waste composition, major legislation, monitoring responsibilities.

UNIT II

Basic Elements In Solid Waste Management: Elements and their inter relationship – principles of solid waste management- onsite handling, storage and processing of solid waste Collection of Solid Waste: Types and methods of waste collection systems, analysis of collection system – optimization of collection routes.

UNIT III

Transfer and Transport: Need for transfer operation, compaction of solid waste – transport means and methods, transfer station types and design requirements.

UNIT IV

Separation and Transformation of Solid Waste: Unit operations used for separation and transformation: shredding – materials separation and recovery, source reduction and waste minimization.

UNIT V

Processing and Treatment: Processing of solid waste – Waste transformation through combustion and composting, anaerobic methods for materials recovery and treatment – Energy recovery – biogas generation and cleaning– Incinerators.

UNIT VI

Disposal of Solid Waste: Methods of Disposal, Landfills: Site selection, design and operation, drainage and leachate collection systems –designated waste landfill remediation.

Text Books:

1. George Techobanoglous "Integrated Solid Waste Management", McGraw Hill Publication, 1993
2. Gerard Kiely " Environmental Engineering", McGraw Hill Publication, 2007
3. J Glynn Henry,. Gary W.Heinke "Environmental Science and Engineering", Prentice-Hall of India Pvt Ltd, 1996

2. Charles A. Wentz; "Hazardous Waste Management", McGraw Hill Publication, 1995.
3. Mackenzie L Davis, David A.Cornwell :Introduction to Environmental Engineering" McGraw Hill Publication, 2017

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET35
Name of the Course	**GROUND WATER DEVELOPMENT**					
Branch	CIVIL ENGINEERING					

Course Outcomes

At the end of the course the student will be able to

- Analyse radial flow towards wells in confined and unconfined aquifers (K3)
- Design wells and understand the construction practices (K5)
- Construct the wells and development of ground water (K2)
- Determine the process of artificial recharge for increasing groundwater potential (K4)
- Employ different geo physical methods to explore ground water (K3)
- Apply appropriate measures for groundwater management (K3)

SYLLABUS

UNIT I

Introduction: Groundwater in the hydrologic cycle, groundwater occurrence, aquifer parameters and their determination, general groundwater flow equation.

Well Hydraulics Steady radial flow and unsteady radial flow to a well in confined and unconfined aquifers, Theis solution, Jocob and Chow's methods, Leaky aquifers.

UNIT II

Well Design: Water well design-well diameter, well depth, well screen-screen length, slot size, screen diameter and screen selection, design of collector wells, infiltration gallery.

UNIT III

Well Construction and Development: Water wells, drilling methods-rotary drilling, percussion drilling, well construction-installation of well screens-pull-back method, open- hole, bail- down and wash-down methods, well development-mechanical surging using compressed air, high velocity jetting of water, over pumping and back washing, well completion, well disinfection, well maintenance.

UNIT IV

Artificial Recharge: Concept of artificial recharge of groundwater, recharge methods-basin, stream-channel, ditch and furrow, flooding and recharge well methods, recharge mounds and induced recharge

Saline Water Intrusion: Occurrence of saline water intrusion, Ghyben-Herzberg relation, Shape of interface, control of saline water intrusion.

UNIT V

Geophysics: Surface methods of exploration of groundwater – Electrical resistivity and Seismic refraction methods, Sub-surface methods – Geophysical logging and resistivity logging. Aerial Photogrammetry applications.

UNIT VI

Groundwater Modeling and Management: Basic principles of groundwater modelling- Analog models-viscous fluid models and membrane models, digital models-Finite difference and finite element models, Concepts of groundwater management, basin management by conjunctive use-case studies.

Text Books:

1. Groundwater, Raghunath H M, New Age International Publishers, 2005.
2. Groundwater Hydrology, Todd D. K., Wiley India Pvt Ltd., 2014.
3. Groundwater Hydrology, Todd D K and L W Mays, CBS Publications, 2005.

References:

1. Groundwater Assessment and Management, Karanth K R, Tata McGraw Hill Publishing Co., 1987.
2. Groundwater Hydrology, Bouwer H, McGraw Hill Book Company, 1978.
3. Groundwater Systems Planning and Management, Willis R and W.W.G. Yeh, Prentice Hall Inc., 1986.
4. Groundwater Resources Evaluation, Walton W C, McGraw Hill Book Company,1978.

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET36
Name of the Course	**EARTHQUAKE ENGINEERING**					
Branch	CIVIL ENGINEERING					

Course Outcomes

At the end of the course the student will be able to

- Differentiate types of lodes and it's characteristic(K2)
- Recognize foundations of many basic engineering concepts related earthquake engineering(K2)
- Examine the strong ground motion and seismic hazard(K3)
- Assess the frequency of wave propagation in different mediums(K3)
- Find the behavior of structures during earthquake and earthquake resistant Features of structure(K3)
- Relate the properties of liquefaction and soil improvement for remediation of seismic hazards(K3)

SYLLABUS

UNIT I

Introduction to Dynamic Loads: Static Load v/s Dynamic Load, Types of Dynamic forces, Force Control and Displacement Control.

UNIT II

Seismology and Earthquakes: Introduction, Seismic Hazards, seismic waves, internal structure of earth, Continental drift and plate tectonics, faults, elastics rebound theory, geometric notations, location of earthquakes, size of earthquakes.

UNIT III

Strong Ground Motion: Strong ground motion measurement, ground motion parameters, estimation of ground motion parameters.

Seismic Hazard Analysis: Identification and Evaluation of Earthquake Sources, deterministic seismic hazard analysis, probabilistic seismic hazard analysis.

UNIT IV

Wave Propagation: Waves in unbounded media, waves in a semi – infinite body, waves in a layered media, attenuation of stress waves.

Artificial Ground Motion Generation: Modification of actual ground motion records, time –domain generation, frequency domain generation.

UNIT V

Behavior of Structures: During Earthquake and Earthquake Resistant Features of Structure Inertia forces in structures, Behavior of Masonry Structures, Behavior of RC Structures

UNIT VI

Liquefaction: Flow liquefaction, cyclic mobility, evaluation of liquefaction hazards, liquefaction susceptibility, initiation of liquefaction, effects of liquefaction.

Soil Improvement for Remediation of Seismic Hazards: Densification techniques, Reinforcement Techniques, Grouting and Mixing techniques, Drainage techniques.

Text Books:

1. Earthquake Resistant Design of Structures By Pankaj Agarwal & Manish Shrikhande, PHI Publications
2. S. K. Duggal; Earthquake Resistance Design of Structures; Oxford University Press, New Delhi.
3. K. Chopra; Dynamics of Structures, Pearson, New Delhi
4. Park & Pauly; Behavior of R.C Structures
5. Geotechnical Earthquake Engineering by Steven L. Kramer, prentice Hall

Reference Books:

1. IS: 1893 (Part-I) 2002, Criteria for Earthquake Resistant Design General Provision to Building.
2. S: 13920 (1993), Code of Practice for Ductile Detailing of RC Structures
3. IS: 4326 (1993), Code of Practice for Earthquake Resistant Design and Construction of Buildings
4. IS: 13827 (1993), Improving Earthquake Resistance of Earthen Buildings
5. IS: 13828 (1993), Guide lines for Improving Earthquake Resistance of low Strength Masonry Buildings.
6. S S Rao; Mechanical Vibration; Pearson, New Delhi.

VIII SEMESTER – SYLLABUS

Year/Sem	VIII Sem	L	T	P	C	COURSE CODE
Regulation / Year	V18 / 2021-2022	3	0	0	3	V18CET37
Name of the Course	HIGHWAY CONSTRUCTION & MANAGEMENT					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon the successful completion of course students will be able to

- Understand the concepts of PMS and evaluate strategies for pavement maintenance (K2)
- Evaluate the pavements based on the functional and structural characteristics(K3)
- Understand constructions of Construction methods of Base, Subbase, Shoulders and drains(K2)
- Understand constructions of bituminous pavements(K2)
- Understand the concepts of construction of cement concrete pavements(K2)
- Evaluate the concepts of maintenance of cement concrete pavements(K3)

SYLLABUS

UNIT I

Pavement management system: Components of PMS and their activities; Major steps in implementing PMS; Inputs; Design, Construction and Maintenance; Rehabilitation and Feedback systems; Examples of HDM and RTIM packages; Highway financing; Fund generation; Evaluating alternate strategies and Decision criteria ; Pavement Maintenance Management Components of Maintenance Management and Related Activities – Network and Project Level Analysis; Prioritization Techniques and Formulation of Maintenance Strategies.

UNIT II

Pavement Inventories, Quality Control and Evaluation: Serviceability Concepts; Visual Rating; Pavement Serviceability Index; Roughness Measurements; Distress Modes – Cracking Rutting Etc; Pavement Deflection – Different Methods and BBD, Skid Resistance, Roughness, Safety – Aspects; Inventory System. Causes of Deterioration, Traffic and Environmental Factors, Pavement Performance Modeling Approaches and Methods of Maintaining WBM, Bitumen and Cement Concrete Roads, Quality Assurance; Quality Control – ISO 9000, Sampling Techniques – Tolerances and Controls related to Profile and Compaction.

UNIT III

Construction of Base, Subbase, Shoulders and Drain: Roadway and Drain Excavation, Excavation and Blasting, Embankment Construction, Construction of Gravel Base, Cement Stabilised Sub- Bases, WBM Bases, Wet Mix Construction; Crushed Cement Bases, Shoulder Construction; Drainage Surface, Turfing Sand Drains; Sand Wicks; Rope Drains, Geo- Textile Drainage; Preloading Techniques.

UNIT IV Bituminous Construction: Preparation and Laying of Tack Coat; Bituminous Macadam, Penetration Macadam, Built up Spray Grout, Open Graded Premix, Mix Seal, Semi-Dense Asphalt Concrete-Interface Treatments and Overlay Construction, IRC Specifications.

UNIT V Cement Concrete pavement Construction: Cement Concrete Pavement Analysis - Construction of Cement Roads, Manual, and Mechanical Methods, Joints in Concrete and Reinforced Concrete Pavement and Overlay Construction.

UNIT VI Bituminous and Cement Concrete pavement Maintenance: Repair of surface layer, Base layer, sub base layer, Sub grade. Maintenance of Concrete slab, Dry Lean concrete sub base layer and Subgrade in concrete pavement.

Text Books :

1. Highway Engineering, Khanna S. K., Justo C. E. G and Veeraragavan A, Nem Chand Bros., Roorkee.
2. Principles of Highway Engineering, Kadiyali L. R, Khanna Publishers, New Delhi.
3. MORTH - Specifications.

References:

1. Principles of Transportation Engineering, Partha Chakroborthy and Animesh Das PHI Learning Private Limited, Delhi.
2. Transportation Engineering - An Introduction, JotinKhisty C, Prentice Hall, Englewood Cliffs, New Jersey.
3. Transportation Engineering and Planning, Papacostas C.S. and P.D. Prevedouros,Prentice Hall of India Pvt.Ltd; New Delhi.

Year/Sem	VIII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET38
Name of the Course	REPAIR AND REHABILITATION OF STRUCTURES					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon the successful completion of course students will be able to

- Develop various maintenance and repair strategies(K2)
- Evaluate the existing buildings through field investigations(K2)
- Understand and use the different techniques for structural rehabilitation(K2)
- To assess damage to structures and various repair techniques(K2)
- To understand the importance of maintenance of structures(K2)
- Understand the importance of advanced concretes mixes(K2)

SYLLABUS

UNIT I

Introduction: Deterioration of Structures – Distress in Structures – Causes and Prevention. Mechanism of Damage – Types of Damage.

UNIT II

Non Destructive Testing: Corrosion of Steel Reinforcement – Causes – Mechanism and Prevention. Damage of Structures due to Fire – Fire Rating of Structures – Inspection and Testing – Symptoms and Diagnosis of Distress – Damage assessment

UNIT III

Materials for repair and rehabilitation: Admixtures- types of admixtures- purposes of using admixtures- chemical composition- Natural admixtures- Fibres- wraps- Glass and Carbon fibre wraps- Steel Plates

UNIT IV

Strengthening and stabilization: Techniques- design considerations-Beam shear capacity strengthening- Shear Transfer strengthening-stress reduction techniques- Column strengthening-flexural strengthening- Connection stabilization and strengthening, Crack stabilization

UNIT V

Fibre reinforced concrete: Properties of constituent materials- Mix proportions, mixing and casting methods-Mechanical properties of fiber reinforced concrete- applications of fibre reinforced concretes-Light weight concrete- properties of light weight concrete- No fines concrete- design of light weight concrete- Flyash concrete-Introduction- classification of flyash-properties and reaction mechanism of flyash- Properties of flyash concrete in fresh state and hardened state-Durability of flyash concretes.

UNIT VI

High performance concretes: Introduction- Development of high performance concretes- Materials of high performance concretes- Properties of high performance concretes- Self Consolidating concrete-properties-qualifications.

Text Books:

1. Maintenance and Repair of Civil Structures, B.L. Gupta and Amit Gupta, Standard

   Publications.
2. Concrete Technology by A.R. Santa Kumar, Oxford University press
3. Concrete technology by Neville and J J Brooks, Pearson publications, 2nd edition

References:

1. Concrete technology by M S Shetty, S. Chand publications (2006).
2. Defects and Deterioration in Buildings, EF & N Spon, London
3. Non-Destructive Evaluation of Concrete Structures by Bungey – Surrey University Press
4. Concrete Repair and Maintenance Illustrated, RS Means Company Inc W.H.Ranso, (1981)
5. Building Failures: Diagnosis and Avoidance, EF & N Spon, London, B.A. Richardson, (1991)

Year/Sem	VIII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET39
Name of the Course	RURAL WATER SUPPLY AND ONSITE SANITATION SYSTEMS					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon the successful completion of course students will be able to

- Relate various approaches for planning the water supply systems in rural areas (K3)
- Apply suitable methods of water treatment for rural areas(K3)
- Develop distribution system in rural areas (K3)
- Apply the sanitary engineering concept and principals(K3)
- Apply the different public sanitation methods in rural areas(K3)
- Apply different solid waste methods in rural areas(K3)

SYLLABUS

UNIT I

Concept of environmental and scope of sanitation in rural areas: Magnitude of problem of water supply and sanitation – population to be covered and difficulties National policy. Various approaches for planning of water supply systems in rural areas. Selection and development of preferred sources of water, springs, wells and infiltration galleries, collection of raw water from surface source.

UNIT II

Specific problems: Specific problems in rural water supply and treatment e.g. iron, manganese, fluorides etc. Low cost treatment, appropriate technology for water supply and sanitation. Improvised method and compact system of treatment of surface and ground waters such as MB settlers, slow and sand filter, chlorine diffusion cartridge etc. Water supply through spot sources, hand pumps, open dug –well.

UNIT III

Planning of distribution system in rural areas: Water supply during fairs, festivals and emergencies. Treatment and disposal of wastewater/sewage. Various method of collection and disposal of night soil.

UNIT IV

On site sanitation system and community latrines: Simple wastewater treatment system for rural areas and small communities such as stabilization ponds, septic tanks, soakage pits etc.

UNIT V

Industrial Hygiene And Sanitation: Occupational Hazards- Schools- Public Buildings- Hospitals- Eating establishments- Swimming pools – leanliness and maintenance and comfort- Industrial plant sanitation

UNIT VI

Solids Waste: Collection, Transfer, Transport and deposit of solid waste management, composting, land filling.

Text Books:

1. Low cost on site sanitation option, Hoffman & Heijno Occasional Nov.1981 paper no.

2. 21, P.O. Box 5500 2280 HM Rijswijk, the Netherlands offices, J.C. Mokeniaan, 5

3. Rijswijk (the Haque). Wagner, E.G. and Lanoik, J.N. water supply for rural areas and Small Communities, Geneva: W.H.O.1959.

References:

1. Manual of water supply and treatment, 3rd edition, CPHEEO, GOI, New Delhi.
2. Vesilind, P.A., Worrell, W., Reinhart, D. “Solid Waste Engineering”, Cenage learning, New Delhi, 2004

Year/Sem	**VIII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET40
Name of the Course	**PRESTRESSED CONCRETE**					
Branch	CIVIL ENGINEERING					

COURSE OUTCOMES:

Upon the successful completion of course students will be able to

- Generalize the basic concepts of prestressed concrete (K2)
- Compute prestress and bending stresses (K3)
- Estimate effective prestress including the short- and long-term losses (K2)
- Analyze and design prestressed concrete beams under flexure (K4)
- Analyze and design prestressed concrete beams under Shear and torsion (K4)
- Generalize the end zone of prestressed concrete members (K2)

SYLLABUS

UNIT I

Introduction: Basic concepts of prestressing; Need for High strength steel and High strength concrete. Terminology; Advantages and Applications of Prestressed Concretes. Materials For Prestressed Concrete: High strength concrete; High tensile steel.

UNIT II

Prestressing Systems: Prestressing Systems- Introduction, Tensioning devices, Pre-tensioning Systems, Post tensioning Systems

Analysis of Prestress and Bending Stresses: Basic assumptions; Analysis of prestress; Resultant stresses at a section; Pressure (Thrust) line and internal resisting couple; Concept of Load balancing.

UNIT III

Losses of Prestress: Nature of losses of prestress; Loss due to elastic deformation of concrete, shrinkage of concrete, creep of concrete, relaxation of stress in steel, friction and anchorage slip; Total losses allowed for in design.

UNIT IV

Deflections of Prestressed Concrete Members: Importance of control of deflections; Factors influencing deflections; Short term deflections of un-cracked members; Effect of tendon profile on deflections.

Limit State of Collapse: Flexural Strength of Prestressed Concrete Sections: Ultimate flexural strength of rectangular sections and T-sections using simplified IS code recommendations.

UNIT V

Limit State of Collapse: Shear Resistance of Prestressed Concrete Members: Shear and principal stresses; Shear- IS Code recommendations: Ultimate shear resistance of prestressed concrete members; Design of shear reinforcement.

Torsional Resistance of Prestressed Concrete Members: Design of reinforcements for torsion, shear and bending.

UNIT VI

Design of End Blocks: Transmission of prestress in pretensioned members; Transmission length; Anchorage stress in post tensioned members; Bearing stress and bursting tensile force stresses in end blocks-Methods. IS Code provision for the design of end block reinforcement.

Text Books: (supplemented with IS: 1343)

1. Prestressed Concrete by N. Krishna Raju; Tata Mc.Graw - Hill Publishing Company Limited, New Delhi.
2. Pre-stressed Concrete- P. Dayarathnam: Oxford and IBH Publishing Co.
3. Prestressed Concrete, S. Ramamrutham

References:

1. Prestressed concrete by N. Rajagopalan; Narosa Publishing House.
2. Design of pre-stressed concrete structures- T.Y. Lin and Ned H. Burns - John Wiley & Sons, New York.
3. Fundamental of pre-stressed concrete- N.C. Sinha & S.K. Roy
4. Prestressed Concrete, T. Y. Lin & Burns, Wiley Publications

Year/Sem	VIII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET41
Name of the Course	**ENGINEERING WITH GEO-SYNTHETICS**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Relate the need and demand of geo-synthetic materials in the field of geotechnical construction works (K3)
- Employ various parameters related to the use and application of geotextiles, geogrids (K3)
- Examine the use and field testing of geo-synthetics in road construction (K3)
- Design reinforced earth retaining walls with strip, sheet and gird reinforcement (K5)
- Distinguish survivability requirements of geo-composites and could design geowebs, geocells, and moisture barriers and natural geotextiles etc. (K4)
- Employ other methods to use the natural geotextiles like jute fibres, coir, bamboo and their combination (K3)

SYLLABUS

UNIT I

Geosynthetics: Introduction to Geosynthetics – Basic description – Polymeric materials– Uses and Applications. Properties of Geotextiles – Geogrids – Geomembranes – Geocomposites.

UNIT-II

Geotextiles: Design criteria for Separation – Reinforcement – Stabilization – Filtration – Drainage and Moisture barriers.

Geogrids: Designing for Reinforcement – Stabilization – Designing Gabions – Construction methods.

UNIT-III

Use of Geosynthetics in Roads: Geosynthetics in road ways- applications role of subgrade conditions-design criteria-survivability-application in paved roads.

UNIT-IV

Reinforced Earth Retaining Walls: Components - External stability – Internal stability-Design of reinforced earth walls with strip, sheet and grid reinforcement.

UNIT-V

Geomembranes: Pond Liners – Covers for Reservoirs – Canal Liners – Landfill Liners– Caps and closures, moisture barriers.

Geocomposites: An added advantage – Geocomposites in Separation – Reinforcement – Filtration – Geocomposites as Geowebs and Geocells.

UNIT-VI

Natural Geotextiles: Natural fibres as geotextiles- factors governing the use jute fibres-coir geotextiles-bamboo/timber-combination of geotextiles.

Text Books:

1. Designing with Geosynthetics by Robert M. Koerner, Prantice Hall, Eaglewood Cliffs, NJ.

2. An Introduction to Soil Reinforcement and Geosynthetics' by G.L.Sivakumar Babu

(2009), Universities Press (India) Pvt. Ltd.

3. Engineering with Geosynthetics', by G. Venkatappa Rao and GVS Suryanarayana Raju –

Tata McGraw Hill Publishing Company Limited – New Delhi.

References:

1. 'Construction and Geotechnical Engineering using Synthetic Fabries' by Robert M.

Koerner and Josoph P. Welsh. John Willey and Sons, New York.

2. 'Foundation Analysis and Design' by J.E. Bowles McGraw Hill Publications.

Year/Sem	**VIII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET42
Name of the Course	**URBAN HYDROLOGY & HYDRAULICS**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Generalize the effect of urbanization on hydrological cycle (K2)
- Develop intensity duration frequency curves for urban drainage systems (K3)
- Calculate runoff parameters in urban drainage system (K3)
- Develop design storms to size the various components of drainage systems (K3)
- Apply best management practices to manage urban flooding (K3)
- Prepare master drainage plan for an urbanized area (K3)

SYLLABUS

UNIT I

Introduction: Urbanization and its effect on water cycle – urban hydrologic cycle – Trends in urbanization – Effect of urbanization on hydrology

UNIT II

Precipitation Analysis: Importance of short duration of rainfall and runoff data, methods of estimation of time of concentration for design of urban drainage systems, Intensity-Duration -Frequency (IDF) curves, design storms for urban drainage systems.

UNIT III

Approaches to urban drainage: Time of concentration, peak flow estimation approaches, rational method, NRCS curve number approach, runoff quantity and quality, wastewater and storm water reuse, major and minor systems.

UNIT IV

Elements of drainage systems: Open channel, underground drains, appurtenances, pumping, source control.

UNIT V

Analysis and Management: Storm water drainage structures, design of storm water network- Best Management Practices–detention and retention facilities, swales, constructed wetlands, models available for storm water management.

UNIT VI

Master drainage plans: Issues to be concentrated upon – typical urban drainage master plan, interrelation between water resources investigation and urban planning processes, planning objectives, comprehensive planning, use of models in planning.

Text Books:

1. Manual on Drainage in Urbanised area, Geiger W. F., J Marsalek, W. J. Rawls and F.C. Zuidema, (1987 - 2 volumes), UNESCO,

2. Urban Hydrology, Hall M J (1984), Elsevier Applied Science Publisher.

3. Hydrology – Quantity and Quality Analysis, Wanielista M P and Eaglin (1997), Wiley and Sons

4. Urban Hydrology, Hydraulics and Storm water Quality: Engineering Applications and Computer Modelling, Akan A.O and R.L. Houghtalen (2006), Wiley International.

References:

1. Storm water Detention for Drainage, Stahre P and Urbonas B (1990), Water Quality and CSO Management, Prentice Hall.

2. Urban water cycle processes and interactions, Marsalek et.al. (2006), Publication No. 78, UNESCO, Paris (http://www.bvsde.paho.org/bvsacd/cd63/149460E.pdf)

3. Frontiers in Urban Water Management – Deadlock or Hope, by Maksimovic C and J A Tejada-Guibert (2001), IWA Publishing

Year/Sem	**VIII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET43
Name of the Course	**ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of the course, the student will be able to

- Prepare EMP, EIS, and EIA report (K3)
- Select the an appropriate EIA methodologies (K2)
- Assess the Impact of development activities and land use (K3)
- Employ in procuring the natural resources for assessing the environment (K3)
- Assess the ecosystem (K3)
- Develop the EIA notifications and reports (K3)

SYLLABUS

UNIT I

Basic concept of EIA: Elements of EIA-factors affecting EIA-Initial environmental Examination-life cycle analysis preparation of Environmental Base map-Classification of environmental parameters role of stakeholders in the EIA preparation stages in EIA

UNIT II

E I A Methodologies: introduction, Criteria for the selection of EIA Methodology, E I A methods, Ad-hoc methods, matrix methods, Network method Environmental Media Quality Index method, overlay methods, cost/benefit Analysis – EIS and EMP

UNIT III

Impact of Developmental Activities and Land use: Introduction and Methodology for the assessment of soil and ground water, Delineation of study area, Identification of actives- application of remote sensing and GIS for EIA.

UNIT IV

Procurement of natural resources: Procurement of relevant soil quality, Impact prediction, Assessment of Impact significance, Identification and Incorporation of mitigation measures - E I A with reference to surface water, Air and Biological environment: Methodology for the assessment of Impacts on surface water environment, generalized approach for assessment of Air pollution Impact.

UNIT V

Assessment of ecosystem: Assessment of Impact of development Activities on Vegetation and wildlife, environmental Impact of Deforestation. Environmental Risk Assessment and Risk management in EIA: Risk assessment and treatment of uncertainty-key stages in performing an Environmental Risk Assessment advantages of Environmental Risk Assessment

UNIT VI

EIA notification: EIA notification by Ministry of Environment and Forest (Govt. of India): Provisions in the EIA notification, procedure for environmental clearance, and procedure for conducting environmental impact assessment report- evaluation of EIA report. Environmental legislation objectives, evaluation of Audit data and preparation of Audit report. Post Audit activities, Concept of ISO and ISO 14000. Case studies and preparation of Environmental Impact assessment statement for various Industries.

Text Books:

1. Environmental Impact Assessment, Canter Larry W., McGraw-Hill education Edi (1996)

2. Environmental Impact Assessment Methodologies, Y.Anjaneyulu, B. S. Publication, Sultan Bazar, Hyderabad.

3. Environmental Impact Assessment and Management, B B Hosetti, A.Kumar, Daya Publishing House (2014)

References:

1. Environmental Science and Engineering, J. Glynn and Gary W. Hein Ke PrenticeHall Publishers

2. Environmental Science and Engineering, Suresh K. Dhaneja, S. K. ,Katania & Sons Publication., New Delhi.

3. Environmental Pollution and Control, H. S. Bhatia, Galgotia Publication (P) Ltd, Delhi

Year/Sem	**VIII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET44
Name of the Course	**ADVANCED CONCRETE TECHNOLOGY**					
Branch	CIVIL ENGINEERING					

Course Outcomes

Upon successful completion of course the students will be able to

- Relate material characteristics and their influence on microstructure of concrete(K3)
- Predict concrete behavior based on its durability properties(K3)
- Illustrate proportioning of different types of concrete mixes for required fresh and hardened properties using professional codes(K3)
- Select a suitable type of concrete based on specific application(K3)
- Employ suitable concreting methods to place the concrete based on requirement(K3)
- Illustrate different types of concrete tests for hardened properties(K3)

SYLLABUS

UNIT I

Ingredients of Concrete: Cement –chemical composition and their importance, hydration of cement, types of cement. Testing of cement.
Fine aggregate: Functions, requirement, Alternatives to River sand, M-sand introduction and manufacturing.
Coarse aggregate: Importance of size, shape and texture. Grading and blending of aggregate. Testing on aggregate, requirement. Recycled aggregates Water – qualities of water.
Chemical admixtures: Plasticizers, accelerators, retarders and air entraining agents. Mineral admixtures – Pozzolanic and cementitious materials, Fly ash, GGBS, silica fumes, Metakaolin and rice huskash.

UNIT II
Durability of Concrete: Durability, Transport mechanism of fluids and gases in concrete, cracking in concrete - corrosion and carbonation induced cracking, Alkali Aggregate Reaction, degradation by freeze and thaw, chloride attack, sulphate and sea water attack (marine conditions). Hot and cold weather concreting.

UNIT III

Concrete Mix Design: Design of concrete mixes by IS code method - ACI method Design of high strength concrete mixes, design of fly-ash cement concrete mixes, design of high density concrete mixes.

UNIT IV

Special Concrete: Lightweight concrete, autoclaved aerated concrete, no-fines concrete, lightweight aggregate concrete and foamed concrete, High strength concrete, refractory concrete, high density and radiation-shielding concrete, polymer concrete, fibre-reinforced concrete, mortars, renders, recycled concrete, Ferro Cement, Self Compacting Concrete.

UNIT V

Special processes and technology for particular types of structure: Sprayed concrete, underwater concrete, grouts, grouting and grouted concrete, mass concrete, slip form construction, pumped concrete, concrete for liquid retaining structures, vacuum process

UNIT VI

Testing of Concrete: Test methods: Analysis of fresh concrete, Accelerated testing methods, Tests on hardened concrete, Core cutting and testing, partially destructive testing, Non-destructive testing of concrete structure

Text Books:

1. Neville, A.M., Properties of Concrete, Pearson Education Asia (P) Ltd, England, 2000.
2. Concrete Technology, Gambhir M.L, Tata McGraw Hill
3. Concrete Technology, M.S.Shetty, S.Chand& Company New Delhi
4. Concrete microstructure, properties & materials, P.KumarMehata, Paulo & J.M. Monteiro,
5. Light Weight Concrete, Short &Kenniburg, Asia Publishing House, Bombay

References:

1. N. V. Nayak, A. K. Jain Handbook on Advanced Concrete Technology, ISBN: 978-81-8487-186-9
2. Job Thomas, "Concrete Technology", CENGAGE Learning,2015.
3. IS 4926 (2003): Code of Practice Ready-Mixed Concrete [CED 2: Cement and Concrete] Criteria for RMC Production Control, Basic Level Certification for Production Control of Ready Mixed Concrete BMTPC.
4. Specification and Guidelines for Self-Compacting Concrete, EFNARC, Association House.

Year/Sem	VIII Sem	L	T	P	C	COURSE CODE
Regulation	V18	3	0	0	3	V18CET45
Name of the Course	FINITE ELEMENT METHOD					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of the course, the student will be able to

- Apprise the students about the basics of the Finite Element Technique(K2)
- Describe the finite element method, identify different types of finite elements and apply to respective engineering problems(K3)
- Analyze one dimensional solid elements of various engineering problems(K3)
- Illustrate frame structures of various engineering problems (K3).
- Analyze 2-D and 3-D engineering problems using finite element method(K3)
- Examine finite element for elastic stability, fluid mechanics and dynamic analysis (K3)

SYLLABUS

UNIT I

Introduction to Finite Element Analysis: Basic Concepts of Finite Element Analysis - Introduction to Elasticity -Steps in Finite Element Analysis

UNIT II

Finite Element Formulation Techniques: Virtual Work and Variational Principle -Galerkin Method- Finite Element Method: Displacement Approach - Stiffness Matrix and Boundary Conditions

UNIT III

Element Properties: Natural Coordinates -Triangular Elements - Rectangular Elements - Lagrange and Serendipity Elements -Solid Elements - Isoparametric Formulation -Stiffness Matrix of Isoparametric Elements - Numerical Integration: One Dimensional - Numerical Integration: Two and Three Dimensional- Worked out Examples

UNIT IV

Analysis of Frame Structures: Stiffness of Truss Members -Analysis of Truss -Stiffness of Beam Members - Finite Element Analysis of Continuous Beam - Plane Frame Analysis - Analysis of Grid and Space Frame

UNIT V

FEM for Two and Three Dimensional Solids: Constant Strain Triangle - Linear Strain Triangle - Rectangular Elements - Numerical Evaluation of Element Stiffness - Computation of Stresses, Geometric Nonlinearity and Static Condensation - Axisymmetric Element - Finite Element Formulation of Axisymmetric Element - Finite Element Formulation for 3 Dimensional-Elements Worked out Examples

UNIT VI

Additional Applications of FEM: Finite Elements for Elastic Stability - Finite Elements in Fluid Mechanics - Dynamic Analysis

Text Books:

1. Introduction to Finite Elements in Engineering, Tirupati R. Chandrupatla, Ashok D. Belgundu, PHI publications.

2. A first course in the Finite Element Method, Dary L. Logan, Thomson Publications.

3. The Finite Element Method- Zinkiewicz, O.C. and Taylor, R.L , Oxford .

4. Finite Element Analysis Theory and Programming- Krishnamoorthy, C.S, Tata McGraw-Hill Education.

References:

1. Concepts and applications of Finite Element Analysis, Robert D. Cook, Michael E Plesha, John Wiley & sons Publication.

2. Introduction to Finite Element Method, Desai & Abel CBS Publication.

3. Introduction to Finite Element Method- P.N. Godbole, I K International Publishing House Pvt. Ltd.

4. The Finite Element Method in Engineering- S.S. Rao, Butterworth-Heinemann;

5. An Introduction to Finite Element Method- Reddy, J. N., McGraw-Hill Education

Year/Sem	**VIII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CET46
Name of the Course	**GROUND IMPROVEMENT TECHNIQUES**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course. the student will be able to

- To make the student appreciate the need for different ground improvement methods adopted for improving the properties of remoulded and in-situ soils (K2)
- The student should be in a position to understand the importance of dewatering and different dewatering techniques (K3)
- The student should be in a position to know the importance of stabilization of soils and types of stabilizations (K3)
- To make the student understand how the reinforced earth technology and soil nailing can obviate the problems posed by the conventional retaining walls (K3)
- To enable the students to know how geotextiles and geosynthetics can be used to improve the engineering performance of soils (K2)
- To make the student learn the concepts, purpose and effects of grouting (K2)

SYLLABUS

UNIT I

In situ densification methods: In situ densification of granular soils-vibration at ground surface and at depth, impact at ground and at depth – in situ densification of cohesive soils – pre loading – vertical drains – sand drains and geo drains – stone columns.

UNIT II

Dewatering: Sumps and interceptor ditches – single and multi stage well points – vacuum well points – horizontal wells– electro osmosis

UNIT III

Stabilization of soils: Methods of soil stabilization – mechanical – cement – lime – bitumen and polymer stabilization – use of industrial wastes like fly ash and granulated blast furnace slag.

UNIT IV

Reinforced earth: Principles – components of reinforced earth –stability checks – soil nailing

UNIT V

Geosynthetics: Geotextiles – types – functions, properties and applications – geogrids , geomembranes and gabions – properties and applications.

UNIT VI

Grouting: Objectives of grouting – grouts and their applications – methods of grouting – stage of grouting.

Text Books:

1. Ground Improvement Techniques, Purushotham Raj, Laxmi Publications, New Delhi.
2. Ground Improvement Techniques, Nihar Ranjan Patro, Vikas Publishing House (p) limited , New Delhi.
3. An introduction to Soil Reinforcement and Geosynthetics, G. L. Siva Kumar Babu, Universities Press.

References:

1. Ground Improvement, M.P.Moseley, Blackie Academic and Professional, USA
2. Designing with Geosynethetics, R. M Koerner, Prentice Hall
3. Engineering Principles of Ground Modification by Manfred R. Hausmann,McGraw-Hill Inc.,

ANNEXURE – CE- II

COURSES OFFERED UNDER OPEN ELECTIVE IN VII & VIII SEMESTER TO OTHER BRANCHES

Open Elective 2	VII Sem	3. Environmental Pollution and Control 4. Disaster Management	V18CEOE03 V18CEOE04
Open Elective 3	VIII Sem	3. Solid Waste Management 4. Water Quality and Conservation	V18CEOE05 V18CEOE06

Year/Sem	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CEOE03
Name of the Course	**ENVIRONMENTAL POLLUTION AND CONTROL**					
Branch	Common to all except Civil Engineering					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Describe about air pollution and its control methods to students(K2)
- Develop the student to understand about industrial wastewater and ways to control it (K3)
- Describe student to understand about solid waste and methods to control it(K2)
- Express to student about importance of Environmental sanitation(K2)
- Prepare student to understand about Hazardous waste and ways to control it(K3)
- Illustrate the importance of Sustainable development to student(K3)

SYLLABUS
UNIT I
Air Pollution: Air pollution Control Methods–Particulate control devices – Methods of Controlling Gaseous Emissions – Air quality standards.Noise Pollution: Noise standards, Measurement and control methods –Reducing residential and industrial noise – ISO14000.

UNIT II

Industrial wastewater Management: – Strategies for pollution control - Volume and Strength reduction – Neutralization – Equalization – Proportioning – Common Effluent Treatment Plants - Recirculation of industrial wastes – Effluent standards.

UNIT III

Solid Waste Management: solid waste characteristics – basics of on-site handling and collection – separation and processing – Incineration Composting-Solid waste disposal methods – fundamentals of Land filling.

UNIT IV

Environmental Sanitation: Environmental Sanitation Methods for Hostels and Hotels, Hospitals, Swimming pools and public bathing places, social gatherings (melas and fares), Schools and Institutions, Rural Sanitation-low cost waste disposal methods.

UNIT V

Hazardous Waste: Characterization - Nuclear waste – Biomedical wastes – Electronic wastes - Chemical wastes – Treatment and management of hazardous waste-Disposal and Control methods.

UNIT VI

Sustainable Development: Definition- elements of sustainable developments-Indicators of sustainable development- Sustainability Strategies- Barriers to Sustainability–Industrialization and sustainable development – Cleaner production in achieving sustainability- sustainable development.

Text Books:

1. Environmental Engineering, by Ruth F. Weiner and Robin Matthews – 4th Edition Elesevier, 2003.
2. Environmental Science and Engineering by J.G. Henry and G.W. Heinke – Pearson Education.
3. Environmental Engineering by Mackenzie L Davis & David A Cornwell. McGraw Hill Publishing.

References:

1. Air Pollution and Control by M.N. Rao & H.N. Rao
2. Solid Waste Management by K. Sasi Kumar, S.A. Gopi Krishna. PHI New Delhi.
3. Environmental Engineering by Gerard Kiley, Tata McGraw Hill.
4. Environmental Sanitation by KVSG Murali Krishna, Reem Publications, New Delhi.
5. Industrial Water Pollution Control by Nemerow Jr., McGraw Hill Publishing.
6. Unit Operations and Processes in Environmental Engineering by Reynolds. Richard – Cengage Learning.
7. Environmental Engineering by D. Srinivasan, PHI Learning Private Limited, New Delhi, 2011.
8. Environmental Engineering – Howard S. Peavy, Donald R. Rowe,Teorge George Tchobanoglus – Mc-Graw-Hill Book Company,New Delhi, 1985.

Year/Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CEOE04
Name of the Course	**DISASTER MANAGEMENT**					
Branch	Common to all except Civil Engineering					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Describe to student to have a idea on different natural hazards and disaster management (K2)
- Develop the student to understand manmade disaster and their management (K3)
- Prepare the student in such a way inorder to understand building codes and vulnerability of disaster (K3)
- Illustrate to student about role of technology in disaster management (K2)
- Assess the importance of education and community preparedness in disaster management to student (K3)
- Classify the multi-sectional issues caused by disaster to student (K2)

SYLLABUS

UNIT I

Natural Hazards and Disaster Management: Introduction of DM Disaster Management cycle – Five priorities for action- Case study methods of the following: floods, droughts – Earthquakes – global warming, cyclones & Tsunamis – Post Tsunami hazards along the Indian coast – landslides.

UNIT II

Man Made Disastar And Their Management Along With Case Study Methods Of The Following: Fire hazards – transport hazard dynamics – solid waste management – post disaster – bio terrotirism - rail and air craft's accidents-Management of these disasters

UNIT III

Risk And Vulnerability: – Building codes and land use planning – social vulnerability – environmental vulnerability -Financial management of disaster.

UNIT IV

Role Of Technology In Disaster Managements: Disaster management for infra structures, taxonomy of infra structure - mitigation programme for earth quakes –geospatial information in agriculture drought assessment-multimedia technology in disaster risk management and training-transformable indigenous knowledge in disaster reduction.

UNIT V

Education And Community Preparedness: Education in disaster risk reduction-Essentials of school disaster education-Community capacity and disaster resilience-Community based disaster recovery -Community based disaster management and social capital-Designing resilience- building.

UNIT VI

Multi-sectional Issues: Impact of disaster on poverty and deprivation-Climate change adaptation and human health -Exposure , health hazards and environmental risk-Forest management and disaster risk reduction - The Red cross and red crescent movement.

Text Books:

1. Disaster Management – Global Challenges and Local Solutions' by Rajib shah & R R Krishnamurthy(2009),Universities press.
2. Disaster Science & Management' by Tushar Bhattacharya, Tata McGraw Hill Education Pvt. Ltd., New Delhi.
3. Disaster Management – Future Challenges and Opportunities' by Jagbir Singh (2007), I K International Publishing House Pvt. Ltd.

Reference Books:

1. 'Disaster Management' edited by H K Gupta (2003), Universities press.
2. Natural Hazards and Disaster Management, Vulnerability and Mitigation by RB Singh
3. Disaster Management by Harish K.Gupta

Year/Sem	**VIII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V18	3	0	0	3	V18CEOE05
Name of the Course	**SOLID WASTE MANAGEMENT**					
Branch	Common to all except Civil Engineering					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Generalize Solid Waste and its management(K2)
- Assess different elements for managing Solid Waste(K3)
- Employ different methods for transfer and transport of solid waste(K3)
- Employ different methods for Separation and Transformation of Solid waste(K3)
- Organize different methods for processing and treatment of municipal solid waste(K3)
- Identify suitable disposal methods with respect to solid waste(K2)

SYLLABUS

UNIT I

Introduction to Solid Waste Management: Goals and objectives of solid waste management, Classification of Solid Waste – Factors Influencing generation of solid waste – sampling and characterization –Future changes in waste composition, major legislation, monitoring responsibilities.

UNIT II

Basic Elements In Solid Waste Management: Elements and their inter relationship – principles of solid waste management- onsite handling, storage and processing of solid waste Collection of Solid Waste: Types and methods of waste collection systems, analysis of collection system – optimization of collection routes.

UNIT III

Transfer and Transport: Need for transfer operation, compaction of solid waste – transport means and methods, transfer station types and design requirements.

UNIT IV

Separation and Transformation of Solid Waste: Unit operations used for separation and transformation: shredding – materials separation and recovery, source reduction and waste minimization.

UNIT V

Processing and Treatment: Processing of solid waste – Waste transformation through combustion and composting, anaerobic methods for materials recovery and treatment – Energy recovery – biogas generation and cleaning– Incinerators.

UNIT VI

Disposal of Solid Waste: Methods of Disposal, Landfills: Site selection, design and operation, drainage and leachate collection systems –designated waste landfill remediation.

Text Books:

1. George Techobanoglous "Integrated Solid Waste Management", McGraw Hill Publication, 1993
2. Gerard Kiely " Environmental Engineering", McGraw Hill Publication, 2007
3. J Glynn Henry,. Gary W.Heinke "Environmental Science and Engineering", Prentice-Hall of India Pvt Ltd, 1996

3. Mackenzie L Davis, David A.Cornwell :Introduction to Environmental Engineering" McGraw Hill Publication, 2017

Year/Sem	VIII Sem	L	T	P	C	COURSE CODE
Regulation Year	V18 / 2021-2022	3	0	0	3	V18CEOE06
Name of the Course	WATER QUALITY AND CONSERVATION SYSTEMS					
Branch	Common to all except Civil Engineering					

Course Outcomes:
Upon successful completion of the course, the student will be able to

- Describe the Engineering Hydrology and application (K2)
- Assess the importance and necessity of water supply systems (K3)
- Relate different sources of surface and ground water (K3)
- Predict the quality of water in reference to IS and WHO standards (K3)
- Design of plumbing and sanitary fittings (K3)
- Employ different conservation techniques (K3)

SYLLABUS

UNIT I
Introduction to Hydrology: Engineering hydrology, applications, Hydrologic cycle, evaporation, evapotranspiration, precipitation, run off, infiltration, hydrological data-sources

UNIT II

Sources of Water: Surface water, Lakes, Rivers, Reservoirs, comparison of sources with reference to quality, quantity and other considerations.

Groundwater, types of water bearing formations, springs, Wells and Infiltration galleries, Yields from infiltration galleries.

UNIT III

Importance and Necessity: Protected Water Supply systems, Flow chart of public water supply system, Water borne diseases. Estimation of water usages in different purpose.

UNIT IV

Quality and Analysis of Water: Characteristics of water–Physical, Chemical and Biological-Analysis of Water – Physical, Chemical and Biological characteristics. Comparison of sources with reference to quality- I.S. Drinking water quality standards and WHO guidelines for drinking water.

UNIT V

Plumbing Systems: Systems of plumbing-types of pipes and sanitary fittings and other accessories–one pipe andtwo pipe systems – Design parameters and factors.

UNIT VI

Water conservation: importance and necessity, objectives, systems-rainwater harvesting, recharge pits, watershed.

SYLLABI OF III & IV SEMESTERS OF B.TECH V20 REGULATION

ACADEMIC YEAR 2021-2022

III SEMESTER – SYLLABUS

Year/Sem	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CET01
Name of the Course	**STRENGTH OF MATERIALS**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Understand the basic materials behavior under the influence of different external loading conditions and the support conditions (K2)
- Draw the diagrams indicating the variation of the key performance features like bending moment and shear forces (K3)
- Understand bending concepts and calculation of section modulus and for determination of stresses developed in the beams and torsion (K3)
- Understand the basic concepts of Principal stresses developed in a member when it is subjected to stresses along different axes and design the sections (K2)
- Asses stresses in different engineering applications like columns and struts subjected to different loading conditions (K3)

SYLLABUS

UNIT I

Simple Stresses ,Strains and Strain Energy: Elasticity and plasticity –Types of stresses and strains – Hooke‘s law – stress – strain diagram for mild steel – Workingstress – Factor of safety – Lateral strain, Poisson‘s ratio and volumetric strain – Elasticmoduli and the relationship between them – Bars of varying section – composite bars –Temperature stresses. Strain Energy – Resilience – Gradual, sudden, impact and shock loadings – simple applications.

UNIT II

Shear Force and Bending Moment: Definition of beam – Types of beams – Concept of shear force and bending moment – S.F and B.M diagrams for cantilever, simply supported and overhanging beams subjected to point loads, uniformly distributed loads, uniformly varying loads and combination of these loads – Point of contra flexure – Relation between S.F., B.M and rate of loading at a section of a beam

Deflection of Beams: Bending into a circular arc – slope, deflection and radius of curvature – Differential equation for the elastic line of a beam – Double integration and Macaulay‘s methods – Determination of slope and deflection for cantilever and simply supported beams subjected to point loads, - U.D.L. Uniformly varying load. Mohr‘s theorems – Moment area method – application to simple cases.

UNIT III

Flexural Stresses: Theory of simple bending – Assumptions – Derivation of bending equation: M/I = f/y = E/R, Neutral axis – Determination bending stresses – section modulus of rectangular and circular sections (Solid and Hollow), I, T, Angle and Channel sections – Design of simple beam sections.

Shear Stresses: Derivation of formula – Shear stress distribution across various beam sections like rectangular, circular, triangular, I, T angle sections, built up beams, shear centre Torsion- Derivation of torsion equation and its assumptions.

UNIT-IV

Principal Stresses and Strains: Introduction – Stresses on an inclined section of a bar under axial loading – compound stresses – Normal and tangential stresses on an inclined plane for biaxial stresses – Two perpendicular normal stresses accompanied by a state of simple shear – Mohr’s circle of stresses – Principal stresses and strains – Analytical and graphical solutions. Theories of failures: Various Theories of failures such as Maximum Principal stress theory –Maximum Principal Strain Theory – Maximum shear stress theory – Maximum strain energy theory –Maximum shear strain energy theory.

UNIT-V

Columns and Struts: Introduction – Types of columns – Short, medium and long columns –Axially loaded compression members – Crushing load – Euler’s theorem for long columns –assumptions – derivation of Euler’s critical load formulae for various end conditions – Equivalent length of a column – Slenderness ratio –Euler’ critical stress – Limitations of Euler’ theory – Rankine– Gordon formula – Long columns subjected to eccentric loading – Secant formula –Empirical formulae – Straight line formula – Prof. Perry’ formula.

Text Books:

1. Mechanics of Materials- R. C. Hibbler, Pearson; 10 edition (January 15, 2016)
2. Strength of materials -S. S. Bhavakatti, Vikas Publishing House; Fourth edition (2013)
3. Strength of Materials -R. K. Rajput, S. Chand Publishing (6th Edition) (2015)
4. Strength of Materials - R.K Bansal,Laxmi Publications; Sixth edition (2018)

References:

1. Fundamentals of Solid Mechanics M.L. Gambhir, PHI Learning Pvt. Ltd., New Delhi. (1 December 2009)
2. Introduction to Strength of Material by U.C. Jindal, Pearson Education; Second edition (28 September 2017)
3. Strength of materials by R. Subramanian, Oxford university press, New Delhi, third edition (15 June 2016)

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET02
Name of the Course	**FLUID MECHANICS & HYDRAULICS**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Understand the physical properties of fluids and their influences on fluid motion (K2)
- Calculate the forces acting on plane and curved surfaces and solve fluid flow problems in kinematics and dynamics (K3)
- Solve various laminar and turbulent flow problems (K2)
- Solve uniform and non uniform open channel flow problems (K2)
- Estimate the impact of jet on plane and curved surfaces using momentum Principle (K2)

SYLLABUS

UNIT I

Introduction and Hydrostatics: Dimensions and units – Physical properties of fluid specific gravity, viscosity, surface tension, vapor pressure and their influences on fluid motion - pressure at a point, Pascal‘s law, hydrostatic law, atmospheric, gauge and vacuum pressure, measurement of pressure - pressure gauges, Manometers: Differential Manometers- Hydrostatic forces on submerged plane - Horizontal, Vertical, Center of pressure, derivations and problems.

UNIT II

Fluid Kinematics and Dynamics: Description of fluid flow - Stream line, path line and streak lines and stream tube - Classification of flows: Steady, unsteady, uniform, non-uniform, laminar, turbulent, rotational and irrotational flows - Surface and body forces - Euler and Bernoulli’s equations for flow

UNIT III

Closed Conduit and Measurement of Flow: Laws of Fluid friction-Darcy’s equation-Minor losses-pipes in series, pipes in parallel, Pipe network problem- variation friction factor with Reynolds’s number- Pitottube,Venturi meter and Orifice meter - flow over rectangular, triangular and trapezoidal notches.

UNIT IV

Uniform Flow and Non Uniform Flow: Types of flows - Type of channels - Chezy's, manning's and Bazin formulae for uniform flow - Most Economical sections - Critical flow: Specific energy-critical depth computation of critical depth critical, sub-critical and super critical flows - Dynamic equation for G.V.F., Mild, Critical, Steep, horizontal and adverse slopes, surface profiles - direct step method - Rapidly varied flow, hydraulic jump, energy dissipation.

UNIT V

Hydraulic Similitude and Momentum Principles: Dimensional analysis-Buckingham's-Pi theorem - study of hydraulic models-Geometric, Kinematic and Dynamic similarities-dimension less numbers, model laws-Hydrodynamic force of jets on stationary and moving flat-inclined and curved vanes-jet striking centrally and at tip- velocity triangles at inlet and outlet-expressions for work done and efficiency

Textbooks:

1. Hydraulics and Fluid Mechanics including Hydraulic Machines by Dr. P.N.Modiand Dr.S.N.Seth, Standard Book house, Rajsons Pvt.Ltd.,21stEdition.
2. A text book of Fluid Mechanics and Hydraulic Machines by Dr.R.K.Bansal,Laxmi Publications(P)Ltd.,NewDelhi,10thEdition,2018.
3. A text book of Fluid mechanics and Hydraulic machines by Er. R.K.Rajput, S.Chand&company,6thEdition,2016

References:

1. Introduction to Fluid Mechanics and Fluid Machines by S.K.Som, G.Biswas, Suman Chakraborthy, McGraw Hill Education, 3rd Edition,2017.
2. Fluid Mechanics by A.K.Mohanty, Prentice Hall of India Pvt. Ltd., NewDelhi,2nd Edition,1994.
3. Fluid Mechanics and Hydraulic Machines by K.Subramanya, McGraw Hill Education,1st Edition,2010.

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET03
Name of the Course	SURVEYING AND GEOMATICS					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Demonstrate the basic surveying skills (K2)
- Computation of bearings by various surveying instruments (K3)
- Perform different methods of leveling (K3)
- Compute various data required for various methods of surveying (K3)
- Compute area and volume quantities by different methods (K3)

SYLLABUS

UNIT I

Introduction: Definition-Uses of surveying- overview of plane surveying (chain, Compass and plane table), Objectives, Principles and classifications – Errors in survey Measurements

UNIT II

Compass survey and traversing: Electronic distance measurements (EDM)- principles of electro optical EDM-Errors and corrections to linear measurements- Compass survey-Meridians, Azimuths and Bearings, declination, computation of angle. Traversing-Purpose-types of traverse- traverse computation-traverse adjustments-Introduction omitted measurements

UNIT III

Leveling, contouring and Curves: Concept and Terminology, Leveling Instrument and their Temporary and permanent adjustments- method of leveling. Characteristics and Uses of contours- methods of conducting contour surveys.Types of curves, design and setting out – simple and compound curves

UNIT IV

Theodolite Surveying: principles-uses and adjustments – temporary and permanent, measurement of horizontal and vertical angles. Principles of Electronic Theodolite – Introduction to Trigonometrically leveling,. Tachometric Surveying: Stadia and tangential methods of Tacheometry. Distance and-Elevation formulae for Staff vertical position

UNIT V

Computation of Areas and Volumes: Area from field notes, computation ofareas along irregular boundaries and area consisting of regular boundaries. Embankments and cutting for a level section and two level sections with and without transverse slopes, determination of the capacity of reservoir, volume of barrow pits.

Geomatics: Introduction, Total Station and Global positioning system, Electromagnetic spectrum, Visual image interpretation, Digital image processing

Text Books:

1. Surveying, Vol No.1, 2 &3, B. C. Punmia, Ashok Kumar Jain and Arun Kumar Jain –
2. Laxmi Publications Ltd, New Delhi,seventeenth edition (2016)
3. 2 Text book of Surveying, S.K. Duggal (Vol No. 1&2), Tata McGraw Hill Publishing
4. Co. Ltd. New Delhi.Fourth edition (1 July 2017)
5. Text book of Surveying, Arora (Vol No. 1&2), STANDARD BOOK HOUSE SINCE 1960; Edition: Year-2015 edition (2015)
6. Anji Reddy, M., Remote sensing and geographical information system,BS Publications/BSP Books (2012)

References:

1. Text book of Surveying, C. Venkataramaiah, universities Press (India) Pvt. Ltd. (12 January 2011)
2. Surveying and levelling, R. Subramanian, Oxford University Press; 2 edition (30 June 2012)

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET04
Name of the Course	BUILDING MATERIALS & CONCRETE TECHNOLOGY					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Discuss the basic concepts of building materials (K2)
- Distinguish the basic ingredients of concrete and their role in the production of concrete and its behavior in the field (K2)
- Apply fundamental knowledge in the fresh concrete (K3)
- Apply fundamental knowledge in the hardened properties of concrete and factors (K3)
- Find test on hardened concrete and properties, evaluate the ingredients of concrete through lab test results and design the concrete mix by BIS method (K3)

SYLLABUS

Unit I (Stones, Bricks, Tiles, Wood and Paints)

Stones: Classification of Stones – Properties of stones in structural requirements

Bricks: Composition of good brick earth, Various methods of manufacturing of bricks

Tiles: Characteristics of good tile – Manufacturing methods, Types of tiles

Wood: Structure – Properties – Seasoning of timber – Classification of various types of woods used in buildings – Defects in timber

Paints: White washing and distempering, Constituents of paint – Types of paints – Painting of new and old wood – Varnish

Unit II (Aggregates, Cement and Admixtures)

Aggregates: Classification of aggregate, Bond, Strength and other mechanical properties of aggregate, Physical properties of aggregate, bulking of sand, Deleterious substance in aggregate, Soundness of aggregate, Alkali-Aggregate reaction – Thermal properties, Sieve analysis – Fineness modulus – Grading curves – Grading of fine and coarse aggregates as per relevant IS code, Maximum aggregate size

Portland Cement: Chemical composition, Hydration, Structure of hydrated cement – Setting of cement, Fineness of cement, Tests for physical properties

– Different grades of cements **Supplementary cementitious materials:** Fly ash, GGBS, Silica fume, Rice husk ash, Calcinated ash (Basic properties and their contribution to concrete strength)

Admixtures: Mineral and Chemical admixtures

Unit III (Fresh Concrete)

Manufacture of concrete: Mixing and vibration of concrete, Workability – Segregation and bleeding – Factors affecting workability, Measurement of workability by different tests, Effect of time and temperature on workability – Quality of mixing water, Ready mix concrete, Shotcrete

Unit IV (Hardened Concrete)

Water / Cement ratio: Abram's law, Gel space ratio, Nature of strength of concrete – Maturity concept, Strength in tension and compression – Properties of Hardened Concrete (Elasticity, Creep, Shrinkage, Poisson's ratio, Water absorption, Permeability, etc.), Relating between compression and tensile strength, Curing

Unit V (Testing of Hardened Concrete, Mix Design)

Testing of Hardened Concrete: Factors affecting properties of Hardened concrete, Compression tests, Tension tests, Flexure tests, Non-destructive testing methods – Codal provisions for NDT – Rebound hammer and UPV method.

Mix Design: Factors in the choice of mix proportions – Quality Control of concrete -Acceptance criteria – Concepts Proportioning of concrete mixes by various methods – BIS method of mix design.

Text Books:

1. "Concrete Technology" by M. S. Shetty - S. Chand & Co., 2004
2. "Engineering Materials" by Rangwala S C, (36th edition), Anand Charotar Publishing
   House
3. "Concrete Technology" by Shantha Kumar – Oxford Publications

Reference Books:

1. "Building Materials" by S. K. Duggal, New Age International Publications
2. "Building Materials" by P. C. Verghese, PHI learning (P) Ltd., 2009
3. "Properties of Concrete" by A. M. Neville – Pearson – 4th edition

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	0	0	3	1.5	V20CEL01
Name of the Course	STRENGTH OF MATERIALS LAB					
Branch	CIVIL ENGINEERING					

Course outcomes:

Upon completion of the course, the student will be able to

- Identify the engineering properties of materials in the laboratory
- Assess torsion test to determine elastic constants
- Assess spring test to determine elastic constants
- Assess flexural test to determine elastic constants
- Determine hardness of metals
- Determine Impact strength of metals

List of Experiments

1. Tension test on Steel bar
2. Bending test on (Steel / Wood) Cantilever beam.
3. Bending test on simple support beam.
4. Torsion test
5. Hardness test
6. Spring test
7. Compression test on wood or concrete
8. Impact test
9. Shear test
10. Verification of Maxwell‘s Reciprocal theorem on beams.
11. Continuous beam – deflection test.

List of Major Equipment:

1. UTM for conducting tension test on rods
2. Steel beam for flexure test
3. Wooden beam for flexure test
4. Torsion testing machine
5. Brinnell‘s / Rock well‘s hardness testing machine
6. Setup for spring tests
7. Compression testing machine
8. Izod Impact machine
9. Shear testing machine
10. Beam setup for Maxwell‘s theorem verification.
11. Continuous beam setup

Year/Sem	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	3	1.5	V20CEL02
Name of the Course	**SURVEYING LAB**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Use different Survey instruments to collect filed data
- Calculate distances, levels and angles from collected data
- Transfer points on ground to drawing sheet
- Interpret survey data to compute areas and volumes by using different methods
- Prepare profile of land from the collected survey data

List of experiments:

1. Survey by chain survey of road profile with offsets in case of road widening.
2. Finding the area of the given boundary using compass (Closed Traverse)
3. Plane table survey; finding the area of a given boundary by the method of Radiation
4. Plane table survey; finding the area of a given boundary by the method of intersection.
5. Fly leveling : Height of the instrument method (differential leveling)
6. Fly leveling: Rise and Fall method.
7. Theodolite Survey: Determining the Horizontal and Vertical Angles by the method of repetition method.
8. Theodolite Survey: Finding the distance between two inaccessible points.
9. One Exercise on Curve setting.
10. One Exercise on contours.
11. Determination of area using total station
12. Determination distance between two inaccessible points.
13. Introduction to GPS.

References:

2. Text book of Surveying by S.K. Duggal (Vol No. 1&2), McGraw Hill Education; Fourth edition (1 July 2017), New Delhi.
3. Text book of Surveying,Dr.K.R.Arora (Vol No. 1&2), STANDARD BOOK HOUSE SINCE 1960; Edition: Year-2015 edition (2015), Delhi.

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	0	0	3	1.5	V20CEL03
Name of the Course	CONCRETE TECHNOLOGY LAB					
Branch	CIVIL ENGINEERING					

Course outcomes:

Upon completion of the course, the student will be able to

- Find some properties of cement by consistency, fineness, setting times, specific gravity, soundness and compressive strength.
- Determine the workability of cement concrete by compaction factor, slump and Vee – Bee tests.
- Determine properties of self-compacting concrete by Slump cone, V funnel, L Box
- Determine the specific gravity of coarse aggregate and fine aggregate by Sieve analysis.
- Determine the flakiness and elongation index of coarse aggregates.
- Determine the bulking of sand.
- Understand the non-destructive testing procedures on concrete

I. Tests on Cement

1. Normal Consistency and fineness of cement.
2. Initial setting time and final setting time of cement.
3. Specific gravity of cement
4. Soundness of cement.
5. Compressive strength of cement.

II. Tests on Aggregate

1. Sieve Analysis and gradation chairs
2. Bulking of sand.
3. Bulk and compact densities of fine and coarse aggregates

III. Tests on Fresh Concrete

1. Slump test
2. Compact factor test
3. Vee-bee Test
4. Flow Table Test

Tests on Self Compacting Concrete

1. Slump cone
2. V funnel
3. L Box

IV. Tests on hardened concrete

1. Compression test on cubes & Cylinders
2. Flexure test
3. Splitting Tensile Test
4. Modulus of Elasticity

V. Non Destructive tests of concrete

1. Rebound hammer
2. Ultrasound pulse Velocity (UPV)

Text Books:

1. Concrete Technology, M. S. Shetty. – S. Chand & Company

References:

1. Concrete Technology, M.L. Gambhir. – Tata Mc. Graw Hill Publishers, New Delhi.

Codes for reference:

1. IS: 4031 – chemical analysis and tests on cement.
2. IS 650:1991 –Standards and testing
3. IS 383:1970- Specification for coarse & fine aggregate
4. IS 2386 (Part III) 1963- Methods of test for aggregate for specific gravity, density, voids, absorption & bulking
5. IS 516:1959- Specification for compressive strength, Flexural strength
6. IS 5816:1999-Method of test for splitting tensile strength of concrete.
7. IS 13311(Part 1):1992 Methods of non-destructive testing of concrete: Part 1 Ultrasonic pulse velocity.
8. IS 13311(Part 2):1992 Methods of non-destructive testing of concrete: Part 2 Rebound hammer.
9. IS 6461(Part 7):1973 Glossary of terms relating to cement concrete: Part 7 Mixing, laying, compaction, curing and other construction aspects.

IV SEMESTER – SYLLABUS

Year/Sem	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CET05
Name of the Course	**ENGINEERING GEOLOGY**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Relate the features of geological agents (K3)
- Employ different techniques to identify different types of minerals and rocks (K3)
- Interpret hazard zonaation with reference to secondary structures (K3)
- Review earthquakes and landslides and their resulting subsidence (K3)
- Examine the engineering geological conditions of the strata and its suitability to major projects like Dams, Tunnels and Reservoirs etc. (K3)

SYLLABUS

UNIT I

Introduction: Branches of geology, Importance of geology in Civil engineering with case studies. Physical Geology: Geological processes, Weathering, Erosion and Civil engineering importance of weathering and Erosion

UNIT II

Mineralogy: Definition of mineral, Importance of study of minerals, Significance of different physical properties in mineral identification, Study of physical properties, Structure and chemical composition of common rock forming and economic minerals viz. Feldspar, Quartz, Olivine, Augite, Hornblende, Muscovite, Biotite, Asbestos, Apatite , Kyanite, Garnet, Beryl, Talc, Calcite, Dolomite, Pyrite, Hematite, Magnetite, Galena, Graphite, Magnesite, Bauxite and Clay minerals Petrology: Introduction, Civil Engineering importance of petrology, Definition of Rock, Rock cycle, Geological Classification of rocks Igneous Rocks: Forms, Structures and textures of igneous rocks, Megascopic description and civil engineering uses of Granite, Basalt, Dolerite, Pegmatite and Charnockite Sedimentary Rocks: Formation, Structures and textures of sedimentary rocks, Megascopic description and civil engineering uses of Laterite, Conglomerate, Sand stone, Lime stone and Shale Metamorphic Rocks: Types of metamorphism, Structures and textures of metamorphic rocks, Megascopic Description and Civil engineering uses of Gneiss, Schist, Quartzite, Marble and Slate

UNIT III

Structural Geology: Introduction, Out crop, Strike and dip, Causes for development of secondary structures, Classification of Structures associated with Folds, Faults, Joints, Unconformities and their Civil engineering importance

UNIT IV

Earthquakes: Classification and causes, Intensity and magnitude and their measuring scales, Effects of earthquakes, Seismic belts, Civil Engineering considerations in seismic areas, Seismic zones of India Land Slides: Classification, Causes and effects, Preventive measures of landslides Ground water: Introduction, Classification of rocks based on porosity and permeability, Types of aquifers, Effects of groundwater over draft

Geophysics: Importance of Geophysical methods, Classification, Principles of Geophysical study by Gravity method, Magnetic method, Electrical methods, Seismic methods, Radiometric method and Electrical resistivity, Seismic refraction methods

UNIT V

Dams & Reservoirs: Types of Dams, Geological considerations for the selection of dam sites, Stages of investigation, Case histories of few dam failures, Geology of few Indian dam sites

Tunnels: Purpose of Tunneling, Geological considerations for tunneling, Effects of tunneling, Over break, Geology of some tunnel sites

Textbooks:

1. A text Book of Engineering Geology by N. Chenna Kesavulu, Macmillan India Ltd., Delhi, second edition, 2009.
2. Principles of Engineering Geology by K M Bangar, Standard Publishers and Distributers, 2009.
3. Principles of Engineering Geology- K Gokhale, B. S. Publication, Revised Edition, 2010.

Reference Books:

1. Fundamentals of Engineering Geology, F.G.Bell, published by Butterworth-Heinemann, 1983.
2. Principles of Engineering Geology and Geotechnics by D P Krynine and W R Judd, CBS Publishers & Distribution, first edition, 2005.
3. Engineering Geology for Civil Engineers by D. Venkata Reddy, Oxford & IBM Publishing Company Pvt. Ltd., New Delhi, second edition, 2017.
4. Engineering and General Geology by Parbin Singh, Published by S. K. Kataria & Sons, New Delhi, 2013.
5. Engineering Geology and Rock Mechanics by Dr B.P.Varma, Khanna Publishers, Delhi, 1998.

Year/Sem	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CET06
Name of the Course	**STRUCTURAL ANALYSIS-I**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Illustrate Shear Force, Bending Moment and Deflection of Propped Cantilevers for different fixity conditions (K3)
- Calculate Shear Force, Bending Moment and Deflections of fixed beams for different fixity conditions (K3)
- Calculate Shear Force, Bending Moment and Deflections of Continuous beams for different fixity conditions (K3)
- Understand the concepts of Energy Theorems (K2)
- Assess Maximum Shear Force, Bending Moment and Deflections at a given section when loads of varying spans are passing over truss (K3)

SYLLABUS

UNIT I

Propped Cantilevers: Analysis of propped cantilevers-shear force and bending moment diagrams-Deflection of propped cantilevers..

UNIT II

Fixed Beams: Introduction to statically indeterminate beams with U. D. load, central point load, eccentric point load, number of point loads, uniformly varying load, couple and combination of loads - shear force and Bending moment diagrams-Deflection of fixed beams including effect of sinking of support, effect of rotation of a support.

UNIT III

Continuous Beams: Introduction-Clapeyron's theorem of three moments-Analysis of continuous beams with constant moment of inertia with one or both ends fixed continuous beams with overhang, continuous beams with different moment of inertia for different spans Effects of sinking of supports-shear force and bending moment diagrams.

UNIT IV

Energy Theorems: Introduction-Strain energy in linear elastic system, expression of strain energy due to axial load, bending moment and shear forces - Castigliano's first theorem Deflections of simple beams and pin jointed trusses.

UNIT V

Moving Loads And Influence Lines: Introduction, influence line diagrams, influence line diagrams for simply supported beams, cantilever beams, overhanging beams, double overhanging beams, balanced cantilever beams, girder supporting floor beams, use of influence line diagrams, maximum SF and BM values for moving loads, Train of concentrated loads

Text Books:

1. Basic Structural Analysis, C. S. Reddy Tata Mc.Graw-Hill, New Delhi.
2. Analysis of Structures by T.S. Thandavamoorthy, Oxford University Press, New Delhi.
3. Analysis of Structures- Vol. I and II, V. N. Vazirani and M. M. Ratwani, Khanna Publishers, New Delhi.
4. Structural Analysis - Vol. I and II,S.S.Bhavikatti,Vikas Publishing House,New Delhi.

References:

2. Theory of Structures, R.S. Khurmi, S. Chand Publishers.
3. Structural analysis by R.C. Hibbeler, Pearson, New Delhi.
4. Structural Analysis-I, Hemanth Patel, Yogesh Patel, Synergy Knowledgeware, Mumbai 5. Structural Analysis I Analysis of Statically Determinate Structures, P. N. Chandramouli. Yesdee Publishing Pvt Limited, Chennai

Year/Sem	IV Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET07
Name of the Course	WATER RESOURCES ENGINEERING					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Calculate average rainfall and check consistency, continuity of rainfall (K3)
- Estimate the different components of the hydrologic cycle (K2)
- Compute the runoff of a catchment using Hydrographs (K3)
- Compute the flood frequency, design flood, flood routing (K3)
- Discuss the concepts of groundwater movement and well hydraulics (K2)

SYLLABUS

UNIT I

Introduction: Engineering hydrology and its applications, Hydrologic cycle, hydrological

Data - sources of data. Precipitation: Types and forms, measurement, rain gauge network, presentation of rainfall data, average rainfall, continuity and consistency of rainfall data, frequency of rainfall, Intensity-Duration-Frequency (IDF) curves, Depth-Area-Duration (DAD) curves, Probable Maximum Precipitation (PMP), design storm.

UNIT II

Abstractions from Precipitation: Initial abstractions. Evaporation: factors affecting, measurement, reduction Evapotranspiration: factors affecting, measurement, control Infiltration: factors affecting, Infiltration capacity curve, measurement, infiltration indices.

UNIT III

Runoff: Catchment characteristics, Factors affecting runoff, components, computation empirical formulae, tables and curves, stream gauging, rating curve, flow mass curve and flow duration curve. Hydrograph analysis: Components of hydrograph, separation of base flow, effective rainfall hyetograph and direct runoff hydrograph, unit hydrograph, assumptions, derivation of unit hydrograph, unit hydrographs of different durations, principle of superposition and S-hydrograph methods, limitations and applications of unit hydrograph, synthetic unit hydrograph.

UNIT IV

Floods: Causes and effects, frequency analysis- Gumbel's and Log-Pearson type III distribution methods, Standard Project Flood (SPF) and Probable Maximum Flood (MPF), flood control methods and management. Flood Routing: Hydrologic routing, channel and reservoir routing- Muskingum and Puls methods of routing.

UNIT V

Groundwater: Occurrence, types of aquifers, aquifer parameters, porosity, specific yield, permeability, transmissivity and storage coefficient, types of wells, Darcy's law, Dupuit's equation- steady radial flow to wells in confined and unconfined aquifers, yield of a open well-recuperation test.

Year/Sem	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CET08
Name of the Course	TRANSPORTATION ENGINEERING					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Design highway geometric elements for the decided alignment through engineering surveys (K3)
- Analyze and design of flexible, rigid pavements and examine pavement construction activities and also conduct quality control at site (K3)
- Analyze and design of traffic infrastructure facilities and evaluate pavement condition to suggest remedial measures (K3)
- Analyze the Railway Track Geometric Elements (K3)
- Analyze and design geometric elements of Airport Runway and Taxiway and classify the various components of Dock & Harbors (K3)

SYLLABUS

UNIT I

Highway Alignment and Geometric Design: Historical development of roads– Highway development in India –Different Road Development Plan– Highway Alignment–Factors affecting Alignment– Engineering Surveys. Highway Geometric Design: Importance of Geometric Design– Factors– Highway Cross Section Elements–Sight Distance Elements–Design of Horizontal Alignment–Design of Vertical alignment.

UNIT II

Design of Pavements and Highway Construction: Types of pavement– Components of pavement–Flexible Pavements – Design factors – Flexible Pavement Design Methods– Mechanistic method, Rigid Pavements– Design Considerations– wheel load stresses– Temperature stresses–Design of slabs– IRC method of rigid pavements–Highway Construction–Types of Highway Construction – Earthwork – Stabilization of soils–Construction of Bituminous Pavements –Construction of Cement Concrete Pavements

UNIT III

Highway Maintenance and Traffic Infrastructure Design: Pavement Failures – Pavement Condition Survey–Maintenance of Highways– Pavement evaluation– Strengthening of existing pavements– Traffic Engineering – Basic Parameters of Traffic– Volume,– Speed– Density- Volume Studies Speed Studies– spot speed– speed & delay studies, Parking Studies, Condition Diagram and Collision Diagrams-–PCU Factors –Capacity and LOS of Highways – Road Traffic Signs –Road markings – Types of Intersections– At-Grade Intersections–Design of Traffic Signals– Webster Method .

UNIT IV

Railway Engineering : Permanent way – Components and their functions – Rail joints – Welding of Rails – Creep of Rails – Rail fixtures & Fastenings – Geometric Design of Railway Track: Gradients- Grade Compensation- Cant and Negative Super elevation- Cant Deficiency –Degree of Curve , Layout of Railway stations and yards – Signals – Interlocking –Track layouts –Turnouts – Layout of Turnout – Crossings –Diamond crossing – Scissors crossing. Signal Objectives – Classification – Fixed signals – Stop signals – Signaling systems

UNIT V

Airport Planning and Docks Harbors: Airport Master plan – Airport site selection – Air craft characteristics –Airport classification – Runway orientation – Wind rose diagram – Runway length – Taxiway – Terminal area. Docks Harbors: Layout of Port components – Functions –Classification of Ports – Site selection – Natural Phenomenon – Tides, Winds, Waves, Currents – Drift – Navigational aids.

Textbooks

1. Highway Engineering, Khanna S. K., Justo C. E. G and Veeraragavan A, Nem Chand Bros.,Roorkee.
2. Traffic Engineering and Transportation Planning, Kadiyali L. R, Khanna Publishers, New Delhi.
3. Railway Engineering, Satish Chandra and Agarwal M. M., Oxford University Press, New Delhi.
4. Airport Engineering, Khanna & Arora, Nemchand Bros, New Delhi.
5. Docks and Harbor Engineering, Bindra S.P., Dhanpathi Rai & Sons, New Delhi.

References

1. Principles of Transportation Engineering, Partha Chakroborthy and Animesh Das, PHI Learning Private Limited, Delhi.

- IRC58–2015: Guidelines for the Design of Plain Jointed Rigid Pavements for Highways, Indian Road Congress Publications, New Delhi.
- MORTH - Specifications for Road and Bridge works, Indian Road Congress Publication, New Delhi, Latest Edition.

Year/Sem	IV Sem	L	T	P	C	COURSE CODE
Regulation	V20	0	0	3	1.5	V20CEL04
Name of the Course	**ENGINEERING GEOLOGY LAB**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Understand the importance of geology in civil engineering
- Identify the geological process of any region to carry civil engineering works
- Evaluate the formation and properties of minerals, rocks and soil
- Develop the ability to prepare geological maps and sections to interpret site conditions

List of Experiments

1. Physical properties of minerals and their megascopic identification
2. Rock forming minerals: Quartz group, Feldspar group, Garnet group, Mica group, Talc, Chlorite, Olivine, Kyanite, Asbestos, Tourmelene, Calcite, Gypsum etc.
3. Ore forming minerals: Magnetite, Hematite, Pyrite, Pyralusite, Graphite, Chromite etc.
4. Megascopic description and identification of rocks
5. Igneous rocks: Granite, Pegmatite, Gabbro, Dolerite, Syenite, Granite Poryphery, Basalt, etc.
6. Sedimentary rocks: Sand stone, Ferrugineous sand stone, Lime stone, Shale, Laterite, Conglamorate, etc.
7. Metamorphic rocks: Biotite, Granite Gneiss, Slate, Muscovite & Biotiteschist, Marble, Khondalite, etc.
8. Interpretation and drawing of sections for geological maps showing tilted beds, faults, unconformities etc.
9. Simple Structural Geology problems
10. Bore hole data
11. Strength of the rock using laboratory tests
12. Field work to identify Minerals and Rocks, Geomorphology and Structural Geology

Year/Sem	IV Sem	L	T	P	C	COURSE CODE

Regulation	V20	0	0	3	1.5	V20CEL05
Name of the Course	**FLUID MECHANICS & HYDRAULIC MACHINERY LAB**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon completion of the course, the student will be able to

- Employ the basic principles of Fluid mechanics to assess discharge with different devices and different losses in a pipe line (K3)
- Calculate the performance parameters of Reciprocating and Centrifugal pumps (K3)
- Calculate the performance parameters of different types of turbines (K3)

List of Experiments

1. Determination of friction factor for the given pipe line.
2. Determination of loss of head due to sudden contraction.
3. Determination of force exerted by a jet on a vane.
4. Calibration of Venturimeter.
5. Calibration of Orificemeter.
6. Calibration of Turbine flow meter.
7. Determination of performance parameters of Reciprocating pump.
8. Determination of performance parameters of Single stage Centrifugal pump.
9. Determination of performance parameters of Multi stage Centrifugal pump.
10. Determination of performance parameters of Pelton wheel.
11. Determination of performance parameters of Francis Turbine.
12. Determination of performance parameters of Kaplan Turbine.

Add On Experiments:

1. Determination of loss of head due to sudden expansion.
2. Verification of Bernoulli‘s theorem.

Course Outcomes:

Upon successful completion of this course, the student will be able to

- Assess the suitability of different materials for the road construction (K3)
- Examine the given bitumen samples and judge their suitability for road construction (K3)
- Find the Optimum Bitumen content for the Bituminous mix (K3)
- Develop the gradation of Bituminous mix for stability and flow properties (K3)

List of Experiments

I. Road Aggregates:

1. Aggregate Crushing value
2. Aggregate Impact Test.
3. Specific Gravity and Water Absorption.
4. Abrasion Test.
5. Shape tests

II. Bituminous Materials:

6. Penetration Test.
7. Ductility Test.
8. Softening Point Test.
9. Flash and fire point tests.
10. Viscosity Test.

III. Bituminous Mix:

11. Marshall Stability test.

List of Equipment

1. Apparatus for aggregate crushing test.
2. Aggregate Impact testing machine

3. Pycnometers.
4. Los angles Abrasion test machine
5. Length and elongation gauges
6. Bitumen penetration test setup.
7. Bitumen Ductility test setup.
8. Ring and ball apparatus
9. Flash and Fire Apparatus
10. Viscometer.
11. Marshal Stability apparatus.

SYLLABI PROPOSED FOR M.Tech
(Structural Engineering)

I SEMESTER – SYLLABUS

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation / Year	V21 / 2021-2022	3	0	0	3	V21STET01
Name of the Course	THEORY OF ELASTICITY					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Relate the stress and deformation and how to determine the components of the stress and strain tensors (K3)
- Apply the conditions of compatibility and equations of equilibrium (K3)
- Employ the mechanical characteristics of materials, constitutive equations and generalized Hook law (K3)
- Use the equilibrium equations stated by the displacements and compatibility conditions stated by stresses (K3)
- Develop index notation of equations, tensor and matrix notation and define state of plane stress, state of plane strain (K3)

SYLLABUS

UNIT I

Elasticity – Notation for forces and stresses – components of stresses and strains – Hooke's Law - Plane Stress – Plane strain – Differential Equations of equilibrium – Boundary conditions – Compatibility equations Stress function – Boundary Conditions.

UNIT II

Two dimensional problems in rectangular co-ordinates – Solution by polynomials – Saint Venant's principle – Determination of displacements – Bending of simple beams – Application of Fourier series for two dimensional problems for gravity loading.

UNIT III

Two dimensional problems in polar coordinates - General equations in polar coordinates – Stress distribution for problems having symmetrical about an axis - Strain components in polar co-ordinates– Displacements for symmetrical stress distributions - Stresses for plates with circular holes subjected to far field tension – stress concentration factor.

UNIT IV

Analysis of stress and strain in three dimension - Principal stresses – Stress ellipsoid and stress director surface – Determination of principal stresses - Maximum shear stress – Homogeneous Deformation – General Theorems - Differential equations of equilibrium – Conditions of compatibility– Equations of equilibrium in terms of displacements – Principle of superposition – Uniqueness of solution –Reciprocal theorem.

UNIT V

Torsion of Prismatic bars – Bars with elliptical cross section – Other elementary solution – Membrane analogy – Torsion of rectangular bars – Solution of Torsional problems by energy method.

Text Books:

1. 1.Theory of Elasticity- Stephen Timoshenko & J. N. Goodier, Mc.Grawhill Publishers
2. Advanced Mechanics of Solids L.S. Srinath, McGraw Hill Publishers
3. Theory of Elasticity By A.I. Lurie

References:

1. Elasticity: Theory, Applications and Numeric Martin H. Sadd, Wiley Publishers
2. Theory of Elasticity -Sadhu Singh 3rd Edition, Khanna Publishers.
3. An Introduction to the Theory of Elasticity
4. By R. J. Atkin, N. Fox · 2005, Dover Publications

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET02
Name of the Course	**STRUCTURAL DYNAMICS**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Asses the behavior of structures subjected to dynamic loads Harmonic excitation and earthquake load(K3)
- Demonstrate the behavior and response of SDOF structures with various dynamic loading. (K3)
- Illustrate the response of structural systems to dynamic loads and Realize the behavior and response of linear and nonlinear SDOF and MDOF structures with various dynamic loading. (K3)
- Develop the ability to find out suitable solution for continuous system of various beams with different end conditions. (K3)
- Interpret the analysis of building subject to earthquake by various methods. (K3)

SYLLABUS

UNIT I

Theory of vibrations: Introduction - Elements of vibratory system - Degrees of Freedom - Continuous System - Lumped mass idealization - Oscillatory motion - Simple Harmonic motion - Victorian representation of S.H.M. - Free vibrations of single degree of freedom system - undamped and damped vibrations - critical damping - Logarithmic decrement - Forced vibration of SDOF systems - Harmonic excitation - Vibration Isolation -Dynamic magnification factor – Phase angle.

UNIT II

Introduction to Structural Dynamics: Fundamental objectives of dynamic analysis -Types of prescribed loading - Methods of discretization - Formulation of equations of motion by different methods – Direct equilibration using Newton's law of motion / D'Alembert's Principle, Principle of virtual work and Hamilton principle.

Single Degree of Freedom Systems : Formulation and solution of the equation of motion – Free vibration response - Response to Harmonic, Periodic, Impulsive and general dynamic loadings - Duhamel integral.

UNIT III

Multi Degree of Freedom Systems: Selection of the degrees of Freedom - Evaluation of structural property matrices - Formulation of the MDOF equations of motion -Undamped free vibrations - Solutions of Eigen value problem for natural frequencies and mode shapes - Analysis of Dynamic response – Normal co-ordinates - Uncoupled equations of motion - Orthogonal properties of normal modes - Mode superposition procedure.

UNIT IV

Practical Vibration Analysis: Introduction - Stodola method - Fundamental mode analysis - Analysis of second and higher modes - Holzer method - Basic procedure.

Continuous Systems: Introduction - Flexural vibrations of beams - Elementary case – Derivation of governing differential equation of motion - Analysis of undamped free vibrations of beams in flexure - Natural frequencies and mode-shapes of simple beams with different end conditions - Principles of application to continuous beams.

UNIT V

Introduction to Earthquake Analysis: Deterministic Earthquake Response: Systems on Rigid Foundations -Types of Earthquake Excitations – Lumped SDOF Elastic Systems, Translational Excitations -Generalized coordinate - SDOF Elastic Systems, Translational Excitations, Linear Static Method – Analysis for obtaining response of multi storied RC Building.

Text Books:

1. Structural Dynamics Anil K Chopra, 4edition, Prentice Hall Publishers
2. Structural Dynamics Theory & Computation – Mario Paz, CBS Publishes and Distributors
3. Elementary Structural Dynamics- V.K. Manika Selvam, Dhanpat Rai Publishers

References:

1. Dynamics of Structures by Clough & Penzien 3e, Computers & Structures Inc.
2. Theory of Vibration -William T Thomson, Springer Science.
3. Mechanical Vibrations- S. S. Rao, 5e, Pearson Publications.
4. Structural Dynamics of Earthquake Engineering - Theory and Application using Mathematica and Matlab- S. Rajasekharan.

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET03
Name of the Course	MATRIX ANALYSIS OF STRUCTURES					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Assess the structural analysis of determinate and indeterminate structures using classical compatibility methods, such as method of consistent displacements, force and equilibrium Methods (K3)
- Solve multiple degree of freedom two- and three-dimensional problems involving trusses, beams, frames and plane stress (K3)
- Asses the analysis of grid element by stiffness method (K3)
- Discuss the band width, loads at joints and their support displacement (K2)
- Complete analysis of plane frames with and without side sway by various approaches. (K3)

SYLLABUS

UNIT I

Introduction of matrix methods of analysis – Static and kinematic indeterminacy – Degree of freedom– Structure idealization-stiffness and flexibility methods – Suitability: Element stiffness matrix for truss element, beam element and Torsional element- Element force -displacement equations.

UNIT II

Stiffness method – Element and global stiffness equation – coordinate transformation and global assembly – structure stiffness matrix equation – analysis of simple pin jointed trusses – continuous beams – rigid jointed plane frames

UNIT III

Stiffness method for Grid elements – development of stiffness matrix – coordinate transformation. Examples of grid problems – tapered and curved beams

UNIT IV

Additional topics in stiffness methods – discussion of band width – semi band width – static condensation – sub structuring –Loads between joints-Support displacements- inertial and thermal stresses-Beams on elastic foundation by stiffness method.

UNIT V

Analysis of plane frame - continuous beams with and without settlement - plane frame including side sway single storey, single – bay and gable frame by flexibility method using system approach.

Text Books:

1. Matrix analysis of structures, Robert E Sennet- Prentice Hall-Englewood cliffs,New Jercy.
2. Advanced structural analysis, P. Dayaratnam, Tata McGraw hill publishing company limited.
3. Structural Analysis Matrix Approach - Pandit and Gupta, Mc Graw Hill Education

References:

1. Indeterminate Structural analysis, C.K Wang, Amazon Publications
2. Analysis of Tall buildings by force – displacement – Method M. Smolira Mc. Graw Hill.
3. Foundation Analysis and design, J.E. Bowls, Amazon Publications.
4. Matrix Analysis of Framed Structures -William Weaver, Jr.James M. Gere, Van Nostrand Reinhold, Newyork.
5. Matrix Methods of Structural Analysis Madhu B.Kanchi, Wiley Publications.
6. Indeterminate Structural Analysis by K. U. Muthu, IK International Publishing house.

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21MAT01
Name of the Course	**ANALYTICAL& NUMERICAL METHODS FOR STRUCTURAL ENGINEERING**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Calculate of Laplace transform methods on heat conduction problems (K3)
- Apply the principles and techniques of Elliptic Equations-Laplace equation (K3)
- Develop the principles and techniques of Integral Equations (K3)
- Adopt the principles and techniques of Finite Difference and their Applications (K3)
- Apply the principles and techniques of Numerical Integration (K3)

SYLLABUS

UNIT I

Transform Methods- Laplace transform methods for one-dimensional wave equation - Displacements in a long string - Longitudinal vibration of an elastic bar - Fourier transforms methods for one-dimensional heat conduction problems in infinite and semi-infinite rod

UNIT II

Elliptic Equations-Laplace equation - Properties of harmonic functions - Fourier transform methods for Laplace equation-Calculus Of Variations-Variation and its properties - Euler's equation - Functionals dependent on first and higher order derivatives - Functionals dependent on functions of several independent variables - Some applications - Direct methods - Ritz and Kantorovich methods

UNIT III

Integral Equations- Fredholm and Volterra integral equations - Relation between differential and integral equations - Green's function -Fredholm equation with separable kernel - Iterative method for solving equations of second kind

UNIT IV

Finite Difference and their Applications: Introduction- Differentiation formulas by Interpolating parabolas – Backward and forward and central differences- Derivation of Differentiation formulas using Taylor series- Boundary conditions- Beam deflection – Solution of characteristic value problems - Richardson's extrapolation - Use of unevenly spaced pivotal points- Integration formulae by interpolating parabolas- Numerical solution to spatial differential equations – Application to Simply Supported Beams, Columns & rectangular Plates.

UNIT V

Numerical Differentiation: Difference methods based on undetermined coefficients- optimum choice of step length– Partial differentiation.

Numerical Integration: Method based on interpolation-method based on undetermined coefficient – Gauss – Lagrange interpolation method- Radaua integration method- composite integration method – Double integration using Trapezoidal and Simpson's method – New Marks Method and Application to Beams – Calculations of Slopes & Deflections.

Textbooks:

1. Introduction to Partial Differential Equations, Sankar Rao. K, PHI, New Delhi, 1995
2. Numerical Methods For Scientific and Engineering Computations. M. K. Jain- S. R. K. Iyengar – R. K. Jain, New Age International (p) Ltd., Publishers.
3. Numerical Methods for Engineering Problems N. Krishna Raju, K.U. Muthu Macmillan Publishers

References:

2. Fundamentals of Mathematical Statistics Gupta. S.C, & Kapoor. V.K, Sultan Chand & Sons, Reprint 1999.
3. Higher Engineering Maths for Engg. And Sciences Venkataraman. M. K, National Publishing Company, Chennai
4. Elements of Partial Differential Equations, Sneddon. I.N, Mc Graw Hill, 1986
5. Computer based numerical analysis by Dr. M. Shanta Kumar, Khanna Book publishers New Delhi

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET04
Name of the Course	DESIGN OF RCC FOUNDATIONS (Elective-I)					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Attain the perception of site investigation to select suitable type of foundation based on soil category (K3)
- Capable of ensuring design concepts of shallow foundation (K3)
- Can be efficient in selecting suitable type of pile for different soil stratum and in evaluation of group capacity by formulation (K3)
- Design different types of well foundation (K3)
- Explain the properties of soil and mechanism of suitable foundation (K3)

SYLLABUS

UNIT I

Foundation Structures & Design of Centrally Loaded Isolated Footings and Column Pedestals – Introduction, Rigid and Flexible Foundations, Loads and their Effects, Design Requirements, Geotechnical Design, Empirical and Exact Methods of Analysis of foundations, Design Loads for Foundations, Recommended Approach to Structural Design of Foundations.

Introduction, General Procedure for Design, Design of Square Footing of Uniform Depth (Pad Footing), Design of sloped Rectangular Footings, Design Procedure, Detailing of Steel, Design of Rectangular Pad Footings, Design of Plain Concrete Footings, Design of Pedestals, Design Calculation for Pedestals.

UNIT II

Wall Footings – Introduction Simple Plain Concrete Wall Footings, Reinforced Concrete Continuous Strip Wall Footings, Design of continuous Strip Wall Footings, Design for Longitudinal Steel, R.C. T Beam Footings in Shrinkable Soils, Foundations of Partition Wall in Ground Floors, Summary.

Strip Footings Under Several Columns – Introduction, Design Procedure for Equally loaded and Equally Spaced Columns, Analysis of Continuous Strip Footing for Unsymmetrical Loading, Analysis of Strip Footing with Unsymmetrical Loads, Detailing of Members.

UNIT III

Raft Foundations – Introduction, Rigid and Flexible Foundations, common Types of Rafts, Deflection Requirements of Beams and Slabs in Rafts, General considerations in Design of Rigid Rafts, Types of Loadings and Choice of Rafts, Record of Contact Pressures Measured Under Rafts, Modern Theoretical Analysis.

Design of Flat Slab Rafts-Mat Foundations – Introduction, Components of Flat Slabs, Preliminary Planning of Flat Slab Rafts, Analysis of Flat Slab by Direct Design Method, Method of Analysis, Values for Longitudinal Distribution and Transverse, Redistribution, Shear in Flat Slabs, Bending of Columns in flat Slabs, Limitations of Direct Design Method for Mats, Detailing of Steel, Design of Edge Beam in Flat Slabs.

Beam and Slab Rafts – Introduction, Planning of the Raft, Action of the Raft, Approximate Dimensioning of the Raft, Design of the Beam and Slab Raft under Uniform Pressure, Structural Analysis for the Main Slab, Design of Secondary and Main Beams, Analysis by Winkler Model, Detailing of Steel.

UNIT IV

Combined Piled Raft Foundations (CPRF) – Introduction, Types and uses of Piled Rafts, , Interaction of Pile and Raft, Ultimate Capacity and Settlement of Piles, Estimation of Settlement of Raft in Soils, Allowable Maximum and Differential Settlement in Buildings, Design of CPRF System, conceptual Method of Design, Conceptual Method of Analysis, Distribution of Piles in the Rafts, Theoretical Methods of Analysis.

Circular and Annular Rafts – Introduction, Positioning of chimney Load on Annular Raft, Forces Acting on Annular Rafts, Pressures Under Dead Load and Moment, Methods of Analysis, Conventional Analysis of Annular Rafts, Analysis of Ring Beams Under circular Layout of Columns, Analysis of Ring Beam Transmitting Column Load to Annular Rafts, Detailing of Annular Raft Under Columns of a Circular Water Tank.

UNIT V

Under-reamed Pile Foundations – Introduction, Safe Loads on Under-reamed Piles, Design of Under-reamed Pile Foundation for Load Bearing Walls of Buildings, Design of Grade Beams, Design of Under-reamed Piles Under Columns of Buildings, Use of Under-reamed Piles for Expansive Soils.

Design of cantilever and Basement Retaining Walls – Introduction, Earth Pressure and Rigid Walls, Calculation of Earth Pressure on Retaining Walls, Design of Rigid Walls, Design of Ordinary R.C. cantilever Walls, Design of cantilever Walls without Toe, Design of Basement Walls, Calculation of Earth Pressures in Clays, Design of Free Standing Basement Walls.

Text Books:

1. Design of Reinforced Concrete Foundations by P. C Varghese, PHI Learning Private Limited., New Delhi.
2. Krishnaraju.N " Design of Reinforced Concrete Structurres", CBS Publishers & Distributors Pvt. Ltd., New Delhi.
3. Design of Reinforced Concrete Structures by N. Subramaniam- Oxford University.

References:

1. Reinforced Concrete Design by Unnikrishna Pillai and Devdas Menon, Tata Mc Graw Hill.
2. Ramachandra, "Limit state Design of Concrete Structures" Standard Book House, New Delhi.
3. IS 456 (2000): Plain and Reinforced Concrete - Code of Practice.

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET05
Name of the Course	**BRIDGE ENGINEERING**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Illustrate the different types of loads and stresses acting on various bridges (K3)
- Asses the various methodologies to analyses the bridges and also interpret the specifications of bridge super structure (K3)
- Demonstrate the box culverts and its design (K3)
- Develop the knowledge on design of plate girder bridges (K3)
- Illustrate the different types of bearings, abutments, piers and various types of foundations for Bridges (K3)

SYLLABUS

UNIT I

Concrete Bridges: Introduction-Types of Bridges-Economic span length-Types of loading-Dead load-live load-Impact Effect-Centrifugal force-wind loads-Lateral loads-Longitudinal forces- Seismic loads- Frictional resistance of expansion bearings-Secondary Stresses-Temperature Effect-Erection Forces and effects-Width of roadway and footway-General Design Requirements.

UNIT II

Design of Girders & Slabs: Pigeaud's Method Design of longitudinal girders-Guyon-Messonet method- Hendry Jaegar method- Courbon's theory. (Ref: IRC-21), voided slabs.

Super Structure: Slab bridge- Wheel load on slab- effective width method-slabs supported on two edges- cantilever slabs- dispersion length- Design of interior panel of slab- T-Beam bridges.

UNIT III

Box Culverts: Single Cell Box Culvert – Design Loads, Design Moments, Shears and Thrusts. Design of Critical sections.

UNIT IV

Plate Girder Bridges: Elements of plate girder and their design-web-flange-intermediate stiffener- vertical stiffeners- bearing stiffener-design problem

UNIT V

Sub structure: Abutments- Stability analysis of abutments- piers- loads on piers – Analysis of piers- Design problem(Ref: IRC-13, IRC-21, IRC-78)- Pipe culvert- Flow pattern in pipe culvers- culvert alignment-culvert entrance structure- Hydraulic design and structural design of pipe culverts-reinforcements in pipes .(Ref: IRC: SP-13)

Text Books:

1. 1.Design of Bridges by N. Krishna Raju CBS Publishers and Distributors
2. Bridge Engineering by S. Ponnuswamy, Mc Grawhill Publications
3. 3.Essentials of Bridge Engineering- Jhonson Victor D, 7e, Oxford IBH Publications

References:

1. Bridge Deck Behavior- E.C. Hambly 2e- CRC Press
2. Concrete Bridge Design and Practice- V.K. Raina, Tata McGraw- Hill Publishing Company Limited
3. IRC 6- 2016 Standard Specifications and Code of Practice for Road bridges
4. IRC 112-2011 Code of Practice for Concrete Road Bridges.

Year/Sem	**I Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation / Year	V21 / 2021-2022	3	0	0	3	V21STET06
Name of the Course	**REPAIR AND REHABILITATION OF STRUCTURES**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Recognize the mechanisms of degradation of concrete structures and to design durable concrete structures. (K2)
- Describe and suggest repair strategies for deteriorated concrete structures including repairing with composites. (K2)
- Develop the methods of strengthening methods for concrete structures. (K3)
- Demonstrate the fiber reinforced concrete and its properties. (K3)
- Examine the structural member's strength by high performance concrete. (K3)

SYLLABUS

UNIT I

Materials for repair and rehabilitation: Admixtures- types of admixtures-purposes of using admixtures- chemical composition- Natural admixtures- Fibres- wraps- Glass and Carbon fibre wraps- Steel Plates-Non destructive evaluation: Importance- Concrete behavior under corrosion, disintegrated mechanisms- moisture effects and thermal effects – Visual investigation- Acoustical emission methods- Corrosion activity measurement- chloride content – Depth of carbonation- Impact echo methods- Ultrasound pulse velocity methods- Pull out tests.

UNIT II

Strengthening and stabilization: Techniques- design considerations-Beam shear capacity strengthening- Shear Transfer strengthening-stress reduction techniques- Column strengthening- flexural strengthening- Connection stabilization and strengthening, Crack stabilization.

UNIT III

Bonded installation techniques: Externally bonded FRP- Wet layup sheet, bolted plate, near surface mounted FRP, fundamental debonding mechanisms-intermediate crack debonding- CDC debonding- plate end debonding- strengthening of floor of structures

UNIT IV

Fibre reinforced concrete: Properties of constituent materials- Mix proportions, mixing and casting methods-Mechanical properties of fiber reinforced concrete- applications of fibre reinforced concretes-Lightweight concrete- properties of light weight concrete- No fines concrete- design of light weight concrete- Fly ash concrete-Introduction- classification of Fly ash- properties and reaction mechanism of fly ash- Properties of fly ash concrete in fresh state and hardened state- Durability of fly ash concretes

UNIT V

High performance concretes: Introduction- Development of high-performance concretes- Materials of high-performance concretes- Properties of high-performance concretes- Self Consolidating concrete- properties- qualifications.

Textbooks:

1. Maintenance Repair Rehabilitation & Minor works of Buildings- P.C. Varghese, PHI Publications
2. Repair and Rehabilitation of Concrete Structures – P.I. Modi, C.N. Patel, PHI Publications
3. Rehabilitation of Concrete Structures- B. Vidivelli, Standard Publishers Distributors
4. Concrete Bridge Practice Construction Maintenance & Rehabilitation- V.K. Raina, Shroff Publishers and Distributors.

References:

1. Concrete Technology Theory and Practice- M.S. Shetty, S Chand and Company
2. Concrete Repair and Maintenance illustrated- Peter H Emmons
3. Concrete Chemical Theory and Applications- Santa Kumar A.R. Indian Society for
Construction Engineering and Technology, Madras
4. Handbook on Repair and Rehabilitation of RC Buildings published by CPWD, Delhi

Year/Sem	**I Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21STET07
Name of the Course	**STRUCTURAL OPTIMIZATION**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Study the optimization methodologies applied to structural engineering
- Solve some continuous structural optimization problems using calculus of variations.
- Have sufficient knowledge on various optimization techniques like, non-linear programming, geometric and dynamic
- Describe numerical algorithms and linear programming suitable for structural optimization problems.
- Use and describe quadratic and dynamic programming .

SYLLABUS

UNIT I
Introduction: Need and scope for optimization – statements of optimization problems Objective function and its surface design variables- constraints and constraint surface Classification of optimization problems (various functions continuous, discontinuous and discrete) and function behavior (monotonic and unimodal)

UNIT II
Classical optimization techniques: Differential calculus method, multi variable optimization by method of constrained variation and Lagrange multipliers (generalized problem) Khun-Tucker conditions of optimality -Fully stressed design and optimality criterion based algorithms introduction, characteristics of fully stressed design theoretical basis-examples

UNIT III
Non-Liner programming: Unconstrained minimization- Fibonacci, golden search, Quadratic and cubic interpolation methods for a one dimensional minimization and univariate method, Powel's method, Newton's method and Davidon Fletcher Powell's method for multivariable optimization- Constrained minimization- Cutting plane method- Zoutendjik's method- penalty function methods

UNIT IV
Linear programming: Definitions and theorems- Simplex method-Duality in Linear programming- Plastic analysis and Minimum weight design and rigid frame

UNIT V

Introduction to quadratic programming: Geometric programming- and dynamic programming Design of beams and frames using dynamic programming technique

Text books:

1. Iyengar.N.G.R and Gupta.S.K, “Structural Design Optimization”, Affiliated East West Press Ltd, New Delhi, 1997 .
2. Rao,S.S. “Optimization theory and applications”, Wiley Eastern (P) Ltd., 1984
3. Spunt, “Optimization in Structural Design”, Civil Engineering and Engineering Mechanics Services, Prentice-Hall, New Jersey 1971.
4. Uri Krish, “Optimum Structural Design”, McGraw Hill Book Co. 1981

References:

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	2	0	0	2	V21STET08
Name of the Course	ADVANCED CONCRETE TECHNOLOGY					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Explain the materials of concrete and its chemical proportions (K2)
- Describe the fresh and hardened properties of concrete (K2)
- Explain high strength and high-performance concrete manufacturing process and its properties (K2)
- Develop the special concrete and enhance the durability properties (K3)
- Describe the formwork considerations used in designs (K2)

SYLLABUS
UNIT I

Concrete Making Materials: Cement – Bogus Compounds – Hydration Process – Types of Cement – Aggregates – Gradation Charts – Combined Aggregate – Alkali Silica Reaction – Admixtures – Chemical and Mineral Admixtures - Bureau of Indian Standards (BIS) Provisions.

UNIT II

Fresh And Hardened Concrete: Fresh Concrete – workability tests on Concrete – Setting Times of Fresh Concrete – Segregation and bleeding.

Hardened Concrete: Abrams Law, Gel space ratios, Maturity concept – Stress strain Behaviour– Creep and Shrinkage – Durability Tests on Concrete – Non-Destructive Testing of Concrete. BIS Provisions**.**

UNIT III

High Strength Concrete – Microstructure – Manufacturing and Properties – Design of HSC Using Erintroy Shaklok method – Ultra High Strength Concrete.

High Performance Concrete – Requirements and Properties of High-Performance Concrete – Design Considerations. BIS Provisions.

UNIT IV

Special Concretes: Self Compacting concrete, Polymer Concrete, Fibre Reinforced Concrete – Reactive Powder Concrete – Requirements and Guidelines – Advantages and Applications.

Concrete Mix Design: Quality Control – Quality Assurance – Quality Audit - Mix Design Method – BIS Method – IS.10262 – 2019 Concrete Mix proportion guidelines. DOE Method– Light Weight Concrete, Self-Compacting Concrete.

UNIT V

Form work – materials – structural requests – form work systems – connections – specifications – design of form work – shores – removal for forms - shores – reshoring – failure of form work**.**

Text Books:

1. Properties of Concrete by A. M. Neville, ELBS publications Oct 1996.
2. Concrete Technology by A. R. Santhakumar, 2nd Edition, Oxford University Press.
3. Concrete Technology by M.S. Shetty, S.Chand & Co 2009.

References:

1. Concrete: Micro Structure, Properties and Materials by P. K. Mehta and P. J. Monteiro,. Mc. Graw-Hill Publishing Company Ltd. New Delhi
2. Design of Concrete Mixes by N. Krishna Raju, CBS Publications, 2000.
3. Special Structural concretes by Rafat Siddique, Galgotia Publications 2000.
4. IS 10262-2009: Concrete Mix Proportioning - Guidelines.

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	0	0	4	2	V21SEL01
Name of the Course	**ADVANCED CONCRETE TECHNOLOGY LABORATORY**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Develop relation between Water / Cement Ratios Vs Workability, Water / Cement Ratios Vs Strength in concrete.
- Develop strength and workability relation between fine aggregate, coarse aggregates.
- Calculate Strain measurement in concrete.
- Assess concrete properties by using Non destructive testing methods.
- Find properties of Self compaction concrete by using L Box , J Box , U box and Slump tests

SYLLABUS

List of Experiments:

1. Study on Water / Cement Ratios Vs Workability of different concretes
2. Study on Water / Cement Ratios Vs Strength of different concretes
3. Study of variation of Coarse Aggregate to Fine Aggregates on Workability
4. Study of variation of Coarse Aggregate to Fine Aggregates on Strength
5. Strain measurement - Electrical resistance strain gauges
6. Non destructive testing- Impact Hammer test, UPV test
7. Qualifications tests on Self compaction concrete- L Box , J Box , U box and Slump tests

NOTE: **A minimum of five experiments from the above set have to be conducted.**

Year/Sem	**I Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	0	0	4	2	V21SEL02
Name of the Course	**ADVANCED STRUCTURAL ENGINEERING LABORATORY**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Conduct various laboratory tests on Cement, Aggregates
- Know strain measurement
- Non destructive testing
- Chemical analysis on concrete and Aggregate and Sand

List of Experiments:

1. Study on Deflection and Cracks on a Under Reinforced Over Reinforced and Balanced Sections
2. Study on Performance of RCC Beams designed for Bending and failing in Shear
3. Study on Performance of RCC Beams designed for Shear and failing in Bending
4. Study on Performance of RCC One way slabs
5. Study on Performance of RCC Two way slabs with simply supported edge conditions
6. Study on Performance of RCC Two way slabs with fixed edge conditions
7. Calculation of Young's Modulus of Elasticity of Concrete
8. Extraction and Study of Concrete Core samples from pavements

NOTE : **A minimum of five experiments from the above set have to be conducted as demonstration to entire class..**

II SEMESTER – SYLLABUS

Year/Sem	II Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET09
Name of the Course	FINITE ELEMENT METHODS IN STRUCTURAL ENGINEERING					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Compute principle of potential energy of an elastic body (K3)
- Calculate the stiffness matrices of truss element (K3)
- Calculate the stiffness matrices of beam elements (K3)
- Interpret displacements, strains and stress resultants (K3)
- Formulate the shape functions for element (K3)

SYLLABUS

UNIT I

Introduction: Review of stiffness method- Principle of Stationary potential energy- Potential energy of an elastic body- Rayleigh-Ritz method of functional approximation - variational approaches -weighted residual methods

UNIT II

Finite Element formulation of truss element: Stiffness matrix- properties of stiffness matrix – Selection of approximate displacement functions- solution of a plane truss- transformation matrix and stiffness matrix for a 3-D truss- Inclined and skewed supports-Galerkin’s method for 1-D truss – Computation of stress in a truss element.

UNIT III

Finite element formulation of Beam elements: Beam stiffness- assemblage of beam stiffness matrix- Examples of beam analysis for concentrated and distributed loading-Galerkin’s method - 2-D Arbitrarily oriented beam element – inclined and skewed supports –rigid plane frame examples.

UNIT IV

Finite element formulation: Plane stress, plane strain and axi-symmetric problems- Derivation of CST and LST stiffness matrix and equations- treatment of body and surface forces-Finite Element solution for plane stress and axi-symmetric problems- comparison of CST and LST elements – convergence of solution- interpretation of stresses.

UNIT V

Iso-parametric Formulation: Iso-parametric bar element- plane bilinear Iso-parametric element – quadratic plane element - shape functions, evaluation of stiffness matrix, consistent nodal load vector - Gauss quadrature- appropriate order of quadrature – element and mesh instabilities – spurious zero energy modes, stress computation- patch test.

Text Books:

1. A first course in the Finite Element Method – Daryl L. Logan, Thomson Publications.
2. Concepts and applications of Finite Element Analysis – Robert D. Cook, Michael E Plesha, John Wiley & Sons Publications
3. Fundamental Finite Element Analysis and Applications: with Mathematica and Matlab Computations, Bhatti, M.A. Wiley Publications
4. A first course in the Finite Element Method, Dary L. Logan, Thomson Publications.

References:

1. Introduction to Finite Elements in Engineering- Tirupati R. Chandrupatla, Ashok D.Belgunda, PHI publications.
2. Finite Element Methods (For Structural Engineers) Wail N Rifaie, Ashok K Govil, New Age International (P) Limited.
3. Introduction to Finite Element Method, Desai & Abel CBS Publication.
4. An Introduction to Finite Element Method- Reddy, J. N., McGraw-Hill Education.

Year/Sem	II Sem	L	T	P	C	COURSE CODE

Regulation	V21	3	0	0	3	V21STET10
Name of the Course	**STABILITY OF STRUCTURES**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Develop differential equation based on loading and end conditions of beam column (K3)
- Illustrate and work out the elastic buckling using various methodologies (K3)
- Illustrate and work out the in-elastic buckling using various methodologies (K3)
- Assess the torsional buckling behaviour of pure and non uniform torsion of thin walled bars (K3)
- Illustrate and work out the lateral buckling of various cross sections (K3)

SYLLABUS

UNIT I

Beam columns: Differential equation for beam columns – Beams column with concentrated loads – continuous lateral load – couples – Beam column with built in ends – continuous beams with axial load – application of Trigonometric series – Determination of allowable stresses

UNIT II

Elastic buckling of bars: Elastic buckling of straight columns – Effect of shear stress on buckling – Eccentrically and laterally loaded columns –Sway & Non Sway mode - Energy methods – Buckling of a bar on elastic foundation – Buckling of bar with intermediate compressive forces and distributed axial loads – Buckling of bars with change in cross section – Effect of shear force on critical load – Built up columns – Effect of Initial curvature on bars – Buckling of frames – Sway & Non Sway mode

UNIT III

In-elastic buckling: Buckling of straight bars – Double modulus theory Tangent modulus theory. Experiments and design formulae: Experiments on columns – Critical stress diagram – Empirical formulae of design – various end conditions – Design of columns based on buckling. Mathematical Treatment of stability problems: Buckling problem orthogonality relation – Ritz method –Stiffness method and formulation of Geometric stiffness matrix-Applications to simple frames

UNIT IV

Torsional Buckling: Pure torsion of thin walled bars of open cross section – Non uniform torsion of thin walled bars of open cross section - Torsional buckling – Buckling of Torsion and Flexure

UNIT V

Lateral Buckling of simply supported Beams: Beams of rectangular cross section subjected for pure bending, Buckling of I Section subjected to pure bending

Text Books:

1. Theory of Stability of Structures by Alexander ChaJes.
2. Theory of Elastic Stability by S. P. Timshenko & J.M. Gere-Mc Graw Hill Publications
3. Theory of Elastic Stability by Manikaselvam

References:

1. Fundamentals of Structural Stability by George J Smith & Dewey H. Hodges, Elsevier Publications
2. Elastic Stability of Structural Elements, N.G.R. Iyengar Macmillan Publications
3. Structural stability of Steel, Theodore v. Galambos & andrea e. Surovek

Year/Sem	II Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET11
Name of the Course	THEORY OF PLATES AND SHELLS					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Analyze Navier's solution, Levy's solution and solve for the rectangular and square plates (K3)
- Analyze circular plates with various boundary conditions (K3)
- Practice on the finite difference method of solving plate problems(K3)
- Develop the potential energy principle and find the solution of rectangular plates for various loadings(K3)
- Identify the behavior of folded plates and shells.(K3)

SYLLABUS

UNIT I

Rectangular Plates: Derivation of governing differential equation for plate– in plane bending and transverse bending effects - Plates under various loading conditions like concentrated, uniformly distributed load and hydrostatic pressure. Navier and Levy's type of solutions for various boundary condition.

UNIT II

Circular plates: Symmetrically loaded, circular plates under various loading conditions, annular plates.

UNIT III

Shells: Introduction to Shells- Single and double curvature- Equations of Equilibrium of shells. Derivation of stress resultants, Principles of membrane theory and bending theory

UNIT IV

Cylindrical Shells: Derivation of the governing DKJ equation for bending theory, details of Schorer's theory. Application to the analysis and design of short and long shells. Use of ASCE Manual coefficients for the design.

UNIT V

Beam theory of cylindrical shells: Beam and arch action. Design of diaphragms - Geometry analysis and design of elliptic Paraboloid, Conoidal and Hyperbolic Paraboloid shapes by membrane theory.

Text Books:

1. Theory of Plates and Shells 2e –S. Timoshenko and S. Woinowsky Krieger, McGraw-Hill book company, INC, New York.
2. Reinforced Concrete Shells and Folded Plates by P.C. Varghese, Prentice Hall India Publications
3. Analysis of Thin Concrete Shells by K. Chandrasekhara, New Age International (P) Ltd

References:

1. Theory and Analysis of Elastic Plates and Shells by J. N. Reddy, CRS Press
2. A Text Book of Shell Analysis – Bairagi, K, Khanna Publisher, New Delhi.
3. Design and Construction of Concrete Shell Roofs – Ramaswamy, G.S, Mc Graw Hill, New York

Year/Sem	II Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET12
Name of the Course	ADVANCED STEEL DESIGN					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Examine the simple connection used in various joints and design of connection (K3)
- Assess the plastic analysis to different beams based on their considerations (K3)
- Illustrate the eccentric and moment connection on various structural members (K3)
- Develop and analyse the industrial buildings subjected to transverse and lateral loading (K3)
- Complete the design of steel truss girder bridges and strengthening measures to girders (K3)

SYLLABUS

UNIT I

Simple Connections – Riveted, Bolted Pinned And Welded Connections: Riveted Connections – Bolted Connections –Load Transfer Mechanism – Failure of Bolted Joints – Specifications for Bolted Joints – Bearing – Type Connections – Tensile Strength of Plate – Strength and Efficiency of the Joint – Combined Shear and Tension – Slip-Critical connections – Prying Action – Combined Shear and Tension for Slip-Critical Connections. Design of Groove Welds - Design of Fillet Welds – Design of Intermittent Fillet Welds – Failure of Welds.

UNIT II

Plastic Analysis: Introduction – Plastic Theory – Plastic neutral Axis plastic moment, Elastic & Plastic Section moduli - shape factors plastic Hinge – Fundamental condition conditions in plastic analysis, methods of plastic analysis – collapse load – simply supported, propped cantilever beam, fixed beams continuous beams, portal frame single bay single storey portal frame at different level subjected to vertical and horizontal loads.

UNIT III

Eccentric and Moment Connections: Introduction – Beams – Column Connections – Connections Subjected to Eccentric Shear – Bolted Framed Connections –Bolted Seat Connections – Bolted Bracket Connections. Bolted Moment Connections – Welded Framed Connections- Welded Bracket Connections – Moment Resistant Connections.

UNIT IV

Analysis and Design of Industrial Buildings: Dead loads, live loads and wind loads on roofs. Design wind speed and pressure, wind pressure on roofs; wind effect on cladding and louvers; Design of angular roof truss, tubular truss, truss for a railway platform. Design of purlins for roofs, design of built up purlins, design of knee braced trusses and stanchions. Design of bracings.

UNIT V

Design af Steel Truss Girder Bridges: Types of truss bridges, component parts of a truss bridge, economic Proportions of trusses, self weight of truss girders, design of bridge Compression members, tension members; wind load on truss girder Bridges; wind effect on top lateral bracing; bottom lateral bracing; portal Bracing; sway bracing Design of Lacing.

Text Books:

1. Limit State Design of Steel Structures S.K. Duggal Mc Graw Hill Education Private Ltd. New Delhi.
2. Design of steel structures by N. Subramanian, Oxford University Press
3. Design Steel Structures Volume-II, Ramachandra & Vivendra Gehlot, Scientific Publishes Journals Department.

References:

1. Design of Steel Structures. P. Dayaratnam, S. Chand, Edition 2011-12.
2. Design of Steel Structures Galyord & Gaylord, Tata Mc Graw Hill, Education, Edition 2012.
3. Indian Standard Code – IS – 800-2007.
4. Indian Standard Code – IS – 875 – Part III - 2015

Year/Sem	**II Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21STET13
Name of the Course	**ANALYSIS OF OFFSHORE STRUCTURES**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Illustrate different types of offshore structures. (K3)
- Calculation of Conservation mass and momentum. (K3)
- Assess the Wave force estimation on small bodies. (K3)
- Assess the Wave force estimation on long bodies. (K3)
- Compute Static and dynamic analysis of fixed offshore structures. (K3)

SYLLABUS

UNIT I

Introduction: Types of offshore structures, Concept of fixed, compliant and floating structures, Law of floatation, fluid pressure and centre of pressure, estimation of centre of gravity, hydrostatic particulars, stability criteria of floating bodies, and motions of a floating body.

UNIT II

Dynamics and Kinematics : Conservation mass and momentum, Euler equation, Bernoullis Equation, Potential flow, Classification of waves, small amplitude or Linear Airy's theory, dispersion relationship, water particle kinematics, wave energy.

UNIT III

Wave force on small bodies: Estimation - Morison equation, Estimation of wave force on a vertical cylinder, Force due to current, Effect of marine growth on vertical cylinders.

UNIT IV

Wave force on large bodies: Froude-krylov theory, Diffraction theory.

UNIT V

Static and dynamic analysis of fixed offshore structures.

Text Books:

1. Graff, W. J., Introduction to Offshore Structures, Gulf Publ. Co.1981.
2. Dawson, T. H., Offshore Structural Engineering, Prentice Hall, 1983.
3. McClelland, B & Reifel, M. D., Planning & Design of fixed Offshore Platforms, Van Nostrand, 1986.

Year/Sem	**II Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21STET14
Name of the Course	**EARTHQUAKE RESISTANT DESIGN OF BUILDINGS**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Demonstrate the fundamentals of seismology and basic earthquake mechanisms, tectonics types of ground motion, magnitude and propagation of ground motion. (K3)
- Assess the seismic design concepts of various moment resisting frames and their ductility behaviour (K3)
- Compute the earthquake load on various building frames and study on ductile behavior of building frames (K3)
- Assess the Cyclic loading behavior of RC, steel and pre- stressed concrete elements (K3)
- Illustrate the methods of Retrofitting and restoration of buildings subjected to damage due to earthquakes (K3)

SYLLABUS

UNIT I

Engineering seismology: Rebound theory – plate tectonics – seismic waves - earthquake size and various scales – local site effects – Indian seismicity – seismic zones of India – theory of vibrations – near ground and far ground rotation and their effects

UNIT II

Seismic design concepts: EQ load on simple building – load path – floor and roof diaphragms – seismic resistant building architecture – plan configuration – vertical configuration – pounding effects – mass and stiffness irregularities – torsion in structural system- Provision of seismic code (IS 1893 & 13920) – Building system – frames – shear wall – braced frames – layout design of Moment Resisting Frames(MRF) – ductility of MRF – Infill wall – Non-structural elements

UNIT III

Calculation of EQ load: 3D modeling of building systems and analysis (theory only) Design and ductile detailing of Beams and columns of frames Concept of strong column weak beams, Design and ductile detailing of shear walls.

UNIT IV

Cyclic loading behavior of RC, steel and pre- stressed concrete elements: modern concepts- Base isolation – Adaptive systems – case studies

UNIT V

Retrofitting and restoration of buildings subjected to damage due to earthquakes- effects of earthquakes – factors related to building damages due to earthquake- methods of seismic retrofitting- restoration of buildings

Text Books:

1. Earthquake Resistant Design of Structures Pankaj Agarwal and Manish ShriKhande, Prentice Hall of India, 2007, New Delhi.
2. Earthquake Resistant Design of Structures- S.K. Duggal, Oxford Publications.
3. Seismic design of reinforced concrete and masonry buildings by Paulay and Priestley .

References:

1. Earthquake Resistant Design and Risk Reduction- David Dowrick
2. IS 4326 -1998: Earthquake Resistant Design and Construction of Buildings
3. IS 1893 (Part 1 to 5)- 2016: General Provisions and Building
4. IS 4928–1993: Code of practice for Earthquake Resistant Design and Construction of Buildings
5. IS 13920-2016: Code of Practice for Ductile Detailing of Reinforced Concrete Structures subjected to Seismic Forces
6. IS 13935-1993: Guidelines for Repair and Seismic Strengthening of Building

Year/Sem	**II Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21STET15
Name of the Course	**PRECAST AND PREFABRICATED STRUCTURES**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes

Upon successful completion of this course, the students will be able to

- Explain impotence of prefabrication and Principles of Prefabrication. (K3)
- Find Prefabricated Load Carrying Members. (K3)
- Assess Joints for different structural connections. (K3)
- Analyze the production technology of prefabrication. (K3)
- Design and detailing of precast UNIT for factories. (K3)

SYLLABUS

UNIT I

Introduction to prefabrication: General Principles of Prefabrication - Comparison with monolithic construction, types of prefabrication, site and plant prefabrication, economy of prefabrication, modular coordination, standardization – Materials – Modular coordination – Systems – Production – Transportation – Erection.

UNIT II

Prefabricated Members: Load Carrying Capacity - Planning for components of prefabricated structures, disuniting of structures, design of simple rectangular beams and I-beams, handling and erection stresses, elimination of erection stresses, beams, columns, symmetric frames. Behaviour of structural components – Large panel constructions – Construction of roof and floor slabs – Wall panels – Columns – Shear walls..

UNIT III

Joints: Joints for different structural connections, effective sealing of joints for water proofing, provisions for non-structural fastenings, expansion joints in precast construction.

UNIT IV

Production Technology: Choice of production setup, manufacturing methods, stationary and mobile production, planning of production setup, storage of precast elements, dimensional tolerances, acceleration of concrete hardening. Hoisting Technology - Equipment for hoisting and erection, techniques for erection of different types of members like beams, slabs, wall panels and columns, vacuum lifting pads.

UNIT V

Designing and detailing of precast: For factory structures, purlins, principal rafters, roof trusses, lattice girders, gable frames, singe span single storied simple frames, single storied buildings, slabs, beams and columns. Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

Text Books:

1. Precast Concrete Structures- Kim S Elliott, CRC Press
2. CBRI, Building materials and components, India, 1990
3. Gerostiza C.Z., Hendrikson C. and Rehat D.R., Knowledge based process planning for construction and manufacturing, Academic Press Inc., 1994

References:

1. Structural design manual, Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland Betor Verlag, 1978.

3. Koncz T., Manual of precast concrete construction, Vols. I, II and III, Bauverlag, GMBH, 1971.

Year/Sem	II Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21STET16
Name of the Course	EARTH RETAINING STRUCTURES					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Compute the lateral earth pressures associated with different earth systems (K3)
- Assess the failure criterion and stability requirements in selecting the most technically appropriate type of retaining wall (K3)
- Employ different techniques to design a sheet pile structure considering both external and internal stability (K3)
- Apply the knowledge of reinforced earth in the designing the earth retaining systems (K3)
- Relate different methods in analyzing the stability of braced cuts and cofferdams (K3)

SYLLABUS

UNIT I

Earth pressures: Different types and their coefficients; Classical Theories of Earth pressure – Rankine's and Coulomb's Theories for Active and Passive earth pressure; Computation of Lateral Earth Pressure in Homogeneous and Layered soils; Graphical solutions for Coulomb's Theory in active and passive conditions.

UNIT II

Retaining walls: Types, Type of Failures of Retaining Walls – Stability requirements –Drainage behind Retaining walls – Provision of Joints – Relief Shells.

UNIT III

Sheet Pile Structures: Types of Sheet piles – Cantilever sheet piles in sands and clays – Anchored sheet piles – Free earth and Fixed earth support methods – Rowe's moment reduction method – Location of anchors and Design of Anchorage system.

UNIT IV

Soil reinforcement: Reinforced earth - Different components – their functions – Design principles of reinforced earth retaining walls.

UNIT V

Braced cuts and Cofferdams: Lateral Pressure in Braced cuts – Design of Various Components of a Braced cut – Stability of Braced cuts – Bottom Heave in cuts. – Types of cofferdam, suitability, merits and demerits – Design of single – wall cofferdams and their stability aspects – TVA method and Cummins' methods.

Text Books:

1. Principles of Foundation Engineering by Braja M Das, Cengage Learning
2. Foundation analysis and design by Bowles, J.E., McGraw Hill
3. Soil Mechanics in Engineering Practice – Terzaghi, K and Ralph B. Peck, John Wiley & Sons.

References:

1. Earth Pressure and Earth Retaining Structures by Chris RI Clayton, Rick I woods, Andrew J Bond and Jarbas Milititsky, CRC Press, Taylor and Francis Group, New York.
2. Analysis and Design of Foundations and Retaining Structures, Samsher Prakash
3. Gopal Ranjan and Swami Saran, Saritha Prakashan Publishers, New Delhi.
4. NPTEL course materials on Geo-synthetics and Earth Retaining Structures

Year/Sem	I Sem	L	T	P	C	COURSE CODE
Regulation	V21	2	0	0	2	V21STET17
Name of the Course	**ADVANCED REINFORCED CONCRETE DESIGN**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Explain the limit state method provisions in analysis of structures (K2)
- Apply the yield line method to analyze slab (K3)
- Develop the designs to flat slabs and ribbed slabs (K3)
- Explain the design steps involved in deep beams, corbel design procedure (K2)
- Interpret the Design method of slender and eccentric column (K3)

SYLLABUS

UNIT I

Limit Analysis of R C Structures: Rotation of a plastic hinge, Redistribution of moments, moment rotation characteristics of RC member, I.S. code provisions, loading pattern, Bending Moment Envelop, Application for Fixed Beams and Continuous Beams.

UNIT II

Yield line analysis for slabs: Yield line criterion – Virtual work and equilibrium methods of analysis – For square circular, Rectangular, Triangular and Hexagonal with simple andcontinuous end conditions.

UNIT III

Ribbed slabs: Analysis of the Slabs for Moment and Shears, Ultimate Moment of Resistance, Design for shear, Deflection, Arrangement of Reinforcements.

UNIT IV

Design of Reinforced Concrete Deep Beams & Corbels: Steps of Designing Deep Beams, Design by IS 456. Checking for Local Failures, Detailing of Deep Beams, Analysis of Forces in a Corbels, Design of Procedure of Corbels, Design of Nibs. Detailing of reinforcement.

UNIT V

Design of Slender Columns – Slenderness limits, Methods of Design of Slender Columns, Additional Moment Method, Procedure for Design of Slender Columns. Detailing of reinforcement.

Text Books:

1. Advanced Reinforced Concrete Design, by P.C. Varghese Prentice Hall India Limited
2. Design of Reinforced Concrete Structures by N.Subramanian, Oxford University Press.
3. Reinforced Concrete Design, by S. Unnikrishna Pillai & Devdas Menon Tata Mc.Graw-Hill Publishing Company Ltd. New Delhi 2010.

References:

1. Limit State Theory and Design of Reinforced Concrete S. R. Karve and V.L Shah. Standard Publishers
2. Reinforced concrete structural elements – behavior, Analysis and design by P. Purushotham, Tata Mc.Graw-Hill, 1994.
3. Design of concrete structures – Arthus H. Nilson, David Darwin, and Chorles W. Dolar, Tata Mc. Graw-Hill, 3rd Edition, 2005.
4. Reinforced Concrete design by Kennath Leet, Tata Mc. Graw-Hill International, editions, 2nd edition, 1991.

Year/Sem	II Sem	L	T	P	C	COURSE CODE
Regulation	V21	0	0	4	2	V21SEL03
Name of the Course	STRUCTURAL DESIGN LABORATORY					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Develop Computer Programs for Analysis and Design of various Structural Elements
- Use different Structural Engineering software's to solve various civil Engineering programs

SYLLABUS

1. Analysis and Design of reinforced concrete multistoried building
2. Analysis of plane and space truss
3. Analysis of plane and space frame
4. Wind analysis on tall structure
5. Analysis of Cylindrical shell
6. Dynamic Analysis of Multistory structure Analysis and Design using STADD, STADD FOUNDATION, ETABS, ANSYS

NOTE: A minimum of four from the above set have to be conducted.

References:

1. Computer aided design laboratory (Civil Engineering) by Shesha Prakash and Suresh.S

III SEMESTER – SYLLABUS

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation / Year	V21 / 2021-2022	3	0	0	3	V21STET18
Name of the Course	**DESIGN OF PRESTRESSED CONCRETE STRUCTURES**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Compute the Analysis of prestress , losses in prestress and Anchorage slip (K3)
- Deflections of prestressed concrete members (K3)
- Employ types and advantages and analysis of composite sections (K3)
- Apply the knowledge of prestressed concrete slabs (K3)
- Analyze continuity beams in prestressed concrete structures (K3)

SYLLABUS

UNIT I

Introduction – Prestressing Systems – Pretensioning Systems – Postensioning Systems – High Strength Steel and Concrete - Analysis of Prestress - Resultant Stresses at a Section – Pressure Line or Thrust Line – Concept of Load Balancing - Losses of Prestress – Loss Due to Elastic Deformation of Concrete – Shrinkage of Concrete – Creep – Relaxation of Stress in Steel – Friction – Anchorage Slip.

UNIT II

Deflections Of Prestressed Concrete Members: Importance of Control of Deflections – Factors Influencing Deflection – Short-term Deflections of Uncracked Members – Prediction of Long-time Deflections – Deflections of Cracked Members – Requirements of IS 1343-2012. Ultimate Flexural Strength of Beams: Introduction, Flexural theory using first principles – Simplified Methods – Ultimate Moment of Resistance of untensioned Steel.

UNIT III

Composite Constructions: Introduction, Advantages, Types of Composite Construction, Analysis of Composite beams- Differential shrinkage- Ultimate Flexural and shear strength of composite sections- Deflection of Composite Beams. Design of Composite sections.

UNIT IV

Prestressed Concrete Slabs: Types Of Prestressed Concrete Floor Slabs- Design of Prestressed Concrete One Way and Two Way Slabs. Prestressed Concrete Pipes and Poles : Circular prestressing- Types of Prestressed Concrete Pipes- Design of Prestressed Concrete Pipes - Prestressed Concrete Poles.

UNIT V

Continuous Beams: Advantage of Continuous Members – Effect of Prestressing Indeterminate Structures – Methods of Achieving Continuity – Methods of Analysis of Secondary Moments – Concordant Cable Profile – Guyon's Theorem. Redistribution of moments in a continuous beam. Anchorage Zone Stresses in Beams : Introduction, Stress distribution in End Block – Anchorage zone stresses –Magnel's method- Guyon's Method - Anchorage zone Reinforcement.

Text Books:

1. Prestressed Concrete, by N. Krishna Raju, Mc Graw Hill Publishers – fourth edition
2. Prestressed Concrete by K. U.Muthu, PHI Learning Pvt Limited - 18 January 2016
3. Design of Prestressed Concrete by S.S.Bhavikatti – 1 January 2019

References:

1. 1 Prestressed Concrete Analysis and Design, Antone E. Naaman, Techno Press 3000
2. Design of Prestressed Concrete- T. Y. Lin, Ned H. Burns
3. 3 Wiley Publications 3. Design of prestressed Concrete by E.G. Nawy

Year/Sem	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21STET19
Name of the Course	**STRUCTURAL HEALTH MONITORING**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Assess the structural health by investigation and regular maintenance (K3)
- Employ various measures for monitoring structural health (K3)
- Employ various Investigations for monitoring structural audit (K3)
- Discover the dynamic field testing (K3)
- Apply the knowledge of Repairing and rehabilitation of structures (K3)

SYLLABUS

UNIT I

Structural Health: Factors affecting Health of Structures, Causes of Distress, Regular Maintenance Structural Audit: Assessment of Health of Structure, Collapse and Investigation, Investigation Management, SHM Procedures.

UNIT II

Structural Health Monitoring: Concept, Various Measures, Structural Safety in Alteration.

UNIT III

Structural Audit: Assessment of Health of Structure, Collapse and Investigation, Investigation Management, SHM Procedures.

UNIT IV

Dynamic Field Testing: Types of Dynamic Field Test, Stress History Data, Dynamic Response Methods, Hardware for Remote Data Acquisition Systems, Remote Structural Health Monitoring.

UNIT V

Introduction to Repairs and Rehabilitations of Structures: Case Studies (Site Visits), Piezo– electric materials and other smart materials, electro–mechanical impedance (EMI) technique, adaptations of EMI technique.

Text Books:

1. Structural Health Monitoring, Daniel Balageas, Claus Peter Fritzen, Alfredo Güemes, John Wiley and Sons, 2006.
2. Health Monitoring of Structural Materials and Components Methods with Applications, Douglas E Adams, John Wiley and Sons, 2007.
3. Structural Health Monitoring by Daniel Balageas, Claus-peter fritzen and Alfredo Guemes

References:

1. Structural Health Monitoring and Intelligent Infrastructure, Vol1, J. P. Ou, H. Li and Z. D. Duan, Taylor and Francis Group, London, UK, 2006.
2. Structural Health Monitoring with Wafer Active Sensors, Victor Giurglutiu, Academic Press Inc, 2007.
3. Advances in Condition Monitoring and Structural Health Monitoring: WCCM by Len Gelman .et.al.

Year/Sem	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21STET20
Name of the Course	**INDUSTRIAL STRUCTURES**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- functional requirements of structural systems for various industries (K3)
- Get an idea about the materials used and design of industrial structural elements (K3)
- Pre Engineered Buildings (K3)
- Realize the basic concepts and design of power plant structures (K3)
- Design power transmission structures (K3)

SYLLABUS

UNIT I

Planning and functional requirements- classification of industries and industrial structures- planning for layout- requirements regarding lighting ventilation and fire safety- protection against noise and vibrations.

UNIT II

Industrial buildings- roofs for industrial buildings (Steel) - design of gantry girder- design of corbels and nibs- machine foundations

UNIT III

Design of Pre Engineered Buildings

UNIT IV

Power plant structures- Bunkers and silos- chimney and cooling towers- Nuclear containment structures

UNIT V

Power transmission structures- transmission line towers- tower foundations- testing towers

Text books:

1. Machine Foundations by P. Srinivasulu and C. V. Vaidyanathan, Structural Engineering Research Center - 1 July 2017
2. Tall Chimneys- Design and Construction by S. N. Manohar Tata Mc Grawhill Publishing Company -
3. The Design & Construction of Industrial Buildings by Moritz Kahn

References:

1. Transmission Line Structures by S. S. Murthy and A. R. Santakumar McGraw Hill
2. SP 32: 1986, Handbook on functional requirements of Industrial buildings 3. Design of steel structures by N. Subramanian
3. The Architect's Studio Companion: Rules of Thumb for Preliminary Design by Edward Allen

Year/Sem	III Sem	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21MBT56
Name of the Course	COST MANAGEMENT OF ENGINEERING PROJECTS					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to

- Understand the cost management process and various costs involved in a project (K2)
- Understand various aspects of a project and related processes. (K2)
- Analyze the concepts of Break even and CVP analysis. (K3)
- Demonstrate quality management techniques besides budgeting strategies (K2)
- Apply quantitative techniques for cost management (K4)

SYLLABUS

UNIT I

Introduction and Overview of the Strategic Cost Management Process: Cost concepts in decision-making; relevant cost, Differential cost, Marginal cost, Incremental cost and Opportunity cost. Objectives of Costing System; Creation of a Database for operational control; Provision of data for Decision-Making.

UNIT II

Project Management: Meaning, Different types of projects.

Various stages of project execution: conception to commissioning, Project execution as a conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution, main clearances and documents.

Project team: Role of each member, Importance of Project site. Project contracts: Types and its contents. CPM & PERT Techniques.

UNIT III

Cost Behavior and Profit Planning: Marginal Costing, Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis, Standard Costing and Variance Analysis.

UNIT IV

Quality management and Budgeting strategies: Pareto Analysis, Target costing, Life Cycle Costing, Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. **Budgetary Control**; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing & decisions including transfer pricing.

UNIT V

Quantitative techniques for cost management, Linear Programming, Transportation problems, Assignment problems, Simulation, Learning Curve Theory

Reference Books:

1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
4. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher
5. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

ANNEXURE – CE- V

AUDIT COURSES OFFERED IN I & II SEMESTER

Audit course	I & II Sem	Disaster Management	V21STEAC1

Year/Sem		**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation Year	V21 / 2021-2022	3	0	0	3	V21STEAC1
Name of the Course	**DISASTER MANAGEMENT**					
Branch	Common to all					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Describe to student to have a idea on different natural hazards and disaster management (K2)
- Develop the student to understand manmade disaster and their management (K3)
- Prepare the student in such a way inorder to understand building codes and vulnerability of disaster (K3)
- Illustrate to student about role of technology in disaster management (K2)
- Assess the importance of education and community preparedness in disaster management to student (K3)

SYLLABUS

UNIT I

Natural Hazards and Disaster Management: Introduction of DM Disaster Management cycle – Five priorities for action- Case study methods of the following: floods, droughts – Earthquakes – global warming, cyclones & Tsunamis – Post Tsunami hazards along the Indian coast – landslides.

UNIT II

Man Made Disastar And Their Management Along With Case Study Methods Of The Following: Fire hazards – transport hazard dynamics – solid waste management – post disaster – bio terrotirism - rail and air craft's accidents-Management of these disasters

UNIT III

Risk And Vulnerability: – Building codes and land use planning – social vulnerability – environmental vulnerability -Financial management of disaster.

UNIT IV

Role Of Technology In Disaster Managements: Disaster management for infra structures, taxonomy of infra structure - mitigation programme for earth quakes –geospatial information in agriculture drought assessment-multimedia technology in disaster risk management and training-transformable indigenous knowledge in disaster reduction.

UNIT V

Education And Community Preparedness: Education in disaster risk reduction-Essentials of school disaster education-Community capacity and disaster resilience-Community based disaster recovery -Community based disaster management and social capital-Designing resilience- building.

Text Books:

1. Disaster Management – Global Challenges and Local Solutions' by Rajib shah & R R Krishnamurthy(2009),Universities press.
2. Disaster Science & Management' by Tushar Bhattacharya, Tata McGraw Hill Education Pvt. Ltd., New Delhi.
3. Disaster Management – Future Challenges and Opportunities' by Jagbir Singh (2007), I K International Publishing House Pvt. Ltd.

Reference Books:

1. 'Disaster Management' edited by H K Gupta (2003), Universities press.
2. Natural Hazards and Disaster Management, Vulnerability and Mitigation by RB Singh
3. Disaster Management by Harish K.Gupta

(AUTONOMOUS)

(Sponsored by Sri Vasavi Educational Society)
(Approved by AICTE, New Delhi &Recognized by UGC under section 2(f) & 12(B))
(Permanently affiliated to JNTUK, Kakinada, Accredited by NBA and NAAC with 'A' Grade)
Pedatadepalli, **TADEPALLIGUDEM–534 101.**W.G.Dist**. (A.P)**

Department of Electrical & Electronics Engineering

Date: 07-09-2021

The fifth meeting of Board of Studies in Department of Electrical and Electronics Engineering is held at 11.00 AM on 03-09-2021 though online mode using gotomeeting tool (Meeting ID: 954129285).

The following members are attended the meeting.

S.No.	Name	Designation	Role
1.	Dr. Sudha Rani Donepudi	Professor, Head, Dept. of EEE, SVEC, Pedatadepalli.	Chairperson
2.	Dr. R. SrinivasaRao	Professor, Dept. of EEE, UCEK, JNTUK, Kakinada	Subject Expert Nominated By V.C.
3.	Dr. M. Sydulu	Professor, Dept. of EE, NITW, Warangal	Subject Expert Nominated By A.C.
4.	Dr. Y.P. Obulesu	Professor, School of EE, VIT, Vellore	Subject Expert Nominated By A.C.
5.	Er. B.N.V.R.C. Suresh Kumar	Retired AGM, PGCI, Hyderabad	Industry Expert Nominated By A.C
6.	Er. Ch. Vinay Kumar	Assistant Engineer, EHT Lines, APTRANSCO, Eluru.	Alumni
7.	Dr. Ch. Rambabu	Professor	Member
8.	U. Chandra Rao	Sr. Asst. Professor	Member
9.	N. Sri Harish	Asst. Professor	Member
10.	K Ramesh Babu	Asst. Professor	Member
11.	M.T.V. L Ravi Kumar	Asst. Professor	Member
12.	V. Rama Narayana	Asst. Professor	Member
13.	G Madhu Sagar Babu	Asst. Professor	Member
14.	A Uma Siva Naga Prasad	Asst. Professor	Member
15.	K. Venkata Reddy	Asst. Professor	Member

16.	K Amarendra	Asst. Professor	Member
17.	Mr. V.S. Aditya	Asst. Professor	Member
18.	Pradeep Vejju	Asst. Professor	Member
19.	Ch Srinivas	Asst. Professor	Member

The following are the minutes of the meeting

Item No. 1: Welcome note by the Chairperson BOS

The HOD extended a formal welcome and introduced the members.

Item No. 2: Progress Report of the Department

Chairperson BOS had given the Brief on Progress Report of the Department.

Item No. 3: Review of course structure for VII & VIII semesters of B. Tech EEE under V18 Regulation.

Reviewed and approved the course structure of VII & VIII semesters of B.Tech-EEE Programme under V18 Regulation.

The details of the approved course structure for VII & VIII semesters of UG (B.Tech) Programme (EEE) under V18 Regulation are given in **Annexure– EE-I**

Item No. 4: Approval of syllabi for the courses offered in VII & VIII semesters B. Tech EEE under V18 Regulation.

Approved the syllabi for the courses offered in VII & VIII semesters B. Tech EEE under V18 Regulation.

The approved syllabi for the courses offered in VII and VIII semesters of B.Tech EEE of under V18 Regulation is attached in **Annexure– EE-II**

Item No. 5: Approval of list of courses offering under Open Elective- II & III in VII & VIII semester B. Tech respectively under V18 Regulation for all other branches and the approval of their detailed syllabi.

Approved the list of courses and syllabi for the courses offered as Open Electives in VII and VIII semesters B. Tech for all other branches under V18 Regulation and the details are given in **Annexure– EE-III**

Item No. 6: Approval of course structure for III & IV semesters of B. Tech EEE under V20 Regulation.

Approved the course structure of III & IV semesters of B.Tech-EEE Programme under V20 Regulation with the following modifications.

SEM	Suggestions	Inclusions / Modifications
III & IV Skill Oriented Courses (SOC)	Suggested to add Raspberry-pi, Arduino, and E-CAD	Included Arduino Board and E-CAD into pool of SOC at second year level and Raspberry-pi will be included at third year level

The details of the approved course structure for III & IV semesters of UG (B.Tech) Programme (EEE) under V20 Regulation are given in **Annexure– EE-IV**

Item No. 7: Approval of syllabi for the courses offered in III & IV semesters of B. Tech EEE under V20 Regulation.

Approved the syllabi for the courses offered in III & IV semesters B. Tech EEE under V20 Regulation with the following suggestions/modifications.

SEM	Course Code	Course Title	Suggestions	Inclusions / Modifications
III	V20EET04	Electrical Circuit Analysis-II	Replace Network Synthesis Unit with Filters	Replaced Network Synthesis Unit with Filters
IV	V20EET10	Electrical Power Generation & Transmission	Add introduction level of Renewable Sources in Unit-I	Included Introduction to Renewable Energy Sources, Solar and wind Power plant Layouts.
IV	V20EEL06	Electrical Measurements Laboratory	Add demonstration of new electronic meters available for field electrical engineers	Included demonstration of electronic meters as an experiment

The approved syllabi for the courses offered in III and IV semesters of B. Tech EEE of under V20 Regulation is attached in **Annexure– EE-V**

Item No. 8: Approval of syllabi for the courses offered in III & IV semesters for other branches of B. Tech under V20 Regulation.

Approved the syllabus for the course offered in IV semesters B. Tech ECE under V20 Regulation and is given in **Annexure– EE-VI**

Item No. 9: Approval of course structure for I to IV semesters of M. Tech Power Electronics and Power Systems (PE&PS) under V21 Regulation.

Approved the proposed course structure from I to IV semesters M. Tech Power Electronics and Power Systems (PE&PS) under V21 Regulation with following suggestions/modifications.

SEM	Suggestions	Inclusions / Modifications
I	Advanced Digital Signal Processing Course (Course Code: V21PET04) in Elective –I can be replaced with Smart Grid	Advanced Digital Signal Processing Course (Course Code: V21PET04) is replaced with Smart Grid (Course Code: V21PET04)
II	DSP Controlled Drives course (Course code: V21PET12) in Elective-III can be changed as Control of Electric Drives	DSP Controlled Drives course (Course code: V21PET12) in Elective-III is modified as Control of Electric Drives (Course code: V21PET12)
III	In Elective-III, Optimization Techniques (Course code: V21PET18) and Artificial Intelligent Techniques (Course code: V21PET19) can combine together as a Soft Computing Techniques	Optimization Techniques (Course code: V21PET18) is merged with Artificial Intelligent Techniques (Course code: V21PET19) and renamed as Soft Computing Techniques in Electrical Engineering (Course code: V21PET18)

The approved course structure from I to IV semesters M. Tech Power Electronics and Power Systems (PE&PS) under V21 Regulation is given in **Annexure– EE-VII**

Item No. 10: Approval of syllabi for the courses offered form I to IV semesters of M. Tech Power Electronics and Power Systems (PE&PS) under V21 Regulation.

Approved the syllabi for various courses offered from I to IV semesters of M. Tech Power Electronics and Power Systems (PE&PS) under V21 Regulation with the following modifications.

SEM	Course Code	Course Title	Suggestions	Inclusions / Modifications

I	V21PET02	Power System Operation & Control	Included Load Flow Analysis	Load Flow Analysis is added in the syllabus

The approved syllabi for various courses offered from I to IV semesters of M. Tech Power Electronics and Power Systems (PE&PS) under V21 Regulation is given in **Annexure– EE-VIII**

Dr. Sudha Rani Donepudi

- Internship/Industrial Training certificate must be submitted on or before last instruction day of VII Semester, otherwise his/her Semester End Examination results will not be declared.
- Certification Course certificate must be submitted on or before last instruction day of VII Semester, otherwise his/her Semester End Examination results will not be declared.

Annexure- EE-II

Syllabi for the Courses offered in VII & VIII Semesters B. Tech EEE Under V18 Regulation

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET26
Name of the Course	Power System Operation and Control					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Analyze the optimal scheduling of power generating thermal units	K4
CO2	Compute optimal hydro and thermal scheduling.	K3
CO3	Predict the optimal unit commitment problem	K3
CO4	Calculate the transfer function of single area and two area load frequency control.	K4
CO5	Evaluate the steady state response of single area load control with PI controller.	K5
CO6	Assess the reactive power control and compensation of transmission lines.	K3

UNIT–I: ECONOMIC OPERATION OF POWER SYSTEMS

Optimal operation of Generators in Thermal power stations, Heat rate curve, Cost Curve, Incremental fuel and Production costs, Input–output characteristics, Optimum generation allocation with line losses neglected, Optimum generation allocation including the effect of transmission line losses, Loss Coefficients, General transmission line loss formula.

UNIT–II: HYDROTHERMAL SCHEDULING

Optimal scheduling of Hydrothermal System: Hydroelectric power plant models, Scheduling problems, Short term hydrothermal scheduling problem.

UNIT–III: UNIT COMMITMENT

Optimal unit commitment problem, Need for unit commitment, Constraints in unit commitment, Cost function formulation, Solution methods, Priority ordering, Dynamic programming.

UNIT–IV: LOAD FREQUENCY CONTROL-I

Modeling of steam turbine, Generator, Mathematical modeling of speed governing system– Transfer function – Modeling of Hydro turbine –Necessity of keeping frequency constant–Definitions of Control area – Single area control system – Block diagram representation of an isolated power system – Steady state analysis – Dynamic response – Uncontrolled case. Proportional plus Integral control of single area and its block diagram representation – Steady state response.

UNIT–V: LOAD FREQUENCY CONTROL-II

Block diagram development of Load Frequency Control of two area system uncontrolled
case and controlled case. Tie-line bias control. Load Frequency Control and Economic
dispatch control.

UNIT–VI: REACTIVE POWER CONTROL

Overview of Reactive Power control – Reactive Power compensation in transmission systems– Advantages and disadvantages of different types of compensating equipment for transmission systems – Load compensation – Specifications of load compensator –
Uncompensated and compensated transmission lines: Shunt and series compensation – Need for FACTS controllers.

TEXT BOOKS:

1. Electric Energy Systems Theory – by O. I. Elgerd, Tata Mc Graw–hill Publishing Company Ltd., Second edition. 2017
2. Power System stability & control, Prabha Kundur, TMH ,First Edition 2006.
3. Modern Power System Analysis – by I. J. Nagrath & D. P. Kothari Tata Mc Graw – Hill Publishing Company Ltd, 2nd edition Energy management by Paul o’ Callaghan, Mc–Graw Hill Bookcompany–1st edition, 1998.

REFERENCE BOOKS:

1. Power System Analysis and Design by J. Duncan Glover and M.S. Sarma, THOMPSON, 6rd Edition2019.
2. Power System Analysis by Grainger and Stevenson, Tata McGraw Hill2017.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET27**
Name of the Course	**AI Techniques for Power Systems**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand fundamentals concepts of artificial neural networks.	K2
CO2	Understand concepts of different algorithms ANN paradigms.	K2
CO3	Understand fundamentals of fuzzy set properties and membership functions.	K2
CO4	Understand the concept of evolutionary techniques operation.	K2
CO5	Understand fundamentals of optimization techniques.	K2
CO6	Apply optimization techniques to power system applications.	K4

UNIT-I: ARTIFICIAL INTELLIGENCE

Artificial Neural Networks (ANN) – definition and fundamental concepts – Biological neural networks – Artificial neuron – activation functions – setting of weights – typical architectures – biases and thresholds – learning/training laws and algorithms.

UNIT-II: ANN PARADIGMS

ADALINE – feed forward networks – Back Propagation algorithm-Radial Basis Function (RBF) network- Hopfield Neural Network.

UNIT- III: CLASSICAL AND FUZZY SETS

Introduction to classical sets- properties, Operations and relations; Fuzzy sets, Membership, Operations, Properties, Fuzzy relations, Membership functions.

UNIT-IV: EVOLUTIONARY TECHNIQUES

Introduction-concepts of genetic algorithms: Initialization-Selection-Genetic operators, Mutation- Evolutionary programming-Evolutionary techniques.

UNIT-V: FUNDMENTALS OF OPTIMIZATION

Classification of optimization problems-Unconstrained and Constrained optimization- Particle swarm optimization.

UNIT-VI: APPLICATIONS OF AI

PSO based Economic load dispatch without losses, Load flow, and Load frequency control: Single area system using ANN.

TEXT BOOKS:

1. Neural Networks, Fuzzy logic, Genetic algorithms: synthesis and applications by Rajasekharan and pai – PHI Publication, 2011.
2. Fuzzy logic with Fuzzy Applications – T.J Ross – Mc Graw Hill Inc, 1997.
3. NP Padhy, Artificial Intelligence and Intelligent Systems, Oxford University Press, 1st Edition, 2005.

REFERENCE BOOKS:

Semester	VII SEM	L	T	P	C	Course Code
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET28**
Name of the Course	**Power Quality (Professional Elective – III)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Explain different types of power quality phenomena	**K2**
CO2	Illustrate sources for voltage sag, voltage swell, interruption, transients, long duration over voltages & harmonics in a power system	**K3**
CO3	Describe power quality terms & study power quality standards	**K2**
CO4	Discuss principle of voltage regulation & power factor improvement methods	**K2**
CO5	Assess the relationship between distributed generation & power quality	**K3**
CO6	Discuss the power quality monitoring concepts & the usage of measuring instruments	**K2**

UNIT–I: INTRODUCTION

Overview of power quality – Concern about the power quality – General classes of power quality and voltage quality problems – Transients – Long–duration voltage variations – Short–duration voltage variations – Voltage unbalance – Waveform distortion – Voltage fluctuation – Power frequency variations.

UNIT–II: VOLTAGE IMPERFECTIONS IN POWER SYSTEMS

Power quality terms – Voltage sags – Voltage swells and interruptions – Sources of voltage sag, swell and interruptions – Nonlinear loads – IEEE and IEC standards. Source of transient over voltages – Principles of over voltage protection – Devices for over voltage protection – Utility capacitor switching transients.

UNIT–III: VOLTAGE REGULATION AND POWER FACTOR IMPROVEMENT

Principles of regulating the voltage – Device for voltage regulation – Utility voltage
regulator application – Capacitor for voltage regulation – End–user capacitor application – Regulating utility voltage with distributed resources – Flicker – Power factor penalty – Static VAR compensations for power factor improvement.

UNIT– IV: HARMONIC DISTORTION AND SOLUTIONS

Voltage distortion vs. Current distortion – Harmonics vs. Transients – Harmonic indices – Sources of harmonics – Effect of harmonic distortion – Impact of capacitors, transformers, motors and meters – Point of common coupling – Passive and active filtering – Numerical problems.

UNIT–V: DISTRIBUTED GENERATION AND POWER QUALITY

Resurgence of distributed generation – DG technologies – Interface to the utility system – Power quality issues and operating conflicts – DG on low voltage distribution networks.

UNIT–VI: MONITORING AND INSTRUMENTATION

Power quality monitoring and considerations – Historical perspective of PQ measuring instruments – PQ measurement equipment – Assessment of PQ measuring data – Application of intelligent systems – PQ monitoring standards.

TEXTBOOKS:

1. Electrical Power Systems Quality, Dugan R C, Mc Granaghan M F, Santoso S, and Beaty H W, Second Edition, McGraw–Hill, 2012, 3rdedition.
2. Electric power quality problems –M. H. J. Bollen IEEE series-Wiley Indiapublications,2011.

2. Understanding Power Quality Problems: Voltage Sags and Interruptions, Bollen M HJ, First Edition, IEEE Press;2000.
3. Power System Harmonics, Arrillaga J and Watson N R, Second Edition, John Wiley & Sons,2003.
4. Power Quality C. shankaran, CRC Press,2001
5. Power Quality in Power systems and Electrical Machines–Ewald F. fuchs, Mohammad A. S. Masoum–Elsevier.2nd edition 2015
6. **https://nptel.ac.in/courses/108/106/108106025/**

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET29**
Name of the Course	**High Voltage Engineering (Professional Elective – III)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Describe the electric field stress on different configuration of electrodes.	K2
CO2	Understand the breakdown phenomena in various dielectric materials.	K2
CO3	Illustrate the generation of high DC, AC and Impulse voltages and Currents.	K2
CO4	Explain various methods available for measurement of high DC, AC and Impulse voltages and currents.	K2
CO5	Describe different methods for measuring DC Resistivity, Dielectric Constant, Loss Factor & explain the phenomena of Partial Discharge.	K2
CO6	Illustrate the testing techniques for various equipment's used in High Voltage Engineering.	K2

UNIT–I: INTRODUCTION TO HIGH VOLTAGE TECHNOLOGY

Electric Field Stresses – Uniform and non–uniform field configuration of electrodes – Estimation and control of electric Stress – Numerical methods for electric field computation.

UNIT–II: BREAK DOWN PHENOMENON IN GASEOUS, LIQUID AND SOLID INSULATION

Gases as insulating media – Collision process – Ionization process – Townsend's criteria of breakdown in gases – Paschen's law – Liquid as Insulator – Pure and commercial liquids – Breakdown in pure and commercial liquid – Intrinsic breakdown – Electromechanical breakdown – Thermal breakdown –Breakdown of solid dielectrics, composite dielectrics used in practice.

UNIT–III: GENERATION OF HIGH VOLTAGES AND HIGH CURRENTS

Generation of High DC voltages – Generation of High Alternating Voltages – Generation of Impulse Voltages and Currents – Tripping and Control of Impulse Generators.

UNIT–IV: MEASUREMENT OF HIGH VOLTAGES AND HIGH CURRENTS

Measurement of High - Direct Current Voltages, AC and Impulse Voltages; Measurement of High – DC, AC and Impulse Currents.

UNIT–V: NON–DESTRUCTIVE TESTING OF MATERIAL AND ELECTRICAL APPARATUS

Measurement of DC Resistivity – Measurement of Dielectric Constant and Loss Factor – Partial Discharge Measurements.

UNIT–VI: High Voltage Testing of Electrical Apparatus

Testing of Insulators and Bushings – Testing of Isolators and Circuit Breakers – Testing of Cables – Testing of Transformers – Testing of Surge Diverters – Radio Interference Measurements.

TEXT BOOKS:

1. High Voltage Engineering: Fundamentals by E.Kuffel, W.S.Zaengl, J.Kuffel by Elsevier, 2nd Edition,2000.
2. High Voltage Engineering and Technology by Ryan, IET Publishers.3rd Edition,2013.

REFERENCE BOOKS:

1. High Voltage Engineering by M.S.Naidu and V. Kamaraju – TMH Publications, 4th Edition2009
2. High Voltage Engineering by C.L.Wadhwa, New Age Internationals (P) Limited, 1997.
3. High Voltage Insulation Engineering by Ravindra Arora, Wolfgang Mosch, New Age International (P)Limited, 1995.

Semester	VIISEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET30
Name of the Course	Modelling and Simulation of Power Electronics (Professional Elective – III)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the background activities i.e. numerical solution used in the simulation software.	**K3**
CO2	Describe the transient analysis in circuit simulation	**K2**
CO3	Explain the concepts of simulation of power electronic converters	**K2**
CO4	Compute properties of switching functions in single and parallel switch	**K3**
CO5	Express mathematical modelling of different converters	**K2**
CO6	Develop state space averaging technique and Hybrid Modelling for DC-DC converter	**K3**

UNIT-I: INTRODUCTION

Challenges in computer simulation – Simulation process–mechanics of simulation, Solution techniques for time domain analysis-Equation solvers, circuit-oriented simulators.

UNIT-II: SIMULATION OF POWER ELECTRONIC CONVERTERS-1

MNA and ST Approaches- Nodal Analysis, Modified Nodal Analysis, The Spare Tableau Approach, Nonlinear Circuits - The Newton Raphson Method, Computation Time, Convergence Issues, Nonlinear Circuit Equations, Introduction to Transient Simulation-Introduction, Discretization of Time, Transient Analysis, Accuracy and Stability, Explicit and Implicit Schemes, Methods for Transient Simulation - FE, BE and TRZ, Transient Analysis in Circuit Simulation, Equivalent Circuit Approach: RC Circuit,

UNIT- III: SIMULATION OF POWER ELECTRONIC CONVERTERS– II

Buck Converter; Some Practical Aspects: Undamped Oscillations, Ringing, Global Error in Switching Circuits, Round-off Error, Assessment of Accuracy,SingularMatrixProblem,Trapezoidalintegration,M&Nmethodforsimulatingpowerelectronicconverters(with buck converter as are presentative example).

UNIT-IV: SWITCHINGFUNCTION

Introduction, Application of the switching function technique, Properties of the switching function, Voltage-Current relations in switched circuits - Single Switch, Parallel Switch, Pulse Width Modulation- Unipolar, PWM Signal of a composite function, bipolar square wave modulation.

UNIT-V: MATHEMATICAL MODELING OF CONVERTERS

Mathematical Modeling of Buck Converter, Modeling using switching function-buck converter, Rectifier,3-phase VSI inverter, matrix converter, m-phase rectifier. PWM rectifier topologies, modeling of power electronic converters-PWM rectifier in different frames-abc, alpha-beta and d-q.

UNIT-VI: MODELING, SIMULATION OF SWITCHING CONVERTERS WITH STATE SPACE AVERAGING, HYBRID MODEL

State space approach, averaging method, State Space Averaging Technique–Modeling AND linearization of converter transfer function-Hybrid Modeling for DC-DC converter.

TEXT BOOKS:

1. M. B. Patil, V. Ramnarayanan, V. T. Ranganathan: *Simulation of Power Electronic Converters*, 1st ed., Narosa Publishers, 2010

REFERENCE BOOKS:

1. Ned Mohan, Undeland and Robbins, “Power Electronics: Converters, Design and control”-3rd ed., John Wiley 2009.
2. https://nptel.ac.in/courses/108/106/108106023/

Semester	VII SEM	L	T	P	C	Course Code
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET31**
Name of the Course	**Flexible AC Transmission Systems (Professional Elective – III)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Determine power flow control in transmission lines by using FACTS controllers.	**K3**
CO2	Explain operation and control of voltage source converter.	**K2**
CO3	Discuss compensation methods to improve stability and reduce power oscillations in the transmission lines.	**K2**
CO4	Explain the method of shunt compensation by using static VAR compensators.	**K2**
CO5	Appreciate the methods of compensations by using series compensators..	**K3**
CO6	Explain the operation of two modern power electronic controllers (Unified Power Quality Conditioner and Interline Power Flow Controller)	**K2**

UNIT-I: FACTS CONCEPTS

Introduction to FACTS: Transmission interconnections power flow in an AC system, loading capability limits, Dynamic stability considerations, importance of controllable parameters basic types of FACTS controllers, benefits from FACTS controllers.

UNIT-II: VOLTAGE SOURCE CONVERTERS

Single & three phase full wave bridge converters, Three level voltage source converter, pulse width modulation, basic concept of current source converters, and comparison of current source converters with voltage source converters

UNIT- III: STATIC SHUNT COMPENSATION

Objectives of shunt compensation: mid-point voltage regulation, voltage instability prevention, improvement of transient stability, Power oscillation damping, Methods of controllable VAR generation, variable impedance type static VAR generators switching converter type VAR generators, hybrid VAR generators.

UNIT-IV: STATICSHUNT COMPENSATION-2

Thyristor Switched Capacitor (TSC)– Thyristor Switched Capacitor – Thyristor Switched Reactor (TSC–TCR). Static VAR compensator (SVC) and Static Compensator (STATCOM): The regulation and slope transfer function and dynamic performance – Transient stability enhancement and power oscillation damping– Operating point control and summary of compensation control.

UNIT-V: SERIESCOMPENSATORS

Static series compensators: Concept of series capacitive compensation Improvement of transient stability – Power oscillation damping – Functional requirements. GTO thyristor controlled Series Capacitor (GSC) – Thyristor Switched Series Capacitor (TSSC) and Thyristor Controlled Series Capacitor (TCSC).

UNIT-VI: COMBINED CONTROLLERS

Schematic and basic operating principles of unified power flow controller (UPFC) and Interline power flow controller (IPFC) – Application of these controllers on transmission lines.

TEXT BOOKS:

1. Understanding FACTS” N. G. Hingorani and L. Guygi, IEEE Press. Indian Edition is available:—Standard Publications, 2001.
2. Thyristor-based FACTS Controllers for Electrical Transmission Systems, by R. Mohan Mathur and Rajiv K. Varma, Wiley, 2002.

REFERENCE BOOKS:

1. Zhang, Xiao-Ping, Rehtanz, Christian, Pal, Bikash “Flexible AC Transmission Systems: Modeling and Control”, Springer, 2012.
2. Yong-Hua Song, Allan Johns, “Flexible AC Transmission Systems”, IET, 1999.
3. **https://nptel.ac.in/courses/108/107/108107114/**

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET32
Name of the Course	Modern Control Theory (Professional Elective – IV)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Describe and analyse systems in state space model	K2
CO2	Model a system in various canonical forms	K3
CO3	Design a controller and observer using state feedback	K4
CO4	Analyse non-linear system using describing functions	K3
CO5	Analyse non-linear system using Phase plane analysis	K3
CO6	Analyse non-linear system using Lypanov method	K3

UNIT – I: STATE VARIABLE DESCRIPTION
Concept of State – State Equations for Linear Continuous time Models-Non uniqueness of state model – State diagrams for continuous time state models – Solution of state equations – State transmission matrix.

UNIT – II: CONTROLLABILITY AND OBSERVABILITY
Tests for controllability and observability for continuous time systems – Time varying case, minimum energy control, time invariant case, Principle of Duality, Controllability and observability of state models in Jordan canonical form and other canonical forms.

UNIT – III: MODAL CONTROL
Effect of state feedback on controllability and observability, Design of State Feedback Control through Pole placement. Full order observer and reduced order observer.

UNIT – IV: DESCRIBING FUNCTION ANALYSIS
Introduction to nonlinear systems, Types of nonlinearities, Concepts of describing functions, Derivation of describing functions for Dead zone, Saturation, backlash, relay with dead zone and Hysteresis – Jump Resonance.

UNIT-V: PHASE-PLANE ANALYSIS

Introduction to phase-plane analysis, Method of Isoclines for Constructing Trajectories, Singular points, Phase-plane analysis of nonlinear control systems.

UNIT-VI: STABILITY ANALYSIS

Stability in the sense of Lyapunov. Lyapunov‘s stability and Lypanov‘s instability theorems. Direct method of Lypanov for the Linear and Nonlinear continuous time autonomous systems.

TEXT BOOKS:

1. Modern Control System Theory – by M. Gopal, New Age International Publishers, 2nd edition, 1996.
2. Systems and Control by Stainslaw H. Zak, Oxford Press, 2003.

REFERENCE BOOKS:

1. Modern Control Engineering – by K. Ogata, Prentice Hall of India, 3rd edition, 1998.
2. Control Systems Engineering by I.J. Nagrath and M.Gopal, New Age International (P) Ltd. 2007.
3. Digital Control and State Variable Methods – by M. Gopal, Tata Mc Graw-Hill companies, 1997.
4. https://nptel.ac.in/courses/108/103/108103007/

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V18**	**4**	**-**	**-**	**3**	**V18EET33**
Name of the Course	**Smart Grid (Professional Elective – IV)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand concept of smart grid and its advantages over conventional grid.	**K2**
CO2	Explain the architecture of smart Grid	**K2**
CO3	Illustrate the concept of Micro Grid and its integration	**K3**
CO4	Understand smart metering techniques and measuring techniques	**K2**
CO5	Examine different communication technologies that can be used for smart grid	**K3**
CO6	Identify the power quality problems associated with smart grid	**K2**

UNIT –I: INTRODUCTION TO SMART GRID

Introduction to Smart Grid - Need of Smart Grid, Working definitions of Smart Grid and Associated Concepts – Smart Grid Functions – Traditional Power Grid and Smart Grid – New Technologies for Smart Grid – Advantages — Key Challenges for Smart Grid.

UNIT—II: SMART GRID ARCHITECTURE

Components and Architecture of Smart Grid Design – Review of the proposed architectures for Smart Grid-Geographic Information System(GIS)-The fundamental components of Smart Grid designs – Transmission Automation – Sub-Station Automation -Distribution Automation – Feeder Automation, Renewable Integration

UNIT-III: DISTRIBUTION GENERATION

Introduction-necessity of DG– Concept of micro grid-Issues of interconnection-protection & control of micro grid – Storage Technologies – Smart Storages, Battery, SMES– Economic Issues.

UNIT-IV: SMART METERS

Introduction to smart Meters-Phasor Measurement Unit (PMU)-Wide Area Measurement Systems (WAMS). Intelligent Electronic Devices (IED) & their application for monitoring & protection

UNIT-V: INFORMATION AND COMMUNICATION TECHNOLOGY FOR SMART GRID

Advanced Metering infrastructure (AMI) drivers and benefits-AMI protocols-Standards and initiatives-AMI needs in the smart grid, Home Area Network (HAN), Wide Area Network (WAN)

UNIT – VI: POWER QUALITY MANAGEMENT IN SMART GRID

Introduction, Power Quality, Power Quality Issues of Grid Connected Renewable Energy Sources, Load Frequency Control (LFC) and Voltage Control in Micro Grid System – Reactive Power Control in Smart Grid- Web based Power Quality Monitoring- Permanent Power Quality Monitoring Equipment-Power Quality Audit.

TEXT BOOKS:

1. James Momoh, “Smart Grid :Fundamentals of Design and Analysis”-Wiley, IEEE Press,2012
2. Ali Keyhani, Mohammad N. Marwali, Min Dai ―Integration of Green and Renewable Energy in Electric Power Systems‖, Wiley2010.
3. JanakaEkanayake, KithsiriLiyanage, Jianzhong.Wu, AkihikoYokoyama, Nick Jenkins,“Smart Grid: Technology and Applications”- Wiley, 2012.

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET34
Name of the Course	Electrical Machine Modelling & Analysis (Professional Elective – IV)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Analyze Kroon's Primitive Machine	K2
CO2	Develop modeling of dc machine	K3
CO3	Explain linear Transformation	K4
CO4	Apply mathematical modeling concepts to 3-phase Induction machines	K3
CO5	Design control strategies based on dynamic modeling of 3-ph Induction machines and3-phase Synchronous machine	K4
CO6	Analyze BLDC Machine and switched reluctance machine based on Mathematical modeling of BLDCM and SRM	K4

UNIT – I: BASIC CONCEPTS OF MODELING

Basic Two-pole Machine representation of Commutator machines, 3-phase synchronous machine with and without damper bars and 3-phase induction machine, Kron's primitive Machine-voltage, current and Torque equations.

UNIT – II: DC MACHINE MODELING

Mathematical model of separately excited D.C motor – Steady State analysis- Transient State analysis- Sudden application of Inertia Load-Transfer function of separately excited D.C Motor- Mathematical model of D.C Series motor, Shunt motor

UNIT- III: REFERENCE FRAME THEORY & MODELING OF SINGLE PHASE INDUCTION MACHINES

Linear transformation-Phase transformation - three phase to two phase transformation (abc to dq0) and two phase to three phase transformation dq0 to abc -Power equivalence- Mathematical modeling of single phase induction machines.

UNIT – IV: MODELING OF THREE PHASE INDUCTION MACHINE

Generalized model in arbitrary reference frame-Electromagnetic torque-Derivation of commonly used Induction machine models- Stator reference frame model-Rotor reference frame model-Synchronously rotating reference frame model-state space model with flux linkages as variables.

UNIT –V: MODELING OF SYNCHRONOUS MACHINE

Synchronous machine inductances–voltage equations in the rotor's dq0 reference frame electromagnetic torque- current in terms of flux linkages-three synchronous machine model.

UNIT –VI: MODELING OF SPECIAL MACHINES

Modeling of PM Synchronous motor, modeling of BLDC motor, modeling of Switched Reluctance motor.

TEXT BOOKS:

1. Generalized theory of Electrical Machinery–P. S. Bimbra - Khanna Publishers.- 6th Edition 2017.
2. Electric Motor Drives-Modeling, Analysis & control- R. Krishnan-Pearson Publications-1st edition- 2002.

1. Analysis of Electrical Machinery and Drive systems– P. C. Krause, Oleg Wasynczuk, Scott D. Sudhoff – Second Edition-IEEE Press2002.
2. Dynamic simulation of Electric machinery using Matlab / Simulink – Chee Mun Ong - PHI.1997.
3. Modern Power Electronics and AC Drives-B. K. Bose –PHI2001.
4. https://nptel.ac.in/courses/108/106/108106023/

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET35
Name of the Course	Control of Grid Connected Converters for PV and Wind Energy Systems (Professional Elective – IV)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic requirements of grid for connecting PV and WT converters.	K2
CO2	Describe various grid synchronization techniques for single phase power converters.	K2
CO3	Describe various grid synchronization techniques for three phase power converters.	K2
CO4	Illustrate various filter topologies and control techniques for grid connected converters.	K2
CO5	Explain different MPPT Control Methods and limitations of standard MPPT.	K2
CO6	Illustrate the control of grid converter for renewable energy interface	K2

UNIT–I: GRID REQUIREMENT FOR PV AND WT SYSTEM

Introduction, International Regulations, Response to Abnormal Grid Conditions, Power Quality. Grid Code Evolution for WT system, Frequency and Voltage Deviation under Normal Operation, Active Power Control in Normal Operation, Reactive Power Control in Normal Operation.

UNIT–II: GRID SYNCHRONIZATION FOR SINGLE-PHASE POWER CONVERTERS

Grid Synchronization Techniques for Single-Phase Systems, Phase Detection Based on In-Quadrature Signals, Some PLLs Based on In-Quadrature Signal Generation.

UNIT–III: GRID SYNCHRONIZATION FOR THREE-PHASE POWER CONVERTERS

The Three-Phase Voltage Vector under Grid Faults, Synchronous Reference Frame PLL under Unbalanced and Distorted Grid Conditions, Decoupled Double

Synchronous Reference Frame PLL (DDSRF-PLL), Double Second-Order Generalized Integrator FLL (DSOGI-FLL).

UNIT–IV: INTRODUCTION TO CONTROL STRATEGY OF CONVERTERS WITH DIFFERENT FILTER CONFIGURATIONS

Filter Topologies, Design Considerations, Practical Examples of LCL Filters and Grid Interactions, Resonance Problem and Damping Solutions, Nonlinear Behavior of the Filter. Converter configurations, Different current Control techniques– PI control, PR control, HCC, Model Predictive control.

UNIT–V: MPPT CONTROL FOR PV AND WT SYSTEM

The Dynamic Optimization Problem, Fractional Open-Circuit Voltage and Short-Circuit Current, MPPT Control Methods, The Perturb and Observe Approach, Improvements of the P&O Algorithm, The Incremental Conductance Method, MPPT Efficiency, Limitation of standard MPPT. Charge controller for off grid PV system.

UNIT–VI: GRID CONVERTER CONTROL FOR RENEWABLE ENERGY INTERFACE

Model of the Converter-Mathematical Model of the L-Filter Inverter; AC Voltage and DC Voltage Control-Management of the DC Link Voltage, Cascaded Control of the DC Voltage through the AC Current, Tuning Procedure of the PI Controller, PI-Based Voltage Control; Voltage Oriented Control (VOC) and Direct Power Control (DPC): Synchronous Frame VOC: PQ Open-Loop Control, PQ Closed-Loop Control, Direct Power Control, Stand-alone.

Semester	VII SEM	L	T	P	C	COURSE CODE
Regulation	V18	3	-	-	3	V18EEL10
Name of the Course	Power Systems Lab					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Calculate the sequence impedances of 3 phase Transformer	K4
CO2	Determine the power Angle Characteristics of 3-phase Alternator with infinite bus bars	K4
CO3	Calculate the dielectric strength of Transformer oil	K4
CO4	Explain load flow studies using N-R method	K5
CO5	Assess load frequency control with &without controller	K5
CO6	Evaluate economic load dispatch with & without losses	K5

Any 10 of the Following experiments are to be conducted:

1. Sequence impedances of 3 phase Transformer.
2. Sequence impedances of 3 phase Alternator by Fault Analysis.
3. Sequence impedances of 3 phase Alternator by Direct method.
4. ABCD parameters of Transmission line.
5. Power Angle Characteristics of 3phase Alternator with infinite bus bars.
6. Dielectric strength of Transformer oil.
7. Calibration of Tong Tester.
8. Load flow studies using Gauss-Seidel method
9. Load flow studies using N-R method
10. Transient Stability Analysis
11. Load frequency control with & without control
12. Load frequency control with control
13. Economic load dispatch with & without losses
14. Economic load dispatch with losses.

Semester	VIII SEM	L	T	P	C	Course

						Code
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET36**
Name of the Course	**Electrical Distribution Systems (Professional Elective – V)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand various factors of distribution system	**K2**
CO2	Construct the distribution substation and feeders	**K3**
CO3	Calculate the voltage drop and power loss calculations on Distribution System	**K3**
CO4	Understand the distribution system protection and its coordination.	**K2**
CO5	Understand the effect of compensation for power factor improvement.	**K2**
CO6	Understand the effect of voltage control on distribution system.	**K2**

UNIT I: GENERAL CONCEPTS

Introduction to distribution systems, Load modeling and characteristics, Coincidence factor, Contribution factor loss factor, Relationship between the load factor and loss factor, Classification of loads (Residential, commercial, Agricultural and Industrial).

UNIT II: SUBSTATIONS & DISTRIBUTION FEEDERS

Location of substations: Rating of distribution substation, Service area with 'n' primary feeders, Benefits and methods of optimal location of substations.

Design Considerations of distribution feeders: Radial and loop types of primary feeders, Voltage levels, Feeder loading, Basic design practice of the secondary distribution system.

UNIT III: SYSTEM ANALYSIS

Voltage drops and power–loss calculations: Derivation for voltage drop and power loss in lines, uniformly distributed loads and non-uniformly distributed loads, Numerical problems, three phase balanced primary lines.

UNIT IV: PROTECTION & CO-ORDINATION

Objectives of distribution system protection, Types of common faults and procedure for fault calculations for distribution system, Protective devices: Principle of operation of fuses, Circuit reclosures, Line sectionalizes and circuit breakers.

Co-ordination of protective devices: General coordination procedure, Various types of coordinated operation of protective devices, Residual Current Circuit Breaker.

UNIT V: COMPENSATION FOR POWER FACTOR IMPROVEMENT

Capacitive compensation for power factor control, Different types of power capacitors,
shunt and series capacitors, Effect of shunt capacitors (Fixed and switched), Power factor correction, Capacitor allocation, Economic justification, Procedure to determine the best capacitor location, Numerical problems.

UNIT VI: VOLTAGE CONTROL

Equipment for voltage control, Effect of series capacitors, Effect of AVB/AVR, Line drop compensation

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET37
Name of the Course	Digital Signal Processing (Professional Elective – V)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Classify Discrete Time Signals, systems, estimate the response of various Systems	K2
CO2	Compute DFT for discrete time signals using FFT Algorithm.	K3
CO3	Describe the various implementations of digital filter structures.	K2
CO4	Analyze and design a Digital filter (FIR&IIR) from the given specifications.	K4
CO5	Use the Multi-rate Processing concepts in various applications.	K2
CO6	Describe the concepts of DSP Processor.	K3

UNIT I: INTRODUCTION

Review of Signals and systems, Digital Signal Processing: Discrete time signals & sequences, Classification of Discrete time Systems, stability of LTI systems. Response of LTI systems to arbitrary inputs. Solution of Linear constant coefficient difference equations. Frequency domain representation of discrete time signals and systems.

UNIT II: DISCRETE FOURIER TRANSFORMS

Introduction to DTFT, Discrete Fourier transforms, Properties of DFT, Introduction to Fast Fourier transforms (FFT) - Radix-2 decimation in time and decimation in frequency FFT Algorithms, Inverse FFT.

UNIT III: REALIZATION OF DIGITAL FILTER

Review of Z-transform, digital filters, Block diagram representation of linear constant coefficient difference equations, Basic structures of IIR systems, Transposed forms. Basic structures of FIR systems.

UNIT IV: DESIGN OF IIR and FIR DIGITAL FILTERS

Analog filter approximations – Butterworth and Chebyshev, Design of IIR Digital filters from Analog filters, Characteristics of FIR Digital Filters, frequency response. Design of FIR Digital Filters using Window Techniques and Frequency Sampling technique, Comparison of IIR & FIR filters.

UNIT V: MULTIRATE DIGITAL SIGNAL PROCESSING

Introduction, Decimation, Interpolation, Sampling rate conversion, Implementation of sampling rate converters, Applications – Sub-band Coding of Speech Signals.

UNIT VI: INTRODUCTION TO DSP PROCESSORS

Introduction to programmable DSPs, Multiplier and Multiplier Accumulator, Modified bus structures and memory access schemes in P-DSPs, Multiple Access Memory, Multiported memory, VLIW architecture, Pipelining, Special addressing modes, On-Chip Peripherals.

TEXT BOOKS:

1. Digital Signal Processing, Principles, Algorithms, and Applications by John G. Proakis, Dimitris G. Manolakis, Pearson Education / PHI, 4th edition, 2007.
2. Discrete Time Signal Processing by A. V. Oppenheim and R.W. Schaffer, 3rd edition, 2010, PHI.

REFERENCE BOOKS:

3. Digital Signal Processing by Alan V. Oppenheim, Ronald W. Schafer, PHI Ed., 2nd edition, 2006
4. Digital Signal Processing by Ramesh babu, Sci Tech publications, 6th edition, 2011.
5. Digital Signal Processing by A. Nagoor Kani, RBA Publications, 2nd edition, 2017.
6. https://nptel.ac.in/courses/117/102/117102060/

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET38
Name of the Course	Digital Control Systems (Professional Elective – V)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the concepts of digital signal processing	K2
CO2	Solve difference equations and determine pulse transfer functions	K3
CO3	Analyze a discrete time system using state space model	K3
CO4	Determine the stability of a discrete time system	K4
CO5	Design a controller for discrete time system using conventional methods	K4
CO6	Design a controller for discrete time system using state feedback	K4

UNIT – I: INTRODUCTION AND SIGNAL PROCESSING

Introduction to analog and digital control systems – Advantages of digital systems – Typical examples – Signals and processing – Sample and hold devices – Sampling theorem and data reconstruction – Digital to Analog conversion and Analog to Digital conversion Frequency domain characteristics of zero order hold.

UNIT–II: Z-TRANSFORMS

Z-Transform and theorems, finding inverse and method for solving difference equations; Pulse transforms function, block diagram analysis of sampled – data systems.

UNIT–III: STATE SPACE ANALYSIS

State Space Representation of discrete time systems, Pulse Transfer Function Matrix solving discrete time state space equations, State transition matrix and it's Properties, Methods for Computation of State Transition Matrix, Discretization of continuous time state – space equations- Concepts of controllability and observability – Tests(without proof).

UNIT–IV: STABILITY ANALYSIS

Mapping between the S-Plane and the Z-Plane – Primary strips and Complementary Strips – Constant frequency loci, Constant damping ratio loci, Stability Analysis of closed loop systems in the Z-Plane. Jury stability test – Stability Analysis by use of the Bilinear Transformation and Routh Stability criterion.

UNIT – V: DESIGN OF DISCRETE TIME CONTROL SYSTEM BY CONVENTIONAL METHODS

Transient and steady – State response Analysis – Design based on the frequency response method –Bilinear Transformation and Design using frequency response in the w–plane for lag and led compensators and digital PID controllers.

UNIT – VI: STATE FEEDBACK CONTROLLERS AND OBSERVERS

Design of state feedback controller through pole placement – Necessary and sufficient conditions, Ackerman's formula.

TEXT BOOKS:

1. K. Ogata, "Discrete–Time Control systems", Pearson Education/PHI, 2nd Edition.
2. M. Gopal, "Digital Control and State Variable Methods", TMH, 4th Edition.

REFERENCE BOOKS:

1. Kuo, "Digital Control Systems", Oxford University Press, 2nd Edition, 2003.

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET39
Name of the Course	Electrical and Hybrid Vehicles (Professional Elective – V)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Differentiate between Electric vehicles and Hybrid Electric Vehicles	K2
CO2	Discriminate between various Drive-Train Topologies	K2
CO3	Identify different motors used for hybrid electric vehicles.	K2
CO4	Explain the Sizing of Drive Train	K2
CO5	Illustrate different batteries and other energy storage systems.	K3
CO6	Discuss Various issues of energy management strategies	K2

UNIT-I: INTRODUCTION TO ELECTRIC VEHICLES

Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics-Social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT-II: DRIVE TRAINS

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train.

Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train.

UNIT-III: ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, control of DC Motor drives, Control of Permanent Magnet Motor drives, control of Switch Reluctance Motor drives, drive system efficiency.

UNIT-IV: ENERGY STORAGE

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage, Fuel Cell based energy storage - Super Capacitor based energy storage - Flywheel based energy storage

UNIT-V: SIZING THE DRIVE SYSTEM

Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems

UNIT-VI: ENERGY MANAGEMENT STRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, implementation issues of energy management strategies.

TEXT BOOKS:

1. Ali Emadi, Advanced Electric Drive Vehicles, CRC Press, 1st edition, 2014.
2. Iqbal Hussein, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press, 1st edition, 2003.

REFERENCE BOOKS:

2. Sandeep Dhameja, “Electric Vehicle Battery Systems”, Newnes, 1st edition, 2001.
3. http://nptel.ac.in/courses/108103009/

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	4	-	-	3	V18EET40
Name of the Course	Power System Reforms (Professional Elective – VI)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand fundamentals of power system deregulation and restructuring.	K2
CO2	Compute Available Transfer Capability (ATC)	K3
CO3	Apply methods to reduce congestion	K3
CO4	Compute electricity pricing in deregulated environment	K3
CO5	Understand the power system operation in deregulated environment	K2
CO6	Understand importance of ancillary services	K2

UNIT-I: BASIC ISSUES IN ELECTRIC UTILITIES

Introduction – Restructuring models – Independent system operator (ISO) – Power Exchange – Market operations – Market Power – Stranded cost – Transmission Pricing – Congestion Pricing

UNIT-II: OVERVIEW OF OASIS

Structure of OASIS – Posting of Information – Transfer capability on OASIS –Definitions of Transfer capability – Transfer Capability Issues – ATC calculations – TTC calculations – TRM calculations – CBM calculations – Methods to calculate ATC.

UNIT-III: CONGESTION MANAGEMENT

Introduction to congestion management –Effects of congestion – Methods to relieve congestion – Non market methods –Market Based methods – Management of Inter zonal/Intra zonal Congestion

UNIT-IV: PRICING OF ELECTRICITY

Introduction – Electricity price volatility – Factors effecting volatility – Measuring Volatility – electricity price indexes– Construction of forward price curves – Short–time price forecasting – Factors impacting electricity prices – Forecasting Methods – Analysing forecasting errors – Impact of data pre-processing – Impact of training vectors.

UNIT-V: POWER SYSTEM OPERATION IN DEREGULATED ENVIRONMENT

Introduction – Operational planning activities of ISO – The ISO in pool markets – The ISO in bilateral markets – Operational planning activities of a GENCO– the GENCO in pool markets – The GENCO in bilateral markets.

UNIT-VI: ANCILLARY SERVICES

Introduction – Types of ancillary services – Reactive power as an ancillary service –Synchronous generators as ancillary service providers.

Semester	**VIII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET41**
Name of the Course	**Energy Storage and Battery Management (Professional Elective – VI)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand need of energy storage systems	**K3**
CO2	Determine various types of energy storage and various devices used for the purpose	**K3**
CO3	Examine various real time applications	**K3**
CO4	Interpret the role of battery management system	**K3**
CO5	Illustrate the requirements of Battery Management System	**K3**
CO6	Interpret the concept associated with battery charging / discharging process	**K3**

UNIT-I: INTRODUCTION TO ENERGY STORAGE

Necessity of energy storage, different types of energy storage, mechanical, chemical, electrical, electrochemical, biological, magnetic, electromagnetic, thermal, comparison of energy storage technologies.

UNIT-II: NEEDSFOR ELECTRICAL ENERGY STORAGE

Emerging needs for EES, More renewable energy, less fossil fuel, Smart Grid uses, the roles of electrical energy storage technologies, the roles from the viewpoint of a utility, the roles from the viewpoint of consumers, the roles from the viewpoint of generators of renewable energy.

UNIT- III: FEATURES OF ENERGY STORAGE SYSTEMS

Classification of EES systems , Mechanical storage systems, Pumped hydro storage (PHS), Compressed air energy storage (CAES), Flywheel energy storage (FES),Electrochemical storage systems, Secondary batteries, Flow batteries, Chemical energy storage, Hydrogen (H2),Synthetic natural gas (SNG).

UNIT- IV: INTRODUCTION TO BATTERY MANAGEMENT SYSTEM

Introduction to Battery Management System, Cells & Batteries, Nominal voltage and capacity, C rate, Energy and power, Cells connected in series, Cells connected in parallel, Electrochemical and lithium-ion cells, Rechargeable cell, Charging and Discharging Process, Overcharge and Undercharge, Modes of Charging.

UNIT- V: BATTERY MANAGEMENT SYSTEM REQUIREMENT

Introduction and BMS functionality, Battery pack topology, BMS Functionality, Voltage Sensing, Temperature Sensing, Current Sensing, BMS Functionality, High-voltage contactor control, Isolation sensing, Thermal control, Protection, Communication Interface, Range estimation, State-of charge estimation, Cell total energy and cell total power.

UNIT- VI: BATTERY STATE OF CHARGE AND STATE OF HEALTH ESTIMATION, CELL BALANCING

Battery state of charge estimation (SOC), voltage-based methods to estimate SOC, Model-based state estimation, Battery Health Estimation, Lithium-ion aging: Negative electrode, Lithium ion aging: Positive electrode, Cell Balancing, Causes of imbalance, Circuits for balancing

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EET42
Name of the Course	Switched Mode Power Converters (Professional Elective – VI)					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Compute the operation and control of non-isolated switch mode converters	K3
CO2	Explain the operation and control of isolated switch mode converters	K2
CO3	Describe the concepts of resonant converters	K2
CO4	Compute control strategies of switching converters	K3
CO5	Develop modeling of DC-DC converters	K3
CO6	Illustrate controller design based on linearization	K3

UNIT-I: NON-ISOLATEDSWITCHMODECONVERTERS
Control of DC-DC converters: Buck converters, Boost converters, Buck-Boost converter, CUK Converter, continuous and discontinuous operation, Converter realization with non-ideal components.

UNIT-II: ISOLATED SWITCHED MODE CONVERTERS
Forwarded converter, fly back converter, push-pull converter, half-bridge converter, full bridge converter

UNIT- III: RESONANT CONVERTERS

Basic resonant circuit concepts, series resonant circuits, parallel resonant circuits, zero current switching quasi-resonant buck converter, zero current switching quasi-resonant boost converter, zero voltage switching quasi-resonant buck converter, zero voltage switching quasi-resonant boost converter.

UNIT-IV: CONTROL SCHEMES OF SWITCHING CONVERTERS

Voltage control, Current mode control, control scheme for resonant converters. Magnetic design consideration: Transformer design, inductor and capacitor design

UNIT-V: MODELING OF DC-DC CONVERTERS

Formulation of averaged models for buck and boost converters: state space analysis, average circuit models, linearization and small– signal analysis, small-signal models.

UNIT-VI: CONTROLLER DESIGN BASED ON LINEARIZATION

Control design based on linearization: Transfer function of converters, control design, large signal issues in voltage-mode and current-mode control.

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EET43**
Name of the Course	**Electrical Machine Design (Professional Elective – VI)**					
Branches	**EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Study mmf calculation and thermal rating of various types of electrical machines.	**K2**
CO2	To design armature and field systems for D.C. machines.	**K3**
CO3	To design core, yoke, windings and cooling systems of transformers.	**K3**
CO4	To design stator and rotor of induction machines.	**K3**
CO5	To design stator and rotor of synchronous machines and study their thermal behavior	**K3**
CO6	The importance of computer aided design method.	**K3**

UNIT I: DESIGN OF FIELD SYSTEM AND ARMATURE
Major considerations in Electrical Machine Design – Electrical Engineering Materials – Space factor – Choice of Specific Electrical and Magnetic loadings – Thermal considerations – Heat flow – Temperature rise and Insulating Materials – Rating of machines – Standard specifications.

UNIT II: DESIGN OF DC MACHINES
Construction - Output Equations – Main Dimensions – Choice of specific loadings – Selection of number of poles – Design of Armature – Design of commutator and brushes – design of field Computer program: Design of Armature main dimensions.

UNIT III: DESIGN OF TRANSFORMERS

Construction - KVA output for single and three phase transformers – Overall dimensions – design of yoke, core and winding for core and shell type transformers – Estimation of No load current – Temperature rise in Transformers – Design of Tank and cooling tubes of Transformers. Computer program: Complete Design of single phase core transformer.

UNIT IV: DESIGN OF INDUCTION MOTORS

Construction - Output equation of Induction motor – Main dimensions – choice of specific loadings – Design of squirrel cage rotor and wound rotor –Magnetic leakage calculations – Operating characteristics : Magnetizing current - Short circuit current – Circle diagram - Computer program: Design of slip-ring rotor .

UNIT V: DESIGN OF SYNCHRONOUS MACHINES

Output equations – choice of specific loadings – Design of salient pole machines – Short circuit ratio – Armature design – Estimation of air gap length – Design of rotor –Design of damper winding – Determination of full load field MMF – Design of field winding – Design of turbo alternators.

UNIT VI: DESIGN OF BLDC MACHINES

Computer program: Design of Stator main dimensions-Brushless DC Machines.

TEXT BOOKS:

Annexure- EE-III

List courses offered under Open Elective –II & III in VII & VII semesters respectively under V18 Regulation for all other branches:

Open Electives(Offered to the other Departments)						
S. No.	**Course Code**	**Name of the Course**	**L**	**T**	**P**	**Credits**
Open Elective-I: (Approved by BOS)						
1.	V18EEOE1	Energy Audit & Conservation	3	-	-	3
2.	V18EEOE2	Electrical Measuring Instruments	3	-	-	3
3.	V18EEOE3	Industrial Safety	3	-	-	3
Open Elective-II: (For the Approval from BOS)						
1.	V18EEOE4	Non-Conventional Energy Sources	3	-	-	3
2.	V18EEOE5	Electrical Engineering Materials	3	-	-	3
3.	V18EEOE6	Servicing of Electrical Appliances	3	-	-	3
Open Elective-III: (For the Approval from BOS)						
1.	V18EEOE7	Energy Storage Systems	3	-	-	3
2.	V18EEOE8	Basics of Electrical Power Generation	3	-	-	3
3.	V18EEOE9	Industrial Automation	3	-	-	3

Syllabi for the Courses offering under Open Elective – II & III

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EETOE4
Name of the Course	Non Conventional Energy Sources (Open Elective-II)					
Branches	Common to all except EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the solar radiation and calculate geometric angle	K3
CO2	Understand the working of solar thermal collectors	K2
CO3	Understand the working of solar photo voltaic systems and develop the maximum power point techniques	K3
CO4	Understand the wind energy conversion systems, Betz coefficient and tip speed ratio.	K2
CO5	Understand the basic principle and working of hydro and tidal systems.	K2
CO6	Understand the basic principle and working of, biomass, fuel cell and geothermal systems.	K2

UNIT–I: FUNDAMENTALS OF SOLAR ENERGY AND ENERGY CONSERVATION PRINCIPLE

Energy scenario (world and India) – various forms of renewable energy - Solar radiation: Outside earth's atmosphere –Earth surface– Analysis of solar radiation data –Geometry–Radiation on tilted surfaces– Numerical problems.

UNIT–II: SOLAR THERMAL SYSTEMS

Liquid flat plate collectors: Performance analysis –Transmissivity– Absorptivity product collector efficiency factor –Collector heat removal factor – Numerical problems. Introduction to solar air heaters – Concentrating collectors, solar pond and solar still–solar thermal plants.

UNIT–III: SOLAR PHOTOVOLTAIC SYSTEMS

Solar photovoltaic cell, module, array – construction – Efficiency of solar cells – Developing technologies – Cell I-V characteristics – Equivalent circuit of solar cell – Series resistance – Shunt resistance – Applications and systems –Balance of system components - System design: storage sizing – PV system sizing – Maximum power point techniques: Perturb and observe(P&O)technique–Hill climbing technique.

UNIT–IV: WIND ENERGY

Sources of wind energy - Wind patterns – Types of turbines –Horizontal axis and vertical axis machines - Kinetic energyofwind–Betzcoefficient–Tip–speedratio–Efficiency–Poweroutputofwindturbine–Selection of generator(synchronous,induction) – Maximum power point tracking –wind farms–Power generation for utility grids.

UNIT–V: HYDRO AND TIDAL POWER SYSTEMS

Basic working principle – Classification of hydro systems: Large, small, micro–measurement of head and flow–Energy equation – Types of turbines – Numerical problems. Tidal power – Basics – Kinetic energy equation – Turbines for tidal power - Numerical problems – Wave power – Basics – Kinetic energy equation – Wave power devices – Linear generators.

UNIT–VI: BIOMASS AND GEOTHERMALSYSTEMS

Fuel classification – Pyrolysis – Direct combustion of heat– Different digesters and sizing. Geothermal: Classification – Dry rock and hot aquifer–Energy analysis–Geothermal based electric power generation

TEXT BOOKS:

1. Solar Energy: Principles of Thermal Collection and Storage, S.P. Sukhatme and J.K. Nayak, TMH, New Delhi, 3rd edition , 2013.
2. Renewable Energy Resources, John Twidell and Tony Weir, Taylor and Francis-2nd edition, 2013.

REFERENCE BOOKS:

3. Hand book of renewable technology Ahmed and Zobaa, Ramesh C Bansal, World scientific, Singapore, 1st edition, 2011.
4. Renewable Energy Technologies, Ramesh & Kumar, Narosa, 1st edition, 1997.
5. Renewable energy technologies– A practical guide for beginners –Chetong Singh Solanki, PHI, 1st edition, 2008.
6. Non-conventionalenergysource–B.H.khan-TMH-2nd edition, 2017.
7. https://nptel.ac.in/courses/121/106/121106014/.

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EEOE5
Name of the course	Electrical Engineering Materials (Open Elective-II)					
Branches	Common to all except EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Familiarise the properties of different conducting materials and their applications	K2
CO2	Analyse the properties of Insulating materials	K2
CO3	Understand semi conducting and dielectric materials and their properties	K2
CO4	Understand Magnetic materials and their properties	K2
CO5	Comprehend the working function of Special purpose materials	K2
CO6	Understand and analyse the working of Various Batteries	K3

UNIT-I: CONDUCTING MATERIALS

Conducting Materials – Properties -Hardening, Annealing – Its effects- Low Resistive Materials –Requirements – Properties and applications of Copper and Aluminum - Comparison between Copper and Aluminum - ACSR Conductors, AAAC, - High Resistive Materials – Requirements-Properties and applications of Manganin, Eureka, Constantan, Nichrome, Tungsten, Mercury and Carbon-colour coding of resistor.

UNIT-II: INSULATING MATERIALS

Properties -Insulation resistance - Factors effecting Insulation resistance - Classification of Insulating materials - Properties & Applications i) Impregnated paper ii) Wood iii) Cardboard iv) Asbestos v)Mica vi)Ceramics and vii) Glass- Thermo Plastics, Thermo Setting resins – PVC- Effects on PVC- Properties and Applications of Insulating Gases(Air, Nitrogen, Hydrogen and Sulphur Hexa Fluoride).

UNIT- III: SEMICONDUCTING & DIELECTRIC MATERIALS

Semiconductors - Intrinsic and Extrinsic semiconductors- `P’ and `N’ type materials- Distinguish between P-type and N- type Semi-Conductors. Permittivity of different Di-electric materials-Polarization-Dielectric Loss– Applications of Dielectrics- Colour coding of capacitors.

UNIT-IV: MAGNETIC MATERIALS

Classification of magnetic materials - Soft & Hard magnetic materials- B-H Curves – Hysteresis loop - Hysteresis loss - Steinmetz constant - Eddy Current Loss -- Curie Point – Magneto striction.

UNIT-V: SPECIAL PURPOSE MATERIALS

Need of Protective materials – List of Special Purpose Materials (Lead, Paints, Steel Tapes) - Thermocouple - Bi-metals- Fabrication -Soldering- Fuses -Galvanizing and Impregnating-Importance of Nano Materials.

UNIT-VI: BATTERIES

Primary cell and Secondary cells-Lead-Acid, Nickel iron and Nickel - cadmium - Chemical reactions during charging and discharging– Charging of Batteries- Constant Current method and Constant Voltage method-Trickle charging- Capacity of Battery - Ampere-Hour efficiency and Watt-Hour efficiency-Numerical problems on Ampere-Hour efficiency and Watt-Hour efficiency - Maintenance free batteries

TEXT BOOKS:

1. Electrical Engineering Materials – N.I.T.T.T.R Publications, 1st edition, 1959.
2. Introduction to Engineering materials – B. K. Agarwal, 1st edition, 2006.
3. Electrical Engineering Materials by PL Kapoor, Khanna Publishers, New Delhi, 1st edition, 1988.
4. Electrical & Electronics Engineering Materials BR Sharma and Others, Satya Parkashan, New Delhi, 1st edition, 2013.

REFERENCE BOOKS

1. Electronic Components -Dr. K. Padmanabham, laxmi publications (p) Ltd, 1st edition, 2016.
2. Electronic Components -D. V. Prasad
3. Material science for Electrical and Electronic Engineers – Ian P. Jones, Oxford Publications, 1st edition, 2000.
4. Electrical and Electronic Engineering Materials by SK Bhattacharya, Khanna Publishers, New Delhi Electronic Components and Materials by Grover and Jamwal, Dhanpat Rai and Co., New Delhi, 1st edition, 1996.
5. Electrical Engineering Materials by Sahdev, Unique International Publications
6. Electronic Components and Materials by SM Dhir, Tata McGraw Hill, New Delhi, 1st edition, 2006.
7. Electronic Engineering Materials by ML Gupta, Dhanpat Rai & Sons, New Delhi

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EEOE6
Name of the Course	Servicing of Electrical Appliances (Open Elective-II)					
Branches	Common to all except EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand Testing of Electrical Domestic Appliances	K2
CO2	Understand maintenance of U.P.S and SMPS	K2
CO3	Understand Maintenance of Electrical Power devices	K2
CO4	Understand Safety procedure	K2
CO5	Understand Departmental Tests	K2
CO6	Understand Rural electrification and Indian Electricity Act	K2

UNIT-I: TESTING OF ELECTRICAL DOMESTIC APPLIANCES

Tools & meters required for testing and repair of Domestic appliances-Principle, construction & working with fault finding, dismantling, assembling and testing after repair of the Domestic appliances.

Note: Suitable tests to be conducted on the above Electrical Domestic appliances are Open circuit, Short circuit, Earth fault and Leakage tests.

UNIT-II: U.P.S AND SMPS

Commercial power supply-Disturbances and Spikes in voltages-UPS-SMPS

UNIT- III: MAINTENANCE OF ELECTRICAL POWER DEVICES

Preventive and periodical maintenance schedule of the following electrical power devices. i.e Batteries (Dry / Wet), UPS / Inverters, DC & AC Motors, Motor starters (AC & DC), Air conditioners, Power transformers, Pole mounted & Plinth mounted transformer yards, Circuit breakers.

UNIT-IV: SAFETY

Need of safety - Equipment used in Electrical and general safety - Different types of Electrical hazards / accidents - Causes of different Electrical hazards / accidents - Methods to avoid Electrical hazards / accidents - First-Aid methods followed to rescue a person met with Electric shock - Do's & Don't's of Electrical supervisor at Electrical substations - Different fire extinguishers- operation and application of different fire extinguishers.

UNIT-V: DEPARTMENTAL TESTS

Electrical installation testing - departmental procedure for testing before giving service connection – departmental procedure for obtaining service connection - desirable insulation resistance for domestic and power circuits – Tests for measuring insulation resistance - procedure for conducting insulation resistance test and continuity tests, earth continuity test

UNIT-VI: RURAL ELECTRIFICATION AND INDIAN ELECTRICITY ACTS.

Design of rural electrification scheme - Load survey-determination of capacity of transformer - estimation of quantity of materials required for the erection of distribution lines and 11 kV feeder from a nearby 11 kV feeder - determining the economic feasibility of the scheme as per the procedure laid out in NEC, - Indian Electricity Act-2003 rules related to domestic and Industrial lighting- power, agricultural and earthing installations, erection of 11 kV, 400 Volt

TEXT BOOKS:

1. Operation & Maintenance of Electrical Machines Vol – I by B.V.S. Rao - Media Promoters & Publisher, 1963.
2. Operation & Maintenance of Electrical Machines Vol – II by B.V.S. Rao - Media Promoters & Publisher, 1967.
3. Study of Electrical Appliances and devices by K. B. Bhatia, Khanna Publishers, New Delhi, 1st edition, 1988.

REFERENCE BOOKS:

1. Preventive Maintenance by C.J. Hubert, zs
2. Testing, Commissioning Operation & Maintenance of Electrical equipment by S. Rao
3. Indian Electricity Act-2003
4. APERC regulation Act (www.aperc.gov.in)
5. Electrical Installation design and drawing by CR Dargar -New Asian publishers

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EEOE7
Name of the Course	Energy Storage Systems (Open Elective-III)					
Branches	Common to all except EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Identify the Factors for the Need of Energy Storage	K2
CO2	Classify various types of energy Storages	K2
CO3	Describe the performance factors of Energy Storage Systems.	K2
CO4	Describe charging patterns in Battery Storage Systems	K2
CO5	Identify Various Types of Fuel Cells	K2
CO6	Identify various applications of Electrical Storage	K2

UNIT – I: NEED FOR ENERGY STORAGE

Electricity and the roles of EES, High generation cost during peak-demand periods, Long distance between generation and consumption-Variations in Energy Demand Variations in Energy Supply - Interruptions in Energy Supply - Transmission Congestion - Demand for Portable Energy

UNIT-II: TYPES OF ENERGY STORAGE SYSTEMS

Potential energy -pumped hydro, compressed air, springs - Kinetic energy - mechanical flywheels - Thermal energy with phase change-ice, molten salts, steam - Chemical energy-hydrogen, methane, gasoline, coal, oil - Electrochemical energy-batteries, fuel cells, Electrostatic energy -capacitors, Electromagnetic energy-superconducting magnets.

UNIT-III: PERFORMANCE FACTORS OF ENERGY STORAGE SYSTEMS

Energy capture rate and efficiency - Discharge rate and efficiency - Dispatch ability and load flowing characteristics, scale flexibility, durability – Cycle lifetime, mass and safety – Risks of fire, explosion, toxicity - Ease of materials, recycling and recovery -Environmental consideration and recycling

UNIT-IV: BATTERY STORAGE SYSTEM

Introduction with focus on Lead Acid and Lithium - Chemistry of Battery Operation, Power storage calculations, Reversible reactions, Charging patterns, Battery Management system.

UNIT-V: FUEL CELL

Fuel Cell-Construction-Working Principle-Types of Fuel Cells-Polymer electrolyte membrane Fuel Cell-Alkaline Fuel Cell-Solid oxide Fuel Cell-Merits and Demerits

UNIT – VI: APPLICATIONS OF ELECTRICAL ENERGY STORAGE

Waste heat recovery-Solar energy storage- Power plant applications-Energy storage in automotive applications

TEXT BOOKS:

1. Doughty Liaw, Narayan and Srinivasan, "Batteries for Renewable Energy Storage".
2. The Electroc Jiujun Zhang, Lei Zhang, Hansan Liu, Andy Sun, Ru-Shi Liu, "Electrochemical Technologies for Energy Storage and Conversion", John Wiley and Sons, 2012.hemical Society, New Jersy, 2010.
3. Detlef Stolten, "Hydrogen and Fuel Cells: Fundamentals, Technologies and Applications ", Wiley, 2010.

REFERENCE BOOKS:

1. The Electrical Energy Storage by IEC Market Strategy Board.
2. "James M. Eyer, Joseph J. Iannucci and Garth P. Corey ", "Energy Storage Benefits and Market Analysis", Sandia National Laboratories, 2004.
3. https://nptel.ac.in/content/storage2/courses/108103009/download/M9.pdf

Semester	VIII SEM	L	T	P	C	Course Code
Regulation	V18	3	-	-	3	V18EETOE8
Name of the Course	Basics of Electrical Power Generation (Open Elective-III)					
Branches	Common to all except EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the various energy sources, substations and switchgear devices.	K2
CO2	Understand the principle of operation of different components of thermal power stations.	K2
CO3	Understand the principle of different components of a Nuclear power stations.	K2
CO4	Understand the principle of operation of different components of hydro power stations.	K2
CO5	Understand the working of solar photo voltaic systems and applications.	K3
CO6	Understand the wind energy conversion systems, efficiency and power generation.	K2

UNIT–I: FUNDAMENTALS OF ELECTRICAL POWER SYSTEM

Energy scenario (world and India) – various Conventional and non-conventional energy sources–structure of electric power system: generation, transmission, distribution- classification of substations-switchgear devices: switches, fuses, relay, MCB.

UNIT–II: THERMAL POWER STATIONS

Schematic arrangement- Selection of site- general layout of a thermal power plant showing paths of coal, steam, water, air, ash handling system: generation, transmission, distribution and flue gasses, ash handling system- Brief description of components: Boilers, Super heaters, Economizers, electrostatic precipitators Condensers, feed water circuit, Cooling towers and Chimney.

UNIT–III: NUCLEAR POWER STATIONS

Location of nuclear power plant, Working principle, Nuclear fission, Nuclear fuels, Nuclear chain reaction, nuclear reactor Components: Moderators, Control rods, Reflectors and Coolants. Types of Nuclear reactors, Radiation: Radiation hazards and Shielding, nuclear waste disposal.

UNIT–IV: HYDRO POWER STATIONS

Schematic arrangement, advantages and disadvantages, choice of site constituents of hydro power plant, Hydro turbine. Environmental aspects for selecting the sites and locations of hydro power stations.

UNIT–V: SOLAR POWER PLANT

Solar photovoltaic cell, module, array – construction of power plant– Efficiency of solar cells – Cell I-V characteristics – Equivalent circuit of solar cell – Series resistance – Shunt resistance – Applications and systems - System design: storage sizing – PV system sizing.

UNIT–VI: WIND POWER PLANT

Sources of wind energy - Wind patterns – Types of turbines –Horizontal axis and vertical axis machines - construction of power plant –Efficiency– Poweroutputofwindturbine–Selectionofgenerator(synchronous,induction) –Power generation for utility grids.

TEXT BOOKS:

1. A Text Book on Power System Engineering by M. L. Soni, P. V. Gupta, U. S. Bhatnagar and A. Chakrabarti, Dhanpat Rai & Co. Pvt. Ltd.- 2nd edition, 2013.
2. Renewable Energy Resources, John Twidell andTonyWeir,TaylorandFrancis-2nd edition, 2013.

REFERENCE BOOKS:

Semester	**VIII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V18**	**3**	**-**	**-**	**3**	**V18EEOE 9**
Name of the Course	**Industrial Automation (Open Elective-III)**					
Branches	**Common to all except EEE**					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic concepts of control systems.	**K3**
CO2	Understand the concepts of industrial automation and components of control system.	**K3**
CO3	Illustrate the concepts of electrical actuators and controllers.	**K3**
CO4	Analyse the Control Procedures in Control systems	**K4**
CO5	Analyse the Process control	**K4**
CO6	Understand the concept of PLC and its application	**K3**

UNIT-I: BASIC CONCEPTS OF CONTROL SYSTEMS

Basic concepts-Definition of open loop and closed loop system, examples with block diagrams. Terms used in the control systems-Types of feedback-Transfer function Definition &derivation control systems- Equivalence of physical system components

UNIT-II: INTRODUCTION TO INDUSTRIAL AUTOMATION

Need of Automation and its requirements, Structure & components Industrial Automation systems, Architectural levels of Industrial controls. Components of control systems-Contact types-Normally open & Normally closed, Solenoids-AC/DC, Input devices Push button, Selector switch, Photo electric, Level Control, Pressure sensing device, Output devices- contactors, valves, Pilot lamps, Relays-Electromagnetic and Reed Relay

UNIT- III: ELECTRICAL ACTUATORS AND CONTROLLERS

Potentiometers –working principle, AC & DC Servomotors-working principle, working of Synchro's - transmitter, control transformer, concept and purpose of a Tacho –generator

UNIT-IV: CONTROL PROCEDURES IN CONTROL SYSTEMS

Types of control systems-Time Variant/ Invariant systems, Continuous data and sampled data system, Linear and Non-Linear control system, Digital Control system Concept of controllers- P Controller, I Controller, PI Controller, PD Controller, PID Controller

UNIT-V: PROCESS CONTROL

Introduction to process control, PID control, controller tuning, implementation of PID controllers, speed control structures- feed forward and ratio control, predictive control, cascade, override and split range control.

UNIT-VI: PLC AND ITS APPLICATIONS

PLC Definition-advantages-Block diagram-Ladder diagrams for AND, OR, NOT, NAND, NOR-Instruction set-Ladder diagram for DOL starter, Star-Delta Starter, Stair case lighting, Traffic light control, Temperature controller-Special control systems DCS, SCADA.

6.	V20EES06	Industrial Automation with PLC

Annexure- EE-V

Syllabi for the course offered in III & IV Semesters of B. Tech by Department of EEE under V20 Regulation

Semester	III SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET04
Name of the Course	Electrical Circuit Analysis –II					
Branches	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Determine electrical parameters for 3-phase unbalanced systems	K3
CO2	Apply the network theorems for solving electrical circuits.	K3
CO3	Analyze circuit parameters under transient conditions	K3
CO4	Calculate two-port network parameters for any type of electrical networks	K3
CO5	Understand the concept of filters	K2

Unit-I: Unbalanced Three phase circuits

Unbalanced star connected load supplied from: Balanced 3-ϕ, 4-wire system and balanced 3-ϕ, 3-wire system using Millman's, Mesh/Loop and Star-Delta transformation methods; Unbalanced delta connected load supplied from: Balanced 3-ϕ, 3-wire system; Measurement of 3-ϕ active power using two wattmeter method; Measurement of 3-ϕ reactive power using one wattmeter method; Numerical Problems.

Unit-II: Network Theorems (DC & AC Excitations)

Superposition, Thevenin‘s, Norton‘s, Milliman‘s, Reciprocity, Compensation, Maximum Power Transfer, Tellegen‘s theorems; Problem solving for the network consisting of independent and dependent sources; Concept of Duality and Dual networks.

Unit-III: Transient analysis in DC and AC Circuits

Initial Conditions; Analysis of R-L, R-C and R-L-C circuits with DC and AC excitations using differential equations and Laplace transforms; Numerical Problems.

Unit-IV: Two-Port Networks

Basic Definitions; Z-parameters; Y-parameters; Transmission line (ABCD) parameters; h-parameters; Relationship between parameter sets; Series, Parallel and Cascade connections of two port networks; Problem solving for the network consisting of independent and dependent sources.

Unit-V: Passive Filters

Classification of filters; Analysis and Design of low pass, high pass, band pass and band stop filters (Constant-k & m-derived); Low Pass and High Pass Filters with RC and RL Circuits; Band Pass and Band Stop Filters with RLC Circuit.

Text Books:

1. Engineering Circuit Analysis by William Hayt and Jack E. Kemmerley, McGraw Hill Company,6th edition,Jan 2005
2. Network Analysis by Van Valkenburg, Prentice-Hall of India Private Ltd, revised 3rd edition, 15 April 2019
3. Circuit Theory (Analysis and Synthesis) by A.Chakrabarthi, DhanpatRai& Co.,7th revised edition,1 Jan 2018
4. Network Analysis and Synthesis by Ravish R Singh, Mc Graw Hill Education (I) Pvt. Ltd., 2nd edition, 1 may 2019

Reference Books:

1. Network Theory-Analysis and Synthesis by Smarajit Ghosh, PHI Publishers, 9th edition, Aug 2015
2. Network Theory by N.C. Jagan, C. Lakshminarayana, Anshan Publications, 2nd edition September 30, 2005
3. Fundamentals of Electrical Circuits by Charles K. Alexander and Mathew N.O. Sadiku, McGraw Hill Education (India), 5th edition, 1st july 2013
4. Network Analysis by C.L.Wadhwa, New Age International Publishers., 3rd edition, 1 Aug 2018
5. Electrical Circuit Analysis by Sudhakar A. & Shyammohan S. Palli, McGraw Hill Publication, 5th edition 1 july 2017
6. Introductory Circuit Analysis by Robert L Boylestad, Pearson Publications,12th edition,1st Jan 2013
7. https://nptel.ac.in/courses/108/105/108105159/

Semester	**III SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V20**	**3**	**-**	**-**	**3**	**V20EET05**
Name of the Course	**Electro Magnetic Fields**					
Branches	**EEE**					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Compute the electric field and potential due to different configurations of static charges and electric dipole.	**K3**
CO2	Calculate the capacitance of various configurations and understand the concept of conduction and convection current densities.	**K3**
CO3	Apply the Biot-Savart‘s law and Amperes Circuital Law for finding MFI for different cables and develop the Maxwell equations.	**K3**
CO4	Determine the magnetic forces, torque produced by currents in magnetic fields, self-inductance of solenoid and toroid.	**K3**
CO5	Calculate the induced E.M.F‘s and understand the concept of fields varying with time.	**K3**

Unit-I: Electrostatics

Electrostatic Fields; Coulomb‘s Law; Electric Field Intensity (EFI) - EFI due to a line and a surface charges; Work done in moving a point charge in an electrostatic field; Electric Potential - Properties of potential function, Potential gradient; Guass‘s law; Maxwell‘s first law, div(D)=ρv; Laplace‘s and Poison‘s equations; Electric dipole - Potential and EFI due to an electric dipole, Torque on an Electric dipole placed in an electric field.

Unit-II: Conductors, Dielectrics and Capacitance Conductors & Dielectrics

Conductors - Behavior of conductors in an electric field; Dielectrics - Polarization; Electric boundary conditions.

Capacitance: Capacitance of parallel plates, spherical and coaxial cables with composite dielectrics; Energy density in a static electric field; Current density -

Conduction and Convection current densities; Ohm‘s law in point form, Equation of continuity.

Unit-III: Magneto Statics

Introduction; Biot-Savart‘s law; Magnetic Field Intensity (MFI) - MFI due to a straight current carrying filament, circular, square and solenoidal current carrying wires; Maxwell‘s second Equation i.e, div(B)=0.

Ampere‘s circuital law - MFI due to an infinite sheet of current, long filament current carrying conductor, Pointform of Ampere‘s circuital law; Maxwell‘s third equation i.e, Curl (H)=J.

Unit-IV: Forces in Magnetic fields and Inductance

Magnetic force; Behavior of charges moving in magnetic field; Lorentz force equation; Force on a current carrying element placed in a magnetic field; Force on a straight and a long current carrying conductor placed in a magnetic field; Force between two straight long and parallel current carrying conductors; Magnetic dipole - a differential current loop as a magnetic dipole, Torque on a current loop placed in a magnetic field; Inductance: Basic expressions for self and mutual inductances, self-inductance of a solenoid and toroid.

Unit-V: Time Varying Fields

Introduction; Integral and point forms of faraday‘s laws of electromagnetic induction; statically and dynamically induced EMFs; Maxwell‘s fourth equation, Curl (E) = $-\partial B/\partial t$; Modification of Maxwell‘s equations for time varying fields; Simple problems.

Text Books:

1. Engineering Electromagnetics by William H. Hayt& John. A. Buck Mc. Graw-Hill Companies, 7th Editon.2006.
2. Electromagnetic Fields by R MeenaKumari, R Subhasri, New Age International, 2nd edition, Jan 2007.
3. Elements of Electromagnetics by Matthew N.O. Sadiku, Oxford University Press, 4th edition, 1 Jan 2006

Reference Books:

1. Introduction to Electro Dynamics by D J Griffiths, Prentice-Hall of India Pvt. Ltd, 4th edition, 1st Jan 2015
2. Electromagnetic Field Theory by Yaduvir Singh, Pearson., 1st edition 23 April 2011
3. Fundamentals of Engineering Electromagnetics by Sunil Bhooshan, Oxford higher education., 1st edition 30 june 2012
4. https://nptel.ac.in/courses/108/106/108106073/

Semester	III SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET06
Name of the Course	Electrical Machines – I					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Asses the performance of a DC Machines	K3
CO2	Understand the torque production mechanism and control the speed of DC Machines	K2
CO3	Asses the performance of single phase transformers	K3
CO4	Calculate the regulation, losses and efficiency of single phase transformers	K3
CO5	Understand the parallel transforms, control voltages with tap changing methods and achieve three phase to two phase transformation	K2

Unit-I: Introduction and Performance of DC machines

Construction and principle of operation of DC machine; EMF equation of DC generator; Classification of DC machines based on excitation; Magnetization Characteristics of DC shunt generator, DC machine acts as a motor - back-emf and Torque, Armature Reaction and Commutation; Characteristics of separately-excited, shunt, series and compound motors; losses and efficiency of a DC machine; Applications of DC motors

Unit-II: Starting, Speed Control and Testing of D.C. Machines

Necessity of Starter - Working of 3-Point and 4-Point Starters; Speed Control of DC shunt motor by armature voltage and field flux control; Testing of DC machines - Brake Test, Swinburne‘s method, Hopkinson‘s Test, Retardation Test; Simple Numerical Problems.

Unit-III: Single-phase Transformers

Types, Constructional details, Principle of operation, EMF Equation of a 1-Φ Transformer; Transformer operation on No-Load and On-Load for lagging, leading and unity power factors loads and their phasor diagrams; Transformer equivalent circuit; Transformer Regulation, Losses and efficiency; effect of variation of supply frequency and voltage on losses; All day efficiency.

Unit-IV: Testing of Single-phase Transformers

O.C. and S.C. tests; Sumpner's test; Separation of losses of a 1-Φ transformer; Parallel operation with equal voltage ratios; Auto Transformer - equivalent circuit, comparison with two winding transformers.

Unit-V:-3-Phase Transformers

Poly-phase connections, Y/Y, Y/Δ, Δ/Y, Δ/Δ and open-Δ; Scott Connection; Three winding Transformer: Determination of Zp, Zs and Zt; Off-load and On-load tap changers.

Text Books:

1. Electrical Machines by P.S. Bhimbra, Khanna Publishers.7th edition 1st Jan 1977
2. Theory & Performance of Electrical Machines by J. B. Guptha. S. K. Kataria& Sons. 15th edition 2015

Reference Books:

1. Electrical Machines by D. P.Kothari, I .J .Nagarth, Mc Graw Hill Publications, 5thedition 23 june 2017
2. Electrical Machines by R. K. Rajput, Lakshmi publications, 5th edition, 1st Jan 2016
3. Electrical Machinery by Abijith Chakrabarthi and Sudhipta Debnath, McGraw Hill

Education 1st edition 9th Feb 2015

4. Electrical Machinery Fundamentals by Stephen J Chapman, McGraw Hill education

4th edition 1st july 2017

5. Electric Machines by Mulukutla S. Sarma & Mukeshk. Pathak, CENGAGE Learning., 1st edition 1st November 2009
6. Electric Machinery by A. E. Fitzgerald, Charles kingsley, Stephen D. Umans, TMH 6th edition 16th Aug 2002
7.https://nptel.ac.in/courses/108/105/108105155/

Semester	III SEM	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20EEL04
Name of the Course	Electrical Circuits Laboratory					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Compute response in the electrical circuits using various Network theorems	K3
CO2	Sketch Locus Diagrams of RL and RC Series Circuits	K2
CO3	Find parameters of the circuit under resonance conditions	K3
CO4	Determine two port network parameters	K3
CO5	Calculate 3phase power and choke coil parameters	K3

Any 10 experiments are to be conducted

1. Verification of KVL and KCL
2. Verification of Thevenin's and Norton's Theorems
3. Verification of Superposition and Reciprocity Theorem
4. Verification of Compensation and Millmann's Theorems.
5. Verification of Maximum Power Transfer Theorem.
6. Locus Diagrams of RL and RC Series Circuits.
7. Time Response of first order RC and second order RLC Networks.
8. Series and Parallel Resonance
9. Determination of Z and Y parameters.
10. Determination of Transmission and hybrid parameters.
11. Determine the Parameters of a choke coil
12. Measurement of 3-phase Power by two Wattmeter Method for unbalanced loads

Semester	IV SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET07
Name of the Course	Signals and Systems					
Branches	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand and estimate various types of signals and systems.	(K2)
CO2	Understand the basic principles of Sampling Theorem.	(K2)
CO3	Understand the characteristics of LTI Systems	(K2)
CO4	Understand the concepts of Cross-Correlation and Auto-Correlation of Functions	(K2)
CO5	Apply the concept of ROC for Laplace Transform and Z transform, Inverse Z transforms.	(K3)

Unit-I:Introduction

Definition of Signals and Systems, Classification of Signals, Classification of Systems, Operations on signals: time-shifting, time-scaling, amplitude-shifting, amplitude-scaling. Problems on classification and characteristics of Signals and Systems. Complex exponential and sinusoidal signals, Singularity functions and related functions: impulse function, step function signum function and ramp function. Analogy between vectors and signals, orthogonal signal space, Signal approximation using orthogonal functions, mean square error, closed or complete set of orthogonal functions, Orthogonality in complex functions.

Unit–II: Sampling theorem

Graphical and analytical proof for Band Limited Signals, impulse sampling, Natural and Flat top Sampling, Reconstruction of signal from its samples, effect of under sampling – Aliasing, Introduction to Band Pass sampling.

Unit-III: Linear Time Invariant (LTI) System

Linear- nonlinear, Time variant-invariant, casual - non-casual, static-dynamic, stable-unstable, invertible. Convolution sum and convolution integral using graphical methods for different signals (Time domain).

Unit-IV: Cross-Correlation And Auto-Correlation of Functions

Properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between auto correlation function and energy/power spectral density function. Relation between convolution and correlation, Detection of periodic signals in the presence of noise by correlation, Extraction of signal from noise by filtering.

Unit –V: Transforms

Concept of region of convergence (ROC) for Laplace transforms, constraints on ROC for various classes of signals, Distinction between Laplace, Fourier and Z transforms. Region of convergence in Z-Transform, constraints on ROC for various classes of signals, Inverse Z-transform, properties of Z-transforms.

Semester	IV SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET08
Name of the Course	Electrical Machines – II					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Explain the operation and performance of three phase induction motor	K2
CO2	Assess the torque-speed relation, performance of induction motor and induction generator	K3
CO3	Explain the torque production mechanism and starting of single phase induction motors	K2
CO4	Asses the performance of synchronous generators by determining its voltage regulation	K3
CO5	Explain the operation and performance of Synchronous Motors	K2

Unit-I: 3-Phase Induction Motors

Construction details of cage and wound rotor machines; Production of rotating magnetic field; Principle of operation; Rotor EMF, Rotor frequency, Rotor Current and p.f. at standstill and during running conditions; Rotor power input; rotor copper losses; Mechanical power developed and their interrelationship; Equivalent circuit; Phasor diagram.

Unit-II: Characteristics, starting and testing methods of Induction Motors

Torque equation; expressions for maximum torque and starting torque; torque-slip characteristics; double cage and deep bar rotors construction; crawling and cogging; speed control of induction motor with V/f method; no-load and blocked rotor tests (construction of circle diagram for predetermination of performance parameters); methods of starting, soft starters; induction generator operation (Qualitative treatment only).

Unit-III: Single Phase Motors

Constructional features and its equivalent circuit; Problem of starting – Double revolving field theory; Starting methods; shaded pole motors; AC Series motor.

Unit-IV: Alternators

Constructional features of non–salient and salient pole type alternator; Armature windings – Distributed and concentrated windings; Distribution, Pitch and Winding factors; E.M.F equation; Improvements of waveform and armature reaction; Voltage regulation by synchronous impedance method, MMF method and Potier triangle method; Phasor diagrams; Two reaction analysis of salient pole machine and phasor diagram; Parallel operation of alternators, Numerical problems.

Unit-VI: Synchronous Motors

Principle and theory of operation of Synchronous Motor; Phasor diagram; Starting torque; Variation of current and power factor with excitation; Synchronous condenser; Mathematical Analysis for power developed; Hunting and its suppression; Methods of starting.

Text Books:

1. Electrical Machines by P.S. Bhimbra, Khanna Publishers , Edition-2,2021
2. Theory & Performance of Electrical Machines by J. B. Guptha. S. K. Kataria & Sons , Edition-2,2013
3. Electrical Machinery Fundamentals by Stephen J Chapman McGraw Hill education 5th edition 2011

Reference Books:

Semester	IV SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET09
Name of the Course	Electrical and Electronic Measurements					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Identify the proper instrument for measurement of AC or DC voltages and currents	**K2**
CO2	Choose the suitable instrument for the measurement of power and energy.	**K3**
CO3	Compute the electrical parameters by using appropriate bridge.	**K3**
CO4	Calculate different magnetic parameters by using magnetic instruments and Understand the operation of potentiometer.	**K3**
CO5	Understand the operation of various digital instruments.	**K2**

Unit-I: Electromechanical Indicating Instruments

Classification of measuring instruments; Construction and principle of operation of PMMC, MI instruments; Extension of instrument ranges using shunts, multipliers; Numerical Problems.

Instrument Transformers: Ratio and Phase angle errors (Derivation & Phasor Diagram) and their applications in the extension of instrument ranges, Numerical Problems.

Unit-II: Power and Energy Measurement

Single phase dynamometer wattmeter (LPF and UPF), expression for deflecting and control torques; Type of P.F. Meters; Single phase induction type energy meter, Driving and braking torques, errors and compensations, testing by phantom loading using R.S.S. meter; Numerical Problems.

Unit-III: Measurement of Parameters
Measurement of Resistance: wheat stone‘s bridge and its Sensitivity; Ohm meter; Kelvin‘s double bridge; Loss of charge method; Earth resistance measurement by fall of potential method and megger.

Measurement of inductance & Q-Factor: Maxwell‘s bridge; Hay‘s bridge; Anderson‘s bridge.

Measurement of capacitance and loss angle: Desauty‘s Bridge; Schering Bridge.

Unit-IV: Magnetic Measurements & Potentiometers
Magnetic Measurements: Constructional details of Flux meter; Determination of B–H Loop: Methods of reversals and Step-by-Step method; Core loss measurements by Maxwell‘s and Campbell‘s Bridges, D.C. & A.C. Crompton‘s potentiometer and their applications.

Unit-V: Electronic Instruments
Introduction; Digital Voltmeters (DVM); Ramp type DVM; Integrating type DVM; Successive-approximation DVM; Q- Meter, Digital frequency meter, Digital Tachometer; Measurement of phase difference & Frequency by using lissajous patterns in CRO; Electronic Multi meter.

Text Books:
1. A course in Electrical& Electronic Measurement and Instrumentation by A. K. Sawhney, Dhapat Rai& Co. 2015
2. Electronic Instruments by H.S. Kalsi, Tata Mc-Graw hill. 7th edition 2017

Reference Books:
1. Electrical and Electronic Measurements and instrumentation by R. K. Rajput, S.Chand. 2016
2. Digital Instrumentation by A.J. Bouwens, Tata Mc-Graw hill.
3. Modern Electronic instrumentation & Measuring instruments by A.D. Heltric & W.C. Copper, Wheeler Publication. 2015
4. Instrument transducers by H.K.P. Neubert, Oxford University press.
5. Electrical Measurements by Forest K. Harris, John Wiley and Sons.
6. **NPTEL Link** : https://nptel.ac.in/courses/108/105/108105153/

Semester	IV SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET10
Name of the Course	Electrical Power Generation & Transmission					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Understand the working of conventional power generating stations	K2
CO2	Calculate various factors of load, insulation resistance and power factor of the cables.	K3
CO3	Compute the resistance, inductance and capacitance of transmission lines	K3
CO4	Determine the various transmission line parameters	K3
CO5	Calculate the corona loss, sag and tension in transmission lines	K3

Unit-I: Power Generating Stations

Introduction to renewable and non-renewable energy sources - general layout of a thermal power plant and its Components-General layout of Nuclear power plant - Nuclear fission and Chain Reaction –General Layout of Hydel power plant and Description of its main components- General Layout of Solar and wind Power plants.

Unit-II: Economic Aspects of Power Generation, Tariffs and Cables

Load curve- load duration and integrated load duration curves- discussion on economic aspects: connected load, maximum demand, and demand factor. Different Tariff methods. Construction of cables, Types of Cables, Calculation of insulation resistance and power factor of the cable.

Unit-III: Transmission Line Parameters

Conductor materials: Types of conductors – Calculation of resistance for solid conductors – Calculation of inductance for single phase– Single and double circuit lines–Concept of GMR and GMD–Symmetrical and asymmetrical conductor configuration with and without transposition–Bundled conductors-Numerical Problems–Calculation of capacitance for 2 wire– Effect of ground on capacitance – Capacitance calculations for symmetrical and asymmetrical for single phase– Numerical Problems.

Unit-IV: Modeling of Transmission Lines

Classification of Transmission Lines: Short, medium and their model representations –Nominal-T–Nominal-Pie and A, B, C, D Constants for symmetrical and Asymmetrical Networks— Evaluation of A,B,C,D Constants–regulation and efficiency-Numerical problems-Surge Impedance –Surge Impedance loading-Wavelengths and Velocity of Propagation.

Unit-V: Sag and Tension Calculations and Overhead Line Insulators
Skin and Proximity effects – Ferranti effect – Charging Current –Shunt Compensation –Corona – Description of the phenomenon–Factors affecting corona- Sag and Tension calculations with equal and unequal heights of towers–Effect of Wind and Ice on weight of Conductor–Numerical Problems

Text Books:

1. Generation, Distribution and Utilization of Electric Energy by C.L.Wadhawa, New age International (P) Limited, Publishers
2. Thermal Engineering by Rajput, Lakshmi publications
3. Electrical Power Systems by C.L.Wadhwa, 6th Edition, New Age International Publishers.

Reference Books:

2. A Course in Power Systems by J. B. Gupta, S K Kataria& Sons Publishers. 2013
3. Principles of Power Systems by V.K Mehta and Rohit Mehta, S. Chand Publishers. 2nd Edition 2005
4. Electrical Power Systems by P.S.R. Murthy, B.S.Publications, 2017
5. **NPTEL Link :** https://nptel.ac.in/courses/108/102/108102047/

Semester	IV SEM	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20EEL05
Name of the Course	Electrical Machines-I Lab					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Sketch the magnetizing characteristics of DC shunt generator	K3
CO2	Determine and predetermine the performance of DC machines	K3
CO3	Apply different methods to control the speed of the DC motors	K3
CO4	Assess the performance of transformers	K3
CO5	Convert three phase supply to two phase	K2

Any 10 of the following experiments are to be conducted

1. Magnetization characteristics of DC shunt generator: Determination of critical field resistance and critical speed.
2. Brake test on DC shunt motor. Determination of performance curves.
3. Hopkinson‘s test on DC shunt machines. Predetermination of efficiency.
4. Swinburne‘s test and Predetermination of efficiencies as Generator and Motor.
5. Speed control of DC shunt motor by Field and armature Control.
6. Retardation test on DC shunt motor. Determination of losses at rated speed.
7. Separation of losses in DC shunts motor.
8. OC & SC test on single phase transformer.
9. Sumner‘s test on single phase transformers.
10. Scott connection of transformers.
11. Parallel operation of Single phase Transformers.
12. Separation of core losses of a single phase transformer.
13. Heat run test on a bank of 3 Nos. of single phase Delta connected transformers.

Semester	IV SEM	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20EEL06
Name of the Course	Electrical Measurements Laboratory					
Branches	EEE					

Course Outcomes:

After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Calibrate voltmeters, ammeters, single phase energy meter	K3
CO2	Measure the electrical parameters using Anderson, Schering& Kelvin's double Bridges.	K5
CO3	Apply various methods to calculate powers and choke coil parameters	K3
CO4	Calibrate dynamometer and LPF Wattmeters	K3
CO5	Measure the Dielectric Strength of transformer oil	K3

Any 10 experiments are to be conducted

1. Calibration and Testing of single phase energy Meter
2. Calibration of PMMC ammeter and voltmeter using Crompton D.C. Potentiometer
3. Calibration of AC voltmeter and measurement of choke parameters using AC Potentiometer in polar form.
4. Calibration of dynamometer wattmeter by using phantom loading.
5. Calibration of LPF wattmeter by using direct loading.
6. Capacitance Measurement using Schering Bridge
7. Inductance Measurement using Anderson Bridge.
8. Measurement of 3 phase power with single wattmeter and using two C.Ts
9. Measurement of single phase Power by using 3 Voltmeter and 3 Ammeter method.

10. Measurement of resistance using Kelvin's double Bridge.
11. Dielectric oil testing using H.T test Kit.
12. Measurement of 3 phase reactive power with single wattmeter for balanced loading.
13. Demonstration of Electronic Meters used by electrical field engineers

Annexure- EE-VI

Semester	**IV SEM (ECE & ECT);** **V SEM (EEE)**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V20**	**3**	**-**	**-**	**3**	**V20EET11**
Name of the Course	**Control Systems**					
Branches	**EEE, ECE & ECT**					

Course Outcomes

After successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Determine the mathematical modelling of physical systems	(K3)
CO2	Calculation of Time Domain Specification of first and second order systems and understand the effect of Controllers	(K3)
CO3	Investigate the stability of closed loop systems using Routh's stability criterion and root locus method.	(K3)
CO4	Find the stability of control systems using frequency response approaches.	(K3)
CO5	Analyze physical systems using state space approach.	(K4)

Unit – I: Mathematical Modeling of Control Systems

Classification of control systems, Open Loop and closed loop control systems and their differences, Feed-Back Characteristics, transfer function of linear system, Differential equations of electrical networks, Translational and Rotational mechanical systems, Transfer Function of DC Servo motor - AC Servo motor- Synchro, transmitter and receiver - Block diagram algebra – Representation by Signal flow graph - Reduction using Mason's gain formula.

Unit-II: Time Response Analysis

Standard test signals - Time response of first and second order systems - Time domain specifications - Steady state errors and error constants – Effects of various controllers

Unit –III: Stability And Root Locus Technique

The concept of stability – Routh's stability criterion –limitations of Routh's stability – Root locus concept - construction of root loci

Unit–IV: Frequency Response Analysis

Introduction to Frequency domain specifications-Bode diagrams- transfer function from the Bode Diagram-Phase margin and Gain margin-Stability Analysis from Bode Plots, Polar Plots, Nyquist Stability criterion. Effects of various controllers.

Unit–V: State Space Analysis of LTI Systems

Concepts of state, state variables and state model, state space representation of transfer function, Diagonalization- Solving the time invariant state equations- State Transition Matrix and it's Properties – Concepts of Controllability and Observability.

Annexure –EE-VIII

Syllabi for the Courses offered in I to IV semesters of M. Tech EEE for Power Electronics & Power Systems (PE&PS) under V21 Regulation

Semester	**I SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21PET01
Name of the Course	Analysis of Power Electronic Converters					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Explain the Static and Dynamic Characteristics of power switching devices.	K2
CO2	Analyze the parameters of AC-DC converters	K4
CO3	Explain the operation of power factor correction converters	K2
CO4	Analyze the operation of three phase inverters with PWM control.	K4
CO5	Understand the principles of operation of multi- level inverters and their applications	K2

UNIT– I : Overview of Switching Devices:

Power MOSFET, IGBT, GTO, GaN devices-static and dynamic characteristics, gate drive circuits for switching devices.

UNIT– II: AC-DC converters:

Single phase fully controlled converters with RL load–Evaluation of input power factor and harmonic factor- Continuous and Discontinuous load current, Power factor improvements, Extinction angle control, symmetrical angle control, PWM control. Three Phase AC-DC Converters, fully controlled converters feeding RL load with continuous and discontinuous load current, Evaluation of input power factor and harmonic factor-three phase dual converters

UNIT– III: Power Factor Correction Converters:

Single-phase single stage boost power factor corrected rectifier, power circuit principle of operation and steady state- analysis, three phase boost PFC converter.

UNIT– IV : PWM Inverters:

Principle of operation - Voltage control of single phase inverters - sinusoidal PWM– modified PWM – phase displacement Control – Trapezoidal, staircase, stepped, harmonic injection and delta modulation. Voltage Control of Three-Phase Inverters- Sinusoidal PWM- 60^0 PWM- Third Harmonic PWM- Space Vector Modulation- Comparison of PWM Techniques- Three phase current source inverters-Variable dc link inverter.

UNIT– V : Multi level inverters:

Introduction, Multilevel Concept, Types of Multilevel Inverters- Diode-Clamped Multilevel Inverter, Principle of Operation, Features of Diode-Clamped Inverter, Improved Diode-Clamped Inverter- Flying-Capacitors Multilevel Inverter- Principle of Operation, Features of Flying-Capacitors Inverter- Cascaded Multilevel Inverter- Principle of Operation- Features of Cascaded Inverter-Switching Device Currents-DC-Link Capacitor Voltage Balancing- Features of Multilevel Inverters-Comparisons of Multilevel Converters.

Semester	I SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET02
Name of the Course	Power System Operation & Control					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Apply various load flow methods to analyse the system	K3
CO2	Apply various methods to solve unit commitment problem and understand Optimal power flow	K3
CO3	Determine the transfer function of single area load frequency control	K3
CO4	Calculate the frequency deviation for two area load frequency control	K3
CO5	Explain the effect of generation with limited energy supply.	K2

UNIT– I: Load Flow Analysis

Newton Raphson method, Fast Decoupled method, AC-DC load flow – Single and three phase methods

UNIT– II: Unit commitment & Optimal power flow

Unit commitment problem and optimal power flow solution: Unit commitment: Constraints in UCP, UC solution methods. Priority list method, introduction to Dynamic programming Approach.

Optimal power flow: OPF without inequality constraints, inequality constraints on control variables and dependent variables.

UNIT– III: Single area Load Frequency Control:

Necessity of keeping frequency constant. Definition of control area, single area control, Block diagram representation of an isolated Power System, Steady State analysis, Dynamic response-Uncontrolled case. Proportional plus Integral control of single area and its block diagram representation, steady state response.

UNIT– IV : Two area Load Frequency Control:

Load frequency control of two-area system, uncontrolled case and controlled case, tie-line bias control, steady state representation. Optimal two-area LF control-performance Index and optimal parameter adjustment. Load frequency control and Economic dispatch control.

UNIT– V: Generation with limited Energy supply:

Take-of-pay fuel supply contract, composite generation production cost function. Solution by gradient search techniques, hard limits and slack variables, Fuel scheduling by linear programming.

Semester	I SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET03
Name of the Course	Control & Integration of Renewable Energy Systems (Elective -I)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the fundamental requirements of Grid Integration	K2
CO2	Explain different conventional & non-conventional dynamic energy conversion technologies	K2
CO3	Describe different renewable energy sources and storage devices	K2
CO4	Understand the real & reactive power control techniques with renewable generators	K2
CO5	Develop a model of complete system for standalone/grid connected system	K4

UNIT– I: Introduction:

Electric grid introduction, Supply guarantee and power quality, Stability, Effects of renewable energy penetration into the grid, Boundaries of the actual grid configuration, Consumption models and patterns, static and dynamic energy conversion technologies, interfacing requirements .

UNIT– II: Dynamic Energy Conversion Technologies:

Introduction to different conventional and non-conventional dynamic generation technologies, principle of operation and analysis of reciprocating engines, gas and micro turbines, hydro and wind based generation technologies, control and integrated operation of different dynamic energy conversion devices.

UNIT– III: Static Energy Conversion Technologies:

Introduction to different conventional and non conventional static generation technologies, principle of operation and analysis of fuel cell, photovoltaic based generators, and wind based generation technologies, different storage technologies such as batteries, fly wheels and ultra-capacitors, plug-in-hybrid vehicles, control and integrated operation of different static energy conversion devices.

UNIT– IV: Real and reactive power control:

Control issues and challenges in Diesel, PV, wind and fuel cell based generators, PLL, Modulation Techniques, Dimensioning of filters, Linear and nonlinear controllers, predictive controllers and adaptive controllers, Fault-ride through Capabilities, Load frequency and Voltage Control.

UNIT– V: Integration of different Energy Conversion Technologies:

Resources evaluation and needs, Dimensioning integration systems, Optimized integrated systems, Interfacing requirements, integrated Control of different resources, Distributed versus Centralized Control, Synchro Converters, Grid connected and Islanding Operations, stability and protection issues, load sharing, Cases studies.

Semester	I SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET04
Name of the Course	Smart Grid (Elective-I)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand concept of smart grid and its advantages over conventional grid.	K2
CO2	Understand smart metering techniques and measuring techniques	K2
CO3	Understand monitoring, protection techniques and storage systems for smart grids	K2
CO4	Illustrate the concept of Micro Grid and its integration	K2
CO5	Examine different communication technologies that can be used for smart grid	K2

UNIT-I: Introduction to Smart Grid

Evolution of Electric Grid, Concept of Smart Grid, Definitions, Need of Smart Grid, Functions of Smart Grid, Opportunities & Barriers of Smart Grid, Difference between conventional & smart grid. Case study of Smart Grid.

UNIT-II : Smart Grid Technologies: Part 1

Introduction to Smart Meters, Real Time Prizing, Smart Appliances, Automatic Meter Reading (AMR), Outage Management System (OMS), Plug in Hybrid Electric Vehicles (PHEV), Vehicle to Grid, Smart Sensors, Home & Building Automation.

UNIT-III :Smart Grid Technologies: Part 2

Smart Substations, Substation Automation, Feeder Automation. Geographic Information System (GIS), Intelligent Electronic Devices (IED) & their application for monitoring & protection, Smart storage like Battery, SMES, Pumped Hydro, Compressed Air Energy Storage, Wide Area Measurement System (WAMS), Phasor Measurement Unit (PMU).

UNIT-IV : Microgrids and Distributed Energy Resources

Concept of micro grid, need & applications of micro grid, formation of microgrid, Issues of interconnection, protection & control of microgrid. Plastic & Organic solar cells, Thin film solar cells, Variable speed wind generators, fuelcells, microturbines, Captive power plants, Integration of renewable energy sources.

UNIT-V: Information and Communication Technology for Smart Grid

Advanced Metering Infrastructure (AMI), Home Area Network (HAN), Neighborhood Area Network (NAN), Wide Area Network (WAN).

Semester	**I SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21PET05
Name of the Course	Power Quality (Elective-I)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Identify the issues related to power quality in power systems	K2
CO2	Describe the problems of transient and long duration voltage variations in power systems	K2
CO3	Analyze the effects of harmonics and understand different mitigation techniques.	K4
CO4	Identify the importance of custom power devices and their applications	K2
CO5	Choose suitable custom power device to mitigate power quality problem	K2

UNIT– I: Introduction to power quality:

Overview of Power Quality, Concern about the Power Quality, General Classes of Power Quality Problems, Voltage Unbalance, Waveform Distortion, Voltage fluctuation, Power Frequency Variations, Power Quality Terms, Voltage Sags, swells, flicker and Interruptions - Sources of voltage and current interruptions, Nonlinear loads.

UNIT– II: Transient and Long Duration Voltage Variations:

Source of Transient Over Voltages - Principles of Over Voltage Protection, Devices for Over Voltage Protection, Utility Capacitor Switching Transients, Utility Lightning Protection, Load Switching Transient Problems.

Principles of Regulating the Voltage, Device for Voltage Regulation, Utility Voltage Regulator Application, Capacitor for Voltage Regulation, End-user Capacitor Application, Regulating Utility Voltage with Distributed generation

UNIT– III : Harmonic Distortion and solutions:

Voltage vs. Current Distortion, Harmonics vs. Transients – Power System Quantities under Non-sinusoidal Conditions, Harmonic Indices, Sources of harmonics, Locating Sources of Harmonics, System Response Characteristics, Effects of Harmonic Distortion, Inter harmonics, Harmonic Solutions - Harmonic Distortion Evaluation, Devices for Controlling Harmonic Distortion, Harmonic Filter Design, Standards on Harmonics

UNIT– IV: Custom Power Devices:

Custom power and custom power devices, voltage source inverters, reactive power and harmonic compensation devices, compensation of voltage interruptions and current interruptions, static series and shunt compensators, compensation in distribution systems, interaction with distribution equipment, installation considerations.

UNIT– V: Application of custom power devices in power systems:

Static and hybrid Source Transfer Switches, Solid state current limiter - Solid state breaker. P-Q theory – Control of P and Q, Dynamic Voltage Restorer (DVR): Operation and control – Interline Power Flow Controller (IPFC): Operation and control of Unified Power Quality Conditioner (UPQC); Generalized power quality conditioner

Semester	I SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET06
Name of the Course	Electrical Distribution Automation (Elective-II)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand various factors of distribution system	**K2**
CO2	Construct the distribution substation and feeders	**K3**
CO3	Understand the distribution system protection and its coordination.	**K2**
CO4	Understand the effect of compensation for power factor improvement.	**K2**
CO5	Explain the distribution automation functions	**K2**

UNIT– I: Introduction to Distribution systems:

Introduction, an overview of the role of computers in distribution system planning-Load modeling and characteristics - definition of basic terms like demand factor, utilization factor, load factor, plant factor, diversity factor, coincidence factor, contribution factor and loss factor-Relationship between the load factor and loss factor - Classification of loads (Residential, Commercial, Agricultural and Industrial) and their characteristics.

UNIT– II: Distribution Feeders and Substations:

Design consideration of Distribution feeders: Radial and loop types of primary feeders, voltage levels, and feeder-loading. Design practice of the secondary distribution system. Location of Substations: Rating of a Distribution Substation, service area with "n" primary feeders. Benefits derived through optimal location of substations.

UNIT– III: **Protective devices and coordination:**

Objectives of distribution system protection, types of common faults and procedure for fault calculation. Protective Devices: Principle of operation of fuses, circuit reclosers, line sectionalizer and circuit breakers. Coordination of protective devices: General coordination procedure; types of coordination.

UNIT– IV: Capacitive compensation for power factor control:

Different types of power capacitors, shunt and series capacitors, effect of shunt capacitors (Fixed and switched), power factor correction, capacitor location. Economic justification. Procedure to determine the best capacitor location. Voltage control: Equipment for voltage control, effect of series capacitors, effect of AVB/AVR, line drop compensation.

UNIT– V: Distribution automation functions:

Electrical system automation, EMS functional scope, DMS functional scope functionality of DMS- Steady state and dynamic performance improvement; Geographic information systems-AM/FM functions and Database management; communication options, supervisory control and data acquisition: SCADA functions and system architecture; Synchro phasors and its application in power systems.

Text Books:

Semester	**I SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21PET07
Name of the Course	HVDC Transmission (Elective-II)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the various schemes of HVDC transmission	K2
CO2	Explain the operation of static power converters for HVDC transmission	K2
CO3	Describe various control techniques of power converters	K2
CO4	Understand the interaction between HVAC and HVDC system.	K2
CO5	Understand the various protection schemes of HVDC transmission	K2

UNIT– I: Limitation of EHV AC Transmission, Advantages of HVDC:

Technical economical and reliability aspects. HVDC Transmission: General considerations, Power Handling Capabilities of HVDC Lines, Basic Conversion principles, static converter configuration. Types of HVDC links-Apparatus and its purpose

UNIT– II: Static Power Converters:

6-pulse bridge circuit and 12-pulse converters, converter station and Terminal equipment, commutation process, Rectifier and inverter operation, equivalent circuit for converter – special features of converter transformers. Comparison of the performance of diametrical connection with 6-pulse bridge circuit

UNIT– III: Control of HVDC Converters and systems:

Constant current, constant extinction angle and constant Ignition angle control. Individual phase control and equidistant firing angle control, DC power flow control. Factors responsible for generation of Harmonics voltage and current, harmonics effect of variation of α and μ. Filters, Harmonic elimination.

UNIT– IV: Interaction between HV AC and DC systems:

Voltage interaction, Harmonic instability problems and DC power modulation. Development of DC circuit Breakers, Multi-terminal DC links and systems; series, parallel and series parallel systems, their operation and control.

UNIT– V: Transient over voltages in HV DC systems:

Over voltages due to disturbances on DC side, over voltages due to DC and AC side line faults. Converter faults and protection in HVDC Systems: Converter faults, over current protection - valve group, and DC line protection, circuit breakers. Over voltage protection of converters, surge arresters.

Semester	I SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET08
Name of the Course	Advanced Power Systems Protection (Elective-II)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Classify different types of static relays and tools.	K2
CO2	Explain various Amplitude and Phase Comparators	K2
CO3	Describe different types of static over current relays.	K2
CO4	Understand the PILOT Relaying schemes	K2
CO5	Identify suitable Microprocessor based and Numerical relays for power system protection	K2

UNIT– I: Static Relays classification and Tools :

Comparison of Static with Electromagnetic Relays, Basic classification, Level detectors and Amplitude and phase Comparators – Duality – Basic Tools – Schmitt Trigger Circuit, Multi-vibrators, Square wave Generation – Polarity detector – Zero crossing detector – Thyristor and UJT Triggering Circuits. Phase sequence Filters – Speed and reliability of static relays.

UNIT– II: Amplitude and Phase Comparators (2 Input) :

Generalized equations for Amplitude and Phase comparison – Derivation of different characteristics of relays – Rectifier Bridge circulating and opposed voltage type amplitude comparators – Averaging & phase splitting type amplitude comparators – Principle of sampling comparators.

Phase Comparison : Block Spike and phase Splitting Techniques – Transistor Integrating type, phase comparison, Rectifier Bridge Type Comparison – Vector product devices.

UNIT– III: Static over current (OC) relays:

Instantaneous, Definite time, Inverse time OC Relays, static distance relays, static directional relays, static differential relays, measurement of sequence impedances in distance relays, multi input comparators, elliptic & hyperbolic characteristics, switched distance schemes, Impedance characteristics during Faults and Power wings,

UNIT– IV: PILOT Relaying schemes:

Wire pilot protection: circulating current scheme – balanced voltage scheme – translay scheme – half wave comparison scheme - carrier current protection: phase comparison type – carrier aided distance protection – operational comparison of transfer trip and blocking schemes – optical fibre channels.

UNIT– V: Microprocessor based relays and Numerical Protection:

Introduction – over current relays – impedance relay – directional relay – reactance relay.

Numerical Protection: Introduction - numerical relay - numerical relaying algorithms - mann-morrison technique - Differential equation technique and discrete fourier transform technique - numerical over current protection - numerical distance protection.

Text Books:

1. TS MadhavaRao, "Power System Protection with Static Relays", TMH, 2nd edition, 2017.

Semester	**I SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	0	0	4	2	V21PEL01
Name of the Course	Power Electronics Simulation Laboratory					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Analyze the DC-DC converters using small signal model	K4
CO2	Analyze the operation of Multi-level inverters	K4
CO3	Analyze the different PWM techniques for inverters	K4
CO4	Analyze the operation of AC Voltage regulators	K4
CO5	Analyze the operation of AC-DC converters	K4

List of Experiments:

1. Simulation of Buck converter using small signal model.
2. Simulation of Boost converter using small signal model.
3. Simulation of single phase half bridge inverter.
4. Simulation of full bridge inverter using Uni-polar & Bi-polar PWM techniques.
5. Simulation of three phase inverter using sine-triangle PWM.
6. Simulation of three phase inverter using space vector PWM.
7. Simulation of three level three phase NPC inverter.
8. Study of neutral point voltage floating in NPC three level inverter
9. Simulation of 3-level flying capacitor inverter & evaluation of capacitor voltage balanced methods.
10. Simulation of single phase AC voltage regulator.
11. Simulation of three phase AC voltage regulator.
12. Comparison of harmonic profile of two level& three level inverter (FFT analysis).
13. Simulation of 5-level inverter using carrier based PWM methods.
14. Simulation of three phase full converter with RL & RLE loads.
15. Simulation of three-phase dual converter.

Semester	I SEM	L	T	P	C	COURSE CODE
Regulation	V21	0	0	4	2	V21PEL02
Name of the Course	Power Systems Laboratory					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Calculate the sequence impedances of 3 phase Transformer and Alternator	K3
CO2	Determine the power Angle Characteristics of 3-phase Alternator with infinite bus bars	K4
CO3	Estimate the performance of long transmission lines	K4
CO4	Determine the ABCD parameters of a transmission line model	K4
CO5	Analyse the Ferranti effect in long transmission line	K4

List of Experiments:

1. Determination of Sequence Impendence of an Alternator by direct method.
2. Determination of Sequence impedance of an Alternator by fault Analysis.
3. Measurement of sequence impedance of a three phase transformer
   (a) application of sequence voltage. (b). using fault analysis.
4. Power angle characteristics of a salient pole Synchronous Machine.
5. Poly-phase connection on three single phase transformers and measurement of phase displacement.
   a. Determination of equivalent circuit of 3-winding Transformer.
6. Measurement of ABCD parameters on transmission line model.
7. Performance of long transmission line without compensation.
8. Study of Ferranti effect in long transmission line.
9. Performance of long transmission line with shunt compensation.

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET09
Name of the Course	Switched Mode Power Conversion					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Explain operation and control of non-isolated switch mode converters.	K2
CO2	Describe operation and control of isolated switch mode converters.	K2
CO3	Understand the operation and control of resonant converters	K2
CO4	Compute control strategies of switching converters	K3
CO5	Explain the operation of switch mode converters based on linearization and small-signal analysis.	K3

UNIT– I: Non-isolated switch mode converters:

Control of DC-DC converters: Buck converters, Boost converters, Buck-Boost converter, CUK Converter, continuous and discontinuous operation, Converter realization with non-ideal components.

UNIT– II: Isolated switched mode converters:

Forwarded converter, flyback converter, push-pull converter, half-bridge converter, full bridge converter.

UNIT– III: Resonant converters:

Basic resonant circuit concepts, series resonant circuits, parallel resonant circuits, zero current switching quasi-resonant buck converter, zero current switching quasi-resonant boost converter, zero voltage switching quasi-resonant buck converter, zero voltage switching quasi-resonant boost converter.

UNIT– IV: Control schemes of switching converters:

Voltage control, Current mode control, control scheme for resonant converters.

Magnetic design consideration: Transformer design, inductor and capacitor design.

UNIT– V: Modeling and Controller design based on linearization:

Formulation of averaged models for buck and boost converters: state space analysis, average circuit models, linearization and small – signal analysis, small-signal models.

Control design based on linearization: Transfer function of converters, control design, large signal issues in voltage-mode and current-mode control.

Text Books:

1. Fundamentals of Power Electronics Third Edition-Erickson, Robert W., Maksimovic, Dragan, Springer, 2011.
2. Power switching converters Third Edition-Simon Ang, Alejandro Oliva, CRC Press, 2010.
3. Elements of Power Electronics Second Edition– Philip T. Krein, Oxford University press, 2014.

4. Design of Magnetic Components for Switched Mode Power Converters First Edition- Umanand, S.P. Bhat, John Wiley & Sons Australia, 1992.

2. Power Electronics Second Edition– Issa Batareseh, Jhon Wiley publications, 2004.
3. Power Electronics: converters Applications & Design Third Edition- – Mohan, Undeland, Robbins-Wiley publications,2002.
4. https://nptel.ac.in/courses/108/108/108108036/

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET10
Name of the Course	Real Time Control of Power Systems					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Classify the state estimation methods and understand the concepts of bad data observability, detection, identification and elimination	K2
CO2	Identify and Recognize the security, contingency and line outages in power system	K2
CO3	Illustrate the need of computer control and SCADA in real time power system	K2
CO4	Understand the concept of voltage stability in real time power systems	K2
CO5	Understand the basic concepts of Synchrophasor Measurement units	K2

UNIT– I: State Estimation:

Different types of State Estimations, Theory of WLS state estimation, sequential and non-sequential methods to process measurements. Bad data Observability, Bad data detection, identification and elimination.

UNIT– II: Security and Contingency Evaluation:

Security concept, Security Analysis and monitoring, Contingency Analysis for Generator and line outages by iterative linear power flow method, Fast Decoupled model, and network sensitivity methods.

UNIT– III: Computer Control of Power Systems:

Need for real time and computer control of power systems, operating states of a power system, SCADA - Supervisory control and Data Acquisition systems implementation considerations, energy control centers, software requirements for implementing the above functions.

UNIT– IV: Voltage Stability:

Voltage collapse, and voltage security, relation of voltage stability to rotor angle stability. Voltage stability analysis Introduction to voltage stability analysis `P-V‟curves and `Q-V‟ curves, voltage stability in mature power systems, long-term voltage stability, power flow analysis for voltage stability, voltage stability static indices.

UNIT– V: Synchrophasor Measurement units:

Introduction, Phasor representation of sinusoids, a generic PMU, GPS, Phasor measurement systems, Communication options for PMUs, Functional requirements of PMUs and PDCs, Phasors for nominal frequency signals, types of frequency excursions in power systems, DFT estimation at off nominal frequency with a nominal frequency clock.

Text Books:

2. L.P.Singh : Advanced Power System Analysis and Dynamics Fourth Edition, Wiley Eastern Ltd. 2008
3. PrabhaKundur : Power System Stability and Control First Edition, McGraw Hill, 2006
4. P.D.Wasserman : `Neural Computing:Theory and Practice‟Van Nostrand First Edition -Feinhold, New York.

Semester	II SEM	L	T	P	C	COURSE CODE

Regulation	V21	3	0	0	3	V21PET11
Name of the Course	Electrical Machine Modeling and Analysis (Elective –III)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Analyze Kroon's Primitive Machine	K2
CO2	Develop modeling of dc machine	K3
CO3	Explain linear Transformation	K4
CO4	Apply mathematical modeling concepts to 3-phase Induction machines	K3
CO5	Design control strategies based on dynamic modeling of 3-ph Induction machines and3-phase Synchronous machine	K4

UNIT– I: Basic concepts of Modeling:

Basic two-pole machine representation of Commutator machines, representations of 3-phase synchronous machine with and without damper bars and 3-phase induction machine, Kron"s primitive Machine voltage, current and torque equations.

UNIT– II: DC Machine Modeling:

Mathematical model of separately excited D.C motor – Steady state analysis-transient State analysis-sudden application of inertia load-transfer function of separately excited D.C motor- Mathematical model of D.C Series motor, Shunt motor-Linearization techniques for small perturbations

UNIT– III: Reference frame theory & Modeling of single phase Induction Machines:

Linear transformation-Phase transformation - three phase to two phase transformation (abc to αβ0) and vice-versa, transformation to rotating reference frame, (αβ0 to dqo) and vice versa -Power equivalence-Mathematical modeling of single phase induction machines.

UNIT– IV: Modeling of three phase Induction Machine:

Generalized model in arbitrary reference frame-Derivation of commonly used induction machine models-Synchronously rotating reference frame model, Stator reference frame model-Rotor reference frame model--power equation, electromagnetic torque equation, state space model in induction motor with flux linkages as variables

UNIT– V: Modeling of Synchronous Machine:

Synchronous machine inductances –derivation of voltage equations in the rotor‟s dq0 reference frame electromagnetic torque-current in terms of flux linkages-three phase synchronous motor. State space models with flux linkages as variables.

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET12
Name of the Course	Control of Electric Drives (Elective –III)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand fundamentals of electric drives	K2
CO2	Understand various DC motor drives and control	K2
CO3	Analyze control techniques of synchronous motor drives	K4
CO4	Analyze control techniques for Switched Reluctance Motor	K4
CO5	Understand operation and various control schemes of BLDC motor	K2

Unit I: Fundamentals of Electric Drive:

Electric Drives and its parts, advantages of electric drives Classification of electric drives Speed-torque conventions and multi-quadrant operations, Constant torque and constant power operation, Types of load torque: components, nature and classification

Unit II: DC Motor Drives:

Starting, Braking and Speed Control, Transient analysis of separately excited motor with armature and field control, Energy losses during transient operation, Phase controlled converter fed DC drives, Chopper Control DC drives.

Unit III: Control of Synchronous Motor Drives:

Synchronous motor and its characteristics- Control strategies-Constant torque angle control- power factor control, constant flux control, flux weakening operation, load commutated inverter fed synchronous motor drive, motoring and regeneration, phasor diagrams.

Unit IV: Control of Switched Reluctance Motor Drives:

SRM Structure-Stator Excitation-techniques of sensor less operation-convertor topologies-RM Waveforms-SRM drive design factors-Torque controlled SRM-Torque Ripple-Instantaneous Torque control -using current controllers-flux controllers.

Unit V: Control of BLDC Motor Drives:

Principle of operation of BLDC Machine, Sensing and logic switching scheme, BLDM as Variable Speed Synchronous motor-methods of reducing Torque pulsations -Three-phase full wave Brushless dc motor -Sinusoidal type of Brushless dc motor -current controlled Brushless dc motor Servo drive.

Text Books:

2. Power Electronics control of AC motors – MD Murphy & FG Turn Bull Pergman Press -1st edition-1998.
3. Electric Motor Drives Modeling, Analysis & control -R. Krishnan- Pearson Education-4th edition – 2015
4. Brushless permanent magnet and reluctance motor drives- T J E Miller- Oxford university press- 1989

Reference Books:

1. Ned Mohan, T.M. Undeland and William P. Robbins: Power Electronics: Converters, Applications, 3rd Edition, John Wiley & Sons, 2009
2. Modelling, Simulation and control of Electric Drives- M.F Rahman, Sanjeet K. Dwivedi- IET Publiers-1st edition-Oct 2019
3. Power Semiconductor drives- G.K. Dubey-Prentice hall-1989

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET13
Name of the Course	Applications of Power Converters (Elective –III)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	understand the inverters for induction heating applications	K2
CO2	understand the power converters for different industrial applications	K2
CO3	understand modeling of high voltage power supplies using the power converters for radar and space applications	K2
CO4	understand modeling of low voltage and high current power supplies using the power converters for microprocessors and computer loads	K2
CO5	understand the applications of DC-DC converters	K2

UNIT– I: Inverters for Induction Heating:

For induction cooking, induction hardening, melting, and welding applications.

UNIT– II: Power Converters for Lighting, pumping and refrigeration Systems:

Electronic ballast, LED power drivers for indoor and outdoor applications. PFC based grid fed LED drivers, PV / battery fed LED drivers. PV fed power supplies for pumping/refrigeration applications.

UNIT– III: **High Voltage Power Supplies:**

Power supplies for X-ray applications - power supplies for radar applications - power supplies for space applications.

UNIT– IV: Low voltage high current power supplies:

Power converters for modern microprocessor and computer loads

UNIT– V: Bi-directional DC-DC (BDC) converters:

Electric traction, automotive Electronics and charge/discharge applications, Line Conditioners and Solar Charge Controllers

Text Books:

1. Ali Emadi, A. Nasiri, and S. B. Bekiarov: Uninterruptible Power Supplies and Active Filters First Edition, CRC Press, 2004.
2. M. Ehsani, Y. Gao, E. G. Sebastien and A. Emadi: Modern Electric, Hybrid Electric and Fuel Cell Vehicles, 1st Edition,CRC Press, 2004.

References Books:

1. William Ribbens: Understanding Automotive Electronics Eight Edition, Newnes, 2017.
2. https://nptel.ac.in/courses/108/107/108107128/

Semester	**II SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	0	0	3	V21PET14
Name of the Course	EHVAC Transmission (Elective –IV)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Determine the transmission line parameters	K3
CO2	Calculate the field effects on EHV and UHV AC lines.	K3
CO3	Determine the corona, RI and audible noise in EHV and UHV lines	K3
CO4	Analyze voltage control and compensation problems in EHV and UHV transmission systems	K4
CO5	Understand reactive power compensation using SVC and TCR	K2

UNIT– I: E.H.V. A.C. Transmission, line trends and preliminary aspects, standard transmission voltages – power handling capacities and line losses – mechanical aspects. Calculation of line resistance and inductance: resistance of conductors, temperature rise of conductor and current carrying capacity. Properties of bundled conductors and geometric mean radius of bundle, inductance of two conductor lines and multi conductor lines, Maxwell‟s coefficient matrix. Line capacitance calculation. Capacitance of two conductor line, and capacitance of multi conductor lines, potential coefficients for bundled conductor lines, sequence inductances and capacitances and diagonalization.

UNIT– II: Calculation of electro static field of AC lines:

Effect of high electrostatic field on biological organisms and human beings. Surface voltage Gradient on conductors, surface gradient on two conductor bundle and cosine law, maximum surface voltage gradient of bundle with more than 3 sub conductors, Mangolt formula.

UNIT– III: Corona:

Corona in EHV lines – corona loss formulae – attenuation of traveling waves due to corona – Audio noise due to corona, its generation, characteristics and limits, measurement of audio noise.

UNIT– IV: Power Frequency voltage control:

Problems at power frequency, generalized constants, No load voltage conditions and charging currents, voltage control using synchronous condenser, cascade connection of components : Shunt and series compensation, sub synchronous resonance in series – capacitor compensated lines

UNIT– V: Reactive power compensating systems:

Introduction, SVC schemes, Harmonics injected into network by TCR, design of filters for suppressing harmonics injected into the system.

Text Books :

1. Extra High Voltage AC Transmission Engineering Fourth Edition– Rakesh Das Begamudre, Wiley Eastern ltd., New Delhi – 2011.
2. EHV Transmission line reference book – Edison Electric Institute (GEC) 1986.
3. https://nptel.ac.in/courses/108/108/108108099/

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET15
Name of the Course	Flexible AC Transmission System (Elective –IV)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Explain the improvements of transmission system with FACTS	K2
CO2	Illustrate different Types of Static VAr generation systems	K3
CO3	Estimate the effect of static shunt compensation.	K2
CO4	Estimate the effect of static series compensation.	K2
CO5	Explain the principle of operation and various controls of UPFC	K2

UNIT– I: Introduction

FACTS concepts, Transmission interconnections, power flow in an AC System, loading capability limits, Dynamic stability considerations, importance of controllable parameters, basic types of FACTS controllers, benefits from FACTS controllers.

UNIT– II: Static shunt compensation

Basic concept of voltage and current source converters, comparison of current source converters with voltage source converters.

Static shunt compensation : Objectives of shunt compensation, midpoint voltage regulation, voltage instability prevention, improvement of transient stability, Power oscillation damping, methods of controllable VAr generation, variable impedance type static VAr generation, switching converter type VAr generation, hybrid VAr generation.

UNIT– III: SVC and STATCOM

The regulation slope, transfer function and dynamic performance, transient stability enhancement and power oscillation damping, operating point control and summary of compensation control.

UNIT– IV: Static Series compensators

Concept of series capacitive compensation, improvement of transient stability, power oscillation damping, functional requirements. GTO Thyristor controlled series capacitor (GSC), Thyristor switched series capacitor (TSSC), and Thyristor controlled series capacitor (TCSC), control schemes for GSC, TSSC and TCSC.

UNIT– V: Unified Power Flow Controller

Basic operating principle, conventional transmission control capabilities, independent real and reactive power flow control, comparison of the UPFC to series compensators and phase angle regulators. Introduction to Inter line Power Flow Controller (IPFC)

Text Books:

1. Understanding FACTS Devices by N. G. Hingorani and L. Guygi, IEEE Press, 2001

Reference Books:

1. Flexible AC Transmission systems bySang. Y. Hand John. A.T, IEEE Press, 2006
2. HVDC & FACTS Controllers: applications of static converters in power systems by Vijay K. Sood, First Edition- - Springer publishers, 2004.
3. https://nptel.ac.in/courses/108/107/108107114/

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET16
Name of the Course	Power System Dynamics and Stability (Elective –IV)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Develop the State space Model of Synchronous Machine	K3
CO2	Analyse the Steady State Stability and Dynamic Stability of Synchronous machine	K4
CO3	Solve the Swing Equation using different methods to obtain the Transient Stability	K3
CO4	Illustrate the Effect of Governing and Excitation systems on Stability	K3
CO5	Discuss Different types of Excitation Systems	K2

UNIT– I: System Dynamics

Synchronous machine model in state space from computer representation for excitation and governor system –modeling of loads and induction machines.

UNIT– II: Steady state stability

steady state stability - steady state stability limit – Dynamics Stability limit – Dynamic stability analysis – State space representation of synchronous machine connected to infinite bus-time response – Stability by eigen value approach.

UNIT– III: Digital Simulation of Transient Stability

Swing equation machine equations – Representation of loads – Alternate cycle solution method – Direct method of solution – Solution Techniques : Modified Euler method – Runge Kutta method – Concept of multi machine stability.

UNIT– IV

Effect of governor action and excite on power system stability effect of saturation, saliency & automatic voltage regulators on stability.

UNIT– V: Excitation Systems

Rotating Self-excited Exciter with direct acting Rheostatic type voltage regulator – Rotating main and Pilot Exciters with Indirect Acting Rheostatic Type Voltage Regulator – Rotating Main Exciter, Rotating Amplifier and Static Voltage Regulator – Static excitation scheme – Brushless excitation system.

Text Books:

3. Computer Applications to Power Systems Third Edition– M.A.Pai, TMH, 2014.
4. Power Systems Analysis & Stability First Edition– S.S.Vadhera, Khanna Publishers, 2005.
5. https://nptel.ac.in/courses/108/101/108101004/

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	0	0	4	2	V21PEL03
Name of the Course	Power Converters Laboratory					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Find the duty ratio of DC-DC Converters	K3
CO2	Analyze the performance of 1- ϕ AC-DC Controlled rectifiers	K4
CO3	Sketch the characteristics of power semiconductor devices	K3
CO4	Find the modulation index of square wave &SPWM inverters	K3
CO5	Calculate input power factor of 3-ϕ full converter	K3

Any 10 of the following experiments are to be conducted.

List of experiments

1. Study of DC-DC non-isolated converters such as Buck & Boost converter.
2. Study of DC-DC Buck - Boost and Cuk converters.
3. Study of 1-ϕ dual converter.
4. Determination of input p.f. and harmonic factor for 1-ϕ semi- converter and 1- ϕ full-converter (Inductive load)
5. Study of p.f. improvement in 1-ϕ full-converter with symmetric and extinction angle control.
6. Study of 1-ϕ square wave and sinusoidal PWM inverter.
7. Study of 3-ϕ inverter with 120^o and 180^o mode of operation.
8. Study of 3-ϕ sinusoidal PWM inverter.
9. Study of 3-level NPC inverter.
10. Study of 5-level cascaded H-bridge inverter.
11. Determination of input p.f. and harmonic factor for 3-ϕ full converter (Inductive load).
12. Determination of input p.f. and harmonic factor for 3-ϕ semi converter (Inductive load).
13. Study the characteristics of IGBT, MOSFET & GTO‟s.
14. Design of gate drive circuits for IGBT & MOSFET‟s.

Semester	II SEM	L	T	P	C	COURSE CODE
Regulation	V21	0	0	4	2	V21PEL04
Name of the Course	Power Systems Simulation Laboratory					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Analyze the performance of the various transmission lines at different loading conditions	K4
CO2	Examine the load flow study on distribution systems	K4
CO3	Inspect the Z- and Y-bus matrices for the given power transmission system	K4
CO4	Determine the load flow solution obtained using GS and NR methods	K4
CO5	Analyze the transient stability & load frequency control problem of a power system	K4

Any 10 of the following experiments are to be conducted.

List of Experiments:

1. Performance analysis of short, medium and long transmission lines
2. Distribution load flow analysis
3. Economic Load Dispatch with & without transmission losses
4. Formation of Y-bus by direct inspection method
5. Formations of Z-bus by building algorithm
6. Load Flow Solution Using Gauss Siedel Method
7. Load Flow Solution Using Newton Raphson Method
8. Symmetrical and Unsymmetrical Fault analysis using Z-bus
9. Transient Stability Analysis using modified Euler"s method.
10. Transient Stability Analysis using modified R-K method
11. Transient Stability Analysis Using Point By Point Method
12. Load Frequency Control of Single Area Control & Two Area Control system with and without controllers.

Semester	**II SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	0	0	4	2	V21PEP01
Name of the Course	Mini Project with Seminar					
Specialization	Power Electronics & Power systems					

Syllabus content:

A Student has to select one paper published in any of the IEEE Transactions and simulate the same. The student has to present the progress of the work at the middle of the semester. At the end of the semester, the student has to present the results by explaining the idea of the topic, methodology, finding of the simulations. A Student should also submit a report of the entire work carried out under this course. The end semester presentation must be video recorded and preserved.

Semester	III SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET17
Name of the Course	Hybrid Electric Vehicles (Elective–V)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Explain various configurations and basics of HEVs	K2
CO2	Distinguish the concepts and components of various hybrid technologies	K2
CO3	Review the architectures, range extension mechanisms and grid support of PHEVs	K2
CO4	Discuss the PE converters for battery charging and speed control of HEVs	K2
CO5	Illustrate various Energy Storage Technologies	K2

UNIT– I: Introduction

History of hybrid vehicles, architectures of HEVs, series and parallel HEVs, complex HEVs.

UNIT– II: Hybridization of Automobile

Fundamentals of vehicle, components of conventional vehicle and propulsion load; Drive cycles and drive terrain; Concept of electric vehicle and hybrid electric vehicle; Plug-in hybrid vehicle, constituents of PHEV, comparison of HEV and PHEV; Fuel Cell vehicles and its constituents.

UNIT– III: Plug-in Hybrid Electric Vehicle

PHEVs and EREVs blended PHEVs, PHEV Architectures, equivalent electric range of blended PHEVs; Fuel economy of PHEVs, power management of PHEVs, end-of-life battery for electric power grid support, vehicle to grid technology, PHEV battery charging.

UNIT– IV: Power Electronics in HEVs

Rectifiers used in HEVs, voltage ripples; Buck converter used in HEVs, non-isolated bidirectional DC-DC converter, regenerative braking, voltage source inverter, current source inverter, isolated bidirectional DC-DC converter, PWM rectifier in HEVs, EV and PHEV battery chargers.

UNIT– V: Battery and Storage Systems

Energy Storage Parameters; Lead–Acid Batteries; Ultra capacitors; Flywheels - Superconducting Magnetic Storage System; Pumped Hydroelectric Energy Storage; Compressed Air Energy Storage - Storage Heat; Energy Storage as an Economic Resource

Semester	III SEM	L	T	P	C	COURSE CODE
Regulation	V21	3	0	0	3	V21PET18
Name of the Course	Soft Computing Techniques in Electrical Engineering (Elective–V)					
Specialization	Power Electronics & Power systems					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic of Soft Computing Techniques.	K2
CO2	Recognize an appropriate soft computing methodology for an engineering problem.	K3
CO3	Apply fuzzy logic and reasoning to handle uncertainty while solving engineering problems.	K3
CO4	Analysis of neural network and genetic algorithms to combinatorial optimization problems.	K4
CO5	Design of different problems of optimization in power systems	K5

UNIT– I: Introduction to Soft Computing

Introduction, Definition of Soft Computing Techniques, Importance of Soft Computing, Main Components of Soft Computing: Fuzzy Logic, Artificial Neural Networks, Introduction to Evolutionary Algorithms, Hybrid Intelligent Systems, Single and multi-objective optimization.

UNIT– II: Artificial Neural Network and Applications

Introduction, Artificial Neuron Structure, ANN Learning; Back-Propagation Learning, Properties of Neural Networks, Unsupervised learnings, Hopfield networks, Application of GN Models to Electrical Machine Modeling, Short Term Electrical Load Forecasting Using Generalized Neuron Model, Aircraft Landing Control System Using GN Model.

UNIT– III: Introduction to Fuzzy Logic and Genetic Algorithm

Introduction, Uncertainty and Information, Types of Uncertainty, Introduction of Fuzzy Logic, Fuzzy Set, Operations on Fuzzy Sets, Fuzzy Intersection, Fuzzy Union, Fuzzy

Complement, Fuzzy Concentration, Fuzzy Dilation, Fuzzy Intensification, α-Cuts, Characteristics of Fuzzy Sets, Demorgan‟s Law, Fuzzy Cartesian Product, Various Shapes of Fuzzy Membership Functions, Methods of Defining of Membership Functions, Fuzzy Relation, Defuzzification Methods. Introduction to Genetic Algorithm, Crossover, Mutation, Survival of Fittest, Population Size, Evaluation of Fitness Function.

UNIT– IV: Applications of Fuzzy Rule Based System

Introduction, System‟s Modeling and Simulation Using Fuzzy Logic Approach, Selection of Variables, Normalization Range and Number of Linguistic Values, Selection of Shape of Membership Functions for Each Linguistic Value, Selection of Fuzzy Union and intersection Operators, Selection of Defuzzification Method, Power System Stabilizer Using Fuzzy Logic.

UNIT– V: Applications of Soft Computing Techniques to Electrical Engineering

Applications of Artificial Neural Network, Genetic Algorithms, Fuzzy and Hybrid Systems for Power System Applications: voltage stability, Economic load dispatch, Unit commitment, Condition monitoring.

Text Books:

1. Neural Networks: A Comprehensive Foundation – Siman Haykin, IEEE, Press, MacMillan, N.Y. 1994.

Pedatadepalli, Tadepalligudem, W.G.Dt, A.P-534101

Department of Mechanical Engineering

Date: 28-08-2021

Fifth meeting of BOS in Mechanical Engineering Department along with external members is held on 28/08/2021 at 02.00 PM in online mode through ZOOM meeting app in view of COVID-19 pandemic.

The following members are present.

S. No	Name of the BOS Members
1.	Dr.N. Mohan Rao, Professor &CE, JNTUK,Kakinada
2.	Dr. R.V. Chalam, Professor,NIT,Warangal
3.	Dr. A. Krishnaiah, Professor, Osmania University, Hyderabad
4.	Sri S.S. SubramanyaSastry, Head of Practice QMS Veave Technologies, Banglore, India.
5.	Sri A.Sai Krishna, Alumni, Maruthi Design and Engg. Pvt. Ltd ,Bangalore
6.	Dr. Ch.Rambabu, Professor & I/C Principal, SVEC
7.	Dr. M.V. Ramesh, Chairman & HOD, SVEC
8.	All the BOS internal members

Minutes of meeting

Chairman welcomed all the BOS members and introduced to all the BOS internal members.
Item No. 1: Approval of course structure and syllabi for VII & VIII semesters of B.Tech under V18 Regulations.

- Lab course named Production Drawing Lab (course code. **V18MEL13**), MNC course was changed to credit course and 1.5 credits were given in VII semester.
  The approved course structure and their syllabi is attached in **Annexure-ME-I.**

Item No.2: Approval of list of courses offering under Open Electives - II & III in VII & VIII semesters of B.Tech respectively and their syllabi under V18 Regulations for all other branches.

The approved courses offering under Open Electives are attached in **Annexure-ME-II.**

Item No. 3: Approval of course structure & syllabi for the courses offered in III & IV semesters B.Tech under V20 Regulation.

The approved course structure & their syllabi is attached in **Annexure-ME-III.**

Item No. 4: Approval of Course Structure & syllabi of M.Tech-Thermal Engineering programme under V21 regulations.

Approved by the BOS members **Annexure-ME-IV.**

Semester	**VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET20**
Name of the Course	**Automation in Manufacturing**					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Understand the basic types, levels, strategies of automation.	K2
CO2	Identify the basic components and their functions of automated production line system.	K2
CO3	Differentiate various automated assembly systems.	K4
CO4	Compute various storage system and transportation requirements of automated systems.	K3
CO5	Apply appropriate process control strategy to an automated system.	K3
CO6	Illustrate the concepts of CIM..	K3

UNIT – I
INTRODUCTION : Facilities — Manual work systems, worker-machine systems and automated systems. Manufacturing support systems, Automation in Production systems — Automated Manufacturing systems, Computerized manufacturing support systems, Manual labour in Production systems, Automation principles and strategies.
UNIT – II
AUTOMATED PRODUCTION LINES : Fundamentals- System configurations, work part transfer mechanisms, Storage buffers, and Control of the production line. Applications — Machining systems and System Design Considerations. Analysis of Transfer lines — Transfer lines with No internal parts storage, Transfer lines with internal storage buffers.
UNIT – III
AUTOMATED ASSEMBLY SYSTEMS : System configurations, Parts delivery at workstations, and applications, quantitative analysis of assembly systems-Parts Delivery System at Workstations, Multi-Station Assembly Machines, Single Station Assembly Machines, Partial Automation.
UNIT – IV
AUTOMATED MATERIAL TRANSPORT & STORAGE SYSTEMS : Automated Material Transport & Storage systems: Automated Guided Vehicle (AGV) Systems, Types and applications, Vehicle Guidance Technology, Vehicle Management and Vehicle safety. Automated Storage/Retrieval Systems (ASRS) and Carousel Storage Systems.

UNIT – V

AUTOMATED INSPECTION SYSTEMS : Quality in Design and manufacturing, inspection principles and strategies, automated inspection, contact Vison-contact, CMM. Manufacturing support systems. Quality function deployment, computer aided process planning, concurrent engineering, shop floor control, just in time and lean production.

UNIT – VI

COMPUTER INTEGRATED MANUFACTURING : The Scope of CAD/CAM and CIM, Computerized elements of a CIM System, Components of CIM, Database for CIM, Planning , Scheduling and Analysis of CIM Systems.

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET21**
Name of the Course	**Operation Research**					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Understand the formulating of LPP and solve LPP by Simplex methods, artificial variables techniques.	K2
CO2	Solve Transportation and assignment problems.	K3
CO3	Explain the concept of Sequencing and replacement of item.	K2
CO4	Understand the concept of queues with single server, solution of games with and without saddle points.	K2
CO5	Apply the concept of inventory models in solving EOQ problems.	K3
CO6	Solve the issues of dynamic programming and simulation.	K3

UNIT – I
HISTORICAL OVERVIEW – Definition and scope– types of operation research models – applications.
LINEAR PROGRAMMING: Problem formulation – graphical solution – simplex method – artificial variables techniques - big-M method, two–phase method.
UNIT – II
TRANSPORTATION PROBLEM: Formulation – optimal solution, unbalanced transportation problem – degeneracy
ASSIGNMENT PROBLEM: Introduction, optimal solution, Traveling Salesman problem.
UNIT – III
SEQUENCING – Introduction – flow **–**shop sequencing – n jobs through two machines – n jobs through three machines
REPLACEMENT: Introduction – replacement of items that deteriorate with time – when money value is not counted and counted – replacement of items that fail completely, group replacement.
UNIT – IV
THEORY OF GAMES: Introduction – mini. max (max. mini) – criterion and optimal strategy – solution of games with saddle points – rectangular games without saddle points – 2 x 2 games – dominance principle – m x 2 & 2 x n games -graphical method.
WAITING LINES: Introduction – single channel – poison arrivals – exponential service times – with infinite population and finite population models
UNIT – V
INVENTORY : Introduction – single item – deterministic models – purchase inventory models with one price break– shortages are not allowed – stochastic models – demand may be discrete variable or continuous variable – instantaneous production. Instantaneous demand and continuous demand and no set up cost.
UNIT – VI
DYNAMIC PROGRAMMING: Introduction – Bellman’s principle of optimality – applications of dynamic programming- capital budgeting problem – shortest path problem .

SIMULATION: Definition – types of simulation models – phases of simulation– applications of simulation – inventory and queuing problems – advantages and disadvantages – simulation languages.

TEXT BOOKS:

1. Operations Research / S.D.Sharma-Kedarnath
2. Operations Research by R. Pannerselvam; Publisher: Prentice Hall International.

REFERENCES:

1. Introduction to O.R/Hiller & Libermann (TMH).
2. Operations Research / A.M.Natarajan, P. Balasubramani, A. Tamilarasi / Pearson Education.
3. Operations Research: Methods & Problems / Maurice Saseini, Arhur Yaspan & Lawrence Friedman.

Semester	VII	L	T	P	C	Course Code
Regulation	V18	3	0	0	3	V18MET22
Name of the Course	**Industrial Engineering and Management** Professional Elective –II					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Design and conduct experiments, analyze, interpret data and synthesize valid conclusions	K4
CO2	Design a system, component, or process, and synthesize solutions to achieve desired needs	K4
CO3	Use the techniques, skills, and modern engineering tools necessary for engineering practice with appropriate considerations for public health and safety, cultural, societal, and environmental constraints	K3
CO4	Examine effectively within multi-disciplinary teams and understand the fundamental precepts of effective project management	K3
CO5	Understand quality and quality management	K2
CO6	Understand concepts on recourse management	K2

UNIT – I
INTRODUCTION: Definition of industrial engineering (I.E), development, applications, role of an industrial engineer, differences between production management and industrial engineering, quantitative tools of IE and productivity measurement. concepts of management, importance, functions of management, scientific management, Taylor's principles, theory X and theory Y, Fayol's principles of management.
UNIT – II
PLANT LAYOUT: Factors governing plant location, types of production layouts, advantages and disadvantages of process layout and product layout, applications, quantitative techniques for optimal design of layouts, plant maintenance, preventive and breakdown maintenance.
UNIT – III
WORK STUDY: Importance, types of production, applications, work study, method study and time study, work sampling, PMTS, micro-motion study, rating techniques, MTM, work factor system, principles of Ergonomics, flow process charts, string diagrams and Therbligs
UNIT – IV
STATISTICAL QUALITY CONTROL: Quality control, Queuing assurance and its importance, SQC, attribute sampling inspection with single and double sampling, Control charts – and R – charts and *S* charts and their applications, numerical examples.

UNIT – V
TOTAL QUALITY MANAGEMENT: zero defect concept, quality circles, implementation, applications, ISO quality systems. six sigma – definition, basic concepts

VALUE ANALYSIS: Value engineering, implementation procedure, enterprise resource planning and supply chain management.

UNIT – VI

RESOURCE MANAGEMENT: Concept of human resource management, personnel management and industrial relations, functions of personnel management, Job-evaluation, its importance and types, merit rating, quantitative methods, wage incentive plans, types.
PROJECT MANAGEMENT (PERT/CPM): Network Analysis, Programme Evaluation and Review Technique (PERT), Critical Path Method (CPM), Identifying critical path, Probability of Completing the project within given time, Project Cost Analysis, Project Crashing. (simple problems).

TEXT BOOKS:

1. Industrial Engineering and management / O.P Khanna/Khanna Publishers.
2. Industrial Engineering and Production Management/Martand Telsang/S.Chand & Company Ltd. New Delhi

REFERENCE BOOKS:

1. Industrial Management / Bhattacharya DK/Vikas publishers
2. Operations Management / J.G Monks/McGrawHill Publishers.
3. Industrial Engineering and Management Science/T.R. Banga,S.C.Sharma, N. K. Agarwal/Khanna Publishers
4. Principles of Management /Koontz O' Donnel/McGraw Hill Publishers.
5. Statistical Quality Control /Gupta/Khanna Publishers
6. Industrial Engineering and Management /NVS Raju/Cengage Publishers

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET23**
Name of the Course	**Composite Materials** Professional Elective –II					
Branch	**Mechanical Engineering**					

Course Outcomes:
After Successful completion of this course the student will be able to

CO1	Explain the required properties, reinforcements and uses of various composites.	K2
CO2	Explain how common fibers are produced and how the properties of the fibers are related to the internal structure and the interfaces obtained.	K2
CO3	Illustrate the processing techniques for polymer matrix, ceramic matrix and metal matrix composites and list out their properties and applications	K3
CO4	Analyze different ceramic composite materials	K4
CO5	Examine the processing of ceramic matrix composites	K3
CO6	Evaluate mechanical properties of composite materials	K5

UNIT-I

Introduction, Classification of Composite materials based on structure and matrix and reinforcements, Advantages and applications of composites, Functional requirements of reinforcement and matrix materials. Difference between composites and metals &alloys, Properties of composites in comparison with standard materials

UNIT-II

TYPES OF REINFORCEMENTS AND THEIR PROPERTIES: Glass, Carbon, Boron, Aramid, Al_2O_3 and SiC fibers. Nature and manufacture of glass, carbon and aramid fibers, Comparison of fibers. Role of interfaces: Wettability and Bonding, the interface in Composites, Interactions and Types of bonding at the Interface.

UNIT-III

Fabrication of Polymeric Matrix Composites, Structure and properties of Polymeric Matrix Composites, Interface in Polymeric Matrix Composites, Applications,Recycling of PMCs

UNIT-IV

FABRICATION OF METAL MATRIX COMPOSITES (MMC): Solid state fabrication, Liquid state fabrication and In-situ fabrication techniques. Interface in Metal Matrix Composites. Mechanical bonding, Chemical bonding and Interfaces in In-situ Composites. MMC: Properties and Applications.

UNIT -V

FABRICATION OF CERAMIC MATRIX COMPOSITES (CMC): Processing of CMCs: Cold Pressing and Sintering, Hot Pressing, Reaction Bonding Processes, Infiltration, Sol–Gel process. Interface in CMCs. Properties of CMCs, Applications of CMCs.

UNIT -VI

MECHANICAL TESTING OF COMPOSITES AND THEIR CONSTITUENTS: Measurement of Constituent Material Properties Fiber Tests, Neat Resin Matrix Tests, Constituent Volume Fraction Measurement. Measurement of Basic Composite Properties: Tensile Tests, Compressive Tests, Shear Tests, Flexure Tests, Fiber/Matrix Interface Tests.

TEXT BOOKS:

1. Composite Materials – Science & Engineering, K.K. Chawla, Springer-Verlag, New York, 1987.
2. Principles of Composite Material Mechanics, Ronald F. Gibson
3. An Introduction to Composite Materials, Hull, Cambridge, 2nd Edt.1997.

REFERENCE BOOKS:

1. Composites, Engineered Materials Handbook, Vol.1, ASM International, Ohio, 1988.
2. Structure and Properties of Composites, Materials Science and Technology, Vol. 13, VCH, Weinheim, Germany, 1993
3. Composite Materials: Engineering and Science, F.L. Matthews and R.D. Rawlings, Chapman & Hall, London, 1994.

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET24**
Name of the Course	**Refrigeration & Air Conditioning** Professional Elective –II					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Apply the concept of refrigeration to various systems.	K3
CO2	Employ the methods to improve performance of vapor compression systems.	K3
CO3	Identify eco-friendly refrigerants and understanding various VCR System Components.	K2
CO4	Describe vapour absorption systems.	K2
CO5	Analyze cooling and heating loads in an air conditioning system.	K4
CO6	Explain various air conditioning systems.	K2

UNIT – I
INTRODUCTION TO REFRIGERATION: Necessity and applications – Unit of refrigeration and C.O.P. –Mechanical refrigeration – Types of ideal cycles of refrigeration.
Air refrigeration: Bell Coleman cycle - Open and Dense air systems – Refrigeration needs of Air crafts-Refrigeration systems used in air crafts and Problems.
UNIT – II
VAPOUR COMPRESSION REFRIGERATION: Working principle and essential components of the plant –simple vapour compression refrigeration cycle – COP – Representation of cycle on T-S and p-h charts – Effect of sub cooling and super heating – Cycle analysis – Actual cycle influence of various parameters on system performance – Use of p-h charts – Problems.
UNIT – III
Refrigerants – Classification – Desirable properties of an ideal refrigerant – Common refrigerants used – Nomenclature of refrigerants.
VCR System Components: Compressors – General classification – comparison – Advantages and Disadvantages. Condensers – Classification – Working Principles. Evaporators – Classification – Working Principles. Expansion devices – Types – Working Principles.
UNIT – IV
VAPOR ABSORPTION SYSTEM: Calculation of maximum COP – description and working of Water-Ammonia Systems, Water-Lithium Bromide System. Principle of operation three fluid absorption system, salient features.
UNIT – V
INTRODUCTION TO AIR CONDITIONING: Psychometric properties & Processes – Characterization of sensible and latent heat loads — Need for ventilation, Consideration of infiltration – Load concepts of RSHF, GSHF- Problems, concept of ESHF and ADP temperature.
Requirements of industrial air conditioning, Air conditioning load calculations.

UNIT – VI

AIR CONDITIONING SYSTEMS: Classification of equipment, Components related to Air-Conditioning Systems- filters, grills and registers, fans and blowers.

TEXT BOOKS:

1. A Course in Refrigeration and Air conditioning, SC Arora & Domkundwar, Dhanpatrai
2. Refrigeration and Air Conditioning, CP Arora, TMH.
3. Refrigeration and Air Conditioning / Manohar Prasad / New Age

REFERENCE BOOKS:

1. Principles of Refrigeration /Dossat / Pearson Education.
2. Basic Refrigeration and Air-Conditioning / Ananthanarayanan / TMH
3. Stoecker, W. F., and Jones, J. W., Refrigeration and Air-Conditioning, McGraw - Hill, New Delhi.
4. Data Book: Refrigerant and Psychrometric Properties - Tables and Charts [SI Units], MathurM. L., and Mehta F. S., Jain Brothers.

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET25**
Name of the Course	**Total Quality Management** Professional Elective –III					
Branch	**Mechanical Engineering**					

Course Outcomes:
After the completion of this course, the students will be able to

CO1	Understand the importance of significance of quality & to understand the concept of Quality.	K2
CO2	Develop quality improvement teams & to implement Quality Implementation Programs.	K3
CO3	Identify requirements of quality improvement programs & bench marketing	K2
CO4	Apply the tools and techniques of quality management to manufacturing and services processes.	K3
CO5	Apply the concepts of comprehensive quality management and the challenges of putting them into practice.	K3
CO6	Apply the quality management methods for analysing and solving problems of organization.	K3

UNIT – I
INTRODUCTION: The concept of TQM, Quality and Business performance, attitude and involvement of top management, communication, culture and management systems. Management of Process Quality: Definition of quality, Quality Control, a brief history, Product Inspection vs, Process Control, Statistical Quality Control, Control Charts and Acceptance Sampling.

UNIT – II
CUSTOMER FOCUS AND SATISFACTION: The importance of customer satisfaction and loyalty- Crating satisfied customers, Understanding the customer needs, Process Vs. Customer, internal customer conflict, quality focus, Customer Satisfaction, role of Marketing and Sales, Buyer – Supplier relationships. .

UNIT – III
BENCH MARKETING: Evolution of Bench Marketing, meaning of Bench marketing, benefits of bench marketing, the bench marketing process, pitfalls of bench marketing.

UNIT – IV
ORGANIZING FOR TQM: The systems approach, Organizing for quality implementation, making the transition from a traditional to a TQM organizing, Quality Circles. Productivity, Quality and Reengineering:

UNIT – V

THE COST OF QUALITY: Definition of the Cost of Quality, Quality Costs, Measuring Quality Costs, use of Quality Cost Information, Accounting Systems and Quality Management.

UNIT – VI

QUALITY MANAGEMENT SYSTEM (QMS): Introduction to QMS. Universal Standards of Quality: ISO around the world, The ISO9001 ANSI/ASQCQ-Series Standards, benefits of ISO9001 certification, the third party audit, Documentation ISO9001 and services, the cost of certification implementing the system.

TEXT BOOKS:

1. Total Quality Management / Joel E.Ross/Taylor and Franscis Limited
2. Total Quality Management/P.N.Mukherjee/PHI
3. Total Quality Management Paperback / R Kesavan, C Elanchezhian, B Vijaya Ramnath / I K International Publishing House

REFERENCE BOOKS:

1. Beyond TQM / Robert L.Flood
2. Statistical Quality Control / E.L. Grant / McGraw Hill.
3. Total Quality Management- A Practical Approach/H. Lal
4. Quality Management/Kanishka Bedi/Oxford University Press/2011
5. Total Engineering Quality Management/Sunil Sharma/Macmillan

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET26**
Name of the Course	**Finite Element Methods** Professional Elective – III					
Branch	**Mechanical Engineering**					

Course Outcomes:
After the completion of this course, the students will be able to

CO1	Use the concepts of variational methods and weighted residual methods in FEM.	K3
CO2	Use Finite Element Formulation for solving the problems.	K3
CO3	Solve the problems of Truss elements by FEM.	K3
CO4	Solve the problems of Beam s elements by FEM.	K3
CO5	Use FEM to solve 2D CST problems.	K3
CO6	Analyze finite element method for problems involving dynamics and heat transfer.	K4

UNIT-I
INTRODUCTION TO FINITE ELEMENT METHOD: stress and equilibrium, strain – displacement relations, stress-strain relations, plane stress and plane strain conditions, variational and weighted residual methods, the concept of potential energy, one-dimensional problems.

UNIT – II
FINITE ELEMENT FORMULATION: Discretization of the domain, element shapes, discretization procedures, assembly of stiffness matrix, bandwidth, node numbering, mesh generation, interpolation functions, convergence requirements, Treatment of Boundary conditions, Derivation of element stiffness matrix for Bar elements and problems

UNIT – III
ANALYSIS OF TRUSSES: Finite element modelling, coordinates and shape functions, assembly of global stiffness matrix and load vector, finite element equations, treatment of boundary conditions, stress, strain and support reaction calculations.

UNIT – IV
ANALYSIS OF BEAMS: Derivation of Element stiffness matrix for beam element, derivation of load vector for concentrated and UDL, Problems on Cantilever, simply supported beams with point and uniformly distributed loads.

UNIT-V
CST AND AXISYMMETRIC ELEMENTS: Finite element modelling of two-dimensional stress analysis with constant strain triangles and treatment of boundary conditions, formulation of axisymmetric problems,

HIGHER ORDER AND ISOPARAMETRIC ELEMENTS: One dimensional quadratic and cubic elements in natural coordinates, two dimensional four noded isoparametric elements, numerical integration.

UNIT – VI

STEADY STATE HEAT TRANSFER ANALYSIS: one dimensional analysis of a fin and two dimensional analysis of thin plate, analysis of a uniform shaft subjected to torsion.

DYNAMIC ANALYSIS: Formulation of finite element model, element consistent and lumped mass matrices, evaluation of eigen values and eigen vectors, free vibration analysis.

TEXT BOOKS:

1. The Finite Element Methods in Engineering / S. S Rao / Pergamon.

REFERENCE BOOKS:

1. Finite Element Method with applications in Engineering / YM Desai, Eldho& Shah /Pearson publishers
2. An introduction to Finite Element Method / JN Reddy / McGraw Hill
3. The Finite Element Method for Engineers – Kenneth H. Huebner, Donald L. Dewhirst, Douglas E. Smithand Ted G. Byrom / John Wiley &Sons (ASIA) Pte Ltd.
4. Finite Element Analysis/ P.Seshu
5. Finite Element Methods: Basic Concepts and Applications ByChennakesava R. Alavala
6. Finite Element Analysis: for students & Practicing Engineers / G.LakshmiNarasaiah / BSP Books Pvt.Ltd.

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET27**
Name of the Course	**Micro Electro Mechanical Systems (MEMS)** Professional Elective – III					
Branch	**Mechanical Engineering**					

Course Outcomes:

After successful completion of the course, the student will be able to

CO1	Understand about the basics of MEMS, Methods of Micro machining.	K2
CO2	Interpret various Mechanical sensors & Actuators	K3
CO3	Illustrate the working principles of various Thermal sensors and Actuators & its applications.	K3
CO4	Differentiate between different types of MOEMS devices	K4
CO5	Illustrate and explain various Magnetic sensors and Actuators & its applications	K3
CO6	Illustrate and explain various micro-fluidic devices & its applications	K3

UNIT – I
INTRODUCTION: Definition of MEMS, MEMS history and development, micro machining, lithography principles & methods, structural and sacrificial materials, thin film deposition, impurity doping, etching, surface micro machining, wafer bonding, LIGA.

UNIT – II
MECHANICAL SENSORS AND ACTUATORS: Principles of sensing and actuation: beam and cantilever, capacitive, piezo electric, strain, pressure, flow, pressure measurement by micro phone, MEMS gyroscopes, shear mode piezo actuator, gripping piezo actuator, Inchworm technology.

UNIT – III
THERMAL SENSORS AND ACTUATORS: Thermal energy basics and heat transfer processes, thermisters, thermo devices, thermo couple, micro machined thermo couple probe, micro hot plate gas sensors, MEMS thermo vessels, pyro electricity, shape memory alloys (SMA).

UNIT – IV
MICRO-OPTO-ELECTRO MECHANICAL SYSTEMS: Principle of MOEMS technology, properties of light, light modulators, beam splitter, micro lens, micro mirrors, digital micro mirror device (DMD), light detectors, grating light valve (GLV), optical switch.

UNIT – V
MAGNETIC SENSORS AND ACTUATORS: Magnetic materials for MEMS and properties, magnetic sensing and detection, magneto resistive sensor, more on hall effect, magneto diodes, magneto transistor, MEMS magnetic sensor, pressure sensor utilizing MOKE, mag MEMS actuators, by directional micro actuator.

UNIT – VI

MICRO FLUIDIC SYSTEMS: Applications, considerations on micro scale fluid, fluid actuation methods, dielectro phoresis (DEP), electro wetting, electro thermal flow, thermo capillary effect, electro osmosis flow, opto electro wetting (OEW), micro fluid dispenser, micro needle, micro pumps.

TEXT BOOKS:

1. MEMS, Nitaigour Premchand Mahalik, TMH Publishing co.

REFERENCE BOOKS:

1. Foundation of MEMS, Chang Liu, Prentice Hall Ltd.
2. MEMS and NEMS, Sergey Edwrd Lyshevski, CRC Press, Indian Edition.
3. MEMS and Micro Systems: Design and Manufacture, Tai-Ran Hsu, TMH Publishers.
4. Introductory MEMS, Thomas M Adams, Richard A Layton, Springer International Publishers.

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**0**	**0**	**3**	**1.5**	**V18MEL12**
Name of the Course	**Simulation Lab**					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Apply the tools like ANSYS or FLUENT in solving real time problems and day to day problems.	K3
CO2	Develop drawings for various components.	K3
CO3	Practice programming on CNC Machines.	K3

List of experiments:

1. **DRAFTING:** Development of part drawings for various components in the form of orthographic and isometric representation of dimensioning and tolerances scanning and plotting. Study of script, DXE and IGES files.

2. **PART MODELING:** Generation of various 3D models through protrusion, revolve, shell sweep. Creation of various features. Study of parent child relation. Feature based and Boolean based modelling surface and assembly modelling. Study of various standard translators. Design simple components.

3. a) Determinationofdeflectionandstressesin2Dand3Dtrussesandbeams.
   b) Determination of deflections component and principal and Von-mises stresses in plane stress, plane strain and axisymmetric components.
   c) Determination of stresses in 3D and shell structures (at least one example in each case)
   d) Estimation of natural frequencies and mode shapes, Harmonic response of 2D beam.
   e) Steady state heat transfer Analysis of plane and Axisymmetriccomponents.

4. a) Study of various post processors used in NC Machines.
   b) Machining of simple components on NC lathe and Mill by transferring NC Code / from a CAM package. Through RS 232.
   c) Practice on CNC Sinutrain Turning
   d) Practice on CNC Sinutrain Milling
   e) CNC programming forturned components using FANUC Controller
   f) CNC programming for milled components using FANUC Controller
   g) Automated CNC Tool path & G-Code generation using

   Pro/E/MasterCAM**Packages to be provided to cater to drafting, modeling & analysis from the following:**CATIA, Pro-E, I-DEAS, ANSYS, NISA, CAEFEM, Gibbs CAM, Master CAM etc.

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**0**	**0**	**3**	**1.5**	**V18MEL13**
Name of the Course	**Production Drawing Lab**					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Recognise the need of limits, fits and tolerances, and apply the same on part drawings for manufacturing.	K2
CO2	Illusttrate the Geometric Dimensioning and tolerancing, able to apply GD&T to a part drawing.	K3
CO3	Indicate various surface roughness symbols on part drawings for manufacturing.	K2
CO4	Assess the raw material requirements, final cost of the component and heat treatment process.	K3
CO5	Develop skill to produce detailed drawings from assembly drawings.	K3
CO6	Construct press tools, die-casting dies and jigs and fixtures using computer aided design software.	K3

PART-A
LIMITS, FITS AND TOLERANCES: Types of fits, exercises involving selection and interpretation of fits and estimation of limits from tables.
GEOMETRIC DIMENSIONING AND TOLERANCING: Introduction to GD&T ,terminology & basic rules, features and material conditions, maximum material condition, least material condition, regardless of feature's size, datums, datum reference frame, **form tolerances, orientation tolerances, profile tolerances, runout tolerances.**

ADDING GD&T TO A DRAWING/DESIGN – size, location, orientation & form, choosing datums, indication of form and position tolerances on drawings, preparation of bill of material
SURFACE ROUGHNESS AND ITS INDICATIONS: Definition, types of surface roughness indication-Surface roughness obtained from various manufacturing process, recommended surface roughness on mechanical components, heat treatment and surface treatment symbols used on drawings.

PART-B
Drawing of parts from assembly of stuffing box, piercing and blanking die, Die casting die, Box jig, machining fixture with indication of size, tolerance, roughness, form and position tolerances using Computer aided design software.

TEXT BOOKS:
1. Production and Drawing – K.L. Narayana& P. Kannaiah/New Age Publication

2. Tool Engineering & Design_G.R.Nagpal/Khannapublishers,1st edition, Khanna Publishers, 2009

3. MachineDrawingwithAutoCAD-PohitandGhosh,1st edition, Pearso, 2017

4. Geometric dimensioning and tolerancing- James D. Meadows/B.S Publications.

REFERENCE BOOKS:

1. MachineDrawingbyNagpal,1st edition, khanna publishers,2009
2. Machinedrawing,AjeetSingh,2nd edition,TMH,2016
3. Engineering Metrology, R.K. Jain, Khanna Publications.

Syllabi for the courses offered in VIII semester B. Tech under V18 Regulation for the Academic Year 2021-2022

VIII Semester

Semester	VIII	L	T	P	C	Course Code
Regulation	V18	3	0	0	3	V18MET28
Name of the Course	Automobile Engineering					
Branch	Mechanical Engineering					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Understand various components in four wheel automobile.	K2
CO2	Differentiate between different types of transmission systems used in automobile.	K4
CO3	Examine steering geometry and steering systems used in automobile.	K3
CO4	Interpret suspension, breaking and electrical systems in automobile.	K3
CO5	Understand various safety systems used in automobile.	K2
CO6	Practice engine service for different components in automobile.	K3

UNIT – I
INTRODUCTION: Components of four wheeler automobile – chassis and body – power unit – power transmission – rear wheel drive, front wheel drive, 4 wheel drive – types of automobile engines, engine construction, turbo charging and super charging – engine lubrication, splash and pressure lubrication systems, oil filters, oil pumps – crank case ventilation – engine service, reboring, decarbonisation, Nitriding of crank shaft.

UNIT – II
TRANSMISSION SYSTEM: Clutches, principle, types, cone clutch, single plate clutch, multi plate clutch, magnetic and centrifugal clutches, fluid fly wheel – gear boxes, types, sliding mesh, construct mesh, synchromesh gear boxes, epicyclic gear box, over drive torque converter. Propeller shaft – Hotch – Kiss drive, Torquetube drive, universal joint, differential rear axles – types – wheels and tyres.

UNIT – III
STEERING SYSTEM: Steering geometry – camber, castor, king pin rake, combined angle toein, center point steering. Types of steering mechanism – Ackerman steering mechanism, Davis steering mechanism, steering gears– types, steering linkages.

UNIT – IV

SUSPENSION SYSTEM: Objects of suspension systems – rigid axle suspension system, torsion bar, shock absorber, Independent suspension system.
BRAKING SYSTEM: Mechanical brake system, hydraulic brake system, master cylinder, wheel cylinder tandem master cylinder requirement of brake fluid, pneumatic and vacuum brakes.
ELECTRICAL SYSTEM: Charging circuit, generator, current – voltage regulator – starting system, bendix drive mechanism solenoid switch, lighting systems, horn, wiper, fuel gauge – oil pressure gauge, engine temperature indicator etc.

UNIT – V
ENGINE SPECIFICATION AND SAFETY SYSTEMS: Introduction- engine specifications with regard to power, speed, torque, no. of cylinders and arrangement, lubrication and cooling etc.
Safety: Introduction, safety systems - seat belt, air bags, bumper, anti lock brake system (ABS), wind shield, suspension sensors, traction control, mirrors, central locking and electric windows, speed control.

UNIT – VI
ENGINE SERVICE: Introduction, service details of engine cylinder head, valves and valve mechanism, piston connecting rod assembly, cylinder block, crank shaft and main bearings, engine reassembly-precautions.

TEXT BOOKS:
1. Automotive Mechanics – Vol. 1 & Vol. 2 / Kirpal Singh/standard publishers
2. Automobile Engineering / William Crouse/TMH Distributors
3. Automobile Engineering/P.S Gill/S.K. Kataria & Sons/New Delhi.

REFERENCE BOOKS:
1. Automotive Engines Theory and Servicing/James D. Halderman and Chase D. Mitchell Jr.,/ Pearson education inc.
2. Automotive Engineering / K Newton, W.Steeds & TK Garrett/SAE
3. Automotive Mechanics: Principles and Practices/ Joseph Heitner/Van Nostrand Reinhold
4. Automobile Engineering / C Srinivasan / Mc Graw Hill

Semester	VIII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET31**
Name of the Course	**Process Planning & Cost Estimation** Professional Elective – IV					
Branch	**Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Understand the basic concepts of production, steps involved in types of process planning.	K2
CO2	Calculate the process parameters for various production processes.	K3
CO3	Prepare the types of estimates.	K3
CO4	Calculate depreciation cost and explain about different costs.	K3
CO5	Estimate production cost in forging, welding and foundry.	K2
CO6	Determine the machining time of different machining operations.	K4

UNIT – I
INTRODUCTION: Types of production, standardization, simplification, product design and selection-process planning-methods, selection and analysis-steps involved in manual and computer aided process planning-Break even analysis.

UNIT – II

PROCESS PLANNING ACTIVITIES: Calculation of process parameters for various production processes-Selection of jigs & fixtures-Selection quality assurance methods-Set of documents for process planning.

UNIT – III

ESTIMATION AND COSTING: Aim and objective of cost estimation – Functions of estimation – Costing – Importance and aims of costing – Difference between costing and estimation. Types of estimates – Estimation procedure.

UNIT – IV

COST ELEMENTS: Material cost – Determination of material cost, labour cost, Expenses – – Analysis of overhead expenses – Factory expenses, Administrative expenses – Selling and Distributing expenses – Allocation of over head expenses. Cost of product – Illustrative examples Depreciation: Depreciation – Causes of Depreciation – Methods of Depreciation calculation.

UNIT – V

ESTIMATION OF PRODUCTION COST : Estimation in forging shop – Losses in forging – forging cost – Illustrative examples. Estimation in welding shop – Gas cutting – Electric welding - Illustrative examples. Estimation in foundry shop – Estimation of pattern cost and casting cost - Illustrative examples.

UNIT – VI

MACHINING TIME ESTIMATION: Estimation of Machining Time for Lathe operations – Estimation of Machining Time for Drilling, Boring, Shaping, Planning, Milling and Grinding operations - Illustrative examples.

TEXT BOOKS:

1. M.Adithian and B.S. Pabla, Estimation and Costing, Konark publishers Pvt. Ltd., 1989.
2. A.K.Chitale and R.C.Gupta, Product Design and Manufacturing, Prentice Hall Pvt. Ltd.., 2005

REFERENCE BOOKS :

1. Namua Singh, System Approach to computer integrated Design and Manufacturing, John Wiley & Sons,Inc.,1996.
2. Joseph G Monks, Operation Management, Theory & Problems, McGraw Hill Book Company, 1987.
3. T.R.Banga and S.C.Sharma, Estimations and Costing, Khanna Publishers,1988.
4. G.B.S.Narang and V.Kumar, Production and Costing, Khanna Publishers, 1995.
5. Sinha B.P – Mechanical estimating & costing – Tata McGrawhill publishing co.,1995

Semester	VIII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET32**
Name of the Course	**Non Destructive Evaluation** Professional Elective – IV					
Branch	**Mechanical Engineering**					

Course Outcomes:
After Successful completion of this course the student will be able to

CO1	Examine the Radiograpic test method	K3
CO2	Examine the Radiograpic test method	K3
CO3	Understand the Radiograpic test method	K2
CO4	Understand the Radiograpic test method	K2
CO5	Examine the Radiograpic test method	K3
CO6	Apply knowledge of non destructive testing methods for the products of railways, automobiles, aircrafts, chemical industries etc.	K3

UNIT – I
Introduction to non-destructive testing, Radiographic test, Sources of X and Gamma Rays and their interaction with Matter, Radiographic equipment, Radiographic Techniques, Safety Aspects of Industrial Radiography.

UNIT – II
ULTRASONIC TEST: Principle of Wave Propagation, Reflection, Refraction, Diffraction, Mode Conversion and Attenuation, Sound Field, Piezo-electric Effect, Ultrasonic Transducers and their Characteristics, Ultrasonic Equipment and Variables Affecting Ultrasonic Test, Ultrasonic Testing, Interpretations and Guidelines for Acceptance, Rejection, Effectiveness and Limitations of Ultrasonic Testing.

UNIT – III
LIQUID PENETRANT TEST: Liquid Penetrant Test, Basic Concepts, Liquid Penetrant System, Test Procedure, Effectiveness and Limitations of Liquid Penetrant Testing.
EDDY CURRENT TEST: Principle of Eddy Current, Eddy Current Test System, Applications of Eddy Current Testing Effectiveness of Eddy Current Testing.

UNIT – IV
MAGNETIC PARTICLE TEST: Magnetic Materials, Magnetization of Materials, Demagnetization of Materials,Principle of Magnetic Particle Test, Magnetic Particle Test Equipment, Magnetic Particle Test Procedure, Standardization and Calibration, Interpretation and Evaluation, Effective Applications and Limitations of the Magnetic Particle Test.

UNIT – V
INFRARED AND THERMAL TESTING: Introduction and fundamentals to infrared and thermal testing, Heat transfer –Active and passive techniques, Lock in and pulse thermography, Contact and non contact thermal inspection methods, Heat sensitive paints and papers, thermally quenched phosphors liquid crystals, techniques for applying liquid crystals, other temperature sensitive coatings, Inspection methods, Infrared radiation and infrared detectors, thermo mechanical behavior of materials, IR imaging in aerospace applications,electronic components, Honey comb and sandwich structures–Case studies.

UNIT – VI

INDUSTRIAL APPLICATIONS OF NDE: Span of NDE Activities Railways, Nuclear, Non-nuclear and Chemical Industries, Aircraft and Aerospace Industries, Automotive Industries, Offshore Gas and Petroleum Projects, Coal Mining Industry, NDE of pressure vessels, castings, welded constructions.

TEXT BOOKS:

1. Non destructive test and evaluation of Materials/J Prasad, GCK Nair/TMH Publishers
2. Ultrasonic testing of materials/ H Krautkramer/Springer
3. Non destructive testing/Warren, J Mc Gonnagle / Godan and Breach Science publishers
4. Nondestructive evaluation of materials by infrared thermography / X. P. V. Maldague, Springer-Verlag, 1st edition, (1993)

REFERENCE BOOKS:

1. Ultrasonic inspection training for NDT/ E. A. Gingel/Prometheus Press,
2. ASTM Standards, Vol 3.01, Metals and alloys
3. Non-destructive, Hand Book – R. Hamchand

Semester	VIII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET33**
Name of the Course	**Industrial Hydraulics and Pneumatics** Professional Elective – IV					
Branch	**Mechanical Engineering**					

Course Outcomes:
After Successful completion of this course the student will be able to

CO1	Understand the fundamentals of Fluid Power Systems	K2
CO2	Develop general concepts associated with Hydraulic actuators and cylinders.	K3
CO3	Identify Hydraulic elements in the design of circuits	K2
CO4	Illustrate various accumulators & intensifiers	K3
CO5	Develop the operation of pnuematics circuits and components typically used in industry.	K3
CO6	Examine the applications of Industrial Hydraulics and Pneumatics.	K3

UNIT – I
FUNDAMENTALS OF FLUID POWER SYSTEMS-INTRODUCTION – types advantages, disadvantages & applications-fluid characteristics-terminologies used in fluid power-hydraulic symbols-hydraulic systems and components-sources- pumping theory-gear, vane & piston pumps.

UNIT-II
FLUID POWER ACTUATORS: Introduction-hydraulic actuators-hydraulic cylinders-types, construction, specifications and special types. Hydraulic motors- working principle-selection criteria for various types-hydraulic motors in circuits- formulae-numerical problems

UNIT-III
HYDRAULIC ELEMENTS IN THE DESIGN OF CIRCUITS- Introduction-control elements-direction control valve-check valve-pressure control valve-relief valve- throttle valve-temperature & pressure compensation-locations of flow control valve

UNIT-IV
ACCUMULATORS & INTENSIFIERS-types, size &function of accumulators- application & circuits of accumulators- intensifiers-circuit & applications.

UNIT-V
PNEUMATIC SYSTEMS- INTRODUCTION- symbols used-concepts & components-comparison-types & specifications of compressors-arrangement of a complete pneumatic system-compressed air behaviour- understanding pneumatic circuits-direction control valves

UNIT-VI

APPLICATIONS- Servo systems-introduction-closed loop, hydro-mechanical and electro hydraulic – conventional and proportional valves-characteristics of proportional and servo valves- PLC applications in fluid power – selected pneumatic / electro pneumatic circuit problems – failure and trouble shooting in fluid power systems.

TEXT BOOKS:

1. Introduction to Hydraulics and Pneumatics by S. Ilango and V. Soundararajan, PHI , New Delhi
2. Applied hydraulics and pneumatics-T. Sunder Selwyn & R.Jayendiran, Anuradha Publications.

REFERENCE BOOKS:

1. Oil Hydraulic Systems, S.R .Majumdar, McGrawHill Companies
2. Pneumatic Systems: Principles and Maintenance, Majumdar, McGrawHill

Semester	VIII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET34**
Name of the Course	**Computational Fluid Dynamics** Professional Elective – V					
Branch	**Mechanical Engineering**					

Course Outcomes:
After Successful completion of this course the student will be able to

CO1	Apply techniques in the numerical solution of fluid equations	K3
CO2	Apply numerical modeling and its role in the field of heat transfer and fluid flow.	K3
CO3	Develop methodologies used in CFD	K3
CO4	Comapre various discretization methods and solving methodologies.	K4
CO5	Apply skills in the actual implementation of CFD methods (e.g. boundary conditions, different numerical schemes etc.	K3
CO6	Apply the finite element methods in the application of CFD analysis to real life engineering designs.	K3

UNIT – I
ELEMENTARY DETAILS IN NUMERICAL TECHNIQUES: Number system and errors, representation of integers, fractions, floating point arithmetic, loss of significance and error propagation, condition and instability, computational methods for error estimation, convergence of sequences.
UNIT – II
APPLIED NUMERICAL METHODS: Solution of a system of simultaneous linear algebraic equations, iterative schemes of matrix inversion, direct methods for matrix inversion, direct methods for banded matrices.
EQUATIONS GOVERNING FLUID FLOW AND HEAT TRANSFER: Introduction, conservation of mass, Newton's second law of motion, expanded forms of navier-stokes equations, conservation of energy principle, special forms of the navier-stokes equations.
UNIT – III
Steady flow, dimensionless form of momentum and energy equations, stokes equation, conservative body force fields, stream function - vorticity formulation. Finite difference applications in heat conduction and convention – heat conduction, steady heat conduction in a rectangular geometry, transient heat conduction, finite difference application in convective heat transfer, closure.
UNIT – IV
Finite differences, discretization, consistency, stability, and fundamentals of fluid flow modeling: introduction, elementary finite difference quotients, implementation aspects of finite-difference equations, consistency, explicit and implicit methods.

UNIT – V

Introduction to first order wave equation, stability of hyperbolic and elliptic equations, fundamentals of fluid flow modeling, conservative property, the upwind scheme

UNIT – VI

FINITE VOLUME METHOD: Approximation of surface integrals, volume integrals, interpolation and differentiation practices, upwind interpolation, linear interpolation and quadratic interpolation.

TEXT BOOKS:

1. Numerical heat transfer and fluid flow / Suhas V. Patankar- Butter-worth Publishers.
2. Computational fluid dynamics - Basics with applications - John. D. Anderson / McGraw Hill.

REFERENCE BOOKS:

1. Computational Fluid Flow and Heat Transfer/ Niyogi, Pearson Publications.
2. Fundamentals of Computational Fluid Dynamics – Tapan K. Sengupta / Universities Press.
3. Computational fluid dynamics, 3rd edition/Wendt/Springer publishers

Semester	VIII	L	T	P	C	Course Code
Regulation	V18	3	0	0	3	V18MET35
Name of the Course	**Production Planning and Control** Professional Elective – V					
Branch	**Mechanical Engineering**					

Course Outcomes:
After Successful completion of this course the student will be able to

CO1	Generalise structure, elements and functions of Production planning and Control.	K2
CO2	Apply the principles of different forecasting methods.	K3
CO3	Analyze principles of different inventory control systems.	K4
CO4	Generalise Routing, its procedure, factors affecting Routing procedure.	K2
CO5	Explain Scheduling methods, Planning and controlling aspects.	K2
CO6	Understand Dispatching procedure, types of follow up, applications of computers in production planning and control.	K2

UNIT – I
Introduction: Definition – objectives and functions of production planning and control – elements of production control – types of production – organization of production planning and control department – internal organization of department.
UNIT – II
Forecasting– importance of forecasting – types of forecasting, their uses – general principles of forecasting – forecasting techniques – qualitative methods and quantitive methods.
UNIT – III
Inventory management– functions of inventories – relevant inventory costs – ABC analysis – VED analysis – EOQ model – Inventory control systems – P–Systems and Q-Systems. Introduction to MRP I, MRP II, ERP, JIT systems.
UNIT – IV
Routing– definition – routing procedure –route sheets – bill of material – factors affecting routing procedure, schedule –definition – difference with loading.
UNIT – V
Scheduling policies– techniques, standard scheduling methods. Line Balancing, aggregate planning, chase planning, expediting.
UNIT – VI
Dispatching– activities of dispatcher – dispatching procedure – follow up – definition – reasons for existence of functions – applications of computers in production planning and control.

TEXT BOOKS:
1. Elements of Production Planning and Control / Samuel Eilon.
2. Manufacturing, Planning and Control, Partik Jonsson Stig-Arne Mattsson, Tata Mc Graw Hill

Semester	VIII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MET36**
Name of the Course	**Energy Conservation and Management** Professional Elective – V					
Branch	**Mechanical Engineering**					

Course Outcomes:
After Successful completion of this course the student will be able to

CO1	Understand the principles of Energy.	K2
CO2	Evaluate thermal Performance.	K5
CO3	Illustrate Energy Conservation Program.	K3
CO4	Predict the Energy Conservation Options	K2
CO5	Recognise the Strategies for Electricity and Management	K2
CO6	Express the Importance and Role of Energy Management	K2

UNIT-I
Energy scenario, Principles of energy conservation, Energy consumption pattern, Resource availability.

UNIT-II
Calculation of thermal performance, calculation of heat loss – heat gain, estimation of annual heating & cooling load factors that influence thermal performance, analysis of existing buildings.

UNIT-III
Organizing for energy conservation program, the energy audit and energy information system, technology for energy conservation, co-generation of process, steam & electricity, computer controlled energy.

UNIT-IV
Commercial options in waste heat recovery equipment, cases of energy studies, energy conservation opportunity, Energy conservation in I. C. Engine.

UNIT-V
Strategies for electricity and management, setting up an energy management programme, electricity saving technique by category of end use, Electrical end use in industries, energy & power management in industry, energy management strategies for industry, demand management.

UNIT-VI
Importance and role of energy management, Energy economics, Payback period, Internal rate of return, life cycle costing.

TEXT BOOKS:

1. Hamies, Energy Auditing and Conservation, Methods, Measurements, Management and Case Study, Hemisphere,Washington, 1980
2. W.F.Kenny, Energy Conservation in Process Industry.
3. Trivedi, P.R, Jolka K.R., Energy Management, Commonwealth Publication, New Delhi, 1997.
4. C.B.Smith, Energy Management Principles, Pergamon Press, New York, 1981.

REFERENCE BOOKS:

1. W.C. Turner, Energy Management, Hand Book.
2. Kreith, Economics of Solar Energy and Conservation Systems, Vol -3.
3. Witte, Larry C, Industrial Energy Management and Utilization, Hemisphere Publishers, Washinton, 1988.

Annexure-ME-II

Course offered in OPEN ELECTIVE - II & III in VII & VIII sem B.Tech., under V18 Regulations
VII SEMESTER

Semester	VII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MEOE4**
Name of the Course	**Computer Aided Design** Open Elective – II					
Branch	**Common to all except Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Explain the basic fundamentals of CAD tools	K2
CO2	Find the characteristics of curves, Representation and continuity requirements	K3
CO3	Illustrate the Geometric Transformations.	K3
CO4	Demonstrate various types of surfaces and Representation.	K3
CO5	Differentiate between the methods of representing Solid Modelling.	K4
CO6	Apply the local and global properties for product development	K3

UNIT – I
CAD Introduction: Need of machine design, use of computer, computer fundamentals, computer aided design process, CAD configuration, and CAD tools, positive and negative points of CAD, CAD and CAM integration.

UNIT – II
DESIGN OF CURVES: Fundamental of Curve Design, Parametric Space of a Curve, Representation, Parametric cubic curve, Blending functions, Truncation, extension, and subdivision, composite curve: continuity requirements .

UNIT – III
GEOMETRIC TRANSFORMATIONS: Translation, Rotation, Scaling Symmetry and Reflection, Homogeneous Transformations. Orthographic Projections, Axonometric Projections, Oblique Projections, Perspective Transformation.

UNIT – IV
DESIGN OF SURFACES: Fundamental of Surface Design, Parametric Space of a Surface, Representation of a Surface patch, sixteen point form, Four Curve Form, Plane.

UNIT – V
SOLID MODELLING: Solid Modelling fundamentals, topology and geometry. Geometric Modelling Method, Constructive Solid Geometry (CSG), Boundary Representation (Brep), Introduction to Wireframe, surface and solid modelling techniques. Introduction CAD data exchange format IGES, STEP

UNIT – VI

GEOMETRIC PROPERTIES: Local and global properties of a curve, Local and global properties of a surface, Global properties of complex solids, Relational properties, intersections. Applications in Product Development and other areas.

REFERENCE BOOKS:

1. Geometric Modeling: Michael E. Mortenson, Third Edition, Industrial Press Inc.2006.
2. Mathematical Elements of Computer Graphics, Rogers and Adams, McGraw Hill. 1994
3. CAD CAM Theory and Prectice: I. Zeid, Tata-McGraw Hill, 2006
4. Computer-Aided Engineering Design, B Sahay and ASaxena, Springer, 2005.
5. Differential Geometry of Curves and Surfaces, Thomas F. Banchoff and Stephen T. Lovett, Thomas Banchoff-Stephen Lovett, 2010.
6. Computational Geometry for Design and Manufacture, I.D. Faux and M.J. Pratt, John Wiley, 1980.
7. Lectures on Classical Differential Geometry, Dirk J. Struick, Addison Wesley, 1980.

Semester	VII	L	T	P	C	Course Code
Regulation	V18	3	0	0	3	V18MEOE5
Name of the Course	**Condition Monitoring and Machine Learning** Open Elective – II					
Branch	**Common to all except Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Understand various condition monitoring techniques	K2
CO2	Demonstrate the construction and principle of working of sensors for condition monitoring.	K3
CO3	Interpret the concepts of signal processing analysis	K3
CO4	Assess various failure analysis and maintenance.	K3
CO5	Examine the elements of Machine condition monitoring	K3
CO6	Examine the concepts of machine learning systems for signal analysis and fault detection systems	K3

UNIT – I
CONDITION MONITORING TECHNIQUES: Introduction, Condition Monitoring in manufacturing industries; Noise monitoring, Wear and debris Analysis, Thermography, Cracks monitoring, Ultrasonic techniques - Case studies.

UNIT – II
SENSORS FOR CONDITION MONITORING: Accelerometers, strain gauges, eddy current probes, LVDT for measurement of displacement, velocity and acceleration; Temperature transducers, radiation pyrometers and thermal imaging devices.

UNIT – III
SIGNAL PROCESSING: Study of periodic and random signals, probability distribution, statistical properties, auto and cross correlation and power spectral density functions.
SIGNAL ANALYSIS: Time domain and Frequency domain and Time-frequency domain analysis

UNIT – IV
FAILURE ANALYSIS AND MAINTENANCE: Maintenance Principles, Failure mode analysis - Equipment down time analysis – Breakdown analysis - condition based maintenance.

UNIT – V
MACHINE CONDITION MONITORING: Vibration, Acoustic emission and vibro-acoustics signal analysis; intelligent fault detection system, Case studies.

UNIT – VI

MACHINE LEARNING: Vibration, Acoustic emission and vibro-acoustics signal analysis; intelligent fault detection system, Case studies.

TEXT BOOKS:

1. EthemAlpaydin, Introduction to Machine Learning (2010), The MIT Press, Cambridge, London.

REFERENCE BOOKS:

1. K. P. Soman, Data mining theory and practice (2006), Prentice-Hall of India.
2. Amiya RanjanMohanty, Machinery Condition Monitoring: Principles and Practices (2015), CRC Press
3. Mishra, R.C., Pathak, K., Maintenance Engineering and Management (2012), Prentice Hall of India.
4. Clarence W. De Silva, Sensors and Actuators: Control System Instrumentation (2007), CRC Press – Taylor and Francis Group.
5. Boualem Boashash, Time Frequency Signal Analysis and Processing: A Comprehensive Reference (2015), Elsevier.

VIII SEMESTER

Semester	VIII	L	T	P	C	Course Code
Regulation	**V18**	**3**	**0**	**0**	**3**	**V18MEOE6**
Name of the Course	**Power Plant Engineering** Open Elective – III					
Branch	**Common to all except Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Explain the working and layout of steam power plant and the different systems comprising the plant.	K2
CO2	Outline the working principle of diesel power plant and its layout.	K2
CO3	Illustrate the working and layout of gas turbine power plant and various auxiliaries comprising the plant.	K3
CO4	Construct the working principle and basic components of the hydro electric plants.	K3
CO5	Describe the and basic components and working principle of different reactors of nuclear power plant.	K2
CO6	Outline the power plant economics .	K4

UNIT – I
Introduction to the Sources of Energy.
Steam Power Plant: Plant layout, working of different circuits, coal handling equipment, ash handling systems, overfeed and underfeed fuel beds, types of stokers, dust collectors, cooling towers and feed water treatment.

UNIT – II
Diesel power Plant: IC Engines, types, Plant layout with auxiliaries – fuel supply system, air starting equipment, lubrication and cooling system, super charging.

UNIT – III
Gas Turbine Plant: Introduction, classification, construction, Layout with auxiliaries, Principles ofworking of closed and open cycle gas turbines, combined cycle power plants and comparison.

UNIT – IV
Hydro Electric Power Plant: Water power , hydrological cycle, hydrographs, classification of dams and spill ways.
Hydro Projects and Plant: Classification – typical layouts – plant auxiliaries – plant operation pumped storage plants.

UNIT – V

Nuclear Power Station: Nuclear fuel – breeding and fertile materials, nuclear reactor – reactor operation. Types of reactors and their operation - Pressurized water reactor, boiling water reactor, sodium-graphite reactor, fast breeder reactor. Radiation hazards and shielding, radioactive waste disposal.

UNIT – VI

Power Plant Economics: Capital cost, investment of fixed charges, operating costs, general arrangement of power distribution, load curves, load duration curve, definitions of connected load, maximum demand, demand factor, average load, load factor, diversity factor – related exercises.

TEXT BOOKS:

1. A course in Power Plant Engineering /Arora and Domkundwar/Dhanpatrai& Co.
2. Power Plant Engineering /P.C.Sharma / S.K.Kataria Pub

REFERENCE BOOKS:

1. Power Plant Engineering: P.K.Nag/ TMH.
2. Power station Engineering – M.M.Ei-Wakil / McGrawHill.

Semester	VIII	L	T	P	C	Course Code
Regulation	V18	3	0	0	3	V18MEOE7
Name of the Course	**Mechatronics** Open Elective – III					
Branch	**Common to all except Mechanical Engineering**					

Course Outcomes:
After successful completion of the course, the student will be able to

CO1	Understand the elements of Mechatronics & levels and explain various types of sensors , transducers and Mechatronics design process	K2
CO2	Sketch and explain various types of solid state devices like Diode, BJT, MOSFET, etc.,	K3
CO3	Illustrate and explain basic principles of Hydraulic, pneumatic, electro hydraulic, electro hydraulic servo actuating systems.	K3
CO4	Illustrate and explain microprocessors, microcontrollers and PLC	K3
CO5	Sketch and explain System interfacing and data acquisition systems.	K3
CO6	Sketch and explain Digital Controllers and Design of mechatronics systems.	K3

UNIT – I
MECHATRONICS SYSTEMS – elements & levels of mechatronics system, Mechatronics design process, system, measurement systems, control systems, advantages and disadvantages of mechatronics systems. Sensors and transducers, types, displacement, velocity, force, acceleration, liquid flow, liquid level, temperature and light sensors.

UNIT– II
SOLID STATE ELECTRONIC DEVICES - PN junction diode, BJT, FET, Analog signal conditioning, operational amplifiers, filters.

UNIT– III
HYDRAULIC AND PNEUMATIC ACTUATING SYSTEMS - Fluid systems, Hydraulic systems, and pneumatic systems, components, control valves, electro-pneumatic, hydro-pneumatic, electro-hydraulic servo systems.

UNIT– IV
DIGITAL ELECTRONICS AND SYSTEMS - Digital logic control, micro processors and micro controllers, programming, programmable logic controllers, PLCs versus computers, application of PLCs for control.

UNIT– V
SYSTEM AND INTERFACING AND DATA ACQUISITION – Data Acquisition Systems, Analog to Digital and Digital to Analog conversions; Digital Signal Processing.

UNIT– VI

DYNAMIC MODELS AND ANALOGIES - System response. Process Controllers – Digital Controllers, Programmable Logic Controllers, Design of mechatronics systems & future trends.

TEXT BOOKS:

1. MECHATRONICS Integrated Mechanical Electronics Systems/KP Ramachandran, GK Vijaya Raghavan & MS Balasundaram/WILEY India Edition

REFERENCE BOOKS:

1. Mechatronics /Smaili A, Mrad F/ Oxford Higher Education, Oxford University Press
2. Mechatronics Source Book / Newton C Braga/Thomson Publications,Chennai.
3. Mechatronics – N. Shanmugam / Anuradha Agencies Publishers.
4. Mechatronics System Design / Devdas shetty/Richard/Thomson.
5. Mechatronics/M.D.Singh/J.G.Joshi/PHI.
6. Mechatronics – Electronic Control Systems in Mechanical and Electrical Engg. 4th Edition / W. Bolton/ Pearson, 2012
7. Mechatronics – Principles and Application / Godfrey C. Onwubolu/Elsevier, Indian print

Annexure – ME-III

Course structure & Syllabi for the courses offered in III & IV semesters B. Tech under V20 Regulations

III Semester

Semester	III	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET03
Name of the Course	Metallurgy and Material Science					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Explain the types of bonds in solids and crystallization of Metals.	K2
CO2	Construct phase diagrams for the study of alloys and phase Transformation reactions.	K2
CO3	Use different ferrous and nonferrous metals based on properties for various applications	K3
CO4	Apply suitable heat treatment process to achieve desired properties of metals and alloys.	K3
CO5	Illustrate the properties and applications of composites and Ceramic materials and understand the concepts of powder metallurgy.	K2

UNIT – I
INTRODUCTION TO METALLURGY AND MATERIAL SCIENCE: Structure of Metals, Properties of metals, Types of Bonds in Solids, Crystal geometry – Space Lattices, Unit cells, Crystal Structure, Miller indices. Imperfections in crystals-Line defects, Point defects, Surface defects. Crystallization of metals, grain, grain boundaries and their properties. Constitution of alloys: Necessity of alloying, types of solid solutions, Hume Rotherys rules.

UNIT – II
EQUILIBRIUM DIAGRAMS: Experimental methods of construction of equilibrium diagrams, phase rule, Isomorphous alloy systems, Lever rule, eutectic systems, peritectic reaction. Transformations in the solid state – allotropy, eutectoid, peritectoid reactions, Study of important binary phase diagrams of Cu-Ni, Al- Si, and Fe-Fe3C.

UNIT – III
FERROUS, NONFERROUS METALS AND THEIR ALLOYS: Production of Iron and steel: Blast furnace, Cupola, Electric furnace and Induction furnace, Types of Cast irons- White, Grey, Malleable and Nodular Cast Irons, Properties and application of cast irons, Effect of alloying elements on structure and properties

of steels, Properties and uses of Silicon and Hadfield Manganese steels, High speed steels and Stainless steel. Properties and uses of important non-ferrous metals like Cu, Al, Pb, Sn, Zn. Study of important non-ferrous alloys: Brass & Bronzes, Bearing alloys, Al alloys & Ti alloys.

UNIT – IV

HEAT TREATMENT OF FERROUS AND NON-FERROUS ALLOYS: Types of heat treatment processes, Annealing, normalizing, hardening, tempering, hardenability, surface - hardening methods, TTT diagrams, Age hardening treatment

UNIT – V

ADVANCED MATERIALS: Composites and its classification, methods of manufacturing of composites – stir casting method, hand layup process, filament winding process. Properties and applications of crystalline ceramics, shape memory alloys, Bio materials and nano-materials

POWDER METALLURGY: Introduction, Steps in Powder metallurgy, Powder characterizations, powder compact methods.

TEXT BOOKS:

1. Introduction to Physical Metallurgy/ Sidney H.Avner/ 2nd edition, McGraw Hill Education (India) Private Limited/2016.
2. Materials Science and Engineering/William D Callister (Adapted by R. Bala subramaniam) /Wiley Inida (P) Ltd/ 2007
3. Material Science and Metallurgy/ Dr.V.D.Kodgire/40th edition, Everest Publishing House/2017

REFERENCE BOOKS

1. Materials Science and Engineering/ V. Raghavan /5th Edition) Prentice-Hallof India Pvt. Ltd/2004.
2. Essential of Materials science and engineering /Donald Askeland/2nd edition Thomson/2014
3. Engineering mechanics of Composite Materials/Isaac M.Daniel,Ori Ishai/ 5th edition/Oxford Publications/2015.

Semester	III	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET04
Name of the Course	Mechanics of Solids					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Illustrate concept of stress and strain of composite bars.	K3
CO2	Solve shear force and bending moment in beams.	K3
CO3	Calculate flexural and shear stresses in a beam and understand the torsional rigidity of shaft.	K3
CO4	Analyze the principal stresses in structural members.	K4
CO5	Solve the buckling load capacity of columns, and longitudinal stress and strains in thin cylinders.	K3

UNIT – I

SIMPLE STRESSES & STRAINS: Definitions of stress and strain – types of stresses and strains – Elasticity –Hooke's law–Stress–Strain diagram for Mild steel – working stress- factor of safety-Lateral strain–Poisson's ratio and volumetric strain – Elastic Moduli and the relationship between elastic constants–Bars of varying section – composite bars – temperature stresses.
STRAIN ENERGY: Definition – Resilience – Strain Energy due to gradually applied; suddenly applied and impact loads–simple applications.

UNIT – II

SHEAR FORCE & BENDING MOMENT DIAGRAMS: Definition of beam –Types of beams – concept of SF and BM – SF & BM diagrams for cantilever, Simple support and over hanging beams subject end point loads, Uniform distributed load (UDL), uniformly varying loads– point of contra flexure –Relationship between S.F, BM and rate of loading.

UNIT – III

FLEXURAL STRESSES: Theory of simple Bending – Assumptions–Derivation of Bending equation – Neutral axis – Determination of bending stresses – section modulus of rectangular, Circular sections (Solid and Hollow), I and T channel sections.
DEFLECTION OF BEAMS: Relation between curvature, slope and deflection; Slope and deflection of cantilever, simply supported with point and U.D.L– Macaulay's method.

UNIT – IV

PRINCIPAL STRESSES AND STRAINS: Introduction – stresses on an inclined section of a bar under axial loading - compound stresses - Normal and tangential stresses on an inclined plane for biaxial stresses-Two perpendicular normal stresses–representation of stress on Mohr's circle diagram, Introduction to theories of Failure.

UNIT – V

COLUMNS: Buckling and Stability, Columns with Pinned ends, Columns with other support Conditions, Limitations of Euler's Formula, Rankine's Formula.

THIN CYLINDERS: Thin seamless cylindrical shells– Derivation of formula for longitudinal and circumferential stresses – hoop, longitudinal and volumetric strains – changes in diameter, and volume of thin cylinders.

TEXT BOOKS:

1. Strength of materials/R.K.Bansal/LaxmiPublications5th edition/2017
2. Mechanics of Materials/Gere and Timoshenko,/TMH4thedition/2010
3. Strength of materials/ S.Ramamrutham/Dhanpatrai publishers 1stedition /2016

REFERENCE BOOKS:

1. Solid Mechanics, by Popov/PHIpublications2nd edition/2017.
2. Introduction to Solid Mechanics / Irving H Shames/ 4th edition PEARSON /2014.
3. Strengthofmaterials/Young,D.H.Timoshenko,Stephen/CBSpublishers/2002

Semester	III	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET05
Name of the Course	Fluid Mechanics with Machine Learning					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Explain the concepts of fluid properties and measurement of pressure.	K2
CO2	Describe the types of flows, lines & apply equations of fluid mechanics and its applications.	K3
CO3	Calculate losses and force on different types of vanes.	K3
CO4	Calculate the performance of turbines.	K3
CO5	Calculate the performance of pumps & understand hydraulic systems.	K3

UNIT – I

FLUID STATICS: Dimensions and units-Physical properties of fluids-Density, Specific gravity, Viscosity, Surface tension, Vapour pressure, Capillarity, Bulk modulus. Pressure types-Atmospheric, absolute, gauge and vacuum pressure and measurement of pressure-Piezometer, different types of manometers.

UNIT – II

FLUID KINEMATICS: stream line, path line and steak line and stream line, classification of flows steady &un steady, uniform & non uniform, laminar & turbulent, rotational & irrotational flows-equation of continuity for one dimensional flow and three dimensional flow. Equation of continuity in differential form.

FLUID DYNAMICS: Surface and body forces, Bernouli's equation along a stream line, Momentum equation, application of momentum equation on pipe bend. Measurement of flow: Pitot tube, Venturimeter, Orifice meter.

UNIT – III

CLOSED CONDUIT FLOW: Reynolds experiments, Darcy-Weisbach equation, Major and minor losses, Hydraulic gradient line, Total energy line, Pipes in series and parallel.

BASICS OF TURBO-MACHINERY: Determination of hydrodynamic force of jet on stationary and moving flat, inclined, curved vanes (jet striking at tip and centre), velocity diagrams, work done and efficiency, flow over radial vanes, series of vanes.

UNIT – IV

TURBINES AND PUMPS: Classification of turbines, Pelton wheel, Francis turbine, Kaplan turbine- working proportions, work done, efficiencies. Draft tube-types, functions and efficiency.

CENTRIFUGAL PUMPS: Working, work done, heads, efficiencies, losses.

RECIPROCATING PUMPS: Working, work done, slip, indicator diagrams.

UNIT – V

FUNDAMENTALS OF MACHINE LEARNING: Supervised, semi-supervised and supervised learning.

MACHINE LEARNING FOR FLUID MECHANICS: Introduction, historical developments, challenges and opportunities; concepts of flow modelling and flow optimization & control.

TEXT BOOKS:

1. Hydraulics, Fluid mechanics and Hydraulic machinery – Modi & Seth.
2. Fluid mechanics and Hydraulic machines – R.K. Bansal.
3. Introduction to Fluid mechanics and fluid machines – S.K. Som & G. Biswas. (Tata –Mcgrawhill)
4. Ethem Alpaydin, Introduction to Machine Learning , MIT Press, Prentice Hall of India, Third Edition 2014.

REFERENCE BOOKS:

1. Fluid mechanics and machinery – G. Ramadurgaih (New age international publishers)
2. Fluid mechanics and fluid power engineering – D.S.Kumar (S.K. Kataria and sons)

Semester	III	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET06
Name of the Course	Thermodynamics					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Discuss the basic terms related to work and heat.	K2
CO2	Explain first law of thermodynamics and internal energy.K2	K2
CO3	Apply the second law of thermodynamics to basic thermal systems.	K3
CO4	Analyze various thermodynamic cycles.	K4
CO5	Discuss about pure substance.	K2

UNIT – I

Thermodynamic System, boundary, Surrounding, control volume, Universe, Types of Systems, Macroscopic and Microscopic viewpoints, Concept of Continuum, Thermodynamic Equilibrium, State, Property, Process, Cycle – Reversibility – Quasi – static Process, Irreversible Process, Causes of Irreversibility – Energy in State Work and Heat, Point and Path function. Zeroth law of thermodynamics.

UNIT – II

Joule's Experiments – First law of Thermodynamics –First law applied to a Process – First law applied to a flow system –Energy balance for closed systems-Specific heats at constant volume and pressure - Internal energy and Enthalpy, Some steady flow energy equation applied to Nozzle, Turbine, Compressor and heat exchanger devices, PMM-I, Limitations of the First Law – Thermal Reservoir, Heat Engine, Heat pump, Parameters of performance.

UNIT – III

Second Law of Thermodynamics, Kelvin-Planck and Clausius Statements and their Equivalence / Corollaries, PMM of Second kind, Carnot's principle, Carnot cycle and its specialties, Clasius theorem Clausius Inequality, Entropy, Principle of Entropy Increase, availability and irreversibility(Basic definitions), T-ds relations, Helmholtz and Gibbs functions, Gibbs relations, Maxwell relations, Elementary Treatment of the Third Law of Thermodynamics.

UNIT – IV

THERMODYNAMIC CYCLES: Carnot vapor cycle, ideal Rankine cycle, Rankine reheat cycle, air-standard Otto cycle, air-standard Diesel cycle, air-standard Brayton cycle, vapor-compression refrigeration cycle.

UNIT – V

PURE SUBSTANCES: P-V-T- surfaces, T-S and h-s diagrams, Mollier Charts, Phase Transformations, Triple point and critical point, properties during change of phase, Dryness Fraction, Clausius – Clapeyron Equation.

TEXT BOOKS:

1. Engineering Thermodynamics, PK Nag 5th Edn, TMH,2014.
2. Thermodynamics, An engineering Approach, Y.A. Cengel& M.A. Boles, 7th Edn- McGraw Hill, 2014.
3. Internal Combustion Engine –V Ganeshan.4th edition, TMH, 2016

REFERENCE BOOKS:

1. Engineering Thermodynamics by Y.V.C. Rao, 1st edition, Universities, 2005.
2. A text book of Engineering thermodynamics, R.K Rajput, 4th edition, Lakshmi Publishers, 2010.

Semester	III	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL02
Name of the Course	Fluid Mechanics & Hydraulic Machines Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
C01	Determine the force exerted by jet, friction factor, loss of head due to sudden contraction.	K3
C02	Examine and Analyze the performance of pumps and turbines.	K3
C03	Calibrate different flow measuring devices.	K3

1. Determination of force exerted by jet on a flat vane.
2. Determination of loss of head due to sudden contraction.
3. Determination of friction factor.
4. Calibration of Venturimeter.
5. Calibration of Orifice meter.
6. Calibration of Turbine flow meter.
7. Analyze the performance of single stage centrifugal pump.
8. Analyze the performance of multi stage centrifugal pump.
9. Analyze the performance of reciprocating pump.
10. Analyze the performance of Pelton wheel.
11. Analyze the performance of Francis turbine.

Semester	III	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL03
Name of the Course	Mechanics of Solids & Materials Engineering Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Assess the Mechanical properties of different metals.	K3
CO2	Examine the micro structures of different Ferrous and non Ferrous metals.	K3
CO3	Identify the effect of heat treatment and cooling rates on the Properties of steels.	K4

NOTE: Any 6 experiments from each section A and B.

A) MECHNICS OF SOLIDS LAB:

1. Direct tension test
2. Bending test
a) Simply supported beam
b) Can til ever beam
3. Torsion test
4. Hardness test
a) Brinell hardness test
b) Rockwell hardness test
5. Test on springs
6. Compression test on cube
7. Impact test
8. Punch shear test

B) METALLURGY LAB:

1. Preparation and study of the Micro Structure of pure metals like Iron, Cu and Al.
2. Preparation and study of the Micro structure of Mild steels, Medium carbon steels, and \high–Csteels.
3. Study of the Micro Structures of Cast Irons.
4. Study of the Micro Structures of Non-Ferrous alloys–Brass and Bronze.
5. Study of the Micro structures of Heat treated steels.
6. Hard enability of steels by Jominy End Quench Test.
7. To find out the hardness of various treated and untreated steels.

REFERENCE BOOKS:

1. Strength of materials, S.S.Bhavikatti Vikas Publications, 4th edition, 2013.
Material Science and Metallurgy, Dr.V.D.Kodagire, Everest Publishing House, 40th Edition, 2017

Semester	III	L	T	P	C	Course Code
Regulation	**V20**	**0**	**0**	**3**	**1.5**	**V20MEL04**
Name of the Course	**Machine Drawing**					
Branch	**Mechanical Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Identify the national and international standards pertaining to machine drawing.	K2
CO2	Illustrate the importance of the linking functional and visualization aspects in the preparation of the part drawings	K3
CO3	Apply limits and tolerances to assemblies and choose appropriate fits for given assemblies.	K3
CO4	Interpret the Machining and surface finish symbols on the component drawings.	K3
CO5	Develop the part or assembly drawings as per the conventions.	K3

INTRODUCTION: (AUTO CAD or any other drafting Software)
Review of graphic interface of the software. Review of basic sketching commands and navigational commands. Starting a new drawing sheet. Sheet sizes. Naming a drawing, Drawing units, grid and snap. Conversion of pictorial views into orthographic projections of simple machine parts (with and without section). Hidden line conventions. Precedence of lines

PART-A

SECTIONS OF SOLIDS: Sections of Pyramids, Prisms, Cubes, Tetrahedrons, Cones and Cylinders resting only on their bases (No problems on axis inclinations, spheres and hollow solids). True shape of sections. Conversion of pictorial views into orthographic projections of simple machine parts. Hidden line conventions. Precedence of lines. Conversion of pictorial views into orthographic projections of simple machine parts (with section planes indicated on the part).

THREAD FORMS: Thread terminology, sectional views of threads. ISO Metric (Internal & External), BSW (Internal & External) square and Acme. Sellers thread, American Standard thread.

FASTENERS: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut. Flanged nut, slotted nut, taper and split pin for locking, counter sunk head screw, grub screw, Allen screw.

KEYS: Parallel key, Taper key, Feather key, Gib-head key and Woodruff key.

JOINTS: Cotter joint (socket and spigot), knuckle joint (pin joint) for two rods. Couplings: Split Muff coupling, Protected type flanged coupling, pin (bush) type flexible coupling, and universal coupling (Hooks' Joint)

PART-B
Limits, Fits and Tolerances: Introduction, Fundamental tolerances, Deviations, Methods of placing limit dimensions, machining symbols, types of fits with symbols and applications, geometrical tolerances on drawings. Standards followed in industry.

Assembly Drawings (Any modeling software)
1. Plummer block (Pedestal Bearing)
2. Stuffing box
3. Propeller Blade
4. Spur Gear
5. Tailstock of lathe
6. Machine vice
7. Tool head of shaper

TEXT BOOKS:
1. Machine drawing _ K.L. Narayana, P. Kannaiah& K.Venkata reddy, 1st edition, Radiant, 2016
2. Tool Engineering & Design _ G.R. Nagpal/Khanna publishers, 1st edition, Khanna Publishers,2009
3. Machine Drawing with Auto CAD- Pohit and Ghosh, 1st edition, Pearso, 2017

REFERENCE BOOKS:
1. Machine Drawing by Nagpal,1st edition, khanna publishers, 2009
2. Machine drawing, Ajeet Singh, 2nd edition, TMH, 2016
3. Machine drawing with autocad, Pohit; Goutam, 1st edition, Pearson, 2017.

IV Semester

Semester	IV	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET07
Name of the Course	Kinematics of Machinery					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Explain the inversion of the four bar, slider crank and double slider chains.	K2
CO2	Analyze and perform the velocities and accelerations in mechanisms by graphical method.	K4
CO3	Explain the working of copying mechanism, straight line motion mechanisms, steering gears and Hooke's joint.	K2
CO4	Develop the cam profiles for given follower motions.	K3
CO5	Describe tooth profiles for gears, gear trains and compute the velocity ratio and torque in gear trains and calculate various parameters related to belts.	K3

UNIT – I

MECHANISMS : Introduction, terminology, definitions and assumptions, planar, spherical and spatial mechanisms, mobility, classification of mechanisms, kinematic inversion, inversions of four bar chain, slider crank chain and double slider chain, Grashoff's law, mechanical advantage.

UNIT – II

VELOCITY ANALYSIS : Introduction, Absolute and relative motions, Vectors, Addition and subtraction of vectors, Motion of a link, Four-link mechanism, Velocity diagrams, Angular velocity of links, Velocity of rubbing, Slider-crank mechanism, crank and slotted lever mechanism, Instantaneous center, Kennedy's theorem, Locating I-centers, Angular velocity ratio theorem.

ACCELERATION ANALYSIS: Introduction -Acceleration, four-link mechanism, Acceleration of intermediate and offset points, Slider-crank mechanism, Coriolis component, Crank and slotted lever mechanism using graphical method, Klein's Construction.

UNIT – III

LOWER PAIRS: Pantograph, Exact straight line mechanism condition, Peaucellier, Hart Scott-Russel mechanisms. Approximate straight line mechanisms, Grasshopper, Watt, Chebyshev, Robert mechanisms. Steering gears-condition for correct steering, Davis, Ackerman steering gears, Hooke's joint-velocity ratio, angular acceleration of driven shaft, double Hooke's joint.

UNIT – IV

CAMS: Types of cams and followers, types of follower motion, velocity and acceleration diagrams, profile of cams.

UNIT – V

GEARS: Classification of gears, spur gears- terminology, fundamental law of toothed gearing, involute and cycloidal profile, Path of contact, arc of contact, contact ratio, minimum number of teeth, interference and methods of avoiding interference, rubbing velocity.

GEAR TRAINS: Introduction, Types - Simple , compound and reverted gear trains , Epicyclic gear train.
BELT DRIVES: Belt and rope drives, open and crossed belt drives, velocity ratio, slip, material for belts and ropes, crowning of pulleys, ratio of friction tensions, power transmitted, centrifugal effect on belts, maximum power transmitted by a belt, initial tension.

TEXT BOOKS:
1. Theory of Machines/ Rattan SS, Tata McGraw Hill Education Publishers, 4th Edition 2015.
2. Theory of Machines / Beven Thomos / CBS publication, 3rd edition /2005

REFERENCE BOOKS:
1. Theory of Machines / R.K.Bansal/ Laxmi Publications 5th edition /2016
2. Mechanisms of Machines, V Ramamurthy, Narosa publishing House, Reprint ,2019
3. Theory of Machines by R S Khurmi, S Chand Publications, 1st Edition, 2011.
4. Theory of Machines and Mechanisms, Ballaney P, Khanna publications,1st Edition,2011.

Semester	IV	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET08
Name of the Course	Manufacturing Science with Artificial Intelligence					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand fundamentals of casting-patterns and its materials, Gating System	K2
CO2	Distinguish various welding processes and select a suitable process based on the application and requirements, explain advanced welding techniques, testing methods	K2
CO3	Explain the knowledge on Hot working and Cold Working Process	K3
CO4	Describe various bulk forming processes, sheet metal forming and processing of plastics.	K2
CO5	Apply the concepts of Artificial intelligence in manufacturing processes.	K3

UNIT – I

CASTING - Steps involved in making a casting, types of sands – Advantage of casting and its applications.
PATTERNS AND PATTERN MAKING – Types of patterns – Materials used for patterns, pattern allowances and their construction, risers, Centrifugal, Die, Investment castings.
PRINCIPLES OF GATING – Gating ratio and design of Gating systems.
METHODS OF MELTING – Crucible melting and cupola operation.
SOLIDIFICATION OF CASTING – Concept – Solidification of pure metal and alloys.

UNIT – II

WELDING: Classification of welding process types of welds and welded joints and their characteristics, design of welded joints Gas welding, ARC welding, Forge welding, resistance welding, Thermit welding, Inert Gas welding - TIG & MIG, welding, Laser welding, Soldering & Brazing. welding defects, destructive non-destructive testing of welds.

UNIT – III

HOT & COLD WORKING: strain hardening, recovery, re-crystallization and grain growth, Comparison of properties of Cold and Hot worked parts.
ROLLING FUNDAMENTALS – Theory of rolling, types of Rolling mills and products
EXTRUSION OF METALS: Basic extrusion process and its characteristics. Hot extrusion and cold extrusion - Forward extrusion and backward extrusion–Impact extrusion Hydrostatic extrusion
DRAWING – Wire drawing and Tube drawing

UNIT – IV

BULK FORMING PROCESSES: Principles of forging – Tools and dies – Types Forging – Smith forging, Drop Forging – Roll forging – Forging hammers: Rotary forging – forging defects.

SHEET METAL FORMING: Stretch Forming, Deep Drawing, Coining, Spinning, Blanking and Piercing – Bending and Forming, Stamping dies, Spring Back effect.

PROCESSING OF PLASTICS: Types of Plastics, Properties, applications and their Processing methods & Equipment (blow &injection moulding)

UNIT – V

ARTIFICIAL INTELLIGENCE IN MANUFACTURING INDUSTRY: Introduction, developments of Artificial intelligence in manufacturing Industry; Advantages, limitations and applications of Artificial Intelligence in Manufacturing industry- fault diagnosis, Quality inspection, inventory control, industrial safety and maintenance.

TEXT BOOKS:

1. Manufacturing Engineering and Technology/ Kalpakjian, Serope;Steven, Schmid R. / Pearson, 1st Edition 2013.
2. Manufacturing Technology / P.N. Rao/ Tata McGraw Hill, 4th Edition 2016.
3. Russell, S. and Norvig, P. 2015. Artificial Intelligence - A Modern Approach, 3rd edition, Prentice Hall.

REFERENCE BOOKS

1. Production Technology / R.K. Jain /Khanna publishers,17th edition 2004.
2. Principles of Metal Castings / Richard W Heine and Roenthal. McGraw Hill Education, 2nd Edition 2017.
3. Welding Process and technology /Dr. Paramar / Khanna Publishers,3rd Edition.
4. Production Technology /Sarma P C / S.Chand Publications,4th Edition 2014.

Semester	IV	L	T	P	C	Course Code
Regulation	**V20**	**3**	**0**	**0**	**3**	**V20MET09**
Name of the Course	**Mechanical Measurements and Metrology**					
Branch	**Mechanical Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Discuss the basic concepts of measurement system and Linear measuring Instruments.	K2
CO2	Explain various types of Temperature, Pressure and Flow measuring Instruments.	K2
CO3	Understand the working of Acceleration, Vibration and Strain measuring devices.	K2
CO4	Apply tolerances and fits for selected product quality and explain various Linear, Angular and Optical measuring instruments and their applications	K3
CO5	Explain the measurement of surface finish with various comparators	K2

UNIT – I

BASIC CONCEPTS: Introduction, Fundamental Measuring Processes and methods, Generalized measurement system and its functional elements, Performance characteristics.

DISPLACEMENT MEASUREMENT: Principle and construction of various transducers – piezo electric, inductive, capacitance, resistance, ionization and photo electric transducers, calibration procedures.

UNIT – II

TEMPERATURE MEASUREMENT: Thermometry, scales of temperature, electrical resistance – thermister, RTD, thermocouple, pyrometers.

PRESSURE MEASUREMENT: Working of Various instruments - dead weight pressure gauge , bourdon pressure gauges, bellows , diaphragm gauges.

FLOW MEASUREMENT- Rota meter, Magnetic, Ultrasonic, hot – wire anemometer, Laser Doppler Anemometer (LDA).

UNIT – III

ACCELERATION AND VIBRATION MEASUREMENT: Principles of seismic instruments – Vibrometer and Accelerometer

STRAIN MEASUREMENTS: Various types of strain measuring instruments – electrical strain gauge – gauge factor – use of resistance strain gauge for measuring bending compressive and tensile strains, strain gauge rosettes.

UNIT – IV

LIMITS AND FITS: Introduction, Normal size, Tolerance limits, Deviations, Allowance, Fits and their types – unilateral and bilateral tolerance system, hole and shaft basis systems –interchangeability and selective assembly. Indian standard Institution system.

LINEAR MEASUREMENT: Standards of measurements- line and end standard. Basic principle and applications of slip gauges, dial indicator and micrometers.

ANGULAR MEASUREMENTS: Bevel protractor – angle slip gauges – sine bar, rollers and spheres used to determine the tapers, Applications of angular measurement.
OPTICAL MEASURING INSTRUMENTS: Tool maker's microscope and its uses – collimators, optical projector – optical flats and their uses, interferometer, and those applications.

UNIT – V
SURFACE TEXTURE: Factors effecting surface roughness, reasons for controlling surface texture, Differences between surface roughness and surface waviness, Elements of surface texture -Numerical assessment of surface finish – CLA, R, R.M.S Values – Ra values, and Rz values. Basic principle of profile meter and Talysurf. ISI symbols for indication of surface finish, Applications surface texture.
COMPARATORS: Types – Mechanical, Optical, Electrical and Electronic, Pneumatic Comparators and Their Uses.

TEXT BOOKS:
1. Measurement Systems: Applications & design / D.S Kumar/ Metropolitan/1st/2015
2. Mechanical Measurements / BeckWith, Marangoni, Linehard/ Pearson/6th/2018
3. Engineering Metrology by R.K.Jain / Khanna Publishers

REFERENCE BOOKS
1. Dimensional Metrology, Connie Dotson, Cengage Learning.
2. Engineering Metrology by I.C.Gupta / DhanpatRai Publishers.
3. Precision Engineering in Manufacturing by R.L.Murthy / New Age.
4. Engineering Metrology and Measurements by NV Raghavendra, L Krishna murthy, Oxford publishers.
5. Engineering Metrology by KL Narayana, Scitech publishers.
6. Mechanical and Industrial Measurements / R.K. Jain/ Khanna Publishers/2008
7. Measurement systems: Application and design/Doeblin Earnest. O. Adaptation/ TMH/ 6th edition, 2018

Semester	IV	L	T	P	C	Course Code
Regulation	**V20**	**3**	**0**	**0**	**3**	**V20MET10**
Name of the Course	**Applied Thermodynamics**					
Branch	**Mechanical Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Illustrate the working of various IC engines and associated systems such as lubricating system, cooling system, fuel feed system and ignition system.	K2
CO2	Explain the working of boilers and its performance parameters.	K2
CO3	Compute the performance of steam nozzles and steam turbines.	K3
CO4	Analyze the working of steam condensers and their performance parameters.	K4
CO5	Compute the performance of gas turbines.	K3

UNIT – I

I. C. ENGINES: Classification, Working principles of Four & Two stroke engine- SI & CI engines, Valve and Port Timing Diagrams, Engine systems- Carburetor, Fuel injection systems for CI engines, Ignition, Cooling and Lubrication system.

UNIT – II

STEAM BOILERS: Classification, working principles Cochran, Locomotive, Babcock and Wilcox, Benson and Loeffler boiler with sketches, mountings and accessories- working principles, boiler horse power, equivalent evaporation, efficiency and heat balance, Draught: classification, height of chimney for given draught and discharge, condition for maximum discharge, efficiency of chimney.

UNIT – III

STEAM NOZZLES: Applications and Types, Flow through nozzles, Thermodynamic analysis – assumptions -velocity of fluid at nozzle exit, Ideal and actual expansion in a nozzle, velocity coefficient, Condition for maximum discharge, critical pressure ratio, Super saturated flow in nozzles- its effects, Wilson's line.

STEAM TURBINES: Classification, Impulse turbine- mechanical details- velocity diagram- effect of friction- power developed, axial thrust, blade or diagram efficiency- condition for maximum efficiency. Methods to reduce rotor speed-Velocity compounding, Pressure compounding and velocity & pressure Compounding, - Velocity and Pressure variation along the flow – Combined velocity diagram for a velocity compounded impulse turbine.

UNIT – IV

REACTION TURBINE: Mechanical details, principle of operation, thermodynamic analysis of a stage, degree of reaction, velocity diagram, Parson's reaction turbine, condition for maximum efficiency.

STEAM CONDENSERS: Classification of condensers- working principles of Jet, Evaporative and surface condensers, Vacuum and its Measurement, Vacuum efficiency and condenser efficiency, Sources of air leakage and its affects in condensers- Condenser Efficiency, Daltons law of partial pressures, Determination of mass of cooling water.

UNIT – V

GAS TURBINES: Simple gas turbine plant- Ideal cycle, essential components, parameters of performance, actual cycle, regeneration, inter cooling and reheating, closed and open cycles, merits and demerits.

TEXT BOOKS:

1. Engineering Thermodynamics, PK Nag 4th Edn, TMH.
2. Thermodynamics. An engineering Approach with student resources/ DVD. Y.A. Cengel & M.A. Boles/ 8th Edn-McGrawHill/2016.
3. Gas Turbines / V Ganesan/3rd edition, TMH/2016.

REFERENCE BOOKS

1. Thermal Engineering/ R.K.Rajput/4th edition/ Laxmi Publications/2010
2. Applied Thermodynamics-II / R. Yadav./6th edition, Central Publishing House/2016
3. Gas turbines and Propulsive Systems/1st edition, DhanpatRai/2014
4. Tables of the properties of steam and other vapours and temperature-Entropy table by Cecil H Peabody by Forgotten books
5. Steam tables by C.P Kodandaraman – New age International

Semester	IV	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL05
Name of the Course	Mechanical Measurements and Metrology Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Experiment and examine errors in calibration of various instruments	K3
CO2	Explain the working principle of metrology and measuring equipments.	K2
CO3	Compute distance, angle and surface finish by using standard measuring equipments	K3

List of experiments :

METROLOGY

1. Measurement of length, height and diameter by vernier calipers, micrometer and height gauge.
2. Surface roughness measurement using talysurf.
3. Taper angle measurement.
4. Tool maker's microscope.
5. Measurement of bores using dial bore indicator.
6. Measurement of thickness of gear tooth by vernier tooth caliper.

INSTRUMENTATION & CONTROL SYSTEMS LAB

List of experiments:

1. Study and calibration of LVDT transducer for displacement measurement.
2. Calibration of pressure gauge.
3. Angular Measurement using angular sensor.
4. Measurement of speed using opto-coupler pickup.
5. Calibration of strain gauge.
6. Study & calibration of resistance temperature detector (RTD) transducer for temperature measurement.
7. Study and calibration of a rota meter for water flow measurement.
8. Vibration measurement trainer.

Semester	IV	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL06
Name of the Course	Manufacturing Process Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Design and Make a pattern, test the properties of sand and prepare a casting.	K3
CO2	Perform Arc welding, Spot welding, TIG, MIG welding and Plasma Arc Cutting operations	K3
CO3	Perform blanking, piercing, Drawing and bending operations.	K3
CO4	Operate injection and blow moulding machines to manufacture plastic components	K3

METAL CASTING:
Pattern Design and pattern making using wood turning lathe Sand properties testing for Compression strength and permeability. Mould preparation, melting and casting.

WELDING:
ARC Welding Lap, Butt & T- Joint Spot Welding –Lap &Butt Joint
TIG Welding -Butt Joint
MIG Welding- Butt Joint Plasma Arc Cutting

METAL FORMING:
Blanking & Piercing operation by using Progressive die

PROCESSING OF PLASTICS:
Injection Molding, Blow molding

REFERENCE BOOKS:
1. Production technology lab – college manual.
2. Manufacturing Engineering and Technology/ Kalpakjian, Serope; Steven, Schmid R./Pearson, 1st Edition, 2013
3. Manufacturing Technology / P.N. Rao/TMH, 4th Edition, 2016.

Semester	IV	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL07
Name of the Course	Thermal Engineering Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Levels
CO1	Evaluate the performance of I.C.Engines.	K4
CO2	Evaluate the performance of compressors.	K4
CO3	Describe the working of Boilers.	K2

1. I.C. Engines valve and port timing diagrams.
2. I.C. Engines performance test and Exhaust emission measurements (4 -stroke diesel engine).
3. I.C. Engines Performance Test for 2 Stroke SI engines
4. Evaluation of engine friction by conducting Morse test on 4-stroke multi cylinder petrol engine.
5. Draw the heat balance sheet for 4- stroke multi cylinder petrol engine.
6. I.C. Engines Retardation Test
7. Economical speed test of an IC engine.
8. Performance test on variable compression ratio engines.
9. Performance test on reciprocating air compressor unit.
10. Dis-assembly / Assembly of Engines
11. Study of Boilers

Syllabi for the courses offered in M. Tech under V21 Regulation for the Academic Year 2021-2022

I Semester

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET01
Name of the Course	Advanced Fluid Mechanics					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Level
CO1	Apply equations of motion for fluid flow and in viscid flow problems	K3
CO2	Analyze fluid flow using Navier stokes equation	K4
CO3	Explain Boundary layer concepts to flow over flat plate	K2
CO4	Analyze turbulent layer equations and internal flow	K4
CO5	Illustrate Compressible flow	K3

UNIT – I

INVISCID FLOW OF INCOMPRESSIBLE FLUIDS: Lagrangian and Eulerain Descriptions of fluid motion, Path lines, Stream lines, Streak lines, stream tubes – velocity of a fluid particle, types of flows, Equations of three dimensional continuity equation, Stream and Velocity potential functions.

BASIC LAWS OF FLUID FLOW: Condition for irrotationality, circulation & vorticity Accelerations in Carte systems normal and tangential accelerations, Euler's, Bernouli equations in 3D– Continuity and Momentum Equations.

UNIT – II

VISCOUS FLOW: Derivation of Navier,Stoke's Equations for viscous compressible flow – Exact solutions to certain simple cases: Plain Poisoulle flow, Coutte flow with and without pressure gradient , Hagen Poisoulle flow, Blasius solution.

UNIT – III

BOUNDARY LAYER CONCEPTS : Prandtl's contribution to real fluid flows – Prandtl's boundary layer theory , Boundary layer thickness for flow over a flat plate – Approximate solutions – Creeping motion (Stokes) – Oseen's approximation,Von,Karman momentum integral equation for laminar boundary layer –– Expressions for local and mean drag coefficients for different velocity profiles.

UNIT – IV

INTRODUCTION TO TURBULENT FLOW: Fundamental concept of turbulence – Time Averaged Equations – Boundary Layer Equations , Prandtl Mixing Length Model , Universal Velocity Distribution Law: Van Driest Model –Approximate solutions for drag coefficients – More Refined Turbulence Models – k,epsilon model , boundary layer separation and form drag – Karman Vortex Trail, Boundary layer control, lift on circular cylinders.

INTERNAL FLOW: Smooth and rough boundaries – Equations for Velocity Distribution and frictional Resistance in smooth and rough Pipes – Roughness of Commercial Pipes – Moody's diagram.

UNIT – V

COMPRESSIBLE FLUID FLOW – I: Thermodynamic basics – Equations of continuity, Momentum and Energy , Acoustic Velocity, Derivation of Equation for Mach Number – Flow Regimes – Mach Angle – Mach Cone – Stagnation State.

COMPRESSIBLE FLUID FLOW – II: Area Variation, Property Relationships in terms of Machnumber, Nozzles, Diffusers – Fanno and Releigh Lines, Property Relations – Isothermal Flow in Long Ducts – Normal Compressible Shock, Oblique Shock: Expansion and Compressible Shocks – Supersonic Wave Drag.

TEXT BOOKS:

1. Fluid Mechanics / L.VictorSteeter / TMH
2. Fluid Mechanics / Frank M.White / MGH

REFERENCE BOOKS:

1. Fluid Mechanics and Machines/Modi and Seth/Standard Book House
2. Fluid Mechanics/Cohen and Kundu/Elsevier/5th edition
3. Fluid Mechanics/Potter/Cengage Learning
4. Fluid Mechanics/William S Janna/CRC Press
5. Fluid Mechanics / Y.A Cengel and J.M Cimbala/MGH
6. Boundary Layer Theory/ Schlichting H /Springer Publications
7. Dynamics & Theory and Dynamics of Compressible Fluid Flow/ Shapiro.
8. Fluid Dynamics/ William F. Hughes & John A. Brighton/TMH
9. Fluid Mechanics / K.L Kumar /S Chand & Co.

Semester	**I**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TET02**
Name of the Course	**Computational Fluid Dynamics**					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Level
CO1	Explain various finite element formulations/methods	K2
CO2	Apply Hyperbolic equations for non linear problems	K3
CO3	Differentiate formulations of Compressible and incompressible flows	K4
CO4	Differentiate various formulations for 2D & 3D problems	K4
CO5	Illustrate various formulations for steady state and transient problems	K3

UNIT – I

INTRODUCTION: Finite difference method, finite volume method, finite element method, governing equations and boundary conditions. Derivation of finite difference equations.

SOLUTION METHODS: Solution methods of elliptical equations – finite difference formulations, interactive solution methods, direct method with Gaussian elimination.
Parabolic equations, explicit schemes and Von Neumann stability analysis, implicit schemes, alternating direction implicit schemes, approximate factorization, fractional step methods, direct method with tridiagonal matrix algorithm.

UNIT – II

HYPERBOLIC EQUATIONS: Explicit schemes and Von Neumann stability analysis, implicit schemes, multi step methods, nonlinear problems, second order one-dimensional wave equations.Burgers equations: Explicit and implicit schemes, Runge-Kutta method.

UNIT – III

FORMULATIONS OF INCOMPRESSIBLE VISCOUS FLOWS: Formulations of incompressible viscous flows by finite difference methods, pressure correction methods, vortex methods.

TREATMENT OF COMPRESSIBLE FLOWS: Potential equation, Eluer equations, Navier-Stokes system of equations, flow-field, dependent variation methods, boundary conditions.

UNIT – IV

FINITE VOLUME METHOD: Finite volume method via finite difference method,formulations for two and three, dimensional problems.

UNIT – V

STANDARD VARIATIONAL METHODS: Linear fluid flow problems, steady state problems, Transient problems.

TEXT BOOKS:

1. Computational fluid dynamics, T. J.Chung, Cambridge University press, 2002.
2. Computational Fluid Dynamics by John D. Anderson, McGraw Hill Book Company 2017.

REFERENCE BOOKS:

1. Text book of fluid dynamics, Frank Chorlton, CBS Publishers &distributors, 1985.
2. Computational Techniques for Fluid Dynamics, Volume 1& 2 by C. A. J. Fletcher, SpringerPublication, 2012.

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE01
Name of the Course	**Advanced I.C Engine Electric and Hybrid Vehicles** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge Level
CO1	Explain static and dynamic effects of gas exchange process	K2
CO2	Illustrate motion of charge inside the cylinder	K3
CO3	Differentiate between the phenomena of combustion in IC engines	K4
CO4	Explain Electric vehicles and types of Batteries	K2
CO5	Analyze Hybrid and Fuel Cell Vehicles	K3

UNIT – I

GAS EXCHANIGING PROCESSES: Inlet and exhaust processes in the four stroke cycle volumetric efficiency quasi static effects combined quasi static and dynamic effects variation with speed and valve area lift and timing –flow through valves poppet valve geometry and timing flow rate and discharge coefficients, residual gas fraction , exhaust gas flow rate and temperature variation, scavenging in two stroke cyclic engines, scavenging parameters and models actual scavenging processes , flow through ports, super charging and turbo changing – methods of power boosting basic relationships compressors, turbines wave compression devices.

UNIT – II

CHARGE MOTION WITHIN THE CYLINDER: Intake Jet Flow, Mean velocity and turbulence characteristics definitions application to engine velocity data swirl – swirl measurement, swirl generation during induction swirl modification within the cylinder squish pre chamber engine flows crevice flows and blowby flows generated by piston –cylinder wall interaction.

UNIT – III

COMBUSTION IN S.I AND C.I ENGINES: Review of normal and abnormal combustion in SI and CI engine cyclic variation in combustion of SI engine , analysis of cylindrical pressure data in SI and CI engine ,MPFI in SI engines common rail fuel injection system in CI engines fuel spray behavior in CI engines.

UNIT – IV

ELECTRIC VEHICLES: Introduction: Limitations of IC Engines as prime mover, History of EVs, EV system, components of EV-DC and AC electric machines: Introduction and basic structure, Electric vehicle drive train, advantages and limitations, Permanent magnet and switched reluctance motors

BATTERIES: Battery: lead, acid battery, cell discharge and charge operation, construction, advantages of lead, acid battery, Battery parameters: battery capacity, discharge rate, state of charge, state of discharge, depth of discharge, Technical characteristics, Ragone plots.

UNIT – V

HYBRID VECHILES: Configurations of hybrids, Series and Parallel, advantages and limitations, Hybrid drive trains, sizing of components Initial acceleration, rated vehicle

velocity, Maximum velocity and maximum gradeability, Hydrogen: Production, Hydrogen storage systems, reformers.
FUEL CELL VECHILES: Introduction, Fuel cell characteristics, Thermodynamics of fuel cells, Fuel cell types: emphasis on PEM fuel cell.

TEXT BOOKS:
1. J.B. Heywood Internal Combustion Engine Fundamentals, McGraw Hill Co.1988
2. Seth Leitman and Bob Brant Build your own electric vehicle McGraw Hill Co.2009.
3. F. Barbir PEM Fuel Cells-Theory and Practice Elsevier Academic Press,2005.

REFERENCE BOOKS:
1. W.W. Pulkrabek Engineering Fundamentals of IC Engine, PHI Pvt. Ltd 2002

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE02
Name of the Course	**Gas Dynamics** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain equations governing compressible flows	K2
CO2	Explain one dimensional compressible flow concepts	K2
CO3	Explain Two dimensional compressible flow concepts	K2
CO4	Illustrate equations governing quasi one dimensional flows	K3
CO5	Illustrate Unsteady wave motions	K3

UNIT – I

BASIC CONCEPTS : Introduction to compressible flow, A brief review of thermodynamics and fluid mechanics, Integral forms of conservation equations, Differential conservation equations, Continuum Postulates, Acoustic speed and Mach number, Governing equations for compressible flows.

UNIT – II

ONE-DIMENSIONAL COMPRESSIBLE FLOW: One dimensional flow concept, Isentropic flows, Stagnation/Total conditions, Characteristic speeds of gas dynamics, Dynamic pressure and pressure coefficients, Normal shock waves, Rankine , Hugonoit equations, Rayleigh flow, Fannoflow, Crocco's theorem.

UNIT – III

TWO-DIMENSIONAL FLOWS: Oblique shock wave and its governing equations, θ,B,M relations, The Hodograph and Shock Polar, Supersonic flow over wedges and cones, Mach line, Attached and Detached shock, Reflections and interaction of oblique shock waves, Expansion waves, Prandtl , Meyer flow and its governing equations, Supersonic flow over convex and concave corners, Approximation of continuous expansion waves by discrete waves.

UNIT – IV

QUASI-ONE DIMENSIONAL FLOWS: Governing equations, Area velocity relations,Isentropic flow through variable, area ducts, convergent, divergent (or De Laval) nozzles, Over, expanded and under, expanded nozzles, Diffusers.

UNIT – V

UNSTEADY WAVE MOTIONS: Moving normal shock waves, Reflected shock waves, Physical features of wave propagation, Elements of acoustic theory, Incident and reflected waves, Shock tube relations, Piston analogy, Incident and reflected expansion waves, Finite compression waves, Shock tube relations.

INTRODUCTION TO EXPERIMENTAL FACILITIES: Subsonic wind tunnels, Supersonic wind tunnels, Shock tunnels, Free, piston shock tunnel, detonation, driven shock tunnels, and Expansion tubes.

TEXT BOOKS:
1. Gas Dynamics by S.M Yahya, 2017
2. Gas Dynamics by E. Radha Krishnan, Prentice Hall India Learning Private Limited

REFERENCE BOOKS:
1. Fundamentals of Gas Dynamics by Robert D. Zucker, John Wiley & Sons, INC.
2. Dynamics and Thermodynamics of compressible fluid flow (Vol. I, II) by Ascher H.Shapiro.
3. Elements of Gas Dynamics by H.W. Liepmann and A. Roshko, Wiley.
4. Fundamentals of Gas Dynamics by V. Babu, John Wiley & Sons.
5. Modern Compressible Flow by John D. Anderson, Jr./McGraw Hill.

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE03
Name of the Course	**Cryogenic Engineering** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain Vapour compression Refrigeration System and its components	K2
CO2	Illustrate Multiple stage Refrigeration system	K3
CO3	Explain concepts of Cryogenics	K2
CO4	Illustrate the applications of Cryogenics	K3
CO5	Explain insulation to low temperatures	K2

UNIT – I

VAPOUR COMPRESSION REFRIGERATION SYSTEMS:
Analysis of vapor compression refrigeration cycle, Second law of Thermodynamics, Carnot refrigerator, Vapor Compression Refrigeration Cycle, components, Properties of Refrigerants.

UNIT – II

MULTIPLE STAGE REFRIGERATION SYSTEM : Introduction, Methods of improving COP of Multi Stage Compression with Intercooling , Multistage evaporator System, Cascade Refrigeration System, Dry ice Manufacturing, Auto Cascade System, Joule-Thomson Coefficient.

UNIT – III

CRYOGENICS: Liquefaction of air, Linde system, Analysis, Liquefaction of Neon, Hydrogen and Helium.

UNIT – IV

APPLICATION OF LOWER TEMPERATURES: Effects on the properties of metal strength, Thermal properties, super conductivity, super fluidity. Applications, such as expansion fitting, cryobiology, cryosurgery, space research, computers , underground power lines.

UNIT – V

LOW TEMPERATURE INSULATION: Reflective insulation, Evacuated powders, Rigid foams, Super insulation. Cooling by adiabatic de-magnetization, Gas separation and cryogenic systems, separation of gases, Rectifying columns, Air separating, single and double columns Air separation plant. Storage and handling of cryogenic liquids, Dewars and other types of containers.

TEXT BOOKS:
1. Refrigeration & Air, Conditioning by C.P. Arora, TMH, 2017
2. Cryogenic Systems by R.F Barron, Oxford University Press, 1985.

REFERENCE BOOKS:
1. Refrigeration& Air, Conditioning, StoeckerW.F. Jones, J.W., McGraw Hill, 2014.
2. Refrigeration & Air, Conditioning, Manohar Prasad New Age, 2018.
3. Refrigeration & Air, Conditioning Domkunduwar, and Arora, Dhanpatrai & Sons, 2015.

Semester	I	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE04**
Name of the Course	**Advanced Thermodynamics** Program Elective – I					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain availability and irreversibility	K2
CO2	Explain relations of thermodynamic properties	K2
CO3	Differentiate between properties of mixtures of gases and liquids	K4
CO4	Illustrate equilibrium of vapour and liquid mixtures	K3
CO5	Explain combustion phenomena and reactions involved in combustion	K2

UNIT – I
AVAILABILITY AND IRREVERSIBILITY: Quality of Energy, available and unavailable energy, availability, surroundings work, reversible work and irreversibility, availability in a closed system, availability in a SSSF process in an open system, second law efficiencies of processes, second law efficiency of cycles and exergy balance equations.

UNIT – II
THERMODYNAMIC PROPERTY RELATIONS: Helmholtz and Gibbs Functions, two Mathematical Conditions for Exact Differentials, Maxwell Relations, Clapeyron Equation, Relations for Changes in Enthalpy, Internal Energy and Entropy, Specific Heat Relations, Generalized Relations/Charts for Residual Enthalpy and Entropy, Gibbs Function at zero Pressure: A Mathematical Anomaly, Fugacity, Fugacity Coefficient and Residual Gibbs Function, The Joule, Thomson Coefficient and Inversion Curve, Thermodynamic similarity.

UNIT – III

NON-REACTING MIXTURES OF GASES AND LIQUIDS: Measures of Composition in Multi Component Systems.

GAS MIXTURES: Mixtures of ideal Gases, Gas-Vapor Mixtures, Application of First Law to Psychometric Processes, Real Gas Mixtures.

LIQUID MIXTURES/SOLUTIONS: Ideal Solutions, Real Solutions.

THERMODYNAMIC RELATIONS FOR REAL MIXTURES: Partial Properties, Relation for Fugacity and Fugacity Coefficient in Real Gas Mixtures, Relations for Activity and Activity Coefficient in Real Liquid Mixtures/Solutions.

UNIT – IV

PHASE EQUILIBRIUM: V A P O U R LIQUID EQUILIBRIUM OF MIXTURES: Phase Diagrams for Binary Mixtures, Vapor, Liquid Equilibrium in Ideal Solutions, Criteria for Equilibrium, Criterion foe phase Equilibrium, Calculation of Standard State Fugacity of Pure Component, Vapor Liquid Equilibrium at Low to Moderate Pressures, Determination of Constants of Activity Coefficient Equations, and Enthalpy Calculations.

UNIT – V

CHEMICAL REACTIONS AND COMBUSTION: Thermo chemistry, Measures of Composition in Chemical Reactions, Application of First Law of Thermodynamics to chemical Reactions, the Combustion Process-Standard Heat/Enthalpy of Combustion, Reactions at actual Temperatures, adiabatic Flame Temperature, Entropy Change of Reacting Systems, Application of second Law of Thermodynamics to chemical Reactions, chemical equilibrium-Advancement of Chemical Reactions, Equilibrium Criterion in Chemical Reactions, equilibrium Constant and Law of Mass Action, Equilibrium Constant for Gas Phase Reactions in the standard state.

TEXT BOOKS:

1. Basic and Applied Thermodynamics, P.K.Nag, TMH, 2019.
2. Thermodynamics, J.P Holman, Mc Graw Hill, 2017.
3. Thermodynamics, CP Arora, Mc Graw Hill education (India pvt limited), 2016.

REFERENCE BOOKS:

1. Engg. Thermodynamics, PL.Dhar, Elsevier, 2008.
2. Thermodynamics, Sonnatag & Van Wylen, John Wiley & Sons, 2004.
3. Thermodynamics for Engineers, Doolittle-Messe, John Wiley & Sons, 2018.
4. Irreversible thermodynamics, HR De Groff,
5. Thermal Engineering, Soman, PHI, 2011.
6. Thermal Engineering, Rathore, TMH, 2010.
7. Engineering Thermodynamics, Chatopadyaya, 2010.

Semester	I	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE05**
Name of the Course	**Gas Turbines** Program Elective – II					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain turbo machines and cycles used in gas turbines	K2
CO2	Apply the concepts of rotating machines and centrifugal compressors	K3
CO3	Analyze Axial flow compressors and design concepts	K4
CO4	Illustrate Gas turbine combustion systems	K3
CO5	Illustrate Axial and Radial flow turbines	K3

UNIT – I

INTRODUCTION: Review of the fundamentals, Classification of turbo machines, Applicationsof gas turbines.

GAS TURBINE CYCLES FOR SHAFT POWER: Ideal shaft power cycles and their analysis, Practical shaft power cycles and their analysis.

UNIT – II

FUNDAMENTALS OF ROTATING MACHINES: Euler's energy equation, Components of energy transfer, Impulse and reaction machines, Degree of reaction, Flow over an airfoil, Lift and drag.

CENTRIFUGAL COMPRESSORS: Construction and principle of operation, Factors affecting stage pressure ratio, Compressibility effects, Surging and choking, Performance characteristics.

UNIT – III

AXIAL FLOW COMPRESSORS: Construction and principle of operation, Factors affecting stage pressure ratio, Degree of reaction, Three dimensional flow, Design process, Blade design, Stage performance, Compressibility effects, Off, design performance.

UNIT – IV

GAS TURBINE COMBUSTION SYSTEMS: Operational requirements, Factors affecting combustion chamber design, Combustion process, Flame stabilization, Combustion chamber performance, Practical problems, Gas turbine emissions.

UNIT – V

AXIAL AND RADIAL FLOW TURBINES: Construction and operation of axial flow turbines, Vortex theory, Estimation of stage performance, Overall turbine performance, Turbine blade cooling, Radial flow turbines.

TEXT BOOKS:
1. Sarvanamuttoo, H.I.H., Rogers, G. F. C. and Cohen, H., Gas Turbine Theory, 7thEdition, Pearson Prentice Hall, 2017.
2. Ganesan, V., Gas Turbines, 3rd Edition, Tata McGraw Hill, 2017.

REFERENCE BOOKS:

3. Yahya, S. M., Turbines, Compressors and Fans, 4th Edition, Tata McGraw Hill, 2017.
Lefebvre, A.H. and Ballal D. R., Gas Turbine Combustion – Alternative Fuels andEmissions, CRC Press, 2010

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE06
Name of the Course	**Alternative Fuel Technologies** Program Elective – II					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain alternative fuels	K2
CO2	Explain production methods of alternative fuels	K2
CO3	Illustrate performance characteristics of liquid alternative fuels	K3
CO4	Illustrate performance characteristics of gaseous alternative fuels	K3
CO5	Analyze performance characteristics of alternative fuels and methods to improve efficiency	K4

UNIT – I
Fossil fuels and their limitations Engine requirements; Potential alternative liquid and gaseous fuels.

UNIT – II
Methods of production; Properties, safety aspects, handling and distribution of various liquid alternative fuels like alcohols, vegetable oils, Di, methyl and Di, ethyl ether etc.

UNIT – III
Different ways of using alternative liquid fuels in engines, performance and emission characteristics; Conversion of vegetable oils to their esters and effect on engine performance.

UNIT – IV
Use of gaseous fuels like biogas, LPG, hydrogen, natural gas, producer gas etc. in SI/CI engines; Production, storage, distrbution and safety aspects of gaseous fuels.

UNIT – V
Different approaches like duel fuel combustion and surface ignition to use alternative fuels in engines; Use of additives to improve the performance with alternative fuels; Hybrid power plantsand fuel cell.

TEXT BOOK:
1. Alternative Fuels: The Future of Hydrogen, Second Edition**,** Michael Frank Hordeski, CRCPress

REFERENCE BOOKS:
1. Alternative Fuels for Transportation, A S Ramadhas, CRC Press
2. Alternative Fuels & Advanced Technology Vehicles: Incentives & Considerations, Thomas Huber, Jack Spera, Nova Science Publishers

Semester	I	L	T	P	C	Course Code

Regulation	V21	3	0	0	3	V21TEE07
Name of the Course	**Energy Conservation and Management** Program Elective – II					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain the importance of energy conservation and management	K2
CO2	Explain various methods of energy conservation	K2
CO3	Illustrate various methods of energy management	K3
CO4	Illustrate Economic analysis	K3
CO5	Explain standards and laws of energy conservation and management	K2

UNIT – I
The energy market, energy scenario, planning, utilization pattern and future strategy, Importanceof energy management.
UNIT – II
ENERGY CONSERVATION: Methods of energy conservation and energy efficiency for buildings, air conditioning, heat recovery and thermal energy storage systems Energy conservation in industries, Cogeneration, Combined heating and power systems.
UNIT – III
ENERGY MANAGEMENT: Principles of Energy Management, Energy demand estimation, Organising and Managing Energy Management Programs, Energy pricing
Energy Audit: Purpose, Methodology with respect to process Industries, Characteristic method employed in Certain Energy Intensive Industries
UNIT – IV
ECONOMIC ANALysis: Scope, Characterization of an Investment Project
UNIT – V
Relevant international standards and laws.

Semester	I	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE08

Name of the Course	**Theory and Technology of Fuel Cells** Program Elective – II
Specialization	**Thermal Engineering**

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain concepts of Fuel cells	K2
CO2	Explain various models of Fuels cells	K2
CO3	Illustrate Low and High temperature fuel cells	K3
CO4	Determine the production of fuels and design of various fuel cells	K4
CO5	Explain the components of fuel cell system	K2

UNIT – I
INTRODUCTION: Relevance, Principle, various configurations (Alkaline, Acid, Proton Exchange Membrane, direct methanol, molten carbonate and solid oxide fuel cells) fuel cell applications. Basic theory of electrochemistry, electrochemical energy conversion, electrochemical techniques, Thermodynamics of fuel cells, Heat and mass transfer in fuel cells, Single cell characteristics.
UNIT – II
MODELLING: Electrochemical model, Heat and mass transfer model, System thermodynamic model.
UNIT – III
LOW AND HIGH TEMPERATURE FUEL CELLS: Proton exchange membrane fuel cell (PEMFC) and direct methanol fuel cell (DMFC): their special features and characteristics. Molten carbonate fuel cell (MCFC) and solid oxide fuel cell (SOFC) for power generation, theirspecial features and characteristics.
UNIT – IV
FUELS AND FUEL PROCESSING: Availability, production and characteristics of Hydrogen, fossil fuel – diverted fuels and biomass, diverted fuels. Principles of design of PEMFC, DMFC and SOFC.
UNIT – V
FUEL CELL SYSTEM: Materials, component, stack, interconnects, internal and external reforming, system layout, operation and performance.

TEXT BOOKS:
1. Basu, S. (Ed) Fuel Cell Science and Technology, Springer, N.Y. (2007).

Semester	**I**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**0**	**0**	**3**	**2**	**V21TEL01**

Name of the Course	**Computational Fluid Dynamics Lab – I**
Specialization	**Thermal Engineering**

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Analyze flow through pipes, Heat exchanger	K4
CO2	Analyze performance characteristics of combustion and air cooler	K4
CO3	Analyze thermal stresses, temperature gradient & Radiation heat transfer in cylinders	K4
CO4	Determination of Insulated Wall Temperature, thermal loading of support structure	K4
CO5	Illustrate Solid Liquid Phase Change	K3

1. Analysis of Transient state compressible flow through pipes
2. Performance Analysis of Heat Exchanger Device
3. Calibration Performance characteristics of Combustion
4. Estimation of C.O.P for Refrigeration Cycle
5. Analysis of Gas cooled Air-Cooler
6. Performance of Air-Conditioner
7. Thermal Stresses in long cylinder
8. Determination of Insulated Wall Temperature
9. Temperature Gradient across solid Cylinder
10. Radiation Heat Transfer between Concentric Cylinders
11. Solid Liquid Phase Change
12. Thermal Loading on Support structure

- MATLAB, ANSYS fluent modules: for conducting the simulation experiments.

Semester	I	L	T	P	C	Course Code
Regulation	V21	0	0	3	2	V21TEL02
Name of the Course	THERMAL ENGINEERING LAB – I					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Determination of fuel properties	K4
CO2	Investigate the exhaust emissions of IC Engines	K4
CO3	Test the Performance of compressors & IC Engines	K4

1. Abel's apparatus: Determination of flash and fire points of a given oil sample
2. Redwood Viscometer No.1: Determination of kinematic and absolute viscosities of an oil sample given
3. Measurement of Viscosity by Sayboltz's Viscometer.
4. Determination of Calorific Value of fuel.
5. Two-Stage Reciprocating Air-Compressor - Determination of volumetric efficiency of the compressor as
   a function of receiver pressure.
6. I.C. Engines performance test and Exhaust emission measurements (4 -stroke diesel engine)
7. I.C. Engines performance test and Exhaust emission measurements (2-stroke petrol engine)
8. Evaluation of engine friction by conducting Morse test on 4-stroke multi cylinder petrol engine.
9. I.C. Engines heat balance at different loads and show the heat distribution curve.
10. Performance test on variable compression ratio engines.
11. Performance test on Rotary Air Compressor.

II Semester

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET03
Name of the Course	Advanced Heat and Mass Transfer					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain Equations governing heat conduction heat transfer	K2
CO2	Illustrate finite difference methods for heat conduction and convection problems	K3
CO3	Analyze heat and mass transfer in internal and external flows	K4
CO4	Explain concepts related to free convection, boiling & condensation and Heat exchangers	K2
CO5	Explain concepts of Radiation heat transfer and mass transfer.	K2

UNIT – I

BRIEF INTRODUCTION TO DIFFERENT MODES OF HEAT TRANSFER: Conduction: General heat Conduction equation, initial and boundary conditions.

Transient heat conduction: Lumped system analysis, Heisler charts, semi infinite solid,use of shape factors in conduction,2D transient heat conduction, product solutions.

UNIT – II

FINITE DIFFERENCE METHODS FOR CONDUCTION: ID & 2D steady state and simple transient heat conduction problems, implicit and explicit methods.

FORCED CONVECTION: Equations of fluid flow, concepts of continuity, momentum equations, derivation of energy equation, methods to determine heat transfer coefficient: Analytical methods, dimensional analysis and concept of exact solution. Approximate method, ntegral analysis.

UNIT – III

EXTERNAL FLOWS: Flow over a flat plate: Integral method for laminar heat transfer coefficient for different velocity and temperature profiles. Application of empirical relations to variation geometries for laminar and turbulent flows.

INTERNAL FLOWS: Fully developed flow: Integral analysis for laminar heat transfer coefficient, types of flow, constant wall temperature and constant heat flux boundary conditions, hydrodynamic &thermal entry lengths; use of empirical correlations.

UNIT – IV

FREE CONVECTION: Approximate analysis on laminar free convective heat transfer, boussinesque approximation, different geometries, and combined free and forced convection.

BOILING AND CONDENSATION: Boiling curve, correlations, Nusselts theory of film condensation on a vertical plate, assumptions & correlations of film condensation for different geometries.

HEAT EXCHANGERS Types of Heat Exchangers, LMTD and NTU methods

UNIT – V
RADIATION HEAT TRANSFER: Radiant heat exchange in grey, non, grey bodies, with transmitting, Reflecting and absorbing media, specular surfaces, gas radiation, from flames.
MASS TRANSFER: Concepts of mass transfer, diffusion & convective mass transfer analogies, significance of non-dimensional numbers.

TEXT BOOKS:
1. Principles of Heat Transfer / Frank Kreith / Cengage Learning
2. Heat Transfer / Necati Ozisik / TMH

REFERENCE BOOKS:
1. Fundamentals of Heat and Mass Transfer,5th Ed. / Frank P. Incropera/John Wiley
2. Elements of Heat Transfer/E. Radha Krishna/CRC Press/2012
3. Introduction to Heat Transfer/SK Som/PHI
4. Heat Transfer / Nellis& Klein / Cambridge University Press / 2012.
5. Heat Transfer/ P.S. Ghoshdastidar/ Oxford Press
6. Engg. Heat & Mass Transfer/ Sarat K. Das/DhanpatRai
7. Heat Transfer/ P.K.Nag /TMH
8. Heat Transfer / J.P Holman/MGH

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TET04
Name of the Course	Thermal Measurements and Process Controls					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain elements of measuring instruments	K2
CO2	Explain flow measuring devices	K2
CO3	Explain temperature measurement methods	K2
CO4	Illustrate various indicating, recording and data acquisition systems	K3
CO5	Analyze various process control systems	K4

UNIT – I

GENERAL CONCEPTS: Fundamental elements of a measuring instruments. Static and dynamic characteristics – errors in instruments – Different methods of measurement and their analysis – Sensing elements and transducers. Measurement of pressure – principles of pressure measurement, static and dynamic pressure, vacuum and high pressure measurement – Measurement of low pressure, Manometers, Calibration methods, Dynamic characteristics, design principles.

UNIT – II

MEASUREMENT OF FLOW: Obstruction meters, variable area meters, Pressure probes, compressible fluid flow measurement, Thermal anemometers, calibration of flow measuring instruments. Introduction to design of flow measuring instruments.

UNIT – III

TEMPERATURE MEASUREMENT: Different principles of Temperature Measurement, use of bimetallic thermometers – Mercury thermometers, Vapor Pressure thermometers, Thermo positive elements, thermocouples in series & parallel, pyrometry, measurement of heat flux, calibration of temperature measuring instruments. Design of temperature measuring instruments.

MEASURMENT OF : Velocity, moisture content , humidity and thermal conductivity .

UNIT – IV

VOLTAGE INDICATING, RECORDING AND DATA ACQUISITION SYSTEMS: Standards and calibration, analog volt meters and potentiometers. Electrical instruments. Digital voltmeters and multimeters. Signal generation. Electro mechanical servo type XT and XY recorders. Thermal array recorders and data acquisition systems. Analog and digital CROs.

Displays and liquid crystals flat panel displays. Displays. Virtual instruments. Magnetic tape and disk recorders/reproducers. Fiber optic sensors.

UNIT – V
PROCESS CONTROL: Introduction and need for process control principles, transfer functions, block diagrams, signal flow graphs, open and closed loop control systems – Analysis of First & Second order systems with examples of mechanical and thermal systems. Control System Evaluation – Stability, steady state regulations, transient regulations.

TEXT BOOK:

1. Measurement System, Application & Design – E.O. Doeblin, MGH

REFERENCE BOOKS:

1. Mechanical and Industrial Measurements – R.K. Jain – Khanna Publishers.
2. Mechanical Measurements – Buck & Beckwith – Pearson.
3. Control Systems, Principles & Design, 2nd Edition – M. Gopal – TMH.
4. Mechanical Measurements – J.P Holman

Semester	**II**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE09**
Name of the Course	**Equipment Design for Thermal Systems** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various Heat Exchangers and methods of designing them	K2
CO2	Illustrate design of double pipe heat exchanger	K3
CO3	Demonstrate condensation of vapours	K3
CO4	Explain concepts of vaporizers, evaporators and reboilers	K3
CO5	Outline concepts of designing of direct contact heat exchangers	K4

UNIT – I

CLASSIFICATION OF HEAT EXCHANGERS: Introduction, Recuperation & regeneration, Tabular heat exchangers, Double pipe, shell & tube heat exchanger, Plate heat Exchangers, Gasketedplate heat exchanger. Spiral plate heat exchanger, Lamella heat exchanger, Extended surface heat exchanger, Plate fin and Tabular fin.

BASIC DESIGN METHODS OF HEAT EXCHANGER: Introduction, Basic equations in design, Overall heat transfer coefficient, LMTD method for heat exchanger analysis, Parallel flow, Counter flow. Multipass, cross flow heat exchanger design calculations:

UNIT – II

DOUBLE PIPE HEAT EXCHANGER: Film coefficient for fluids in annulus, fouling factors, Calorific temperature, Average fluid temperature, The calculation of double pipe exchanger, Double pipe exchangers in series parallel arrangements.

Shell & Tube Heat Exchangers: Tube layouts for exchangers, Baffle heat exchangers, Calculation of shell and tube heat exchangers, Shell side film coefficients, Shell side equivalent diameter, The true temperature difference in a 1,2 heat exchanger. Influence of approach temperature on correction factor. Shell side pressure drop, Tube side pressure drop, Analysis of performance of 1,2 heat exchanger and design of shell & tube heat exchangers, Flow arrangements for increased heat recovery, the calculation of 2,4 exchangers.

UNIT – III

CONDENSATION OF SINGLE VAPOURS: Calculation of horizontal condenser, Vertical condenser, De,Super heater condenser, Vertical condenser,sub,Cooler, Horizontal Condenser,Sub cooler, Vertical reflux type condenser. Condensation of steam.

UNIT – IV

VAPORIZERS, EVAPORATORS AND REBOILERS: Vaporizing processes, Forced circulation vaporizing exchanger, Natural circulation vaporizing exchangers, Calculations of a reboiler. Extended Surfaces: Longitudinal fins. Weighted fin efficiency curve, Calculation of a Double pipe fin efficiency curve. Calculation of a double pipe finned exchanger, Calculation of a longitudinal fin shell and tube exchanger.

UNIT – V

DIRECT CONTACT HEAT EXCHANGER: Cooling towers, relation between wet bulb & dew point temperatures, The Lewis number and Classification of cooling towers, Cooling tower internals and the roll of fill, Heat Balance. Heat Transfer by simultaneous diffusion and convection, Analysis of cooling tower requirements, Deign of cooling towers, Determination of the number of diffusion units, Calculation of cooling tower performance.

TEXT BOOK:

1. Process Heat Transfer/D.Q.Kern/ TMH
2. Design of Thermal Systems / Wilbert F. Stoecker / McGrawHill 1. Heat Exchanger Design/
   A.P.Fraas and M.N.Ozisicj/ John Wiely& sons, New York.
3. Cooling Towers / J.D.Gurney and I.A. Cotter/ Maclaren
4. Design & Optimization of Thermal Systems / Yogesh Jaluria / CRC Press

REFERENCE BOOKS:

1. Heat Exchanger Design/ A.P.Fraas and M.N.Ozisicj/ John Wiely& sons, New York.
2. Cooling Towers / J.D.Gurney and I.A. Cotter/ Maclaren
3. Design & Optimization of Thermal Systems / Yogesh Jaluria / CRC Press

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE10**
Name of the Course	**Solar Energy Technologies** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various elements of solar energy systems	K2
CO2	Illustrate the design of solar water heating system	K3
CO3	Illustrate solar energy storage systems	K3
CO4	Explain performance characteristics and energy conversion systems	K2
CO5	Explain economics of solar energy systems	K2

UNIT – I

INTRODUCTION: Solar energy option, specialty and potential – Sun – Earth – Solar radiation, beam and diffuse – measurement – estimation of average solar radiation on horizontal and tilted surfaces – problems – applications.
Capturing solar radiation – physical principles of collection – types – liquid flat plate collectors – construction details – performance analysis – concentrating collection – flat plate collectors with plane reflectors– cylindrical parabolic collectors – Orientation and tracking – Performance Analysis.

UNIT – II

DESIGN OF SOLAR WATER HEATING SYSTEM AND LAYOUT: Power generation – solar central receiver system – Heliostats and Receiver – Heat transport system – solar distributed receiver system – Power cycles, working fluids and prime movers, concentration ratio.

UNIT – III

THERMAL ENERGY STORAGE: Introduction – Need for – Methods of sensible heat storage using solids and liquids – Packed bed storage – Latent heat storage – working principle – construction – application and limitations. Other solar devices – stills, air heaters, dryers, Solar Ponds & Solar Refrigeration, active and passive heating systems.

UNIT – IV

DIRECT ENERGY CONVERSION: Solid, state principles – semiconductors – solar cells – performance – modular construction – applications. conversion efficiencies calculations.

UNIT – V

ECONOMICS: Principles of Economic Analysis – Discounted cash flow – Solar system – life cycle costs – cost benefit analysis and optimization – cost based analysis of water heating and photo voltaic applications.

TEXT BOOK:
1. Principles of solar engineering/ Kreith and Kerider/Taylor and Franscis/2nd edition

REFERENCE BOOKS:
1. Solar energy thermal processes/Duffie and Beckman/John Wiley & Sons
2. Solar energy: Principles of Thermal Collection and Storage/Sukhatme/TMH/2nd edition
3. Solar energy/Garg/TMH
4. Solar energy/Magal/McGraw Hill
5. Solar Thermal Engineering Systems /Tiwari and Suneja/Narosa
6. Power plant Technology/ El Wakil/TMH

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE11**
Name of the Course	**Adavanced Power Plant Engineering** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various components of Steam power plant	K2
CO2	Explain various components of Gas turbine & Hydro power plant	K2
CO3	Explain Nuclear power station and types of reactors	K2
CO4	Illustrate operation of combined power plants	K3
CO5	Outline economics and environmental considerations of power plants	K4

UNIT – I
Introduction to the sources of energy – resources and development of power in India.
STEAM POWER PLANT: Plant layout, working of different circuits, fuel handling equipments, types of coals, coal handling, choice of handling equipment, coal storage, ash handling systems. Combustion: properties of coal – overfeed and underfeed fuel beds, traveling grate stokers, spreader stokers, retort stokers, pulverized fuel burning system and its components, combustion needs and draught system, cyclone furnace, design and construction, dust collectors, cooling towers and heat rejection. corrosion and feed water treatment.
UNIT – II
GAS TURBINE PLANT: Introduction – classification , construction – layout with auxiliaries, combined cycle power plants and comparison. Cogeneration of Power and Process heat. Waste heat recovery systems.
HYDRO PROJECTS AND PLANT: Classification – typical layouts – plant auxiliaries – plant operation pumped storage plants.
UNIT – III
NUCLEAR POWER STATION: Nuclear fuel – breeding and fertile materials – nuclear reactor – reactor operation.
TYPES OF REACTORS: Pressurized water reactor, boiling water reactor, sodium,graphite reactor, fast breeder reactor, homogeneous reactor, gas cooled reactor, radiation hazards and shielding – radioactive waste disposal.
UNIT – IV
COMBINED OPERATIONS OF DIFFERENT POWER PLANTS: Introduction, advantages of combined working, load division between power stations, storage type hydro, electric plant in combination with steam plant, run of river plant in combination with steam plant, pump storage plant in combination with steam or nuclear power plant, co ordination of hydro, electric and gas turbine stations, co ordination of hydro,electric and nuclear power stations, co ordination of different types of power plants.
POWER PLANT INSTRUMENTATION AND CONTROL: Importance of measurement and instrumentation in power plant, measurement of water purity, gas analysis, O2 and CO2

measurements, measurement of smoke and dust, measurement of moisture in carbon dioxide circuit, nuclear measurements.

UNIT – V

POWER PLANT ECONOMICS AND ENVIRONMENTAL CONSIDERATIONS: Capital cost, investment of fixed charges, operating costs, general arrangement of power distribution, load curves, load duration curve, definitions of connected load, maximum demand, demand factor, average load, load factor, diversity factor – related exercises. effluents from power plants and Impact on environment – pollutants and pollution standards – methods of pollution control.

TEXT BOOKS:

1. A course in Power Plant Engineering /Arora and Domkundwar/Dhanpatrai & Co.
2. Power Plant Engineering /P.C.Sharma / S.K.Kataria Pub

REFERENCES BOOKS:

1. Power Plant Engineering: P.K.Nag/ II Edition /TMH.
2. Power station Engineering – ElWakil / McGrawHill.
3. An Introduction to Power Plant Technology / G.D. Rai/Khanna Publishers

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE12**
Name of the Course	**Combustion, Emissions and Environment** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain principles of combustion	K2
CO2	Illustrate the combustion phenomena	K3
CO3	Differentiate the laminar and turbulent flame propagation	K4
CO4	Illustrate the measurement and control of pollution	K3
CO5	Explain environmental considerations of pollution	K2

UNIT – I

PRINCIPLES OF COMBUSTION: Chemical composition , Flue gas analysis, dew point of products, Combustion stoichiometry, Chemical kinetics, Rate of reaction, Reaction order, Molecularity, Zeroth, first, second and third order reactions , complex reactions, chain reactions, Theories of reaction Kinetics, General oxidation behavior of HCs.

UNIT – II

THERMODYNAMICS OF COMBUSTION: Enthalpy of formation, heating value of fuel, Adiabatic flame Temperature, Equilibrium composition of gaseous mixtures.

UNIT – III

LAMINAR AND TURBULENT FLAMES PROPAGATION AND STRUCTURE: Flame stability, burning velocity of fuels, Measurement of burning velocity, factors affecting the Burning velocity. Combustion of fuel droplets and sprays, Combustion systems, Pulverized fuel furnaces- fixed, entrained and fluidized bed systems.

UNIT – IV

POLLUTION FORMATION MEASUREMENT AND CONTROL: Causes for Formation of NOx, SOx, COx, Smoke and UBHC. Different methods of measurement of pollutants. Methods of controlling the formation of pollutants, BHARAT and EURO standards of emissions.

UNIT – V

ENVIRONMENTAL CONSIDERATIONS: Air pollution, effects on environment, human health etc. Principal pollutants, Legislative measures, methods of emission control.

TEXT BOOK:

1. Fuels and combustion, Sharma and Chandra Mohan, Tata McGraw Hill, 1984..

REFERENCE BOOKS:

1. Combustion Fundamentals , Roger A strehlow , McGraw Hill.
2. Combustion Engineering and Fuel Technology , Shaha A.K., Oxford and IBH.
3. Principles of Combustion , KannethK.Kuo, Wiley and Sons.
4. Combustion , Samir Sarkar , Mc. Graw Hill, 2009.
5. An Introduction to Combustion , Stephen R. Turns, Mc. Graw Hill International Edition.
6. Combustion Engineering , Gary L. Berman & Kenneth W. Ragland, Mc. Graw Hill

Semester	II	L	T	P	C	Course Code
Regulation	V21	3	0	0	3	V21TEE13
Name of the Course	**Jet Propulsion and Rocket Engineering** Program Elective – III					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain Turbo Jet propulsion systems	K2
CO2	Outline the principles and characteristic parameters of jet propulsion and rockets	K4
CO3	Illustrate chemical formulations of combustion products	K2
CO4	Differentiate solid and liquid propellant rocket systems	K4
CO5	Explain Ramjet propellant rocket system	K2

UNIT – I

TURBO JET PROPULSION SYSTEMS: Gas turbine cycle analysis, layout of turbo jet engine. Turbo machinery, compressors and turbines, combustor, blade aerodynamics, engine off design performance analysis.

FLIGHT PERFORMANCE: Forces acting on vehicle, Basic relations of motion, multi stage vehicles.

UNIT – II

PRINCIPLES OF JET PROPULSION AND ROCKETRY: Fundamentals of jet propulsion, Rockets and air breathing jet engines,Classification,turbo jet , turbo fan, turbo prop, rocket (Solid and Liquid propellant rockets) and Ramjet engines.

NOZZLE THEORY AND CHARACTERISTICS PARAMETERS: Theory of one dimensional convergent, divergent nozzles, aerodynamic choking of nozzles and mass flow through a nozzle, nozzle exhaust velocity, thrust, thrust coefficient, Ac / At of a nozzle, Supersonic nozzle shape, non, adapted nozzles, Summerfield criteria, departure from simple analysis, characteristic parameters,1) characteristic velocity, 2) specific impulse 3) total impulse 4) relationship between the characteristic parameters 5) nozzle efficiency, combustion efficiency and overall efficiency.

UNIT – III

AERO THERMO CHEMISTRY OF THE COMBUSTION PRODUCTS: Review of properties of mixture of gases, Gibbs, Dalton laws, Equivalent ratio, enthalpy changes in reactions, heat of reaction and heat of formation, calculation of adiabatic flame temperature and specific impulse, frozen and equilibrium flows.

SOLID PROPULSION SYSTEM: Solid propellants, classification, homogeneous and heterogeneous propellants, double base propellant compositions and manufacturing methods. Composite propellant oxidizers and binders. Effect of binder on propellant properties. Burning rate and burning rate laws, factors influencing the burning rate, methods of determining burning rates.

UNIT – IV

SOLID PROPELLANT ROCKET ENGINE: Internal ballistics, equilibrium motor operation and equilibrium pressure to various parameters. Transient and pseudo equilibrium operation, end burning and burning grains, grain design. Rocket motor hard ware design. Heat transfer considerations in solid rocket motor design. Ignition system, simple pyro devices.

LIQUID ROCKET PROPULSION SYSTEM: Liquid propellants, classification, Mono and Bi propellants, Cryogenic and storage propellants, ignition delay of hypergolic propellants, physical and chemical characteristics of liquid propellant. Liquid propellant rocket engine,system layout, pump and pressure feed systems, feed system components. Design of combustion chamber, characteristic length, constructional features, and chamber wall stresses. Heat transfer and cooling aspects. Uncooled engines, injectors,various types, injection patterns, injector characteristics, and atomization and drop size distribution, propellant tank design.

UNIT – V

RAMJET AND INTEGRAL ROCKET RAMJET PROPULSION SYSTEM: Fuel rich solid propellants, gross thrust, gross thrust coefficient, combustion efficiency of ramjet engine, air intakes and their classification, critical, super critical and sub,critical operation of air intakes, engine intake matching, classification and comparison of Integral Rocket Ramjet (IRR) propulsion systems.

TEXT BOOKS:

1. Mechanics and Dynamics of Propulsion/ Hill and Peterson/John Wiley & Sons
2. Rocket propulsion elements/Sutton/John Wiley & Sons/8th Edition

REFERENCE BOOKS:

1. Gas Turbines/Ganesan /TMH
2. Gas Turbines & Propulsive Systems / Khajuria & Dubey / Dhanpat Rai& Sons
3. Rocket propulsion/Bevere/
4. Jet propulsion /Nicholas Cumpsty/University of Cambridge

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE14**
Name of the Course	**Automotive Engineering** Program Elective – IV					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain classification of automobiles	K2
CO2	Illustrate Fuel, ignition and electrical systems of automobile	K3
CO3	Illustrate Cooling and lubrication systems of automobile	K3
CO4	Illustrate Steering system of automobile	K3
CO5	Explain automation in automobiles	K2

UNIT – I

INTRODUCTION: Overview of the course, Examination and Evaluation patterns, History of Automobiles, Classification of Automobiles.

POWER PLANT: Classification, Engine Terminology, Types of Cycles, working principle of and IC engine, advanced classification of Engines, Multi cylinder engines, Engine balance, firing order.

UNIT – II

FUEL SYSTEM, IGNITION SYSTEM AND ELECTRICAL SYSTEM: spark Ignition engines, Fuel tank, fuel filter, fuel pump, air cleaner/filter, carburetor, direct injection of petrol engines. Compression Ignition engines, Fuel Injection System, air & solid injection system, Pressure charging of engines, super charging and turbo charging, Components of Ignition systems, battery ignition system, magneto ignition system, electronic ignition and ignition timing. Main electrical circuits, generating & stating circuit, lighting system, indicating devices, warning lights, speedometer.

UNIT – III

LUBRICATING SYSTEMS AND COOLING SYSTEMS: Functions & properties of lubricants, methods of lubrication, splash type, pressure type, dry sump, and wet sump & mist lubrication. Oil filters, oil pumps, oil coolers. Characteristics of an effective cooling system, types of cooling system, radiator, thermostat, air cooling & water cooling.

TRANSMISSION, AXLES, CLUTCHES, PROPELLER SHAFTS AND DIFFERENTIAL: Types of gear boxes, functions and types of front and rear axles, types and functions, components of the clutches, fluid couplings, design considerations of Hotchkiss drive torque tube drive, function and parts of differential and traction control.

UNIT – IV

STEERING SYSTEM: Functions of steering mechanism, steering gear box types, wheel geometry. Braking and suspension system: Functions and types of brakes, operation and principle of brakes, constructional and operational classification and parking brake. Types of springs shock observers, objectives and types of suspension system, rear axles suspension, electronic control and proactive suspension system.

WHEELS AND TYRES : Wheel quality, assembly, types of wheels, wheel rims,construction of tyres and tyre specifications.

UNIT – V

AUTOMATION IN AUTOMOBILES: Sensors and actuators, electronic fuel injection system, electronic management system, automatic transmission, electronic transmission control, Antilock Braking System (ABS).

TEXT BOOKS:

1. Joseph Heitner, Automotive Mechanics, CBS publications,2017.
2. Srinivasan. S, Automotive Mechanics, 2nd Edition, Tata McGraw,Hill, 2003

REFERENCE BOOKS:

1. Crouse and Anglin, Automotive Mechanism, 9th Edition. Tata McGraw,Hill, 2003.
2. Jack Erjavec, A Systems Approach to Automotive Technology, Cengage Learning Pub.2009

Semester	**II**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE15**
Name of the Course	**Modelling of IC Engines** Program Elective – IV					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain fundamentals of IC Engine modeling	K2
CO2	Analyze thermodynamic combustion models of IC Engines	K4
CO3	Illustrate spray behavior of fuels	K3
CO4	Illustrate modeling of charging system	K3
CO5	Explain mathematical models of SI Engines	K2

UNIT – I

FUNDAMENTALS: Governing equations, Equilibrium charts of combustion chemistry, chemical reaction rates, and approaches of modeling, model building and integration methods, gas exchange through valves, engine and porting geometry, exhaust gas recirculation, valve lift curves.

UNIT – II

THERMODYNAMIC COMBUSTION MODELS OF CI ENGINES: Single zone models, premixed and diffusive combustion models, combustion heat release using wiebe function, wall heat transfer correlations, ignition delay, internal energy estimations, two zone model, application of heat release analysis.

UNIT – III

FUEL SPRAY BEHAVIOR: Fuel injection, spray structure, fuel atomization, droplet turbulence interactions, droplet impingement on walls.

UNIT – IV

MODELING OF CHARGING SYSTEM: Constant pressure and pulse turbo charging, compressor and turbine maps, charge air cooler.

UNIT – V

MATHEMATICAL MODELS OF SI ENGINES: Simulation of Otto cycle at full throttle, part throttle and supercharged conditions. Progressive combustion, Autoignition modeling, single zone models, mass burning rate estimation, SI Engine with stratified charge. Friction in pumping, piston assembly, bearings and valve train etc. friction estimation for warm and warm up engines

REFERENCE BOOKS:

Semester	II	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE16**
Name of the Course	**Renewable Energy Technologies** Program Elective – IV					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain solar energy and its applications	K2
CO2	Explain Geothermal energy and techniques of harnessing it	K2
CO3	Illustrate energy conversion systems and application of hydrogen as fuel	K3
CO4	Illustrate Bio energy systems	K3
CO5	Illustrate Wind and Tidal energy systems	K3

UNIT – I

INTRODUCTION: Energy Scenario, Survey of energy resources. Classification and need for conventional energy resources.

SOLAR ENERGY: Sun , Earth relationship, Basic matter to waste heat energy circuit, Solar Radiation, Attention, Radiation measuring instruments.

SOLAR ENERGY APPLICATIONS: Solar water heating. Space heating, Active and passive heating. Energy storage. Selective surface. Solar stills and ponds, solar refrigeration, Photovoltaic generation.

UNIT – II

GEOTHERMAL ENERGY: Structure of earth, Geothermal Regions, Hot springs. Hot Rocks, Hot Aquifers. Analytical methods to estimate thermal potential. Harnessing techniques, Electricity generating systems.

UNIT – III

DIRECT ENERGY CONVERSION: Nuclear Fusion,Fusion, Fusion reaction, P,P cycle, Carbon cycle, Deuterium cycle, Condition for controlled fusion, Fuel cells and photovoltaic. Thermionic & thermoelectric generation, MHD generator.

HYDROGEN GAS AS FUEL: Production methods, Properties, I.C. Engine applications, Utilization strategy, Performance.

UNIT – IV

BIO,ENERGY: Biomass energy sources. Plant productivity, Biomass wastes, aerobic and Anaerobic bioconversion processes, Raw material and properties of bio,gas, Bio,gas plant technology and status, the energetic and economics of biomass systems, Biomass gasification

UNIT – V

WIND ENERGY: Wind, Beaufort number, Characteristics, Wind energy conversion systems, Types, Betz model. Interference factor. Power coefficient, Torque coefficient and Thrust coefficient, Lift machines and Drag machines. Matching, Electricity generation.

ENERGY FROM OCEANS: Tidal energy, Tides, Diurnal and semi, diurnal nature, Power from tides, Wave Energy, Waves, Theoretical energy available. Calculation of period and phase velocity of waves, Wave power systems, submerged devices. Ocean thermal Energy, Principles, Heat exchangers, Pumping requirements, Practical considerations.

TEXT BOOK:

1. Renewable Energy Resources/ John Twidell& Tony Weir/Taylor & Francis/2nd edition

REFERENCE BOOKS:

1. Renewable Energy Resources, Basic Principles and Applications/ G.N.Tiwari and M.K.Ghosal/ Narosa Publications
2. Biological Energy Resources/ Malcolm Fleischer & Chris Lawis/ E&FN Spon
3. Renewable Energy Sources / G.D Rai /Khanna Publishers

Semester	II	L	T	P	C	Course Code
Regulation	V21	0	0	3	2	V21TEL03
Name of the Course	Computational Fluid Dynamics Lab – II					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Analyze the 3D laminar flow through pipe, internal & external flow and rectangular duct.	K4
CO2	Determine the variation of various parameters of rotor & rotary compressor and various losses in pipe flow due to variation of cross section	K4
CO3	Analyze Steady and transient state analysis of solids	K4
CO4	Analyze structural analysis of rectangular plate with hole and orifice in cylinder	K4
CO5	Analyze structural analysis of pressure and velocity in convergent divergent nozzle	K4

1. Static Structural Analysis of a Rectangular Plate with Circular hole
2. Steady State Analysis of a Composite Slab
3. Analysis of Laminar flow in a 3D Circular Pipe
4. Analysis of Pressure and Velocity in a Convergent Divergent Nozzle
5. Study of Variation of various losses in a sudden contraction in pipes
6. External flow analysis of a Cylinder
7. 3 D analysis of a Rectangular Duct
8. Internal Flow 3D analysis
9. Study of Variation of various parameters in a Rotor
10. Study of Variation of various parameters in a Rotary Compressor
11. Transient State Analysis of a Sphere
12. Analysis of Orifice in a Cylinder

Semester	II	L	T	P	C	Course Code
Regulation	V21	0	0	3	2	V21TEL04
Name of the Course	Thermal Engineering Lab – II					
Specialization	Thermal Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Determination of Heat transfer coefficient in convective heat transfer	K4
CO2	Examine the emissivity of test plate	K4
CO3	Test the performance of heat exchanger, Solar flat plate collector and water cooler	K4

1. Composite Slab Apparatus: Determination of theoretical end experimental values of equivalent thermal resistance of a composite slab.
2. Natural Convection Apparatus: Determination of experimental and empirical values of convection heat transfer coefficient from a Vertical Heated Cylinder losing heat to quiescent air
3. Forced Convection Apparatus: Determination of theoretical, experimental and empirical values of convection heat transfer coefficient for internal forced convection through a circular GI pipe
4. Pin-Fin Apparatus: Determination of temperature distribution, efficiency and effectiveness of the fin working in Natural & forced convection environment.
5. Emissivity Apparatus: Determination of surface emissivity of a given aluminium test plate at a given absolute temperature.
6. Heat Pipe Demonstrator: Demonstration of near isothermal characteristic exhibited by a heat pipe in comparison to stainless steel and copper pipes
7. Performance evaluation of Shell and Tube heat exchanger.
8. Determination of COP of water cooler test rig
9. Measurement of Dryness Fraction by using Throttling Calorimeter.
10. Performance evaluation of Solar Flat Plate Collector.
11. Determination of convective heat transfer coefficient in drop wise and film wise condensation.

Regulation	V21	3	0	0	3	V21TEE17
Name of the Course	**Optmization Techniques & Applications** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various single variable optimization techniques	K2
CO2	Illustrate various multi variable optimization techniques	K3
CO3	Explain various linear programming methods	K2
CO4	Explain various non traditional optimization algorithms	K2
CO5	Analyze various applications of optimization techniques to thermal systems	K4

UNIT – I

SINGLE VARIABLE NON,LINEAR UNCONSTRAINED OPTIMIZATION: One dimensional Optimization methods:, Uni, modal function, elimination methods, Fibonacci method, golden section method, interpolation methods, quadratic & cubic interpolation methods.

UNIT – II

MULTI VARIABLE NON LINEAR UNCONSTRAINED OPTIMIZATION: Direct search method, Univariant method , pattern search methods, Powell's, Hook ,Jeeves, Rosenbrock search methods, gradient methods, gradient of function, steepest decent method, Fletcher Reeves method, variable metric method.

UNIT – III

LINEAR PROGRAMMING: Formulation, Sensitivity analysis. Change in the constraints, cost coefficients, coefficients of the constraints, addition and deletion of variable, constraints. Duality, importance of duality, solution of primal from dual.

UNIT – IV

NON TRADITIONAL OPTIMIZATION ALGORITHMS: Genetics Algorithm, Working Principles, Similarities and Differences between Genetic Algorithm & Traditional Methods. Simulated Annealing, Working Principle, Simple Problems.

UNIT – V

APPLICATIONS TO THERMAL SYSTEMS: Optimal design of heat exchangers, condensers, evaporator and IC Engines.

TEXT BOOKS:
1. Optimization theory & Applications / S.S.Rao / New Age International.
2. Optimization for Engineering Design, Kalyanmoy Deb, PHI

REFERENCE BOOKS:
1. S.D.Sharma / Operations Research
2. Optimization Techniques /Benugundu & Chandraputla / Pearson Asia.
3. Design of Thermal Systems / W.F Stoecker/Mc Graw Hill Education

Semester	III	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE18**
Name of the Course	**Design and Analysis of Experiments** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various strategy of experimentation	K2
CO2	Illustrate various factorial design	K3
CO3	Illustrate various two level factorial design	K3
CO4	Analyze various regression models	K4
CO5	Illustrate the Response surface methods	K3

UNIT – I

STRATEGY OF EXPERIMENTATION: Guidelines for designing experiments, sampling and sampling distributions, hypothesis testing, choice of sample size. Experiments with single factor**:** Analysis of variance, analysis of the fixed effects model, model adequacy checking, sample computer output, regression approach to the analysis of variance.

UNIT – II

FACTORIAL DESIGNS: Principles, advantage of factorials, two-factor factorial design, general factorial design, fitting response curves and surfaces.2k factorial design: 22 design, 23 design, General 2kdesign, single replicate of 2k design.

UNIT – III

TWO-LEVEL FRACTIONAL FACTORIAL DESIGNS: one-half fraction of 2K design, one-quarter fraction of 2K design, blocking replicated 2K factorial design, confounding in 2K factorial design. Three-level and mixed-level factorial design: 3K factorial design, confounding in 3K factorial design, fractional replication of 3K factorial design, factorials with mixed levels.

UNIT – IV

REGRESSION MODELS: Linear regression models, estimation of the parameters, hypothesis testing in multiple regression, confidence intervals in multiple regression, prediction of new response observations, regression model diagnostics.

UNIT – V

RESPONSE SURFACE METHODS: Introduction, method of steepest ascent, analysis of second-order response surface, experimental designs for fitting response surfaces.

TEXT BOOK:

1. D.C. Montgomery, “Design and Analysis of Experiments”, 5th edition, John Wiley and sons, 2009.

REFERENCE BOOKS:

1. D.C. Montgomery,” Introduction to Statistical Quality Control”, 4th edition, John Wiley and sons, 2001.
2. Angela Dean and Daniel Voss, “Design and Analysis of Experiments”, Springer, 1999

Semester	III	L	T	P	C	Course Code
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE19**
Name of the Course	**Convective Heat Transfer** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain free, forced convection and equations governing the phenomena	K2
CO2	Illustrate convection heat transfer in laminar, turbulent flows both internal & external	K3
CO3	Illustrate equations of natural convection laminar flow heat transfer	K3
CO4	Analyze equations of combined convection heat transfer in laminar and turbulent flows	K4
CO5	Explain convection heat transfer in porous media	K3

UNIT – I

Introduction to free, forced combined convection,convective heat transfer coefficient,Application of dimensional analysis to convection,Physical interpretation of dimensionless numbers.

EQUATIONS OF CONVECTIVE HEAT TRANSFER: Continuity, Navier,Strokes equation & energy equation for steady state flows,similarity,Equations for turbulent convective heat transfer,Boundary layer equations for laminar, turbulent flows,Boundary layer integral equations.

UNIT – II

EXTERNAL LAMINAR FORCED CONVECTION: Similarity solution for flow over an isothermal plate,integral equation solutions,Numerical solutions,Viscous dissipation effects on flow over a flat plate.

EXTERNAL TURBULENT FLOWS: Analogy solutions for boundary layer flows,Integral equation solutions,Effects of dissipation on flow over a flat plate.

INTERNAL LAMINAR FLOWS: Fully developed laminar flow in pipe, plane duct & ducts with other cross,sectional shapes,Pipe flow & plane duct flow with developing temperature field,Pipe flows & plane duct flow with developing velocity & temperature fields.

INTERNAL TURBULENT FLOWS: Analogy solutions for fully developed pipe flow –Thermally developing pipe & plane duct flow.

UNIT – III

NATURALCONVECTION: Boussineq approximation,Governingequations,Similarity,Boundary layer equations for free convective laminar flows, Numerical solution of boundary layer equations. Free Convective flows through a vertical channel across a rectangular enclosure,Horizontal enclosure,Turbulent natural convection.

UNIT – IV

COMBINED CONVECTION: Governing parameters & equations,laminar boundary layer flow over an isothermal vertical plate,combined convection over a horizontal plate,correlations for mixed convection,effect of boundary forces on turbulent flows,internal flows , internal mixed convective flows,Fully developed mixed convective flow in a vertical plane channel & in a horizontal duct.

UNIT – V

CONVECTIVE HEAT TRANSFER THROUGH POROUS MEDIA: Area weighted velocity,Darcy flow model, energy equation, boundary layer solutions for 2D forced convection, Fully developed duct flow, Natural convection in porous media, filled enclosures, stability of horizontal porous layers.

TEXT BOOK:

1. Convective Heat & Mass Transfer /Kays& Crawford/TMH

REFERENCE BOOKS:

1. Introduction to Convective Heat Transfer Analysis/ Patrick H. Oosthuigen & David Naylor, MGH.
2. Convection Heat Transfer / Adrian Bejan / Wiley
3. Principles of Convective Heat Transfer / Kaviany, Massoud /Springer

Semester	**III**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE20**
Name of the Course	**Extraction of Energy from Waste** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain energy from waste, types of waste and energy conversion devices.	K2
CO2	Explain the methods of yield of biomass	K2
CO3	Illustrate various gasifiers of biomass	K3
CO4	Illustration various combustors of biomass	K3
CO5	Explain concepts of biogas technology	K2

UNIT – I

INTRODUCTION TO ENERGY FROM WASTE: Classification of waste as fuel, Agro based, Forest residue, Industrial waste, MSW, Conversion devices, Incinerators, gasifiers, digesters

UNIT – II

BIOMASS PYROLYSIS: Pyrolysis, Types, slow fast, Manufacture of charcoal, Methods Yields and application, Manufacture of pyrolytic oils and gases, yields and applications.

UNIT – III

BIOMASS GASIFICATION: Gasifiers, Fixed bed system, Downdraft and updraft gasifier– Fluidized bed gasifiers, Design, construction and operation, Gasifier burner arrangement for thermal heating, gasifier engine arrangement and electrical power Equilibrium and kinetic consideration in gasifier operation.

UNIT – IV

BIOMASS COMBUSTION: Biomass stoves, Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation , Operation of all the above biomass combustors.

UNIT – V

BIOGAS: Properties of biogas (Calorific value and composition) , Biogas plant technology and status , Bio energy system , Design and constructional features , Biomass resources and their classification , Biomass conversion processes , Thermo chemical conversion , Direct combustion ,biomass gasification , pyrolysis and liquefaction , biochemical conversion , anaerobic digestion ,Types of biogas Plants, Applications , Alcohol production from biomass, Bio diesel production ,Urban waste to energy conversion , Biomass energy programmed in India.

TEXT BOOKS:

1. Biogas Technology , A Practical Hand Book , Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, Tata McGraw Hill Publishing Co. Ltd., 1983.
2. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley &Sons, 1996.

REFERENCE BOOKS:

1. Non Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.
2. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.

Semester	**III**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	**V21**	**3**	**0**	**0**	**3**	**V21TEE21**
Name of the Course	**Advanced Finite Elements Methods** Program Elective – V					
Specialization	**Thermal Engineering**					

Course Outcomes:

	After successful completion of the course, the student will be able to	Knowledge level
CO1	Explain various approaches to finite element formulations	K2
CO2	Illustrate the displacement, stresses of ID elements used in Finite element analysis	K3
CO3	Differentiate various 2D elements used in Finite element analysis	K4
CO4	Illustrate the iso parametric formulation and convergence criteria	K3
CO5	Analyze the various elements in structural analysis	K4

UNIT – I

FORMULATION TECHNIQUES: Methodology, Engineering problems and governing differential equations, finite elements., Variational methods-potential energy method, Raleigh Ritz method, strong and weak forms, Galerkin and weighted residual methods, calculus of variations, Essential and natural boundary conditions.

UNIT – II

ONE-DIMENSIONAL ELEMENTS: Bar, trusses, beams and frames, displacements, stresses and temperature effects.

UNIT – III

TWO DIMENSIONAL PROBLEMS: CST, LST, four nodded and eight nodded rectangular elements, Lagrange basis for triangles and rectangles, serendipity interpolation functions. Axisymmetric Problems: Axisymmetric formulations, Element matrices, boundary Conditions. Heat Transfer problems: Conduction and convection, examples: - two-Dimensional fin.

UNIT – IV

ISOPARAMETRIC FORMULATION: Concepts, sub parametric, super parametric elements, numerical integration, Requirements for convergence, h-refinement and p-refinement, complete and incomplete interpolation functions, Pascal’s triangle, Patch test.

UNIT – V

FINITE ELEMENTS IN STRUCTURAL ANALYSIS: Static and dynamic analysis, eigen value problems, and their solution methods, case studies using commercial finite element packages.

ANALYSIS OF NON LINEAR ELASTIC SYSTEMS: Introduction to nonlinear FEM, Nonlinear elastic analysis, Numerical integration for elastoplasticity.

TEXT BOOK:
1. Finite element methods by Chandrubatla & Belagondu.
2. The Finite Element Method in Engineering By Singiresu S. Rao, 5th Edition, Publisher: Butterworth-Heinemann.

REFERENCE BOOKS:

Department of Electronics and Communication Engineering

Date: 04.09.2021

Minutes of the 5th meeting of BOS
(Held on 03.09.2021)

The ECE Department 5th meeting of Board of Studies (BOS) was conducted through online mode on 03.9.2021 at 11.00 A.M using ZOOM Application with following given link address.
https://us02web.zoom.us/j/83132873142.
Following external members have attended the meeting along with internal faculty members. The ECE HOD, Dr E. Kusuma Kumari, BOS Chairman headed the meeting.

Details of members attended:

S.No	Name of the BOS Member	Nominee	Address
1.	Dr.E.KusumaKumari	Chair person	Professor & Head, ECE, SVEC
2.	Prof.I. SanthiPrabha	University Nominee	Prof. in ECE Dept., University College of Engg., JNTUK, Kakinada
3.	Prof. NVSN. Sarma	Subject Expert	Director, IIIT Trichy Tiruchirapalli, Tamilnadu.
4.	Prof. M. VenugopalaRao	Subject Expert	Prof., ECE Dept., K.L.University, Vijayawada.
5.	Sri. Sunkavalli Siva Kumar	Alumni Nominee	Sr.Engineer, Qualcomm, Bangalore.
6.	l Faculty Members in Dept.	Members	ECE Dept., SVEC

The following are the key points discussed in the meeting.

- **Item No.1 : Chairperson, BOS has welcomed all the members and given the Opening Remarks.**

- **Item No.2: Review & Approval of the VII& VIII Sem of B. Tech ECE of V18 Reg.**

BOS members Reviewed the Course Structure and given Following Suggestions

- Change the Course title of Radar Systems to Radar Engineering (V18ECT20) in VII semester
- Change the Professional Elective course title from IoT: Concepts & Applications to IoT: Use cases (V18ECT24) in VII semester.
- Removal of topic of "Efficiency of Non Matched Filter in the syllabus of Radar Engg. Course (V18ECT20) in VII Semester.
- Rearrange the syllabus for course titled Optical Communication (V18ECT21) in VII semester.
- Add One more Text book for the Bio-Medical Instrumentation Course (V18ECT35) in VIII semester.

The approved course structure & Syllabus for the VII & VIII semesters of B. Tech ECE of V18 regulation was given in **Annexure-EC-I**

- **Item No.3: Review & Approval the List of Open Elective Courses offered by ECE Dept., in VII & VIII Semesters B. Tech ECE of V18 Reg.**

BOS Members suggested that to Change the Open elective course title in VII Semester "Principles of Wireless, Cellular Mobile Comm. is to " Principles of Wireless Communication" (V18ECTOE4) and approved the Syllabus.

Approved List of Courses and Syllabus was given in **Annexure-EC-II**

- **Item No. 4: Review & Approval of the Proposed Course Structure and Syllabi for the III and IV Semester of B. Tech ECE under V20 Regulation.**

- BOS members reviewed and suggested that try to include Machine Learning Topics in Course titled as Skill Oriented Course (V20ECSOC01) in the III and IV Semester of B. Tech ECE under V20 Regulation and approved the Syllabus.
- In the III semester, the Course titled Probability Theory & Stochastic Processes can be approved in the Basic Science BOS meeting. ECE BOS members were accepted to that proposal.
- Approved the Proposed Course Structure and Syllabi for the III and IV Semester of B. Tech ECE under V20 Regulation.

Approved List of Courses and Syllabus was given in **Annexure-EC-III**

Item No. 5: Approval of List of Courses offered to EEE Department in III Semester of B. Tech EEE under V20 Regulation.

BOS members approved the Syllabus and details are given in **Annexure-EC-IV**

1. **Item No. 6: Approval of Proposed course structure & syllabi for the courses offered in III & IV semesters of B. Tech ECT under V20 Regulation.**

   BOS members approved the Syllabus and details are given in **Annexure-EC-V**

2. **Item No. 7: Approval of Proposed course structure and Syllabi for M. Tech Programme with specialization of Embedded Systems & VLSI under V21 Regulations.**

   BOS Members Suggested that to include the MOOCS courses in III semester of the M. Tech Programme, approved the Course Structure and Syllabus. The details are given in **Annexure-EC-VI**

Finally, the chairperson thanked all the BOS members and faculty. The meeting was ended at 12.30 P.M

Dr. E. Kusuma Kumari,
Chairperson, BOS

Annexure-EC-I

VII-Semester Syllabus

VII Sem.	Radar Engineering	Course Code:V18ECT20	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Derive the radar range equation and to solve some analytical problems. **[K2]**
- CO2: Describe the operation of CW and FMCW Radar systems. **[K2]**
- CO3: Illustrate the principle of each and every block of MTI and Pulse Doppler Radar **[K2]**
- CO4: Distinguish the different methods used for tracking targets. **[K2]**
- CO5: Relate the Noise Figure and Noise Temperature in Radar Receivers **[K2]**
- CO6: Explain the various components of radar receiver and its performance. **[K2]**

UNIT–I:

Basics of Radar: Introduction, Maximum Unambiguous Range, simple Radar range Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications.

Radar Equation : Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise, Modified Radar Range Equation, SNR, Probability of Detection, Probability of False Alarm, Integration of Radar Pulses, Radar Cross Section of Targets (simple targets-sphere, cone-sphere), Transmitter Power, PRF and Range Ambiguities, System Losses.

UNIT–II:

CW and Frequency Modulated Radar: Doppler Effect, CW Radar – Block Diagram, Isolation between Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirements, Applications of CW radar.

FM-CW Radar: Range and Doppler Measurement, Block Diagram and Characteristics, FM-CW altimeter, Multiple Frequency CW Radar.

UNIT-III:

MTI and Pulse Doppler Radar: Introduction, Principle, MTI Radar with - Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers – Filter Characteristics, Blind Speeds, Double Cancellation, Nth Cancellation Staggered PRFs. Range Gated Doppler Filters. MTI Radar Parameters, Limitations to MTI Performance, MTI versus Pulse Doppler Radar.

UNIT –IV:

Tracking Radar: Tracking with Radar, Sequential Lobing, Conical Scan, Mono pulse Tracking Radar – Amplitude Comparison Mono pulse (one- and two- coordinates), Phase Comparison Mono pulse, Tracking in Range, Acquisition and Scanning Patterns, Comparison of Trackers.

UNIT –V:

Detection of Radar Signals in Noise: Introduction, Matched Filter Receiver – Response Characteristics and Derivation, Correlation Detection and Cross-correlation Receiver, Matched Filter with Non-white Noise, Noise Figure and Noise Temperature.

UNIT –VI:

Radar Receivers –Displays – types. Duplexers – Branch type and Balanced type, Circulators as Duplexers.

Introduction to Phased Array Antennas – Basic Concepts, Radiation Pattern, Beam Steering and Beam Width changes, Series versus parallel feeds, Applications, Advantages and Limitations.

TEXT BOOKS:

1. Introduction to Radar Systems – Merrill I. Skolnik, TMH Special Indian Edition, 2ndEd., 2007.
2. Radar Principles – Peebles, Jr., P.Z., Wiley, New York, 1998.
3. Microwave & Radar Engineering – G. SasibhushanaRao, Pearson Publications

REFERENCE BOOKS:

1. Introduction to Radar Systems, 3rd edition – M.I. Skolnik, TMH Ed., 2005
2. Microwave & Radar Engineering – M. Kulkarni, Umesh Publications, 3rd edition
3. Radar Engineering – GSN Raju, IK International.

VII Sem.	Optical Communication	Course Code:V18ECT21	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the overview of optical fiber communication, ray theory transmission and Concepts of modes.**[K2]**
CO2: Explain thoroughly the operation of optical sources, Quantum efficiency and power. **[K2]**
CO3: Classify different types of optical detectors and also explain the operation of optical Receiver.**[K2**
CO4: Explain the types of fiber materials with their properties and fiber losses. **[K2]**
CO5: Illustrate the concept of power launching and power coupling for optical fibers. Discuss splicing techniques and connector losses. **[K3]**
CO6:Construct optical link and becomes familiar with WDM concepts and measurement Techniques.**[K3]**

UNIT I
Introduction - Historical development, the general system, advantages of optical fiber communications. Optical fiber wave guides - Ray theory transmission, Total Internal Reflection, Acceptance angle, Numerical Aperture, Skew rays, Cylindrical fibers- Modes, V-number, Mode coupling, Step Index fibers, Graded Index fibers, Single mode fibers - Cut off wavelength, Mode Field Diameter, Effective Refractive Index, Related problems.

UNIT II
Optical sources-LEDs, Structures, Materials, Quantum efficiency, Power, Modulation, Power bandwidth product. Injection Laser Diodes- Modes, Threshold conditions, Laser diode rate equations, External quantum efficiency, resonant frequencies, Reliability Considerations.

UNIT III
Optical detectors- Physical principles of PIN and APD, Detector response time, Temperature effect on Avalanche gain, Comparison of Photo detectors, Optical receiver operation - Fundamental receiver operation, Digital signal transmission, error sources, Receiver configuration, Digital receiver performance, Probability of Error, Quantum limit, Analog receivers. Related problems.

UNIT IV
Fiber materials - Glass, Halide, Active glass, Chalgenide glass, Plastic optical fibers. Signal Degradation in optical fibers - Attenuation, Absorption, Scattering and Bending losses, Core and Cladding losses, Information capacity determination, Group delay, Types of Dispersion: Material dispersion, Wave-guide dispersion, Polarization-Mode dispersion, Intermodal dispersion, Pulse broadening in Graded index fiber, Related problems.

UNIT V

Source to fiber power launching-Output patterns, Power coupling, Power launching, Equilibrium Numerical Aperture, Lensing Schemes for Coupling, Laser diode to fiber coupling. Fiber to Fiber joints – Mechanical misalignment, Fiber related losses, End face preparation, Fiber Splicing-Splicing techniques, Splicing single mode fibers, Optical fiber Connectors-Connector types, Single mode fiber connectors, Connector return loss, Multimode fiber joints, Single mode fiber joints.

UNIT VI

Optical system design - Point-to- point links- System considerations, Link power budget, Rise time budget with examples, Line coding in Optical links, Operational Principles of WDM, Measurement of Attenuation and Dispersion, Eye pattern.

TEXT BOOKS:

1. Optical Fiber Communications – Gerd Keiser, McGraw-Hill International edition, 3rd Edition, 2000.
2. Fiber Optic Communication Systems – Govind P. Agarwal, John Wiley, 3rd Edition, 2004.

RERFERENCES:

1. Fiber Optic Communications – D.K. Mynbaev, S.C. Gupta and Lowell L. Scheiner, Pearson Education,2005.
2. Text Book on Optical Fiber Communication and its Applications – S.C.Gupta, PHI, 2005.
3. Fiber Optic Communications – Joseph C. Palais, 4th Edition, Pearson Education, 2004.

VII Sem.	Digital Image Processing	Course Code:V18ECT22	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Illustrate the different Transforms Techniques & their use in Image Processing Applications**(K3)**
CO2. Examine Spatial & frequency domain filtering like smoothing & sharpening Operation son Images **(K4)**
CO3. Analyze Restoration operations/techniques on Images**(K4)**
CO4. Describe the Image compression Techniques and multi-resolution processing on Images**(K3)**
CO5. Analyze morphological operations on Images & Image segmentation**(K4)**
CO6. Illustrate the different color Image Processing Techniques on Images**(K3)**

UNIT-I

Introduction: Introduction to Image Processing, Fundamental steps in digital image processing, components of an image processing system, image sensing and acquisition, image sampling and quantization, some basic relationships between pixels, an introduction to the mathematical tools used in digital image processing.

Image Transforms: Need for image transforms, Discrete Fourier transform (DFT) of one variable, Extension to functions of two variables, some properties of the 2-D Discrete Fourier transform, Walsh Transform. Hadamard transform, Haar Transform, Slant transform, Discrete Cosine transform, Discrete Sine Transform, Comparison of different image transforms.

UNIT-II

Intensity Transformations and Spatial Filtering: Some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters, and sharpening spatial filters.

Filtering in the Frequency Domain: The Basics of filtering in the frequency domain, image
Smoothing using frequency domain filters, Image Sharpening using frequency domain filters, Selective filtering.

UNIT-III

Image Restoration and Reconstruction: A model of the image degradation / Restoration process, Noise models, restoration in the presence of noise only-Spatial Filtering, Periodic Noise Reduction by frequency domain filtering, Linear, Position – Invariant Degradations, Estimating the degradation function, Inverse filtering, Minimum mean square error (Wiener) filtering, geometric mean filter .

UNIT-IV

Image compression: Fundamentals, Basic compression methods: Huffman coding, Arithmeticcoding,LZWcoding,Run-Lengthcoding,Symbol-Basedcoding,Bit-Planecoding,BlockTransformcoding,

Wavelets and Multi resolution Processing: Image pyramids, sub band coding, Multi resolution expansions, wavelet transforms in one dimensions &two dimensions, Wavelet coding.

UNIT-V

Image segmentation: Fundamentals, point, line, edge detection, thresholding and region –based segmentation.

Morphological Image Processing: Erosion and dilation, opening and closing,basic morphological algorithms for boundary extraction, thinning, gray scale morphology.

UNIT-VI

Color image processing: color fundamentals, color models, pseudo color image processing, basics of full color image processing, color transformations, smoothing and sharpening. Image segmentation based on color, noise in color images, color image compression.

TextBooks:

1. R.C. Gonzalez and R.E.Woods, Digital ImageProcessing, 3rdedition, PrenticeHall, 2008.
2. Jayaraman, S.Esakkirajan, and T.Veerakumar,"DigitalImageProcessing", TataMcGraw-Hill Education, 2011.

Reference Books:

1. AnilK.Jain,"FundamentalsofDigitalImageProcessing",PrenticeHallofIndia,9thEdition,IndianReprint,2002.
2. B.Chanda, D.Dutta Majumder, "Digital ImageProcessingandAnalysis",PHI,2009.

VII Sem.	IOT: Use Cases (Professional Elective-III)	Course Code:V18ECT24	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe M2M and IOT Technologies. **[K2]**
- CO2: Explain the layers and protocols in IOT. **[K2]**
- CO3: Describe various communication technologies used in IOT. **[K2]**
- CO4: Illustrate various hardware components required for IOT applications. **[K2]**
- CO5: Discuss the cloud technologies and their services. **[K2]**
- CO6: Explain the IoT Applications. **[K2]**

UNIT I – INTRODUCTION [1]
Introduction from M2M to IoT - An Architectural Overview, building architecture, Main design principles and needed capabilities, An IoT architecture outline, M2M and IoT Technology Fundamentals - Devices and gateways.

UNIT II – IOT PROTOCOLS [2]
Functionality of Layers in IoT –Study of protocols - Wireless HART, Z-Wave, 6LoWPAN, RPL, CoAP, MQTT.

UNIT III - COMMUNICATION TECHNOLOGIES IN IOT [2, 4]
Study of IoT Connectivity –IEEE 802.15.4,Zigbee, LPWAN, Wi-Fi, Bluetooth, 5G Era.

UNIT IV - SYSTEM HARDWARE [3, 4]
Sensors, Actuators, Radio Frequency Identification, Introduction to Embedded Devices for IoT - RASPBERRY PI, BeagleBone black.

UNIT V – Cloud Computing [3, 4]
Data Collection, Storage and Computing Using a Cloud Platform for IoT Applications/Services, AWS for IoT-Introduction to Amazon EC2.

UNIT VI - IOT APPLICATIONS [2, 3]
Applications - Smart and Connected Cities, Public Safety, Agriculture, and Healthcare.

TEXTBOOKS:

1. "From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence", Jan Holler, Vlasios Tsiatsis, Catherine Mulligan, Stefan Avesand, StamatisKarnouskos, David Boyle, 1st Edition, Academic Press, 2014.
2. IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things, David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry, and Cisco Press 800 East 96th Street Indianapolis, Indiana 46240 USA.
3. "Internet of Things (A Hands-on- Approach)", Vijay Madisetti and ArshdeepBahga, 1stEdition, VPT, 2014.
4. Internet of Things - By Raj Kamal, McGraw-Hill Education. Copyright.

			L	T	P	C
VII Sem.	**CMOS ANALOG IC DESIGN (Professional Elective-III)**	**Course Code:V18ECT25**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe the Large and Small signal models of different Analog Devices**(K2)**
- CO2: Analyse the various types of current mirrors**.(K3)**
- CO3: Analyse the different types of single stage MOS amplifiers**.(K3)**
- CO4: Describe the Noise modelling of Various Circuit Elements**.(K2**)
- CO5: Illustrate the construction and working of OP-AMP**.(K3)**
- CO6: Illustrate the types of CMOS Comparators **.(K3)**

UNIT -I: Integrated circuit Devices and Modelling

Semiconductors and p-n junction: diodes reverse biased diodes, graded junctions, large signal junction capacitance and forward biased junctions small signal model of forward biased diode

The MOS Transistor**:** symbol for MOS Transistors, basic Operation, and Large signal modelling small signal modelling.

Bi-Polar Transistors: basic Operation, Large signal modelling small signal modelling

UNIT -II: Basic Current Mirrors

Basic CMOS current Mirrors, source Degenerated current mirror, Cascade current Mirror and Wilson Current Mirror, bipolar current mirror and Current mirror with Beta Helper.

UNIT -III: Single Stage Amplifiers

Common source amplifier, Source follower, common gate Amplifier, Cascode Gain stage amplifier and MOS Differential Amplifiers. Frequency response of Amplifiers.

UNIT -IV: Noise Analysis and Modelling

Time Domain Analysis of Noise**:** RMS, SNR, Units of dBm& Noise summation**.**

Frequency Domain Analysis of Noise**:** Noise spectral Density, White Noise, Flicker Noise, Noise filtering & Noise bandwidth**.**

Noise models for circuit elements**:** Resistors, Diodes, Transistors and MOSFETS

UNIT -V: CMOS Operational Amplifiers & Compensation

Block diagram of Op-amp, op-amp gain, frequency response &Slew Rate, op-amp Compensation

UNIT -IV: Comparators

Characterization of Comparator, Two-Stage,Open-Loop Comparators, Other Open-Loop Comparators, Improving the Performance of Open-Loop Comparators, Discrete- Time Comparators.

TEXT BOOKS:

1. Analog Integrated Circuit Design- David A.Johns, Ken Martin, Wiley Student Edn,2013.
2. CMOS Analog Circuit Design - Philip E. Allen and Douglas R. Holberg, Oxford University Press, International Second Edition/Indian Edition,2010.

REFERENCES:

1. Analysis and Design of Analog Integrated Circuits- Paul R. Gray, Paul J. Hurst, S. Lewis and R. G. Meyer, Wiley India, Fifth Edition,2010.
2. Design of Analog CMOS Integrated Circuits- Behzad Razavi, TMH Edition, Second Edition

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Illustrate the fundamentals of television engineering. **[K2]**
- CO2:Explain the colour TV transmission and reception **[K2]**
- CO3: Compare Digital TV transmission standards **[K4]**
- CO4: Discuss factors affecting system noise and transmission errors **[K2]**
- CO5: Explain the Digital TV transmission and reception. **[K2]**
- CO6: Describe the operation of LCD and Plasma screens **[K2]**

UNIT I

Introduction: TV transmitter and receivers, synchronization

Television Pictures: Geometric form and aspect ratio, image continuity, interlaced scanning, picture resolution

Composite video signal: Horizontal and vertical sync details

TV Signal Transmission: VSB transmission, standard channel BW, TV transmitter

UNIT II

Colour Television: Perception of brightness and colours, additive colour mixing, video signals for colours, luminance signal, colour difference signals, encoding of colour difference signals, formation of chrominance signals, PAL encoder, PAL colour receiver

UNIT III

Digital Television Transmission Standards: ATSC terrestrial transmission standard, vestigial sideband modulation, DVB -T transmission standard, ISDB-T transmission standard, channel allocations, antenna height and power, MPEG-2.

UNIT IV

Performance Objectives for Digital Television: System noise, external noise sources, transmission errors, error vector magnitude, eye pattern, interference, co-channel interference, adjacent channel interference, analog to digital TV, transmitter requirements.

UNIT V

Digital Television: Digital System Hardware, Signal Quantization and Encoding, Digital Satellite Television, Direct to Home Satellite Television, Digital TV Receiver, Merits of Digital TV Receivers

UNIT VI

LCD and Plasma Screens: LCD Technology, LCD Matrix types and operation, LCD Screens for Television, Plasma and conduction of charge, Plasma TV Screens, Plasma Color Receiver, LCD color receiver

Text Books:

1. Modern Television Practice: Transmission, Reception and Applications- R. R.Gulati, 4th
Revised edition, New Age International Publishers.
2. Television and Video Engineering – A.M. Dhake, 2nd Edition, Tata McGraw Hill Publishers.
3. Fundamentals of Digital Television Transmission- Gerald W. Collins, John Wiley & Sons.
4. Television engineering and video systems – R G Gupta, Tata McGraw Hill Publishers.

References

1. Basic Television and Video Systems – Bernard Grob, McGrawHill Publishers.
2. Monochrome and Colour Television - R RGulati, New Age International Publishers.
3. Colour Television, Theory and Practice - S.P.Bali, Tata McGraw-Hill Publishers.

VII Sem.	**Low Power IC Design (Professional Elective-IV)**	**Course Code:V18ECT27**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain the need of Low power circuit design **(K2)**.
- CO2: Describe the different architectural approaches **(K2)**.
- CO3: Analyze Low-Power Design Approaches**(K4).**
- CO4: Analyze and design Low-Voltage Low-Power Adders circuits**(K4).**
- CO5: Analyze and design Low-Voltage Low-Power Multiplier circuits**(K4).**
- CO6: Analyze and design of Low-Voltage Low-Power Memories**(K4).**

UNIT–I:
Fundamentals: Need for Low Power Circuit Design, Sources of Power Dissipation–Switching Power Dissipation, Short Circuit Power Dissipation, Leakage Power Dissipation, Glitching Power Dissipation, Short Channel Effects.

UNIT–II:
Supply Voltage Scaling for Low Power: Device Feature Size Scaling, Constant-Field Scaling, Constant-Voltage Scaling, Architectural-Level Approaches: Parallelism for Low Power, Pipelining for Low Power, Combining Parallelism with Pipelining.
Voltage Scaling Using High-Level Transformations: Multilevel Voltage Scaling Challenges in MVS Voltage Scaling Inter faces, Static Timing Analysis Dynamic Voltage and Frequency Scaling.

UNIT-III
Low-PowerDesignApproaches: Low-PowerDesignthroughVoltageScaling VTCMOS circuits, MTCMOS circuits, Architectural Level Approach–Pipelining and Parallel Processing Approaches. Power Gating, Clock Gating Versus Power Gating, Power-Gating Issues.

UNIT–IV:
Low-Voltage Low-Power Adders: Introduction, Standard Adder Cells, CMOS Adder's Architectures – Ripple Carry Adders, Carry Look- Ahead Adders, Carry Select Adders, Carry Save Adders, Low-Voltage Low-Power Design Techniques –Trends of Technology and Power Supply Voltage.

UNIT-V
Low-Voltage Low-Power Multipliers: Introduction, Overview of Multiplication, Types of Multiplier Architectures, BraunMultiplier, Baugh-Wooley Multiplier, Introduction to Wallace Tree Multiplier.

UNIT–VI:

Low-Voltage Low-Power Memories: Basics of ROM, Low-Power ROM Technology, Future Trend and Development of ROMs, Basics of SRAM, Memory Cell, Pre-charge and Equalization Circuit, Low-Power SRAM Technologies, Basics of DRAM, Self-Refresh Circuit, Future Trend and Development of DRAM.

TEXTBOOKS:

1. CMOS Digital Integrated Circuits–Analysis and Design–Sung-Mo Kang, Yusuf Leblebici, TMH, 2011.
2. Low-Voltage, Low-Power VLSI Subsystems–Kiat-SengYeo, KaushikRoy, TMH ProfessionalEngineering, 1st edition, 2004

REFERENCEBOOKS:

1. Introduction to VLSISystems: ALogic, Circuit and System Perspective–Ming-BO Lin, CRCPress, 2011
2. Low Power CMOS VLSI Circuit Design – Kaushik Roy, Sharat C. Prasad, JohnWiley& Sons, 2000.
3. Practical Low Power Digital VLSI Design–Gary K.Yeap, Kluwer AcademicPress, 2002.
4. Leakage in Nanometer CMOS Technologies–SivaG.Narendran, Anatha Chandrakasan, Springer, 2005.

VII Sem.	System on Chip (Professional Elective-IV)	Course Code:V18ECT28	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe SOC System Approach, design and its Architecture.**[K2]**
- CO2: Discuss the selection of processor and its micro architecture for SOC**[K2]**
- CO3: Describe Memory Design for SOC **[K2]**
- CO4: Explain the concepts of bus models and Interconnect Architectures **[K2]**
- CO5: Describe the overview of Zynq SOC**[K2]**
- CO6: Explain the SOC based Applications. **[K2]**

UNIT – I: Introduction to the System Approach: System Architecture, Components of the system, Hardware & Software, Processor Architectures, Memory and Addressing. System level interconnection, an approach for SOC Design, System Architecture and Complexity.

UNIT – II : Processors: Introduction , Processor Selection for SOC, Basic concepts in Processor Architecture, Basic concepts in Processor Micro Architecture, Basic elements in Instruction handling. Buffers: minimizing Pipeline Delays, Branches, More Robust Processors, Vector Processors and Vector Instructions extensions, VLIW Processors, Superscalar Processors.

UNIT – III : Memory Design for SOC: Overview of SOC external memory, Internal Memory, Size, Scratchpads and Cache memory, Cache Organization, Cache data, Write Policies, Strategies for line replacement at miss time, Types of Cache, Split – I, and D – Caches, Multilevel Caches, Virtual to real translation , SOC Memory System, Models of Simple Processor – memory interaction.

UNIT – IV : Interconnect Customization and Configuration: Inter Connect Architectures, Bus: Basic Architectures, SOC Standard Buses , Analytic Bus Models, Using the Bus model, Effects of Bus transactions and contention time. SOC Customization: An overview, Customizing Instruction Processor, Reconfiguration Technologies, Mapping design onto Reconfigurable devices, Instance Specific design, Customizable Soft Processor.

UNIT-V: Zynq system on chip design overview: interfacing and signals, interconnects, Memory and interrupts.

UNIT – VI: Application Studies / Case Studies: SOC Design approach, Design and evaluation - AES algorithms, Image compression – JPEG compression.

TEXT BOOKS:

1. Computer System Design System-on-Chip - Michael J. Flynn and Wayne Luk, Wiely India Pvt. Ltd.
2. Embedded Processing with the ARM Cortex-A9 on the Xilinx Zynq-7000 All Programmable SoC-Louise H. Crockett Ross A. Elliot Martin A. Enderwitz Robert W. Stewart
3. Design of System on a Chip: Devices and Components – Ricardo Reis, 1st Ed., 2004, Springer

REFERENCE BOOKS:

1. Co-Verification of Hardware and Software for ARM System on Chip Design

(Embedded Technology) – Jason Andrews – Newnes, BK and CDROM.

2. System on Chip Verification – Methodologies and Techniques – Prakash Rashinkar, Peter Paterson and Leena Singh L, 2001, Kluwer Academic Publishers.

VII Sem.	System Design Through VERILOG (Professional Elective-IV)	Course Code:V18ECT29	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Outline basic concepts of RTL code for digital circuits **K2**
- CO1: Model RTL codes for digital circuit at gate level **K3**
- CO1: Model RTL codes for digital circuit at behavioural level **K3**
- CO1: Model RTL codes for digital circuit at data flow and switch level **K3**
- CO1: Ouline the concepts of task, function and complier directives **K2**
- CO1: Analyze Synthesize of Combinational and Sequential Circuits **K4**

UNIT-I

INTRODUCTIONTOVERILOG:

Verilog as HDL, Levels of design description, concurrency, module, simulation and synthesis, test bench, functional verification, programming language interface (PLI), simulation and synthesistools.

LANGUAGECONSTRUCTSANDCONVENTIONS:

Introduction, keywords, identifiers, whitespace characters, comments, numbers, strings, logic values, data types, scalars and vectors, parameters, memory, operators, system tasks.

UNIT-II

GATELEVELMODELLING:

Introduction, and gate primitive, module structure, other gate primitives, illustrative examples, tristate gates, array of instances of primitives, design of Flip flops with gate primitives, delays, strengths and contention resolution, net types, design of basic circuits.

UNIT-III

BEHAVIORALMODELLING:

Introduction, operations and assignments, initial construct, always construct, examples, assignments with delays, wait construct, multiple always blocks, designs at behavioral level, blocking and non-blocking assignments, the case statement, if and if else constructs, assign-De assign construct, repeat construct, FOR loop, the disable construct, While loop, Forever loop, parallel blocks, force-release construct, event.

UNIT-IV

DATA FLOWLEVEL MODELLING

Introduction, continuous assignment structures, delays and continuous assignments, assignment to vectors.

SWITCH LEVEL MODELLING

Basic transistor switches, CMOS switch, Bidirectional gates and time delays with switch primitives, instantiations with strengths and delays, strength contention with triregnets, switch level modeling for NAND, NOR and XOR.

UNIT-V

SYSTEM TASKS, FUNCTIONS, AND COMPILER DIRECTIVES: Introduction, System Tasks and Functions, File based Tasks and Functions, Compiler Directives, Hierarchical Directives, User-defined Primitives (UDP), FSM Design (Moore and Melay Machines).

UNIT-VI

SYNTHESISOFCOMBINATIONAL ANDSEQUENTIAL LOGIC USINGVERILOG: Synthesis of Combinational logic: Net list of structured primitives, a set of continuous assignment statements and level sensitive cyclic behavior with examples, Synthesis of priority structures, exploiting logic don’t care conditions.

Synthesis of sequential logic with latches: Accidental synthesis of latches and Intentional synthesis of latches, Synthesis ofsequentiallogicwithflip-flops, Synthesis of explicitstate machines.

TEXTBOOKS:

1. Design through VerilogHDL —T.R.PadmanabhanandB. BalaTripuraSundari, WSE, IEEEPress, 2004.
2. Advanced Digital Design withVerilog HDL—MichaelD.Ciletti, PHI, 2005.

REFERENCES:

1. FundamentalsofLogicDesignwithVerilog—Stephen.BrownandZvonkoVranesic, TMH, 2005.
2. AVerilogPrimier—J.Bhasker, BSP, 2003.

VII Sem.	Microwave & Optical Comm. Lab	Course Code:V18ECL11	L	T	P	C
			0	0	3	1

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Sketch the characteristics of various Microwave & Optical sources **(K3)**

CO2. Compute the various Parameters of Microwave & Optical Components **(K3)**

CO3. Measure the radiation pattern of Horn antenna and reflector antenna. **(K5)**

CO4. Analyze a rectangular microstrip patch antenna using HFSS software **(K4)**

Minimum Twelve Experiments to be conducted:

Part – A (Any 7 Experiments):

1. Reflex Klystron Characteristics.
2. Gunn-Diode Characteristics.
3. Attenuation Measurement.
4. Directional Coupler Characteristics.
5. Impedance and Frequency Measurement.
6. Scattering parameters of Circulator.
7. Scattering parameters of Magic Tee.
8. Radiation Pattern of Horn and Parabolic Antennas.
9. Synthesis of Microstrip antennas (Rectangular Structure) Using HFSS.

Part – B (Any 5 Experiments):

10. Characterization of LED.
11. Characterization of Laser Diode.
12. Intensity modulation of Laser output through an optical fiber.
13. Measurement of Data rate for Digital Optical link.
14. Measurement of NA.
15. Measurement of losses for Analog Optical link.

Equipment required for Laboratories:

1. Klystron Power Supply, Klystron mount
2. VSWR Meter
3. Micro Ammeter
4. Multi meter
5. CRO
6. GUNN Power Supply, Pin Modulator
7. Crystal Diode detector
8. Attenuator
9. Frequency Meter
10. Slotted line carriage
11. Probe detector

12. Wave guide shorts
13. SS Tuner
14. Directional Coupler
15. E, H, Magic Tees
16. Circulators, Isolator
17. Matched Loads
18. Pyramidal Horn and Parabolic Antennas
19. Turntable for Antenna Measurements
20. HFSS Software
21. Fiber Optic Analog Trainer based LED
22. Fiber Optic Analog Trainer based laser
23. Fiber Optic Digital Trainer
24. Fiber cables - (Plastic, Glass)

VIII-Semester Syllabus

VIII Sem.	Cellular & Mobile Communication	Course Code:V18ECT30	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the limitations of conventional mobile telephone systems; Understand the concepts of cellular systems. **[K2]**
CO2: Illustrate the concept of frequency Reuse channels, deduce Co- channel Interference reduction factor **[K2]**
CO3: Understand the frequency management, channel assignment strategies and Antennas in cellular systems.**[K2]**
CO4:Discuss the concepts of Handoff, dropped calls and cell splitting, Intersystem Handoff. **[K2]**
CO5: Explain the knowledge about GSM architecture and GSM channels, multiple Access schemes like FDMA,TDMA and CDMA. **[K2]**
CO6: Summarize the concepts of upcoming technologies like 3G, 4G etc. **[K2]**

UNIT-I CELLULAR MOBILE RADIO SYSTEMS: Introduction to Cellular Mobile System, uniqueness of mobile radio environment, operation of cellular systems, consideration of the components of Cellular system, Hexagonal shaped cells, Analog and Digital Cellular systems.

CELLULAR CONCEPTS: Evolution of Cellular systems, Concept of frequency reuse, frequency reuse ratio, Number of channels in a cellular system, Cellular traffic: trunking and blocking, Grade of Service; Cellular structures: macro, micro, pico and femto cells; Cell splitting, Cell sectoring.

UNIT-II INTERFERENCE: Types of interferences, Introduction to Co-Channel Interference, real time Co-Channel interference, Co-Channel measurement, Co-channel Interference Reduction Factor, desired C/I from a normal case in a Omni directional Antenna system, design of Antenna system, antenna parameters and their effects, diversity receiver, non-cochannel interference-different types.

UNIT-III FREQUENCY MANAGEMENT AND CHANNEL ASSIGNMENT: Numbering and grouping, setup access and paging channels, channel assignments to cell sites and mobile units: fixed channel and non-fixed channel assignment, channel sharing and borrowing, overlaid cells. CELL COVERAGE FOR SIGNAL AND TRAFFIC: Signal reflections in flat and hilly terrain, effect of human made structures, phase difference between direct and reflected paths, straight line path loss slope, and general formula for mobile propagation over water and flat open area, near and long distance propagation, antenna height gain, form of a point to point model.

UNIT-IV HANDOFF STRATEGIES Concept of Handoff, types of handoff, handoff initiation, delaying handoff, forced handoff, mobile assigned handoff, intersystem handoff, vehicle locating methods, dropped call rates and their evaluation.

UNIT-V DIGITAL CELLULAR NETWORKS: GSM architecture, GSM channels, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;

UNIT-VI HIGHER GENERATION CELLULAR STANDARDS: 3G System architecture (UMTS) enhancements in 4G standard, Architecture and representative protocols, introduction to 5G.

TEXTBOOKS:

1. Mobile Cellular Telecommunications – W.C.Y. Lee, Tata McGraw Hill, 2rd Edn,
2006.
2. Principles of Mobile Communications – Gordon L. Stuber, Springer International
2ndEdition, 2007.

REFERENCES:

1. Wireless Communications – Theodore. S. Rapport, Pearson education, 2nd Edn, 2002.
2. Wireless and Mobile Communications – Lee McGraw Hills, 3rd Edition, 2006. 3. Mobile Cellular Communication – G Sasibhushana Rao Pearson Wireless Communication and Networking – Jon W. Mark and Weihua Zhqung, PHI,
2005.
4. Wireless Communication Technology – R. Blake, Thompson Asia Pvt. Ltd., 2004.

			L	T	P	C
VIII Sem.	**Electronics Measurements & Instrumentation (Professional Elective-V)**	**Course Code:V18ECT31**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Select the instrument to be used based on the requirements.**[K2]**
CO2. Understand the design of oscilloscopes for different applications.**[K2]**
CO3. Explain different signal generators and analyzers.**[K2]**
CO4. Understand the design of different types of Bridge circuits for different Applications.**[K2]**
CO5. Explain and Design different types of transducers for different Applications. **[K2]**
CO6. Explain different types of transducers for measurement of Physical parameters. **[K2]**

UNIT-I
Performance characteristics of instruments, Static characteristics, Accuracy, Resolution, Precision, Expected value, Error, Sensitivity. Errors in Measurement, Dynamic Characteristics- speed of response, Fidelity, Lag and Dynamic error. DC Voltmeters- Multi-range, Range extension/Solid state and differential voltmeters, AC voltmeters- multirange, range extension, shunt. Thermocouple type RF ammeter, Ohmmeters series type, and shunt type, Multi-meter for Voltage, Current and resistance measurements.

UNIT-II
Oscilloscopes CRT features, vertical amplifiers, horizontal deflection system, sweep, trigger pulse, delay line, sync selector circuits, simple CRO, triggered sweep CRO, Dual beam CRO, Dual trace oscilloscope, sampling oscilloscope, storage oscilloscope, digital readout oscilloscope, digital storage oscilloscope, Lissajous method of frequency measurement, standard specifications of CRO, Probes for CRO- Active & Passive, attenuator types.

UNIT-III
Signal Generator- fixed and variable, AF oscillators, Standard and AF sine and square wave signal generators, Function Generators, Square pulse, Random noise, sweep, Arbitrary waveform. Wave Analyzers, Harmonic Distortion Analyzers, Spectrum Analyzers, Digital Fourier Analyzers.

UNIT-IV
DC Bridges: Measurement of Resistance-Wheatstone's Bridge, Kelvin's Bridge. AC Bridges: Measurement of inductance- Maxwell's bridge, Hay's bridge, Anderson Bridge. Measurement of capacitance-Schering's Bridge. Measurement of Frequency- Wien Bridge, Errors and precautions in using bridges.Q-meter.

UNIT-V
Transducers- active & passive transducers : Resistance, Capacitance, inductance; Strain gauges, LVDT, Piezo Electric transducers, Resistance Thermometers, Thermocouples, Thermistors, Sensistors.

UNIT-VI
Measurement of physical parameters- Force, Pressure, Velocity, Acceleration, Humidity, Moisture, Proximity, Displacement.Data acquisition systems.

TEXTBOOKS:

1. Electronic Instrumentation, second edition-H.S. Kalsi, Tata McGrawHill, 2004.
2. Modern Electronic Instrumentation and Measurement Techniques–A.D. Helfrick and W.D.Cooper, PHI, 5thEdition, 2002.

REFERENCES:

1. Electronic Instrumentation &Measurements- David A. Bell, PHI, 2ndEdition, 2003.
2. Electronic Test Instruments, Analog and Digital Measurements-Robert A. Witte, Pearson Education, 2ndEdition, 2004.
3. Electronic Measurements & Instrumentations by K. LalKishore, Pearson Education-2005.
4. Electronic Measurements & Instrumentation by UdayA.Bakshi& Ajay V. Bakshi
Technical Publications

VIII Sem.	FPGA Architecture (Professional Elective-IV)	Course Code:V18ECT32	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Low end programmable devices.**[K2]**
CO2: Explain FPGA basics.**[K2]**
CO3: Comprehend Spartan 6 basics.**[K2]**
CO4: Use Virtex 5 clock sources and FIFO. Comprehend various I/O standards.**[K2]**
CO5: Use Memory, DSP blocks in complex designs. Comprehend SerDes.**[K2]**
CO6: Comprehend JTAG. Distinguish RISC based Soft processors from Xilinx, Aletra.**[K2]**

UNIT-I
DESIGNING WITH PROGRAMMABLE LOGIC DEVICES:
Read only Memories, Programmable logic Arrays (PLA), Programmable Array logic (PAL), Programmable logic Devices (PLD) Skew, setup, hold time.

UNIT-II
DESIGNING WITH FPGA:
Logic implementation options, Technology trends, Simple SRAM programmable FPGA architecture, Xilinx 3000 series FPGAs, Programmable interconnects, Xilinx 4000 series FPGAs, Programming the FPGA.

UNIT-III
SPARTAN 6 ARCHITECUTUTE:
Spartan 6 Device features- 6 input LUT, Slice, Single Port RAM, Dual Port RAM, ROM, Distributed RAM, 32 x 6, 64 x 1, 128 x 1, Distributed RAM timings, Shift Registers, Multiplexers, Interconnect, PLL, DCM, DSP Slice.

UNIT-IV
VIRTEX 5 ARCHITECTURE:
Clock resources-Global clocks, regional clocks, Clock buffer, Clock Gating.Clock Tree, Clock De-skew, True Dual port RAM. Write modes, FIFO architecture, empty flags, almost empty flags, almost fill flags, full flag, cascading FIFOS, connecting FIFOs in parallel, designing Large multiplexer 4xl, 8xl, 16xl. Control impedance, I/O primitives. I/O supported standards, LVDS.

UNIT-V
STARATIX V ARCHITECTURE:
ALM Block diagram, ALM operating modes, ALM in Arithmetic mode, Types of embedded memory, Control clocking, Memory features, Memory modes, DSP block features, operational modes, DSP block architecture in 27 X 27 mode, independent complex multiplier mode, I/O features mixing voltage referenced and non-voltage referenced standard I/O features standards. Dynamic OCT.LVDS SerDes block diagram and features, Differential Receiver Block diagram and features.

UNIT-VI
SOFT PROCESSORS:
JTAG, programming through JTAG, IEEE 1149.1 Boundary scan testing, programmable power technology, Features of Soft processors, Nios-II, Microblaze.

TEXT BOOKS:

1. Charles H Roth Jr "Digital System Design using VHDL", second edition, 2008.
2. Spartan 6 family overview.
3. Virtex 5- User Guide.
4. Staratix V Device Hand Book.
5. Nios-II, Microblaze Features – Altera, Xilinx.

REFERENCES:

1. J. Old Field,R.Dorf, "Field Programmable Gate Arrays", John Wiley & Sons, New York, 1995.
2. S. Trimberger, Edr."Field Programmable Gate Arrays Technology", Kluwer Academic Publications, 1994.
3. Bob Zeidman, "Designing with FPGAs & CPLDs", CMP Books, 2002.

			L	T	P	C
VIII Sem.	**Principles of Modern Wireless Communication Systems (Professional Elective-V)**	**Course Code:V18ECT33**	**3**	**0**	**0**	**3**

Syllabus Details

CO1: Describe how to measure the performance of wireless system, in multipath Environment **[K2]**
CO2: Summarize about Wireless Channel. **[K2]**
CO3: Explain Principle and properties of CDMA. **[K2]**
CO4: Discuss the working and advantages of MIMO wireless communication systems **[K2]**
CO5: Explain the principle and advantages of OFDM system **[K2]**
CO6: Describe of various modern wireless communication technologies **[K2]**

UNIT-I

Principles of Wireless Communication: The wireless communication environment, modelling of wireless systems, system model for narrowband signals, Rayleigh fading wireless channel, BER performance of wireless systems, channel estimation in wireless systems, Diversity in wireless communication, multiple antenna receive model, BER in multiple antenna system, channel estimation in multiple antenna system.

UNIT-II

Wireless Channel: Basics of Wireless Channel Modelling, Maximum Delay Spread, RMS Delay Spread, RMS Delay Based on Average Power Profile, Average Delay Spread in Outdoor Cellular Channels, Coherence Bandwidth in Wireless Communications, Relation between ISI and Coherence Bandwidth.

UNIT-III

Code Division Multiple Access: Fundamentals of CDMA codes, Spreading codes based on Pseudo-Noise sequences, correlation properties of random CDMA spread sequences, Multi-user CDMA, Advantages of CDMA, CDMA near far problem and power control.

UNIT-IV

Multiple Input Multiple Output Wireless Communications: Introduction to MIMO wireless Communications, MIMO System model, MIMO zero forcing (ZF) receiver, MIMO MMSE receiver, Singular Value Decomposition (SVD) of the MIMO channel, MIMO capacity, Asymptotic MIMO capacity, MIMO beam forming.

UNIT-V

Orthogonal Frequency Division Multiplexing: Introduction to OFDM, multicarrier transmission, cyclic prefix in OFDM, BER for OFDM, MIMO-OFDM, effect of frequency offset in OFDM, Peak to Average Power ratio in OFDM, SC-FDMA.

UNIT-VI

Recent advancements in wireless technology: Introduction to 4G LTE, VoLTE, 5G Technology, NOMA and Massive MIMO.

Text Books:

1. Aditya K. Jagannatham, "Principle of Modern Wireless Communication Systems: Theory and practice" 1st Edition, McGrawHill Publication
2 Theodore S. Rappaport, "Wireless Communications: Principles and Practice" Second Edition, Pearson Education

Reference Books:

1. Simon Haykin, MichaleMoher, "Modern Wireless Communications", Pearson.
2. Xiaodong Wang, H. Vincent Poor, "Wireless Communication Systems: Advanced Techniques for Signal Reception", Pearson 5 Proakis J.J.,D Wozencraft J.M. and Jacobs I.M., Principles of Communication Engineering, John Wiley

VIII Sem.	Satellite Communication (Professional Elective-VI)	Course Code:V18ECT34	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Describe the basic concepts of Satellite Communications & analyze the concepts of
Orbital mechanics & Launchers**(K4)**

CO2.Discuss the major Sub-Systems of a Satellite**(K2)**

CO3.Design the Communication Link for Satellite**(K4)**

CO4.Compare the various Multiple Access Techniques**(K3)**

CO5.Analyze the various sub-systems used in Earth stations & review the different orbits **(K4)**

CO6.Analyze the Satellite Navigation & the Global positioning system **(K4)**

UNIT-I

Introduction: Origin of Satellite Communications, Historical Back-ground, Basic Concepts of Satellite Communications, Frequency allocations for Satellite Services, Applications, Future Trends of Satellite Communication.

Orbital Mechanics and Launchers: Orbital Mechanics, Look Angle determination, Orbital perturbations, Orbit determination, launches and launch vehicles, Orbital effects in communication systems performance.

UNIT-II

Satellite Subsystems: Attitude and orbit control system, telemetry, tracking, Command &monitoring, power systems, communication subsystems, Satellite antenna Equipment reliability and Space qualification.

UNIT-III

Satellite Link Design: Basic transmission theory, system noise temperature and G/T ratio, Design of down links, up link design, Design of satellite links for specified C/N, System design example.

UNIT-IV

Multiple Access: Frequency division multiple access (FDMA), Inter modulation, Calculation of C/N. Time division Multiple Access (TDMA), Frame structure, Examples. Satellite Switched TDMA Onboard processing, DAMA, Code Division Multiple access (CDMA), Spread spectrum transmission and reception.

UNIT-V

Earth Station Technology: Introduction, Transmitters, Receivers, Antennas, Tracking systems, Terrestrial interface, Primary power test methods.

Low Earth Orbit and Geo-Stationary Satellite Systems: Orbit consideration, coverage and frequency considerations, Delay & Throughput considerations, System considerations, Operational NGSO constellation Designs

UNIT-VI

Satellite Navigation & The Global Positioning System: Radio and Satellite Navigation, GPS Position Location principles, GPS Receivers and codes, Satellite signal acquisition, GPS Navigation Message, GPS signal levels, GPS receiver operation, GPS C/A code accuracy, Differential GPS.

Text Books:

1. Satellite Communications – Timothy Pratt, Charles Bostian& Jeremy Allnutt, WSE, Wiley Publications, 2nd Edition, 2003.
2. Satellite Communications Engineering – Wilbur L. Pritchard, Robert A Nelson & Henri G. Suyderhoud, 2nd Edition, Pearson Publications, 2003.

References:

1. Satellite Communication: Design Principles – M. Richharia, BS Publications, 2nd Edition, 2003.
2. Satellite Communication - D.C Agarwal, Khanna Publications, 5th Ed.
3. Fundamentals of Satellite Communications – K.N. Raja Rao, PHI, 2004
4. Satellite Communications – Dennis Roddy, McGraw Hill, 2nd Edition, 1996.

VIII Sem.	Bio-Medical Engineering (Professional Elective-VI)	Course Code:V18ECT35	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain the basics concepts of Bio-Medical Instrumentation. **[K2]**
- CO2: Explain the concepts of electrode theory, classification of Electrodes and Transducers used in Bio-Medical Applications.**[K2]**
- CO3: Explainhe Anatomy and Physiology of Cardiovascular system and Illustrate the application of Bio-Medical Instruments to measure the Physiological parameters of Cardiovascular System.**[K2]**
- CO4: Discuss the processing methods in elements used for Patient's Health care & monitoring.**[K2]**
- CO5: Explain the Principles of Diagnostic Techniques and the concepts of Bio-Telemetry.**[K2]**
- CO6: Classify different types of monitors, discuss the principles of recorders and Illustrate the methods of accident preventions i.e. Shock Hazards from different Electrical Equipment.**[K2]**

UNIT-I:

INTRODUCTIONTOBIOMEDICALINSTRUMENTATION: AgeofBiomedicalEngineering, Development of Biomedical Instrumentation, Man Instrumentation System, Components of the Man-Instrument System, Physiological System of the Body, Problems Encountered in Measuring a Living System, Sources of Bioelectric Potentials, Muscle, Bioelectric Potentials, Sources of Bioelectric Potentials, Resting and ActionPotentials,BioelectricPotentials-ECG,EEGandEMG,EvokedResponses.

UNIT-II:

ELECTRODES AND TRANSDUCERS: Introduction, Electrode Theory, Bio potential Electrodes, Examples of Electrodes, Basic Transducer Principles ,The Transducer and Transduction Principles, Active Transducers, Passive Transducers, Transducers for Biomedical Applications, Pulse Sensors, Respiration Sensor, Transducers with Digital Output.

UNIT-III:

CARDIOVASCULAR SYSTEM AND MEASUREMENTS: The Heart and Cardiovascular System, Electro Cardiography, Blood Pressure Measurement, Measurement of Blood Flow and Cardiac Output, Measurement of Heart Sounds, Plethysmography.

MEASUREMENTSINTHERESPIRATORYSYSTEM: The Physiology of The Respiratory System, Tests and Instrumentation f orthe Mechanics of Breathing, Respiratory Therapy Equipment.

UNIT-IV:

PATIENTCAREANDMONITORING: Elements of Intensive-CareMonitoring, Patient Monitoring Displays, Diagnosis, Calibration and Repair ability of Patient-Monitoring Equipment, Other Instrumentation for Monitoring Patients, Organization of the Hospital for Patient-Care Monitoring, Pacemakers, Defibrillators.

UNIT-V:

DIAGNOSTIC TECHNIQUES AND BIO-TELEMETRY: Principles of Ultrasonic Measurement, UltrasonicImaging, Ultrasonic Applications of Therapeutic Uses, Ultrasonic Diagnosis, X-Ray and Radio-Isotope Instrumentations, CATScan, Emission Computerized Tomography, MRI, Introduction to Biotelemetry, Physiological Parameters Adaptable to Biotelemetry, The Components of Biotelemetry System, Implantable Units, Telemetry for ECG Measurements during Exercise, Telemetryfor Emergency Patient Monitoring

UNIT-VI:

MONITORS,RECORDERSANDSHOCKHAZARDS: Bio potential Amplifiers, Monitors, Recorders, Shock Hazards and Prevention, Physiological Effects and Electrical Current, Shock Hazards from Electrical Equipment, Methods of Accident Prevention, Isolated Power Distribution System.

TextBooks:

1. “Bio-Medical Electronics and Instrumentation”, Onkar N.Pandey,RakeshKumar, Katson Books.
2. “Bio-Medical Instrumentation”,Cromewell,Wiebell,Pfeiffer

References:

1. “HandBookofBio-MedicalInstrumentation”,Khandapur.McGrawHill
2. “IntroductiontoBio-medical Equipment Technology”, 4th Edition, Joseph J.Carr, John M.Brown, PearsonPublications.

VIII	Wireless Sensor	Course Code:V18ECT36	L	T	P	C

Sem.	**Networks (Professional Elective-VI)**		**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Explain the concepts of Wireless Sensor Networks, its Architecture. **[K2]**
- CO2: Describe the Networking Technologies**. [K2]**
- CO3: Explain the MAC Protocols**. [K2]**
- CO4: Illustrate the Routing Protocols. **[K2]**
- CO5: Describe the Transport Layer Protocols. **[K2]**
- CO6: Explain the Security Layer Protocols and Applications of WSN. **[K2]**

UNIT-I –Introduction to Wireless Sensor Networks:
Key definitions of sensor networks, Advantages of sensor Networks, Unique constraints and challenges, Driving Applications, Enabling Technologies for Wireless Sensor Networks. Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, Operating Systems and Execution Environments, Network Architecture - Sensor Network Scenarios, Gateway Concepts.

UNIT-II - Networking Technologies:
Physical Layer and Transceiver Design Considerations, Personal area networks (PANs), hidden node and exposed node problem, Topologies of PANs, MANETsand WANETs.

UNIT-III - MAC Protocols for Wireless Sensor Networks:
Issues in Designing a MAC protocol for Ad Hoc Wireless Networks, Design goals of a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC Protocols - Contention - Based Protocols, with reservation Mechanisms, and with Scheduling Mechanisms.

UNIT-IV - Routing Protocols:
Introduction, Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks, Classification of Routing Protocols, Table–Driven Routing Protocols, On – Demand Routing Protocols, Hierarchical Routing Protocols, Proactive Routing.

UNIT-V - Transport Layer Protocols:
Introduction, Issues in Designing a Transport Layer Protocol for Ad Hoc Wireless Networks, Design Goals of a Transport Layer Protocol for Ad Hoc Wireless Networks, Classification of Transport Layer Solutions, TCP Over Ad Hoc Wireless Networks.

UNIT- VI - Security, Platforms & Applications:
Security in Ad Hoc Wireless Networks, Network Security Requirements, Issues and Challenges in Security Provisioning; Sensor Node Hardware – Berkeley Motes, Programming Challenges; Applications - Home Automation, Smart Metering.

TEXT BOOKS:

1. Ad Hoc Wireless Networks: Architectures and Protocols, C. Siva Ram Murthy and B.S.Manoj, 2004, PHI.
2. Wireless Adhoc and Sensor Networks: Protocols, Performance and Control, JagannathanSarangapani, CRC Press.
3. Holger Karl & Andreas Willig, “Protocols and Architectures for Wireless Sensor Networks", John Wiley, 2005.

REFERENCES:

1. Wireless Sensor Networks- Technology, Protocols, and Applications, KazemSohraby, Daniel Minoli, &TaiebZnati, John Wiley, 2007.
2. Wireless Sensor Networks- Information Processing Approach, Feng Zhao & Leonidas J. Guibas, Elsevier, 2007.
3. Adhoc Mobile Wireless Networks: Protocols & Systems, C.K. Toh,1st Ed., Pearson Education.
4. Wireless Sensor Networks - C. S. Raghavendra, Krishna M. Sivalingam, 2004, Springer.
5. Wireless Sensor Networks – S Anandamurugan, Lakshmi Publications.

			L	T	P	C
VII Sem.	**Principles of Wireless Comm.** **(Open Elective-II)**	**Course Code:V18ECTOE4**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the cellular system evolution of mobile radio systems **[K2]**
CO2: Illustrate the basic cellular concepts. **[K2]**
CO3: Explain the Various Propagation models. **[K2]**
CO4: Discuss the need of modulation, diversity and equalization in cellular & Mobile Communication. **[K2]**
CO5: Demonstrate the knowledge about GSM architecture, multiple accesss chemes like FDMA,TDMA, CDMA. **[K2]**
CO6: Summarize the concepts of upcoming technologies like 3G, 4G etc. **[K2]**

UNIT-I: Introduction of Wireless Communication
History and evolution of mobile radio systems: Types of mobile wireless services/systems-Cellular, WLL, Paging, Satellite systems, Future trends in personal wireless systems.

UNIT-II: Cellular Concepts and System Design Fundamentals
Cellular concept and frequency reuse, channel assignment, handoff strategies, Interference and system capacity, Trunking and GOS, cell splitting,cell sectoring.

UNIT-III: Mobile radio Propagation Models

Radio wave propagation issues in personal wireless systems, Propagation models, Multipath fading, parameters of mobile multipath channels and Antenna systems in mobile radio.

UNIT-IV: Overview analog and digital modulation techniques
Need For Modulation. Different Analog and Digital modulation techniques used in Cellular and mobile communication systems.

UNIT-V DIGITAL CELLULAR NETWORKS: GSM architecture, GSM Services, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;

UNIT-VI Higher Generation Cellular Standards: 3G System architecture (UMTS), 4G System Architecture, Introduction to 5G.

Text Books

VII Sem.		Course Code:V18ECTOE6	L	T	P	C
			3	0	0	3

	Concepts of Embedded Systems **(Open Elective-II)**					

Syllabus Details

COs	Course outcomes
CO1	Describe the Basic Concepts of embedded systems- **(K2).**
CO2	Describe the characteristics of Embedded Systems - **(K2)**
CO3	Explain the Architecture and Pin Description of 8051- **(K2)**
CO4	Explain various Addressing Modes and Instructions of 8051- **(K2)**
CO5	Discuss the various Interrupts , Modes of Timers/Counters in 8051**-(K2)**
CO6	Discuss the fundamentals of RTOS based embedded firmware design - **(K2)**

UNIT-I - INTRODUCTION TO EMBEDDED SYSTEMS:

Introduction to Embedded Systems, Embedded Systems vs. General Computing Systems, Classification of Embedded systems, Major application areas of embedded systems, Purpose of embedded Systems, The Typical embedded system - core of the embedded system, Difference between RISC and CISC, Types of Memories.

UNIT-II - CHARACTERISTICS OF EMBEDDED SYSTEM:

Characteristics of an embedded system, Quality attributes of embedded systems, Application-specific and Domain-Specific examples of an embedded system.

UNIT-III-8051 Micro Controller – Architecture, Pin Description

Introduction, 8051 Architecture, Registers in 8051, Pin Diagram – Description, Parallel I/O Ports and Memory Organization

UNIT-IV - 8051 Micro Controller – Addressing Modes and Instructions:

8051 Addressing Modes, 8051 Instruction Set, Instructions and Sample Programs, Stack Pointer

UNIT-V - 8051 Micro Controller – Interrupts, Timer/ Counter:

Interrupts in 8051, Timers and Counters, Timer/ Counter Modes, Serial Communication – Modes

UNIT-VI- REAL TIME OPERATING SYSTEM:

Operating System basics, Types of operating systems, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling, Inter Task communication.

Text Books:

1. Embedded Systems-By Shibu. K.V-Tata McGraw Hill Education Private Limited,2013.
2. Micro Controllers [Theory and Applications] – Ajay V Deshmukh – Tata McGraw-Hill Education Private Limited,2012

References:

1. The 8051 Micro Controller- Kenneth Ayala – CENGAGE- 3rd Edition
2. Embedded/Real Time Systems by KVKK Prasad by Dreamtech Publication

VIII Sem.	**Fundamentals of Digital Image & Video Processing (Open Elective-III)**	**Course Code:V18ECTOE7**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Analyse Image transforms for various Image processing operations**(K4)**
- CO2: Examine Spatial & frequency domain filtering like smoothing & sharpening Operations on Images**(K4)**
- CO3: Estimate Image degradation functions and Analyze various Image Restoration Techniques on Images**(K4)**
- CO4: Analyze various Image segmentation techniques**(K4)**
- CO5: Describe various Image compression techniques**(K3)**
- CO6: Explain basic concepts regarding to motion estimation, video filtering and Video standards.**(K2)**

UNIT-I

IMAGE FUNDAMENTALS & TRANSFORMS: Fundamental steps in digital image processing, components of an image processing system, image sensing and acquisition, image sampling and quantization. Two dimensional orthogonal transforms: DFT, WHT, Haar transform, DCT and DST

UNIT-II

Intensity Transformations, Spatial Filtering and frequency domain filtering: Some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters, sharpening spatial filters, `Image smoothing and sharpening in frequency domain filtering

UNIT-III

IMAGE RESTORATION: Degradation Models, Linear Position –Invariant Degradations, Estimating the degradation function, inverse filtering, Minimum mean square error (Wiener) filtering and geometric mean filter.

UNIT-IV

IMAGESEGMENTATION: Pixelclassification,Bi-levelThresholding,Multi-levelThresholding,AdaptiveThresholding,Spectral& spatial classification, Edge detection, Hough transform, Region growing.

UNIT-V

IMAGE COMPRESSION: Compression models, Huffman Coding, Arithmetic coding, Bit plane coding, run length coding, Lossy compression: Transform coding, Image compression standards.

UNIT-VI

VIDEO PROCESSING: Representation of Digital Video, Spatio-temporal sampling, Motion Estimation. Video Filtering, Video Compression, Video coding standards.

Text Books:

1. R.C.Gonzalez, R.E.Woods, "DigitalImageProcessing",Pearson Education. 2ndedition, 2002
2. M.Tekalp,"DigitalVideoProcessing",Prentice-Hall,1995

Reference Books:

1. AnilK.Jain,"FundamentalsofDigitalImageProcessing",PrenticeHallofIndia,9th Edition, Indian Reprint, 2002.
2. B.Chanda, D.DuttaMajumder, "Digital ImageProcessingandAnalysis", PHI, 2009.
3. Bovik, "HandbookofImage&Videoprocessing",AcademicPress,2000.
4. Khalid Sayood,Introduction to data compression ,third edition, The Morgan Kaufmann publishers,2005

VIII Sem.	Embedded RTOS (Open Elective-III)	Course Code:V18ECTOE8	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1: Describe the basics of Real time OS. **[K2]**
- CO2: Explain the tasks, Interrupts, Security. **[K2]**
- CO3: Describe the basics of µCOS-II RTOS. **[K2]**
- CO4: Describe the basics of µCOS-II RTOS. **[K2]**
- CO5: Illustrate the mechanism of target image creation and porting. **[K2]**
- CO6: Explain the Application of RTOS. **[K2]**

UNIT-I: Introduction
OS Basics, Task, Process, Threads, Multiprocessing & Multitasking, Process Management, Timer Functions, Event Functions, Memory Management, Device, File and IO Systems Management, Interrupt Routines in RTOS Environment and Handling of Interrupt Source Calls.

UNIT-II: RTOS
Basic Design Using an RTOS, RTOS Task Scheduling Models, Interrupt Latency and Response of the Tasks as Performance Metrics, OS Security Issues. Basic Functions and Types of RTOS.

UNIT-III: RTOS µCOS-II
Introduction, Task Service, Task Scheduling, Memory Allocation, IPC – Semaphore, Mailbox, Queue, Interrupt Handling.

UNIT-IV: RTOS Vx Works
Introduction, Task Service, Task Scheduling, Memory Allocation, IPC – Semaphore, Mailbox, Queue, Interrupt Handling.

UNIT-V: Embedded OS & Target Image Creation
Off-The-Shelf Operating Systems, Embedded OS, Handheld OS, Operating System Software, Target Image Creation for Window XP Embedded, Porting RTOS on a Micro Controller based Development Board.

UNIT-VI: Program Modeling – Case Studies
Case study of embedded system design and coding for an Automatic Chocolate Vending Machine (ACVM) Using µCOS-II RTOS, Case study of digital camera hardware and software architecture, Using RTOS Vx Works, Case Study of Embedded System for an

Adaptive Cruise Control (ACC) System in Car, Case Study of Embedded System of Mobile Phone Software for Key Inputs.

TEXT BOOKS:

1. Shibu K V: "Introduction to Embedded Systems", Tata McGraw Hill Publications, Second Edition.
2. Dr. K.V.K.K. Prasad: "Embedded/Real-Time Systems", Dream Tech Publications, Black pad.
3. Raj Kamal: "Embedded Systems-Architecture, Programming and Design", Tata McGraw Hill Publications, Second Edition.

REFERENCES:

1. Labrosse, "Embedding system building blocks ", CMP publishers.
2. Rob Williams," Real time Systems Development", Butterworth Heinemann Publications.

			L	T	P	C
VIII Sem.	**Principles of Digital TV Engineering (Open Elective-III)**	**Course Code:V18ECTOE9**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1:	Illustrate the fundamentals of television engineering	**[K2]**
CO2:	Explain about TV signal transmission	**[K2]**
CO3:	Explain the colour TV fundamentals	**[K2]**
CO4:	Classify Digital TV transmission standards	**[K2]**
CO5:	Explain the operation of Digital TV receiver	**[K2]**
CO6:	Describe the working of LCD and Plasma screens	**[K2]**

UNIT-I

Introduction: TV transmitter and receivers, synchronization **Television Pictures**: Geometric form and aspect ratio, image continuity, interlaced scanning, picture resolution

UNIT-II

Composite video signal: Horizontal and vertical sync details **TV Signal Transmission:** VSB transmission, standard channel BW, TV transmitter

UNIT-III

Colour Television: Perception of brightness and colours, additive colour mixing, video signals for colours, luminance signal, colour difference signals, encoding of colour difference signals, formation of chrominance signals, PAL encoder, PAL colour receiver

UNIT-IV

Digital Television Transmission Standards: ATSC terrestrial transmission standard, vestigial sideband modulation, DVB -T transmission standard, ISDB-T transmission standard

UNIT-V

Digital Television: Digital Satellite Television, Direct to Home Satellite Television, Digital TV Receiver, Merits of Digital TV Receivers

UNIT-VI

LCD Screens: LCD Technology, LCD Matrix types and operation, LCD Screens for Television, LCD color receiver

Plasma Screens: Plasma and conduction of charge, Plasma TV Screens, Plasma Color Receiver

Text Books:

1. Television engineering and video systems – R G Gupta, Tata McGraw Hill Publishers.
2. Television and Video Engineering – A.M.Dhake, 2nd Edition, Tata McGraw Hill Publishers.
3. Modern Television Practice: Transmission, Reception and Applications- R RGulati, 4th revised edition, New Age International Publishers.
4. Fundamentals of Digital Television Transmission- Gerald W. Collins, John Wiley & Sons.

References

1. Basic Television and Video Systems – Bernard Grob, McGrawHill Publishers.
2. Monochrome and Colour Television - R RGulati, New Age International Publishers.
3. Colour Television, Theory and Practice - S.P.Bali, Tata McGraw-Hill Publishers.

***Skill Oriented Course:**

The Student shall be given an option to choose either the skill courses being offered by the college or to choose a certificate course being offered by industries/ professional bodies/ APSSDC or any other accredited bodies as approved by the concerned BoS.

List of Skill Oriented Courses:

S. No	Name of the Proposed Course
1	PCB Design
2	Programming in Scilab
3	Programming with Arduino
4	Circuit Design & Simulation using Multisim
5	Concepts of Embedded systems
6	Internet of Things
7	Robotics
8	Hands on Graphical Programming Using Labview

III Semester SYLLABUS

III Sem.	Electronic Devices Circuits & Analysis	Course Code:V20ECT02	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

- CO1: Explain the formation of p-n Junction, Discuss special semi-conductor Diodes & Explain the working principle of rectifiers with and without filters With relevant expressions and necessary comparisons**[K2]**
- CO2: Understand the construction, principle of operation of transistors, BJT and FET with their V-I characteristics in different configurations.**[K2]**
- CO3: Explain the need of transistor biasing, various biasing techniques for BJT. **[K2]**
- CO4: Analyze small signal low frequency transistor amplifier circuits using BJT In Single & Multistage.**[K2]**
- CO5: Explain the operation & Analysis of Feedback and Power amplifiers.**[K2]**

UNIT-I: Junction diode characteristics: p-n junction diode, energy band diagram of PN junction Diode, current components in PN junction Diode, law of junction, derivation of diode equation, V-I Characteristics, Diode resistance, Diode capacitance. Zener Diode, Breakdown mechanisms, UJT, Construction and characteristics

Rectifiers and Filters: Rectifier Classification, characteristics of rectifiers, Filters-Capacitor filter, Inductor filter, derivation for ripple factor in eachcase.

UNIT- II: Transistor Characteristics: BJT: Junction transistor, transistor current components, Transistor equation, Characteristics of transistor in Common Base, Common Emitter and Common Collector configurations, Early Effect.

FET: Comparison between BJT and FET.FET types, construction, operation, characteristics, MOSFET- types, construction, operation, characteristics.

UNIT- III: Transistor Biasing &Thermal Stabilization

BJT: Need for biasing, operating point, Load line analysis, BJT biasing- methods, fixed bias, collector to base bias, self-bias, Stabilization against variations in VBE, Ic, and β,Stability factors(S, S", S'"),Bias compensation.

UNIT-IV: Small Signal Analysis of BJT

Two port network, Transistor hybrid model, determination of h- parameters, Generalized Analysis of CB, CE and CC amplifiers using exact and approximate analysis,Low frequency analysis of Cascade and Cascode amplifiers.

UNIT-V: Feedback Amplifiers, Oscillators & Power Amplifiers

Feedback principle and concept, types of feedback, classification of amplifiers, feedback topologies Generalized analysis of Voltage series, current series, voltage shunt, current shunt feedback amplifiers,

Oscillators: Basic concept, Barkhausen criterion, RC oscillators (phase shift, Wien bridge), LC oscillators (Hartley, Colpitts)various classes of operation (Class A, B, AB), power efficiency calculations.

Text Books:

1. Electronic Devices and Circuits- J. Millman, C. Halkias,TMH.
2. Integrated Electronics- Jacob Millman, C. Halkies, C.D.Parikh,TMH.
3. Electronic Circuit Analysis - B.V.Rao, K.R.Rajeswari, P.C.R.Pantulu, K.B.R.Murthy, Pearson Publications

References:

1. Electronic Devices and Circuits Theory – Robert L. Boylestad and Louis Nashelsky, Pearson/Prentice Hall.
2. ElectronicCircuitAnalysisandDesign–Donald A.Neaman,McGrawHill.

III Sem.	Probability Theory & Stochastic Processes	Course Code: V20ECT03	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO-1: Explain basic concepts of probability theory through Sets and Relative Frequency **(K2)**

CO-2: Explain the concept of a random variable, functions based on random variable like Distribution and density functions (**K2)**

CO-3: Compute the expected value, moments on one random variable **(K3)**

CO-4: Illustrate the concepts of joint distribution & density functions on multiple random Variables**(K3)**

CO-5: Compute the Temporal and Spectral characteristics of stochastic processes **(K3)**

UNIT I PROBABILITY : Probability introduced through Sets and Relative Frequency: Experiments and Sample Spaces, Discrete and Continuous Sample Spaces, Events, Probability Definitions and Axioms, Mathematical Model of Experiments, Probability as a Relative Frequency, Joint Probability, Conditional Probability, Total Probability, Bayes Theorem, Independent Events

UNIT II THE RANDOM VARIABLE: Definition of a random variable, Discrete, continuous and mixed random Variables. Distribution & density functions and its properties of a random variable. Binomial, Poisson, Uniform, Gaussian, Exponential and Rayleigh random variables. Conditional distribution and density functions and its properties.

UNIT III OPERATION ON ONE RANDOM VARIABLE – EXPECTATIONS : Introduction, expected value of a random variable, function of a random variable, moments about the origin, central moments, variance, characteristic function, moment generating function, transformations of a random variable: Monotonic transformations for a continuous random variable

UNIT IV MULTIPLE RANDOM VARIABLES : Vector random variables, joint distribution function, properties of joint distribution, marginal distribution functions, conditional distribution and density, statistical independence, sum of two random variables, sum of several random variables, central limit theorem: unequal distribution, equal distributions.
OPERATIONS ON MULTIPLE RANDOM VARIABLES: Joint moments about the origin, joint central moments, joint characteristic and moment generating functions.

UNIT V RANDOM PROCESSES – TEMPORAL CHARACTERISTICS: The random process concept, classification of processes, deterministic and nondeterministic processes, distribution and density functions, concept of Stationarity and statistical independence. First-order stationary processes, second-order and wide-sense Stationarity, nth-order and strict-sense Stationarity, time averages and Ergodicity, autocorrelation function and its properties, cross-correlation function and its properties, covariance functions.

SPECTRAL CHARACTERISTICS: The power density spectrum: properties, relationship between power density spectrum and autocorrelation function, the cross-power density spectrum, properties, relationship between cross-power density spectrum and cross-correlation function.

TEXT BOOKS:

1. Probability, Random Variables & Random Signal Principles, Peyton Z. Peebles, TMH,
4th Edition, 2001.
2. Probability, Random Variables and Stochastic Processes, Athanasios Papoulis and S. UnniKrishnaPillai, PHI, 4th Edition, 2002.
3. Probability Theory and Stochastic Processes, Y. Mallikarjuna Reddy, 4th Edition, Universities Press

Reference Books:

1. Probability Theory and Stochastic Processes – B. PrabhakaraRao, BS Publications
2. Probability and Random Processes with Applications to Signal Processing, Henry Stark
And John W. Woods, Pearson Education, 3rd Edition.
3. Schaum's Outline of Probability, Random Variables, and Random Processes.
4. An Introduction to Random Signals and Communication Theory, B.P. Lathi, International Textbook, 1968.
5. Random Process – Ludeman, John Wiley
6. Probability Theory and Random Processes, P. Ramesh Babu, McGrawHill, 2015.

III Sem.	Network Theory	Course Code: V20ECT04	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

- CO1: Apply network theorems to solve the electrical circuits. **[K3]**
- CO2: Describe the steady state analysis of RLC circuits. **[K2]**
- CO3: Analyze the resonance circuits. **[K4]**
- CO4: Solve the two port network parameters. **[K3]**
- CO5: Explain RLC transient circuits. **[K2]**

UNIT – I - ELECTRICAL CIRCUITS FUNDEMENTALS AND THEOREMS:
Electric circuits: Network elements classification, Source transformation, Kirchhoff's laws, Mesh analysis and Nodal analysis problem solving with resistances only including dependent sources. **Network theorems:** Thevenin's, Norton's, Milliman's, Reciprocity, Compensation, Substitution, Superposition, Max Power Transfer, - Problem solving using dependent sources also.

UNIT – II - STEADY STATE ANALYSIS OF A.C CIRCUITS
Response to sinusoidal excitation: - pure resistance, pure inductance, pure capacitance, series R-L, R-C, R-L-C circuits, parallel R-L, R-C, R-L-C circuits. Impedance concept, phase angle, problem solving for R-L, R-C and R-L-C circuits using mesh and nodal analysis.

UNIT-III RESONANCE
Series Resonance: resonance frequency, impedance, current, power factor, bandwidth, cutoff frequencies &Q-factor.
Parallel Resonance: resonance frequency, impedance, current, power factor, bandwidth, cutoff frequencies Q-factor. Comparison of series and parallel resonance circuits and solving problems.

UNIT – IV - TWO-PORT NETWORKS
Z-parameters, Y-parameters, Transmission parameters, h-parameters, series connection, Parallel connection, Cascade connection of two port networks. Relationship of two port networks, problem solving

UNIT – V – TRANSIENTS
Initial and final condition in capacitor and inductor, Definition of time constants, R-L, R-C, R-L-C circuits with DC excitation, problem solving using R-L-C elements with DC excitation. Solutions using Laplace transform method.

TEXT BOOKS:
1. Electric Circuit Analysis by Hayt and Kimmarle, TMH.
2. Network Analysis by Van-Valkenberg, PHI.
3. Circuit Theory (Analysis and Synthesis) by ABHIJIT Chakrabarti, Dhanpat Rai&Co.

REFERENCES:
1. Basic Circuit Analysis by DR Cunninghan, Jaico Publishers.
2. Network Analysis and Filter Design by Chadha, Umesh Publications.
3. Circuits & Network Analysis & Synthesis - A.Sudhakar&Shyam MohanS.Pillai, TMH.

			L	T	P	C
III Sem.	**Signals & Systems**	**Course Code: V20ECT05**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1	Classify the signals and various operations on signals.**[K2]**
CO2	Determine the response of LTI system to any arbitrary input signal using convolution**[K2]**
CO3	Analyze the spectral characteristics of signals using Fourier series and Fourier transforms.**[K3]**
CO4	Apply the various sampling techniques on continuous time signals.**[K3]**
CO5	ApplytheconceptsofLaplacetransform/Z-transformtoanalyzecontinuous-time/discrete-timesignalsincomplexplane. **[K3]**

UNIT-I

SignalsandSystems: Continuous-timeandDiscrete-timesignals, Transformations of the independent variable, Exponential and Sinusoidal signals, the unit impulse and unit step functions, Continuous-time and Discrete-time systems and Basic System properties.

UNIT-II

Linear Time Invariant Systems (LTI systems): Discrete-time LTI systems, the convolution sum, Continuoustime LTIsystems, the convolution Integral, Properties of Linear Time-InvariantSystems.

UNIT-III

Fourier series: Fourier series representation of Continuous-time periodic signals, Convergence of the Fourier series, Properties of Continuous time Fourier series.
Fourier transform: Representation of periodic signals: The Continuous-time Fourier transform, The Fourier transform for periodic signals, Properties of the continuous time Fourier transform.

UNIT-IV

Sampling Theorem: Introduction, Sampling theorem for band limited signals-explanation, NY Quist rate, Reconstruction of a signal from its samples using Interpolation, The effect of under sampling: Aliasing, sampling techniques- impulse, natural and flat top sampling.

UNIT-V

Analysis of Continuous time and discrete time signals using Laplace Transform and Z Transform: The Laplace Transform: The Region of convergence for Laplace transforms, the Inverse Laplace transform, Properties of the Laplace transform. TheZ-Transform: The Region of Convergence for the Z-transform, The InverseZ-transform, Properties of the Z-transform.

TEXT BOOKS:

1. Signals and Systems, A.V. Oppenheim and A.S. Will sky with S. H. Nawab, Second Edition, and PHI Private limited.
2. Signals and Systems, Second Edition, S. Haykin and B. Van Veen, John Wiley & Sons.
3. B.P. Lathi, "Principles of Linear Systems and Signals", Second Edition, Oxford, 2009.

REFERENCES:

1. R.E.Zeimer, W.H.Tranter and R.D.Fannin, "Signals & Systems - Continuous and Discrete", Pearson, 2007.
2. John Alan Stuller, "An Introduction to Signals and Systems", Thomson, 2007. 40.
3. M.J.Roberts, "Signals & Systems Analysis using Transform Methods & MATLAB", Tata McGraw

III Sem.	Electronic Devices, Circuits & Analysis Lab	Course Code: V20ECL01	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1-Identify,Test and Describe the specifications of various components.**[K2]**

CO2-Interpret the Characteristics of various Semiconductor Devices.**[K2]**

CO3-Sketch the Regulation Characteristics of Zener Diode.**[K3]**

CO4-Examine the Performance of Rectifiers with and without Filters.**[K3]**

CO5-Sketch the Frequency Response of Amplifiers and Compute Bandwidth.**[K3]**

CO6- Construct different RC and LC oscillators using BJT based on the Frequency range.**[K3]**

PART A ELECTRONIC WORKSHOP PRACTICE

1. Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Coils, Gang Condensers, Relays, Bread Boards.
2. Identification, Specifications and Testing of Active Devices, Diodes, BJTs, JFETs, LEDs, UJT.
3. Study and operation of Ammeters, Voltmeters, Transformers, Analog and digital Multimeter, Function generator, Regulated power supply and CRO.

PART B: List of Experiments

1. PN Junction diode characteristics
2. Zener diode characteristics
3. Rectifier (without and with c-filters)
   Part-A Half- wave Rectifier Part-B Full- wave Rectifier
4. BJT characteristics (CB Configuration Input & Output characteristics)
5. BJT characteristics (CE Configuration Input & Output characteristics)
6. FET Characteristics (CS Configuration Drain&Transfer Characteristics
7. BJT-CE Amplifier
8. RC Phase Shift Oscillator
9. Colpit’s Oscillator
10. Complementary Symmetry Class B Power Amplifier

Equipment required for EDC&Analysis Laboratory

1. Ammeters (Analog or Digital)
2. Voltmeters (Analog or Digital)
3. Active & Passive Electronic Components
4. Regulated Power supplies
5. Cathode Ray Oscilloscopes
6. Analog/ Digital function Generators
7. Digital multimeter
8. Decade resistance Boxes/Rheostats
9. Bread Boards

III Sem.	Signals & Systems Lab	Course Code: V20ECL02	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1. Understand basics of MATLAB syntax, functions and programming. **[K2]**

CO2. Describe continuous-time and discrete time signals and systems. **[K2]**

CO3. Analyze the spectral characteristics of signals using Fourier analysis. **[K4]**

CO4. Analyze the systems using Laplace transform and Z-transform. **[K4]**

LIST OF EXPERIMENTS:

1. Basic operations on matrices.

2. Generation on various signals and Sequences (periodic and aperiodic), such as unit impulse,

Unit step, square, saw tooth, triangular, sinusoidal, ramp, sinc.

3. Operations on signals and sequences such as addition, multiplication, scaling, shifting,

Folding, computation of energy and average power.

4. Finding the even and odd parts of signal/sequence and real and imaginary part of signal.

5. Convolution between signals and sequences.

6. Auto correlation and cross correlation between signals and sequences.

7. Verification of linearity and time invariance properties of a given continuous /discrete

System.

8. Computation of unit sample, unit step and sinusoidal response of the given LTI system and verifying its physical Reliability and stability properties.

9. Gibbs phenomenon.

10. Finding the Fourier transform of a given signal and plotting its magnitude and phase

Spectrum.

11. Waveform synthesis using Laplace Transform.

12. Locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane for the Given transfer function.

IV Semester SYLLABUS

IV Sem.	Analog & Digital Communication	Course Code:V20ECT07	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1: Explain the spectral characteristics, generation and detection Techniques of Amplitude modulation techniques **(K2)**
CO2: Explain the spectral characteristics, generation and Detection techniques of angle modulation techniques **(K2)**
CO3: Illustrate different types of noise and predict its effect on Analog communication Systems. **(K3)**
CO4: Describe the generation and detection methods of various digital Modulation schemes. **(K2)**
CO5: Analyze the concepts of error control coding **(K4).**

UNIT-I

Analog Modulation – Need for modulation, AM, DSB-SC, SSB, VSB - Time domain and frequency domain description, single to NE modulation, power relations, Generation & Detection techniques, AM Transmitters, AM Receivers-Super-heterodyne receiver, IF,AGC.

UNIT-II

Angle Modulation: Phase and Frequency Modulation, Narrow band and Wideband FM, Carson's rule, Indirect and direct method of FM generation, Detection of FM, Phase locked loop, Comparison of FM and AM, FM Transmitters, FM Super-heterodyne receiver.

UNIT-III

Noise in Analog Communication system: Noise in DSB &SSB system, Noise in AM system, Noise in Angle Modulation system, Pre-emphasis and de-emphasis.

Pulse Modulation: Time Division Multiplexing, PAM, PWM, PPM-Generation and Detection.

UNIT-IV

DigitalModulationSystems: PulseModulation:Basebandsignals.Samplingprocess;QuantizationProcess;QuantizationNoise;Pulse-CodeModulation;NoiseConsiderationsinPCMSystems; Differential Pulse-Code Modulation, Delta modulation, adaptive delta modulation, Amplitude, phase and frequency shift keying schemes(ASK,PSK,FSK),introduction to M-array modulation schemes, Matched filter receivers and optimum receiver

UNIT-V

Information theory and Error control Coding: Measure of information, Entropy, Information rate, Source coding theorem, Channelcapacity–Shannon-Hartleylaw,controlCodes–Linearcodes,Cycliccodes,ConvolutionCoding-encoder, decoder-Exhaustive search and sequential method.

TEXTBOOKS:

IV Sem.	Digital IC Applications	Course Code:V20ECT08	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students

Will be able to:

- CO1: Explain the structure of commercially available digital integrated circuit families. **[K2]**
- CO2:Learn the IEEE Standard 1076 Hardware Description Language (VHDL).**[K2]**
- CO3: Model complex digital systems at several levels of abstractions, behavioural, Structural, simulation, synthesis and rapid system prototyping.**[K2]**
- CO4: Analyze and design basic digital circuits with combinatorial and sequential logic Circuits using VHDL.**[K2]**
- CO5:Develop Programmable logic devices and memories with relevant ICs.**[K2]**

UNIT-I

Digital Logic Families and Interfacing: Introduction to logic families, CMOS logic, CMOS steady state and dynamic electrical behavior, CMOS logic families. Bipolar logic, transistor-transistor logic, TTL families, CMOS/TTL interfacing, Emitter coupled logic.

UNIT-II

Introduction to VHDL: Design flow, program structure, levels of abstraction, Elements of VHDL: Data types, data objects, operators and identifiers. Packages, Libraries and Bindings, Subprograms. VHDL Programming using structural and data flow modeling.

Behavioral Modeling: Process statement, variable assignment statement, signal assignment statement, wait statement , if statement, case statement ,null statement, loop statement, exit statement, next statement ,assertion statement, Inertial Delay Model, Transport Delay Model, Logic Simulation, Logic Synthesis, Inside a logic Synthesizer.

UNIT-III

Combinational Logic Design: Half adder, Full Adder, Ripple Adder, Binary Adder-Subtractor, Look Ahead Carry Generator, ALU, Decoders, encoders, multiplexers and DE multiplexers, parity circuits, comparators, Barrel Shifter, Simple Floating Point Encoder, Dual Priority Encoder, Design considerations of the above combinational logic circuits with relevant Digital ICs, modeling of above ICs using VHDL.

UNIT-IV

Sequential Logic Design: SSI Latches and flip flops, Shift Registers, Universal Shift Registers, Ring Counter, Johnson Counter, Ripple Counter, Design of Modulus N Synchronous Counters, Design considerations of the above sequential logic circuits with relevant Digital ICs, modelling of above ICs using VHDL.

UNIT-V

Memories:
ROM: Internal structure, 2D-Decoding, Commercial ROM types, timing and applications. Static RAM: Internal structure, SRAM timing, standard synchronous SRAMS. Dynamic RAM: Internal structure, timing, synchronous DRAMs.

Text Books:

1. Digital Design Principles & Practices – John F. Wakerly, PHI/ PearsonEducation Asia, 3rd

Ed., 2005.

2. VHDL Primer – J. Bhasker, Pearson Education/ PHI, 3rd Edition.

References:

1. Fundamentals of Digital Logic with VHDL Design- Stephen Brown, ZvonkoVranesic,

McGrawHill, 3rd Edition.

IV Sem.	Electro Magnetic Waves & Transmission Lines	Course Code:V20ECT09	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1:Find static electric field intensity by using various laws of electrostatics. **[K3]**

CO2:Find static magnetic field intensity by using various laws of magneto statics and Develop the Maxwell's equations for time varying fields**. [K3]**

CO3:Calculate the Propagation Characteristics of the EM Waves in different mediums

And find Brewster angle, critical angle and total internal reflection**. [K3]**

CO4:Compute Primary and Secondary constants for a given transmission line. **[K3]**

CO5:Calculate reflection coefficient, VSWR etc. using smith chart. **[K3]**

Prerequisites: Review of Co-ordinate Systems.

UNIT-I: Electrostatics:

Coulomb's Law, Electric Field Intensity, Electric Flux Density, Gauss Law and Applications, Electric Potential, Relation between E and V, Energy Density, Convection and Conduction Currents, Dielectric Constant, Poisson's and Laplace's Equations; Capacitance – Parallel Plate, Coaxial Capacitors, Illustrative Problems.

UNIT-II: Magneto Statics:

Biot-Savart Law, Ampere's Circuital Law and Applications, Magnetic FluxDensity, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Inductances and MagneticEnergy. Illustrative Problems**.**

Maxwell's Equations (Time Varying Fields):

Faraday's Law and Transformer EMF, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Final Forms and Word Statements. Conditions at a Boundary Surface.

UNIT-III: EM Wave Characteristics:

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves – Definition, Relation Between E & H, Sinusoidal Variations, Wave Propagation in Lossy dielectrics, lossless dielectrics, free space, wave propagation in good conductors, Good Dielectrics, skin depth, Polarization & Types, Illustrative Problems.
Reflection and Refraction of Plane Waves – Normal and Oblique Incidences for Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection, Surface Impedance. Poynting Vector and Poynting Theorem.Illustrative Problems.

UNIT-IV: Transmission Lines - I:
Types, Applications of Transmission Lines, Equivalent Circuit, Primary & Secondary Constants, Transmission Line Equations for Finite and Infinite Lines, Characteristic Impedance, Propagation Constant, Phase and Group Velocities, , Lossless lines, Distortion less Lines, Illustrative Problems.

UNIT-V: Transmission Lines – II:
Input Impedance Relations, SC and OC Lines, Reflection Coefficient, VSWR. UHF Lines as Circuit Elements; λ/8, λ/4 and λ /2 Lines, Smith Chart – Construction and Applications, Single Stub Matching, Illustrative Problems.

TEXT BOOKS:

1. Elements of Electromagnetic – Matthew N.O. Sadiku, Oxford Univ. Press, 3rd ed., 2001.
2. Electromagnetic Waves and Radiating Systems – E.C. Jordan and K.G. Balmain, PHI,
2nd Edition, 2000.
3. Transmission Lines and Networks – UmeshSinha, SatyaPrakashan (Tech. India Publications), New Delhi, 2001.

REFERENCES:

1. Electromagnetic Fields and Wave Theory –GSN Raju, Pearson Education 2006
2. Engineering Electromagnetics – William H. Hayt Jr. and John A. Buck, TMH, 7th ed., 2006.
3. Electromagnetic Waves andTransmission Lines by Y. Mallikarjuna Reddy, Universities Press

IV Sem.	Analog & Digital Communication Lab	Course Code: V20ECL04	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO-1- Demonstrate the operation of various pulse modulation and demodulation Techniques.**[K3]**
CO-2 -Construct the pre-emphasis and de-emphasis circuits and verify its frequency Response.**[K3]**
CO-3 -Demonstrate the spectrum analysis of modulated signal using spectrum analyser, Operation of AGC and PLL **[K3]**
CO-4- Distinguish the Time division multiplexing and DE multiplexing, Pulse digital Modulation Techniques **[K2]**
CO-5- Distinguish generation and detection of digital modulation techniques **[K2]**
CO-6- Verify the Source encoding and decoding (Huffman Coding) technique and channel Encoding and decoding techniques. **[K3]**

List of Experiments (Twelve experiments to be done)

A. Analog Communications

1. Amplitude Modulation - Mod. &Demod.
2. AM - DSB SC - Mod. &Demod.
3. Spectrum Analysis of Modulated signal using Spectrum Analyser
4. Pre-emphasis & De-emphasis
5. Frequency Modulation - Mod. &Demod, PLL.
6. Sampling Theorem - Pulse Amplitude Modulation - Mod. &Demod.
7. PWM, PPM - Mod. &Demod.

B. Digital Communications

1. Pulse code modulation, Differential pulse code modulation.
2. Delta modulation, Companding.
3. ASK, FSK, PSK.
4. Differential phase shift keying.
5. Source Encoder and Decoder
6. Channel coding-
    i. Linear Block Code-Encoder and Decoder
    ii. Binary Cyclic Code – Encoder and Decoder
    iii. Convolution Code – Encoder and Decoder

IV Sem.	**Digital IC Application Lab**	**Course Code: V20ECL05**	**L**	**T**	**P**	**C**
			0	**0**	**3**	**1.5**

Syllabus Details

Course Outcomes: After Successful completion of this course, the students Will be able to:

CO1: Identify the importance of various tools available in XILINX ISE12.2.**[K2]**
CO2: Develop VHDL/Verilog HDL Source code and perform simulation for various Combinational logic circuits using XILINX ISE12.2.**[K3]**
CO3: Develop VHDL/Verilog HDL Source code and perform simulation for various Sequential logic circuits using XILINX ISE12.2.**[K3]**

Note: The students are required to design and draw the internal logical structure of the following Digital Integrated Circuits and to develop VHDL/Verilog HDL Source code, perform simulation using relevant simulator and analyse the obtained simulation results using necessary synthesizer.

All the experiments are required to verify and implement the logical operations on the latest FPGA Hardware in the Laboratory.

List of Experiments:

(Minimum of Ten Experiments has to be performed)

1. Realization of Logic Gates
2. Design of Full Adder
3. Design of 3 to 8 Decoder –IC 74138
4. Design of 8 to 3 Encoder (with and without priority)
5. Design of 8 x 1 Multiplexer-IC 74151 and Dual 1x 4 De-multiplexer-IC 74155
6. Design of 4-Bit comparator-IC 7485
7. Design of D-Flip-Flop-IC 7474
8. Design of 4-Bit Ripple Counter.
9. Design of Decade counter –IC 7490
10. Design of Universal Shift register.
11. Design of RAM
12. Design of ALU.

Equipment/Software required:

1. Xilinx Vivado software / Equivalent Industry Standard Software
2. Xilinx Hardware / Equivalent hardware
3. Personal computer system with necessary software to run the programsand Implement.

Annexure-04

V20 Regulation

Semester III (Second Year)

Approved List of Courses offered to EEE Department by ECE Dept.

Sl. No.		Course Code	Course Title	Hours per Week			Credits
1.	Professional Core Course	V20ECT06	Analog Electronics	3	0	0	3
2.	Professional Core Course lab	V20ECL03	Analog Electronics lab	0	0	3	1.5

III Sem.	Analog Electronics	Course Code:V20ECT06	L	T	P	C
			3	0	0	3

Syllabus

Course Outcomes:
After Successful completion of the Course, the student will be able to:

CO-1: Explain the working principle of diode and Diode rectifier circuits with and without Filters.**(K2)**

CO-2: Sketch V-I characteristics of BJT and FET in different configurations (**K3)**

CO-3: Construct wave shaping circuits for various applications **(K3)**

CO-4: Construct circuits for different applications using ICs **(K3)**

CO-5: Explain the operation of Data Converters using IC 741 OP-AMP **(K2)**

UNIT-I Junction Diode Characteristics: p-n junction diode, current components in PN junction Diode, diode current equation, V-I Characteristics, Diode resistances, Breakdown mechanisms, Zener Diode.
Rectifiers: Basic Rectifier setup**,** half wave rectifier, full wave rectifier, bridge rectifier, derivations of characteristics of rectifiers, Filters- Inductor filter, Capacitor filter, derivation for ripple factor in each case, Zener diode as Voltage Regulator.

UNIT-II Transistor Characteristics: BJT: Junction transistor, transistor current components, transistor equation, transistor configurations and characteristics of transistor in Common Base, Common Emitter and Common Collector configurations, punch through/ reach through, transistor as an amplifier.
FET: FET types, construction, operation, characteristics, parameters, MOSFET-types, construction, operation, characteristics, comparison between JFET and MOSFET.

UNIT-III Wave shaping circuits: Response of high pass and low pass RC circuits to step, pulse, Square inputs. High pass RC circuit as differentiator, low pass RC circuit as integrator. Series and shunt clippers, clipping at two independent levels, Positive and Negative Clampers.

UNIT-IV Integrated Circuits and applications: Op-amp Block Diagram, Ideal Op-amp, Equivalent Circuit, Ideal voltage transfer curve, open loop op-amp configurations. Inverting and non-inverting amplifiers, summing, scaling, averaging amplifier, integrator and differentiator, 555 timer functional block diagram, A stable and Monostable multivibrators.

UNIT-V Data Converters: Weighted resistor DAC, R-2R ladder DAC. Flash Type ADC; counter type ADC, Successive approximation ADC, Dual slope ADC, Specifications of DAC&ADC.

TEXT BOOKS:

1. Integrated Electronics- J. Millman and C.C. Halkias, TMH
2. Electronic Devices and Circuits- Salivahanan, N.Suresh Kumar, A. Vallavaraj, TMH
3. Pulse, Digital and Switching Waveforms - J. Millman and H. Taub, TMH
4. Linear Integrated Circuits – D. Roy Choudhury, 4th edition, New Age International (p) Ltd.
5. Op-Amps & Linear Integrated Circuits - Ramakanth A. Gayakwad,3rd edition, PHI.

REFERENCE BOOKS:

1. Electronic Devices and Circuits Theory – Robert L. Boylestad and Louis Nashelsky,
Pearson/Prentice Hall.
3. Pulse & Digital Circuits-BN Yoga Narasimhan, 2000,SriMaruthi Publishers, Bangalore.
4. Operational Amplifiers & Linear Integrated Circuits –Sanjay Sharma; SKKataria& Sons;2nd Edition,2010

III Sem.	Analog Electronics Lab	Course Code: V20ECL03	L	T	P	C
			0	0	3	1.5

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Interpret the Characteristics of various semiconductor devices. **(K2)**

CO-2: Examine the Performance of Rectifiers with and without Filters. **(K3)**

CO-3: Construct circuit for linear wave shaping circuits. **(K3)**

CO-4: Construct circuits for verifying linear and nonlinear applications using IC741op-amp And IC 555 timer **(K3)**

CO-5: Verify the Characteristics of 4 bit Digital to Analog Converter **(K3)**

List of Experiments: (Any 10 Experiments to be done)

1. PN Junction diode characteristics
2. Rectifiers with and without filters
   Part A: Half Wave Rectifier, Part B: Full Wave Rectifier
3. Zener diode Characteristics
   Part A: V-I characteristics, Part B: Zener diode as Voltage Regulator
4. BJT Characteristics (CE Configuration)
   Part A: Input characteristics, Part B: Input characteristics
5. JFET Characteristics (CS Configuration)
   Part A: Drain characteristics, Part B: Transfer characteristics
6. Linear Wave Shaping
   Part A: High Pass RC Circuit, Part B: Low Pass RC Circuit
7. Non-linear Wave Shaping - Clippers
   Part A: Unbiased Clippers, Part B: Biased Clippers
8. Non-linear Wave Shaping - Clampers
   Part A: Unbiased Clampers, Part B: Biased Clampers
9. Summing, Scaling, Averaging amplifiers using IC 741.
10. Differentiator and Integrator Circuits using IC 741.
11. A stable Multi vibrator using IC 555
12. . 4 bit Digital to Analog to Digital Converter

2.	Basic Science Course/Prof Core Course	V20ECT07	Analog & Digital Communication **(ADC)**	3	0	0	3
3.	Professional Core Courses	V20ECT08	Digital IC Applications **(DICA)**	3	0	0	3
4.	Professional Core Courses	V20ECT09	Electro Magnetic Waves & Transmission Lines **(EMTL)**	3	0	0	3
5.	Humanities and Social Sciences	V20MBT51	Managerial Economics & Financial Analysis (**MEFA)**	3	0	0	3
6.	EngineeringScience Courses/Prof Core (Interdisciplinary) (LAB)	V20CSL32	Python Programming Lab	0	0	3	1.5
7.	Professional Core Courses (LAB)	V20ECL04	Analog & Digital Communication Lab **(ADC LAB)**	0	0	3	1.5
8.	Professional Core Courses (LAB)	V20ECL05	Digital IC Applications Lab **(DICA LAB)**	0	0	3	1.5
9	**Skill Oriented Course***		Certificate course being offered by industries/ professional bodies/ APSSDC or any other accredited bodies	**1**	**0**	**2**	**2**
10	Mandatory Course (AICTE suggested)	V20ENT03	Professional Communication Skills **(PCS-II)**	2	0	0	0
			Total Credits				**21.5**
	Internship 2 Months (Mandatory) during Summer vacation						
	Honors/Minor Courses (The Hours Distribution can be 3-0-2 or 3-1-0 also)			**4**	0	**0**	**4**

***Skill Oriented Course:**

The Student shall be given an option to choose either the skill courses being offered by the college or to choose a certificate course being offered by industries/ professional bodies/ APSSDC or any other accredited bodies as approved by the concerned BoS.

List of Skill Oriented Courses:

S. No	Name of the Proposed Course
1	PCB Design
2	Programming in Scilab
3	Programming with Arduino
4	Circuit Design & Simulation using Multisim
5	Concepts of Embedded systems
6	Internet of Things
7	Robotics
8	Hands on Graphical Programming Using Labview

I Semester SYLLABUS

I Sem.	SYSTEM DESIGN THROUGH VERILOG	Course Code: V21ESVT01	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes:

- CO1: Outline basic concepts of RTL code for digital circuits **[K2]**
- CO2: Model RTL codes for digital circuit at gate and data flow level **[K3]**
- CO3: Model RTL codes for digital circuit at behavioural level **[K3]**
- CO4: Model RTL codes for digital circuit at switch level modelling and outline the concepts of task, function and complier directives **[K3]**
- CO5: Analyze Synthesize of Combinational and Sequential Circuits **[K4]**

UNIT-I

INTRODUCTIONTOVERILOG:

Verilog as HDL, Levels of design description, concurrency, module, simulation and synthesis, testbench, functional verification,programminglanguageinterface (PLI),simulationand synthesistools.

LANGUAGECONSTRUCTSANDCONVENTIONS:

Introduction, keywords, identifiers, whitespace characters, comments, numbers, strings, logic values, data types, scalars and vectors, parameters, memory, operators,systemtasks.

UNIT-II

GATELEVELMODELLING:

Introduction,AND gate primitive, module structure, other gate primitives, illustrative examples, tristate gates, arrayof instances of primitives, design of Flip flops with gate primitives, delays, strengths and contention resolution, nettypes,designofbasic circuits.

DATA FLOWLEVEL MODELLING

Introduction, continuous assignment structures, delays and continuous assignments, assignment to vectors.

UNIT-III

BEHAVIORALMODELLING:

Introduction, operationsandassignments,initial construct,alwaysconstruct,examples,assignmentswith delays, wait construct, multiple always blocks, designs at behavioral level, blocking and non-blocking assignments, the case statement, if and if else constructs, assign-De assign construct,repeat construct, FOR loop, the disable construct, While loop, Forever loop, parallel blocks, force-release construct,event.

UNIT-IV

SWITCHLEVELMODELLING

Basictransistor switches, CMOS switch, Bidirectional gates and time delays with switch primitives, instantiations withstrengthsanddelays,strengthcontentionwithtriregnets, switch level modeling for NAND, NOR and XOR.

SYSTEM TASKS, FUNCTIONS, AND COMPILER DIRECTIVES: Introduction, System Tasks and Functions, File based Tasks and Functions, Compiler Directives, Hierarchical Directives, User-defined Primitives (UDP), FSM Design (Moore and Melay Machines).

UNIT-V

SYNTHESISOFCOMBINATIONAL ANDSEQUENTIAL LOGIC USINGVERILOG: Synthesisof combinational logic: Net list of structured primitives, a set of continuous assignment statements and level sensitivecyclic behavior with examples, Synthesis of priority structures, Exploiting logic don’t care conditions. Synthesis ofsequential logic with latches: Accidental synthesis of latches and Intentional synthesis of latches, Synthesis ofsequentiallogicwithflip-flops, Synthesis of explicitstate machines.

TEXTBOOKS:

1. DesignthroughVerilogHDL—T.R.PadmanabhanandB. BalaTripuraSundari, WSE, IEEEPress, 2004.
2. AdvancedDigitalDesignwithVerilog HDL—MichaelD.Ciletti, PHI, 2005.

REFERENCES:

1. FundamentalsofLogicDesignwithVerilog—Stephen.BrownandZvonkoVranesic, TMH, 2005.
2. AVerilogPrimier—J.Bhasker, BSP, 2003.

I Sem.	EMBEDDED SYSTEM DESIGN	Course Code: V21ESVT02	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:

The student will be able to

- CO1: Illustrate the ARM architecture and its memory management.**(K2)**
- CO2: Describe the ARM instruction set for ARM programming.**(K2)**
- CO3: Describe Thumb instruction set for ARM programming.**(K2)**
- CO4: Explain the basics of ARM Cortex-M3**(K2)**
- CO5: Explain ARM Cortex-M3 interfacing.**(K2)**

UNIT-I:

ARM Architecture ARM Design Philosophy, Registers, PSR, Pipeline, Interrupts and Vector Table, Architecture Revision, ARM Processor Families. Introduction to ARM Cortex.

UNIT-II:

ARM Programming Model-I Instruction Set**:** Data Processing Instructions, Branch, Load, Store Instructions, PSR Instructions, Conditional Instructions.

UNIT-III:

ARM Programming Model-II Thumb Instruction Set**:** Register Usage, Other Branch Instructions, Data Processing Instructions, Single-Register and Multi Register Load-Store Instructions, Stack, Software Interrupt Instructions.

UNIT-IV

Introduction to ARM Cortex-M3 Processor-What Is the ARM Cortex-M3 Processor,Background of ARM and ARM Architecture,Instruction Set Development**,** The Thumb-2 Technology and Instruction Set Architecture**,** Cortex-M3 Processor Applications.

Cortex-M3 Basics-Registers, Operation Mode**,** Exceptions and Interrupts**,** Vector Tables**,** Stack Memory Operations, Reset Sequence

UNIT-V

Exceptions, Types, Priority, Vector Tables, Interrupt Inputs and Pending behavior, Fault
Exceptions, Supervisor call and Pendable Service Call, Nested Vectored Interrupt Controller, Basic Interrupt Configuration.

Cortex-M3 Implementation Overview-the Pipeline, A detailed block diagram, Bus Interfaces on the Cortex-M3,Other Interfaces on the Cortex-M3, the External PPB, Typical Connections,Reset Types and Reset Signals.

TEXT BOOKS:

1. ARM Systems Developer's Guides- Designing & Optimizing System Software – Andrew N. Sloss, Dominic Symes, Chris Wright, 2008, Elsevier.
2. The Definitive Guide to the ARM® Cortex-M3 Second Edition-Joseph Yiu
3. ARM System-on-chip Architecture- Stephen Bo Furber - Addison-Wesley, 2000

REFERENCE BOOKS:

1. Embedded Microcomputer Systems, Real Time Interfacing – Jonathan W. Valvano – Brookes / Cole, 1999, Thomas Learning.

I Sem.	Programming Languages for Embedded Systems	Course Code: V21ESVT03	L	T	P	C
			3	0	0	3

	(Elective-I)					

Syllabus Details

Course Outcomes:
At the end of this course, students will be able to

- CO1: Write an embedded C application of moderate complexity.
- CO2: Develop and Analyze algorithms in C++.
- CO3: Differentiate interpreted languages from compiled languages.

UNIT-I: Embedded „C‟ Programming Bitwise operations, Dynamic memory allocation, OS services.Linked stack and queue, sparsematrices, Binary tree. Interrupt handling in C, Code optimization issues.Embedded Software Development Cycle and Methods (Waterfall, Agile)

UNIT-II: Object Oriented Programming Introduction to procedural, modular, object-oriented and genericprogramming techniques, Limitations of procedural programming, objects, classes, data members,methods, data encapsulation, data abstraction and information hiding, inheritance, polymorphism

UNIT-III: CPP Programming: „cin‟, „cout‟, formatting and I/O manipulators, new and deleteoperators, Defining a class, data members and methods, „this‟ pointer, constructors, destructors, friendfunction, dynamic memory allocation

UNIT-IV: Overloading and Inheritance: Need of operator overloading, overloading the assignment,Overloading using friends, type conversions, single inheritance, base and derived classes, friendClasses, types of inheritance, hybrid inheritance, multiple inheritance, virtual base class,Polymorphism, virtual functions.

UNIT-V: Templates: Function template and class template, member function templates and templatearguments, Exception Handling: syntax for exception handling code: try-catch- throw,Multiple Exceptions.Scripting Languages:

Overview of Scripting Languages – PERL, CGI, VB Script, Java Script.
PERL: Operators, Statements Pattern Matching etc. Data Structures, Modules, Objects, TiedVariables, Inter process Communication Threads, Compilation & Line Interfacing.

Text Books:

1. Michael J. Pont, “Embedded C”, Pearson Education, 2nd Edition, 2008
2. Randal L. Schwartz, “Learning Perl”, O‟Reilly Publications, 6th Edition 2011

Reference Books:

1. A. Michael Berman, “Data structures via C++”, Oxford University Press, 2002
2. Robert Sedge wick, “Algorithms in C++”, Addison Wesley Publishing Company, 1999
3. Abraham Silberschatz, Peter B, Greg Gagne, “Operating System Concepts”, John Willey& Sons, 2005Kaufmann.

			L	T	P	C
I Sem.	**Parallel Processing (Elective I)**	**Course Code: V21ESVT04**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes:
At the end of this course, students will be able to

- CO1: Identify limitations of different architectures of computer
- CO2: Analysis quantitatively the performance parameters for different Architectures
- CO3: Investigate issues related to compilers and instruction set based on type of Architectures.

UNIT-I: Overview of Parallel Processing and Pipelining, Performance analysis, Scalability

UNIT-II: Principles and implementation of Pipelining, Classification of pipelining processors, Advanced pipelining techniques, Software pipelining

UNIT-III: VLIW processors Case study: Superscalar Architecture- Pentium, Intel Itanium Processor and Ultra SPARC,MIPS on FPGA, Vector and Array Processor, FFT Multiprocessor Architecture

UNIT-IV: Multithreaded Architecture, Multithreaded processors, Latency hiding techniques, Principles of multithreading, Issues and solutions

UNIT-V: Parallel Programming Techniques: Message passing program development, Synchronous and asynchronous message passing, Shared Memory Programming, Data Parallel Programming, Parallel Software Issues. Operating systems for multiprocessors systems customizing applications on parallel processing platforms

Text Books:

1. Kai Hwang, Faye A. Briggs, “Computer Architecture and Parallel Processing”, MGH International Edition
2. Kai Hwang, “Advanced Computer Architecture”, TMH
3. V. Rajaraman, L. Sivaram Murthy, “Parallel Computers”, PHI.

Reference Books:

1. William Stallings, “Computer Organization and Architecture, Designing for Performance“Prentice Hall, Sixth edition
2. Kai Hwang, ZhiweiXu, “Scalable Parallel Computing”, MGH
3. David Harris and Sarah Harris, “Digital Design and Computer Architecture”, Morgan

I Sem.	System on Chip & Applications (Elective I)	Course Code: V21ESVT05	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:
The student will be able to

- CO1: Describe SOC System Approach, design and its Architecture –**[K2]**
- CO2: Discuss the selection of processor and its micro architecture for SOC –**[K2]**
- CO3: Discuss Memory Design for SOC –**[K2]**
- CO4: Explain the concepts of bus models and Interconnect Architectures –**[K2]**
- CO5: Explain SOC based Applications –**[K2]**

UNIT-I
Introduction to the System Approach System Architecture, Components of the system, Hardware & Software, Processor Architectures, Memory and Addressing.System level interconnection, an approach for SOC Design, System Architecture and Complexity.

UNIT-II
Processors Introduction , Processor Selection for SOC, Basic concepts in Processor Architecture, Basic concepts in Processor Micro Architecture, Basic elements in Instruction handling. Buffers: minimizing Pipeline Delays, Branches, More Robust Processors, Vector Processors and Vector Instructions extensions, VLIW Processors, Superscalar Processors.

UNIT-III
Memory Design for SOC Overview of SOC external memory, Internal Memory, Size, Scratchpads and Cache memory, Cache Organization, Cache data, Write Policies, Strategies for line replacement at miss time, Types of Cache, Split – I, and D – Caches, Multilevel Caches, Virtual to real translation , SOC Memory System, Models of Simple Processor – memory interaction.

UNIT-IV
Interconnect Customization and Configuration Inter Connect Architectures, Bus: Basic Architectures, SOC Standard Buses, Analytic Bus Models, Using the Bus model, Effects of Bus transactions and contention time. SOC Customization: An overview, Customizing Instruction Processor, Reconfiguration Technologies, Mapping design onto Reconfigurable devices, Instance- Specific design, Customizable Soft Processor, Reconfiguration - overhead analysis and trade-off analysis on reconfigurable Parallelism.

UNIT-V
Application / Case Studies:
Zynq system on chip design – Secure Boot, Analog Data Acquisition, System Monitoring using the Zynq-7000 AP SOC Processing System with the XADC AXI Interface.
Cypress- PSoC4- Architecture, GPIO Pins and its applications - down counter, sine wave Generator using PSOC 4 device.

TEXT BOOKS:

1. Computer System Design System-on-Chip - Michael J. Flynn and Wayne Luk, Wiely India Pvt. Ltd.
2. ARM System on Chip Architecture – Steve Furber –2nd Ed., 2000, Addison Wesley Professional.
3. Embedded Processing with the ARM Cortex-A9 on the Xilinx Zynq-7000 All Programmable SoC-Louise H. Crockett Ross A. Elliot Martin A. Enderwitz Robert W. Stewart
4. Cypress PSoC User Manual

REFERENCE BOOKS:

1. Design of System on a Chip: Devices and Components – Ricardo Reis, 1st Ed., 2004, Springer
2. Co-Verification of Hardware and Software for ARM System on Chip Design (Embedded Technology) – Jason Andrews – Newnes, BK and CDROM.
3. System on Chip Verification – Methodologies and Techniques – PrakashRashinkar, Peter Paterson and Leena Singh L, 2001, Kluwer Academic Publishers.

I Sem.	Digital System Design (Elective II)	Course Code: V21ESVT06	L	T	P	C
			3	0	0	3

<u>Syllabus Details</u>

Course Outcome:

The student will be able to

- CO1: Describe the algorithms for minimization of functions
- CO2: Describe the algorithms for minimization of PLDs.
- CO3: Design large scale digital systems.
- CO4: Discuss the fault model and diagnosis in combinational and sequential Circuits.

UNIT-I: Minimization Procedures and CAMP Algorithm
Review on minimization of switching functions using tabular methods, k-map, QM algorithm, CAMP-I algorithm, Phase-I: Determination of Adjacencies, DA, CSC, SSMs and EPCs, CAMPI algorithm, Phase-II: Passport checking, Determination of SPC, CAMP-II algorithm: Determination of solution cube, Cube based operations, determination of selected cubes are wholly within the given switching function or not, Introduction to cube based algorithms.

UNIT-II: PLA Design, PLA Minimization and Folding Algorithms
Introduction to PLDs, basic configurations and advantages of PLDs, PLA-Introduction, Block diagram of PLA, size of PLA, PLA design aspects, PLA minimization algorithm (IISc algorithm), PLA folding algorithm(COMPACT algorithm)-Illustration of algorithms with suitable examples.

UNIT -III: Design of Large Scale Digital Systems
Algorithmic state machine charts-Introduction, Derivation of SM Charts, Realization of SM Chart, control implementation, control unit design, data processor design, ROM design and PAL design aspects, digital system design approaches using CPLDs, FPGAs and ASICs.

UNIT-IV: Fault Diagnosis in Combinational Circuits
Faults classes and models, fault diagnosis and testing, fault detection test, test generation, testing process, obtaining a minimal complete test set, circuit under test methods- Path sensitization method, Boolean difference method, properties of Boolean differences, Kohavi algorithm, faults in PLAs, DFT schemes, built in self-test.

UNIT-V: Fault Diagnosis in Sequential Circuits
Fault detection and location in sequential circuits, circuit test approach, initial state identification, Haming experiments, synchronizing experiments, machine identification, distinguishing experiment, adaptive distinguishing experiments.

TEXT BOOKS:

1. Logic Design Theory-N. N. Biswas, PHI
2. Switching and Finite Automata Theory-Z. Kohavi, 2nd Edition, 2001, TMH
3. Digital system Design using PLDd-Lala

REFERENCE BOOKS:

1. Fundamentals of Logic Design – Charles H. Roth, 5th Ed., Cengage Learning.
2. Digital Systems Testing and Testable Design – MironAbramovici, Melvin A. Breuer and Arthur D. Friedman- John Wiley & Sons Inc.

			L	T	P	C
I Sem.	**CPLD & FPGA Architectures and Applications (Elective II)**	**Course Code: V21ESVT07**	**3**	**0**	**0**	**3**

<u>Syllabus Details</u>

Course Outcome:

The student will be able to

- CO1: Describe the Programmable Logic Devices
- CO2: Distinguish the various types of Field Programmable Gate Arrays
- CO3: Apply the typical applications on FPGAs

UNIT-I: Introduction to Programmable Logic Devices

Introduction, Simple Programmable Logic Devices – Read Only Memories, Programmable Logic Arrays, Programmable Array Logic, Programmable Logic Devices/Generic Array Logic; Complex Programmable Logic Devices –Architecture of Xilinx Cool Runner XCR3064XL CPLD, CPLD Implementation of a Parallel Adder with Accumulation.

UNIT-II: Field Programmable Gate Arrays

Organization of FPGAs, FPGA Programming Technologies, Programmable Logic Block Architectures, Programmable Interconnects and Programmable I/O blocks in FPGAs, Dedicated Specialized Components of FPGAs and Applications of FPGAs.

UNIT –III: SRAM Programmable FPGAs:

Introduction, Programming Technology, Device Architecture, the Xilinx XC2000, XC3000 and XC4000 Architectures.

UNIT –IV: Anti-Fuse Programmed FPGAs

Introduction, Programming Technology, Device Architecture, theActel ACT1, ACT2 and ACT3 Architectures.

UNIT –V: Design Applications

General Design Issues, Counter Examples, a Fast Video Controller, A Fast DMA Controller and Designing Counters with ACT devices, Designing Adders and Accumulators with the ACT Architecture.

TEXT BOOKS:

1. Field Programmable Gate Array Technology - Stephen M. Trimberger, Springer International Edition.
2. Digital Systems Design - Charles H. Roth Jr, LizyKurian John, Cengage Learning.

REFERENCE BOOKS:

1. Field Programmable Gate Arrays - John V. Oldfield, Richard C. Dorf, Wiley India.
2. Digital Design Using Field Programmable Gate Arrays - Pak K. Chan/ SamihaMourad, Pearson Low Price Edition.
3. Digital Systems Design with FPGAs and CPLDs - Ian Grout, Elsevier, Newnes.
4. FPGA based System Design - Wayne Wolf, Prentice Hall Modern Semiconductor
Design Series.

I Sem.	VLSI Signal Processing (Elective II)	Course Code:V21ESVT08	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes
On successful completion of the module, students will be able to:

CO1:Ability to modify the existing or new DSP architectures suitable for VLSI.
CO2:Understand the concepts of folding and unfolding algorithms and applications.
CO3:Ability to implement fast convolution algorithms.
CO4:Low power design aspects of processors for signal processing and wireless Applications.

UNIT -I
Introduction to DSP: Typical DSP algorithms, DSP algorithms benefits, Representation of DSP algorithms Pipelining and Parallel Processing Introduction, Pipelining of FIR Digital filters, Parallel Processing, Pipelining and Parallel Processing

for Low Power Retiming Introduction, Definitions and Properties, Solving System of Inequalities, Retiming Techniques

UNIT –II

Folding and Unfolding: Folding- Introduction, Folding Transform, Register minimization Techniques,Register minimization in folded architectures, folding of Multi rate systems

Unfolding**-** Introduction, An Algorithm for Unfolding, Properties of Unfolding, critical Path, Unfoldingand Retiming, Applications of Unfolding

UNIT -III

Systolic Architecture Design: Introduction, Systolic Array Design Methodology, FIR Systolic Arrays,Selection of Scheduling Vector, Matrix Multiplication and 2D Systolic Array Design, Systolic Design forSpace Representations contain Delays.

UNIT -IV

Fast Convolution: Introduction – Cook-Toom Algorithm – Winogard algorithm – Iterated Convolution –Cyclic Convolution – Design of Fast Convolution algorithm by Inspection

Unit V: Digital lattice filter structures, bit level arithmetic, architecture, redundant arithmetic.Numerical strength reduction, synchronous, wave and asynchronous pipe lines, lowpower design.Low Power Design: Scaling Vs. Power Consumption, Power Analysis, Power Reduction techniques,Power Estimation Approaches

Text Books:

1. Keshab K. Parthi[A1], VLSI Digital signal processing systems, design and Implementation [A2],Wiley, Inter Science, 1999.
2. Mohammad Isamail and Terri Fiez, Analog VLSI signal and information processing, McGrawHill, 1994
3. S.Y. Kung, H.J. White House, T. Kailath, VLSI and Modern Signal Processing, Prentice Hall,1985.

I Sem.	System Design through Verilog Lab	Course Code: V21ESVL01	L	T	P	C
			0	0	4	2

Syllabus Details

COURSE OUTCOMES:

- CO1: Develop the simulation of combinational and sequential circuits using HDL Language.**[K3]**
- CO2: Develop the synthesis of combinational and sequential circuits using HDL Language.**[K3]**
- CO3: Analyze the implemented of digital logics with hardware module kit FPGA **[K4]**

The students are required to design the Verilog codes to perform the following experiments using necessary simulator (Xilinx ISE Simulator) to verify the logic functional operation and to perform the analysis with appropriate synthesizer (Xilinx ISE Synthesizer) and then verify the implemented logic function with hardware kits (FPGA kits).

The students are required to acquire the knowledge in the platform Xilinx by perform at least 10 experiments.

List of Experiments:

1) Logic gates
2) Adder-Subtractor
3) Multiplexer and DE multiplexer
4) Encoder and Decoder
5) ALU
6) Fire detection and control system using Combinational Logic Circuits
7) Flip Flops
8) LFSR
9) Up counter/Down counter
10) Synchronous RAM
11) Pattern detector using Moore/Melay machine
12) Traffic light controller using sequential logic circuit.
13) UART

I Sem.	Embedded Systems Design	Course Code: V21ESVL02	L	T	P	C
			0	0	4	2

	Lab					

Syllabus Details

Course Outcomes:

At the end of the laboratory work, students will be able to:

- **CO1:** Develop applications based on ARM Cortex-M3 processor using Cortex-M3 Development boards on the platform of co-coox and Arduino IDE.-**K3**
- **CO2:** Develop the applications based on DSP C6713 evaluation kits and using Code
Composer Studio (CCS).-**K3**

List of Assignments:
Part A:

Experiments to be carried out on Cortex-M3 development boards and using GNU Tool chain

1. Blink an LED with software delay, delay generated using the SysTick timer.
2. Control intensity of an LED using PWM implemented in software and hardware.
3. Control an LED using switch by polling method, by interrupt method and flash the LED once every five switch presses.
4. UART Echo Test.
5. Take Analog readings on rotation of rotary potentiometer connected to an ADC channel.
6. Temperature indication on an RGB LED.
7. Mimic light intensity sensed by the light sensor by varying the blinking rate of an LED.
8. Evaluate the various sleep modes by putting core in sleep and deep sleep modes.
9. System reset using watchdog timer in case something goes wrong.
10. Sample sound using a microphone and display sound levels on LEDs.

Part B:
Experiments to be carried out on DSP C6713 evaluation kits and using Code Composer Studio (CCS)

1. To develop a C code to compute Euclidian distance between any two Points.
2. To develop a C code for implementation of convolution operation.
3. To develop a C code to compute FFT.
4. To design and implement filters in C to enhance the features of given input sequence/signal.

Lab Requirements:

1. Coo-coX Software PlatForm.
2. Arduino IDE

3. Code Composer Studio(CCS)

Hardware:

1. The Development kits of ARM-Cortex Boards
2. DSP C6713 evaluation kits
3. Sensors for Interfacing
4. Serial cables, Network Cables and Recommended power Supply for the board.

II Semester SYLLABUS

II	Analog and	Course Code: V21ESVT09	L	T	P	C

Sem.	**Digital CMOS VLSI Design**		**3**	**0**	**0**	**3**

<u>Syllabus Details</u>

Course Outcomes:
At the end of the laboratory work, students will be able to:

CO1: Describe the concept of MOS structure and physical design of CMOS **(K2)**

CO2: Design the CMOS Inverters and various CMOS combinational logic circuits **(K4)**

CO3: Design the CMOS different Sequential logic circuits **(K4)**

CO4: Describe the concept of modelling of MOS and Analog CMOS Sub-Circuits **(K2)**

CO5: Describe the CMOS Op-Amps & it's Applications. **(K2)**

UNIT-I: **Review of MOS structures and Physical design flow:**
Basic MOS structure and its static behaviour, Quality metrics of a digital design: Cost,Functionality, Robustness, Power, and Delay, Stick diagram and Layout, Wire delay models.Physical design flow: Floor planning, Placement, Routing, CTS, Power analysis and IR drop estimation-static and dynamic.

UNIT-II CMOS INVERTER AND COMBINATIONAL LOGIC:
Inverter: Static CMOS inverter, Switching threshold and noise margin concepts and theirEvaluation, Dynamic behaviour, Power consumption. Combinational logic: Static CMOSdesign, Logic effort, Rationed logic, Pass transistor logic, Dynamic logic, Speed and powerdissipation in dynamic logic, Cascading dynamic gates, CMOS transmission gate logic.

UNIT-III SEQUENTIAL LOGIC:
Static latches and registers, Bi-stability principle, MUX based latches, Static SR flip-flops, Master-slave edge-triggered register, Dynamic latches and registers, Concept of pipelining, Pulse registers, and Non-bistable sequential circuit.

UNIT -IV CMOS MODELING AND ANALOG SUB- CIRCUITS
CMOS Device Modelling - Simple MOS Large-Signal Model, Other Model Parameters,Small-Signal Model for the MOS Transistor, Sub-threshold MOS Model. MOS Switch, MOSDiode, MOS Active Resistor, Current Sinks and Sources, Current Mirrors-Cascode currentMirror and Wilson Current Mirror, Current and Voltage References, Band gap Reference.

UNIT-V CMOS AMPLIFIERS:
Inverters- Active load inverter, current source inverter, push-pull inverter, DifferentialAmplifiers- large signal analysis, small signal analysis, Cascode Amplifiers, CurrentAmplifiers, Output Amplifiers, Design of CMOS Op Amps, Compensation of Op Amps,Design of Two-Stage Op Amps, Power- Supply Rejection Ratio of Two-Stage Op Amps,Cascode Op Amps, Characterization of Comparator, Two-Stage comparator design.

			L	T	P	C
II Sem.	**Real Time Operating Systems**	**Course Code: V21ESVT10**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcomes
Upon the completion of the course student will be able to

- CO1: Illustrate real time programming concepts.
- CO2: Apply RTOS functions to implement embedded applications
- CO3: Understand fundamentals of design consideration for embedded Applications.

UNIT-I
Introduction to Real-Time Operating Systems - Defining an RTOS, The scheduler, Kernel Objects and services, Key characteristics of an RTOS
Task- Defining a Task, Task States and Scheduling, Typical Task Operations, Typical Task Structure, Synchronization, Communication and Concurrency

UNIT-II
Semaphores - Defining Semaphores, Typical Semaphore Operations, Typical Semaphore Use

Message Queues - Defining Message Queues, Message Queue States, Message Queue Content, Message Queue Storage, Typical Message Queue Operations, Typical Message Queue Use, Pipes, Event Registers, Signals and condition Variables

UNIT-III
Exceptions and Interrupts - Exceptions and Interrupts, Applications of Exceptions and Interrupts, Closer look at exceptions and interrupts, processing general Exceptions, Nature of Spurious Interrupts

Timer and Timer Services - Real-Time clocks and System Clocks, Programmable Interval Timers, Timer Interrupt Service Routines.
I/O Subsystems - I/O concepts, I/O subsystems

UNIT-IV
Memory Management - Dynamic Memory Allocation in Embedded Systems, Fixed-Size Memory management in Embedded Systems, Blocking VS. Non-Blocking Memory Functions, Hardware Memory Management Units

Modularizing an application for concurrency- An outside-in approach to decompose
Applications, Guidelines and Recommendations for Identifying Concurrency, Scheduleability Analysis

UNIT-V

Synchronization and Communication - Synchronization, Communication, Resource Synchronization Methods, Critical section, Common practical design patterns, Specific Solution Design Patterns,

Common Design Problems - Resource Classification, Deadlocks, Priority Inversion.

Text Books

1. Qing Li, Caroline Yao (2003), "Real-Time Concepts for Embedded Systems", CMP Books.

Reference Books

1. Albert Cheng, (2002), "Real-Time Systems: Scheduling, Analysis and Verification", WileyInterscience.
2. Hermann Kopetz, (1997), "Real-Time Systems: Design Principles for Distributed EmbeddedApplications", Kluwer.
3. Insup Lee, Joseph Leung, and Sang Son, (2008) "Handbook of Real-Time Systems", Chapman andHall.Krishna and Kang G Shin, (2001), "Real-Time Systems", McGraw Hill.

II Sem.	MEMS Technology and its Applications (Elective-III)	Course Code: V21ESVT11	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:
The student will be able to

- CO1: Describe the concepts of MEMS and Microsystems.
- CO2: Describe various possible materials for MEMS based devices.
- CO3: Describe various process steps involved in fabrication of MEMS devices.
- CO4: Describe various micro sensors and micro actuators.
- CO5: Describe various MEMS devices and their applications.

UNIT-I:

MEMS AND MICROSYSTEM
Introduction to MEMS, Microsystems and microelectronics, Multidisciplinary nature of MEMS, Miniaturization and its Benefits, Scaling laws in Miniaturization, MEMS Design Considerations, Advantages of MEMS Technology, Applications of MEMS

UNIT-II:

MATERIALS FOR MEMS
Introduction, Substrates & wafers, Active Substrate Materials, Silicon as a Substrate Material, Silicon Compounds, Piezoelectric Crystals, Polymers, Packaging Materials.

UNIT-III:

MICROFABRICATION
Introduction, Fabrication Process – Wafer processing, Photolithography, Ion implantation, Oxidation, Chemical vapor deposition (CVD), Physical vapor deposition, Deposition by Epitaxy, Etching, Manufacturing Process -Bulk Micromachining, Surface Micromachining and LIGA Process, Packaging technology, System level packaging, single and multichip packaging. Microsystem packaging, interfacingsin Microsystem packaging.

UNIT-IV:

MEMS BASED SENSORS AND ACTUATORS
Introduction, working principles of Microsystem - Micro Sensors, Micro Actuators and MEMS with Micro sensors: Pressure sensors, Temperature sensors, Humidity sensors, Accelerometers, Gyroscopes, Biomedical Sensors, Chemical sensors, MEMS with micro actuators: Microgrippers, Micromotors, Micro gears and Micropumps. Microfluidics.

UNIT-V:

RF MEMS

RF MEMS devices: Switch parameters- Basics of switching - Mechanical Switches- Electronic switches for RF and microwave applications – Approaches for low-actuation-voltage switches, MEMS based Reconfigurable Antennas, Reconfigurable Filters and Phase shifters.

Textbooks:

1. Tai-Ran Hsu, MEMS and Microsystems: Design, Manufacture, and Nanoscale Engineering, 2nd Edition, John Wiley & Sons, Inc., Hoboken, New Jersey, 2008.
2. Gabriel M Rebeiz, "RF MEMS - Theory Design and Technology", John Wiley, 2004
3. Microsystem Design by Stephen D. Senturia, Springer International, Edition,2010.

Reference Books:

1. Marc Madou, ―Fundamentals of Micro Fabrication‖ CRC Press
2. Mohamed Gad-el-Hak, ―The MEMS Handbook‖, CRC Press
3. Julian W.Gardner, Vijay K.Varadan, Osama O. AwadelKarim, "Micro sensors MEMS and Smart Devices", John Wiby& sons Ltd., 2001.
4. Iannacci, J. (2013). *Practical guide to RF-MEMS*. John Wiley & Sons.

II Sem.	Design for Testability (Elective-III)	Course Code: V21ESVT12	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:

The students will be able to

CO1: Interpret the concepts of modelling digital circuits and simulation.

CO2: Describe modelling of faults and its testing for SSF.

CO3:Explain various techniques of testing.

UNIT-I: Modeling:

Modeling digital circuits at logic level, register level and structural level. Levels of modeling.

Logic Simulation: Types of simulation, delay models, element evaluation, hazard detection, gate level event driven simulation.

UNIT-II: Fault Modeling:

Logic fault models, fault detection and redundancy, fault equivalence and fault location. Single stuck and multiple stuck – fault models. Fault simulation applications, general techniques for combinational circuits.

UNIT-III: Testing for Single Stuck Faults (SSF):

Automated test pattern generation (ATPG/ATG) for SSFs in combinational and sequential circuits, functional testing with specific fault models. Vector simulation – ATPG vectors, formats, compaction and compression, selecting ATPG tool.

UNIT-IV: Design for Testability:

Testability trade-offs techniques. Scan architectures and testing – controllability and observeability, generic boundary scan, fully integrated scan, storage cells for scan design. Board level and system level DFT approaches. Boundary scans standards. Compression techniques – different techniques, syndrome test and signature analysis.

UNIT-V: Built-in-Self-Test (BIST):

BIST concepts and test pattern generation, specific BIST architectures – CSBL, BEST, RTS, LOCST, STUMPS, CBIST, RTD, SST, CATS, CSTP, BILBO. Brief ideas on some advanced BIST concepts and design for self-test at board level.

2. Michael L.Bushnell, VishwaniD.Agrawal, Essentials of Electronic Testing, Springer, 2000.
3. Michael D.Ciletti, Modeling, Synthesis, and Rapid Prototyping with the Verilog HDL. Prentice Hall, 1999.

			L	T	P	C
II Sem.	**Semiconductor Memory Design and Testing (Elective-III)**	**Course Code: V21ESVT13**	**3**	**0**	**0**	**3**

Syllabus Details

Course Outcome:

The students will be able to

CO1: Describe concepts of volatile and non-volatile memory technologies.

CO2: Discuss the fault modeling and testing memory devices.

CO3: Explain the reliability and radiation effects of memory devices.

CO4: Describe the advanced memory technologies.

UNIT-I: Random Access Memory Technologies

SRAM – SRAM Cell structures, MOS SRAM Architecture, MOS SRAM cell and peripheral circuit operation, Bipolar SRAM technologies, SOI technology, Advanced SRAM architectures and technologies, Application specific SRAMs, DRAM – DRAM technology development, CMOS DRAM, DRAM cell theory and advanced cell structures, BICMOS DRAM, soft error failure in DRAM, Advanced DRAM design and architecture, Application specific DRAM.

UNIT-II: Non-volatile Memories

Masked ROMs, High density ROM, PROM, Bipolar ROM, CMOS PROMS, EPROM, Floating gate EPROM cell, One time programmable EPROM, EEPROM, EEPROM technology and architecture, Non-volatile SRAM, Flash Memories (EPROM or EEPROM), advanced Flash memory architecture.

UNIT-III: Memory Fault Modeling Testing and Memory Design for Testability and Fault Tolerance

RAM fault modeling, Electrical testing, Pseudo Random testing, Megabit DRAM Testing, nonvolatile memory modeling and testing, IDDQ fault modeling and testing, Application specific memory testing, RAM fault modeling, BIST techniques for memory.

UNIT-IV: Semiconductor Memory Reliability and Radiation Effects

General reliability issues RAM failure modes and mechanism, Non-volatile memory reliability, reliability modeling and failure rate prediction, Design for Reliability, Reliability Test Structures, Reliability Screening and qualification, Radiation effects, Single Event Phenomenon (SEP), Radiation Hardening techniques, Radiation Hardening Process and Design Issues, Radiation Hardened Memory characteristics, Radiation Hardness Assurance and Testing, Radiation. Dosimetry, Water Level Radiation Testing and Test structures.

UNIT-V: Advanced Memory Technologies and High-density Memory Packing Technologies

Ferroelectric RAMs (FRAMs), GaAs FRAMs, Analog memories, magneto resistive RAMs (MRAMs), Experimental memory devices, Memory Hybrids and MCMs (2D), Memory Stacks and MCMs (3D), Memory MCM testing and reliability issues, Memory cards, High Density Memory Packaging Future Directions.

TEXT BOOKS:

1. Semiconductor Memories Technology – Ashok K. Sharma, 2002, Wiley.
2. Advanced Semiconductor Memories – Architecture, Design and Applications - Ashok
K. Sharma- 2002, Wiley.
3. Modern Semiconductor Devices for Integrated Circuits – Chenming C Hu, 1st Ed,
Prentice Hall.

II Sem.	Hardware Software Co-Design (Elective-IV)	Course Code:V21ESVT14	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:

The students will be able to

- CO1: Describe co-design architectures, methods and algorithms.
- CO2: Describe prototyping emulation and target architecture using embedded Systems.
- CO3: Explain the compilation techniques.
- CO4: Distinguish the various design specifications and verifications.
- CO5: Describe the system level specifications and design using languages.

UNIT-I: Co- Design Issues:

Co- Design Models, Architectures, Languages, A Generic Co-design Methodology.

Co- Synthesis Algorithms Hardware software synthesis algorithms: hardware – software partitioning distributed system co-synthesis.

UNIT-II:

Prototyping and Emulation Prototyping and emulation techniques, prototyping and emulation environments, future developments in emulation and prototyping architecture specialization techniques, system communication infrastructure

Target Architectures Architecture Specialization techniques, System Communication infrastructure, target Architecture and Application System classes, Architecture for control dominated systems (8051-Architectures for High performance control), Architecture for Data dominated systems (ADSP21060, TMS320C60) and Mixed Systems.

UNIT-III:

Compilation Techniques and Tools for Embedded Processor Architectures Modern embedded architectures, embedded software development needs, compilation technologies and practical consideration in a compiler development environment.

UNIT-IV:

Design Specification and Verification Design, co-design, the co-design computational model, concurrency coordinating con current computations, interfacing components, design verification, implementation verification, verification tools, interface verification.

UNIT-V:

Languages for System-Level Specification and Design-I System-level specification, design representation for system level synthesis, system level specification languages.

Languages for System-Level Specification and Design-II

Heterogeneous specifications and multi-language co-simulation, the cosyma system and lycos system.

TEXT BOOKS:

1. Hardware / Software Co- Design Principles and Practice – JorgenStaunstrup, Wayne Wolf – 2009, Springer.
2. Hardware / Software Co- Design - Giovanni De Micheli, MariagiovannaSami, 2002, Kluwer Academic Publishers.

REFERENCE BOOKS:

1. A Practical Introduction to Hardware/Software Co-design -Patrick R.Schaumont - 2010 – Springer Publications.

II Sem.	Embedded Computing (Elective-IV)	Course Code:V21ESVT15	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:
The students will be able to

- CO1: Understand the concepts of Linux OS programming –**[K2]**
- CO2: Describe the different software development tools **[K2]**
- CO3: Explain different interfacing modules – **[K2]**
- CO4: Discuss the networking basics –**[K2]**
- CO5: Explain the basic concepts of LPC17xx Microcontroller –**[K2]**

UNIT-I
Programming on Linux Platform:
System Calls, Scheduling, Memory Allocation, Timers, Basics of Embedded Linux, Root File System, Busy Box.
UNIT-II
Introduction to Software Development Tools
GNU GCC,make, gdb, static and dynamic linking, C libraries, compiler options, code optimization switches.
UNIT-III
Interfacing Modules
Sensor and actuator interface, data transfer and control, GSM module interfacing with data processing and display.
UNIT-IV
Networking Basics
Sockets, ports, UDP, TCP/IP, client server model, socket programming.
UNIT-V
LPC 17xx microcontroller- Internal memory, GPIOs, Timers, ADC, UART and other serial interfaces, PWM, RTC, WDT.

TEXT BOOKS:

1. Modern Embedded Computing - Peter Barry and Patrick Crowley, 1st Ed., Elsevier/Morgan Kaufmann, 2012.
2. Linux Application Development - Michael K. Johnson, Erik W. Troan, Adission Wesley, 1998.
3. Assembly Language for x86 Processors by Kip R. Irvine

REFERENCE BOOKS:

1. Operating System Concepts by Abraham Silberschatz, Peter B. Galvin and Greg Gagne.
2. Technical references and user manuals on www.arm.com.
3. The Design of the UNIX Operating System by Maurice J. Bach Prentice-Hall
4. UNIX Network Programming by W. Richard Stevens.

5.

II Sem.	Communication Buses and Interfaces (Elective-IV)	Course Code: V21ESVT16	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes:
At the end of the course, students will be able to:

- CO1: Select a particular serial bus suitable for a particular application.
- CO2: Develop APIs for configuration, reading and writing data onto serial bus.
- CO3: Design and develop peripherals that can be interfaced to desired serial bus.

UNIT-I
Serial Busses- Cables, Serial busses, serial versus parallel, Data and Control Signal-data frame, data rate, features Limitations and applications of RS232, RS485, I2C , SPI

UNIT-II: CAN
ARCHITECTURE- ISO 11898-2, ISO 11898-3, Data Transmission- ID allocation, Bit timing, Layers- Application layers, Object layer, Transfer layer, Physical layer, Frame formats- Data frame, Remote frame, Error frame, Over load frame, Ack slot, Inter frame spacing, Bit spacing, Applications.

UNIT-III: PCIe
Revision, Configuration space- configuration mechanism, Standardized registers, Bus enumeration, Hardware and Software implementation, Hardware protocols, Applications.

UNIT-IV: USB
Transfer Types- Control transfers, Bulk transfer, Interrupt transfer, isochronous transfer. Enumeration- Device detection, Default state, addressed state, Configured state, enumeration sequencing. Descriptor types and contents- Device descriptor, configuration descriptor, Interface descriptor, Endpoint descriptor, String descriptor.Device driver.

UNIT-V
Data streaming Serial Communication Protocol- Serial Front Panel Data Port(SFPDP) configurations, Flow control, serial FPDP transmission frames, fiber frames and copper cable.

TEXTBOOKS

1. A Comprehensive Guide to controller Area Network – Wilfried Voss, Copperhill Media
Corporation, 2nd Ed., 2005.
2. Serial Port Complete-COM Ports, USB Virtual Com Portsand Ports for Embedded
Systems- JanAxelson, Lakeview Research, 2nd Ed.,

REFERENCES

1. USB Complete – Jan Axelson, Penram Publications.
2. PCI Express Technology – Mike Jackson, Ravi Budruk, Mindshare Press.

II Sem.	Analog and Digital CMOS VLSI Design Lab	Course Code: V21ESVL03	L	T	P	C
			0	0	4	2

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

- CO1 -Analyse the Characteristics of MOS Device **(K3)**
- CO2 -Analyse the basic MOS Amplifiers and current mirrors **(K3)**
- CO3 -Design the various MOS Amplifiers. **(K4)**
- CO4 -Demonstrate various CMOS combinational Digital circuits **(K2)**
- CO5- Demonstrate various CMOS Sequential Digital circuits **(K2)**

The students are required to design and implement the Circuit and Layout of any 10Experiments using CMOS 130nm Technology with Mentor Graphics Tool/Cadence/ Synopsys/Industry Equivalent Standard Software.

List of Experiments:

1. MOS Device Characterization and parametric analysis
2. Common Source Amplifier
3. Common Source Amplifier with source degeneration
5. Simple current mirror
6. Cascade current mirror.
7. Wilson current mirror.
8. Differential Amplifier.
8. Full Adder
9. RS-Latch
10. Clock Divider
11. JK-Flip Flop
12. Synchronous Counter
13. Asynchronous Counter
14. Static RAM Cell

<table>

<tr><td>0</td><td>0</td><td>4</td><td>2</td></tr>
</table>

Syllabus Details

- The Students are required to write the programs using C-Language according to the Experimentrequirements using RTOS Library Functions and macros ARM-926 developer kits and ARMCortex.
- The following experiments are required to develop the algorithms, flow diagrams, source codeand perform the compilation, execution and implement the same using necessary hardware kitsfor verification. The programs developed for the implementation should be at the level of anembedded system design.
- The students are required to perform at least SIX experiments from Part-I and TWO experimentsfrom Part-II.

List of Experiments:
Part-I:
Experiments using ARM-926 with PERFECT RTOS

1. Register a new command in CLI.
2. Create a new Task.
3. Interrupt handling.
4. Allocate resource using semaphores.
5. Share resource using MUTEX.
6. Avoid deadlock using BANKER"S algorithm.
7. Synchronize two identical threads using MONITOR.
8. Reader'sWrite's Problem for concurrent Tasks.

Part-II
Experiments on ARM-CORTEX processor using any open source RTOS. (Coo-Cox-Software-Platform)

1. Implement the interfacing of display with the ARM- CORTEX processor.
2. Interface ADC and DAC ports with the Input and Output sensitive devices.
3. Simulate the temperature DATA Logger with the SERIAL communication With PC.
4. Implement the developer board as a modem for data communication using Serial port communication between two PC"s.

Lab Requirements:
Software:

- Eclipse IDE for C and C++ (YAGARTO Eclipse IDE), Perfect RTOS Library, COO-COX Software Platform, YAGARTO TOOLS, and TFTP SERVER.
- LINUX Environment for the compilation using Eclipse IDE & Java with latest

Version.
Hardware:

- The development kits of ARM-926 Developer Kits and ARM-Cortex Boards.
- Serial Cables, Network Cables and recommended power supply for the board.

III Semester SYLLABUS

III Sem.	IoT and its Applications	Course Code: V21ESVT17	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome: The student will be able to

- CO1: Describe M2M and IOT Technologies. **[K2]**
- CO2: Explain the layers, protocols and communication technologies in IOT. **[K2]**
- CO3: Illustrate various hardware components required for IOT applications**. [K2]**
- CO4: Discuss the cloud technologies and their services. **[K2]**
- CO5: Explain the IoT Applications. **[K2]**

UNIT-I INTRODUCTION [1, 2]
Introduction from M2M to IoT - An Architectural Overview, building architecture, Main design principles and needed capabilities, An IoT architecture outline, M2M and IoT Technology Fundamentals; Sensors, Actuators, RFID, Wireless Sensor Networks, Devices and gateways.

UNIT-II IOT PROTOCOLS & COMMUNICATION TECHNOLOGIES [2, 4]
Functionalityof Layers in IoT, IoT Connectivity – IEEE 802.15.4, Wi-Fi, Bluetooth, Zigbee, LPWAN, 5G.
Study of protocols - 6LoWPAN, CoAP, MQTT.

UNIT-III DESIGN AND DEVELOPMENT [3, 4]
Design Methodology, Embedded computing logic, IoT system building blocks, Raspberry Pi - Board details, sensor/actuator Interface using Python Programming.

UNIT-IV Cloud Computing [3, 4]
Structured Vs. Unstructured Data and Data in Motion Vs. Data in Rest, Role of Machine Learning; Data Collection, Storage and Computing Using a Cloud Platform for IoT Applications/Services, AWS for IoT – Introduction to Amazon EC2.

UNIT-V IOT APPLICATIONS [2, 3]
CASE STUDIES/INDUSTRIAL APPLICATIONS: Case Studies - Home appliances, Smart and Connected Cities, Public Safety, Agriculture, Introduction to Industry 4.0.

Edition, VPT, 2014.

III Sem.	Low Power VLSI Design	Course Code: V21ESVT18	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcome:

The students will be able to

- CO1: Identify various sources of power consumption
- CO2: Estimate the power consumption sing simulation and probabilistic

Approaches.

- CO3: Discuss low power design at various levels of abstraction.
- CO4: Discuss clock distribution for low power dissipation.

UNIT-I: Introduction

Need for low power VLSI chips, Sources of power dissipation. Emerging Low power approaches. Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

UNIT-II: Power estimation Simulation Power analysis:

SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems. Monte Carlo simulation.

Probabilistic power analysis:

Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

UNIT-III: Low Power Design Circuit level:

Power consumption in circuits. Flip Flops & Latches design, high capacitance nodes, low power digital cells library

Logic level:

Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic

UNIT-IV: Low power Architecture & Systems:

Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components, low power memory design.

UNIT-V: Low power Clock Distribution:

Power dissipation in clock distribution, single driver vs. distributed buffers, Zero skew vs. tolerable skew, chip & package co design of clock network

Algorithm &architectural level methodologies: Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

TEXTBOOKS:

1. Gary K. Yeap, "Practical Low Power Digital VLSI Design", KAP, 2002
2. Rabaey, Pedram, "Low power design methodologies" Kluwer Academic, 1997

Department of Computer Science & Engineering (Accredited by NBA)

Dt: 03.09.2021

The 5th Meeting of Board of Studies in Department of Computer Science and Engineering is held at 02.00 PM on 02-09-2021 through online mode using,

https://us02web.zoom.us/j/86328881824

The following members attended the meeting:

S.No.	Name of the Member	Designation	Role
1.	Dr. D Jaya Kumari	Professor, HoD-CSE, SVEC	Chairperson
2.	Dr.Krishna Mohan Ankala	Professor, UCEK, Kakinada	University Nominee
3.	Dr. R.B.V. Subramanyam	Professor, Department of CSE, NIT Warangal	Academic Expert
4.	Dr. S Pallam Setty	Professor, Department of CSE, Andhra University, Vishakapatnam	Academic Expert
5.	Sri. Srinivasa Raju Vuppalapati	Senior Consultant, MSR IT Services LLP, Hitech City, Hyderabad.	Industry Expert
6.	Mr.EEdala Rambabu	microfocus, Bangalore	Alumni
7.	Sri Ch. Apparao	Technical Director	Invited Member
8.	Dr. V. Venkateswara Rao	Professor	Member
9.	Dr. G Loshma	Professor	Member
10.	Dr. V S Naresh	Professor	Member
11.	Ch. Raja Ramesh	Associate Professor	Member
12.	Dr.K. ShirinBhanu	Associate Professor	Member
13.	A. Leelavathi	Sr. Assistant Professor	Member
14.	D Anjani Suputhri Devi	Sr. Assistant Professor	Member
15.	R. LeelaPhani Kumar	Assistant Professor	Member

16.	D Sasi Rekha	Assistant Professor	Member
17.	B.SriRamya	Assistant Professor	Member
18.	G.Sriram Ganesh	Assistant Professor	Member
19.	N.V.Murali Krishna Raja	Assistant Professor	Member
20.	N. Hiranmayee	Assistant Professor	Member
21.	A Rajesh	Assistant Professor	Member
22.	Y.DivyaVani	Assistant Professor	Member
23.	K Lakshmi Narayana	Assistant Professor	Member
24.	M NageswaraRao	Assistant Professor	Member
25.	B Kiran Kumar	Assistant Professor	Member
26.	D.S L Manikanteswari	Assistant Professor	Member
27.	P Uma Sankar	Assistant Professor	Member
28.	M V V Krishna	Assistant Professor	Member
29.	M. Anantha Lakshmi	Assistant Professor	Member
30.	K Venkatesh	Assistant Professor	Member
31.	M. Satyanarayana Reddy	Assistant Professor	Member
32.	J.N. Chandra Sekhar	Assistant Professor	Member
33.	David Raju. K	Assistant Professor	Member
34.	P Suneetha	Assistant Professor	Member
35.	M Sree Radha Mangamani	Assistant Professor	Member
36.	Ch Hemanandh	Assistant Professor	Member
37.	M Chilaka Rao	Assistant Professor	Member
38.	G V Lakshmi Narayana	Assistant Professor	Member
39.	A Nageswara Rao	Assistant Professor	Member
40.	A NagaJyothi	Assistant Professor	Member
41.	G Prashanthi	Assistant Professor	Member

The following are the Minutes of the Meeting

Item No.1: Welcome note by the Chairperson BOS.

Chairperson BOS extended a formal welcome and introduced the members.

Item No.2: Progress Report of the Department

Chairperson BOS had given the Brief Progress Report of the Department.

Item No.3: Review of Course Structure for VII and VIII Semesters of B.Tech(CSE) Programme under V18 Regulation.

Reviewed the Course Structure of VII & VIII Semesters of B.Tech (CSE) Programme under V18 Regulation**.** The approved Course Structure is given in **Annexure-CS-I.**

Item No.4: Approval of Syllabi for the Proposed Courses offered in VII and VIII Semesters of B.Tech(CSE) Programme under V18 Regulation.

Approved the Syllabi for the courses offered in VII & VIII semesters of B.Tech(CSE) Programme under V18 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
VII	V18CST27	In AJWT Course it was suggested that AngularJS need to be replaced by Angular.	AngularJS concepts modified as Angular.

The Modified and Approved Syllabus is given in **Annexure-CS-II.**

Item No.5: Approval of Course Structure for V to VIII Semesters of B.Tech(CST) Programme under V18 Regulation.

Approved Course Structure for V to VIII Semesters for B.Tech (CST) Programme under V18 Regulation. The approved Course Structure is given in **Annexure-CS-III**.

Item No.6: Approval of Syllabi for Proposed Courses offered in V to VIII Semesters of B.Tech(CST) Programme under V18 Regulation..

Approved the syllabi for the courses offered in V to VIII semesters of B.Tech(CST) Programme under V18 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
VII	V18CST27	In AJWT Course it was suggested that AngularJS need to be replaced by Angular.	AngularJS concepts modified as Angular.

The Modified and Approved Syllabus is given in **Annexure-CS-IV.**

Item No.7: Approval of list of Courses offering under Open Elective-II & Open Elective-III in VII and VIII Semesters respectively under V18 Regulation for all other branches and the approval of their Syllabi.

Approved the list of Courses and Syllabi offered under Open Elective-II & Open Elective-III in VII and VIII Semesters respectively under V18 Regulation for all other branches. The approved Courses and Syllabi are given in **Annexure-CS-V.**

Item No.8: Approval of Course Structure for III to VIII Semesters of B.Tech(CSE) and B.Tech(CST) Programme under V20 Regulation.

Reviewed the Course Structure for III to VIII Semesters for B.Tech(CSE) and B.Tech(CST) Programme under V20 Regulation and suggested the following changes:

Suggestions	Inclusions / Modifications
Suggested to include UML Lab in V Semester	Incorporated UML Lab in V Semester and Merged the AI & DM Labs
In Pool of Skill Oriented Courses add Secure DevOps and remove Source Code Management Using Git & Github.	Included Secure DevOps in pool of Skill Oriented Courses.
In Open Elective replace Computer Organization and Architecture course with Some other course.	Replaced the Open Elective Computer Organization and Architecture course with Information Retrieval Systems.

The Modified and Approved Course Structure is given in **Annexure-CS-VI**.

Item No.9: Approval of Syllabi for Proposed Courses offered in III and IV Semesters of B.Tech (CSE) and B.Tech(CST) Programme under V20 Regulation.

Approved the syllabi for the courses offered in III and IV Semesters of B.Tech (CSE) and B.Tech(CST) Programme under V20 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
III	V20CSL03	In OOP through C++ Lab add concepts like how to debug and create libraries using GDB	Included GDB Lab Task in OOP through C++ Lab.
IV	V20CST07	In DAA Course add NP Hard & NP Complete Introduction Concepts	IncludedBasicconcepts of NP-Hard and NP-Complete problems in UNIT-V.

The Modified and Approved Syllabus is given in **Annexure-CS-VII**.

Item No.10: Approval of Proposed Courses and Syllabi for other branches under V20 Regulation.

Approved the Proposed Courses and Syllabi for other branches under V20 Regulation. The approved Courses and Syllabi are given in **Annexure-CS-VIII**.

Item No.11: Approval of Course Structure and Syllabi for I to IV Semesters of M.Tech(CS) Programme under V21 Regulation.

Approved the Course Structure and Syllabi for I to IV Semesters of M.Tech(CS) Programme under V21 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
I	V21CTT06 **(Program Elective-II)**	**Advanced Databases:** - Add Graph Databases / neo4j : Real Time Case Studies - Add Time series Databases: Real Time Case Studies.	Included, as per the suggestions given by the BOS Members
I	V21CTT07 **(Program Elective-II)**	**Advanced computer networks:** - Add SDN - Software Defined Networks - Real Time Case Study	Included, as per the suggestions given by the BOS Members

The Modified and Approved Course Structure and Syllabus is given in **Annexure-CS-IX.**

Dr.D Jaya Kumari

Chairperson of BOS

Annexure-CS-I

Course Structure of VII & VIII Semesters of B.Tech (CSE)

S.No.	Course Code	Category	Course	L	T	P	C
	VII – Semester						
1	V18CST27	PCC	Advanced Java and Web Technologies	3	0	0	3
2	V18MBET52	HSS	Management Science	3	0	0	3
3	**Elective – III**						
	V18CST28	PEC	1. Advanced Operating Systems	3	0	0	3
	V18CST29		2. Statistics with R Programming				
	V18CST30		3. Information Retrieval Systems				
	V18CST31		4 Human Computer Interaction				
4	**Elective – IV**						
	V18CST32	**PEC**	1.Distributed Systems	3	0	0	3
	V18CST33		2.Scripting Languages

Annexure-CS-II

Syllabus for VII & VIII Semesters of B.Tech (CSE)

VII Sem	**Advanced Java and Web Technologies**	Course Code: VI8CST27	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the basic concepts of HTML and CSS (K2)

CO2: Develop dynamic webpages and validate with java Script. (K3)

CO3: Illustrate Extensible markup language (K2)

CO4: Illustrate the basic concepts of NODE JS and Angular. (K2)

CO5: Build database driven web applications using JSP (K3)

CO6: Develop web applications using PHP and MySQL (K3)

UNIT-I :HTML: Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Frames Forms.CSS: Cascading style sheets, Levels of Style Sheets, Style Specification Formats, Selector Forms.

UNIT-II: JavaScript & DHTML: Overview of JavaScript, General Syntactic Characteristics, Primitives Operations and Expressions, Screen output and Keyboard Input, Control Statements, Object creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions, Events and Event Handling.

UNIT-III: Working with XML: Introduction, The syntax of XML, XML Document Structure, Document Type Definition (DTD), Namespaces, XML schemas, XSLT, XML Parsers - DOM and SAX.

UNIT-IV: Fundamentals of NODE JS and Angular: Understanding Node.js, Installing Node.js, Working with Node Packages, Creating a Node.js Application, Understanding Angular, Modules, Directives, Data Binding, Dependency Injection, Services, Separation of Responsibilities, Creating a Basic Angular Application.

UNIT-V: Introduction to Servlets & JSP: Introduction to servlets, Life cycle of Servlet, Limitations of servlets, Java Server Pages: JSP Overview, Components of a JSP Page: Directives, comments, Expressions, Scriptlets, Declarations, implicit objects, Database Access, session tracking.

UNIT-VI: PHP Programming: Overview of PHP, General syntactic characteristics, Primitives, operations, Expressions, Output, Control statements, Arrays, Functions, Pattern Matching, Form Handling, Cookies, Session Tracking. PHP with MySQL connectivity.

Text Books:

1. Programming the World Wide Web, 7th Edition, Robet W Sebesta, Pearson, 2013.
2. Node.js, MongoDB and Angular Web Development, 2nd Edition,Brad Dayley Brendan Dayley Caleb Dayley,Pearson Education,2018
3. JSP:The Complete reference,Phil Hanna,The McGraw-Hill Copanies,2001

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.
2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning

3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

VII Sem	Advanced Operating Systems (**Elective – III)**	Course Code: VI8CST28	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectures of Distributed Systems and Distributed Mutual Exclusion. **(K2)**
CO2: Illustrate the concepts of Deadlock Handling Strategies in Distributed Systems. **(K3)**
CO3: Explain the various Resource Management Techniques for Distributed Systems. **(K2)**
CO4: Discuss Fault Tolerance and Fault Recovery concepts in Distributed Systems . **(K2)**
CO5: Interpret the concepts of Cryptography and Data Security in Distributed Systems. **(K3)**
CO6: Describe Multiprocessor Operating System, Process Synchronization, Scheduling. **(K2)**

UNIT I: Architectures of Distributed Systems –System Architecture types - issues in distributed operating systems - communication networks - communication primitives. Distributed Mutual Exclusion - introduction - the classification of mutual exclusion and associated algorithms

UNIT II: Distributed Deadlock Detection -Introduction - deadlock handling strategies in distributed systems - issues in deadlock detection and resolution - control organizations for distributed deadlock detection - centralized and distributed deadlock detection algorithms -hierarchical deadlock detection algorithms.

UNIT III: Distributed Resource Management- Algorithms for implementing DSM - memory coherence and protocols - design issues. Distributed Scheduling - introduction - issues in load distributing - components of a load distributing algorithm - stability - load distributing algorithm – performance comparison - selecting a suitable load sharing algorithm - requirements for load distributing.

UNIT IV: Failure Recovery and Fault tolerance: Introduction- basic concepts - classification of failures - backward and forward error recovery, backward error recovery- recovery in concurrent systems - consistent set of check points - synchronous and asynchronous check pointing and recovery - check pointing for distributed database systems- recovery in replicated distributed databases.

UNIT V: Protection and Security - Preliminaries, the access matrix model and its implementations.-safety in matrix model, advanced models of protection. Data security - cryptography: Model of cryptography, conventional cryptography- modern cryptography, multipleencryptions - authentication in distributed systems.

UNIT VI: Multiprocessor Operating Systems - Basic multiprocessor system architectures - inter connection networks for multiprocessor systems .Multiprocessor Operating System - structures of multiprocessor operating system, operating system design issues- threads- process synchronization and scheduling.

Text Books:

1. Advanced Concepts in Operating Systems: Distributed, Database and Multiprocessor Operating Systems, MukeshSinghal, NiranjanG.Shivaratri,TMH, 2001.

2. Distributed Operating System-Concepts and Design,PradeepK.Sinha ,PHI, 2003.

Reference Books:

1. Modern operating system, Andrew S.Tanenbaum, PHI, 2003

2. Distributed operating system,Andrew S.Tanenbaum,Pearson education, 2003.
3. Operating System Concepts, Abraham Silberschatz; Peter Baer Galvin; Greg Gagne, Seventh Edition, John Wiley & Sons, 2004.

VII Sem	Statistics with R Programming (**Elective – III)**	Course Code: VI8CST29	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate different data structures in R. **(K2)**
CO2: Demonstrate about control statements and functions in R. **(K3)**
CO3: Compute different mathematical operations using R pre defined functions. **(K3)**

CO4: Construct and edit visualizations with R. **(K3)**
CO5: Identify appropriate statistical tests using R. **(K2)**
CO6: Examine linear and non linear models to create testable hypotheses. **(K3)**

UNIT I: Introduction and Data Structures: Introduction, How to install and run R, R Sessions, Functions, Basic Math, constants, Variables, Expressions, Reserved words in R, Arithmetic, and Boolean Operators and values, Data Types, Vectors, Advanced Data Structures: Data Frames, Lists, Matrices, Arrays, Classes.

UNIT II: Control Statements and Functions in R: R Programming Structures, Control Statements, Loops, – Looping Over Nonvector Sets,- If-Else, Default Values for Argument, return values, Deciding Whether to explicitly call return- returning Complex Objects, Functions are Objects, No Pointers in R, Recursion, A Quick sort Implementation- Extended Example: A Binary Search Tree.

UNIT III: Math and Simulation and Input/output in R: Doing Math and Simulation in R, Math Function, Extended Example Calculating Probability Cumulative Sums and Products-Minima and Maxima- Calculus, Functions for Statistical Distribution, Sorting, Linear Algebra, Operations on Vectors and Matrices, Extended Example: Vector cross Product, Set Operations. **Input /output:** Accessing the Keyboard and Monitor, Reading and writing Files

UNIT IV: Graphics: Graphics, Creating Graphs, The Workhorse of R Base Graphics, the plot() Function ,Customizing Graphs, Saving Graphs to Files.

UNIT V: Probability Distributions and Basic Statistics: Probability Distributions, Normal Distribution- Binomial Distribution- Poisson Distributions Other Distribution, Basic Statistics, Correlation and Covariance, T-Tests,-ANOVA.

UNIT VI: Linear Models in R: Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression, - Poisson Regression, Nonlinear Models, Splines- Decision- Random Forests.

Text Books:

1. R for Everyone, Lander, Pearson, 2^{nd} edition 2018.
2. The Art of R Programming, Norman Matloff, Cengage Learning, 2^{nd} edition, 2017.

Reference Books:

1. R Cookbook, PaulTeetor, Oreilly, 2^{nd} edition, 2017.
2. R in Action, Rob Kabacoff, Manning, 3^{rd} edition, 2019.

VII Sem	Information Retrieval Systems (**Elective – III)**	Course Code: VI8CST30	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Identify the basic concepts of information retrieval. **(K2)**
CO2: Describe the Capabilities of IRS, cataloging and indexing. **(K2)**
CO3: Explain the data structures and retrieving documents. **(K2)**
CO4: Describe the difficulty of representing and retrieving documents. **(K2)**
CO5: Explain the latest technologies for describing and searching the web. **(K2)**
CO6: Illustrate searching procedure for user-text and Information System Evaluation. **(K2)**

UNIT I: Introduction: Definition, Objectives, Functional Overview, Relationship to DBMS, Digital libraries and Data Warehouses.

UNIT II: Information Retrieval System Capabilities: Search, Browse, Miscellaneous **Cataloging and Indexing:** Objectives, Indexing Process, Automatic Indexing, Information Extraction.

UNIT III: Data Structures: Introduction, Stemming Algorithms, Inverted file structures, N-gram data structure, PAT data structure, Signature file structure, Hypertext data structure.

UNIT IV: Automatic Indexing: Classes of automatic indexing, Statistical indexing, Natural language, Concept indexing, Hypertext linkages. **Document and Term Clustering:** Introduction, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT V: User Search Techniques: Search statements and binding, Similarity measures and ranking, Relevance feedback, Selective dissemination of information search, weighted searches of Boolean systems, Searching the Internet and hypertext. **Information Visualization:** Introduction, Cognition and perception, Information visualization technologies.

UNIT VI: Text Search Algorithms: Introduction, Software text search algorithms, Hardware text search systems. **Information System Evaluation:** Introduction, Measures used in system evaluation, Measurement example – TREC results.

Text Books:

1. Information Storage and Retrieval System: Theory and Implementation, Gerald J. Kowalski, Mark T. Maybury, 2nd edition, 2002, Kluwer Academic Press.

Reference Books:

1. Information Retrieval Data Structures and Algorithms, Frakes, W.B., Ricardo Baeza-Yates Prentice Hall.
2. Information Storage & Retrieval by Robert Korfhage – John Wiley & Sons, Wiley computer publisher, 1997.

VII Sem	Human Computer Interaction (**Elective – III)**	Course Code: VI8CST31	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the principles and characteristics of GUI. **(K2)**
CO2: Recognize how a computer system may be modified to include human diversity. **(K2)**
CO3: Select an effective style for a specific application. **(K2)**
CO4: Discuss Screen Designing mock-ups and carry out user and expert evaluation of interfaces.**(K2)**
CO5: Explain System Menus & Navigation Schemes. **(K2)**
CO6: Discuss Device and Screen based controls. **(K2)**

UNIT I: The User Interface: Introduction, Importance of the User Interface, Importance and benefits of Good Design History of Human Computer Interface. Characteristics of Graphical and Web User Interface: Graphical User Interface, popularity of graphics, concepts of Direct Manipulation, Graphical System advantage and disadvantage, Characteristics of GUI. Web User Interface, popularity of web, Characteristics of Web Interface, Merging of Graphical Business systems& the Web, Principles of User Interface Design.

UNIT II: The User Interface Design Process: Obstacles and Pitfall in the development Process, Usability, The Design Team, Human Interaction with Computers, Important Human Characteristics in Design, Human Consideration in Design, Human Interaction Speeds, Performance versus Preference, Methods for Gaining and Understanding of Users.

UNIT III: Understanding Business Functions: Business Definitions & Requirement analysis, Determining Business Functions, Design standards or Style Guides, System Training and Documentation.

UNIT IV: Principles of Good Screen Design: Human considerations in screen Design, interface design goals, test for a good design, screen meaning and purpose, Technological considerations in Interface Design.

UNIT V: System Menus and Navigation Schemes: Structure, Functions, Context, Formatting, Phrasing and Selecting, Navigating of Menus, Kinds of Graphical Menus Windows Interface: Windows characteristic, Components of Window, Windows Presentation Styles, Types of Windows, Window Management, Websystems

UNIT VI: Device and Screen-Based Control: Device based controls, Operable Controls, Text entry/read-Only Controls, Section Controls, Combining Entry/Selection Controls, Other Operable Controls and Presentation Controls, Selecting proper controls

Text Books:

1. "The Essential Guide to User Interface Design", Wilbert O. Galitz, 2nd edition,2002,Wiley India Edition.
2. Prece, Rogers, "Sharps Interaction Design", Wiley India.
3. "Designing the user interfaces". Ben Shneidermann 3rd Edition, Pearson Education Asia.

.**Reference Books:**

1. "User Interface Design" , SorenLauesen, Pearson Education
2. "Essentials of Interaction Design", Alan Cooper, Robert Riemann, David Cronin, Wiley
3. "HumanComputer Interaction", Alan Dix, Janet Fincay, GreGoryd, Abowd, Russell, Bealg, Pearson Education.

VII Sem	Distributed Systems (**Elective – IV)**	Course Code: VI8CST32	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe distributed system and desired properties of such systems. **(K2)**
CO2: Discuss the theoretical concepts, namely, virtual time and agreement. **(K2)**
CO3: Discuss the basic concepts of distributed systems and Characteristics of IPC protocols. **(K2)**
CO4: Explain the mechanisms such as Remote procedure call (RPC/RMI) and OSS . **(K2)**
CO5: Explain the mechanisms such as file systems and P2P algorithms. **(K2)**
CO6: Discuss the Transactions and Replications in distributed systems. **(K2)**

UNIT I: Characterization of Distributed Systems: Introduction, Examples of Distributed Systems, Resource Sharing and the Web, Challenges. **System Models:** Introduction, Architectural Models- Software Layers, System Architecture, Variations, Interface and Objects, Design Requirements for Distributed Architectures, Fundamental Models- Interaction Model, Failure Model, Security Model.

UNIT II: Time and Global States: Introduction, Clocks Events and Process States, Synchronizing Physical Clocks, Logical Time and Logical Clocks, Global States, Distributed Debugging.

Coordination and Agreement: Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication, Consensus and Related Problems.

UNIT III: Inter process Communication: Introduction, The API for the Internet Protocols- The Characteristics of Inter process communication, Sockets, UDP Datagram Communication, TCP Stream Communication; External Data Representation and Marshalling; Client Server Communication; Group Communication, Case Study: MPI.

UNIT IV:: Remote Invocation: Introduction, Request-reply protocols, Remote Procedure Call, Events and Notifications, **Case Study:** JAVA RMI.. **Operating System Support:** Introduction, The Operating System Layer, Protection, Processes and Threads –Address Space, Creation of a New Process, Threads.

UNIT V: Distributed File Systems: Introduction, File Service Architecture; Peer-to-Peer Systems: Introduction, Napster and its Legacy, Peer-to-Peer Middleware, Routing Overlays. **Case Study1:** Sun Network File system. **Case Study 2:** The Andrew File System.

UNIT VI: Transactions & Replications: Introduction, System Model and Group Communication, Concurrency Control in Distributed Transactions, Distributed Dead Locks, Transaction Recovery; Replication-Introduction, Passive (Primary) Replication, Active Replication.

Text Books:

1. "Distributed Systems- Concepts and Design", George Coulouris, Jean Dollimore, Tim Kindberg, Fourth Edition, Pearson Publication
2. "Distributed Computing, Principles, Algorithms and Systems", Ajay D Kshemkalyani, MukeshSighal, Cambridge.

Reference Books:

1. "Distributed Systems, Principles and Paradigms", Andrew S. Tanenbaum, Maarten Van Steen, 2d Edition, PHl.
2. "Distributed Systems, An Algorithm Approach," Sukumar Ghosh, Chapman & HalyCRC, Taylor & Fransis Group, 2007.

VII Sem	Scripting Languages (**Elective – IV**)	Course Code: VI8CST33	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concepts of scripting languages. **(K2)**

CO2: Develop Scripting for application using Ruby. **(K3)**

CO3: Explain the concepts of Programming in Perl. **(K2)**

CO4: Construct programs using Perl. **(K3)**

CO5: Describe TCL Scripting and their applications. **(K2)**

CO6: Discuss features of Groovy when compare with other Scripting Languages. **(K2)**

UNIT I: Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services. RubyTk – Simple Tk Application, widgets, Binding events, Canvas, scrolling.

UNIT II: Extending Ruby: Ruby Objects in C, the Jukebox extension, Memory allocation, Ruby TypeSystem, Embedding Ruby to Other Languages, Embedding a Ruby Interpreter.

UNIT III: Introduction to PERL and Scripting: Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting Languages, Uses for Scripting Languages, Web Scripting, and the universe of Scripting Languages. PERL- Names and Values, Variables, Scalar Expressions, Control Structures, arrays, list, hashes, strings, pattern and regular expressions, subroutines.

UNIT IV: Advanced Perl: Finer points of looping, pack and unpack, file system, eval, data structures, packages, modules, objects, interfacing to the operating system, Creating Internet ware applications, Dirty Hands Internet Programming, security Issues.

UNIT V:TCL: TCL Structure, syntax, Variables and Data in TCL, Control Flow, Data Structures, input/output, procedures, strings, patterns, files, Advance TCL- eval, source, exec and uplevel commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts Internet Programming, Security Issues, C Interface.

UNIT VI: Groovy: Features of Groovy, Environment, Basic Syntax, data types, variables, operators, loops, decision making, methods, File i/o, Optionals , numbers, strings, ranges, lists, maps, date and time, Regular expressions, Exception Handling, OO concepts.

Text Books:

1. The World of Scripting Languages, David Barron, Wiley Publications.
2. Ruby Programming language by David Flanagan and Yukihiro Matsumoto O'Reilly.
3. "Programming Ruby" The Prammatic programmers guide by Dabve Thomas Second edition.

Reference Books:

1. Open Source Web Development with LAMP using Linux, Apache, MySQL, Perl and PHP, J.Lee and B.Ware (Addison Wesley) Pearson Education.
2. Perl by Example, E.Quigley, Pearson Education.
3. Programming Perl, Larry Wall T.Christiansen and J.Orwant, O'Reilly, SPD.
4. Tcl and the Tk Toolkit, Ousterhout, Pearson Education.
5. Pearl Power, J.P. Flynt, Cengage Learning.

VII Sem	Deep Learning (**Elective – IV)**	Course Code: VI8CST34	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basics of machine learning. **(K2)**

CO2: Demonstrate the working of an artificial neural network. **(K2)**

CO3: Identify various parameters and issues while training a deep neural network. **(K2)**

CO4: Explain the working of convolution neural networks. **(K2)**

CO5: Explain the working of recurrent neural networks. **(K2)**

CO6: Recognize the ways of applying deep learning techniques for complex problem-solving. **(K2)**

UNIT I: Machine Learning Basics: Learning Algorithms, Capacity, Overfitting and Underfitting, Hyper parameters and Validation Sets, Estimators, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Descent.

UNIT II: Introduction to Neural Networks: The Basic Architecture of Neural Networks- Single Computational Layer: The Perceptron, Multilayer Neural Networks; Training a Neural Network with Backpropagation, Practical Issues in Neural Network Training-The Problem of Overfitting, The Vanishing and Exploding Gradient Problems, Difficulties in Convergence, Local and Spurious Optima;

UNIT III: Training Deep Neural Networks: Introduction, Backpropagation: Backpropagation with the Computational Graph Abstraction, Dynamic Programming to the Rescue, Backpropagation with Post-Activation Variables and Pre-activation Variables, Setup and Initialization Issues, The Vanishing and Exploding Gradient Problems, Parameter-Specific Learning Rates- AdaGrad, RMSProp, AdaDelta, Adam.

UNIT IV: Convolutional Neural Networks: Introduction, The Basic Structure of a Convolutional Network- Padding, Strides, Typical Settings, The ReLU Layer, Pooling, Fully Connected Layers, The Interleaving Between Layers, Local Response Normalization, Hierarchical Feature Engineering; Training a Convolutional Network-Backpropagating Through Convolutions.

UNIT V: Recurrent Neural Networks: Introduction, The Architecture of Recurrent Neural Networks- Language Modeling Example of RNN, Backpropagation Through Time, Bidirectional Recurrent Networks, Multilayer Recurrent Networks; Long Short-Term Memory (LSTM), Gated Recurrent Units (GRUs).

UNIT VI: Applications Deep Learning: Applications of Convolutional Networks: Content-Based Image Retrieval, Object Localization, Object Detection, Natural Language and Sequence Learning; Application of Recurrent Neural Networks: Application to Automatic Image Captioning, Time-Series Forecasting and Prediction, End-to-End Speech Recognition, Handwriting Recognition.

Text Books:

1. Deep Learning, Ian Goodfellow, Ian Goodfellow, and Aaron Courville, MIT Press.
2. Neural Networks and Deep Learning, Charu C. Aggarwal, Springer.

Reference Books:

1. Neural Networks: A Systematic Introduction, Raúl Rojas, Springer.
2. Introduction to Deep Learning, Eugene Charniak, MIT Press.

VII Sem	Social Networks and semantic web (**Elective – IV)**	Course Code: VI8CST35	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate knowledge by explaining the three different "named" generations of the web. **(K3)**
CO2: Construct a social network. **(K3)**
CO3: Relate knowledge representation methods for semantic web **(K3)**
CO4: Explain the key aspects of Web Architecture. **(K2)**
CO5: Describe web services and its Applications. **(K2)**
CO6: Develop"Linked Data" Applications using Semantic Web Technologies. **(K3)**

UNIT-I: The Semantic web: Limitations of the current Web, The semantic solution, Development of the Semantic Web, The emergence of the social web.

UNIT-II: Social Network Analysis: What is network analysis? Development of Social Network Analysis, Key concepts and measures in network analysis. Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities, Web-based networks.

UNIT-III: Knowledge Representation on the Semantic Web: Ontologies and their role in the Semantic Web, Ontology languages for the semantic Web.

UNIT-IV: Modeling and Aggregating Social Network Data: State of the art in network data representation, Ontological representation of Social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data.

UNIT-V: Developing social semantic applications: Building Semantic Web applications with social network features, Flink- the social networks of the Semantic Web community, Open academia: distributed, semantic-based publication management.

UNIT-VI: Evaluation of Web-Based Social Network Extraction: Differences between survey methods and electronic data extraction, context of the empirical study, Data collection, Preparing the data, optimizing goodness of fit, Comparison across methods and networks, Predicting the goodness of fit, Evaluation through analysis.

Text Books:

1. Social Networks and the Semantic Web, PeterMika, Springer,2007.
2. Semantic Web Technologies, Trends and Research in Ontology basedsystems, J.Davies,RudiStuder,PaulWarren,JohnWiley&Sons.

Reference Books:

1. Semantic Web and Semantic Web Services –Liyang Lu Chapman and Hall/CRC Publishers, (Taylor & Francis Group)
2. Information Sharing on the semantic Web – Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications

VII Sem	Advanced Java and Web Technologies Lab	Course Code: VI8CSL10	L	T	P	C
			0	0	2	1

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop static web pages using HTML, CSS. **(K3)**

CO2: Demonstrate the concepts of JavaScript, DHTML & XML **(K3)**

CO3: Develop Web Applications using JSP. **(K3)**

CO4: Develop dynamic Web Applications using PHP & MySQL. **(K3)**

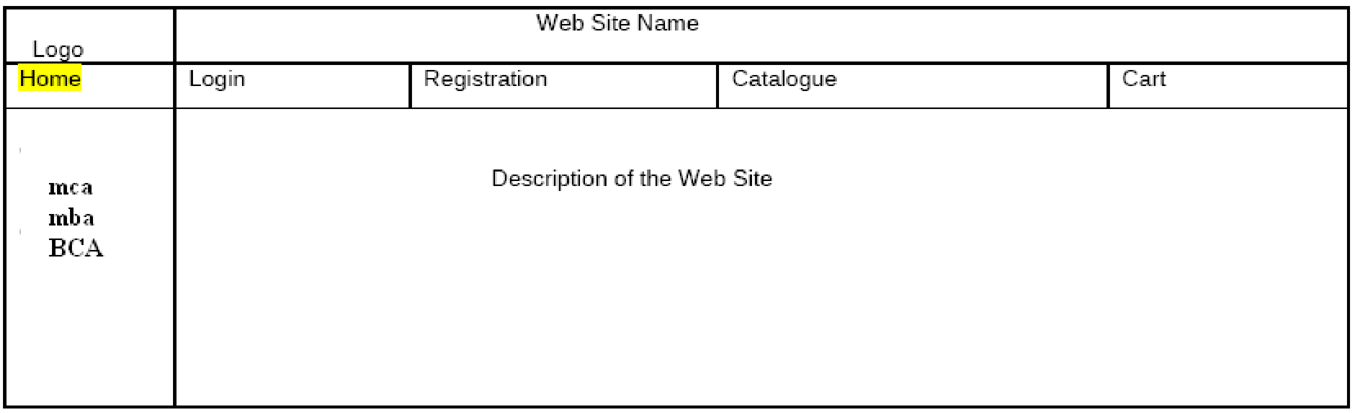
List of Experiments

1) Design the following static web pages required for an online book store web site:

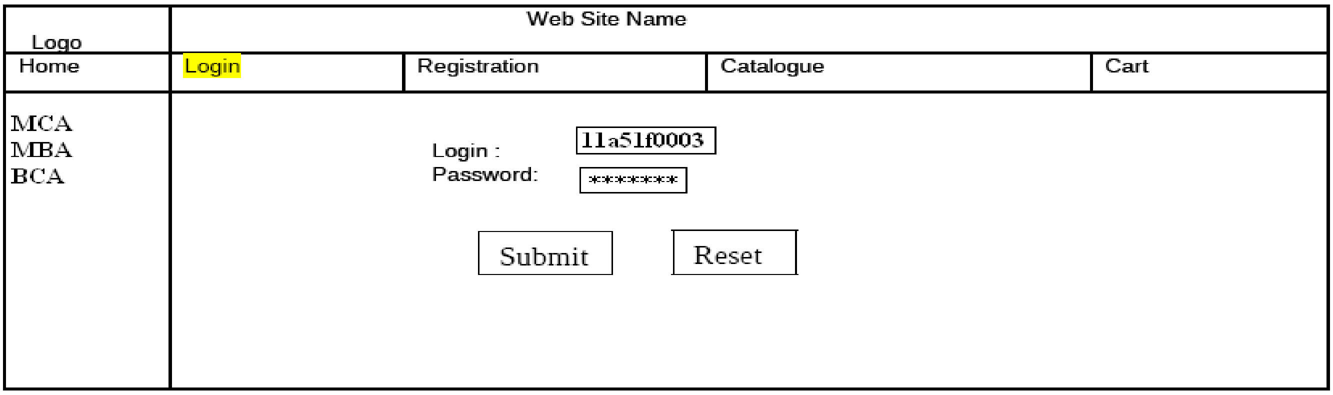
(a) **HOME PAGE:**

The static home page must contain three **frames**.

Top frame: Logo and the college name and links to Home page, Login page, Registration page, Catalogue page and Cart page (the description of these pages will be given below). Left frame: At least four links for navigation, which will display the catalogue of respective links. For e.g.: When you click the link **"MCA"** the catalogue for MCA Books should be displayed in the Right frame. Right frame: The *pages to the links in the left frame must be loaded here*. Initially this page contains description of the web site



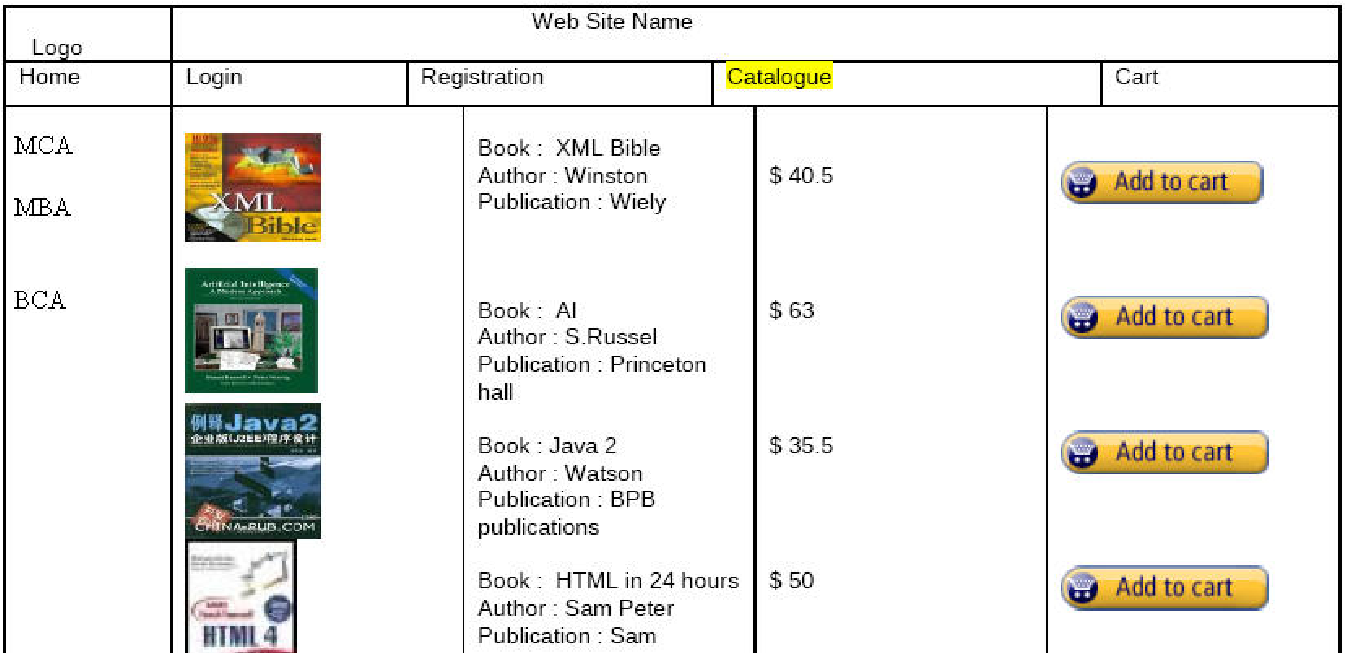
(b) **LOGIN PAGE:**



(c) **CATOLOGUE PAGE:**

The catalogue page should contain the details of all the books available in the web site in a table: The details should contain the following:

1. Snap shot of Cover Page.
2. Author Name.
3. Publisher.
4. Price.
5. Add to cart button.



(d). **REGISTRATION PAGE:**

Create a "*registration form* "with the following fields

1) Name (Text field)

2) Password (password field)

3) E-mail id (text field)

4) Phone number (text field)

5) Sex (radio button)

6) Date of birth (3 select boxes) 7) Languages known (check boxes – English, Telugu, Hindi, Tamil)

2) Design a web page using **CSS (C**ascading **S**tyle **S**heets**)** which includes the following: Use different font, styles:

In the style definition you define how each selector should work (font, color etc.).

3) Design a login page and Make use of Events to perform validation using JavaScript.

4) Demonstrate a JavaScript program to perform On Mouse over event.

5) Demonstrate the concept of Mouse events (Ex:ng-click) with the help of Angular JS.

6) Design a simple Angular JS form.

7) Write an XML file which will display the Book information which includes the following:

1) Title of the book

2) Author Name

3) ISBN number

4) Publisher name

5) Edition

6) Price

a) Write a Document Type Definition (DTD) to validate the above XML file.

b) Write a XML Schema Definition (XSD)

8) Create a simple JSP to print the current Date and Time.

9)Create JSP to insert the details of 3 or 4 users using a registration form store these values in the data base and then check the authentication of the user by entering the name and password using a login form.

10) Assume four users user1, user2, user3 and user4 having the passwords pwd1, pwd2, pwd3 and pwd4 respectively. Write a PHP for doing the following.

A)

1. Create a Cookie and add these four user id's and passwords to this Cookie.

2. Read the user id and passwords entered in the Login form (week1) and authenticate with the values (user id and passwords) available in the cookies.

If he is a valid user (i.e., user-name and password match) you should welcome him by name (user-name) else you should display "You are not an authenticated user ".

B) Use init-parameters to do the same.

11) Create a table which should contain at least the following fields: name, password, email id, phone number (these should hold the data from the registration form).

Write a PHP program to connect to that database and extract data from the tables and display them. Experiment with various SQL queries. Insert the details of the users who register with the web site, whenever a new user clicks the submit button in the registration page.

12) Insert the details of the 3 or 4 users who register with the web site by using registration form. Authenticate the user when he submits the login form using the user name and password from the database.

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.

2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning

3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

VIII Sem	Software Project Management (**Elective – V**)	Course Code: VI8CST36	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software Project Management Terminology. **(K2)**
CO2: Explain various Software development process Models and software Life cycle phases. **(K2)**
CO3: Illustrate various Effort Estimation Techniques and activity network models for Software Project Planning. **(K3)**
CO4: Demonstrate Risk Management Concepts and resource allocation. **(K3)**
CO5: Explain the importance of Project monitoring and control for accomplishing project goals. **(K2)**
CO6: Describe Software Quality models. **(K2)**

UNIT I: Introduction to Software Project Management: Software Project versus other types of projects, Activities covered by Software Project Management, Categorizing projects ,Stakeholders, Objectives& goals, what is management. **Project Planning:** Step-wise planning, Identify Project Scope and objectives, Infrastructure, Project Products &deliverables, Project activities, Effort estimation.

UNIT II: Project Approach: Build or buy, **process models**: waterfall model, Prototyping, Incremental delivery model, **Agile methods**: Extreme Programming, Atern method, selecting an appropriate process model. **Lifecycle phases:** Engineering and Production stages, Inception, Elaboration, Construction, Transition phases.

UNIT III: Software effort estimation and Activity planning: Overview of Effort Estimation techniques, Function Point analysis, COCOMO. **Activity planning:** Objectives, Network planning models, forward pass and backward pass, Identify Critical path and activities.

UNIT IV: Risk Management and Resource Allocation: Introduction, Risk and its categories, Identification, Assessment, Risk Planning and management, applying PERT technique. Resource Allocation: Types of Resources, Identifying resource requirements, Resource scheduling.

UNIT V: Project Monitoring and Control: Creating framework for monitoring& control, Collecting Data, Visualizing Progress, Cost monitoring, Earned value Analysis.

UNIT VI: Software Quality: Defining Quality, Importance of quality, ISO 9126, Product Quality Vs Process Quality management. **Process Capability Models:** Capability Maturity Model, Enhancing software Quality.

Text Books:

1. Software Project Management, Bob Hughes & Mike Cotterell, 6th edition, TATA Mcgraw-Hill
2. Software Project Management, Walker Royce 2nd edition, Pearson Education.

.

Reference Books:

1. Software Project Management in practice, Pankaj Jalote, 9th edition, Pearson Education.
2. Software Project Management, Joel Henry, 3rd edition, Pearson Education.

VIII Sem	Big Data Analytics (**Elective – V)**	Course Code: VI8CST37	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the challenges of Big Data using Hadoop. **(K2)**

CO2: Interpret Hadoop's architecture and core components of Hadoop Distributed File System. **(K2)**

CO3: Apply data modelling techniques to large data sets using map reduce programs. **(K3)**

CO4: Describe the Hadoop I/O classes. **(K2)**

CO5: Examine the use of Pig Framework to work with big data. **(K3)**

CO6: Develop a data analytical system using HIVE. **(K3)**

UNIT I: Introduction to Big Data: What is Big Data, Why Big Data is Important, Data Storage and Analysis, Comparison with other systems, Grid Computing. **Introduction to Hadoop:** A brief history of Hadoop, Meet Hadoop Data, Apache Hadoop and the Hadoop Ecosystem.

UNIT II: Working with Big Data & HDFS: Google File System, Hadoop Distributed File System (HDFS) –Building blocks of Hadoop (Namenode, Datanode, Secondary Namenode, JobTracker, and TaskTracker). **Introducing and Configuring Hadoop cluster:** Local distributed mode, Pseudo-distributed mode, Fully Distributed mode, Configuring XML files.

UNIT III: Writing Map Reduce Programs: A Weather Dataset –Data Format, Analyzing Data with UNIX Tools, Analyzing the Data with Hadoop-Map Reduce. **Basic programs of Hadoop Map Reduce:** Driver code,Mapper code, Reducer code, RecordReader, Combiner functions. Map Reduce Types, Input Formatclass Hierarchy, other map reduce examples (word count).

UNIT IV: Hadoop I/O: The Writable Interface, Writable Comparable and Comparators. **Writable Classes:** Writable wrappers for Java primitives, Text & Bytes Writable, NullWritable, ObjectWritable and Generic Writable, Writable collections. **Implementing a Custom Writable:** Implementing a Raw Comparator for speed, Custom comparators

UNIT V: Pig - Hadoop Programming Made Easier: Admiring the Pig Architecture, Going with the Pig Latin Application Flow, Working through the ABCs of Pig Latin, Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.

UNIT VI: Applying Structure to Hadoop Data with Hive: Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive, Examining the Hive Clients, Working with Hive Data Types, Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.

Text Books:

1. Hadoop: The Definitive Guide, Tom White, O'Reilly, 3rd Edition, 2012.
2. Hadoop in Action, Chuck Lam, MANNING Publ., 2016.
3. Hadoop for Dummies, Dirk deRoos, Paul C.Zikopoulos, Roman B.Melnyk, Bruce Brown, Rafael Coss, 2014.

.

Reference Books:

1. Hadoop in Practice, Alex Holmes, MANNING Publ., 2014.
2. Hadoop Map Reduce Cookbook, Srinath Perera, Thilina Gunarathne, PACKT, 2013.

(Elective – V)</td><td rowspan="2">Course Code:
VI8CST38</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss about Soft Computing, Requirements and Applications of Soft Computing. **(K2)**
CO2: Discuss about various Supervised and Unsupervised Learning Networks. **(K2)**
CO3: Illustrate various Fuzzy Logic, Fuzzy Sets, Crisp sets, Fuzzification and De-fuzzification Principles. **(K2)**
CO4: Discuss about Fuzzy Arithmetic and Fuzzy measures. **(K2)**
CO5: Discuss about Genetic Algorithms and its Operators. **(K2)**
CO6: Discuss about Various Hybrid Soft Computing Techniques. (**K2)**

UNIT I: Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirements of Soft computing, Major Areas of Soft Computing, Applications of Soft Computing.

UNIT II: Associative Memory Networks: (Supervised Learning): Introduction, Training Algorithms for Pattern Association, Auto-associative Memory Network, Hetero-associative Memory Network, Bidirectional Associative Memory (BAM),Hopfield Networks, Iterative Auto-associative Memory Networks, Temporal Associative Memory Network. **Unsupervised Learning Networks:** Introduction, Fixed Weight Competitive Nets, Kohonen Self-Organizing Feature Maps, Learning Vector Quantization, Counter propagation Networks, Adaptive Resonance Theory Network.

UNIT III: Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets: Introduction to Fuzzy Logic, Classical Sets (Crisp Sets), Fuzzy Sets and Operations on Fuzzy sets-Compliment, Intersections, Unions.

Membership Function: Introduction, Features of the Membership Functions, Fuzzification, Methods of Membership Value Assignments. **Defuzzification:** Introduction, Lambda-Cuts for Fuzzy Sets (Alpha-Cuts), Lambda-Cuts for Fuzzy Relations, Defuzzification Methods

UNIT IV: Fuzzy Arithmetic and Fuzzy Measures: Introduction, Fuzzy Arithmetic, Extension Principle, Fuzzy Measures, Measures of Fuzziness, Fuzzy Integrals.

UNIT V: Genetic Algorithm: Introduction to genetic algorithm, operators in genetic algorithm, stopping condition for genetic algorithm flow.

UNIT VI: Hybrid Soft Computing Techniques: Introduction, Neuro-Fuzzy Hybrid Systems, Genetic Neuro-Hybrid Systems.

Text Books:

1. Principles of Soft Computing, S.N. Sivanandam and S.N. Deepa, 3-edition, Wiley India, 2007.
2. "Fuzzy Sets & Fuzzy Logic", G.J. Klir & B. Yuan, PHI, 1995.
3. "An Introduction to Genetic Algorithm", Melanie Mitchell, PHI, 1998.

Reference Books:

1. Neural Networks, Fuzzy Logic and Genetic Algorithms, S. Rajasekaran and G.A.V.Pai, PHI, 2003.

2. Fuzzy Logic with Engineering Applications, Timothy J.Ross, McGraw-Hill, 1997.

3. Neuro-Fuzzy and Soft Computing, J.S.R.Jang, C.T.Sun and E.Mizutani, PHI, 2004, Pearson Education.

VIII Sem	Cloud Computing (**Elective – V**)	Course Code: VI8CST39	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Outline the concepts of cloud computing architecture. **(K2)**
CO2: Describe the Virtualization concepts in different scenarios. **(K2)**
CO3: Explain the best policies for cloud deployment. **(K2)**
CO4: Illustrate the design issues of Cloud computing. **(K2)**
CO5: Illustrate the security and privacy of the data in cloud computing. **(K2)**
CO6: Demonstrate cloud instances in Amazon Web Services. **(K3)**

UNIT I: Introduction to Cloud Computing: Trends in Computing - Distributed Computing, Grid Computing, Cluster Computing, Utility Computing, Cloud Computing, Definition of Cloud Computing, Characteristics, Service Models, Deployment Models, Cloud Service Models Providers, Advantages and Disadvantages of Cloud Computing, Cloud-based Services &Applications.

UNIT II: Cloud Concepts & Technologies: Virtualization and its types, Software Defined Networking, Network Function Virtualization (NFV). **Cloud Services:** Compute Services, Storage Services, Database Services, Application Services

UNIT III: Cloud Application Design: Design Considerations for Cloud Applications, Reference Architectures for Cloud Applications, Cloud Application Design Methodologies: SOA, Cloud Component Model and MVC, Data Storage Approaches.

UNIT IV: Cloud Security: Cloud Security Architecture (CSA), Authentication, Authorization, Identity & Access Management, Data Security, Key Management.

UNIT V: Migrating into a Cloud: Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud, Migration Risks and mitigation, Phases of Migrating to Cloud, benefits and risks of Migrating to Cloud.

UNIT VI: SLA Management in Cloud Computing: Service Level Agreements (SLA), Considerations for SLA, SLA Requirements, Types of SLA, Life Cycle of SLA, SLA Management in Cloud. **Case Study:** Amazon AWS: EC2, Amazon Simple DB, Amazon S3, Amazon Cloud Front and Amazon SQS.

Text Books:

1. Cloud Computing: A Hands-on Approach, ArshdeepBahga, Vijay Madisetti,Universities Press.
2. Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, Andrzej Goscinski, Wiley Publication.

Reference Books:

1. Cloud Computing – Web-Based Applications That Change the way you Work and Collaborate Online, Michael Miller, Pearson Education.
2. Cloud Computing: A Practical Approach, Anthony T. Velte, Toby J. Velte, Robert Elsenpeter, McGraw-Hill, (2010).

VIII Sem	Software Architecture & Design Patterns (**Elective – VI)**	Course Code: VI8CST40	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectural Structures and Quality Attributes. (K2)

CO2: Explain the mechanism of Evaluating Architecture. (K2)

CO3: Demonstrate Creational Patterns. (K3)

CO4: Construct Structural Patterns for a given Scenario. (K3)
CO5. Construct Behavioural Patterns for a given Scenario. (K3)
CO6. Examine various Case Studies in utilizing Software Architectures. (K3)

UNIT-I: Envisioning Architecture The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating and Architecture Quality Attributes, Achieving qualities, Designing the Architecture.

UNIT-II: Analyzing Architectures Architecture Evaluation, Architecture design decision making, ATAM, CBAM. Software Product Lines, Software architecture in future.

UNIT-III: Pattern Description, role in solving design problems, Selection and usage.**Creational Patterns**: Abstract factory, Builder, Factory method, Prototype, Singleton.

UNIT-IV: Structural Patterns: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, PROXY.

UNIT-V: Behavioural Patterns: Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.

UNIT-VI: Case Studies **A-7E – A case study** in utilizing architectural structures, The **World Wide Web** - a case study in Interoperability, **Air Traffic Control** – a case study in designing for high availability, **Celsius Tech** – a case study in product line development.

Text Books:

1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003.

2. Design Patterns, Erich Gamma, Pearson Education, 1995.

Reference Books:

1. Beyond Software architecture, Luke Hohmann, Addison wesley, 2003.

2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall PTR, 2001

3. Software Design, David Budgen, second edition, Pearson education, 2003

4. Head First Design patterns, Eric Freeman & Elisabeth Freeman, O'REILLY, 2007.

5. Design Patterns in Java, Steven John Metsker & William C. Wake, Pearson education, 2006.

.

VIII Sem	Middleware Technologies (**Elective – VI)**	Course Code: VI8CST41	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Middleware, E- Business, IT architecture, RPC, RDC. **(K2)**
CO2: Demonstrate Internet Applications and Web services. **(K2)**
CO3: Summarize Technical issues in Middleware. **(K2)**
CO4: Demonstrate the Use of Middleware in Building Distributed Technologies. **(K2)**
CO5: Identify Security Issues with Distributed Applications. **(K3)**
CO6: Apply Appropriate Middleware Technology to Develop Real Time Applications. **(K3)**

UNIT I: Introduction: Moving to e-business, what is IT architecture? Why is this different from what we did before? Rewrite or evolve?, Who develops the architecture?, Early days, Preliminaries, Remote procedure calls, Remote database access, Distributed transaction processing, Message queuing, Message queuing versus distributed transaction processing, what happened to all this technology.

UNIT II: Objects, Components and the Web: Using object middleware, Transactional component middleware- COM+, EJB, Final comments on TCM, Internet Applications. WEB SERVICES: Service concepts, Web services, and Using Web services: A pragmatic approach.

UNIT III: A Technical Summary Of Middleware: Middleware elements- The communications link, The middleware protocol, The programmatic interface, Data presentation, Server control, Naming and directory services, Security, System management, Comments on Web services, Vendor architectures- Vendor platform architectures, Vendor-distributed architectures, Using vendor architectures, Positioning, Strawman for user target architecture, Marketing, Implicit architectures, Middleware interoperability.

UNIT IV: Using Middleware to Build Distributed Applications: What is middleware for? -Support for business processes, Information retrieval, Collaboration, Tiers- The presentation tier, The processing tier, The data tier, Services versus tiers, Architectural choices - Middleware bus architectures, Hub architectures, Web services architectures, Loosely coupled versus tightly coupled.

UNIT V: Security: What security is needed, Traditional distributed system security, Web services security, Architecture and security. **Application Design and It's Architecture :** Problems with today's design approaches, Design up front or as needed?- The role of business rules, Existing systems, Reuse, Silo and monolithic development, The role of architecture, Levels of design, Reconciling design approaches.

UNIT VI: Building an IT Architecture: Case Studies – Providing an integration infrastructure, creating a service-oriented architecture, Developing a new application. What does the future hold? , The key points to remember-Middleware technology alternatives, IT architecture guideline guidelines, Distribute systems technology principals and Distribute systems implementation design.

Text Books:

1. IT Architectures and Middleware: Strategies for Building Large, Integrated Systems, Chris Britton and Peter Eye, 2nd Edition, Pearson Education.

Reference Books:

1. Middleware for Communications, Qusay H. Mahmoud,1st Edition, John Wiley and Sons.
2. Middleware Networks: Concept, Design and Deployment of Internet Infrastructure, Michah Lerner, 1st Edition, Kluwer Academic Publishers.
3. Middleware and Enterprise Integration Technologies, G. Sudha Sadasivam and Radha Shankarmani, 1st edition, Wiley, 2009.

VIII Sem	Natural Language Processing (**Elective – VI)**	Course Code: VI8CST42	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the Syntax and semantics and Language models of Natural Language Processors. **(K2)**
CO2: Classify Morphology and Finite State Transducers, Markov Models and Entropy Models. **(K2)**
CO3: Explain about Statistical parsing and probabilistic CFGs. **(K2)**
CO4: Demonstrate semantic analysis. **(K2)**
CO5: Explain Discourse Analysis and Lexical Resources. **(K2)**
CO6: DevelopaStatisticalMethodsforRealWorldApplicationsandexploredeeplearning-basedNLP. **(K3)**

UNIT I: Introduction: Natural Language Processing tasks in syntax,semantics,andpragmatics–Issues–Applications-Theroleofmachinelearning-ProbabilityBasics–Informationtheory–Collocations-N-gram Language Models - Estimating parameters and smoothing - Evaluating language models.

UNIT II: Morphology And Part Of Speech Tagging: Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields.

UNIT III: Syntax Parsing: Syntax Parsing - Grammar formalisms and tree banks - Parsing with Context Free Grammars- Features and Unification-Statistical parsing and probabilisticCFGs(PCFGs)-LexicalizedPCFGs.

UNIT IV: Semantic Analysis: Representing Meaning – Semantic Analysis - Lexical semantics –Word-sense disambiguation- Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing – Discourse Analysis.

UNIT V: Discourse Analysis and Lexical Resources: Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brills Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC).

UNIT VI: NLP Applications: Named entity recognition and relation extraction- IE using sequence labeling-Machine Translation (MT) - Basic issues in MT-Statistical translation-word alignment- phrase-based translation – Question Answering.

Text Books:

1. Daniel Jurafsky and James H. Martin Speech and Language Processing (2nd Edition), Prentice Hall; 2nd edition,2008
2. FoundationsofStatisticalNaturalLanguageProcessingbyChristopherD.Manningand Hinrich Schuetze, MIT Press,1999
3. Steven Bird, Ewan Klein and Edward Loper Natural Language Processing with Python, O'Reilly Media; 1 edition,2009
4. Roland R. Hausser, Foundations of Computational Linguistics: Human-Computer Communication in Natural Language, Paperback, MIT Press,2011

References:

1. Pierre M. Nugues, An Introduction to Language Processing with Perl and Prolog: An Outline of Theories, Implementation, and Application with Special Consideration of English, French, and German (Cognitive Technologies) Softcover reprint,2010
2. James Allen, Natural Language Understanding, Addison Wesley; 2 edition 1994
   NLTK – Natural Language Tool Kit -http://www.nltk.org/

VIII Sem	Cyber Security (**Elective – VI)**	Course Code: VI8CST43	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe about Cybercrimes. **(K2)**
CO2: Explain Cyber criminals and their attacks. **(K2)**
CO3: Illustrate Cybercrimes and security in mobile devices **(K2)**
CO4: Discuss about the Tools and methods used to overcome Cybercrimes. **(K2)**
CO5: Discuss about Cyber Laws and IT Acts. **(K2)**
CO6: Explain about Computer Forensics. **(K2)**

UNIT I: Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security Who are Cybercriminals? , Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

UNIT II: Cyber offenses: How Criminals Plan Them –Introduction, How Criminals Plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector Cloud Computing.

UNIT III: Cybercrime Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/CellPhones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

UNIT IV: Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **Phishing and Identity Theft:** Introduction, Phishing, Identity Theft (ID Theft).

UNIT V: Cybercrimes and Cyber security: The Legal Perspectives, Introduction, Why Do We Need Cyber laws: The Indian Context, The Indian IT Act, Challenges to Indian

Law and Cybercrime Scenario in India, Consequences of Not Addressing the Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act,· Cybercrime and Punishment.

UNIT VI: Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.

Text Books:

1. Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, NinaGodbole, SunitBelapure, 1st edition, Wiley.

Reference Books:

1. Principles of Information Security, MichealE.Whitman and Herbert J.Mattord, 4th edition, Cengage Learning.
2. Information Security the complete reference, Mark Rhodes, Ousley, 2nd edition, MGH.

Annexure-CS-IV

V Sem	**Database Management Systems**	Course Code: V18CST10	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Database Systems, various Data Models and Database Architecture. (K2)

CO2: Apply ER Modeling to Design Relational Databases for Real Time Applications. (K3)

CO3: Apply SQL Constructs to Perform Database Operations. (K3)

CO4: Apply Normalization Techniques to Refine Schema. (K3)

CO5: Explain Transaction Management and Concurrency Control. (K2)

CO6: Experiment with various database indexing techniques. (K3)

UNIT-I: An Overview of Database Systems: Managing Data, File Systems verses DBMS, Advantages of DBMS, Data Independence. **Database System Architecture:** Three Levels of Architecture, External Level, Conceptual Level, Internal Level, Structure of DBMS, The Database Management Systems and Client/Server Architecture.

UNIT-II: Database Design: The E/R Models, Database Design and Er Diagrams, Entities, Attributes, Entity Sets, Relationships and Relationship Sets, Conceptual Design with ER Models. **Relational Model:** Integrity Constraints Over Relations, Key Constraints ,Foreign Key Constraints, General Constraints, Relational Algebra-Selection and Projection, Set Operation, Renaming, Joins, Division, Relational Calculus- Tuple Relational Calculus, Domain Relational Calculus.

UNIT-III: SQL Queries, Constraints and Triggers: The Form of Basic SQL Query, Union, Intersect, Except, Nested Queries, Aggregate Operators, Null Values, Complex Integrity Constraints in SQL, Triggers and Active Database.

UNIT-IV: Schema Refinement (Normalization): Purpose of Normalization or Schema Refinement, Concept of Functional Dependency, Normal Forms based on Functional Dependency (1NF, 2NF and 3NF), Concept of Surrogate Key, Boyce-Codd Normal Form (BCNF), Lossless Join and Dependency Preserving Decomposition, Fourth Normal Form(4NF).

UNIT-V:Transaction Management: Transaction, Properties of Transactions, Transaction Log, and Transaction Management with SQL Commit, Rollback and Savepoint. Concurrency Control: Concurrency Control for Lost Updates, Uncommitted Data, Inconsistent Retrievals and the Scheduler. **Concurrency Control with Locking Methods :** Lock Granularity, Lock Types, Two Phase Locking for Ensuring Serializability, Deadlocks, Concurrency Control with Time Stamp Ordering, Transaction Recovery.

UNIT-VI: Storage and Indexing: Overview of Storages and Indexing, Data on External Storage, File Organization and Indexing, Clustered Indexing, Primary and Secondary Indexes, Index Data Structures, Hash based Indexing, Tree based Indexing, Comparison of File Organization

Text Books:

1. Introduction to Databse Systems, CJ Date,8th Edition, Pearson Education.
2. Data base Management Systems, Raghurama Krishnan, Johannes Gehrke, 3rd Edition TATA McGraw Hill.

Reference Books:

1. Data base Systems design, Implementation, and Management, Peter Rob & Carlos Coronel 7th Edition, Course Technology.
2. Fundamentals of Database Systems, ElmasriNavrate, 7th Edition, Pearson Education.
3. Database Systems - The Complete Book, H G Molina, J D Ullman, J Widom, 2ndEdition,Pearson.

V Sem	Computer Networks	Course Code: V18CST11	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss fundamentals of network concepts and Reference Models.(K2)

CO2: Discuss Communication media and switching techniques.(K2)

CO3: Demonstrate Error control and protocols.(K3)

CO4: Apply Routing algorithms and congestion control algorithms.(K3)

CO5: Discuss Transport layer services and protocols. (K2)

CO6: Describe Application layer protocols.(K2)

UNIT-I: Introduction: Reference models: The OSI Reference Model- the TCP/IP Reference Model, Examples of Networks: Novell Networks, Arpanet, Internet, Network Topologies WAN, LAN, MAN.

UNIT– II: Physical Layer: Transmission Media, Multiplexing: FDM, WDM and TDM- LAN Technologies, introduction to switching: Circuit Switched Networks, Datagram Networks, and Virtual Circuit Networks.

UNIT–III: Data link layer: Design issues, Framing, Flow control, error control, error detection and correction, CRC, Checksum: idea, one's complement internet checksum, MAC: ALOHA, CSMA. Elementary Data Link Layer protocols: simplex protocol, Simplex stop and wait, Simplex protocol for Noisy Channel. Sliding window protocol: One bit, Go back N, Selective repeat-Stop and wait protocol, HDLC, point to point protocol (PPP).Piggybacking.

UNIT-IV : Network Layer : Network layer design issues- Algorithm shortest path routing, Flooding, Hierarchical routing, Broad cast, Multi cast Routing algorithms-Congestion control and algorithms, Internet Protocol (IP) Addresses, Subnet masking

UNIT–V :Transport Layer: Services, Primitives and sockets, Elements of transport protocols, Internet Transport protocols(TCP,UDP,RPC,RTTP/RTP,RTCP) Segment headers, Primitives, Control, Congestion control, Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.

UNIT–VI: Application layer: DNS, SMTP, POP,FTP HTTP Presentation formatting. Network security: Introduction to Cryptography, Authentication, Basics of Public key and private key cryptography, digital signatures and certificates firewalls and wireless security.

Text Books:

1. Computer Networks — Andrew S Tanenbaum, 4th Edition. Pearson Education/PHI
2. Data Communications and Networks – Behrouz A. Forouzan.Third Edition TMH

References:

1. An Engineering Approach to Computer Networks-S.Keshav, 2nd Edition, Pearson Education
2. Understanding communications and Networks, 3rd Edition, W.A. Shay, Thomson

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Operating System Services and System Calls (K2).

CO2: Illustrate Process Management Concepts and CPU Scheduling Algorithms (K3).

CO3: Demonstrate Process Synchronization primitives (K3).

CO4: Demonstrate Deadlock Prevention, Avoidance and Detection methods (K3).

CO5: Illustrate Memory Management Techniques and Page Replacement Algorithms (K3).

CO6: Describe File System Concepts and Mass Storage Structures (K2) .

UNIT-I: Introduction: Operating-System Structure, Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls.

UNIT-II: Process Management: Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication. **Threads:** Overview, Multithreading Models. **CPU Scheduling:** Basic Concepts, Scheduling Criteria, Scheduling Algorithms

UNIT-III : Process Synchronization: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors

UNIT-IV: Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock

UNIT-V: Memory Management Main Memory: Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table

Virtual Memory: Introduction, Demand Paging, Page Replacement, Allocation of Frames, Thrashing

UNIT-VI:Storage Management: Overview of Mass-Storage Structure, Disk Scheduling, File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Allocation Methods

Text Book:

1. Operating System Concepts, AbrahamSilberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012

Reference Books:

1. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition, Prentice Hall, 2012
2. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,2007

V Sem	Design and Analysis of Algorithms	Course Code: V18CST13	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe asymptotic notation and basic concepts of algorithms (K2).

CO2: Apply divide and conquer paradigm to solve various problems (K3).

CO3: Use greedy technique to solve various problems (K3).

CO4: Apply dynamic programming technique to various problems (K3).

CO5: Employ backtracking technique to various problems (K3).

CO6: Apply branch and bound technique to various problems (K3).

UNIT-I: Introduction: What is an Algorithm, Algorithm Specification-Pseudo code Conventions Recursive Algorithm, Performance Analysis-Space Complexity, Time Complexity, Amortized Complexity, Amortized Complexity, Asymptotic Notation, Practical Complexities, Performance Measurement.

UNIT-II: Divide and Conquer: General Method, Defective Chessboard, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quick Sort-Performance Measurement, Randomized Sorting Algorithms.

UNIT-III: The Greedy Method: The General Method, Knapsack Problem, Job Sequencing with Deadlines, Minimum-cost Spanning Trees-Prim's Algorithm, Kruskal's Algorithms, An Optimal Randomized Algorithm, Optimal Merge Patterns, Single Source Shortest Paths.

UNIT-IV: Dynamic Programming: All Pairs Shortest Paths, Single Source Shortest paths General Weights, Explain Optimal Binary Search Trees, String Edition, 0/1 Knapsack, Reliability Design.

UNIT-V: Backtracking: The General Method, The 8-Queens Problem, Sum of Subsets, Graph Coloring, Hamiltonian Cycles.

UNIT-VI: Branch and Bound: The Method-Least cost (LC) Search, The 15-Puzzle: an Example, Control Abstraction for LC-Search, Bounding, FIFO Branch-and-Bound, LC Branch and Bound, 0/1 Knapsack Problem-LC Branch-and Bound Solution, FIFO Branch-and-Bound Solution, Traveling Salesperson.

Text Books:

1. Fundamentals of computer algorithms E. Horowitz S. Sahni, University Press

Reference Books:

1. Introduction to Algorithms Thomas H. Cormen, PHI Learning.
2. The Design and Analysis of Computer Algorithms, Alfred V. Aho, John E. Hopcroft, JeffreyD.Ullman.
3. Algorithm Design, Jon Kleinberg, Pearson.

V Sem	**Unix programming**	Course Code: V18CST14	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the UNIX basics and the working of the built in commands in Unix (K2).

CO2: Demonstrate the file system and change the permissions associated with files (K2).

CO3: Develop basic programs using shell script (K3).

CO4: Demonstrate the grep family and data transforming programs sed, and awk (K2).

CO5: Construct programs for process system calls (K3).

CO6: Explain the concept of signals and its system call (K2).

UNIT I: Introduction to UNIX: The UNIX Operating System, A brief history of UNIX, The UNIX Architecture, Basic features of UNIX. General Purpose Utilities- cal, date, man, echo, bc, clear, passwd, who, whoami,unameDirectory Handling Commands: pwd, cd, mkdir, rmdir. File Handling Utilities - cat, touch, cp, ls, rm, mv, nl, pg,tar,wc Displaying Commands: more,head,tail, simple filters and commands: cmp, comm., ulink, diff, head, tail, find, cut, paste,sort, uniq, tr, finger. Disk Utilities– du, df, mount, umount.Process Utilities–ps, kill. Networking Utilities– ping, telnet, rlogin, ftp.

UNIT II : THE FILE SYSTEM : Types of Files, Directories and Files, UNIX File System, Absolute and relative pathnames, File Attributes and Permissions ,The File Command - knowing the File Type, Chmod Command- Changing File Permissions, Chown Command- Changing the Owner of a File, Chgrp Command- Changing the Group of a File. Vi editor- editing with vi, moving the cursor, editing, copying and moving text, pattern searching.

UNIT III : Introduction to Shell Programming : Shell Variables-The Export Command-The Profile File a Script Run During Starting-The First Shell Script-The read Command-Positional parameters-The $? Variable knowing the exit Status-More about the Set Command-The Exit Command-Branching Control Structures-Loop Control Structures-The Continue and Break Statement-The Expr Command: Performing Integer Arithmetic-Real Arithmetic in Shell Programs-The here Document(<<)-I/O Redirection, The Sleep Command-Debugging Scripts-The Script Command-The Eval Command-The Exec Command. Command Line Structure - Met characters.

UNIT-IV : Regular Expressions: grep, egrep, fgrep, Sed- line addressing, context addressing, text editing,substitution. **Programming with awk**: syntax of awk programming statement, structure of awk script, variables ,records fields, and special variables, patterns, operators ,simple input files, awk programming- simple awk programming, awk control structures, looping, functions in awk.

UNIT-V: Unix process: What is a process, process structure, process identifiers, starting new process, waiting for a process, zombie process, system call interface for process management - fork, vfork, exit, wait, waitpid, exec system call.

UNIT VI: Signals: Signal functions, unreliable signals, interrupted system calls, kill and raise functions, alarm, pause functions, abort, sleep functions

Text Books:

1. Introduction to Unix and shell programming, M G Venkateshmurthy, Pearson education
2. Advanced programming in the unix environment, W. Richard Stevens, 3rd Edition, Pearson Education.

References:

1. Unix and shell Programming, B.A. Forouzan& R.F. Giberg, Thomson, First Edition, NewDelhi, 2003.

V Sem	**Advanced Computer Architecture (Elective-I)**	Course Code: V18CST15	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the basics of quantitative design and analysis (K2).

CO2: Illustrate memory hierarchy schemes (K2).

CO3: Illustrate concepts of Instruction-Level Parallelism (K2).

CO4: Explain concepts of Data-Level Parallelism (K2).

CO5: Explain concepts of Thread-Level Parallelism (K2).

CO6: Describe architectural aspects of Warehouse-Scale Computers (K2).

UNIT I: Fundamentals of Quantitative Design and Analysis: Classes of Computers, Defining Computer Architecture, Designing the Organization and Hardware to Meet Goals and Functional Requirements, Quantitative Principles of Computer Design

UNIT II: Memory Hierarchy Design: Basics of Memory Hierarchies, Advanced Optimizations of Cache Performance, Memory Technology and Optimizations, Virtual Memory and Virtual Machines.

UNIT III : Instruction-Level Parallelism: Concepts and Challenges, Basic Compiler Techniques, Reducing Branch Costs with Advanced Branch Prediction, Overcoming Data Hazards with Dynamic Scheduling, Tomasulo's Approach, Hardware-Based Speculation, Multiple Issue and Static Scheduling

UNIT IV: Data-Level Parallelism: Vector Architecture, VMIPS, Vector Processors, SIMD Instruction Set Extensions for Multimedia

UNIT V: Thread-Level Parallelism: Introduction, Centralized Shared-Memory Architectures-Multiprocessor Cache Coherence, Basic Schemes for Enforcing Coherence, Snooping Coherence Protocols

UNIT VI: Warehouse-Scale Computers: Introduction, Programming Models and Workloads for Warehouse-Scale Computers, Computer Architecture of Warehouse-Scale Computers

Text Book:

1. Computer Architecture: A Quantitative Approach, John L. Hennessy, David A. Patterson, 5th Edition, Morgan Kaufmann, Elsevier.

Reference Books:

1. Advanced Computer Architectures: A Design Space Approach, D Sima, T Fountain, P Karsuk, 1st Edition, Pearson
2. Advanced Computer Architecture, K Hwang, N Jotwani, 2nd Edition, McGraw-Hill

V Sem	Advanced Data Structures (Elective-I)	Course Code: V18CST16	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain external sorting method (K2).

CO2: Discuss pattern matching Algorithms (K2).

CO3: Illustrate various hash functions with appropriate examples (K3).

CO4: Illustrate various priority queues with appropriate examples (K3).

CO5: Construct self balanced tree with appropriate examples (K3).

CO6: Discuss Multiway search trees (K2).

UNIT I: SORTING: Introduction - External Sorting- K-way Merging - Buffer Handling for parallel Operation- Run Generation- Optimal Merging of Runs.

UNIT II: STRING MATCHING ALGORITHMS: The Navi String matching algorithms – The Robin-Krap algorithm – String Matching algorithm using finite automata – The Knuth Morris Pratt algorithm.

UNIT III: SKIP LIST AND HASHING: Dictionaries – ADT- Linear List representation - Skip List representation: Ideal case – Insertion and Deletion –Assigning levels – The struct skip node – The class skip list – complexity of skipList methods. Hash Table Representation: Ideal hashing – Hash functions and tables -Linear probing- Hashing with Chains

UNIT IV: PRIORITY QUEUES (HEAPS) : Definition and Applications – ADT – Linear lists – Heaps : Definition – Max heap and Min heap operations, Applications – Heap Sort – Huffman Codes.

UNIT V: EFFICIENT BINARY SEARCH TREES : Introduction to AVL Trees- Red-Black Trees- Definition- Representation of a Red- Black Tree- Searching a Red-Black Tree- Inserting into a Red Black Tree- Deletion from a Red-Black Tree- Joining Red-Black Trees, Splitting a Red-Black tree – Splay Trees – Introduction – operation – Amortized complexity.

UNIT VI: MULTIWAY SEARCH TREES : ISAM - M-Way Search Trees, Definition and Properties- Searching an M-Way Search Tree, B-Trees, Definition and Properties- search Elements in a B-tree- Insertion into B-Tree- Deletion from a B-Tree- Node Structure.

Text Books:

1. Data Structures, Algorithms and Applications in C++; SartajSahni; UniverstiyPress ; 2nd Edition.

2. Introduction to Algorithms By Thomas H Cormen, Charless E leiserson, Ronald L Rivest and Cliford Stein PHI publication Third Edition (UNIT – II)

References:

1. Data Structures, a Pseudocode Approach, Richard F Gilberg, BehrouzA Forouzan, Cengage.
2. An Introduction to Data Structures with applications By Jean Paul Trembly and Paul G Sorenson Tata McGraw Hill Second Edition
3. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, IK Publications, new Delhi.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concept of intelligent systems and current trends in AI. (K2)

CO2: Apply Problem solving, Problem reduction and Game Playing techniques in AI. (K3)

CO3: Illustrate the Logic concepts in AI. (K2)

CO4: Explain the Knowledge representation techniques in AI. (K2)

CO5: Describe Expert systems and their applications. (K2)

CO6: Illustrate Uncertainty Measures. (K2)

UNIT-I: Introduction to Artificial Intelligence: Introduction, history, intelligent systems, foundations of AI, applications, tic-tac-toe game playing, current trends in AI

UNIT-II: Problem solving: State-space Search and Control Strategies: Introduction, General Problem Solving, Characteristics of problem, Exhaustive searches, Heuristic search techniques, Iterative deepening a*, constraint satisfaction

Problem reduction and game playing: Introduction, problem reduction, game playing, alpha beta pruning, two-player perfect information games

UNIT-III: Logic concepts: Introduction, Propositional Calculus, Proportional Logic, Natural Deduction system, Axiomatic system, Semantic tableau system in proportional logic, Resolution Refutation in Propositional logic, Predicate Logic

UNIT-IV: Knowledge representation: Introduction, approaches to Knowledge representation, Knowledge representation using Semantic Networks, Extended Semantic Networks for KR, Knowledge representation using Frames

UNIT-V: Expert Systems and Applications: Introduction phases in building Expert Systems, Expert System versus Traditional Systems, Rule-based Expert Systems, Blackboard systems, Truth maintenance systems, applications of Expert Systems.

UNIT-VI: Uncertainty measure: Probability theory- Introduction, Probability Theory, Bayesian Belief networks, Certainty Factor Theory, Dempster-Shafer theory

Text Book:

1. Artificial Intelligence, Saroj Kaushik, 1st Edition, Cengage Learning.

Reference Books:

1. Artificial Intelligence, Elaine Rich, Kevin Knight, Shivashankar B Nair, 3rd Edition, Tata McGraw Hill Education Private Limited., 2009
2. Artificial Intelligence- A modern Approach, 3rd Edition, Stuart Russel, Peter Norvig, Pearson Education.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Understand the applications of computer graphics and learn basic algorithms (K2).
CO2: Analyze the concepts of 2D graphics along with transformation techniques (K3).
CO3: Understand 2D Views of objects and clipping algorithms (K2).
CO4: Illustrate 3D graphics and will get an idea about projections views of objects (K2).

CO5: Determine different visible surface detection methods (K2).
CO6: Understand different animation sequences and Color Models (K2).

UNIT I: Introduction: Application of Computer Graphics, raster scan systems, random scan systems, raster scan display processors. Output Primitives : Points and lines, line drawing algorithms(Bresenham's and DDA Line derivations and algorithms), mid-point circle and ellipse algorithms.

UNIT II: Filled area primitives: Boundary-fill and flood-fill algorithms. **2-D geometrical transforms:** Translation, scaling, rotation, reflection and shear transformations, and homogeneous coordinates, composite transforms.

UNIT III: 2-D viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland, Sutherland – Hodgeman polygon clipping algorithm.

UNIT IV: 3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations. 3D Viewing pipeline, clipping, projections (Parallel and Perspective). **3-D object representation:** Polygon surfaces, quadric surfaces, spline representation, Bezier curve and B-Spline curves.

Unit V: Visible surface detection methods: Classification, back-face detection, depth-buffer, scan-line, BSPtree methods, area sub-division.

Unit VI: Computer animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages. **Color Models** – RGB, YIQ, CMY, HSV.

Text Books:

1. Computer Graphics C version, Donald Hearn, M.Pauline Baker, Pearson

2. Computer Graphics, Schaum's outlines", Zhigand xiang,Roy Plastock, 2nd Edition,Tata Mc-Graw Hill.

3. Principles of Computer Graphics, S. Govil-Pai, 1st Edition, Springer International Edtion,2005.

Reference Books:

1. Computer Graphics Principles & practice, 2/e, Foley, VanDam, Feiner, Hughes, Pearson

2. Computer Graphics, Peter, Shirley, CENGAGE

3. Principles of Interactive Computer Graphics, Neuman , Sproul, TMH.

.

V Sem	Data Base Management System Lab	Course Code: V18CSL06	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Build SQL Queries and Constraints (K3).

CO2: Experiment with various Database Indexing Techniques.(K3).

CO3: Construct PL/SQL Cursors and Exceptions (K3).

CO4: Develop application programs using PL/SQL (K3).

CO5: Develop PL/SQL Functions, Procedures, Packages (K3).

CO6: Apply projections and aggregation on collection of MongoDB database (K3).

List of Experiments

Part-A

1. Queries to facilitate acquaintance of Built-In Functions, String Functions, Numeric Functions, Date Functions and Conversion Functions.

2. Queries using operators in SQL

3. Queries to Retrieve and Change Data: Select, Insert, Delete, and Update

4. Queries using Group By, Order By, and Having Clauses

5. Queries on Controlling Data: Commit, Rollback, and Save point

6. Queries to Build Report in SQL *PLUS

7. Queries for Creating, Dropping, and Altering Tables, Views, and Constraints

8. Queries on Joins and Correlated Sub-Queries

9. Queries on Working with Index, Sequence, Synonym, Controlling Access, and Locking Rows for Update, Creating Password and Security features PL/SQL.

10. Write a PL/SQL Code using Basic Variable, Anchored Declarations, and Usage of Assignment Operation.

11. Write a PL/SQL Code Bind and Substitution Variables. Printing in PL/SQL

12. Write a PL/SQL block using SQL and Control Structures in PL/SQL

13. Write a PL/SQL Code using Cursors, Exceptions and Composite Data Types

14. Write a PL/SQL Code using Procedures, Functions, and Packages FORMS

Part-B

1. Install and start MongoDB
2. Create and drop database and collection
3. Insert,update ,delete,query document
4. Projection, limiting records, sorting records and aggregation in MongoDB

Text Books:

1. Oracle Database 11g The Complete Reference by Oracle Press, Kevin Loney
2. Database Systems Using Oracle, Nilesh Shah, 2nd Edition ,PHI.
3. Introduction to SQL, Rick F Vander Lans, 4th Edition, Pearson Education.

Reference Books:

1. Introduction to SQL, Rick F. Vander Lans, 4th Edition, Pearson education.
2. Oracle PL/SQL Interactive Workbook, B. Rosenzweig and E. Silvestrova,2nd Edition, Pearson education.
3. SQL & PL/SQL for Oracle 10 g, Black Book, Dr. P. S. Deshpande, Dream Tech.

V Sem	Operating System and Unix Lab	Course Code: V18CSL07	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate CPU scheduling algorithms (K3)

CO2: Apply Bankers Algorithm for Deadlock Avoidance and Deadlock Prevention (K3)

CO3: Use Page replacement algorithms for memory management (K3)

CO4: Demonstrate the basic knowledge of Linux commands and file handling utilities by using Linux shell environment. (K3)

CO5: Experiment with the concept of shell scripting programs. (K3)

CO 6: Illustrate the process of how the parent and child relationships (K3)

List of Experiments:

Part-A: OS Lab

1. Simulate the following CPU scheduling algorithms:
   a) FCFS b) SJF c) Round Robin d) Priority
2. Implement : fork (), wait (), exec() and exit () system calls
3. Simulate Producer and Consumer problem using Semaphores
4. Simulate Bankers Algorithm for Dead Lock Avoidance
5. Simulate Bankers Algorithm for Dead Lock Prevention
6. Simulate the following page replacement algorithms:
   a) FIFO b) LRU c) LFU
7. Simulate the following File allocation strategies:
   a) Sequenced b) Indexed c) Linked

Part-A: UNIX Lab

8. **Study of Unix Commands:** General Purpose Utilities, Directory Handling Commands, File Handling Utilities, Displaying Commands, Filters, Disk Utilities
9. Shell Script to list all of the directory files in a directory.
10. Shell Script to find the factorial of a given number
11. Shell Script to generate a Multiplication table.
12. Shell Script to Perform arithmetic operations
13. Implement an AWK script to count the number of lines in a file that do not contain vowels
14. Design an awk script to find the number of characters, words and lines in a file?
15. Design a C program to create a child process and allow the parent to display

"parent" and the child to display "child" on the screen

16. Demonstration of GDB tool to understand process programme.
17. Design a C program to create a Zombie Process.
18. Design a C program that illustrates how an orphan is created.

Reference Books:

1. Operating System Concepts,AbrahamSilberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012
2. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition, Prentice Hall, 2012
3. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,2007
4. M G venkateshmurthy Introduction to Unix and shell programming Pearson education
5. W. Richard Stevens, Advanced programming in the unix environment, 3rd Edition,Pearson education.

V Sem	**Technical Skills-III**	Course Code: V18CST62	L	T	P	C
			0	0	4	MNC

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Apply fundamental data structures like List, Stack to solve real work problems in linear time i.e. O(n). (K3)

CO2: Make use of advanced data structures like queue, to solve complex problems in linear time , logarithmic time i.e. O(n) or O(nlogn).(K3)

CO3: Develop programs to solve problems by with the help of searching and sorting techniques. (K3)

CO4: Analyze linked list by comparing with Array List and develop programs to solve optimization Problems. (K4)

CO5: Experiment with types of Linked List to solve complex combinatorial problems. (K3)

CO6: Develop programs to solve complex problems by using combination of stack, Queue and List. (K3)

Data Structures

1. Problem solving using ArrayList
2. Problem solving using LinkedList
3. Problem solving using Stack
4. Problem solving using Queue
5. Problem solving using Searching
6. Problem solving using Sorting

Text Books:

1. Introduction to Algorithms, Second Edition, Thomas H. Cormen Charles E. Leiserson.
2. Data Structures and Algorithms Made Easy: Narasimha Karumanchi .
3. The Algorithm Design Manual, Springer series, Steven Skiena.

VI Sem	**Compiler Design**	Course Code: V18CST19	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the compilation process and lexical analyzer (K2)
CO2: Construct top down parsing Techniques (K3)
CO3: Construct bottom up parsing techniques (K3)
CO4: Construct syntax directed translation (K3)
CO5: Produce intermediate code generation process and run time environments (K3)
CO6: Explain the code generation process. (K2)

UNIT-I: Introduction: Language Processors, the Structure of a Compiler. Lexical Analysis: The Role of the Lexical Analyzer, Specification of Tokens, Recognition of Tokens and the Lexical-Analyzer Generator Lex.

UNIT-II: Syntax Analysis: Definition of CFG, Lexical Versus Syntactic Analysis, Writing a Grammar- Elimination of Left Recursion, Left Factoring. Top Down Parsing: Recursive Descent Parsing, First and Follow, LL(1) Grammars, Non recursive Predictive Parsing, Error Recovery in Predictive Parsing.

UNIT-III: Bottom-Up Parsing: Bottom Up Parser Classification, Reductions, Handle Pruning, Shift-Reducing, Conflicts During Shift Reduce Parsing. Introduction to LR Parsing: Difference between LR and LL Parsers, Why LR Parsers?, Items and the LR(0) automaton, The LR-Parsing Algorithm, Constructing SLR Parsing Tables

UNIT-IV: More powerful LR parsers: construction of CLR (1), LALR Parsing tables, Comparison of all Bottom Up approaches. Semantic Analysis: Syntax Directed Definitions, Evaluation Orders for SDD's, Applications of SDT.

UNIT-V: Intermediate Code Generation: Variants of Syntax Trees, Three-Address Code, Control Flow, Back-patching. Run-Time Environments: Storage Organization, Stack Allocation of Space, Heap Management.

UNIT-VI: Code Generation: Basic Blocks and Flow Graphs, Optimization of Basic Blocks, Peephole Optimization, Register Allocation and Assignment. Machine-Independent optimizations: The Principal Sources of Optimizations, Introduction to Data-Flow Analysis.

Text Books:

1. Compilers, Principles Techniques and Tools- Alfred V Aho, Monica S Lam, Ravi Sethi, Jeffrey D. Ullman,2nded, Pearson,2007

Reference Books:

1. Principles of compiler design, V. Raghavan, 2nd ed, TMH, 2011
2. Compiler Design, K. Muneeswaran, Oxford

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the concept of Data Mining and its functionalities (K2)

CO2: Discuss various Data Preprocessing Techniques (K3)

CO3: Demonstrate Association Analysis Techniques (K3)

CO4: Illustrate various Classification Techniques (K3)

CO5: Demonstrate Alternative techniques for Classification (K3)

CO6: Use different Clustering techniques to cluster data (K3)

UNIT-I : Introduction: Need for Data Mining, Knowledge Discovery from Data, Kinds of Data mined, Kinds of Patterns mined, Technologies used, Kinds of Applications targeted, Major Issues in Data Mining, Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Measuring Data Similarity and Dissimilarity

UNIT-II: Data Preprocessing: Overview of Data Preprocessing, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

UNIT-III: Mining Frequent Patterns, Associations, and Correlations: Basic Concepts, Frequent Itemset Mining Methods- Apriori Algorithm: Finding Frequent Itemsets by Confined Candidate Generation, Generating Association Rules from Frequent Itemsets, Improving the Efficiency of Apriori, Pattern-Growth Approach for Mining Frequent Itemsets

UNIT-IV: Classification: Basic Concepts, Decision Tree Induction, Attribute Selection Measures, Tree Pruning

UNIT-V: Bayes Classification Methods: Bayes' Theorem, Naive Bayesian Classification. **Bayesian Belief Networks:** Concepts and Mechanisms, Training Bayesian Belief Networks

UNIT-VI: Cluster Analysis: Basic Concepts and Methods, Partitioning Methods, Hierarchical Methods, Density Based Method-DBSCAN

Text Books:

1. Data Mining Concepts and Techniques, Jiawei Han, Micheline Kamber, Jian Pei,3rd Edition, Morgan Kaufmann Publishers

Reference Books:

1. Introduction to Data Mining, Pang-Ning Tan, Michael Steinbach, Vipin Kumar, 1st Edition, Pearson Education.
2. Data Mining and Analysis,Mohammed J Zaki, Wagner Meira JR,1st Edition, Cambridge University Press.

VI Sem	**Object Oriented Analysis and Design Through UML**	Course Code: V18CST21	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss importance of modeling. [K2]

CO2: Describe classes and relationships. [K2]

CO3: Develop class diagrams and object diagrams. [K3]

CO4: Develop Interaction, Use case and Activity Diagrams. [K3]

CO5: Illustrate advanced behavioral modeling. [K3]

CO6: Develop component and deployment diagrams.[K3]

UNIT-I: Introduction to UML: Importance of modeling - Principles of modeling - Object oriented modeling - Conceptual model of the UML – Architecture - Software Development Life Cycle.

UNIT-II: Advanced Structural Modeling: Classes – Relationships - Common Mechanisms and diagrams - Advanced classes - Advanced relationships – Interfaces - Types and Roles – Packages.

UNIT-III: Class & Object Diagrams: Terms, concepts - Modeling techniques for Class Diagrams - Modeling techniques for Object Diagrams.

UNIT-IV: Basic Behavioral Modeling-I: Interactions - Interaction diagrams. **Basic Behavioral Modeling-II:** Use cases - Use case Diagrams - Activity Diagrams.

UNIT-V: Advanced Behavioral Modeling: Events and signals - State machines - Processes and Threads - Time and space - State chart diagrams.

UNIT-VI: Architectural Modeling: Component- Deployment - Component diagrams - Deployment diagrams.

Text Book:

1. The Unified Modeling Language User Guide, Grady Booch, James Rumbaugh, Ivar Jacobson, Pearson Education.

Reference Books:

1. UML 2 Toolkit, Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, WILEY-Dreamtech India Pvt. Ltd.
2. Fundamentals of Object Oriented Design in UML, Meilir Page-Jones, Pearson Education.
3. Modeling Software Systems Using UML2, Pascal Roques, WILEY-Dreamtech IndiaPvt. Ltd.

VI Sem	Cryptography and Network Security	Course Code: V18CST22	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the fundamentals of networks security, security architecture, threats and vulnerabilities (K2)
CO2: Discuss the mathematical support for both symmetric and asymmetric key cryptography (K2)
CO3: Discuss the concept of developing encryption and decryption algorithms (K2)
CO4: Illustrate various techniques of encryption and message authentication functions (K3)
CO5: Apply various Key management and Distribution techniques and its importance (K3)
CO6: Discuss the Need of Transport level and Email security algorithms (K2)

UNIT-I: Computer Security concepts, security services, and Active vs. Passive attacks, Security mechanisms, OSI Security Architecture, A Model for Network security, Classical Encryption Techniques, Substitution ciphers, Transposition ciphers.

UNIT-II: Introduction to Number Theory, Fermat's and Euler's Theorem, the Chinese Remainder Theorem, Euclidean Algorithm, and Modular Arithmetic.

UNIT-III: Block Ciphers, Data Encryption Standard (DES), Block Cipher Design Principles, Advanced Encryption Standard (AES), Simplified AES, Multiple Encryption and Triple DES, Pseudorandom Number Generators, Pseudorandom Number Generation Using a Block Cipher, Stream Ciphers, RC4.

UNIT-IV: RSA, Diffie-Hellman Key Exchange, Elliptic Curve Cryptography, Message Authentication Code-Message Authentication Functions, Requirements, and Security, HMAC, Hash functions, Secure Hash algorithm,SHA-512.

UNIT-V: Digital Signatures, Digital Signature Standards, Authentication Protocols, Kerberos, Key Management and Distribution, X.509 Digital Certificate, NIST Digital Signature Algorithm.

UNIT-VI: Transport Level Security: Web Security Considerations, Secure Socket Layer, Transport Layer Security. Electronic mail security: Pretty Good Privacy (PGP),S/MIME.

Text Books:

1. "Cryptography and Network Security, Principles and Practices", William Stallings Pearson Education, Sixth Edition.
2. "Network Security Essentials (Applications and Standards)", William Stallings, Pearson Education Fourth Edition.
3. Cryptography and Network Security, Behrouz A Forouzan, Debdeep Mukhopadhyay, (3e) Mc Graw Hill.

Reference Books:

1. "Network Security – PrivateCommunication in a Public World" Charlie Kaufman, Radia Perlman and Mike Speciner , Pearson/PHI.

			L	T	P	C
VI Sem	**Software Testing Methodologies (Elective-II)**	Course Code: V18CST23	3	0	0	3

<u>Syllabus Details</u>

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software testing objectives and methodology. (K2)

CO2: Apply various Software testing techniques. (K3)

CO3: Discuss Static testing techniques for software testing. (K2)

CO4: Differentiate software testing and debugging process. (K2)

CO5: Construct test cases by understanding test suite management. (K3)

CO6: Explain modern software testing tools to support software testing. (K2)

UNIT-I: Introduction to Software Testing: Evolution of software Testing, Myths and Facts, Goals of software Testing, Definitions of Testing, Model for Software Testing, Software Testing Terminology, Software Testing Life Cycle.

UNIT-II: Verification and Validation: Verification & Validation Activities, Verification, Verification of Requirements, Verification of High level and low level designs, How to verify code, Validation. **Dynamic Testing I:** Black Box testing techniques: Boundary Value Analysis, Equivalence Class Testing, Decision Table based Testing,

UNIT-III: Dynamic Testing II: White-Box Testing: Need of White-Box Testing, Logic coverage criteria, Basis path testing, Loop testing. **Static Testing:** Inspections, Structured Walkthroughs, Technical reviews.

UNIT-IV: Regression Testing: Progressive Vs Regressive Testing, Regression testability, Objectives of regression testing, When is Regression Testing done? Regression Testing Types, Regression testing techniques. **Debugging:** Debugging process, Techniques, correcting bugs.

UNIT-V: Efficient Test Suite Management: Why does a Test Suite grow, minimizing the Test suite and its benefits, Test suite prioritization, Types of Test case prioritization, Prioritization techniques, measuring the effectiveness of a prioritized Test Suite.

UNIT-VI: Software Quality Management: Software quality concept, Quality control and Quality Assurance, Software Quality metrics. **Automation and Testing Tools:** Need for automation, categorization of Testing tools, selection of testing tools, Overview of some commercial testing tools.

Text Books:

1. Software Testing, Principles and Practices, Naresh Chauhan, 9th Edition, Oxford Publisher.

Reference Books:

1. Software testing techniques - Boris Beizer, 2nd Edition, Dreamtech publisher.
2. Foundations of Software testing, Aditya P Mathur, 2nd ed, Pearson.
3. Software Testing- Yogesh Singh, CAMBRIDGE.

VI Sem	**Principles of Programming Languages (Elective-II)**	Course Code: V18CST24	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Syntax and Semantics of Programming Languages (K2).

CO2: Illustrate Data, Data Types and basic statements of Programming Languages (K3).

CO3: Explain various sub programming Issues (K2).

CO4: Construct programs using Object Oriented, Concurrency and Event Handling (K3).

CO5: Distinguish Programming Languages, schemes and ML (K2).

CO6: Describe Logic Programming Languages (K2).

UNIT I: SYNTAX AND SEMANTICS: Reasons for studying Programming Languages, Programming Domains, Evolution of programming languages, describing syntax, context free grammars, attribute grammars, describing semantics, lexical analysis, parsing, recursive – decent bottom – up parsing.

UNIT II: DATA TYPES AND BASIC STATEMENTS: Introduction, primitive data types, strings, array types, associative arrays, record types, tuple types , union types, pointers and references, Arithmetic expressions, overloaded operators, type conversions, relational and Boolean expressions, assignment statements , mixed mode assignments, control structures – selection, iterations, branching, guarded Statements.

UNIT III: SUBPROGRAMS AND IMPLEMENTATIONS: Subprograms, design issues, local referencing, parameter passing, overloaded methods, generic methods, design issues for functions, semantics of call and return, implementing simple subprograms, stack and dynamic local variables, nested subprograms, blocks, dynamic scoping.

UNIT IV: OBJECT- ORIENTED PROGRAMMING,EVENT HANDLING: Object Model – Classes, Visibility and Information Hiding, Inheritance, Polymorphism, Abstract Classes, Event Handling- Mouse Clicks, Mouse Motion, Buttons, Labels, Text areas, Combo boxes, Examples.

UNIT V: FUNCTIONAL PROGRAMMING LANGUAGES: Introduction to lambda calculus, fundamentals of functional programming languages, Programming with Scheme, – Programming with ML.

UNIT VI: LOGIC PROGRAMMING LANGUAGES: Introduction to logic and Horn Clauses, logic programming – Programming in Prolog, Prolog Examples-Solving Word Puzzles, Eight Queens Problem.

Text Books:

1. Concepts of Programming Languages, Robert W. Sebesta ,Tenth Edition, Addison Wesley, 2012.
2. Programming Languages, Principles & Paradigms, 2ed, Allen B Tucker, Robert E Noonan, TMH

References:

1. The Scheme programming language, R. Kent Dybvig, Fourth Edition, MIT Press, 2009.
2. Elements of ML programming, Jeffrey D. Ullman, Second Edition, Prentice Hall, 1998.
3. The craft of Prolog, Richard A. O’Keefe MIT Press, 2009.

VI Sem	Machine Learning (Elective-II)	Course Code: V18CST25	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate basics of Machine Learning. (K2)

CO2: Explain Various Classification Techniques. (K2)

CO3: Explain Tree Based Learning and Ensemble Learning (K2)

CO4: Demonstrate Neural Networks and Multi Layer Perceptrons. (K2)

CO5: Explain Multi Layer Perceptrons and Back Propagation (K2).

CO6: Demonstrate Dimensionality Reduction Techniques (K2).

Unit-I: Introduction: Learning: Machine Learning, Types Of Machine Learning, Supervised Learning, Regression, Classification, The Machine Learning Process. Some Terminology: Weight Space, The Curse Of Dimensionality. Knowing What You Know: Testing Machine Learning Algorithms, Over fitting, Training, Testing, And Validation Sets. Some Basic Statistics: Averages Variance And Covariance, The Bias-Variance Tradeoff.

UNIT II: Classification: The General Problem, Logistic Regression, K-Nearest Neighbor Classifiers, Support Vector Machines. Assessing Performance Of Classifiers: The Confusion Matrix, Accuracy, 0/1 Loss, Sensitivity And Specificity, The Receiver Operator Characteristic (Roc) Curve. Unbalanced Datasets Measurement: Precision, Recall And F1 Score.

UNIT-III: Ensemble Learning : Boosting, Adaboost, Stumping, Bagging , Subbagging, Random Forests.

UNIT-IV: Neural Networks: The Brain And The Neuron, Hebb's Rule, Mcculloch And Pitts Neurons, Limitations Of The Mcculloch And Pitts Neuron Model, Neural Networks, The Perceptron, The Learning Rate, The Bias Input The Perceptron Learning Algorithm, An Example Of Perceptron Learning: Logic Functions Implementation, Linear Separability, Linear Regression, Linear Regression Examples

UNIT-V: The Multi Layer Perceptron(MLP): Going Forwards, Going Backwards(Back Propagation of Errors), The MLP in practice, Examples of using the MLP: Classification and Regression, Deriving Back-Propagation.

UNIT-VI: Dimensionality Reduction: Linear Discriminant Analysis (LDA), Principal Components Analysis (PCA), Relation With The Multi-Layer Perceptron, Kernel PCA, Factor Analysis, Independent Components Analysis (ICA) Locally Linear Embedding.

Text Books:

1. Machine Learning: An Algorithmic Approach.Stephen Marsland, 2nd Edition, CRC Press.

2. A First Course in Machine Learning; Volume in Machine Learning and Pattern Recognition Series – CRC-Taylor & Francis-Chapman & Hall Rogers S., Girolami M., (2011).

Reference Books:

1. Machine Learning: The art and Science of Algorithms that Make sense of Data. Peter Flach, Cambridge, First Edition, 2012.

2. Machine Learning: Tom Mitchel, McGraw Hill Learning, 1997

VI Sem	Image Processing (Elective-II)	Course Code: V18CST26	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the different Transforms Techniques & their use in Image Processing applications (K3).

CO2: Demonstrate Spatial & frequency domain filtering (like smoothing & sharpening operations) on

Images (K3).

CO3: Describe Restoration operations/techniques on Images (K2).

CO4: Demonstrate the Image compression Techniques and multi-resolution processing on Images (K3).

CO5: Illustrate Morphological operations on Images & Image segmentation (K3).

CO6: Illustrate the different color Image Processing Techniques on Images (K3).

UNIT-I : Introduction: Introduction to Image Processing, Fundamental steps in digital image processing, components of an image processing system, image sensing and acquisition, image sampling and quantization, some basic relationships between pixels, an introduction to the mathematical tools used in digital image processing. **Image Transforms:** Need for image transforms, Discrete Fourier transform (DFT) of one variable, Extension to functions of two variables, some properties of the 2-D Discrete Fourier transform, Importance of Phase, Walsh Transform. Hadamard transform, Haar Transform, Slant transform, Discrete Cosine transform.

UNIT-II: Intensity Transformations and Spatial Filtering: Background, Some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters, sharpening spatial filters. **Filtering in the Frequency Domain:** Preliminary concepts, The Basics of filtering in the frequency domain, image smoothing using frequency domain filters, Image Sharpening using frequency domain filters, Selective filtering.

UNIT-III: Image Restoration and Reconstruction: A model of the image degradation / Restoration process, Noise models, restoration in the presence of noise only-Spatial Filtering, Periodic Noise Reduction by frequency domain filtering, Linear, Position –Invariant Degradations, Estimating the degradation function, Inverse filtering, Minimum mean square error (Wiener) filtering, constrained least squares filtering ,geometric mean filter .

UNIT-IV: Image compression: Fundamentals, Basic compression methods: Huffman coding, Arithmetic coding, LZW coding, Run-Length coding, Bit-Plane coding. **Wavelets and Multiresolution Processing:** Image pyramids, subband coding, Multiresolution expansions, wavelet transforms in one dimensions & two dimensions, Wavelet coding.

UNIT-V: Image segmentation: Fundamentals, point, line, edge detection, thresholding, region –based segmentation. **Morphological Image Processing:** Preliminaries, Erosion and dilation, opening and closing, basic morphological algorithms for boundary extraction, thinning, gray-scale morphology.

UNIT-VI: Color image processing: color fundamentals, color models, pseudo color image processing, basics of full color image processing, color transformations, smoothing and sharpening. Image segmentation based on color, noise in color images, color image compression.

Text Books:

1. Digital Image Processing, R. C. Gonzalez and R. E. Woods, 3rd edition, Prentice Hall, 2008.

2. Digital Image Processing, Jayaraman, S. Esakkirajan, and T. Veerakumar, Tata McGraw-Hill Education, 2011.

Reference Books:

1. Fundamentals of Digital Image Processing, Anil K.Jain, Prentice Hall of India, 9th Edition, Indian Reprint, 2002.

2. Digital Image Processing and Analysis, B.Chanda, D.Dutta Majumder, PHI, 2009.

<tr><td rowspan="2">VI Sem</td><td rowspan="2">Object Oriented Analysis and Design Through UML Lab</td><td rowspan="2">Course Code: V18CSL08</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>0</td><td>0</td><td>3</td><td>1.5</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop OOAD and UML concepts to identify Classes, Use Cases and their relationships (K3).

CO2: Develop Class diagrams (K3).

CO3: Develop Use case diagrams (K3).

CO4: Construct Interaction diagrams (K3).

CO5: Develop State chart, Activity diagrams (K3).

CO6: Develop Component and Deployment diagrams (K3).

List of Experiments

1. Draw basic class diagrams to identify and describe key concepts like classes, and their relationships.
2. Draw one or more Use Case diagrams for capturing and representing requirements of the system. Use case diagrams must include template showing description and steps of the Use Case for various scenarios.
3. Draw sequence diagrams OR communication diagrams with advanced notation for system to show objects and their message exchanges.
4. Draw activity diagrams to display either business flows or like flow charts.
5. Develop State chart diagrams.
6. Draw component diagrams assuming that build the system reusing existing components along with a few new ones.
7. Draw deployment diagrams to model the runtime architecture of system.
8. Design Case study on Library Management System
9. Design Case Study on Hospital Management System
10. Case study-Railway Reservation System
11. Design Case study on Library Management System using C4 Model.

Text Books:

1. The Unified Modeling Language User Guide, Grady Booch, James Rumbaugh, Ivar Jacobson, Pearson Education.

. **Reference Books:**

1. UML 2 Toolkit, Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, WILEY-Dreamtech India Pvt. Ltd.
2. Fundamentals of Object Oriented Design in UML, Meilir Page-Jones, Pearson Education.
3. Modeling Software Systems Using UML2, Pascal Roques, WILEY- Dreamtech India Pvt. Ltd.

VI Sem	**Data Mining Lab**	Course Code: V18CSL09	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Data Preprocessing techniques.(K3)

CO2: Demonstrate Association Rule Mining techniques.(K3)

CO3: Demonstrate Classification techniques. (K3)

CO4: Demonstrate the Clustering techniques. (K3)

List of Experiments (Using Weka Tool):

1. Demonstrate Data Preprocessing on predefined Weka dataset labor.arff
2. Create a student.arff dataset and Demonstrate Data Preprocessing on it
3. Demonstrate Association rule process on predefined Weka dataset contactlenses.arff using apriori algorithm.
4. Create an employee.arff dataset and demonstrate Association rule process on it using apriori algorithm
5. Demonstrate Classification process on student.arff dataset using j48 algorithm
6. Create a customer.arff dataset and demonstrate Classification process on it using j48 algorithm
7. Demonstrate Classification process on employee.arff dataset using id3 algorithm
8. Demonstrate Classification process on employee.arff dataset using Naïve Bayes algorithm
9. Demonstrate Clustering process on predefined Weka dataset iris.arff using simple k-means algorithm.
10. Demonstrate Clustering process on dataset student.arff using simple k- means algorithm.

Reference Books:

1. Data Mining: Practical Machine Learning Tools and Techniques, Ian H. Witten, Eibe Frank, Mark A. Hall, 3rd Edition, Morgan Kaufmann Publishers
2. Data Mining Concepts and Techniques, Jiawei Han, Micheline Kamber, Jian Pei, 3rd Edition, Morgan Kaufmann Publishers
3. Introduction to Data Mining, Pang-Ning Tan, Michael Steinbach, Vipin Kumar, 1st Edition, Pearson Education Inc.

I Sem	**Technical Skills-IV**	Course Code: V18CST63	L	T	P	C
			0	0	4	MNC

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate java fundamentals to solve real world computational problems. (K2)

CO2: Illustrate object orientated concepts in solving problems with reusability feature. (K2)

CO3: Apply collections on java to solve complex problems in linear time. (K3)

CO4: Make use of StringBuffer and StringBuilder to solve problems in linear and logarithmic time. (K3)

CO5: Experiment with Object Oriented concepts toreduce complexity of problems.(K3)

CO6: Develop programs to solve robust programs by using Exception Handling. (K3)

Java Programming

1. Problem solving using Control Statements
2. Problem solving using Arrays
3. Problem solving using Strings ,StringBuffer, StringBuilder
4. Problem solving using OOP Concepts
5. Problem solving using Inheritance
6. Problem solving using Polymorphism
7. Problem solving Collections (includes all)
8. Problem solving using Exception Handling

Text Books:

1. Thinking on Java - O'Reilly.
2. Java Complete Reference.
3. Effective Java. Third Edition. Joshua Bloch .

</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the basic concepts of HTML and CSS (K2)

CO2: Develop dynamic webpages and validate with java Script. (K3)

CO3: Illustrate the basic concepts of NODE JS and Angular. (K2)

CO4: Illustrate Extensible markup language & AJAX (K2)

CO5: Build database driven web applications using JSP (K3)

CO6: Develop web applications using PHP and MySQL (K3)

UNIT-I :HTML: Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Frames Forms.**CSS:** Cascading style sheets, Levels of Style Sheets, Style Specification Formats, Selector Forms, Property value forms, Font Properties, List Properties, color, Alignment of Text.

UNIT-II: JavaScript: Overview of JavaScript, General Syntactic Characteristics, Primitives Operations and Expressions, Screen output and Keyboard Input, Control Statements, Object creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions, Events and Event Handling. **DHTML:** Positioning Moving and Changing Elements.

UNIT-III: Fundamentals of NODE JS and Angular : Understanding Node.js, Installing Node.js, Working with Node Packages, Creating a Node.js Application, Understanding Angular, Modules, Directives, Data Binding, Dependency Injection, Services, Separation of Responsibilities, Creating a Basic Angular Application.

UNIT-IV: Working with XML: Introduction, The syntax of XML,XML Document Structure, Document type Definition (DTD), Namespaces, XML schemas, XSLT, XML Processors - DOM and SAX. **AJAX A New Approach**: Overview of AJAX, Basics of AJAX.

UNIT-V: Introduction to Servlets & JSP: Introduction to servlets, Life cycle of Servlet, Limitations of servlets, Java Server Pages: JSP Overview, Components of a JSP Page: Directives, comments, Expressions, Scriptlets , Declarations, implicit objects, Database Access, session tracking.

UNIT-VI: PHP Programming: Overview of PHP, General syntactic characteristics, Primitives, operations, Expressions, Output, Control statements, Arrays, Functions, Pattern Matching, Form Handling, Cookies, Session Tracking. PHP with MySQL connectivity. Integrating PHP and AJAX.

Text Books:

4. Programming the World Wide Web, 7th Edition, Robet W Sebesta, Pearson, 2013.
5. Node.js, MongoDB and Angular Web Development, 2nd Edition,Brad Dayley Brendan Dayley Caleb Dayley,Pearson Education,2018
6. JSP:The Complete reference,Phil Hanna,The McGraw-Hill Copanies,2001

Reference Books:

2. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.

2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage

Learning

3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

VII Sem	Advanced Operating Systems	Course Code:	L	T	P	C
	(**Elective – III)**	VI8CST28	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectures of Distributed Systems and Distributed Mutual Exclusion. **(K2)**

CO2: Illustrate the concepts of Deadlock Handling Strategies in Distributed Systems. **(K3)**

CO3: Explain the various Resource Management Techniques for Distributed Systems. **(K2)**

CO4: Discuss Fault Tolerance and Fault Recovery concepts in Distributed Systems . **(K2)**

CO5: Interpret the concepts of Cryptography and Data Security in Distributed Systems. **(K3)**

CO6: Describe Multiprocessor Operating System, Process Synchronization, Scheduling. **(K2)**

UNIT I: Architectures of Distributed Systems –System Architecture types - issues in distributed operating systems - communication networks - communication primitives. Distributed Mutual Exclusion - introduction - the classification of mutual exclusion and associated algorithms

UNIT II: Distributed Deadlock Detection -Introduction - deadlock handling strategies in distributed systems - issues in deadlock detection and resolution - control organizations for distributed deadlock detection - centralized and distributed deadlock detection algorithms - hierarchical deadlock detection algorithms.

UNIT III: Distributed Resource Management- Algorithms for implementing DSM - memory coherence and protocols - design issues. Distributed Scheduling - introduction - issues in load distributing - components of a load distributing algorithm - stability - load distributing algorithm – performance comparison - selecting a suitable load sharing algorithm - requirements for load distributing.

UNIT IV: Failure Recovery and Fault tolerance: Introduction- basic concepts - classification of failures - backward and forward error recovery, backward error recovery- recovery in concurrent systems - consistent set of check points - synchronous and asynchronous check pointing and recovery - check pointing for distributed database systems- recovery in replicated distributed databases.

UNIT V: Protection and Security - Preliminaries, the access matrix model and its implementations.-safety in matrix model, advanced models of protection. Data security - cryptography: Model of cryptography, conventional cryptography- modern cryptography, multipleencryptions - authentication in distributed systems.

UNIT VI: Multiprocessor Operating Systems - Basic multiprocessor system architectures - inter connection networks for multiprocessor systems .Multiprocessor Operating System - structures of multiprocessor operating system, operating system design issues- threads- process synchronization and scheduling.

TEXT BOOKS:

1. Advanced Concepts in Operating Systems: Distributed, Database and Multiprocessor Operating Systems, MukeshSinghal, NiranjanG.Shivaratri,TMH, 2001.

2. Distributed Operating System-Concepts and Design,PradeepK.Sinha ,PHI, 2003.

REFERENCE BOOKS:

1. Modern operating system, Andrew S.Tanenbaum, PHI, 2003

2. Distributed operating system,Andrew S.Tanenbaum,Pearson education, 2003.

3. Operating System Concepts, Abraham Silberschatz; Peter Baer Galvin; Greg Gagne, Seventh Edition, John Wiley & Sons, 2004.

VII Sem	Statistics with R Programming (**Elective – III**)	Course Code: VI8CST29	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate different data structures in R. **(K2)**
CO2: Demonstrate about control statements and functions in R. **(K3)**
CO3: Compute different mathematical operations using R pre defined functions. **(K3)**

CO4: Construct and edit visualizations with R. **(K3)**
CO5: Identify appropriate statistical tests using R. **(K2)**
CO6: Examine linear and non linear models to create testable hypotheses. **(K3)**

UNIT I: Introduction and Data Structures: Introduction, How to install and run R, R Sessions, Functions, Basic Math, constants, Variables, Expressions, Reserved words in R, Arithmetic, and Boolean Operators and values, Data Types, Vectors, Advanced Data Structures: Data Frames, Lists, Matrices, Arrays, Classes.

UNIT II: Control Statements and Functions in R: R Programming Structures, Control Statements, Loops, – Looping Over Nonvector Sets,- If-Else, Default Values for Argument, return values, Deciding Whether to explicitly call return- returning Complex Objects, Functions are Objects, No Pointers in R, Recursion, A Quick sort Implementation- Extended Example: A Binary Search Tree.

UNIT III: Math and Simulation and Input/output in R: Doing Math and Simulation in R, Math Function, Extended Example Calculating Probability Cumulative Sums and Products- Minima and Maxima- Calculus, Functions for Statistical Distribution, Sorting, Linear Algebra, Operations on Vectors and Matrices, Extended Example: Vector cross Product, Set Operations. **Input /output:** Accessing the Keyboard and Monitor, Reading and writing Files

UNIT IV: Graphics: Graphics, Creating Graphs, The Workhorse of R Base Graphics, the plot() Function ,Customizing Graphs, Saving Graphs to Files.

UNIT V: Probability Distributions and Basic Statistics: Probability Distributions, Normal Distribution- Binomial Distribution- Poisson Distributions Other Distribution, Basic Statistics, Correlation and Covariance, T-Tests,-ANOVA.

UNIT VI: Linear Models in R: Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression, - Poisson Regression, Nonlinear Models, Splines- Decision- Random Forests.

TEXT BOOKS:

3. R for Everyone, Lander, Pearson, 2nd edition 2018.
4. The Art of R Programming, Norman Matloff, Cengage Learning, 2nd edition, 2017.

REFERENCE BOOKS:

3. R Cookbook, PaulTeetor, Oreilly, 2nd edition, 2017.
4. R in Action, Rob Kabacoff, Manning, 3rd edition, 2019.

VII Sem	Information Retrieval Systems (**Elective – III)**	Course Code: VI8CST30	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Identify the basic concepts of information retrieval. **(K2)**
CO2: Describe the Capabilities of IRS, cataloging and indexing. **(K2)**
CO3: Explain the data structures and retrieving documents. **(K2)**
CO4: Describe the difficulty of representing and retrieving documents. **(K2)**
CO5: Explain the latest technologies for describing and searching the web. **(K2)**
CO6: Illustrate searching procedure for user-text and Information System Evaluation. **(K2)**

UNIT I: Introduction: Definition, Objectives, Functional Overview, Relationship to DBMS, Digital libraries and Data Warehouses.

UNIT II: Information Retrieval System Capabilities: Search, Browse, Miscellaneous **Cataloging and Indexing:** Objectives, Indexing Process, Automatic Indexing, Information Extraction.

UNIT III: Data Structures: Introduction, Stemming Algorithms, Inverted file structures, N-gram data structure, PAT data structure, Signature file structure, Hypertext data structure.

UNIT IV: Automatic Indexing: Classes of automatic indexing, Statistical indexing, Natural language, Concept indexing, Hypertext linkages. **Document and Term Clustering:** Introduction, Thesaurus generation, Item clustering, Hierarchy of clusters.

UNIT V: User Search Techniques: Search statements and binding, Similarity measures and ranking, Relevance feedback, Selective dissemination of information search, weighted searches of Boolean systems, Searching the Internet and hypertext. **Information Visualization:** Introduction, Cognition and perception, Information visualization technologies.

UNIT VI: Text Search Algorithms: Introduction, Software text search algorithms, Hardware text search systems. **Information System Evaluation:** Introduction, Measures used in system evaluation, Measurement example – TREC results.

Text Books:

2. Information Storage and Retrieval System: Theory and Implementation, Gerald J. Kowalski, Mark T. Maybury, 2nd edition, 2002, Kluwer Academic Press.

Reference Books:

3. Information Retrieval Data Structures and Algorithms, Frakes, W.B., Ricardo Baeza-Yates Prentice Hall.
4. Information Storage & Retrieval by Robert Korfhage – John Wiley & Sons, Wiley computer publisher, 1997.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the principles and characteristics of GUI. **(K2)**
CO2: Recognize how a computer system may be modified to include human diversity. **(K2)**
CO3: Select an effective style for a specific application. **(K2)**
CO4: Discuss Screen Designing mock-ups and carry out user and expert evaluation of interfaces.**(K2)**
CO5: Explain System Menus & Navigation Schemes. **(K2)**
CO6: Discuss Device and Screen based controls. **(K2)**

UNIT I: The User Interface: Introduction, Importance of the User Interface, Importance and benefits of Good Design History of Human Computer Interface. Characteristics of Graphical and Web User Interface: Graphical User Interface, popularity of graphics, concepts of Direct Manipulation, Graphical System advantage and disadvantage, Characteristics of GUI. Web User Interface, popularity of web, Characteristics of Web Interface, Merging of Graphical Business systems& the Web, Principles of User Interface Design.

UNIT II: The User Interface Design Process: Obstacles and Pitfall in the development Process, Usability, The Design Team, Human Interaction with Computers, Important Human Characteristics in Design, Human Consideration in Design, Human Interaction Speeds, Performance versus Preference, Methods for Gaining and Understanding of Users.

UNIT III: Understanding Business Functions: Business Definitions & Requirement analysis, Determining Business Functions, Design standards or Style Guides, System Training and Documentation.

UNIT IV: Principles of Good Screen Design: Human considerations in screen Design, interface design goals, test for a good design, screen meaning and purpose, Technological considerations in Interface Design.

UNIT V: System Menus and Navigation Schemes: Structure, Functions, Context, Formatting, Phrasing and Selecting, Navigating of Menus, Kinds of Graphical Menus Windows Interface: Windows characteristic, Components of Window, Windows Presentation Styles, Types of Windows, Window Management, Websystems

UNIT VI: Device and Screen-Based Control: Device based controls, Operable Controls, Text entry/read-Only Controls, Section Controls, Combining Entry/Selection Controls, Other Operable Controls and Presentation Controls, Selecting proper controls

Text Books:

1. "The Essential Guide to User Interface Design", Wilbert O. Galitz, 2nd edition,2002,Wiley India Edition.
2. Prece, Rogers, "Sharps Interaction Design", Wiley India.
3. "Designing the user interfaces". Ben Shneidermann 3rd Edition, Pearson Education Asia.

.**Reference Books:**

1. "User Interface Design" , SorenLauesen, Pearson Education
2. "Essentials of Interaction Design", Alan Cooper, Robert Riemann, David Cronin, Wiley
3. "HumanComputer Interaction", Alan Dix, Janet Fincay, GreGoryd, Abowd, Russell, Bealg, Pearson Education.

VII Sem	Distributed Systems (**Elective – IV)**	Course Code: VI8CST32	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe distributed system and desired properties of such systems. **(K2)**
CO2: Discuss the theoretical concepts, namely, virtual time and agreement. **(K2)**
CO3: Discuss the basic concepts of distributed systems and Characteristics of IPC protocols. **(K2)**
CO4: Explain the mechanisms such as Remote procedure call (RPC/RMI) and OSS . **(K2)**
CO5: Explain the mechanisms such as file systems and P2P algorithms. **(K2)**
CO6: Discuss the Transactions and Replications in distributed systems. **(K2)**

UNIT I: Characterization of Distributed Systems: Introduction, Examples of Distributed Systems, Resource Sharing and the Web, Challenges. **System Models:** Introduction, Architectural Models- Software Layers, System Architecture, Variations, Interface and Objects, Design Requirements for Distributed Architectures, Fundamental Models- Interaction Model, Failure Model, Security Model.

UNIT II: Time and Global States: Introduction, Clocks Events and Process States, Synchronizing Physical Clocks, Logical Time and Logical Clocks, Global States, Distributed Debugging.

Coordination and Agreement: Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication, Consensus and Related Problems.

UNIT III: Inter process Communication: Introduction, The API for the Internet Protocols- The Characteristics of Inter process communication, Sockets, UDP Datagram Communication, TCP Stream Communication; External Data Representation and Marshalling; Client Server Communication; Group Communication, Case Study: MPI.

UNIT IV:: Remote Invocation: Introduction, Request-reply protocols, Remote Procedure Call, Events and Notifications, **Case Study:** JAVA RMI.. **Operating System Support:** Introduction, The Operating System Layer, Protection, Processes and Threads –Address Space, Creation of a New Process, Threads.

UNIT V: Distributed File Systems: Introduction, File Service Architecture; Peer-to-Peer Systems: Introduction, Napster and its Legacy, Peer-to-Peer Middleware, Routing Overlays. **Case Study1:** Sun Network File system. **Case Study 2:** The Andrew File System.

UNIT VI: Transactions & Replications: Introduction, System Model and Group Communication, Concurrency Control in Distributed Transactions, Distributed Dead Locks, Transaction Recovery; Replication-Introduction, Passive (Primary) Replication, Active Replication.

Text Books:

1. "Distributed Systems- Concepts and Design", George Coulouris, Jean Dollimore, Tim Kindberg, Fourth Edition, Pearson Publication
2. "Distributed Computing, Principles, Algorithms and Systems", Ajay D Kshemkalyani, MukeshSighal, Cambridge.

Reference Books:

1. "Distributed Systems, Principles and Paradigms", Andrew S. Tanenbaum, Maarten Van Steen, 2d Edition, PHl.
2. "Distributed Systems, An Algorithm Approach," Sukumar Ghosh, Chapman & HalyCRC, Taylor & Fransis Group, 2007.

VII Sem	Scripting Languages (**Elective – IV)**	Course Code: VI8CST33	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concepts of scripting languages. **(K2)**

CO2: Develop Scripting for application using Ruby. **(K3)**

CO3: Explain the concepts of Programming in Perl. **(K2)**

CO4: Construct programs using Perl. **(K3)**

CO5: Describe TCL Scripting and their applications. **(K2)**

CO6: Discuss features of Groovy when compare with other Scripting Languages. **(K2)**

UNIT I: Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services. RubyTk – Simple Tk Application, widgets, Binding events, Canvas, scrolling.

UNIT II: Extending Ruby: Ruby Objects in C, the Jukebox extension, Memory allocation, Ruby TypeSystem, Embedding Ruby to Other Languages, Embedding a Ruby Interpreter.

UNIT III: Introduction to PERL and Scripting: Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting Languages, Uses for Scripting Languages, Web Scripting, and the universe of Scripting Languages. PERL- Names and Values, Variables, Scalar Expressions, Control Structures, arrays, list, hashes, strings, pattern and regular expressions, subroutines.

UNIT IV: Advanced Perl: Finer points of looping, pack and unpack, file system, eval, data structures, packages, modules, objects, interfacing to the operating system, Creating Internet ware applications, Dirty Hands Internet Programming, security Issues.

UNIT V:TCL: TCL Structure, syntax, Variables and Data in TCL, Control Flow, Data Structures, input/output, procedures, strings, patterns, files, Advance TCL- eval, source, exec and uplevel commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts Internet Programming, Security Issues, C Interface.

UNIT VI: Groovy: Features of Groovy, Environment, Basic Syntax, data types, variables, operators, loops, decision making, methods, File i/o, Optionals , numbers, strings, ranges, lists, maps, date and time, Regular expressions, Exception Handling, OO concepts.

Text Books:

1. The World of Scripting Languages, David Barron, Wiley Publications.
2. Ruby Programming language by David Flanagan and Yukihiro Matsumoto O'Reilly.
3. "Programming Ruby" The Prammatic programmers guide by Dabve Thomas Second edition.

Reference Books:

1. Open Source Web Development with LAMP using Linux, Apache, MySQL, Perl and PHP, J.Lee and B.Ware (Addison Wesley) Pearson Education.
2. Perl by Example, E.Quigley, Pearson Education.
3. Programming Perl, Larry Wall T.Christiansen and J.Orwant, O'Reilly, SPD.
4. Tcl and the Tk Toolkit, Ousterhout, Pearson Education.
5. Pearl Power, J.P. Flynt, Cengage Learning.

VI8CST34</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basics of machine learning. **(K2)**

CO2: Demonstrate the working of an artificial neural network. **(K2)**

CO3: Identify various parameters and issues while training a deep neural network. **(K2)**

CO4: Explain the working of convolution neural networks. **(K2)**

CO5: Explain the working of recurrent neural networks. **(K2)**

CO6: Recognize the ways of applying deep learning techniques for complex problem-solving. **(K2)**

UNIT I: Machine Learning Basics: Learning Algorithms, Capacity, Overfitting and Underfitting, Hyper parameters and Validation Sets, Estimators, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Descent.

UNIT II: Introduction to Neural Networks: The Basic Architecture of Neural Networks- Single Computational Layer: The Perceptron, Multilayer Neural Networks; Training a Neural Network with Backpropagation, Practical Issues in Neural Network Training-The Problem of Overfitting, The Vanishing and Exploding Gradient Problems, Difficulties in Convergence, Local and Spurious Optima;

UNIT III: Training Deep Neural Networks: Introduction, Backpropagation: Backpropagation with the Computational Graph Abstraction, Dynamic Programming to the Rescue, Backpropagation with Post-Activation Variables and Pre-activation Variables, Setup and Initialization Issues, The Vanishing and Exploding Gradient Problems, Parameter-Specific Learning Rates- AdaGrad, RMSProp, AdaDelta, Adam.

UNIT IV: Convolutional Neural Networks: Introduction, The Basic Structure of a Convolutional Network- Padding, Strides, Typical Settings, The ReLU Layer, Pooling, Fully Connected Layers, The Interleaving Between Layers, Local Response Normalization, Hierarchical Feature Engineering; Training a Convolutional Network- Backpropagating Through Convolutions.

UNIT V: Recurrent Neural Networks: Introduction, The Architecture of Recurrent Neural Networks- Language Modeling Example of RNN, Backpropagation Through Time, Bidirectional Recurrent Networks, Multilayer Recurrent Networks; Long Short-Term Memory (LSTM), Gated Recurrent Units (GRUs).

UNIT VI: Applications Deep Learning: Applications of Convolutional Networks: Content-Based Image Retrieval, Object Localization, Object Detection, Natural Language and Sequence Learning; Application of Recurrent Neural Networks: Application to Automatic Image Captioning, Time-Series Forecasting and Prediction, End-to-End Speech Recognition, Handwriting Recognition.

Text Books:

1. Deep Learning, Ian Goodfellow, Ian Goodfellow, and Aaron Courville, MIT Press.
2. Neural Networks and Deep Learning, Charu C. Aggarwal, Springer.

Reference Books:

1. Neural Networks: A Systematic Introduction, Raúl Rojas, Springer.
2. Introduction to Deep Learning, Eugene Charniak, MIT Press.

VII Sem	Social Networks and semantic web (**Elective – IV)**	Course Code: VI8CST35	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate knowledge by explaining the three different "named" generations of the web. **(K3)**
CO2: Construct a social network. **(K3)**
CO3: Relate knowledge representation methods for semantic web. **(K3)**
CO4: Explain the key aspects of Web Architecture. **(K2)**
CO5: Describe web services and its Applications. **(K2)**
CO6: Develop "Linked Data" Applications using Semantic Web Technologies. **(K3)**

UNIT-I: The Semantic web: Limitations of the current Web, The semantic solution, Development of the Semantic Web, The emergence of the social web.

UNIT-II: Social Network Analysis: What is network analysis? Development of Social Network Analysis, Key concepts and measures in network analysis. Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities, Web-based networks.

UNIT-III: Knowledge Representation on the Semantic Web: Ontologies and their role in the Semantic Web, Ontology languages for the semantic Web.

UNIT-IV: Modeling and Aggregating Social Network Data: State of the art in network data representation, Ontological representation of Social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data.

UNIT-V: Developing social semantic applications: Building Semantic Web applications with social network features, Flink- the social networks of the Semantic Web community, Open academia: distributed, semantic-based publication management.

UNIT-VI: Evaluation of Web-Based Social Network Extraction: Differences between survey methods and electronic data extraction, context of the empirical study, Data collection, Preparing the data, optimizing goodness of fit, Comparison across methods and networks, Predicting the goodness of fit, Evaluation through analysis.

Text Books:

1. Social Networks and the Semantic Web, PeterMika, Springer,2007.
2. Semantic Web Technologies, Trends and Research in Ontology basedsystems, J.Davies,RudiStuder,PaulWarren,JohnWiley&Sons.

Reference Books:

1. Semantic Web and Semantic Web Services –Liyang Lu Chapman and Hall/CRC Publishers, (Taylor & Francis Group)
2. Information Sharing on the semantic Web – Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications

VII Sem	Advanced Java and Web Technologies Lab	Course Code: VI8CSL10	L	T	P	C
			0	0	2	1

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop static web pages using HTML, CSS. **(K3)**

CO2: Demonstrate the concepts of JavaScript, DHTML and XML. **(K3)**

CO3: Develop Web Applications using JSP. **(K3)**

CO4: Develop dynamic Web Applications using PHP & MySQL. **(K3)**

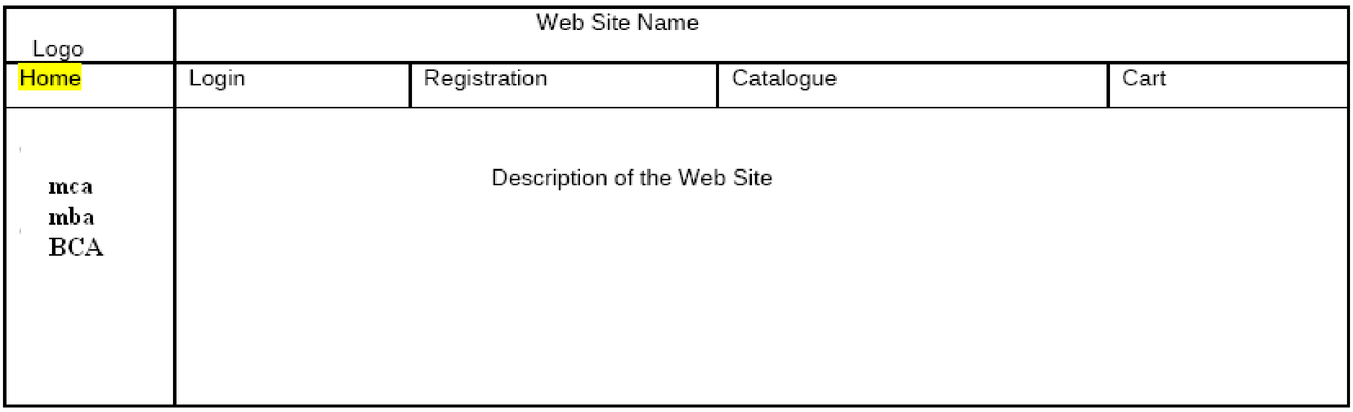
List of Experiments

1) Design the following static web pages required for an online book store web site:

(a) **HOME PAGE:**

The static home page must contain three **frames**.

Top frame: Logo and the college name and links to Home page, Login page, Registration page, Catalogue page and Cart page (the description of these pages will be given below). Left frame: At least four links for navigation, which will display the catalogue of respective links. For e.g.: When you click the link **"MCA"** the catalogue for MCA Books should be displayed in the Right frame. Right frame: The *pages to the links in the left frame must be loaded here.* Initially this page contains description of the web site



(b) **LOGIN PAGE:**

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
MCA MBA BCA	Login : 11a51f0003 Password: ******** Submit Reset			

(c) **CATALOGUE PAGE:**

The catalogue page should contain the details of all the books available in the web site in a table: The details should contain the following:

1. Snap shot of Cover Page.

2. Author Name.

3. Publisher.

4. Price.

5. Add to cart button.

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
MCA MBA		Book : XML Bible Author : Winston Publication : Wiely	$ 40.5	Add to cart
BCA		Book : AI Author : S.Russel Publication : Princeton hall	$ 63	Add to cart
		Book : Java 2 Author : Watson Publication : BPB publications	$ 35.5	Add to cart
		Book : HTML in 24 hours Author : Sam Peter Publication : Sam	$ 50	Add to cart

(d). **REGISTRATION PAGE:**

Create a "*registration form* "with the following fields

1) Name (Text field)

2) Password (password field)

3) E-mail id (text field)

4) Phone number (text field)

5) Sex (radio button)

6) Date of birth (3 select boxes) 7) Languages known (check boxes – English, Telugu, Hindi, Tamil)

2) Design a web page using **CSS (C**ascading **S**tyle **S**heets**)** which includes the following: Use different font, styles:

In the style definition you define how each selector should work (font, color etc.).

5) Design a login page and Make use of Events to perform validation using JavaScript.

6) Demonstrate a JavaScript program to perform On Mouse over event.

5) Demonstrate the concept of Mouse events (Ex:ng-click) with the help of Angular JS.

6) Design a simple Angular JS form.

7) Write an XML file which will display the Book information which includes the following:

1) Title of the book

2) Author Name

3) ISBN number

4) Publisher name

5) Edition

6) Price

a) Write a Document Type Definition (DTD) to validate the above XML file.

b) Write a XML Schema Definition (XSD)

8) Create a simple JSP to print the current Date and Time.

9)Create JSP to insert the details of 3 or 4 users using a registration form store these values in the data base and then check the authentication of the user by entering the name and password using a login form.

10) Assume four users user1, user2, user3 and user4 having the passwords pwd1, pwd2, pwd3 and pwd4 respectively. Write a PHP for doing the following.

A)

1. Create a Cookie and add these four user id's and passwords to this Cookie.

2. Read the user id and passwords entered in the Login form (week1) and authenticate with the values (user id and passwords) available in the cookies.

If he is a valid user (i.e., user-name and password match) you should welcome him by name (user-name) else you should display “You are not an authenticated user ”.

C) Use init-parameters to do the same.

11) Create a table which should contain at least the following fields: name, password, email id, phone number (these should hold the data from the registration form).

Write a PHP program to connect to that database and extract data from the tables and display them. Experiment with various SQL queries. Insert the details of the users who register with the web site, whenever a new user clicks the submit button in the registration page.

12) Insert the details of the 3 or 4 users who register with the web site by using registration form. Authenticate the user when he submits the login form using the user name and password from the database.

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.
2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning
3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

VIII Sem	Software Project Management (**Elective – V)**	Course Code: VI8CST36	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software Project Management Terminology. **(K2)**
CO2: Explain various Software development process Models and software Life cycle phases. **(K2)**
CO3: Illustrate various Effort Estimation Techniques and activity network models for Software Project Planning. **(K3)**
CO4: Demonstrate Risk Management Concepts and resource allocation. **(K3)**
CO5: Explain the importance of Project monitoring and control for accomplishing project goals. **(K2)**
CO6: Describe Software Quality models. **(K2)**

UNIT I: Introduction to Software Project Management: Software Project versus other types of projects, Activities covered by Software Project Management, Categorizing projects ,Stakeholders, Objectives& goals, what is management. **Project Planning:** Step-wise planning, Identify Project Scope and objectives, Infrastructure, Project Products &deliverables, Project activities, Effort estimation.

UNIT II: Project Approach: Build or buy, **process models**: waterfall model, Prototyping, Incremental delivery model, **Agile methods**: Extreme Programming, Atern method, selecting an appropriate process model. **Lifecycle phases:** Engineering and Production stages, Inception, Elaboration, Construction, Transition phases.

UNIT III: Software effort estimation and Activity planning: Overview of Effort Estimation techniques, Function Point analysis, COCOMO. **Activity planning:** Objectives, Network planning models, forward pass and backward pass, Identify Critical path and activities.

UNIT IV: Risk Management and Resource Allocation: Introduction, Risk and its categories, Identification, Assessment, Risk Planning and management, applying PERT technique. Resource Allocation: Types of Resources, Identifying resource requirements, Resource scheduling.

UNIT V: Project Monitoring and Control: Creating framework for monitoring& control, Collecting Data, Visualizing Progress, Cost monitoring, Earned value Analysis.

UNIT VI: Software Quality: Defining Quality, Importance of quality, ISO 9126, Product QualityVs Process Quality management. **Process Capability Models:** Capability Maturity Model, Enhancing software Quality.

Text Books:

1. SoftwareProjectManagement, Bob Hughes & Mike Cotterell, 6th edition, TATA Mcgraw-Hill

2. Software Project Management, WalkerRoyce 2nd edition, Pearson Education.

.

Reference Books:

1. Software Project Management in practice, PankajJalote, 9th edition, Pearson Education.

2. Software Project Management, Joel Henry, 3rd edition, Pearson Education.

VIII Sem	Big Data Analytics (**Elective – V)**	Course Code: VI8CST37	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the challenges of Big Data using Hadoop. **(K2)**

CO2: Interpret Hadoop's architecture and core components of Hadoop Distributed File System. **(K2)**

CO3: Apply data modelling techniques to large data sets using map reduce programs. **(K3)**

CO4: Describe the Hadoop I/O classes. **(K2)**

CO5: Examine the use of Pig Framework to work with big data. **(K3)**

CO6: Develop a data analytical system using HIVE. **(K3)**

UNIT I: Introduction to Big Data: What is Big Data, Why Big Data is Important, Data Storage and Analysis, Comparison with other systems, Grid Computing. **Introduction to Hadoop:** A brief history of Hadoop, Meet Hadoop Data, Apache Hadoop and the Hadoop Ecosystem.

UNIT II: Working with Big Data & HDFS: Google File System, Hadoop Distributed File System (HDFS) –Building blocks of Hadoop (Namenode, Datanode, Secondary Namenode, JobTracker, and TaskTracker). **Introducing and Configuring Hadoop cluster:** Local distributed mode, Pseudo-distributed mode, Fully Distributed mode, Configuring XML files.

UNIT III: Writing Map Reduce Programs: A Weather Dataset –Data Format, Analyzing Data with UNIX Tools, Analyzing the Data with Hadoop-Map Reduce. **Basic programs of Hadoop Map Reduce:** Driver code,Mapper code, Reducer code, RecordReader, Combiner functions. Map Reduce Types, Input Formatclass Hierarchy, other map reduce examples (word count).

UNIT IV: Hadoop I/O: The Writable Interface, Writable Comparable and Comparators. **Writable Classes:** Writable wrappers for Java primitives, Text & Bytes Writable, NullWritable, ObjectWritable and Generic Writable, Writable collections. **Implementing a Custom Writable:** Implementing a Raw Comparator for speed, Custom comparators

UNIT V: Pig - Hadoop Programming Made Easier: Admiring the Pig Architecture, Going with the Pig Latin Application Flow, Working through the ABCs of Pig Latin, Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.

UNIT VI: Applying Structure to Hadoop Data with Hive: Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive, Examining the Hive Clients, Working with Hive Data Types, Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.

Text Books:

1. Hadoop: The Definitive Guide, Tom White, O'Reilly, 3rd Edition, 2012.
2. Hadoop in Action, Chuck Lam, MANNING Publ., 2016.
3. Hadoop for Dummies, Dirk deRoos, Paul C.Zikopoulos, Roman B.Melnyk, Bruce Brown, Rafael Coss, 2014.

.

Reference Books:

1. Hadoop in Practice, Alex Holmes, MANNING Publ., 2014.
2. Hadoop Map Reduce Cookbook, Srinath Perera, Thilina Gunarathne, PACKT, 2013.

<table>
<tr><td rowspan="2">VIII Sem</td><td rowspan="2">Soft Computing
(Elective – V)</td><td rowspan="2">Course Code:
VI8CST38</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss about Soft Computing, Requirements and Applications of Soft Computing. **(K2)**
CO2: Discuss about various Supervised and Unsupervised Learning Networks. **(K2)**
CO3: Illustrate various Fuzzy Logic, Fuzzy Sets, Crisp sets, Fuzzification and De-fuzzification Principles. **(K2)**
CO4: Discuss about Fuzzy Arithmetic and Fuzzy measures. **(K2)**
CO5: Discuss about Genetic Algorithms and its Operators. **(K2)**
CO6: Discuss about Various Hybrid Soft Computing Techniques. (**K2)**

UNIT I: Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirements of Soft computing, Major Areas of Soft Computing, Applications of Soft Computing.

UNIT II: Associative Memory Networks: (Supervised Learning): Introduction, Training Algorithms for Pattern Association, Auto-associative Memory Network, Hetero-associative Memory Network, Bidirectional Associative Memory (BAM),Hopfield Networks, Iterative Auto-associative Memory Networks, Temporal Associative Memory Network. **Unsupervised Learning Networks:** Introduction, Fixed Weight Competitive Nets, Kohonen Self-Organizing Feature Maps, Learning Vector Quantization, Counter propagation Networks, Adaptive Resonance Theory Network.

UNIT III: Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets: Introduction to Fuzzy Logic, Classical Sets (Crisp Sets), Fuzzy Sets and Operations on Fuzzy sets-Compliment, Intersections, Unions.

Membership Function: Introduction, Features of the Membership Functions, Fuzzification, Methods of Membership Value Assignments. **Defuzzification:** Introduction, Lambda-Cuts for Fuzzy Sets (Alpha-Cuts), Lambda-Cuts for Fuzzy Relations, Defuzzification Methods

UNIT IV: Fuzzy Arithmetic and Fuzzy Measures: Introduction, Fuzzy Arithmetic, Extension Principle, Fuzzy Measures, Measures of Fuzziness, Fuzzy Integrals.

UNIT V: Genetic Algorithm: Introduction to genetic algorithm, operators in genetic algorithm, stopping condition for genetic algorithm flow.

UNIT VI: Hybrid Soft Computing Techniques: Introduction, Neuro-Fuzzy Hybrid Systems, Genetic Neuro-Hybrid Systems.

Text Books:

1. Principles of Soft Computing, S.N. Sivanandam and S.N. Deepa, 3-edition, Wiley India, 2007.
2. “Fuzzy Sets & Fuzzy Logic”, G.J. Klir & B. Yuan, PHI, 1995.
3. “An Introduction to Genetic Algorithm”, Melanie Mitchell, PHI, 1998.

Reference Books:

1. Neural Networks, Fuzzy Logic and Genetic Algorithms, S. Rajasekaran and G.A.V.Pai, PHI, 2003.

2. Fuzzy Logic with Engineering Applications, Timothy J.Ross, McGraw-Hill, 1997.

3. Neuro-Fuzzy and Soft Computing, J.S.R.Jang, C.T.Sun and E.Mizutani, PHI, 2004, Pearson Education.

<table>

(Elective – V)</td><td rowspan="2">Course Code:
VI8CST39</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Outline the concepts of cloud computing architecture. **(K2)**
CO2: Describe the Virtualization concepts in different scenarios. **(K2)**
CO3: Explain the best policies for cloud deployment. **(K2)**
CO4: Illustrate the design issues of Cloud computing. **(K2)**
CO5: Illustrate the security and privacy of the data in cloud computing. **(K2)**
CO6: Demonstrate cloud instances in Amazon Web Services. **(K3)**

UNIT I: Introduction to Cloud Computing: Trends in Computing - Distributed Computing, Grid Computing, Cluster Computing, Utility Computing, Cloud Computing, Definition of Cloud Computing, Characteristics, Service Models, Deployment Models, Cloud Service Models Providers, Advantages and Disadvantages of Cloud Computing, Cloud-based Services &Applications.

UNIT II: Cloud Concepts & Technologies: Virtualization and its types, Software Defined Networking, Network Function Virtualization (NFV). **Cloud Services:** Compute Services, Storage Services, Database Services, Application Services

UNIT III: Cloud Application Design: Design Considerations for Cloud Applications, Reference Architectures for Cloud Applications, Cloud Application Design Methodologies: SOA, Cloud Component Model and MVC, Data Storage Approaches.

UNIT IV: Cloud Security: Cloud Security Architecture (CSA), Authentication, Authorization, Identity & Access Management, Data Security, Key Management.

UNIT V: Migrating into a Cloud: Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud, Migration Risks and mitigation, Phases of Migrating to Cloud, benefits and risks of Migrating to Cloud.

UNIT VI: SLA Management in Cloud Computing: Service Level Agreements (SLA), Considerations for SLA, SLA Requirements, Types of SLA, Life Cycle of SLA, SLA Management in Cloud. **Case Study:** Amazon AWS: EC2, Amazon Simple DB, Amazon S3, Amazon Cloud Front and Amazon SQS.

Text Books:

1. Cloud Computing: A Hands-on Approach, ArshdeepBahga, Vijay Madisetti,Universities Press.
2. Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, Andrzej Goscinski, Wiley Publication.

Reference Books:

1. Cloud Computing – Web-Based Applications That Change the way you Work and Collaborate Online, Michael Miller, Pearson Education.
2. Cloud Computing: A Practical Approach, Anthony T. Velte, Toby J. Velte, Robert Elsenpeter, McGraw-Hill, (2010).

VIII Sem	Software Architecture & Design Patterns (**Elective – VI)**	Course Code: VI8CST40	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Architectural Structures and Quality Attributes. (K2)

CO2: Explain the mechanism of Evaluating Architecture. (K2)

CO3: Demonstrate Creational Patterns. (K3)

CO4: Construct Structural Patterns for a given Scenario. (K3)
CO5. Construct Behavioural Patterns for a given Scenario. (K3)
CO6. Examine various Case Studies in utilizing Software Architectures. (K3)

UNIT-I: Envisioning Architecture The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating and Architecture Quality Attributes, Achieving qualities, Designing the Architecture.

UNIT-II: Analyzing Architectures Architecture Evaluation, Architecture design decision making, ATAM, CBAM. Software Product Lines, Software architecture in future.

UNIT-III: Pattern Description, role in solving design problems, Selection and usage.**Creational Patterns**: Abstract factory, Builder, Factory method, Prototype, Singleton.

UNIT-IV: Structural Patterns: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, PROXY.

UNIT-V: Behavioural Patterns: Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.

UNIT-VI: Case Studies **A-7E – A case study** in utilizing architectural structures, The **World Wide Web** - a case study in Interoperability, **Air Traffic Control** – a case study in designing for high availability, **Celsius Tech** – a case study in product line development.

Text Books:

1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003.

2. Design Patterns, Erich Gamma, Pearson Education, 1995.

Reference Books:

1. Beyond Software architecture, Luke Hohmann, Addison wesley, 2003.

2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall PTR, 2001

3. Software Design, David Budgen, second edition, Pearson education, 2003

4. Head First Design patterns, Eric Freeman & Elisabeth Freeman, O'REILLY, 2007.

5. Design Patterns in Java, Steven John Metsker & William C. Wake, Pearson education, 2006.

VIII Sem	Middleware Technologies (**Elective – VI)**	Course Code: VI8CST41	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Middleware, E- Business, IT architecture, RPC, RDC. **(K2)**
CO2: Demonstrate Internet Applications and Web services. **(K2)**
CO3: Summarize Technical issues in Middleware. **(K2)**
CO4: Demonstrate the Use of Middleware in Building Distributed Technologies. **(K2)**
CO5: Identify Security Issues with Distributed Applications. **(K3)**

CO6: Apply Appropriate Middleware Technology to Develop Real Time Applications. **(K3)**

UNIT I: Introduction: Moving to e-business, what is IT architecture? Why is this different from what we did before? Rewrite or evolve?, Who develops the architecture?, Early days, Preliminaries, Remote procedure calls, Remote database access, Distributed transaction processing, Message queuing, Message queuing versus distributed transaction processing, what happened to all this technology.

UNIT II: Objects, Components and the Web: Using object middleware, Transactional component middleware- COM+, EJB, Final comments on TCM, Internet Applications. WEB SERVICES: Service concepts, Web services, and Using Web services: A pragmatic approach.

UNIT III: A Technical Summary Of Middleware: Middleware elements- The communications link, The middleware protocol, The programmatic interface, Data presentation, Server control, Naming and directory services, Security, System management, Comments on Web services, Vendor architectures- Vendor platform architectures, Vendor-distributed architectures, Using vendor architectures, Positioning, Strawman for user target architecture, Marketing, Implicit architectures, Middleware interoperability.

UNIT IV: Using Middleware to Build Distributed Applications: What is middleware for? - Support for business processes, Information retrieval, Collaboration, Tiers- The presentation tier, The processing tier, The data tier, Services versus tiers, Architectural choices - Middleware bus architectures, Hub architectures, Web services architectures, Loosely coupled versus tightly coupled.

UNIT V: Security: What security is needed, Traditional distributed system security, Web services security, Architecture and security. **Application Design and It's Architecture :** Problems with today's design approaches, Design up front or as needed?- The role of business rules, Existing systems, Reuse, Silo and monolithic development, The role of architecture, Levels of design, Reconciling design approaches.

UNIT VI: Building an IT Architecture: Case Studies – Providing an integration infrastructure, creating a service-oriented architecture, Developing a new application. What does the future hold? , The key points to remember-Middleware technology alternatives, IT architecture guideline guidelines, Distribute systems technology principals and Distribute systems implementation design.

Text Books:

1. IT Architectures and Middleware: Strategies for Building Large, Integrated Systems, Chris Britton and Peter Eye, 2nd Edition, Pearson Education.

Reference Books:

1. Middleware for Communications, Qusay H. Mahmoud,1st Edition, John Wiley and Sons.
2. Middleware Networks: Concept, Design and Deployment of Internet Infrastructure, Michah Lerner, 1st Edition, Kluwer Academic Publishers.
3. Middleware and Enterprise Integration Technologies, G. Sudha Sadasivam and Radha Shankarmani, 1st edition, Wiley, 2009.

VIII Sem	Natural Language Processing (**Elective – VI**)	Course Code: VI8CST42	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the Syntax and semantics and Language models of Natural Language Processors. **(K2)**
CO2: Classify Morphology and Finite State Transducers, Markov Models and Entropy Models. **(K2)**
CO3: Explain about Statistical parsing and probabilistic CFGs. **(K2)**
CO4: Demonstrate semantic analysis. **(K2)**
CO5: Explain Discourse Analysis and Lexical Resources. **(K2)**
CO6: DevelopaStatisticalMethodsforRealWorldApplicationsandexploredeeplearning-basedNLP. **(K3)**

UNIT I: Introduction: Natural Language Processing tasks in syntax, semantics, andpragmatics –Issues –Applications- The role of machine learning-Probability Basics– Information theory– Collocations- N-gram Language Models - Estimating parameters and smoothing - Evaluating language models.

UNIT II: Morphology And Part Of Speech Tagging: Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields.

UNIT III: Syntax Parsing: Syntax Parsing - Grammar formalisms and tree banks - Parsing with Context Free Grammars- Features and Unification-Statistical parsing and probabilisticCFGs(PCFGs)-LexicalizedPCFGs.

UNIT IV: Semantic Analysis: Representing Meaning – Semantic Analysis - Lexical semantics –Word-sense disambiguation- Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing – Discourse Analysis.

UNIT V: Discourse Analysis and Lexical Resources: Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brills Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC).

UNIT VI: NLP Applications: Named entity recognition and relation extraction- IE using sequence labeling-Machine Translation (MT) - Basic issues in MT-Statistical translation-word alignment- phrase-based translation – Question Answering.

VIII Sem	Cyber Security (**Elective – VI**)	Course Code: VI8CST43	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe about Cybercrimes. **(K2)**
CO2: Explain Cyber criminals and their attacks. **(K2)**
CO3: Illustrate Cybercrimes and security in mobile devices **(K2)**
CO4: Discuss about the Tools and methods used to overcome Cybercrimes. **(K2)**
CO5: Discuss about Cyber Laws and IT Acts. **(K2)**
CO6: Explain about Computer Forensics. **(K2)**

UNIT I: Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security Who are Cybercriminals? , Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

UNIT II: Cyber offenses: How Criminals Plan Them –Introduction, How Criminals Plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack VectorCloud Computing.

UNIT III: Cybercrime Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/CellPhones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

UNIT IV: Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoSAttacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **Phishing and Identity Theft:** Introduction, Phishing, Identity Theft (ID Theft).

UNIT V: Cybercrimes and Cyber security: The Legal Perspectives, Introduction, Why Do We Need Cyber laws: The Indian Context, The Indian IT Act, Challenges to Indian Law and Cybercrime Scenario in India, Consequences of Not Addressing the Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act,· Cybercrime and Punishment.

UNIT VI: Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.

Text Books:

1. Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, NinaGodbole, SunitBelapure, 1stedition, Wiley.

Reference Books:

1. Principles of Information Security, MichealE.Whitman and Herbert J.Mattord, 4th edition, Cengage Learning.
2. Information Security the complete reference, Mark Rhodes, Ousley, 2nd edition, MGH.

List of Open Elective Courses offered by CSE for Other Branches

SEM	Course Code	Course
Open Elective-II		
VII SEM	V18CSTOE04	1. Operating Systems
	V18CSTOE05	2. Artificial Intelligence
	V18CSTOE06	3. Java Programming
Open Elective-III		
VIII SEM	V18CSTOE07	1.Software Testing Methodologies
	V18CSTOE08	2. Cyber Security
	V18CSTOE09	3. Computer Graphics

VII Sem	Operating Systems **(Open Elective-II)**	Course Code: V18CSTOE04	L	T	P	C
			3	0	0	3

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Operating System Services and System Calls. **(K2)**

CO2: Illustrate Process Management Concepts and CPU Scheduling Algorithms. **(K3)**

CO3: Demonstrate Process Synchronization primitives. **(K3)**

CO4: Demonstrate Deadlock Prevention, Avoidance and Detection methods. **(K3)**

CO5: Illustrate Memory Management Techniques and Page Replacement Algorithms. **(K3)**

CO6: Describe File System Concepts and Mass Storage Structures. **(K2)**

UNIT-I: Introduction: Operating-System Structure, Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls.

UNIT-II: Process Management: Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication. **Threads:** Overview, Multithreading Models. **CPU Scheduling:** Basic Concepts, Scheduling Criteria, Scheduling Algorithms

UNIT-III : Process Synchronization: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors

UNIT-IV: Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock

UNIT-V: Memory Management Main Memory: Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table

Virtual Memory: Introduction, Demand Paging, Page Replacement, Allocation of Frames, Thrashing

UNIT-VI: Storage Management : Overview of Mass-Storage Structure, Disk Scheduling, File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Allocation Methods

Text Book:

1. Operating System Concepts, Abraham Silberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012

Reference Books:

1. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition, Prentice Hall, 2012

2. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,2007

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the concept of intelligent systems and current trends in AI. **(K2)**

CO2: Apply Problem solving, Problem reduction and Game Playing techniques in AI. **(K3)**

CO3: Illustrate the Logic concepts in AI. **(K2)**

CO4: Explain the Knowledge representation techniques in AI. **(K2)**

CO5: Describe Expert systems and their applications. **(K2)**

CO6: Illustrate Uncertainty Measures. **(K2)**

UNIT-I: Introduction to Artificial Intelligence: Introduction, history, intelligent systems, foundations of AI, applications, tic-tac-toe game playing, current trends in AI

UNIT-II: Problem solving: State-space Search and Control Strategies: Introduction, General Problem Solving, Characteristics of problem, Exhaustive searches, Heuristic search techniques, Iterative deepening a*, constraint satisfaction

Problem reduction and game playing: Introduction, problem reduction, game playing, alpha beta pruning, two-player perfect information games

UNIT-III: Logic concepts: Introduction, Propositional Calculus, Proportional Logic, Natural Deduction system, Axiomatic system, Semantic tableau system in proportional logic, Resolution Refutation in Propositional logic, Predicate Logic

UNIT-IV: Knowledge representation: Introduction, approaches to Knowledge representation, Knowledge representation using Semantic Networks, Extended Semantic Networks for KR, Knowledge representation using Frames

UNIT-V: Expert Systems and Applications: Introduction phases in building Expert Systems, Expert System versus Traditional Systems, Rule-based Expert Systems, Blackboard systems, Truth maintenance systems, applications of Expert Systems.

UNIT-VI: Uncertainty measure: Probability theory- Introduction, Probability Theory, Bayesian Belief networks, Certainty Factor Theory, Dempster-Shafer theory

Text Book:

Artificial Intelligence, Saroj Kaushik, 1st Edition, Cengage Learning.

Reference Books:

Artificial Intelligence, Elaine Rich, Kevin Knight, Shivashankar B Nair, 3rd Edition, Tata McGraw Hill Education Private Limited., 2009

Artificial Intelligence- A modern Approach, 3rd Edition, Stuart Russel, Peter Norvig, Pearson Education.

VII Sem	**JAVA PROGRAMMING** **(Open Elective-II)**	Course Code: **V18CSTOE06**	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Java Virtual Machine and Type casting. (**K2**)
CO2: Demonstrate Concepts like Constructors, Arrays, Nested Classes and Command Line Arguments. (**K3**)
CO3: Implement Concepts of Inheritance and Exception Handling. (**K3**)
CO4: Develop programs on Multi-Threading and Files. (**K3**)
CO5: Demonstrate Applet Programming and AWT Components. (**K3**)
CO6: Describe Event Handling and Swings. (**K3**)

UNIT-I: Introduction to Java: Introduction to Object Oriented Paradigm, Concepts of OOP, Applications of OOP, History of Java, Java Features, JVM, Program Structure. Variables, Primitive Data Types, Constants, Operators, Expressions, Precedence rules and Associativity, Primitive type conversion and Casting, Control Structures.
UNIT-II: Classes and Objects: Classes and objects, Class declaration, Creating objects, Methods, Constructors and Constructor Overloading, Importance of Static Keyword and Examples, this Keyword, Arrays, Command Line Arguments, Nested Classes.
UNIT-III: Inheritance and Exception Handling: Inheritance, super Keyword, final Keyword, Method Overriding and Abstract Class. Interfaces, Creating Packages, Using Packages, Importance of Class path. Exception Handling, Importance of try, catch, throw, throws and finally Block.
UNIT-IV: Multithreading and Files: Introduction, Thread Lifecycle, Creation of Threads, Thread Priorities, Thread Synchronization, Communication between Threads. Reading Data from Files and Writing Data to Files, Random Access Files.
UNIT-V: Applet Programming and AWT: Applet Class, Applet Lifecycle, Applet Programs. Introduction to AWT, Components and Containers, Button, Label, Checkbox, Radio Buttons, List Boxes, Layouts, Menu and Scrollbar.
UNIT-VI: Event Handling and Swings: Event Handling : Event Delegation Model, Sources of Events, Event Listeners, Adapter Classes, InnerClasses. Introduction to Swings.

Text Books:

1. Java Proramming, E.Balagurusamy, 4thEdition , TMH.
2. The complete Reference Java, 8thEdition, Herbert Schildt, TMH.
3. Introduction to java programming ,Y Daniel Liang, 7thEdition, Pearson.

Reference books:

1. Core Java: An Integrated Approach , R Nageswara Rao, 7th Edition, Dream Tech
2. Head First Java , Kathy Sierra and Bert Bates, 2nd Edition O'reilly

VIII Sem	Software Testing Methodologies **(Open Elective-III)**	Course Code: V18CSTOE07	L	T	P	C
			3	0	0	3

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software testing objectives and methodology. **(K2)**

CO2: Apply various Software testing techniques. **(K3)**

CO3: Discuss Static testing techniques for software testing. **(K2)**

CO4: Differentiate software testing and debugging process. **(K2)**

CO5: Construct test cases by understanding test suite management. **(K3)**

CO6: Explain modern software testing tools to support software testing. **(K2)**

UNIT-I: Introduction to Software Testing: Evolution of software Testing, Myths and Facts, Goals of software Testing, Definitions of Testing, Model for Software Testing, Software Testing Terminology, Software Testing Life Cycle.

UNIT-II: Verification and Validation: Verification & Validation Activities, Verification, Verification of Requirements, Verification of High level and low level designs, How to verify code, Validation. **Dynamic Testing I:** Black Box testing techniques: Boundary Value Analysis, Equivalence Class Testing, Decision Table based Testing,

UNIT-III: Dynamic Testing II: White-Box Testing: Need of White-Box Testing, Logic coverage criteria, Basis path testing, Loop testing. **Static Testing:** Inspections, Structured Walkthroughs, Technical reviews.

UNIT-IV: Regression Testing: Progressive Vs Regressive Testing, Regression testability, Objectives of regression testing, When is Regression Testing done? Regression Testing Types, Regression testing techniques. **Debugging:** Debugging process, Techniques, correcting bugs.

UNIT-V: Efficient Test Suite Management: Why does a Test Suite grow, minimizing the Test suite and its benefits, Test suite prioritization, Types of Test case prioritization, Prioritization techniques, measuring the effectiveness of a prioritized Test Suite.

UNIT-VI: Software Quality Management: Software quality concept, Quality control and Quality Assurance, Software Quality metrics. **Automation and Testing Tools:** Need for automation, categorization of Testing tools, selection of testing tools, Overview of some commercial testing tools.

.

Text Books:

1. Software Testing, Principles and Practices, Naresh Chauhan, 9th Edition, Oxford Publisher.

Reference Books:

1. Software testing techniques - Boris Beizer, 2nd Edition, Dreamtech publisher..
2. Foundations of Software testing, Aditya P Mathur, 2nd ed, Pearson.
3. Software Testing- Yogesh Singh, CAMBRIDGE.

VIII Sem	Cyber Security **(Open Elective – III)**	Course Code: VI8CSTOE08	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe about Cybercrimes. **(K2)**
CO2: Explain Cyber criminals and their attacks. **(K2)**
CO3: Illustrate Cybercrimes and security in mobile devices **(K2)**
CO4: Discuss about the Tools and methods used to overcome Cybercrimes. **(K2)**
CO5: Discuss about Cyber Laws and IT Acts. **(K2)**
CO6: Explain about Computer Forensics. **(K2)**

UNIT I: Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security Who are Cybercriminals? , Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens.

UNIT II: Cyber offenses: How Criminals Plan Them –Introduction, How Criminals Plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector Cloud Computing.

UNIT III: Cybercrime Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/CellPhones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

UNIT IV: Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **Phishing and Identity Theft:** Introduction, Phishing, Identity Theft (ID Theft).

UNIT V: Cybercrimes and Cyber security: The Legal Perspectives, Introduction, Why Do We Need Cyber laws: The Indian Context, The Indian IT Act, Challenges to Indian Law and Cybercrime Scenario in India, Consequences of Not Addressing the Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act,· Cybercrime and Punishment.

UNIT VI: Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.

Text Books:

1. Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, NinaGodbole, SunitBelapure, 1stedition, Wiley.

Reference Books:

1. Principles of Information Security, MichealE.Whitman and Herbert J.Mattord, 4th edition, Cengage Learning.
2. Information Security the complete reference, Mark Rhodes, Ousley, 2nd edition, MGH.

VII Sem	Computer Graphics **(Open Elective-III)**	Course Code: V18CSTOE09	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Understand the applications of computer graphics and learn basic algorithms. **(K2)**
CO2: Analyze the concepts of 2D graphics along with transformation techniques. **(K3)**
CO3: Understand 2D Views of objects and clipping algorithms. **(K2)**
CO4: Illustrate 3D graphics and will get an idea about projections views of objects. **(K2)**

CO5: Determine different visible surface detection methods. **(K2)**
CO6: Understand different animation sequences and Color Models. **(K2)**

UNIT I: Introduction: Application of Computer Graphics, raster scan systems, random scan systems, raster scan display processors. Output Primitives : Points and lines, line drawing algorithms(Bresenham's and DDA Line derivations and algorithms), mid-point circle and ellipse algorithms.

UNIT II: Filled area primitives: Boundary-fill and flood-fill algorithms. **2-D geometrical transforms:** Translation, scaling, rotation, reflection and shear transformations, and homogeneous coordinates, composite transforms.

UNIT III: 2-D viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland, Sutherland – Hodgeman polygon clipping algorithm.

UNIT IV: 3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations. 3D Viewing pipeline, clipping, projections (Parallel and Perspective). **3-D object representation:** Polygon surfaces, quadric surfaces, spline representation, Bezier curve and B-Spline curves.

Unit V: Visible surface detection methods: Classification, back-face detection, depth-buffer, scan-line, BSP tree methods, area sub-division.

Unit VI: Computer animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages. **Color Models** – RGB, YIQ, CMY, HSV.

Text Books:

1. Computer Graphics C version, Donald Hearn, M.Pauline Baker, Pearson

2. Computer Graphics, Schaum's outlines", Zhigand xiang,Roy Plastock, 2nd Edition,Tata Mc-Graw Hill Edition.

3. Principles of Computer Graphics, S. Govil-Pai, 1st Edition, Springer International Edtion,2005.

Reference Books:

1. Computer Graphics Principles & practice, 2/e, Foley, VanDam, Feiner, Hughes, Pearson

2. Computer Graphics, Peter, Shirley, CENGAGE

3. Principles of Interactive Computer Graphics, Neuman , Sproul, TMH.

Annexure-CS-VII

III Sem	**OOPs Through C++**	**Course Code:** V20CST03	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Differentiate Procedural Oriented Programming and Object-Oriented Programming. **(K2)**
CO2: Develop programs using Classes and Objects. **(K3)**
CO3: Demonstrate Constructors, destructors & Operator-Overloading. **(K3)**
CO4: Construct Classes using inheritance and Exceptions. **(K3)**
CO5: Demonstrate Files and Generic Programming. **(K3)**

Syllabus

Unit-I: Introduction to Object-Oriented Programming – Programming Paradigms, Data Types, Variables, Constants, Operators,Decision Statements &Control Structures, Arrays, Namespace, Default Arguments, Constant Arguments, Parameter passing techniques, Features of Object-Oriented Programming.

Unit-II: Introduction to Classes and Objects: Defining Classes & Objects, Access specifiers, Scope Resolution Operator, Static Member variables, Static Member Functions, Array of Objects. Inline Functions, Overloading Member Functions, Objects as Function Arguments, Friend Functions, Friend Class, Local Class, Empty Class, Nested Classes, Return by Reference.

Unit-III: Introduction to Constructors: Characteristics, Constructor with Default Arguments, Parameterized Constructors, Overloading Constructors, Copy Constructor, Dynamic Constructors and Destructors, Anonymous Objects. Introduction to operator Overloading, Rules for Overloading Operators, Overloading Unary & Binary Operators, this keyword, Constraint on Increment and Decrement Operators, Overloading with Friend Functions, Type Conversions.

Unit-IV: Inheritance: Base class and Derived class, Single Inheritance, Multiple Inheritance, Multilevel Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual Base Classes, Constructor in Derived Classes. qualifier classes, Significance of Virtual Functions, Early Vs Late Binding, Pure Virtual Functions, Virtual Destructor. **Exception handling:** Principles of Exception Handling, Keywords, Exception Handling Mechanism, Multiple Catch Statements, Catching Multiple Exceptions, Re-throwing Exception.

Unit-V: Files: File Opening Modes, File Stream Classes, I/O manipulators, Classes for File Handling, Sequential Access Files, Random Access Files, Error Handling Functions.
Generic Programming with Templates: Need for Templates, Class Templates, Function Templates, overloading Template Functions. Introduction to Standard Template Library, Sequential Containers & Associative Containers.

Text Books:

1. Programming in C++, Ashok N Kamthane, 2nd Edition, Pearson.
2. C++ How to Program, Paul J. Deitel, Harvey Deitel, 6th edition, PHI publication.

.

Reference Books:

1. Object Oriented Programming C++, Joyce Farrell, Cengage.
2. Mastering C++, Venugopal, Raj Kumar, Ravi Kumar, TMH.
3. The Complete Reference C++, HerbertSchildt, 4th Edition, Mcgraw Hill.
4. Object Oriented Programming With C++, R. Subburaj, Vikas Publishing House.

III Sem	**Data Structures**	Course Code: V20CST04	L	T	P	C
			3	1	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the time and space complexities for searching and sorting algorithms. **(K2)**

CO2: Demonstrate linked lists and their applications. **(K3)**

CO3: Demonstrate Stacks and Queues. **(K3)**

CO4: Illustrate basic operations on binary trees. **(K3)**

CO5: Demonstrate Graphs and their applications. **(K3)**

Syllabus

Unit-I: Introduction, searching and sorting: Introduction to Data Structures, Types of Data Structures, Performance Analysis: Space complexity, time complexity, asymptotic notation. **Searching:** Linear, Binary and Fibonacci search. **Sorting**: Bubble sort, Selection sort, Insertion sort, radix sort, quick sort, and merge sort.

Unit-II: Single linked list: Representation of node, operations on single linked list, **Double linked list:** Representation of node, operations on double linked list. **Circular linked List:** Representation of node and its operations.

Unit-III: Stacks: Definition, Stack ADT, array representation, linked list representation, Towers of Hanoi, infix to postfix conversion, expression evaluation. **Queues:** definition, Queue ADT, Array representation, linked list representation, operations on queues, Applications of Queues, Circular Queue.

Unit-IV: Trees: Introduction: Terminology, representation of trees, **Binary trees:** abstract data type, Properties of binary trees, binary tree representation, **Tree Traversals:** Inorder, Preorder, Postorder. **Binary search trees:** Definition, searching BST, insert into BST, delete from a BST, Height of a BST.

Unit-V: Graph: Introduction, definition, types of Graphs, Graph Representation, operations. **Graph Traversal Techniques:** Breadth First Search, Depth First Search **Spanning Trees:** minimum cost spanning tree, Prim's and Kruskal's algorithms, Single source shortest Path and all pair shortest path algorithms.

Text Books:

1. Data Structures, algorithms and applications in C, SartajSahni, Universities press, Second Edition.
2. Fundamentals of Data Structures in C, Ellis Horowitz, SartajSahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

III Sem	Computer Organization and Architecture	Course Code: V20CST05	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Basic structure of Computers, Instruction types and their addressing modes. **(K2)**
CO2: Describe the different modes of Input / Output transfer. **(K2)**
CO3: Illustrate different types of Memory. **(K2)**
CO4: Describe the different types of Control Unit techniques. **(K2)**
CO5: Explain the Concepts of Pipelining and Parallel Processing **(K2)**

Syllabus

Unit-I: Introduction: Functional Units, Basic Operational Concepts, Bus Structures.
Instruction Sequencing and Addressing Modes: Instructions and Instruction Sequencing, Addressing modes, Basic Input/output Operations.

Unit-II: Input/output Organization: Accessing Input/output devices, Interrupts- Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Direct Memory Access, Buses- Synchronous and Asynchronous.

Unit-III: Memory Organization: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative memory, Cache Memory. (Morris Mano)

Unit-IV: Processing Unit: Fundamental Concepts, Execution of a Complete Instruction, Multiple-Bus Organization, Hardwired Control, Microprogrammed Control-Microinstructions, Microprogram Sequencing.

Unit-V: Pipelining: Basic Concepts, Data Hazards, Instruction Hazards
Parallelism: Parallel processing challenges – Flynn's classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

Text Books:

1. Computer Organization, Carl Hamacher, ZvonkoVranesic, SafwatZaky, 5th Edition, McGraw Hill Education.Computer System Architecture, M. Morris Mano, 3rd Edition, Pearson Education..
   David A. Patterson and John L. Hennessy, Computer Organization and Design: The Hardware/Software Interface, Fifth Edition, Morgan Kaufmann / Elsevier, 2014.

Reference Books:

1. Computer Organization and Architecture, William Stallings, 10th Edition, Pearson Education.
2. Computer Architecture and Organization, John P. Hayes, 3rd Edition, McGraw Hill Education.

III Sem	OOPs Through C++ Lab	Course Code: V20CSL03	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: DevelopPrograms onClasses and Objects. (K3)

CO2: Demonstrate Constructors, Destructors and Operator-Overloading, Inheritance and Polymorphism. (K3)

CO3: Develop programs to handle Exceptions & Files. (K3)

CO4: Demonstrate Generic Programming. (K3)

LIST OF EXPERIMENTS:

1. Demonstrate how to debug basic programs using GDB compiler.
2. Develop programs on control structures.
3. Construct programs for following concepts.
   a) Default Arguments b) Constant Arguments c)Reference Arguments
4. Construct programs for following concepts.
   a) Classes & Objects b) Inline functions
   c) Static Member functions d) Overloading of Member Functions
5. Develop programs for following concepts.
   a) Objects as Function Arguments b) Friend Functions, Friend class
   c) Local class d) Empty Class& Nested Classes
6. Develop programs for following concepts.
   a) Default constructor b) Constructor with arguments c) Copy constructor
7. Construct programs for following concepts.
   a) Binary b) Unary c) new d) delete
8. Construct programs for following concepts.
   a) Single b) Multilevel c) Hierarchical d) Hybrid
9. Demonstrate the use of Virtual Functions &Virtual Base class.
10. Develop programs to handle following Exceptions.
    a) Division-by-zero b) Overflow in an array
11. Develop programs for following file handling operations.
    a) Copying text files b) Displaying the contents of the file

12. Demonstrate Class template and Function Template.
13. Demonstrate Sequential Containers & Associative Containers.

Text Books:

1. Programming in C++, Ashok N Kamthane, 2nd Edition, Pearson.
2. C++ How to Program, Paul J. Deitel, Harvey Deitel, 6th Edition, PHI publication.

III Sem	**Data Structures Lab**	Course Code: V20CSL04	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Construct Programs on Sorting and Searching Techniques. **[K3]**

CO2: Illustrate Various Operations On Linked Lists. **[K3]**

CO3: Develop Programs On Stacks, Queues and Their Applications. **[K3]**

CO4: Develop Various Operations on Trees and Graphs **[K3]**

LIST OF EXPERIMENTS:

1. Practice following Sorting Techniques
   (A) Selection Sort (B) Quick Sort (C)Merge Sort
2. Practice following Searching Methods
   (A) Linear Search (B) Binary Search.
3. Develop program for
   Single Linked List and Its Operations. (Create, Insert, Delete, Display)
4. Develop program for Double Linked List and Its Operations.
5. Construct Stack along with their operations using Arrays.
6. Construct Queue along with their operations using Arrays.
7. Develop Circular Queue using Arrays.
8. Construct Queue along with their operations using Single Linked List.
9. Construct Binary Search Tree and Its Operations using double linked list.
10. Demonstrate Depth First Search and Breadth First Search Algorithm.
11. Develop Minimum Spanning Tree using Prim's Algorithm.
12. Develop Minimum Spanning Tree Kruskal's Algorithm.

Text books:

1. Data Structures, algorithms and applications in C++, SartajSahni, Universities press, Second Edition.
2. Fundamentals of Data Structures in C++, Ellis Horowitz, SartajSahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, RakeshNayak, Ch. Raja Ramesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

III Sem	**Linux Shell Scripting Lab**	Course Code: V20CSL05	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the basic knowledge of Linux commands and utilities by using Linux shell environment **(K3)**

CO2: Experiment with the Concept of shell Programming on Files and Directories **(K3)**

CO3: Experiment with the Concept of shell Programming on File Permissions **(K3)**

CO4: Experiment with the Concept of shell Programming on Conditional Statements **(K3)**

CO5: Experiment with the Concept of shell Programming on Looping Statements **(K3)**

LIST OF EXPERIMENTS:

1. Experiment the following Unix Commands:
   a) **General Purpose Utilities:** cal, date,man,who.
   b) **Directory Handling Commands:** pwd,cd,mkdir,rmdir.
   c) **File Handling Utilities:** cat,cp,ls,rm,nl,wc
   d) **Displaying Commands:** head, tail
   e) **Filters:** cmp,comm.,diff,sort,uniq
   f) **Disk Utilities:** du,df
2. Develop a Shell Program to Display all the words which are entered as command line arguments.
3. Develop a shell script that Changes Permissions of files in PWD as rwx for users.
4. Develop a shell script to print the list of all sub directories in the current directory.
5. Develop a Shell Program which receives any year from the keyboard and determine whether the year is leap year or not. If no argument is supplied the current year should be assumed.
6. Develop a shell script which takes two file names as arguments-If their contents are same then delete the second file.
7. Develop a shell script to print the given number in the reversed order.
8. Develop a shell script to print first 25 Fibbonacci numbers.
9. Develop a shell script to print the Prime numbers between the specified range.

10. Develop a shell script to delete all lines containing the word 'unix' in the files supplied as arguments.
11. Develop a shell script Menu driven program which has the following options.

    i) contents of /etc/passwd

    ii) list of users who have currently logged in.

    iii) present working directory.   iv) exit.

Text Books:

1. UNIX and Shell Programming: A Textbook, Behrouz A. Forouzan | Richard F. Gilberg, Cengage Learning
2. UNIX : Concepts and Applications, Sumithaba Das, 4th Edition, Tata McGrawHill.
3. Unix & Shell Programming, M.G.Venkatesh Murthy, Pearson Education
4. Unix shells by example,4th Edition Ellie Quigley, Pearson Education.

IV SEM	**Design and Analysis of Algorithms**	Course Code: V20CST07	L	T	P	C
			3	0	0	3

Syllabus Details

Course Outcomes: At the end of the Course student will be able to:

CO1: Demonstrate asymptotic notation and divide and conquer technique. **(K3)**
CO2: Use greedy technique to solve various problems. **(K3)**
CO3: Demonstrate dynamic programming technique to various problems. **(K3)**
CO4: Develop algorithms using backtracking technique. **(K3)**
CO5: Demonstrate branch and bound technique to various problems. **(K3)**

Unit-I: Introduction: What is an Algorithm, Algorithm Specification-Pseudo code Conventions Recursive Algorithms, Performance Analysis-Space Complexity, Time Complexity, Asymptotic Notation, Practical Complexities, Performance Measurement.

Divide and Conquer: General Method, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quick Sort-Performance Measurement,

Unit-II: The Greedy Method: The General Method, Knapsack Problem, Job Sequencing with Deadlines, Minimum-cost Spanning Trees-Prim's Algorithm, Kruskal's Algorithms, Optimal Merge Patterns, Single Source Shortest Paths.

Unit-III: Dynamic Programming: All Pairs Shortest Paths, Single Source Shortest paths General Weights, Explain Optimal Binary Search Trees, String Edition, 0/1 Knapsack, Reliability Design.

Unit-IV: Backtracking: The General Method, 8-Queens Problem, Sum of Subsets, Graph Coloring, and Hamiltonian Cycles.

UNIT-V: Branch and Bound: The Method-Least cost (LC) Search, The 15-Puzzle: an Example, Control Abstraction for LC-Search, Bounding, FIFO Branch-and-Bound, LC Branch and Bound, 0/1 Knapsack Problem-LC Branch-and Bound Solution, FIFO Branch-and-Bound Solution, Traveling Salesperson. Basic Concepts of NP-hard and NP-complete problems.

Text Books:

1. Fundamentals of computer algorithms E. Horowitz S. Sahni, University Press.

Reference Books:

1. Introduction to Algorithms Thomas H. Cormen, PHI Learning.

2. The Design and Analysis of Computer Algorithms, Alfred V. Aho, John E. Hopcroft, Jeffrey D.Ullman.

3. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh,

Distributed by WILEY publications, New Delhi.

4. Algorithm Design, Jon Kleinberg, Pearson.

IV Sem	**Software Engineering**	Course Code:	L	T	P	C
		V20CST08	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the Software Development life cycle Models. **(K3)**

CO2: Illustrate the Requirements engineering process and SRS document. **(K3)**

CO3: Develop the Software Architecture and Design Modeling. **(K3)**

CO4: Apply the Coding & Testing techniques and Risk management strategies. **(K3)**

CO5: Describe Project estimation techniques and Quality Management& Metrics. **(K2)**

Unit-I: Software and Software Engineering: The Nature of Software, Software Engineering, Software Process, Software Engineering Practice, Software Myths. **Software process models:** Waterfall model, Prototyping, Iterative development, Unified process, RAD model, Spiral model, and agile process.

Unit-II: Software Requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, SRS document. **Requirements engineering process:** Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.

Unit-III: Software Architecture: Role of software architecture, Architecture views, components and connector view, Cohesion and Coupling, documenting architecture design. **Design:** Design concepts, Function-oriented design, object-oriented design, UML diagrams, and Data flow diagram.

Unit-IV: Coding and Testing: Programming principles and guidelines, incrementally developing code. Testing concepts, testing process, Black-box & White-box testing. **Risk management**: Reactive vs. Proactive Risk strategies, Software risks, Risk identification, Risk projection, Risk refinement, RMMM Plan.

Unit-V: Software Project Estimation & Maintenance: Decomposition techniques, Empirical Estimation Models, Maintenance Process, Reengineering, Configuration Management. Metrics for Products & Quality Management: Software Measurement, Metrics for software quality, Quality concepts, Software Reviews, Formal technical reviews, SEI-CMM Model, Six Sigma and ISO 9000 quality standards.

Text Books:

1. Software Engineering, A practitioner's Approach- Roger S.Pressman, 7th Edition, McGrawHill International Edition.
2. Software Engineering- Ian Sommerville, 9th Edition, Pearson education.Software Engineering, A Precise approach, PankajJalote, Wiley

Reference Books:

1. CMMI and Six Sigma: Partners in Process Improvement, Jeannine M. Siviy,M. Lynn Penn, Robert W. Stoddard, 1st edition, Addison Wesley;
2. SoftwareEngineeringprinciplesandpractice,WSJawadekar, 3rdEdition,TMH.

V Sem	Database Management Systems	Course Code: V20CST09	L	T	P	C
			3	0	0	3

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Database systems, various Data models and Database architecture. (K2)
CO2: Develop various real time applications using Relational algebra and Relational calculus. (K3)
CO3: Apply various Normalization techniques to refine schema. (K3)
CO4: Explain Transaction management and Concurrency control. (K2)
CO5: Illustrate various Database indexing techniques. (K2)

UNIT-I: An Overview of Database Systems: Managing data, File systems verses DBMS, Advantages of DBMS, Data models, Levels of abstraction in a DBMS, Data independence, Structure of a DBMS, Client/Server Architecture, E.F.Codd Rules.

Database Design: Database design and ER Diagrams, Entities, Attributes, Entity sets, Relationships and Relationship sets, Conceptual design with ER Models.

UNIT-II: Relational Model: Integrity constraints over relations, Key constraints, Foreign key constraints, General constraints, Enforcing integrity constraints, Querying relational data

Relational Algebra: Selection and Projection, set operation, renaming, Joins, Division, Introduction to Views, destroying/altering Tables and Views

Relational Calculus: Tuple Relational Calculus, Domain Relational Calculus.

UNIT-III: SQL Queries, Constraints and Triggers: The Form of Basic SQL Query, Union, Intersect, Except, Nested Queries, Aggregate Operators, Null Values, Complex Integrity Constraints in SQL, Triggers and active data bases.

Schema Refinement (Normalization): Problems caused by redundancy, Decompositions, purpose of Normalizion, Schema refinement, Concept of functional dependency, Normal forms based on functional dependency (1NF, 2NF and 3NF), Concept of Surrogate key, Boyce-Codd Normal Form (BCNF), Lossless Join and Dependency preserving decomposition, Fourth Normal Form(4NF).

UNIT-IV: Transaction Management: Transaction, Properties of Transactions, Transaction Log, and Transaction management with SQL commit, rollback and savepoint.

Concurrency Control: Concurrency Control for Lost updates, Uncommitted data, Inconsistent retrievals and the Scheduler.

Concurrency Control with Locking Methods : Lock granularity, Lock types, Two phase locking for ensuring serializability, Deadlocks, Concurrency control with Time stamp ordering, Transaction recovery.

UNIT-V: Storage and Indexing: Overview of Storages and Indexing, Data on external storage, File organization and indexing, Clustered indexing, Primary and secondary indexes, Index data structures, Hash based indexing, Tree based indexing, Comparison of file organization

Text Books:

1. Database Management Systems, Raghu Ramakrishnan, Johannes Gehrke, 3rd Edition TATA McGraw Hill.
2. An Introduction to Database Systems, C.J Date,A.Kannan,S.J Swamynathan 8th Edition, Pearson Education

Reference Books:

1. Database Systems-Design, Implementation and Management, Peter Rob &Carlos Coronel 7th Edition, Course Technology Inc.
2. Fundamentals of Database Systems, Ramez Elmasri,Shamkant B. Navathe ,7th Edition, Pearson Education.
3. Database Systems - The Complete Book, Hector Garcia- Molina, Jeffry D Ullman, Jennifer Widom, 2nd Edition, Pearson.

IV Sem	**Java Programming**	Course Code:	L	T	P	C
		V20CST08	3	0	0	3

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Java Virtual Machine and Type casting. [K2]

CO2: Demonstrate Concepts like Constructors, Arrays, Nested Classes and Command Line Arguments. [K3]

CO3: Implement Concepts of Inheritance and Exception Handling [K3]

CO4: Develop programs on Multi-Threading and Files [K3]

CO5: Implement Event Handling and Swings. [K3]

Syllabus

UNIT-I: Introduction to Java: Introduction to Object Oriented Paradigm, Concepts of OOP, Applications of OOP, History of Java, Java Features, JVM, Program Structure. Variables, Primitive Data Types, Constants, String class, Primitive type conversion and Casting, Control Structures.

UNIT-II:ClassesandObjects: Classesandobjects,Classdeclaration,Creatingobjects, Methods, Constructors and Constructor Overloading, Importance of Static Keyword and Examples, this Keyword, Arrays, Command Line Arguments, Nested Classes, Garbage Collector.

UNIT-III: Inheritance and Exception Handling: Inheritance, super Keyword, final Keyword, Method Overriding and Abstract Class. Interfaces, Creating Packages, Using Packages, Importance of Class path. Exception Handling, Importance of try, catch, throw, throws and finally Block.

UNIT-IV: Multithreading and Files: Introduction, Thread Lifecycle, Creation of Threads, Thread Priorities, Thread Synchronization, Communication between Threads. Reading Data from Files and Writing Data to Files, Random Access Files.

UNIT-V: Event Handling and Swings: Introduction to AWT and Applets. Swings: Introduction, Components, Button, Label, Checkbox, List Boxes, Menu and Scrollbar, Layout Managers. **Event Handling :** Event Delegation Model, Sources of Events, Event Listeners, Adapter Classes.

Text Books:

1. Java Programming, E. Balagurusamy, 4thEdition, TMH.
2. The complete Reference Java, 8thEdition, Herbert Schildt,TMH.
3. Introduction to java programming, Y Daniel Liang, 7 Edition,Pearson.

Reference books:

1. Core Java: An Integrated Approach , R Nageswara Rao, 7thEdition, Dream Tech
2. Head First Java , Kathy Sierra and Bert Bates, 2nd Edition O'reilly

IV Sem	**Statistical Visualization using R Lab**	Course Code: V20CSL06	L	T	P	C
			0	0	3	1.5

Syllabus Details

Course Outcomes: At the end of the Course student will be able to:

CO1: Employ math and simulation in R [**K2**]
CO2: Demonstrate various types of data structures in R **[K3]**
CO3: Apply appropriate control structures to solve a particular Programming problem **[K3]**

CO4: Use R to graphically visualize data and results of statistical calculations **[K3]**

LIST OF EXPERIMENTS:

1. Demonstrate the basic math functions in R
2. Demonstrate Vector operations in R
3. Demonstrate Matrix operations in R
4. Demonstrate Array operations in R
5. Demonstrate Data frames in R
6. Demonstrate Lists in R
7. Illustrate the following controls statements in R
   a. if and else b. ifelse c. switch
8. Demonstrate for and while loops in R
9. Demonstrate importing and exporting data using R
10. Illustrate the descriptive statistics using summary() in R
11. Demonstrate the following statistical distribution functions in R:
    a. Normal Distribution
    b. Binomial Distribution
    c. Poisson Distribution
    d. Chi Square Distribution
12. Illustrate the following basic graphics in R:
    a. Bar plots
    b. Pie Charts
    c. Histograms
    d. Kernel density plots
    e. Boxplots
    f. Dotplots
13. Illustrate the Correlation and Covariance analysis using R
14. Illustrate the different types of t-tests using R
15. Illustrate the ANOVA test using R

Text Books:

1. R for Everyone, Jared P Lander, Pearson
2. R in Action,Rob I Kabacoff, Manning

Reference Book:

1. The Art of R Programming, Norman Matloff, No Starch Press

IV Sem	**Data Base Management System Lab**	Course Code: V20CSL07	L	T	P	C
			0	0	3	1.5

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1:	Construct SQL queries to perform different database operations.	(K3)
CO2:	Experiment with various constraints and Database Indexing Techniques.	(K3)
CO3:	Construct PL/SQL Cursors and Exceptions	(K3)
CO4:	Develop PL/SQL Functions, Procedures and Packages	(K3)
CO5:	Apply basic operations on collections of Mongo DB database	(K3)

<u>List of Experiments</u>

Part-A

1. Construct SQL queries to facilitate acquaintance of Built-In Functions, String Functions, Numeric Functions, Date Functions and Conversion Functions.
2. Construct SQL queries using Operators.
3. Construct SQL queries to Retrieve and Change Data: Select, Insert, Delete, and Update
4. Construct SQL queries using Group By, Order By, and Having Clauses.
5. Construct SQL queries on Controlling data: commit, rollback, and savepoint
6. Construct report using SQL *PLUS
7. Construct SQL queries for Creating, Dropping, and Altering Tables, Views, and Constraints
8. Construct SQL queries on Joins and Correlated Subqueries
9. Demonstrate Index,Sequence and Synonym.
10. Demonstrate Controlling access,locking rows for update and security features.

<u>PL/SQL</u>

11. Demonstrate Basic Variables, Anchored Declarations, and Usage of Assignment Operation Using PL SQL block
12. Demonstrate Bind and Substitution Variables using PL SQL block
13. Demonstrate Control Structures in PL SQL
14. Demonstrate Cursors, Exceptions and Composite Data Types in PL SQL.
15. Demonstrate Procedures, Functions, and Packages in PLSQL.

Part-B

1. Demonstrate the installation of Mongo DB database.
2. Demonstrate Creating and dropping database, collection in Mongodb.
3. Demonstrate Insertion, updation and deletion operations in Mongodb database.
4. Construct queries for Projection, limiting records, sorting records and aggregation in Mongodb database.

Text Books:

1. Oracle Database 11g The Complete Reference by Oracle Press, Kevin Loney
2. Database Systems Using Oracle, Nilesh Shah, 2nd Edition, PHI.
3. Introduction to SQL, Rick F Van der Lans, 4th Edition, Pearson Education.

Reference Books:

1. Oracle PL/SQL Interactive Workbook, B. Rosenzweig and E. Silvestrova,2nd Edition, Pearson education.
2. SQL & PL/SQL for Oracle 10 g, Black Book, Dr. P. S. Deshpande, Dream Tech.

<tr><td>V20CSL08</td><td>0</td><td>0</td><td>3</td><td>1.5</td></tr>
</table>

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Programs on Classes, Objects, Constructors and Arrays. **(K3)**

CO2: Demonstrate Inheritance and Exception Handling. **(K3)**

CO3: Implement programs on Multi-Threading and File Handling. **(K3)**

CO4: Implement Event handling using Swings. **(K3)**

List of Experiments

1. Develop programs on Control Structures and Type Conversions in java.
2. Develop programs using various String handling functions
3. Construct programs using the following concepts:
   a) Classes & Objects b) Usage of static c)Constructors
4. Construct programs using the following concepts.
   a) Arrays b) Nested Classes c) Command Line Arguments
5. Construct programs using the following concepts.
   a) Inheritance b) Usage of super c)Method Overriding
6. Construct programs using the following concepts.
   a) Usage of final b) Abstract class c)Interfaces
7. Implement the programs using the concepts
   a) Packages b) Exception Handling.
8. Implement the programs on Multi-Threading.
   a) Multiple Threads on Single Object b) Thread Deadlock
9. Construct a program that shows Inter-thread Communication
10. Construct programs to perform read and write operations on files.
    a) Sequential Files b) Random Access files
11. Develop GUI using Swings.
12. Construct programs on Event Handling using Listener Interfaces.

Text books:

1. The complete Reference Java, 8th Edition, Herbert Schildt, TMH.
2. Introduction to java programming, Y Daniel Liang, 7 Edition, Pearson.

Annexure-CS-VIII

Proposed Courses and Syllabi for other Branches under V20 Regulation

S.No.	Course Code	Course Name
1	V20CSL31	Data Structures Lab
2	V20CSL33	Python Programming Lab
3	V20CSL32	Object-Oriented Programming Through Java Lab

Syllabus Details

			L	T	P	C
	DATA STRUCTURES LAB	Course Code: V20CSL31	0	1	3	1.5
Branch	Common to ECE, EEE,ECT, CIVIL and MECH					

Course Outcomes:

CO1: Construct Sorting and searching methods. (K3)
CO2: Implement programs using Singly Linked Lists, Double Linked List. (K3)
CO3: Construct Basic Data Structures, Stacks, Queues and Applications. (K3)

CO4: construct Binary search tree (K3)
CO5: Implement various graph operations and shortest path algorithm. (K3)

List of Experiments

1. Bubble sort, Insertion sort, Selection sort, Quick sort, Merge sort.

   Programs to implement the following sorting techniques
   a) Selection sort b) Quick sort c) Merge sort

2. Linear search and Binary search.
   Programs to implement the following searching methods
   a) Linear search b) Binary search.

3. Basic Terminology, Classification of Data Structures, Operation on Data Structures. **Arrays**: Representation of arrays - Polynomial representation, Addition of two polynomials.

   A Program to implement addition of two polynomials. (using arrays).

4. single linked list Representation of node, operations on single linked list,
   A Program to implement single linked list and its operations. (create, insert, delete, display, reverse list)

5. **Double linked list**: operations like insert delete and display.
   A Program to implement double linked list and its operations.

6. **Stacks:** Introduction, Array representation, Operations, linked list representation, operation on linked stacks
   A Program to implement stack operations using arrays.
7. **Queues:** Introduction, Array representation, linked list representation, operation on queues, types of queues
   A Program to implement queue operations using arrays.
8. Applications of Stacks
   A Program to convert infix expression to postfix expression.

9. Introduction, Terminology, Representation of Trees, types of trees, **Binary Trees:** Properties of Binary Trees, Tree Traversals. **Binary Search Tree:** Introduction, Creation, insertion, delete, display.

   A Program to implement Binary search Tree and its operations.
10. **Graphs:** Introduction, Terminology, **Graph Traversal techniques**: Depth First Search, Breadth First Search
   A Program to implement graph traversal algorithms (BFS & DFS).

Text Books:

1. Data Structures, algorithms and applications in C++, Sartaj Sahni, Universities press, Second Edition.
2. Fundamentals of Data Structures in C++, Ellis Horowitz, Sartaj Sahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

	PYTHON PROGRAMMING LAB	Course Code: V20CSL32	L	T	P	C
			0	1	3	1.5
Branch	Common to ECE, EEE,ECT, CIVIL and MECH					

Syllabus Details

1. Course Outcomes:Upon completion of the course, students will be able to

CO1: Demonstrate Basic Python Programs (K3)
CO2: Construct control structures in python (K3)
CO3: Demonstrate functions and packages. (K3)
CO4: Construct python programs using structured data types. (K3)
CO5: Demonstrate Text Files (K3)

2. Syllabus

Basics of python programming: Features of python – History of Python - The Future of Python installation and execution - Data types – Identifiers - variables – type conversions-Literal Constants – Numbers – Strings. I/O statements.Operators and expressions, operator precedence – expression evaluation.

Exercise 1 - Basics
a) A sample Python Script using command prompt, Python Command Line and IDLE
b) A program to purposefully raise an Indentation Error and correct it

Exercise 2 - Operations
a) A program to compute distance between two points taking input from the user (Pythagorean Theorem)
b) A program on add.py that takes 2 numbers as command line arguments and prints its sum.

Decision Control statements: conditional (if), alternative (if-else), chained conditional (if-elif-else); **Iteration:** while loop, for loop, nested for loop, range function, break, continue and pass statements.

Exercise - 3 Control Flow
a) A Program to implement for checking whether the given number is a even number or not.
b) A program to construct reverse the digits of a given number and add it to the original, If the sum is not a palindrome repeat this procedure.
c) A program using a while loop that asks the user for a number, and prints a countdown from that number to zero.

Exercise 4 - Control Flow – Continued

a) A program to construct the following pattern, using a nested for loop.

```
*
* *
* * *
* * * *
* * * * *
* * * *
* * *
* *
*
```

b) By considering the terms in the Fibonacci sequence whose values do not exceed four million, find the sum of the even-valued terms.

Functions and modules : Introduction - Function Definition - Function Call – argument types- Scope and Lifetime - The return statement - More on Defining Functions - Lambda Functions or Anonymous Functions.

Exercise - 5 – Problem Solving using Functions
a) Find mean, median, mode for the given set of numbers passed as arguments to a function
b) Develop a function nearly_equal to test whether two strings are nearly equal. Two strings a and b are nearly equal when a can be generated by a single mutation on b.
c) Develop a Recursive Function to find the Factorial of a given number .
d) Develop function to compute gcd, lcm of two numbers. Each function shouldn't exceed one line.
Lists: list operations, list slices, list methods, mutability, cloning lists, list parameters. **Tuples**: tuple assignment, tuple as return value. **Set:** Set Creation, Set Operations. **Dictionaries**: Creation, operations; comprehension, operations on strings.

Exercise - 6 Structured Data types
a) a program to count the number of strings where the string length is 2 or more and the first and last character are same from a given list of strings.
b) a program to develop unzip a list of tuples into individual lists and convert them into dictionary.

Exercise – 7 Structured Data types Continued
a) A program to count the numbers of characters in the string and store them in a dictionary data structure
b) a program to use split and join methods in the string and trace a birthday with a dictionary data structure.
Documentation Strings- Modules – Packages

Exercise - 8– Modules
a) Install packages requests, flask and explore them using (pip)
b) A program to implement a script that imports requests and fetch content from the page. Eg. (Wiki)
c) Develop a simple script that serves a simple HTTP Response and a simple HTML Page

Introduction - Types of files - Text files - reading and writing files

Exercise - 9 Files
a) a program to count frequency of characters in a given file. Can you use character frequency to tell whether the given file is a Python program file, C program file or a text file?
b) a program to compute the number of characters, words and lines in a file.

Classes, Methods, Constructor, Inheritance, Overriding Methods, Data hiding

Exercise - 10 OOP
a) Class variables and instance variable and illustration of self variable
i) Robot
ii) ATM Machine

Text Books:

1. "Python Programming using problem solving Approach" ReemaThareja, Oxford University Press – 2017.
2. Python with Machine Learning by A.Krishna Mohan, Karunakar & T.Murali Mohan by S. Chand Publisher-2018.

	OBJECT-ORIENTED PROGRAMMING THROUGH JAVA LAB	Course Code: V20CSL33	L	T	P	C
			0	1	3	1.5
Branch	Common to ECE, EEE,ECT, CIVIL and MECH					

Syllabus Details

Course Outcomes: After the completion of this course, students will be able to

CO1: Use code editors and JDK tools to write, compile, and run Java programs.
CO2: Use control statements and arrays while programming.
CO3: Develop programs using classes and objects.
CO4: Use inheritance, interfaces and packages while developing programs in Java.
CO5: Apply exception-handling mechanism.
CO6: Develop multithreaded programs.

Syllabus:

CYCLE–I:Overview of Object-oriented Programming: Introduction to Object-oriented Programming, Principles of Object-oriented Programming Languages, and Applications of OOP.

Introduction to Java: History of Java, Java Features, Java Virtual Machine, Java Program Structure, Literals, Identifiers, Primitive Data types, Variables, Operators and Expressions, Operator Precedence and Associativity, Type Conversion and Casting.

Exercises

a) Develop a Java program to display the default values of all primitive data types of Java.
b) Construct a Java program that calculates the area of a triangle, given the lengths of all three sides.

Area $=\sqrt{(S(S-a)(S-b)(S-c))}$, where S = (a+b+c)/2.

CYCLE– II: Control Statements: Conditional Statements - if, switch; Iteration Statements - while, do-while, for, for-each version of for; Jump Statements - break, continue, return.

Arrays: Introduction to Arrays, Array Declaration and Initialization, One-Dimensional Arrays, Multi-Dimensional Arrays, Basic String Handling.

Exercises

a) Develop a Java program that displays
   i) The roots of a quadratic equation $ax^2+bx+c=0$
   ii) The nature of roots by calculating the discriminate D.
b) N bikers compete in a race such that they drive at a constant speed, which may or may not be the same as the other. To qualify the race, the speed of a racer must be more than the average speed of all N racers. Take as input, the speed of each racer and print back the speed of qualifying racers.
c) Develop a Java program that displays the name of the day, based on the value of day, using the switch statement.
d) Develop a Java program to search for an element in a given list of elements using Linear Search.
e) Develop a Java program to perform multiplication of two matrices.
f) Develop a Java program using StringBuffer to perform various operations on a string.

CYCLE– III: Introduction to Classes and Objects: General Form of a Class, Methods, Declaring Objects using new, Constructors, this Keyword, Understanding static, Method and Constructor Overloading, Using Command-Line Arguments, Garbage Collection.

Exercises

a) Construct a Java program to demonstrate class mechanism - Create a class that contains variables, methods, constructors and invoke those methods inside main().
b) Develop a Java program demonstrating the use of static variables, methods.
c) Develop a Java program demonstrating the use of this keyword.
d) Develop a Java program that implements method overloading.
e) Develop a Java program that implements constructor overloading.
f) Develop a Java program demonstrating the use of command-line arguments.

CYCLE– IV: Inheritance: Access Control, Introduction to Inheritance, Types of Inheritance, Using super, Method Overriding and Dynamic Method Dispatch, Using final, Abstract Classes.
Interfaces: Defining and Implementing Interfaces.**Packages:** Creating Packages, Importing Packages, Importance of CLASSPATH.

Exercises

a) Construct a Java program to demonstrate single inheritance.
b) Construct a Java program to demonstrate multi-level inheritance.
c) Construct a Java program that illustrates the use of super.
d) Develop a Java program that illustrates runtime polymorphism.
e) Develop a Java program that uses an abstract class to find areas of different shapes.
f) Develop a Java program using interfaces. In addition, use interfaces to achieve multiple inheritance.
g) Construct a Java program that creates a user-defined package. Use the package by importing it in another Java program.

CYCLE– V: Exception Handling: Exception-Handling Fundamentals, Using try and catch, Using throw, Using throws and finally, User-defined Exceptions.

Exercises

a) Develop a Java program to demonstrate exception-handling mechanism using try/catch. Use multiple catch clauses.
b) Construct a Java program for illustrating the use of throw.
c) Construct a Java program for illustrating the use of finally.
d) Construct a java program for demonstrating the creation and use of user-defined exceptions.

CYCLE– VI: Multithreading: Introduction to Multithreading, Creation of Threads, Thread Life Cycle, isAlive() and join(), Thread Synchronization, and Interthread Communication.

Exercises

a) Construct a Java program that creates threads by extending Thread class. The first thread displays “Good Morning” every 1 second, the second thread displays “Hello” every 2 seconds and thethird displays “Welcome” every 3 seconds.
b) Use Runnable to develop a Java program for the above problem.
c) Construct a java program illustrating isAlive() and join().
d) Develop a Java program to solve producer consumer problem using thread synchronization.

TEXT BOOKS:

1. Java: The Complete Reference; 8th edition; Herbert Schildt; TMH.
2. Programming in Java;2nd edition; SachinMalhotra, SaurabhChoudhary; Oxford University Press.
3. Core JAVA, An Integrated Approach; Dr. R. Nageswara Rao; Dreamtech Press.

Total Credits						16

			L	T	P	C
I-I	**Mathematical Foundations of Computer Science**	Course Code: **V21CTT01**	3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate skills in solving mathematical problems, mathematical principles and logic. (K3)
CO2: Demonstrate the basic concepts associated with set theory, relations, functions and their applications (K3)
CO3: Illustrate algebraic structures and concepts associated with Number Theory and their applications in computer science. (K3)
CO4: Manipulate and consider data numerically by using combinatorics. (K3)
CO5: Solve recurrence relations using various methods apply techniques of graphs for real-time problems(K3)

UNIT I: **Mathematical Logic**-Propositional Calculus: Statements and Notations, Connectives, Well Formed Formulas, Truth Tables, Tautologies, Equivalence of Formulas, Duality Law, Tautological Implications, Normal Forms, Theory of Inference for Statement Calculus, Consistency of Premises, Indirect Method of Proof. Predicate Calculus: Predicative Logic, Statement Functions, Variables and Quantifiers, Free and Bound Variables, Inference Theory for Predicate Calculus.

UNIT II: **Set Theory-**Introduction, Operations on Binary Sets, Principle of Inclusion and Exclusion, *Relations:* Properties of Binary Relations, Relation Matrix and Digraph, Operations on Relations, Partition and Covering, Transitive Closure, Equivalence, Compatibility and Partial Ordering Relations, Hasse Diagrams, *Functions:* Bijective Functions, Composition of Functions, Inverse Functions, Permutation Functions, Recursive Functions, Lattice and its Properties.

UNIT III: **Algebraic Structures and Number Theory-** *Algebraic Structures:* Algebraic Systems, Examples, General Properties, Semi Groups and Monoids, Homomorphism of Semi Groups and Monoids, Group, Subgroup, Abelian Group, Homomorphism, Isomorphism, *Number Theory:* Properties of Integers, Division Theorem, The Greatest Common Divisor, Euclidean Algorithm, Least Common Multiple, Testing for Prime Numbers, The Fundamental Theorem of Arithmetic, Modular Arithmetic (Fermat's Theorem and Euler's Theorem).

UNIT IV: **Combinatorics-** Basic of Counting, Permutations, Permutations with Repetitions, Circular Permutations, Restricted Permutations, Combinations, Restricted Combinations, Generating Functions of Permutations and Combinations, Binomial and Multinomial Coefficients, Binomial and Multinomial Theorems, The Principles of Inclusion–Exclusion, Pigeonhole Principle and its Application.

UNIT V: **Recurrence Relations-**Generating Functions, Function of Sequences, Partial Fractions, Calculating Coefficient of Generating Functions, Recurrence Relations, Formulation as Recurrence Relations, Solving Recurrence Relations by Substitution and Generating Functions, Method of Characteristic Roots, Solving Inhomogeneous Recurrence Relations, **Graph Theory:** Basic Concepts of Graphs, Sub graphs, Matrix Representation of Graphs: Adjacency Matrices, Incidence Matrices, Isomorphic Graphs, Paths and Circuits, Eulerian and Hamiltonian Graphs, Multigraphs, Planar Graphs, Euler's Formula, Graph Colouring and Covering, Chromatic Number, Spanning Trees, Algorithms for Spanning Trees (Problems Only and Theorems without Proofs).

Text Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J.P. Tremblay and P. Manohar, Tata McGraw Hill.
2. Elements of Discrete Mathematics-A Computer Oriented Approach, C. L. Liu and D. P. Mohapatra, 3rd Edition, Tata McGraw Hill.
3. Discrete Mathematics and its Applications with Combinatorics and Graph Theory, K. H. Rosen, 7th Edition, Tata McGraw Hill.

Reference Books:

1. Discrete Mathematics for Computer Scientists and Mathematicians, J. L. Mott, A. Kandel, T. P. Baker, 2nd Edition, Prentice Hall of India.
2. Discrete Mathematical Structures, Bernand Kolman, Robert C. Busby, Sharon Cutler Ross, PHI.
3. Discrete Mathematics, S. K. Chakraborthy and B.K. Sarkar, Oxford, 2011.

I-I	**Advanced Data Structures**	Course Code: **V21CTT02**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Select appropriate data structures as applied to specified problem definition. (**K2)**

CO2: Apply data structures such as linked list and trees on necessary applications. (**K3)**

CO3: Practice all data structures like stacks, queues, trees, graphs and compare their performance. **(K3)**

CO4: Discuss operations like searching, insertion, deletion and traversing on various data structures. (**K2)**

CO5: Apply data structures into the applications such as binary search trees, AVL, Red black trees. (**K3)**

UNIT I: **Arrays** Abstract Data Types and the C++ Class, The Array as an Abstract Data Type, The Polynomial Abstract Data type, Spares Matrices, Introduction- Sparse Matrix Representation- Transposing a Matrix- Matrix Multiplication, Representation of Arrays. **Stacks And Queues-** Templates in C++, The Stack Abstract Data Type, The Queue Abstract Data Type, Subtyping and Inheritance in C++, Evaluation of Expressions, Expression- Postfix Notation- Infix to Postfix.

UNIT II: **Linked Lists** Single Linked List and Chains, Representing Chains in C++, The Template Class Chain, Circular Lists, Available Space Lists, Linked Stacks and Queues, Polynomials, Equivalence Classes, Sparse Matrices, Doubly Linked Lists, Generalized Lists, Representation of Generalized Lists, **Trees** Introduction, Binary Trees, Binary Tree Traversal and Tree Iterators- Introduction, In order, Preorder, Post order Traversal, Thread Binary Trees, Heaps, Binary Search Trees.

UNIT III: **Graphs** The Graph Abstract Data Type, Elementary Graph Operation, Minimum Cost Spanning Trees, Shortest Paths and Transitive Closure, **Hashing**-Introduction, Static Hashing, Dynamic Hashing.

UNIT IV: **Priority Queues** Binomial heaps, Fibonacci Heaps, Symmetric Min-Max Heaps, **Efficient Binary Search Trees** Optimal Binary Search Trees, AVL trees, Red-Black Trees, Splay Trees.

UNIT V: **Multiyway Search Trees** m-way Search Trees, B- Trees, B+- Trees **Digital Search Trees** Digital Search Trees, Binary Tries and Patricia, Multiway Tries

Text Books:

1. Data structures, Algorithms and Applications in C++, S.Sahni, 2nd edition, Universities Press, Pvt. Ltd.
2. Data structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education. Ltd., Second Edition.
3. Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley student edition, John Wiley and Sons.

Reference Books:

1. Data structures and algorithms in C++, 3rd Edition, Adam Drozdek, Thomson
2. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
3. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

I-I	**Advanced Operating Systems** (Elective-I)	Course Code: **V21CTT03**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Explain architectures and issues in Distributed Operating Systems.(K2)

CO2: Illustrate different Distributed Mutual Exclusion Algorithms and Distributed Deadlock Algorithms. (K3)

CO3: Demonstrate Distributed Scheduling Algorithm and Distributed Shared Memory.(K3)

CO4: Apply various Cryptographic Algorithms for the protection of given data.(K3)

CO5: Demonstrate Multiprocessor Scheduling Algorithms and Concurrency Control Algorithms.(K3)

UNIT-I: **Architectures of Distributed Systems**: System Architecture Types, Distributed Operating Systems, Issues in Distributed Operating Systems. **Theoretical Foundations:** Inherent Limitations of a Distributed System, Lamport's Logical clocks, Vector Clocks, Global State, and Termination Detection.

UNIT-II: **Distributed Mutual Exclusion:** The classification of Mutual Exclusion Algorithms, Preliminaries, Non-Token-Based Algorithms, Lamport's Algorithm, The Ricart-Agrawala Algorithm, Token-Based Algorithms, Suzuki-kasami's Broadcast Algorithm, Singhal's Heuristic Algorithm. **Distributed Deadlock Detection:** Resource Vs Communication Deadlocks, A graph– theoretic Model, Deadlock handling strategies in Distributed Systems, Control Organizations for Distributed Deadlock Detection, Centralized Deadlock Detection Algorithms, Distributed Deadlock Detection Algorithms- A Path-Pushing, Edge-Chasing, Hierarchical Deadlock Detection Algorithms. **Agreement protocols**: The System Model, The Byzantine Agreement Problem, The Consensus Problem.

UNIT-III: **Distributed File Systems**: Mechanisms for Building Distributed File Systems, Design Issues. **Distributed Shared Memory**: Algorithms for Implementing DSM, Memory Coherence, Coherence Protocols, Design Issues. **Distributed Scheduling:** Issues in Load Distributing, Components of a Load Distributing Algorithm, Stability, Load Distributing Algorithms, Performance Comparison.

UNIT-IV: **Failure Recovery**: Backward and Forward Error Recovery, Consistent Set of Checkpoints, Synchronous and Asynchronous check Pointing and Recovery. **Fault Tolerance**: Commit Protocols, Non-blocking Commit Protocols, Voting Protocols. **Resource Protection and Security:** The Access Matrix Model. **Cryptography**: Private Key: Data Encryption Standard, Public Key Cryptography.

UNIT-V: **Multiprocessor System Architectures**: Basic Multiprocessor System Architectures, Interconnection Networks for Multiprocessor Systems, Caching, Hypercube Architectures. **Multiprocessor Operating Systems:** Threads, Process Synchronization, Processor Scheduling. **Database Operating Systems:** Concurrence Control Model of Database systems, Problem of Concurrency Control, Distributed Database Systems. **Concurrency Control Algorithms**: Lock Based Algorithms, Timestamp Based Algorithms.

TEXT BOOKS:

1. "Advanced concepts in operating systems: Distributed, Database and multiprocessor operating systems", Mukesh Singhal, Niranjan G.Shivaratri, TMH, 2001.

REFERENCE BOOKS:

1. "Modern operating system", Andrew S.Tanenbaum, PHI, 2003
2. "Distributed operating system-Concepts and design", Pradeep K.Sinha, PHI, 2003.
3. "Distributed operating system", Andrew S.Tanenbaum, Pearson education, 2003.

I-I	**Advanced Computer Architecture** (Elective-I)	Course Code: **V21CTT04**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Classify the types of computers, and new trends and developments in computer architecture**.** **(K2)**
CO2: Describe pipelining, instruction set architectures, memory addressing. **(K2)**
CO3: Demonstrate exploiting ILP using dynamic scheduling, multiple issue, and speculation**.** **(K3)**
CO4: Demonstrate the various techniques to enhance a processors ability to exploit Instruction level parallelism (ILP), and its challenges**.** **(K3)**
CO5: Illustrate multithreading by using ILP and supporting thread-level parallelism (TLP). **(K3)**

UNIT I: **Fundamentals of Computer Design**-Fundamentals of Computer design, Changing faces of computing and task of computer designer, Technology trends, Cost price and their trends, Measuring and reporting performance, Quantitative principles of computer design, Amdahl's law, Instruction set principles and examples- Introduction, Classifying instruction set- Memory addressing- type and size of operands, Operations in the instruction set.

UNIT II: **Pipelines-** Introduction, Basic RISC instruction set, Simple implementation of RISC instruction set, Classic five stage pipe lined RISC processor, Basic performance issues in pipelining, Pipeline hazards, Reducing pipeline branch penalties, **Memory Hierarchy Design-** Introduction, Review of ABC of cache, Cache performance, Reducing cache miss penalty, Virtual memory.

UNIT III: **Instruction** Level Parallelism the Hardware Approach: Instruction- Level parallelism, Dynamic scheduling, Dynamic scheduling using Tomasulo's approach, Branch prediction, high performance instruction delivery- hardware based speculation.

UNIT IV: ILP Software
Approach Basic compiler level techniques, Static branch prediction, VLIW approach, Exploiting ILP, Parallelism at compile time, Cross cutting issues - Hardware versus Software.

UNIT V: **Multi Processors and Thread Level Parallelism:**
Multi Processors and Thread level Parallelism- Introduction, Characteristics of application domain, Systematic shared memory architecture, Distributed shared– memory architecture, Synchronization, **Inter Connection and Networks-** Introduction, Interconnection network media, Practical issues in interconnecting networks, Examples of inter connection, Cluster, Designing of clusters, **Intel Architecture-** Intel IA-64 ILP in embedded and mobile markets Fallacies and pit falls.

Text Books:

1. JohnL. Hennessy, David A.Patterson –Computer Architecture: A Quantitative Approach, 3rd Edition, An Imprint of Elsevier.

References:

1. John P.Shen and Miikko H.Lipasti – Modern Processor Design: Fundamentals of Super Scalar Processors
2. Computer Architecture and Parallel Processing – Kai Hwang, Faye A.Brigs., MC Graw Hill.
3. Advanced Computer Architecture – A Design Space Approach – Dezso Sima, Terence Fountain, Peter Kacsuk , Pearson Ed

I-I	**Parallel Computing** (Elective-I)	Course Code: **V21CTT05**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe different parallel architectures; inter-connect networks, programming models, and algorithms for common operations such as matrix-vector multiplication. **(K2**)
CO2: Develop an efficient parallel algorithm to solve it. **(K3)**
CO3: Illustrate a parallel algorithm time complexity as a function of the problem size and number of processors. **(K3)**
CO4: Illustrate Matrix Multiplication and Sorting Techniques. **(K3)**
CO5: Explain parallel algorithm using MPI, Open MP, pthreads, or a combination of MPI and Open MP. **(K2)**

UNIT I: **History-** Introduction, Modern Scientific Method, Evolution of Supercomputing, Modem Parallel Computers, Seeking Concurrency, Data Clustering, Programming Parallel Computers. **Parallel Architectures:** Introduction, Interconnection Networks, Processor Arrays, Multiprocessors, Multi computers, Flynn's Taxonomy

UNIT II: **Parallel Algorithm Design-** Introduction, The Task/Channel Model, Foster's Design Methodology, Boundary Value Problem ,Finding the Maximum, The n-Body Problem, Adding Data Input, **Message-Passing Programming-** Introduction, The Message-Passing Model, The Message-Passing Interface , Circuit Satisfiability, Introducing Collective Communication, Benchmarking Parallel Performance.

UNIT III: **The Sieve of Eratosthenes-**Introduction, Sequential Algorithm, Sources of Parallelism, Data Decomposition options, Developing the Paralle1 Algorithm, Analysis of Parallel Sieve Algorithm, Documenting the Parallel Program, Benchmarking, Improvements, **Performance Analysis-** Introduction, Speedup and Efficiency, Amdahl's Law, Gustafson-Barsis's Law, The Karp-Flatt Metric, The Iso-efficiency Metric.

UNIT IV: **Matrix Multiplication,** Introduction, Sequential Matrix Multiplication, Row wise Block-Striped Parallel Algorithm, Cannon's Algorithm, Solving Linear Systems, Back Substitution, Gaussian Elimination, Iterative Methods, **Sorting** Introduction, Quick sort, A Parallel Quick sort Algorithm, Hyper quick sort Algorithm, Parallel Sorting by Regular Sampling.

UNIT V: **Shared-Memory Programming –** Introduction, The Shared-Memory Model, Parallel for Loops, Declaring Private Variables, Critical section, Reductions, Performance Improvements, More General Data Parallelism, Functional Parallelism, **Combining MPI and OpenMP** -Introduction, Conjugate Gradient Method, Jacobi Method.

Text Books:

1. Parallel Programming in C with MPI and OpenMP Michael J, Quinn Oregon State University.

Reference books:

1. Distributed and Cloud Computing: From Parallel Processing to the Internet of Things 1st Edition, Kai Hwang , Jack Dongarra, Geoffrey C. Fox

I-I	**Advanced Databases** (Elective-II)	Course Code: **V21CTT06**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Explain Distributed Database Process, Architecture, and Design Principles. **(K2)**
CO2: Apply Distributed Query Optimization Techniques and Algorithms. **(K3)**
CO3: Illustrate and apply Concurrency Control and Reliability Techniques. **(K3)**
CO4: Illustrate Need of Complex Data type like ORDBMS and OODBMS. **(K3)**
CO5: Identify Emerging Database Models and case study on Time Series Database. **(K2)**

UNIT I: Database Analysis and Design Techniques: Review of basic Database Concepts, Database Design Methodologies. ER Modeling: Specialization, Generalization, Aggregation, Normalization Theory. Database Implementation using UML: Introduction to UML, Structure diagrams, behavioral diagrams, object oriented analysis, class diagram, Advanced Transaction Processing and Concurrency Control: Transaction Concepts, Concurrency Control: Locking Methods, Time stamping Methods, Optimistic Methods for Concurrency Control, Concurrency Control in Distributed Systems.

UNIT II: Query Compiler: Introduction, parsing, generating logical query plan from parse tree. Query Processing: Physical-Query-plan Operators. Operations: selection, sorting, join, project, set. Query Evaluation: Introduction, Approaches to QE, Transformation of relational expressions in Query optimization, heuristic optimization, cost estimation for various operations, transformation rule.

UNIT III: Distributed Database Centralized DBMS and Distributed DBMS, functions and architecture of a DDBMS, Distributed Data Storage, Transparency issues in DDBMS, Query Processing DDBMS, Distributed transaction Management and Protocols, Distributed Concurrency Control and Deadlock Management.

UNIT IV: Object Oriented Database Limitations of RDBMS, Need of Complex Datatype, Data Definition, ODBMS Fundamentals, issues in OODBMS, Object- oriented database design. Comparison of ORDBMS and OODBMS.

UNIT V: Emerging Database Models, Technologies and Applications Multimedia database-Emergence, difference from other data types, structure, deductive databases, GIS and spatial databases, Knowledge database, Information Visualization, Wireless Networks and databases, Personal database, Digital libraries, web databases, case studies.
Time Series Database(TSD): Time Series Database, Importance of TSD, TSD Vs Relational DB, RTA and TSD, TSD as stream processing solution.

Text Books:

1. Advanced database management system by RiniChkrabarti and Shibhadra Dasgupta, Dreamtech.
2. Distributed Databases by Ozsu and Valduriez ,Pearson Education.

Reference Books**:**

1. Fundamentals of Database Systems by Ramez Elmasri, Shamkant Navathe, Pearson Education
2. Database System Concepts by Abraham Silberschatz, Henry F. Korth, S. Sudarshan, Tata McGraw-Hill.

I-I	**Advanced Computer Networks** (Elective-II)	Course Code: **V21CTT07**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe the functionalities and services provided by the network layer. (K2)

CO2: Apply IP addressing for the given network. (K3)

CO3: Select the transport protocol appropriate for a given application. (K3)

CO4: Discriminate between different types of multimedia communications. (K2)

CO5: Describe the working, types and challenges involved in Adhoc networks & SDN. (K2)

UNIT I: **Network layer-**Network Layer design issues: store-and forward packet switching, services provided transport layers, implementation connection less services, implementation connection oriented services, comparison of virtual – circuit and datagram subnets. **Routing Algorithm** –shortest path routing, flooding, distance vector routing, link state routing, Hierarchical routing, Broadcast routing, Multicasting routing, routing for mobiles Hosts, routing in Adhoc networks, **Congestion control algorithms**-Load shedding, Congestion control in Data gram Subnet.

UNIT II: **IPV4 Address** address space, notations, classful addressing, classless addressing network addressing translation(NAT) , **IPV6 Address** structure address space, **Internetworking** need for network layer internet as a data gram, internet as connection less network. **IPV4** datagram, Fragmentation, checksum, options. **IPV6** Advantages, packet format, extension Headers, Transition form IPV4 to IPV6

UNIT III: **Process to process delivery:** client/server paradigm, multiplexing and demultiplexing, connectionless versus connection oriented services, reliable versus reliable. **UDP:** well known ports for UDP, user data gram, check sum, UDP operation, and uses of UDP **TCP:** TCP services, TCP features, segement, A TCP connection, Flow control, error control, congestion control. **SCTP:** SCTP services SCTP features, packet format, An SCTP association, flow control, error control. **Congestioncontrol**: open loop congestion control, closedloop congestion control, Congestion control in TCP, frame relay, **Quality Of Service**: flow characteristics, flow classes **Techniques To Improve QOS**: scheduling, traffic shaping, resource reservation, admission control.

UNIT IV: **Multimedia-** introduction digital a audio , Audio compression, streaming audio, internet radio, voice over IP, introduction to video, video compression, video on demand, the MBone-the multicast back bone

UNIT V: **Emerging trends Computer Networks- Mobile Ad hoc networks**: applications of Ad hoc networks, challenges and issues in MANETS,MAC layers issues, routing protocols in MANET, transport layer issues, Ad Hoc networks security. **Wireless sensors networks:** WSN functioning, operation system support in sensor devices, WSN Characteristics, sensor network operation, sensor Architecture: cluster management; **Wireless mesh networks** WMN design, Issues in WMNs;

Software-defined networking (SDN): importance of SDN, working principle of SDN, Benefits of SDN, SDN vs Traditional Networking, Different models of SDN.

Text Books:

1. Data communications and networking 4th edition Behrouz A Fourzan, TMH.
2. Computer networks 4th edition Andrew S Tanenbaum, Pearson.
3. Computer networks, Mayank Dave, CENGAGE.

Reference Books:

1. Computer Networks, A system Approach, 5th ed, Larry L Peterson and Bruce S Davie, Elsevier.
2. https://www.vmware.com/topics/glossary/content/software-defined-networking.

			L	T	P	C
I-I	**Object Oriented Software Engineering** (Elective-II)	Course Code: **V21CTT08**	**3**	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Apply the Object Oriented Software-Development Process to design software. (K3)
CO2: Illustrate the Object Oriented Software Architecture & Design patterns. (K3)
CO3: Examine theDesign and Plan software solutions to problems using an object-oriented Testing strategies. (K4)
CO4: Illustrate the Object Oriented metrics for designing the projects. (K3)
CO5: Develop the CASE Tools
& Integrated CASE environments for Object Oriented Software. (K3)

UNIT I: Introduction to Software Engineering: Software, Software Crisis, Software Engineering definition, Evolution of Software Engineering Methodologies, Software Engineering Challenges. Software Processes: Software Process, Process Classification, Phased development life cycle, Software Development Process Models- Process, use, applicability and Advantages/limitations.

UNIT II: Object oriented Paradigm, Object oriented Concepts, Classes, Objects, Attributes, Methods and services, Messages, Encapsulation, Inheritance, Polymorphism, Identifying the elements of object model, management of object oriented Software projects, Object Oriented Analysis, Domain Analysis, Generic Components of OOA model,, OOA Process, Object Relationship model, Object Behavior Model, Object Oriented Design: Design for Object- Oriented systems, The Generic components of the OO design model, The System design process, The Object design process, Design Patterns, Object Oriented Programming.

UNIT III: Object Oriented testing: Broadening the view of Testing, Testing of OOA and OOD models, Object-Oriented testing strategies, Test case design for OO software, testing methods applicable at the class level, Interclass test case design

UNIT IV: Technical Metrics for Object Oriented Systems: The Intent of Object Oriented metrics, The distinguishing Characteristics, Metrics for the OO Design model, Class-Oriented metrics, Operation-Oriented Metrics, Metrics foe Object Oriented testing, Metrics for Object Oriented projects

UNIT V: Computer-Aided Software Engineering: What is CASE?, Building blocks for CASE, A taxonomy of CASE tools, Integrated CASE environments, The Integration Architecture, The CASE Repository

Text Books:

1. Object Oriented and Classical Software Engineering, 7/e, Stephen R. Schach, TMH.
2. Object oriented and Classical Software Engineering, Timothy Lethbridge, Robert Laganiere, TMH
3. Software Engineering by Roger S Pressman, Tata McGraw Hill.

Reference Books:

1. Component based Software Engineering: ivica Crnkovic, Springer.

I-I	**Advanced Data Structures Lab**	Course Code: **V21CTL01**	**L**	**T**	**P**	**C**
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Develop solutions for a range of problems using object oriented programming. (**K3)**

CO2: Practice complex problems using advanced data structures like arrays, stacks, queues, linked lists, graphs and trees. **(K3)**

CO3: Practice operations like searching, insertion, deletion and traversing on various data structures. (**K3)**

CO4: Apply data structures into the applications such as binary search trees, AVL, Red black trees. (**K3)**

CO5: Differentiate various hash functions. (**K2)**

List of Experiments

Experiment 1:

Develop a program to implement Polynomial additions using Arrays.

Experiment 2:

Develop a program to implement Polynomial additions using linked lists.

Experiment 3:

Develop a program to implement Multi Stack ADT using Arrays with the basic operations as Create(), IsEmpty(), Push(), Pop(), IsFull() with appropriate prototype to a functions.

Experiment 4:

Develop a program to implement Queue ADT using Linked list with the basic functions of Create(), IsEmpty(), Insert(), Delete() and IsFull() with suitable prototype to a functions.

Experiment 5:

Develop a program to transfer data from stack to queue.

Experiment 6:

Develop a program to implement the following ADT using Linked list with the basic functions of Create(), IsEmpty(), Insert(), Delete() and IsFull() with suitable prototype to a functions.

i) Double Ended Queue (Dequeues)
ii) Circular Queues

Experiment 7:

Develop a program to generate the binary tree from the given inorder, preorder and post order traversal.

Experiment 8:

Develop a program to implement insertion, deletion and display operation in Min- Max Heap for the given data as integers.

Experiment 9:

Develop a program for Binary Search Tree to implement following operations:

a) Insertion
b) Deletion
   i. Delete node with only child
   ii. Delete node with both children
c) Finding an element
d) Finding Min element
e) Finding Max element
f) Left child of the given node
g) Right child of the given node
h) Finding the number of nodes, leaves nodes, full nodes, ancestors, descendants

Experiment 10:

Develop a program to implement BFS and DFS for a Graph.

Experiment 11:

Develop a program to implement to generate a min-cost spanning tree

a) Kruskal's algorithm
b) Prim's algorithm

Experiment 12:

Develop a program to store k keys into an array of size n at the location computed using a hash function, loc = key % n, where k<=n and k takes values from [1 to m], m>n. To handle the collisions use the following collision resolution techniques,

a) Linear probing
b) Quadratic probing
c) Double hashing/rehashing

Experiment 13:

Develop a program for AVL Tree to implement following operations: (For nodes as integers)

a) Insertion: Test program for all cases (LL, RR, RL, LR rotation)
b) Deletion: Test Program for all cases (R0, R1, R-1, L0, L1, L-1)
c) Display: using set notation

Experiment 14:

Develop a program to generate the B-tree of order 2-3 for a given list of integers.

Experiment 15:

Develop a program to perform string matching using Boyer-Moore algorithm.

Text Books:

1. Data structures, Algorithms and Applications in C++, S.Sahni, 2nd edition, Universities Press, Pvt. Ltd.
2. Data structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education. Ltd., Second Edition.
3. Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley student edition, John Wiley and Sons.

Reference Books:

1. Data structures and algorithms in C++, 3rd Edition, Adam Drozdek, Thomson
2. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
3. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

Advanced Computing Lab-1

NOTE: **Lab programs based on elective taken by student may be offered.**

I-I	Advanced Operating Systems Lab	Course Code: **V21CTL02**	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate deadlock avoidance and detection algorithms in a distributed environment (K3)
CO2: Demonstrate efficient clock synchronization and election algorithms. (K3)
CO3: Describe Client server architecture (K2)

List of Experiments

Experiment 1: **Develop a program to implement Deadlocks through Simulation.**

Experiment 2: **Develop a Case Study of 3 tier client server architecture.**

Experiment 3: **Develop a Case study on Client and RMI Server.**

Experiment 4: **Develop a program to implement any one Election algorithms.**

Experiment 5: **Develop a program to show the software simulation for Clock Synchronization in Distributed System using Lamport's Algorithm.**

Experiment 6: **Develop a program to implement Banker's Algorithm for avoiding Deadlock.**

TEXT BOOKS:

1. "Advanced concepts in operating systems: Distributed, Database and multiprocessor operating systems", Mukesh Singhal, Niranjan G.Shivaratri, TMH, 2001.

REFERENCE BOOKS:

1. "Modern operating system", Andrew S.Tanenbaum, PHI, 2003
2. "Distributed operating system-Concepts and design", Pradeep K.Sinha, PHI, 2003.
3. "Distributed operating system", Andrew S.Tanenbaum, Pearson education, 2003.

I-I	**Parallel Computing Lab**	Course Code: **V21CTL03**	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Develop an efficient parallel algorithm to solve it. (K3)

CO2: Use parallel algorithm using MPI, OpenMP, pthreads, or a combination of MPI and OpenMP.(K3)

List of Experiments

Experiment 1: Develop a parallel program that computes the sum 1+2+------+ in the following

Manner. Each process I assigns the value i+1 to an integer, and then the processes perform a sum reduction. As a way of double-checking the result, process 0 should also compute and print the value p(p+1)/2.

Experiment 2: Implement A print number is a positive integer evenly divisible by exactly two positive integers: itself and .The first five prime numbers are 2,3,5,7 and 11. Sometimes two consecutive odd numbers are both prime. For example, the odd integers following 3,5 and 11 are all prime numbers. However, the odd integer following 7 is not a prime number. Write a parallel program to determine, for all integers less then 1,000,000, the number of times that two consecutive odd integers are both prime.

Experiment 3: Develop a program implementing the parallel matrix multiplication algorithm.

Experiment 4: Develop a MPI program implementing consecutive gradient.

Experiment 5: Develop a MPI program to implementing Quick sort.

Text Books:

1. Parallel Programming in C with MPI and OpenMP Michael J, Quinn Oregon State University.

Reference books:

2. Distributed and Cloud Computing: From Parallel Processing to the Internet of Things 1st Edition, Kai Hwang , Jack Dongarra, Geoffrey C. Fox

I-I	**Advanced Computer Networks Lab**	Course Code: **V21CTL04**	L	T	P	C
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate various routing protocols. (K3)

CO2: Develop sub netting and addressing IP. (K3)

CO3: Develop emerging trends and security issues in computer Networks. (K3)

List of Experiments

Experiment 1:

Configuration of IP addressing for a given scenario for a given set of topologies.

Experiment 2:

Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address.

Experiment 3:

Configure, implement and debug the following: Use open source tools for debugging and diagnostics.

a) ARP/RARP protocols

b) RIP routing protocols

c) BGP routing

d) OSPF routing protocols

e) Static routes (check using netstat)

Text Books:

1. Data communications and networking 4th edition Behrouz A Fourzan, TMH
2. Computer networks 4th edition Andrew S Tanenbaum, Pearson
3. Computer networks, Mayank Dave, CENGAGE

Reference Books:

I-I	**Object Oriented Software**	Course	L	T	P	C

	Engineering Lab	Code: **V21CTL05**	**0**	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Apply software solutions to problems using an object-oriented strategy. **(K3)**

CO2: Construct the object oriented software systems Model using Unified Modeling Language (UML). **(K3)**

List of Experiments

Experiments 1:

Develop the following for the given project

a) Define the problem statement, Software Requirement Specification, entity relationship diagram,

b) Dataflow diagrams for level 0 and level 1,

c) Draw use-case diagram

d) Draw the activity diagram of all use cases.

e) Draw sequence diagram of all use cases

f) Draw collaboration diagram of all use cases, and Assign objects in Sequence diagram to classes and make class diagrams.

Text Books:

1. Object Oriented and Classical Software Engineering, 7/e, Stephen R. Schach, TMH.
2. Object oriented and Classical Software Engineering, Timothy Lethbridge, Robert Laganiere, TMH
3. Software Engineering by Roger S Pressman, Tata McGraw Hill.

Reference Books:

I-II	**Web Technologies**	Course Code: **V21CTT09**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Demonstrate the basics of JavaScript. (K3)

CO2: Illustrate the concepts of XML and AJAX. (K3)

CO3: Produce Dynamic web pages with PHP and MySQL. (K3)

CO4: Use PERL to retrieve documents from the web. (K3)

CO5: Describe the fundamentals of RUBY Programming. (K2)

Syllabus:

UNIT-I: **Java script-** The Basic of Java script: Objects, Primitives Operations and Expressions, Screen Output and Keyboard Input, Control Statements, Object Creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions

UNIT-II: **XML-** Document type Definition, XML schemas, Document object model, XSLT, DOM and SAX Approaches, **AJAX A New Approach:** Introduction to AJAX, Integrating PHP and AJAX.

UNIT-III: **PHP Programming- Introducing PHP:** Creating PHP script, Running PHP script. **Working with variables and constants:** Using variables, Using constants, Data types, Operators. **Controlling program flow:** Conditional statements, Control statements, Arrays, functions. Working with forms and Databases such as MySQL.

UNIT-IV: PERL- Introduction to PERL, Operators and if statements, Program design and control structures, Arrays, Hashs and File handling, Regular expressions, Subroutines, Retrieving documents from the web with Perl.

UNIT-V: RUBY: Introduction to Ruby, Variables, types, simple I/O, Control, Arrays, Hashes, Methods, Classes, Iterators, Pattern Matching. Overview of Rails.

TEXT BOOKS:

1. Programming the World Wide Web, Robet W Sebesta, 7ed, Pearson.
2. Web Technologies, Uttam K Roy, Oxford

Reference Book:

1. The Web Warrior Guide to Web Programming, Bai, Ekedahl, Farrelll, Gosselin, Zak, Karparhi, Maclntyre, Morrissey, Cengage.
2. Programming world wide web-Sebesta, Pearson Education, 2007.
3. Core SERVLETS AND JAVA SERVER PAGES VOLUME 1: CORE TECHNOLOGIES By Marty Hall and Larry Brown Pearson Internet and World Wide Web – How to program by Dietel and Nieto PHI/Pearson Education Asia.

I-II	**Data Science through Python Programming**	Course Code: **V21CTT10**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Illustrate the python basics and the working of various built-in objects in Python. (K2)

CO2: Describe the process of data collection using python. (K2)

CO3: Manipulate data using Pandas and NumPy libraries of python. (K3)

CO4: Apply various techniques for cleaning and pre-processing the data. (K3)

CO5: Demonstrate data visualization techniques using python matplotlib. (K3)

Syllabus:

UNIT I: **PYTHON Basics and Programming Concepts:** Introducing Python, Types and Operations - Numbers, Strings, Lists, Tuples, Dictionaries, Files, Numeric Types, Dynamic Typing; Statements and Syntax - Assignments, Expressions, Statements, Loops, iterations, comprehensions; Functions - Function Basics, Scopes, Arguments, Advanced Functions; Modules - Module Coding Basics, Module Packages, Advanced Module Topics; Classes and OOP - Class, Operator Overloading, Class Designing; Exceptions and Tools - Exception Basics, Exception Coding Details, Exception Objects, Designing With Exceptions, Parallel System Tools

UNIT II: **GUI Programming:** Graphical User Interface - Python gui development options, Adding Widgets, GUI Coding Techniques, Customizing Widgets; Internet Programming - Network Scripting, Client-Side scripting, Pymailgui client, server-side scripting, Pymailcgi server; Tools and Techniques - databases and persistence, data structures, text and language, python/c integration

UNIT III: **Pandas and NumPy:** Numpy Basics - Fast Element wise array functions, Multidimensional Array, Data Processing using arrays, file i/o with arrays; Pandas - Data Structures, Essential Functionality, Summarizing and Computing Descriptive Statistics, Handling Missing Data, Hierarchical Indexing

UNIT IV: **Data Preprocessing:** Data Loading, Storage, and FileFormats - Reading and Writing data in text format, binary data formats, interacting with html and web apis, interacting with databases; Data Wrangling: Clean, Transform, Merge, Reshape - Combining and Merging Data Sets, Reshaping and Pivoting, Data Transformation, String Manipulation; Data Aggregation and Group Operations – Group by Mechanics, Data Aggregation, Groupby Operations and and Transformations, Pivot Tables and Cross- Tabulation

UNIT V: **Data Visualization:** A Brief matplotlib API Primer, Plotting Functions in pandas, Time Series, Financial and Economic Data Applications

Text Books:

1. Learning Python , O'Reilly, Mark Lutz
2. Programming Python, O'Reilly, Mark Lutz
3. Python For Data Analysis (O'Reilly, Wes Mckinney)

Reference Text Books:

1. Python: The Complete Reference, Martin C. Brown, McGraw Hill Education
2. Head First Python, Paul Barry, O'Reilly

I-II	**Machine Learning** (Elective –III)	Course Code: **V21CTT11**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe Knowledge for Productive use of Machine Learning and Diversity of Data (K2)
CO2: Demonstrate on Supervised and Computational Learning (K3)
CO3: Illustrate on Statistics in learning techniques and Logistic Regression (K3)
CO4: Illustrate on Support Vector Machines and Perceptron Algorithm (K3)
CO5: Construct a Multilayer Perceptron Networks and classification of decision tree (K3)

UNIT-I: **Introduction-**Towards Intelligent Machines, Well posed Problems, Example of Applications in diverse fields, Data Representation, Domain Knowledge for Productive use of Machine Learning, Diversity of Data: Structured / Unstructured, Forms of Learning, Machine Learning and Data Mining, Basic Linear Algebra in Machine Learning Techniques.

UNIT-II: **Supervised Learning-** Rationale and Basics: Learning from Observations, Bias and Why Learning Works: Computational Learning Theory, Occam's Razor Principle and Overfitting Avoidance Heuristic Search in inductive Learning, Estimating Generalization Errors, Metrics for assessing regression, Metris for assessing classification.

UNIT-III: **Statistical Learning-** Machine Learning and Inferential Statistical Analysis, Descriptive Statistics in learning techniques, Bayesian Reasoning: A probabilistic approach to inference, K-Nearest Neighbor Classifier. Discriminant functions and regression functions, Linear Regression with Least Square Error Criterion, Logistic Regression for Classification Tasks, Fisher's Linear Discriminant and Thresholding for Classification, Minimum Description Length Principle.

UNIT-IV: **Support Vector Machines (SVM)-** Introduction, Linear Discriminant Functions for Binary Classification, Perceptron Algorithm, Large Margin Classifier for linearly seperable data, Linear Soft Margin Classifier for Overlapping Classes, Kernel Induced Feature Spaces, Nonlinear Classifier, Regression by Support vector Machines.

Learning with Neural Networks: Towards Cognitive Machine, Neuron Models, Network Architectures, Perceptrons, Linear neuron and the Widrow-Hoff Learning Rule, The error correction delta rule.

UNIT -V: Multilayer Perceptron Networks and error back propagation algorithm, Radial Basis Functions Networks. **Decision Tree Learning**: Introduction, Example of classification decision tree, measures of impurity for evaluating splits in decision trees, ID3, C4.5, and CART decision trees, pruning the tree, strengths and weakness of decision tree approach.

Textbooks:

1. Applied Machine Learning,1e, M.Gopal, Mc Graw Hill Education, 2018

Reference Books

1. Kevin Murphy, Machine Learning: A Probabilistic Perspective, MIT Press, 2012
2. Trevor Hastie, Robert Tibshirani, Jerome Friedman, The Elements of Statistical Learning, Springer 2009 (freely available online)
3. Christopher Bishop, Pattern Recognition and Machine Learning, Springer, 2007.

<table>
<tr><td rowspan="2">I-II</td><td rowspan="2">Ad Hoc & Sensor Networks
(Elective –III)</td><td rowspan="2">Course Code:
V21CTT12</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Course Outcomes: After completion of course, students would be able to

CO1: Explain the Fundamental Concepts and applications of ad hoc and wireless sensor networks (K2)
CO2 : Describe the MAC protocol issues of ad hoc networks (K2)
CO3 : Describe routing protocols for ad hoc wireless networks with respect to TCP design issues (K2)
CO4 : Explain the concepts of network architecture and MAC layer protocol for WSN (K2)
CO5 : Discuss the WSN routing issues by considering QoS measurements (K2)

UNIT I: **Introduction :** Fundamentals of Wireless Communication Technology, The Electromagnetic Spectrum, Radio propagation Mechanisms ,Characteristics of the Wireless channel mobile ad hoc networks (MANETs), **Wireless Sensor Networks (WSNs):** concepts and architectures, Applications of Ad Hoc and Sensor Networks, Design Challenges in Ad hoc and Sensor Networks.

UNIT II: **MAC Protocols For Ad Hoc Wireless Networks:** Issues in designing a MAC Protocol, Issues in Designing a MAC Protocol for Ad Hoc Wireless Networks, Design Goals of a MAC Protocol for Ad Hoc Wireless Networks, Classification of MAC Protocols, Contention based protocols, Contention based protocols with Reservation Mechanisms, Contention based protocols with Scheduling Mechanisms, Multi channel MAC - IEEE 802.11.

UNIT III: **Routing Protocols And Transport Layer In Ad Hoc Wireless Networks**: Routing Protocol: Issues in designing a routing protocol for Ad hoc networks, Classification, proactive routing, reactive routing (on-demand), hybrid routing, Transport Layer protocol for Ad hoc networks, Design Goals of a Transport Layer Protocol for Ad Hoc Wireless Networks, Classification of Transport Layer solutions- TCP over Ad hoc wireless, Network Security, Security in Ad Hoc Wireless Networks, Network Security Requirements.

UNIT IV: **Wireless Sensor Networks (WSNS) And Mac Protocols**: Single node architecture - hardware and software components of a sensor node, **WSN Network architecture:** typical network architectures, data relaying and aggregation strategies, **MAC layer protocols:** self-organizing, Hybrid TDMA/FDMA and CSMA based MAC -IEEE 802.15.4.

UNIT V: **WSN Routing, Localization & Qos:** Issues in WSN routing, OLSR, Localization, Indoor and Sensor Network Localization, absolute and relative localization, triangulation, QOS in WSN, Energy Efficient Design, Synchronization.

Text Books:

1. "Ad Hoc Wireless Networks: Architectures and Protocols ", C. Siva Ram Murthy, and B. S. Manoj, Pearson Education, 2008
2. “Wireless Adhoc and Sensor Networks”, Labiod. H, Wiley, 1st edition-2008

2. "Wireless Sensor Networks", Feng Zhao and LeonidesGuibas,Elsevier Publication 2nd edition-2004
3. “Protocols and Architectures for Wireless Sensor Networks”, Holger Karl and Andreas Willig,Wiley, 2005 (soft copy available)
4. “Wireless Sensor Networks Technology, Protocols, and Applications”, KazemSohraby, Daniel Minoli, &TaiebZnati, John Wiley, 2007. (soft copy available)

I-II	**Internet of Things** (Elective –III)	Course Code: **V21CTT13**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Describe the term 'internet of things' in different contexts. (K2)
CO2: Develop various protocols for IoT. (K3)
CO3: Develop a PoC of an IoT system using Rasperry Pi/Arduino (K3)
CO4: Apply data analytics and use cloud offerings related to IoT. (K3)
CO5: Demonstrate applications of IoT in real time scenario (K3)

UNIT I: **FUNDAMENTALS OF IoT:** Evolution of Internet of Things, Enabling Technologies, IoT Architectures,oneM2M, IoT World Forum (IoTWF) and Alternative IoT models, Simplified IoT Architecture and Core IoT Functional Stack, Fog, Edge and Cloud in IoT, Functional blocks of an IoT ecosystem, Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II: **IoT PROTOCOLS:** IT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and Lora WAN, Network Layer: IP versions, Constrained Nodes and Constrained Networks, Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks, Application Transport Methods: Supervisory Control and Data Acquisition, Application Layer Protocols: CoAP and MQTT. Bluetooth Smart Connectivity-Overview, Key Versions, BLE-Bluetooth Low Energy Protocol, Low Energy Architecture.

UNIT III: **DESIGN AND DEVELOPMENT:** Design Methodology, Embedded computing logic,Microcontroller, System on Chips, IoT system building blocks, Arduino, Board details, IDE programming, Raspberry Pi, Interfaces and Raspberry Pi with Python Programming.

UNIT IV: **Arm Based Embedded System Design:** ARM Cortex-A class processor, Embedded Devices-ARM Cortex-M Class processor, Networking-Bluetooth Smart Technology **Introduction to embedded systems**: CPUs vs MCU's vs Embedded Systems, Examples, Options for Building Embedded Systems, Features of Embedded Systems, Building Embedded Systems, Building Embedded Systems using MCUs, Introduction to mbedTM Platform

UNIT V: **CASE STUDIES/INDUSTRIAL APPLICATIONS:** Cisco IoT system, IBM Watson IoT platform, Manufacturing, Converged Plant wide Ethernet Model (CPwE), Power Utility Industry, Grid Blocks Reference Model, Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control.

Text Books:

1. IoT Fundamentals: Networking Technologies, Protocols and Use Cases for Internet of Things, David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Rob Barton and Jerome Henry, Cisco Press, 2017
2. The Definitive Guide to ARM Cortex-M3 and M4 Processors, 3rd Edition, Joseph Yiu

Reference Books:

1. Internet of Things – A hands-on approach, Arshdeep Bahga, Vijay Madisetti, Universities Press, 2015
2. The Internet of Things – Key applications and Protocols, Olivier Hersent, David Boswarthick, Omar Elloumi and Wiley, 2012 (for Unit 2).
3. “From Machine-to-Machine to the Internet of Things – Introduction to a New Age of Intelligence”, Jan Ho¨ ller, Vlasios Tsiatsis, Catherine Mulligan, Stamatis, Karnouskos, Stefan Avesand. David Boyle and Elsevier, 2014.
4. Architecting the Internet of Things, Dieter Uckelmann, Mark Harrison, Michahelles and Florian (Eds), Springer, 2011.
5. Recipes to Begin, Expand, and Enhance Your Projects, 2nd Edition, Michael Margolis, Arduino Cookbook and O’Reilly Media, 2011.
6. Cortex–A series Programmer’s Guide for ARMv7-A by Arm http://infocenter.arm.com/help/index.jsp?topic=/com.arm.doc.den0013d/index.htmlc

I-II	**Principles of Cyber Security** (Elective-IV)	Course Code: **V21CTT14**	**L**	**T**	**P**	**C**
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Apply cyber security architecture principles. (K3)

CO2: Describe risk management processes and practices (K2).

CO3: Construct cyber security incidents to apply appropriate response (K3)

CO4: Differentiate system and application security threats and vulnerabilities. (K2)

CO5: Identify security tools and hardening techniques. (K1)

UNIT–I: **Introduction to Cyber security-** Cyber security objectives**,** Cyber security roles**,** Differences between Information Security & Cyber security, **Cyber security Principles-**Confidentiality, integrity, &availability Authentication & non- repudiation.

UNIT–II: **Information Security (IS) within Lifecycle Management-**Lifecycle management landscape, Security architecture processes, Security architecture tools, Intermediate lifecycle management concepts, **Risks & Vulnerabilities-**Basics of risk management**,** Operational threat environments**,** Classes of attacks.

UNIT–III: **Incident Response-** Incident categories**,** Incident response Incident recovery, and **Operational security protection**: Digital and data assets, ports and protocols, Protection technologies, Identity and access Management, configuration management.

UNIT–IV: **Threat Detection and Evaluation (DE): Monitoring-** Vulnerability Management, Security Logs and Alerts, Monitoring Tools and Appliances**. Analysis-** Network traffic Analysis, packet capture and analysis .

UNIT–V: **Introduction to backdoor System and security-**Introduction to metasploit, Backdoor, demilitarized zone(DMZ),Digital Signature, Brief study on Hardening of operating system.

<table>
<tr><td rowspan="2">I-II</td><td rowspan="2">Cloud Computing (Elective –IV)</td><td rowspan="2">Course Code: V21CTT15</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>3</td><td>0</td><td>0</td><td>3</td></tr>
</table>

Course Outcomes: After completion of course, students would be able to

CO1: Interpret the key dimensions of the challenge of Cloud Computing (K2)

CO2: Examine the economics, financial and technological implications for selecting cloud computing for own organization. (K3)

CO3: Explain the financial, technological, and organizational capacity of employer's for actively initiating and installing cloud-based applications (K2)

CO4: Examine the own organizations' needs for capacity building and training in cloud computing- related IT areas. (K3)

CO5: Illustrate Virtualization for Data-Center Automation. (K2)

SYLLABUS:

UNIT I: **Introduction:** Network centric computing, Network centric content, peer-to –peer systems, cloud computing delivery models and services, Ethical issues, Vulnerabilities, Major challenges for cloud computing. **Parallel and Distributed Systems:** Introduction, architecture, distributed systems, communication protocols, logical clocks, message delivery rules, concurrency, model concurrency with Petri Nets.

UNIT II: **Cloud Infrastructure:** At Amazon, The Google Perspective, Microsoft Windows Azure, Open Source Software Platforms, Cloud storage diversity, Inter cloud, energy use and ecological impact, responsibility sharing, user experience, Software licensing, **Cloud Computing:** Applications and Paradigms: Challenges for cloud, existing cloud applications and new opportunities, architectural styles, workflows, The Zookeeper, The Map Reduce Program model, HPC on cloud, biological research.

UNIT III: **Cloud Resource virtualization:** Virtualization, layering and virtualization, virtual machine monitors, virtual machines, virtualization-full and para, performance and security isolation, hardware support for virtualization, Case Study: Xen, vBlades, **Cloud Resource Management and Scheduling**: Policies and Mechanisms, Applications of control theory to task scheduling, Stability of a two-level resource allocation architecture, feedback control based on dynamic thresholds, coordination, resource bundling, scheduling algorithms, fair queuing, start time fair queuing, cloud scheduling subject to deadlines, Scheduling Map Reduce applications, Resource management and dynamic application scaling.

UNIT IV: **Storage Systems:** Evolution of storage technology, storage models, file systems and database, distributed file systems, general parallel file systems. Google file system. Apache Hadoop, Big Table, Megastore (text book 1), Amazon Simple Storage Service(S3) (Text book 2), **Cloud Security:** Cloud security risks, security – a top concern for cloud users, privacy and privacy impact assessment, trust, OS security, Virtual machine security, Security risks.

UNIT V: **Cloud Application Development:** Amazon Web Services : EC2 – instances, connecting clients, security rules, launching, usage of S3 in Java, Installing Simple Notification Service on Ubuntu 10.04, Installing Hadoop on Eclipse, Cloud based simulation of a Distributed trust algorithm, Cloud service for adaptive data streaming (Text Book 1), **Google:** Google App Engine, Google Web Toolkit (Text Book 2), **Microsoft:** Azure Services Platform, Windows live, Exchange Online, Share Point Services, Microsoft Dynamics CRM (Text Book 2).

Text Books:

1. Cloud Computing, Theory and Practice, Dan C Marinescu, MK Elsevier
2. Cloud Computing, A Practical Approach, Anthony T Velte, Toby J Velte, Robert Elsenpeter, TMH

Reference book:

Mastering Cloud Computing, Foundations and Application Programming, Raj Kumar Buyya, Christen vecctiola, S Tammarai selvi, TMH

I-II	**Natural Language Processing** (Elective –IV)	Course Code: **V21CTT16**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Explain approaches to syntax and semantics in NLP. (K2)
CO2: Demonstrate approaches to discourse, generation, dialogue and summarization within NLP. (K3)
CO3: Explain current methods for statistical approaches to machine translation. (K2)
CO4: Identify machine learning techniques used in NLP, including hidden Markov models and probabilistic (K2)
CO5: Explain context-free grammars, clustering and unsupervised methods, log-linear and discriminative models, and the EM algorithm as applied within NLP (K2)

UNIT-I: **Introduction:** NLP tasks in syntax, semantics, and pragmatics. Applications such as information extraction, question answering, and machine translation. The problem of ambiguity. The role of machine learning. Brief history of the field.

UNIT-II: **N-gram Language Models:** The role of language models, Simple Ngram models. Estimating parameters and smoothing. Evaluating language models. **Part of Speech Tagging and Sequence Labeling:** Lexical syntax. Hidden Markov Models. Maximum Entropy Models. Conditional Random Fields

UNIT-III: **Syntactic parsing:** Grammar formalisms and tree banks. Efficient parsing for context-free grammars (CFGs). Statistical parsing and probabilistic CFGs (PCFGs). Lexicalized PCFGs.

UNIT-IV: **Semantic Analysis:** Lexical semantics and word-sense disambiguation. Compositional semantics. Semantic Role Labeling and Semantic Parsing.

UNIT- V: **Information Extraction (IE) and Machine Translation (MT):**
Named entity recognition and relation extraction. IE using sequence labeling. Basic issues in MT. Statistical translation, word alignment, phrase based translation, and synchronous grammars. Dialogues: Turns and utterances, grounding, dialogue acts and structures Natural Language Generation: Introduction to language generation, architecture, discourse planning (text schemata, rhetorical relations).

I-II	**Advanced Web Technologies Lab**	Course Code: **V21CTL06**	**L**	**T**	**P**	**C**
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Develop static web pages using HTML, CSS. **(K3)**

CO2: Demonstrate the concepts of JavaScript and DHTML. **(K2)**

CO3: Demonstrate the basic concepts of PHP and JSP. **(K2)**

CO4: Demonstrate the concepts of Extensible markup language & AJAX. **(K2)**

CO5: Develop dynamic Web Applications using PHP & MySQL. **(K3)**

<u>List of Experiments</u>

1. a) Create a Simple HTML home page provides links to move to other pages like hobbies, educational info, personal info etc.
   b) Create a HTML program to illustrate the use of frame and frameset tags of HTML.
   c) Create a HTML Program which use a HTML controls to create a student information form to collect student's information like name, address, phone, email, sex, birth date, hobbies etc.
2. a) Create a webpage which displays "Hello World" with font size 20 pixels, bold format, in "Times New Roman" font and green in color using inline CSS, embedded CSS and external CSS.
   b) Create a webpage which displays the class time table and apply the following effects on the table:

   - For the table header apply *blue* as the background color and *white* for the color of the text in the table header.
   - Display *day names* (Mon, Tue etc...) in bold format with the first letter in the day name in uppercase.
   - Display *lunch* slightly in bigger font other than the remaining text.

   c) Create a webpage to manage personal details like name, class, qualifications, photo, address etc., using tables and other suitable HTML tags. Apply the following style information:

   - Display the heading of the page in *Times New Roman* font and with 24px size.
   - Align all the field names like Name, Class, Photo etc to *right* in the table.
   - Apply *light blue* as background color for the left side cells in the table which contains field names like Name, Class etc...
   - Also display your college logo as background image in the top right position of the web page.

   d) Create a web page containing two images, where one image overlaps another image by using the *z-index* CSS property.

3. a) Create a HTML Program which demonstrates loops like for loop, do while, while in java script.
   b) Create a HTML Program which demonstrates the use of functions in java script.
   c) Create a HTML Program which demonstrates various events like onclick,

ondbclick, onfocus, onblur, onchange, onmouseover, onmouseover, window event, onload, onunload event.

d) Create a HTML Program to create various functions and sub routines to validate the data entered by user in form.

4. a) Create a program to illustrate the concept of associative array in PHP.
   b) Create PHP program to implement the concept of Session management.
   c) Create a PHP program to display student information in webpage. Student‘s data is stored in My SQL database.
   d) Create a PHP program to insert student information from HTML form. Student‘s data is stored in My SQL database.
5. a) Create a well-formed XML document.
   b) Create a valid XML document using DTD.
   c) Create a valid XML document using XML Schema.
   d) Create a XML document which contains details of cars and display the same as a table using XSLT.
   e) Write a Java program to parse the XML document containing car details using SAX API.
6. a) Create a servlet to display "Hello World" in the browser.
   b) Create a servlet to store email-id as an initialization parameter and print the same email-id by reading the initialization parameter from the web.xml file.
   c) Create a servlet to retrieve name and branch details from a html page and print the same using the servlet.
   e) Create a HTML page which accepts book id, book name and book price and a submit button. When the user clicks the submit button, all the values assigned to the previous text fields must be stored in a session object and the control forwards to another servlet where the values stored in the session are retrieved and displayed.
7. a) Create a JSP page to display "Hello World" in the browser.
   b) Create a JSP page to store email-id as an initialization parameter and print the same email-id by reading the initialization parameter from the web.xml file.
   c) Create a JSP page to retrieve name and branch details from a html page and print the same using a servlet.
   d) Create a HTML page which accepts book id, book name and book price and a submit button. When the user clicks the submit button, all the values assigned to the previous text fields must be stored in a session object and the control forwards to a JSP page where the values stored in the session are retrieved and displayed.
8. Create a HTML page which accepts student regd.no. and prints the results of that student by retrieving the results from the database. Use AJAX to display the "please wait..." while the server is processing the request and print the result of the student when the server returns the result. Server resource can be either servlet or JSP or PHP

I-II	**Data Science Applications with Python Lab**	Course Code: **V21CTL07**	**L**	**T**	**P**	**C**
			0	**0**	**4**	**2**

Course Outcomes: After completion of course, students would be able to

CO1: Use data science operations like data collection, management and storing. (K3)
CO2: Apply Python programming concepts in data science, including their real-world applications. (K3)
CO3: Develop data collection and management scripts using Python Pandas. (K3)

List of Experiments

Experiment 1:
Develop a Python Program to Find the Sum of the Series: 1 + 1/2 + 1/3 + .. + 1/N

Experiment 2:
Develop a Python Program to Split the array and add the first part to the end

Experiment 3:
Develop a Python Program to Create a List of Tuples with the First Element as the Number and Second Element as the Square of the Number

Experiment 4:
Develop a Python program to count number of vowels using sets in given string

Experiment 5:
Develop a program to implement permutation of a given string using inbuilt function.

Experiment 6:
Develop a python program to sort list of dictionaries by values in Python – Using lambda function.

Experiment 7:
Develop a Python Program for following sorting:
i. Quick Sort ii. Heap Sort

Experiment 8:
Develop a Python Program to Reverse a String Using Recursion

Experiment 9:
Develop a Python Program to Count the Number of Words in a Text File

Experiment 10:
Develop a Python Program to Read the Contents of a File in Reverse Order

Experiment 11:
Develop a program to Merge and Join DataFrames with Pandas in Python

Experiment 12:
Develop a program to implement Merge and Join Data Frames with Python Pandas

Experiment 13:
Develop a Python Program to Append the Contents of One File to Another File

Experiment 14:

Explain how to install and Load CSV files to Python Pandas

Text Books:

1. Learning Python , O'Reilly, Mark Lutz
2. Programming Python, O'Reilly, Mark Lutz
3. Python For Data Analysis (O'Reilly, Wes Mckinney)

II-I	**Mobile Applications and Development** (Elective-V)	Course Code: **V21CTT18**	**L**	**T**	**P**	**C**
			3	**0**	**0**	**3**

Course Outcomes: After completion of course, students would be able to

CO1: Describe Installation and configuration of Android application development tools. (K2)

CO2: Develop applications using services and publishing android applications. (K3)

CO3: Demonstrate Android software development tools. (K3)

CO4: Illustrate debugging programs running on mobile devices. (K2)

CO5: Develop Android applications using server-less database like SQLite. (K3)

Unit I: **Introduction to Android:** The Android 4.1 jelly Bean SDK, Understanding the Android Software Stack, installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text view Control, Using the Android Emulator, The Android Debug Bridge(ADB), Launching Android Applications on a Handset.

Unit II: **Basic Widgets:** Understanding the Role of Android Application Components, Understanding the Utility of Android API, Overview of the Android Project Files, Understanding Activities, Role of the Android Manifest File, Creating the User Interface, Commonly Used Layouts and Controls, Event Handling, Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit Text Control, Choosing Options with Checkbox, Choosing Mutually Exclusive Items Using Radio Buttons.

Unit III: **Building Blocks for Android Application Design:** Introduction to Layouts, Linear Layout, Relative Layout, Absolute Layout, Using Image View, Frame Layout, Table Layout, Grid Layout, Adapting to Screen orientation. Utilizing Resources and Media Resources, Creating Values Resources, Using Drawable Resources, Switching States with Toggle Buttons, Creating an Images Switcher Application, Scrolling Through Scroll View, playing Audio, Playing Video, Displaying Progress with Progress Bar, Using Assets.

Unit IV: **Using Selection widgets and Debugging:** Using List View, Using the Spinner control, Using the GridView Control, Creating an Image Gallery Using the ViewPager Control, Using the Debugging Tool: Dalvik Debug Monitor Service(DDMS), Debugging Application, Using the Debug Perspective. Displaying And Fetching Information Using Dialogs and Fragments: What Are Dialogs?, Selecting the Date and Time in One Application, Fragments, Creating Fragments with java Code, Creating Special Fragments

Unit V: **Building Menus and Storing Data:** Creating Interface Menus and Action Bars, Menus and Their Types, Creating Menus Through XML, Creating Menus Through Coding, Applying a Context Menu to a List View, Using the Action Bar, Replacing a Menu with the Action Bar, Creating a Tabbed Action Bar, Creating a Drop-Down List Action Bar Using Databases: Using the SQLiteOpenHelperclasss, Accessing Databases with the ADB, Creating a Data Entry Form, Communicating with SMS and Emails: Understanding Broadcast Receivers, Using the Notification System, Sending SMS Messages with Java Code, Receiving SMS Messages, Sending Email, Working With Telephony Manager.

Text Books

1. Android Programming by B.M Harwani, Pearson Education, 2013.

References Text Books:

1. Android application Development for Java Programmers, James C Sheusi, Cengage Learning
2. Android In Action by w.Frank Ableson, Robi Sen, Chris King, C. Enrique Ortiz., Dreamtech.
3. Professional Android 4 applications development, Reto Meier, Wiley India, 2012.
4. Beginning Android 4 applications development, Wei- Meng Lee, Wiley India,2013.

II-I	**Big Data Analytics** (Elective-V)	Course Code: **V21CTT19**	L	T	P	C
			3	0	0	3

Course Outcomes: After completion of course, students would be able to

CO1: Illustrate big data and its use cases from selected business domains. (K3)
CO2: Interpret and summarize No SQL and Cassandra (K3)
CO3: Discuss the HADOOP and Map Reduce technologies associated with big data analytics and explore on Big Data applications Using Hive. (K2)
CO4: Define the use of Apache Spark, RDDs etc. to work with datasets. (K1)
CO5: Assess real time processing with Spark Streaming. (K3)

Syllabus:

UNIT I: What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and big data, risk and big data, credit risk management, big data and algorithmic trading, big data and healthcare, big data in medicine, advertising and big data, big data technologies, introduction to Hadoop, open source technologies, cloud and big data, mobile business intelligence, Crowd sourcing analytics, inter and trans firewall analytics.

UNIT II: Introduction to NoSQL, aggregate data models, aggregates, key-value and document data models, relationships, graph databases, schema less databases, materialized views, distribution models, sharding, master-slave replication, peer-peer replication, sharding and replication, consistency, relaxing consistency, version stamps, Working with Cassandra ,Table creation, loading and reading data.

UNIT III: Data formats, analyzing data with Hadoop, scaling out, Architecture of Hadoop distributed file system (HDFS), fault tolerance ,with data replication, High availability, Data locality , Map Reduce Architecture, Process flow, Java interface, data flow, Hadoop I/O, data integrity, compression, serialization. Introduction to Hive, data types and file formats, HiveQL data definition, HiveQL data manipulation, Logical joins, Window functions, Optimization, Table partitioning, Bucketing, Indexing, Join strategies.

UNIT IV: Apache spark- Advantages over Hadoop, lazy evaluation, In memory processing, DAG, Spark context, Spark Session, RDD, Transformations- Narrow and Wide, Actions, Data frames ,RDD to Data frames, Catalyst optimizer, Data Frame Transformations, Working with Dates and Timestamps, Working with Nulls in Data, Working with Complex Types, Working with JSON, Grouping, Window Functions, Joins, Data Sources, Broadcast Variables, Accumulators, Deploying Spark- On-Premises Cluster Deployments, Cluster Managers- Standalone Mode, Spark on YARN , Spark Logs, The Spark UI- Spark UI History Server, Debugging and Spark First Aid

UNIT V: Spark-Performance Tuning, Stream Processing Fundamentals, Event-Time and State full Processing - Event Time, State full Processing, Windows on Event Time-Tumbling Windows, Handling Late Data with Watermarks, Dropping Duplicates in a Stream, Structured Streaming Basics - Core Concepts, Structured Streaming in Action, Transformations on Streams, Input and Output.

Text Books:

1. Big Data, Big Analytics: Emerging, Michael Minnelli, Michelle Chambers, and Ambiga Dhiraj
2. SPARK: The Definitive Guide, Bill Chambers & Matei Zaharia, O'Reilly, 2018 Edition
3. Business Intelligence and Analytic Trends for Today's Businesses", Wiley, 2013
4. P. J. Sadalage and M. Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World Polyglot Persistence", Addison-Wesley Professional, 2012
5. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilly, 2012

Reference Books:

1. "Hadoop Operations", O'Reilly, Eric Sammer, 2012
2. "Programming Hive", O'Reilly, E. Capriolo, D. Wampler, and J. Rutherglen, 2012
3. "HBase: The Definitive Guide", O'Reilly, Lars George, 2011
4. "Cassandra: The Definitive Guide", O'Reilly, Eben Hewitt, 2010
5. "Programming Pig", O'Reilly, Alan Gates, 2011.

Minutes of the 5th Meeting of Board of Studies in Mathematics held on 27-09-2021 at 2:00 PM through online zoom meeting.

S.No	Name of the Member	Designation & Address	Designation on
1	Sri. N Raja Sekhar	Assoc. Professor & HOD	Chairman
2	Prof. G.V.S.R.Deekshitulu	Professor, Department of Mathematics, UCEK, JNTUK, Kakinada	University Nominee
3	Dr. K.K.M. Sarma	Professor, Department of Mathematics, Andhra University, Visakhapatnam	Council Nominee
4	Prof. Y.N.Reddy	Professor, Department of Mathematics, NIT Warangal	Council Nominee
5	Dr. T.S.R Murthy	Professor of Mathematics, Sri Vishnu Engineering College for Women,	Academician
6	Sri SK Dhana Prasad	Assistant.Professor of Mathematics, Section Head	Member
7	Smt.B.Adi Lakshmi	Assistant.Professor of Mathematics	Member
8	Smt.G S Prasanthi	Assistant.Professor of Mathematics	Member
9	Sri.A Kiran Kumar	Assistant.Professor of Mathematics	Member
10	Sri.D.N.V.Rama Krishna	Assistant.Professor of Mathematics	Member
11	Smt.B.V.D. Santhi	Assistant.Professor of Mathematics	Member
12	Smt.Dr.N.N.V.Sakuntala	Assistant.Professor of Mathematics	Member
13	Sri.V.Srinivas Rao	Assistant.Professor of Mathematics	Member
14	Sri.T.D.Rama Krishna	Assistant.Professor of Mathematics	Member
15	Sri P.Someswarara Rao	Aptitude Trainer	Member
16	Sri JNV Somayajulu	Aptitude Trainer	Member

Members present:

The following items are discussed in the meeting:

Item No-1: Introducing the members of BOS by the chairman.

The chairman of BOS extended a formal welcome and introduced the members.

Item No.2: Syllabi for the courses offered in B.Tech & M.Tech Programmes.

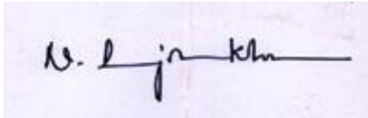
The detailed syllabi for the following courses of B.Tech and M.Tech under V20 and V21 regulations respectively (i.e. for 2020-21 and 2021-2022 batch students) along with prescribed text books have been presented.

S. NO	COURSE NAME	COURSE CODE	PROGRAMME	SEMESTER	BRANCHES	REMARKS
1	Complex Analysis	V20MAT03	B.TECH	III	ECE ,ECT	
2	Probability and Statistics	V20MAT04	B.TECH	III	CE	
				IV	CSE,CST,ME	
3	Transform Calculus	V20MAT05	B.TECH	III	EEE	
4	Probability Theory & Stochastic Processes	V20MAT06	B.TECH	III	ECE & ECT	
5	Mathematical Foundation of Computer Science	V20MAT07	B.TECH	III	CSE , CST	
6	Operations Research	V20MAT08	B.TECH	V	EEE	
				VII	ME	
7	Professional communication skills-II	V20ENT03	B.TECH	IV	Common to all	
8	Professional communication skills-III	V20ENT04	B.TECH	V	Common to all	
9	Analytical and Numerical methods for Structural Engineering	V21MAT01	M.TECH	I	CE- Structural Engineering	Elective
10	Operations Research	V21MAT02	M.TECH	III	Common to all	Open elective

With minor changes, the syllabi for the courses mentioned above have been approved. The approved syllabi for the courses are given in annexure-I to X

Item No.3: The members of BOS recommended 4th Mathematics paper ,Operations Research (course code V20MAT08) for CIVIL Engineering to fulfill the required number of credits of Basic Sciences .

<u>Item No.4</u>: The members also suggested to mention the required number of lecture hours CO wise.



Chairman

Board of Studies, Mathematics

SRI VASAVI ENGINEERING COLLEGE (AUTONOMOUS)

(Sponsored by Sri Vasavi Educational Society)

(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)

(Accredited by NAAC with 'A' Grade, Recognized by UGC under section 2(f) & 12(B))

Pedatadepalli, **TADEPALLIGUDEM – 534 101.** W.G.Dist. **(A.P)**

Annexure-Maths - I

Year/Sem	**B.Tech III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	**V20**	**3**	**-**	**-**	**3**	**V20MAT03**
Name of the Course	**COMPLEX ANALYSIS**					
Branch	**ECE & ECT**					

Course Outcomes: At the end of the course student will be able to:

CO1: Evaluate improper integrals using special functions

CO2: Define the analytic function and find harmonic conjugate

CO3: Apply Cauchy's theorem and its variants in evaluating line integrals and find Taylor's and Laurent's series expansions for complex functions.

CO4: Calculate residues and real definite integrals.

CO5: Understand the idea of transformation.

UNIT – I **(10 hrs)**

Special functions: Definition of improper integral- Gamma and Beta functions – their properties – evaluation of improper integrals.

UNIT-II **(8 hrs)**

Functions of a complex variable – Continuity – Differentiability – Analyticity – Properties(without proofs) – Cauchy - Riemann equations in Cartesian form. Harmonic and conjugate harmonic functions – Milne – Thomson method.

UNIT-III **(12 hrs)**

Complex integration: Line integral – evaluation along a path and by definite integration – Cauchy's integral theorem – Cauchy's integral formula – Generalized integral formula.

(statements of theorems only)

Complex power series: Radius of convergence – Expansion in Taylor's series, Maclaurin's series and Laurent series - singular point –isolated singular point – pole of order m – essential singularity.

UNIT-IV **(10 hrs)**

Residue – Evaluation of residue by formula and by Laurent series - Residue theorem(without proof) Evaluation of integrals of the type

a) Improper real integrals $\int_{-\infty}^{\infty} f(x)dx$ (b) $\int_{c}^{c+2\pi} f(\cos\theta, \sin\theta)d\theta$

(c) $\int_{-\infty}^{\infty} e^{imx} f(x)dx$

UNIT-V **(8 hrs)**

Conformal mapping: Transformation by e^z , lnz, z^2, z^n (n positive integer), sin z, cos z,

z + a/z. Translation, rotation, inversion and bilinear transformation – fixed point – cross ratio – properties.

Text Books:

1. B. V. Raman, Tata Mc Graw Hill, A text Book of Engineering Mathematics.

2. N.P.Bali, Engineering Mathematics, Lakshmi Publications.

Pedatadepalli, **TADEPALLIGUDEM–534 101.**W.G.Dist. **(A.P)**

Annexure-Maths-II

Year/Sem	B.Tech (III & IV Sem)	L	T	P	C	COURSE CODE
Regulation	**V20**	**3**	**-**	**-**	**3**	VI8MAT04
Name of the Course	**PROBABILITY AND STATISTICS**					
Branches	CIVIL, ME, CSE & CST					

Pre requisites: Probability, Conditional Probability, Baye's theorem on probability

Course Outcomes: At the end of the Course student will be able to:

CO1: Find the Expectation of Random variables
CO2: Apply probability distribution to real time problems
CO3: Plot a best fit curve to an experimental data and find the correlation and regression
CO4: Create good estimators to various parameters
CO5: Apply the principles of Statistical Inference to practical problems

Unit-I: Random Variables and Expectation: **(10 hrs)**

Random Variables: Discrete and continuous - Probability function – density and distribution function,Expectation of a Random Variable, Moments, Chebychev's Inequality (Without proof).

Unit-II: Probability Distributions **(10 hrs)**

Probability distributions: Binomial, Poisson and Normal - Evaluation of statistical parameters: Mean, Variance and their properties, Introduction to Exponential, Gamma and Weibull distributions

Unit-III: Bivariate Distributions **(8 hrs)**

Curve fitting by the method of Least squares- Fitting of straight line, parabola and exponential curves, Simple Correlation and Regression – Rank correlation.

Unit-IV: Sampling Distribution and Estimation **(8 hrs)**

Introduction –Sampling distribution of means with known and unknown standard deviation

Estimation: Criteria of a good estimator, point and interval estimators for means and proportions

Unit-V: Tests of Hypothesis **(12 hrs)**

Introduction-Type-I, Type-II Errors, Maximum Error, one–tail, two-tail tests, Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means.

Test of significance: Small sample test for single mean, difference of means and test of ratio of variances (F-Test) - Chi-square test for goodness of fit and independence of attributes.

Year/Sem	B.Tech III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	-	-	3	V20MAT05
Name of the Course	Transform Calculus					
Branch	EEE					

Course Outcomes: At the end of the course student will be able to:

CO1: find the integrals using Laplace transforms

CO2: apply the Laplace transform for solving differential equations

CO3: apply the Z- transform for solving difference equations

CO4: find the Fourier series of periodic signals

CO5: find the Fourier transforms of given function

Unit-I: Laplace Transforms **(9 hrs)**

Laplace transforms-introduction– Definition and Laplace transforms of standard functions– properties (without proof)-Shifting theorems (without proof) – Transforms of derivatives and integrals – Unit step function –Dirac's delta function - Periodic function.

Unit-II: Inverse Laplace Transforms and Applications **(9 hrs)**

Inverse Laplace transforms –properties(without proof) - inverse laplace transforms of derivatives and integrals - Convolution theorem (without proof).

Applications: Solving ordinary differential equations (initial value problems) using Laplace transforms.

Unit-III: Z – Transforms **(12 hrs)**

Z – Transforms – Properties (without proofs) – Damping Rule – Shifting Rule – Initial and Final value Theorems (without proofs) – Inverse Z- Transforms-properties (without proofs) – Convolution Theorem (without proof)

Applications: Solutions of Difference equation by Z - transforms.

Unit – IV: Fourier series **(9 hrs)**

Fourier series – Determination of Fourier Coefficients – Fourier series – even and odd functions – Fourier series in an arbitrary interval – Half –range sine and cosine series.

Unit –V: Fourier Transforms **(9 hrs)**

Fourier Integral Theorem (only statement) – Fourier sine and cosine Integrals – Fourier Transform – sine and cosine Transforms – Properties (without proofs) – Inverse Transforms.

Annexure-Maths -IV

Semester	B.Tech III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	-	3	V20MAT06
Name of the Course	Probability Theory & Stochastic Processes					
Branches	ECE, ECT					

Course Outcomes: After Successful completion of this course, the students will be able to:

COX	Course Outcomes	KX
CO1	Explain basic concepts of probability theory through Sets and Relative Frequency	K2
CO2	Explain the concept of a random variable, functions based on random variable like Distribution and density functions	K2
CO3	Compute the expected value, moments on one random variable	K3
CO4	Illustrate the concepts of joint distribution & density functions on multiple random Variables	K3
CO5	Compute the Temporal and Spectral characteristics of stochastic processes	K3

UNIT I PROBABILITY : (8 hrs)

Probability introduced through Sets and Relative Frequency: Experiments and Sample Spaces, Discrete and Continuous Sample Spaces, Events, Probability Definitions and Axioms, Mathematical Model of Experiments, Probability as a Relative Frequency, Joint Probability, Conditional Probability, Total Probability, Bayes Theorem, Independent Events

UNIT II (10 hrs)

THE RANDOM VARIABLE: Definition of a random variable, Discrete, continuous and mixed random Variables. Distribution & density functions and its properties of arandom variable.Binomial, Poisson, Uniform, Gaussian, Exponential and Rayleigh random variables.Conditional distribution and density functions and its properties.

UNIT III **(10 hrs)**

OPERATION ON ONE RANDOM VARIABLE – EXPECTATIONS : Introduction, expected value of a random variable, function of a random variable, moments about the origin, central moments, variance, characteristic function, moment generating function, transformations of a random variable: Monotonic transformations for a continuous random variable

UNIT IV **(10 hrs)**

MULTIPLE RANDOM VARIABLES : Vector random variables, joint distribution function, properties of joint distribution, marginal distribution functions, conditional distribution and density, statistical independence, sum of two random variables, sum of several random variables, central limit theorem: unequal distribution, equal distributions.

OPERATIONS ON MULTIPLE RANDOM VARIABLES: Joint moments about the origin, joint central moments, joint characteristic and moment generating functions.

UNIT V **(10 hrs)**

RANDOM PROCESSES – TEMPORAL CHARACTERISTICS: The random process concept, classification of processes, deterministic and nondeterministic processes, distribution and density functions, concept of Stationarity and statistical independence. First-order stationary processes, second-order and wide-sense Stationarity, nth-order and strict-sense Stationarity, time averages and Ergodicity, autocorrelation function and its properties, cross-correlation function and its properties, covariance functions.

SPECTRAL CHARACTERISTICS: The power density spectrum: properties, relationship between power density spectrum and autocorrelation function, the cross-power density spectrum, properties, relationship between cross-power density spectrum and cross-correlation function.

TEXT BOOKS:

1. Probability, Random Variables & Random Signal Principles, Peyton Z. Peebles, TMH, 4th Edition, 2001.
2. Probability, Random Variables and Stochastic Processes, Athanasios Papoulis and S.UnniKrishnaPillai, PHI, 4th Edition, 2002.
3. Probability Theory and Stochastic Processes, Y. Mallikarjuna Reddy, 4th Edition, Universities Press

Reference Books:

Semester	B.Tech III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	-	3	V20MAT07
Name of the ourse	Mathematical Foundation of Computer Science					
Branches	CSE, CST					

Course Outcomes: At the end of the Course student will be able to:

COX	Course Outcomes	KX
CO1	Demonstrate the concepts associated with propositions and mathematical logic	K3
CO2	Demonstrate the basic concepts associated with relations, functions and their applications	K3
CO3	Solve recurrence relations using various methods	K3
CO4	Apply techniques of graphs for real-time problems	K3
CO5	Construct minimal spanning tree by using different algorithms	K3

Syllabus

UNIT-I : Mathematical Logic **(10 hrs)**

Statements and Notation , Connectives, Well Formed Formulas ,Truth tables, Tautologies, Equivalence of formulas, Tautological Implications, Normal forms, Theory of inference for Statement Calculus, Indirect Method of Proof. Predicate calculus-Predicates, quantifiers, universe of discourse.

UNIT-II: Set Theory and Relations: **(10 hrs)**

Operations on Sets, Principle of Inclusion and Exclusion, Relations, Properties of Binary Relations in a set, Transitive Closure, Relation Matrix and Digraph, Equivalence, Partial Ordering Relations, Hasse Diagrams, Lattice and its Properties, Functions, Bijective Functions, Composition of Functions.

Unit 3: Recurrence relations **(10 hrs)**

Generating Function of Sequences, Calculating Coefficient of generating functions, Recurrence relations, solving recurrence relation by substitution and Generating functions, the method of Characteristic roots, Solution of Inhomogeneous Recurrence Relation.

UNIT-4 Graph Theory: **(10 hrs)**

Basic Concepts of graph, Representing graphs, Sub graphs, Isomorphic graphs, Paths and Circuits, Eulerian and Hamiltonian Graphs, Planar graphs, Graph Coloring, Chromatic Number. (Theorems without proofs)

Unit 5: Trees **(8 hrs)**

Spanning Trees, minimal Spanning Trees, BFS, DFS, Kruskal's Algorithm, Prim's Algorithm, Binary trees, Planar Graphs.

TEXT BOOKS:

1. Discrete Mathematical Structures with Applications to Computer Science, J. P. Tremblay and P. Manohar, 1st Edition, Tata McGraw Hill.
2. Discrete Mathematics and its Applications with Combinatorics and Graph Theory, K. H.Rosen, 7th Edition, Tata McGraw Hill.
3. Discrete Mathematics for Computer Scientists and Mathematicians, J. L. Mott, A. Kandel, T.P. Baker, 2nd Edition, Prentice Hall of India.

REFERENCE BOOKS:

1. Elements of Discrete Mathematics -A Computer Oriented Approach, C. L. Liu and D. P. Mohapatra, 3rdEdition, Tata McGraw Hill.
2. Discrete Mathematics with Combinatorics and Graph Theory, Santha, 1st Edition Cengage Learning.

Annexure-Maths-VI

Semester	B.Tech	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MAT08
Name of the Course	Operations Research					
Branch	EEE & ME					

Course Outcomes:

After successful completion of the course, the student will be able to

CO1	Understand the formulating of LPP and solve LPP by Simplex methods, artificial variables techniques.	K2
CO2	Solve Transportation and assignment problems.	K3
CO3	Explain the concept of Sequencing and replacement of item.	K2
CO4	Apply the principles of game theory to real world competitive situations	K3
CO5	Understand the concept of queues with single server,	K2

UNIT – I **(10 hrs)**

HISTORICAL OVERVIEW – Definition and scope– types of operation research models – applications.

LINEAR PROGRAMMING: Problem formulation – graphical solution – simplex method – artificial variables techniques - big-M method.

UNIT – II **(10 hrs)**

TRANSPORTATION PROBLEM: Formulation – optimal solution, unbalanced transportation problem – degeneracy

ASSIGNMENT PROBLEM: Introduction, optimal solution, Traveling Salesman problem.

UNIT – III **(9 hrs)**

SEQUENCING – Introduction – flow –shop sequencing – *n* jobs through two machines – *n* jobs through three machines

REPLACEMENT: Introduction – replacement of items that deteriorate with time – when money value is not counted and counted – replacement of items that fail completely, group replacement

UNIT – IV **(10 hrs)**

THEORY OF GAMES: Introduction – mini. max (max. mini) – criterion and optimal strategy – solution of games with saddle points – rectangular games without saddle points – 2 x 2 games – dominance principle – m x 2 & 2 x n games -graphical method.

UNIT – V **(9 hrs)**

WAITING LINES: Introduction – single channel – poison arrivals – exponential service times – with infinite population and finite population models

.

TEXT BOOKS:

1. Operations Research / S.D.Sharma-Kedarnath

2. Operations Research by R. Pannerselvam; Publisher: Prentice Hall International.

Syllabus for the Regulation Year 2021-22 (Common to all Branches)

Professional Communication Skills – II

B.Tech IV Semester

Annexure-Maths-VII

S.No	Course Code	Course Name	L	T	P	C
1	V20ENT03	**Professional Communication Skills - II**		2 +2	-	MNC

	After successful completion of the course, students will be able to	Knowledge Level
CO1	Demonstrate grammatical competence, analyze noun and pronoun dispositions, classify various kinds of verbs, adjectives and adverbs and identify errors in sentences; distinguish the subtle meanings of various words in different contexts, recognize similar words as well as words with contrast meanings and use them appropriately. (K3)	K2
CO2	Organize individual words into one whole sentence using new vocabulary and focus on the error analysis of prepositions and conjunctions, build conversations which befit the situations and develop pre-reading strategies to improve comprehension skills. Distinguish and acquire knowledge of using words of the same category in a sentence and learn new words that promote communicative finesse. Find errors in sentences where the modifiers are misplaced and put them at the appropriate place, use hit pair words and send an email that is concise and lucid.	K3
CO3	Recognize the easiest and best possible way of solving problems in the area of Number and Letter Series, Analogy, Classification, Coding & Decoding Symbols, Ranking and Analytical Reasoning.	K4

CO4	Investigate the different types of logics involved in Mirror and Water Images, Logical Reasoning & Arithmetic Reasoning.	K4
CO5	Find the common traps in the questions and errors likely to be made from the concepts of Blood Relations, Directions, Average, Clock and Calendar, Data Sufficiency, Permutations-Combinations and Probability.	K3

UNIT – I **(12 hrs)**

ERROR ANALYSIS: Nouns & Pronouns – Singular & Plural – Kinds of Nouns & Pronouns-Collective Nouns - Personal and Reflexive Pronouns. Subject – Verb agreement. Adjectives – Adverbs – role of modifiers – place of Adjectives– Adverbs of frequency.

VOCABULARY : Word Power Made Easy Sessions 15- 30, Antonyms and Synonyms and One word substitutes

EXPANSION OF PROVERBS: Meaning – interpretation – explanation**.**

UNIT – II **(12 hrs)**

ERROR ANALYSIS: Prepositions - kinds of prepositions –appropriate use - conjunctions –sub-ordinating– coordinating.

ROLE PLAY: Day to day situations - practical approach – real life experiences.

READING COMPREHENSION: Reading as a skill – quick reading - analyzing – answering **-**

Skimming – scanning - summarizing – problem solving.

ERROR ANALYSIS: Parallel grammatical forms – same grammatical structures. Dangling modifiers – misplacement of modifiers – arrangement.

SENTENCE IMPROVEMENT: Better choice – error-free sentences – effective – syntax**.**

EMAIL WRITING: Format – method of exchanging – technicalities.

UNIT – III **(12 hrs)**

Number And Letter Series, Coding & Decoding, Analogy,Classification Ranking. (K1)

Problems of how to find the next number in the series, Finding the missing number and related sums, Sums related to Classification, Sums related to letter series, Relation between number series and letter series, Finding odd one out from groups, Identify the rank in different places.

UNIT-IV **(12 hrs)**

Problems On Ages& Numbers, Mirror And Water Images, Logical Reasoning & Arithmetic Reasoning.(K4)

Definition and concept of Venn Diagram – its applications. statements – Affirmations, Denials and Contradictions. Sums related to Ages & numbers. Problems on ages with different logics. Identifying the images of water and Mirror.

UNIT-V **(12 hrs)**

Blood Relations, Directions, Average, Clock And Calendar, Data Sufficiency, Permutations-Combinations And Probability.(K3)

Deriving the formula to find the angle between hands for the given time, History of calendar-, Finding the day for the given date, Problems related to directions. Difference between words Permutation and Combinations – Various cases - Real Time Scenarios. Concept of Probability – - Conjunctions – Rules & Cases of Probability.

B.Tech V Semester

Annexure-Maths-VIII

S.No	Course Code	Course Name	L	T	P	C
1	V20ENT04	**Professional Communication Skills - III**		2+2	-	MNC

	After successful completion of the course, the students will be able to	Knowledge Level
CO1	Distinguish the subtle meanings of various words in different contexts, recognize similar words as well as words with contrast meanings and use them appropriately. Express writer's tone and relevant ideas using different types of writing skills and prepare resume to showcase skills and accomplishments.Organize thoughts in the discussions and express views without reticence.Develop the ability to write different types of essays in a structured way, maintaining cohesion and logic	**K4**
CO2	Identify the central theme and arrange the scrambled sentences into a meaningful passage.Draft emails with appropriate subject-lines and relevant content.Compare different pairs of words, recognize the relationship between the head words and the options to siphon correct analogy Choose an appropriate word to make a sentence meaningful.Infer the meaning of the picture by thinking out of the box and speak without inhibitions and face interviews with aplomb.	**K2**
CO3	Analyze appropriate methods of logical thinking on Ratio and Proportion, Partnership, LCM and HCF, Number System, Areas & Volumes.	**K4**
CO4	Demonstrate problem solving skills through the concepts of Percentages, Profit and loss, Simple Interest & Compound Interest and Allegation.	**K3**
CO5	Calculate the end results of Cubes, Dice and Data Analysis, Time & Work, Time & Distance, Race & Games.	**K4**

SYLLABUS

UNIT – I **(12 hrs)**

VOCABULARY – MODEL RESUMES & SPEAKING

500 words (PIC-VOC) -Meaning – contextual Usage - Prefix – Suffix – Root words. Resume writing-Model Resume-Introducing different formats-Tailoring resume as per job description. Paragraph writing- Essay writing- Types of Essays- Strategies – Cause and effect signals – support signals – contrast signals. Watch a video and respond

Group Discussion – Types of GD – Dos & Don'ts , JAM , Presentation Skills, Designing Advertisements

UNIT – II **(12 hrs)**

GRAMMAR, WRITING & SPEAKING SKILLS

Tenses – Simple – Continuous – perfect – perfect continuous - voice – Active & Passive -Para jumbles – Strategies – Directional words – central theme-Email writing– Types -- Dos and Don'ts- **VERBAL ABILITY- ANALOGIES- INTERVIEW SKILLS- CREATIVE THINKING**

ANALOGIES: Strategies - Recognize common relationship types. Synonyms – Antonyms - Create a general sentence - Use the correct part of speech - Beware of homonyms.Equalizing the sentences-scrambled sentences. Interview Skills – Personal Interview – Skype Interview – Telephone Interview – Mock Interviews. Creative thinking – Picture Interpretation -Creative writing

UNIT – III **(12 hrs)**

Ratio & Proportion, Partnership, LCM & HCF and Areas & Volumes

Introducing the concept of ratio in three different methods, a method to compute and compare two ratios – The effect of increase or decrease of a quantity on the ratio – The meaning of proportion and Problems related to Ratio and Proportion. Improve problem solving skills through Lcm & Hcf.

UNIT – IV **(12 hrs)**

Percentages, Profit and Loss, Simple and Compound Interest, Allegation & Mixtures

Definition of Simple and Compound Interest. Formulas of Applications – Difference between Simple and Compound interest – Rate of Increase or Decrease Population – Expected values of Maturity. Calculate percentages on different situations, using in profit and loss. Identifying difference between Cost price, Selling Price and Marked Price, Finding Discounts, using the method of allegation.

UNIT – V **(12 hrs)**

Time, Work and Distance, Cubes, Dice and Data Analysis

Men- Days -work –completion- Capability Ratio among Men, Women and Children – Application of time in Pipes and Cistern. Work Progress in positive and negative effects. Relation among Time, Speed and Distance – Concepts of Relative speed and Average Speed – Ideas about Boats and Streams and Races of Games. Calculate the end results of Cubes and Dice.

Regulation / Year	V21 / 2021-2022	3	0	0	3	V21MAT01
Name of the Course	**ANALYTICAL& NUMERICAL METHODS FOR STRUCTURAL ENGINEERING (Elective)**					
Branch	STRUCTURAL ENGINEERING					

Course Outcomes: Upon successful completion of this course, the students will be able to

CO1: apply Laplace transform methods on heat conduction problems (K3)

CO2: Apply the principles and techniques of Elliptic Equations-Laplace equation (K3)

CO3: Develop the principles and techniques of Integral Equations (K3)

CO4: Adopt the principles and techniques of Finite Difference and their Applications (K3)

CO5: Apply the principles and techniques of Numerical Integration (K3)

UNIT I **(10 hrs)**

Transform Methods- Laplace transform methods for one-dimensional wave equation - Displacements in a long string - Longitudinal vibration of an elastic bar - Fourier transforms methods for one-dimensional heat conduction problems in infinite and semi-infinite rod

UNIT II **(10 hrs)**

Elliptic Equations-Laplace equation - Properties of harmonic functions - Fourier transform methods for Laplace equation-Calculus Of Variations- Variation and its properties - Euler's equation - Functionals dependent on first and higher order derivatives - Functionals dependenton functions of several independent variables - Some applications - Direct methods - Ritz and Kantorovich methods

UNIT III **(9 hrs)**

Integral Equations- Fredholm and Volterra integral equations - Relation between differential and integral equations - Green's function -Fredholm equation with separable kernel - Iterative method for solving equations of second kind

UNIT IV **(9 hrs)**

Finite Difference and their Applications: Introduction- Differentiation formulas by Interpolating parabolas – Backward and forward and central differences- Derivation of Differentiation formulas using Taylor series- Boundary conditions- Beam deflection – Solution of characteristic value problems - Richardson's extrapolation - Use of unevenly spaced pivotal points- Integration formulae by interpolating parabolas- Numerical solution to spatial differential equations – Application to Simply Supported Beams, Columns & rectangular Plates.

UNIT V **(10 hrs)**

Numerical Differentiation: Difference methods based on undetermined coefficients- optimum choice of step length– Partial differentiation.
Numerical Integration: Method based on interpolation-method based on undetermined coefficient – Gauss – Lagrange interpolation method- Radaua integration method- composite integration method – Double integration using Trapezoidal and Simpson's method – New Marks Method and Application to Beams – Calculations of Slopes & Deflections.

Year/Sem	**M.Tech III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V21	3	-	-	3	V21MAT02
Name of the Course	**OPERATIONS RESEARCH (Open Elective)**					
Branch	Common To All					

Course Outcomes: Upon the completion of the course the students will be able to

CO 1: solve the linear programming problem.

CO 2: solve Transportation and Assignment problems.

CO 3: apply sequencing techniques to create the jobs.

CO 4: solve problems of waiting lines.

CO 5: apply the principles of Game theory to real world competitive situations.

UNIT-I: **(10 hrs)**

Introduction to Operations Research: Basics definition, scope, objectives, phases, models and limitations of Operations Research. Linear Programming Problem – Formulation of LPP,Graphical solution of LPP. Simplex Method, Artificial variables, big-M method, degeneracy and unbound solutions.

UNIT-II: **(10 hrs)**

Transportation Problem. Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the stepping stone method and MODI method.

UNIT-III: **(10 hrs)**

Assignment model. Formulation. Hungarian method for optimal solution. Solving unbalanced problem. Traveling salesman problem and assignment problem Sequencing models. Solution of Sequencing Problem – Processing n Jobs through 2 Machines – Processing n Jobs through 3 Machines – Processing 2 Jobs through m machines – Processing n Jobs through m Machines.

UNIT-IV: **(9 hrs)**

Queuing Theory**:** Introduction – Single Channel – Poisson arrivals – exponential service times – with infinite population and finite population models – multi channel – poisson arrivals – exponential service times with infinite population single channel poisson arrivals

UNIT-V: **(9 hrs)**

Game Theory: Introduction – Minimax and Maximin – Criterion and optimal strategy – Solution of games with saddle points – Rectangular games without saddle points –algebraic method – Graphical Method (m x 2, 2 x n methods) – dominance principle .

ANNEXURE-IX

MINUTES OF THE 5th BOS OF ENGLISH ON 20-09-2021.

The 5th BOS Meeting of English was held online at 11am, 20-09-2021 using the Zoom link :

https://us02web.zoom.us/j/87068834452?pwd=OHk1WHgvdU5SbTVCREdjeEdXd3lLZz09

AGENDA OF THE MEETING

1. Opening Remarks by BOS Chairperson.

2. To discuss and finalize the syllabi of Professional Communication Skills-I{**V20ENT02**} Professional Communication Skills- II {**V20ENT03**}& Professional Communication Skills-III{{**V20ENT04**} for III, IV & V Semesters of B.Tech .,for the Academic Year 2021-2022 & 2022 -2023.

3.To discuss and finalize the syllabus of Constitution of India (V20ENT11) for the Academic Year 2021-2022 & 2022 -2023.

4.To discuss and finalize the syllabi of Audit Courses for M.Tech students namely, Pedagogy Studies(V21PGENT51**)** ,Personality Development through Life Enlightenment Skills (V21PGENT52**)**,Stress Management by Yoga Course (V21PGENT53), English for Research Paper Writing (V21PGENT54**)**, Value Education (V21PGENT55).

MINUTES

- The syllabi of Professional Communication Skills-I{**V20ENT02**} Professional Communication Skills- II {**V20ENT03**}& Professional Communication Skills-III{{**V20ENT04**} for III, IV & V Semesters of B.Tech , was approved by the members of BOS of English.
- The syllabus of Constitution of India (V20ENT11) for B.Tech , was approved by the members of BOS of English.
- The syllabi of Audit Courses for M.Tech students namely, Pedagogy Studies(V21PGENT51**)** ,Personality Development through Life Enlightenment Skills (V21PGENT52**)**,Stress Management by Yoga Course (V21PGENT53), English for Research Paper Writing (V21PGENT54**)**, Value Education (V21PGENT55) was approved by the BOS members.
- The members of the BOS suggested renaming the audit course " English for Research Paper Writing" as "Research Paper Writing - Conventions & Structures" if possible.
- The syllabus of Audit course for M.Tech students " Constitution of India" (V21PGENT56) was mailed to the BOS members and their approval for the

same was received by 3.10’21.

Members Present

English BOS Members

1.Chairperson of BOS

Dr. T Sujani, Assoc. Professor of English

Sri Vasavi Engineering College

2.Dr.D.KesavaRao
(Council Nominee)

Professor of English, NIT Warangal

3. Prof.K.Sree Ramesh
(Council Nominee)

Professor of English and Principal, College of Arts and Commerce
Adikavi Nannaya University

Rajamahendravarm

4. Dr.Purna Chandra Rao
(University Nominee)
Assoc.Professor of English,

PVP Siddhartha Institute of Technology,Vijayawada .

Faculty Present

1. Dr.K. Venkata Rao
2. B.AnandaRao
3. K.V.Rama Rao
4. K.Radha Madhavi
5. Tanuja .Ch
6. Aparanjani.U
7. G.Srinivasa Rao
8. A.Kiranmayee
9. M.Naresh
10. M.Venkata Ramana
11. G.Ch.S.Madhusudhana Rao
12. D.Satish

Annexures of Syllabi

SRI VASAVI ENGINEERING COLLEGE (AUTONOMOUS)

(Sponsored by Sri Vasavi Educational Society)

(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)

(Accredited by NAAC with 'A' Grade ,Recognized by UGC under section 2(f) & 12(B))

Pedatadepalli, TADEPALLIGUDEM – 534 101. W.G.Dist. (A.P)

Syllabus for the Regulation Year 2019-2020 (Common to all Branches)

Professional Communication Skills - I

B.Tech IIISemester

S.No	Course Code	Course Name	L	T	P	C
1	V20ENT02	**Professional Communication Skills - I**		3	-	MNC

Students will be able to

CO1: Use vocabulary in regular chores of life with accuracy, make meaningful sentences, and describe people and their traits vividly. (K3)

Syllabus

UNIT – I

BUILDING VOCABULARY FOR DAILY ACTIVITIES

NAMES: Things- Kitchen Utensils – Occupation- tools – spices- vegetables –flowers - sciences of study – Professions .

Framing Questions – statements – expressions related to the Vocabulary taught

PEOPLE : Describing people - Physical characteristics,-Mental attributes – various professions

Framing Questions – statements – expressions related to the Vocabulary taught

ACTIVITY : Related to the topics learnt in Unit – 1

No. of hours required - 10

UNIT – II

BUILDING VOCABULARY FOR PLACES, THINGS & PROCESS

PLACES: Describing favourite place – famous place- Places of Pilgrimage

THINGS: Describing a thing- Describe an incident or an event

PROCESS: Describe a process –Recipe – experiment –Entrance test application

Framing Questions – statements – expressions related to the Vocabulary taught

ACTIVITY : Related to the topics learnt in Unit – II

No. of hours required - 10

UNIT – III

NATIVE EXPRESSIONS – Idioms and Phrases – in day to day activities for different occasions - Usage written & spoken –

PHRASES with as—as expressions – used to compare & contrast

COMMON MISTAKES- in spoken & written

INDIANISMS- Most often used expressions – accepted in India – found place in Dictionary

ACTIVITY : Related to the topics learnt in Unit – III

No. of hours required - 10

UNIT -IV

NET VOCABULARY: Acronyms and abbreviations that are most often used
HOMOPHONES : Words often confused – Spelling & Pronunciation
Letter Writing : Formal & Informal- Letters for all occasions
Email Writing : Business mails – project status mails – informative mails
ACTIVITY : Related to the topics learnt in Unit – IV
No. of hours required - 10
UNIT –V

SELF-INTRODUCTION: Basic information - Academic and personal - interests– strengths and weaknesses – goal.

PROFILE BUILDING: Resume writing – CV Building – Types

STORYTELLING WITH CREATIVITY: Reading and Narrating a story – narrating anecdotes

ACTIVITY : Related to the topics learnt in Unit – V
No. of hours required - 10

CO1	Distinguish the subtle meanings of various words in different contexts, recognize similar words as well as words with contrast meanings and use them appropriately. Express writer's tone and relevant ideas using different types of writing skills and prepare resume to showcase skills and accomplishments.Organize thoughts in the discussions and express views without reticence.Develop the ability to write different types of essays in a structured way, maintaining cohesion and logic	**K4**
CO2	Identify the central theme and arrange the scrambled sentences into a meaningful passage.Draft emails with appropriate subject-lines and relevant content.Compare different pairs of words, recognize the relationship between the head words and the options to siphon correct analogy Choose an appropriate word to make a sentence meaningful.Infer the meaning of the picture by thinking out of the box and speak without inhibitions and face interviews with aplomb.	**K2**
CO3	Analyze appropriate methods of logical thinking on Ratio and Proportion, Partnership, LCM and HCF, Number System, Areas & Volumes.	**K4**
CO4	Demonstrate problem solving skills through the concepts of Percentages, Profit and loss, Simple Interest & Compound Interest and Allegation.	**K3**
CO5	Calculate the end results of Cubes, Dice and Data Analysis, Time & Work, Time & Distance, Race & Games.	**K4**

SYLLABUS

UNIT – I

VOCABULARY – MODEL RESUMES & SPEAKING

500 words (PIC-VOC) -Meaning – contextual Usage - Prefix – Suffix – Root words. Resume writing-Model Resume-Introducing different formats-Tailoring resume as per job description. Paragraph writing- Essay writing- Types of Essays- Strategies – Cause and effect signals – support signals – contrast signals. Watch a video and respond

Group Discussion – Types of GD – Dos & Don'ts , JAM , Presentation Skills, Designing Advertisements

UNIT – II

GRAMMAR, WRITING & SPEAKING SKILLS

Tenses – Simple – Continuous – perfect – perfect continuous - voice – Active & Passive -Para jumbles – Strategies – Directional words – central theme-Email writing– Types -- Dos and Don'ts- **VERBAL ABILITY- ANALOGIES- INTERVIEW SKILLS- CREATIVE THINKING**

ANALOGIES: Strategies - Recognize common relationship types. Synonyms – Antonyms - Create a general sentence - Use the correct part of speech - Beware of homonyms.Equalizing the sentences- scrambled sentences. Interview Skills – Personal Interview – Skype Interview – Telephone Interview – Mock Interviews. Creative thinking – Picture Interpretation -Creative writing

UNIT – III

Ratio & Proportion, Partnership, LCM & HCF and Areas & Volumes

Introducing the concept of ratio in three different methods, a method to compute and compare two ratios – The effect of increase or decrease of a quantity on the ratio – The meaning of proportion and Problems related to Ratio and Proportion. Improve problem solving skills through Lcm & Hcf.

UNIT - IV

Percentages, Profit and Loss, Simple and Compound Interest, Allegation & Mixtures

Definition of Simple and Compound Interest. Formulas of Applications – Difference between Simple and Compound interest – Rate of Increase or Decrease Population – Expected values of Maturity. Calculate percentages on different situations, using in profit and loss. Identifying difference between Cost price, Selling Price and Marked Price, Finding Discounts, using the method of allegation.

UNIT – V

Time, Work and Distance, Cubes, Dice and Data Analysis

Men- Days -work –completion- Capability Ratio among Men, Women and Children – Application of time in Pipes and Cistern. Work Progress in positive and negative effects. Relation among Time, Speed and Distance – Concepts of Relative speed and Average Speed – Ideas about Boats and Streams and Races of Games. Calculate the end results of Cubes and Dice.

V21PGENT51	**PEDAGOGY STUDIES**	**0**	**2**	**0**	

COURSE OUTCOMES

	After successful completion of the course, the students will be able to	Knowledge Level
CO1	Identify various theories of learning and recognize Research questions with an overview of methodology and searching.	**K2**
CO2	Review Pedagogical practices used by teacher in both formal and informal classroom and design curriculum	**K2**
CO3	Examine how teacher education and the school curriculum support effective pedagogy along with various pedagogical approaches and theories.	**K3**
CO4	Show peer support for professional development and support from head teacher to develop curriculum and assessment. Find out the barriers involved in learning	**K3**
CO5	Find out the gaps and give directions for research design as per context.	**K3**

AUDIT 1 and 2: PEDAGOGY STUDIES

Units	Content	Hours
1	**Introduction and Methodology:** ● Aims and rationale, Policy background, Conceptual framework and terminology ● Theories of learning, Curriculum, Teacher education. ● Conceptual framework, Research questions. ● Overview of methodology and Searching.	4
2	● Thematic overview: Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. ● Curriculum, Teacher education.	2
3	● Evidence on the effectiveness of pedagogical practices ● Methodology for the in depth stage: quality assessment of included studies ● How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? ● Theory of change. ● Strength and nature of the body of evidence for effective pedagogical practices. ● Pedagogic theory and pedagogical approaches. ● Teachers' attitudes and beliefs and Pedagogic strategies.	4
4	● Professional development: alignment with classroom practices and follow-up support ● Peer support ● Support from the head teacher and the community. ● Curriculum and assessment ● Barriers to learning: limited resources and large class sizes	4

5	**Research gaps and future directions** • Research design • Contexts • Pedagogy • Teacher education • Curriculum and assessment • Dissemination and research impact	2

18	Dr.K.Pulla Rao	Asst. Professor	Member
19	K.Lalitha Bhavani	Asst. Professor	Member

The Chairman of the BOS Extended a formal welcome to the members and handed over the proceedings to the Head of the Department.

Minutes of the 4th BOS Meeting

Item No.1:

- **Reviewed and approved the MBA Course Structure under V21 Regulations.**
  The Chairman of BOS proposed the New course structure under V21 Regulations. After considering the suggestions made by all BOS members the course structure was modified accordingly and was approved by BOS. The approved course structure was enclosed under **Annexure-MBA- I**

Item No.2:

- **Reviewed and approved the syllabi for the Courses offered in 1st and 2nd Semesters under V21 Regulations.**
  The Chairman of BOS proposed the New Syllabi under V21 Regulations. After considering the suggestions made by all BOS members the Syllabi was modified accordingly and was approved by BOS. The approved Syllabi was enclosed under **Annexure-MBA- II**

Item No.3:

- **To design and approve the Syllabus for Managerial Economics and Financial Analysis for Engineering Branches under V20 Regulations.**
  The Syllabi of Managerial Economics and Financial Analysis under V20 Regulations has been approved by BOS. The approved Syllabi was enclosed under **Annexure-MBA- III**

Item No.4:

- **To design and approve the syllabus for Cost Management of Engineering Projects and Research Methodology and IPR for M.Tech Courses under V21 Regulations.**

  The Syllabi of Cost Management of Engineering Projects and Research Methodology and IPR under V21 Regulations has been approved by BOS. The approved Syllabi was enclosed under **Annexure-MBA- IV**

Item No.5:

- **Review of MBA Results**

  The semester wise result of MBA 2018 admitted batch (All semesters) and the results of MBA 2019 admitted batch (1,2 & 3 Semesters) were presented before the BOS and they expressed their satisfaction towards the progress report. The details are attached under **Annexure-MBA- V**

L-LECTURE HOURS, P-PRACTICAL HOURS, C-CREDITS, I-INTERNAL MARKS, E-EXTERNAL MARKS, TM-TOTAL MARKS

Dual Specialization:

The Specialization papers will be offered in the areas of Marketing, Finance, and Human Resource Management (HRM). The students should choose any **Two** of the listed Specialization areas in the beginning of the third semester of MBA. Specialization will be offered subject to a minimum of 20 students.

Semester-III

Specialization I: Marketing

S.No.	***Course Code***	***Course***
1	V21MBT15	Consumer Behavior
2	V21MBT16	Retail Management
3	V21MBT17	Digital & Social Media Marketing

Specialization II: Finance

S.No.	***Course Code***	***Course***
1	V21MBT18	Security Analysis & Portfolio Management
2	V21MBT19	Banking & Insurance Management
3	V21MBT20	Business Taxation & Planning

Specialization III: HRM

S.No.	***Course Code***	***Course***
1	V21MBT21	Labour Welfare & Legislations
2	V21MBT22	Performance Evaluation & Compensation Management
3	V21MBT23	Strategic Human Resource Management

Semester-IV

Specialization I: Marketing

S.No.	***Course Code***	***Course***
4	V21MBT25	Sales and Distribution Management
5	V21MBT26	Services Marketing
6	V21MBT27	Advertising & Brand Management

Specialization II: Finance

S.No.	***Course Code***	***Course***
4	V21MBT28	Financial Derivatives
5	V21MBT29	Financial Markets & Services
6	V21MBT30	Advanced Management Accounting

Specialization III: HRM

S.No.	***Course Code***	***Course***
4	V21MBT31	Human Resource Metrics & Analytics
5	V21MBT32	Management of Industrial Relations
6	V21MBT33	International Human Resource Management

Annexure-MBA- II

MBA Syllabus

MBA: First Year - First semester

V21MBT01: MANAGEMENT THEORY & ORGANIZATIONAL BEHAVIOUR

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the fundamentals of management and develop holistic perspective towards an organization. (K1)
2. Construct the models of decision making and controlling in an organizational context. (K2)
3. Describe various dimensions of individual behavior. (K1)
4. Identify the dynamics of group and also emerge as a good team member.(K2)
5. Demonstrate their leadership qualities and understand the culture of an organization. (K3)
6. Apply Managerial concepts for solving Business Management problems.(K3)

****

Unit-I:
Role of Management – Concept – Significance – Functions – Principles of Management - Patterns of Management: Scientific – Behavioral – Systems – Contingency

Unit-II:
Decision Making and Controlling – Process – Techniques. Planning – Process – Problems- Making it Effective. Controlling - System of Controlling – Controlling Techniques – Making Controlling Effective.

Unit-III:
Organizational Behavior – Introduction to OB – Organizing Process – Departmentation Types – Making Organizing Effective - Understanding Individual Behavior – Perception – Learning – Personality Types – Johari window- Transactional Analysis

Unit-IV:
Group Dynamics and Motivation – Benefits of Groups – Types of Groups – Group Formation and Development, Motivation – Concept of Motivation - Motivational Theories of Maslow, Herzberg, David Mc Clelland, and Porter and Lawler

Unit-V:
Leadership and Organizational Culture and Climate: Leadership – Theories of Leadership - Managerial Grid – Transactional vs. Transformational Leadership – Qualities of good Leader, Change Management – Conflict Management.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBT02: MANAGERIAL ECONOMICS

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to….

1. Describe the concepts of Managerial economics in managerial decision making. (K1)
2. Infer the relationship between Price, demand & supply and determine changes in market equilibrium. (K2)
3. Explain the relationship between inputs and productivity using various production functions and their applicability in real world business. (K2)
4. Describe various cost structures and determine the relationship between costs and output in short and long run. (K2)
5. Describe the profit maximizing price and output in various competitive markets in short and long run. (K2)
6. Interpret problems related to Micro Economics and Business by studying practical cases. (K3)

****

UNIT 1:
Introduction to Managerial Economics: Definition, Nature and Scope, Relationship with other areas in Economics, The role of managerial economist. Concept of opportunity cost, Incremental
concept, time perspective, Risk & uncertainty.

UNIT 2:
Demand Analysis: Elasticity of demand, types and significance of Elasticity of Demand - Measurement of price Elasticity of Demand – law of Supply, Elasticity of Supply -Need for Demand forecasting, forecasting techniques.

UNIT 3:
Production Analysis: Production function, Marginal Rate of Technical Substitution, Production function with one/two variables, Cobb-Douglas Production Function, Returns to Scale and Laws of returns.

UNIT 4:
Cost and Revenue Analysis: Cost concepts, determinants of cost, cost – output relationship in the short run and long run – Modern development in cost theory – Envelop shaped long run curve- Total, Average and Marginal cost and revenue curves– Cost - Volume – Profit analysis

UNIT 5:
Market Structure and Pricing practices: Features and Types of different Markets – Price- Output
determination in Perfect competition, Monopoly, Monopolistic competition and Oligopoly both in the long run and short run. Pricing methods in practice –- Managerial Theories of a firm. .

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBT03: ACCOUNTING FOR MANAGERS

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to….

1. Understand Nature, objectives and principles of financial accounting. (K1)
2. Prepare the financial statements of organization. (K3)
3. Apply various tools to analysis the financial position of the organization. (K3)
4. Describe the fundamental concepts of cost accounting which help the organization in decision making. (K2)
5. Quote the contemporary practices in the area of financial accounting. (K1)
6. Interpret problems related to Accountancy by studying practical cases. (K3)

****

Unit-I:

Introduction to Financial Accounting: Definition – Nature – Scope - Objectives – Users of Accounting Information – Accounting Principles: Concepts and Conventions – Accounting Standards. **Branches of Accounting:** Financial Accounting – Cost Accounting – Management Accounting.

Unit-II:

Accounting Cycle & Preparation of Financial Statements: Book keeping, **Double Entry System, Classification of Accounts – Journal – ledger and Trial Balance preparation**. Capital and Revenue Expenditure. **Preparation** of Final Accounts: Trading, profit and loss account and Balance Sheet – Straight line and diminishing balance methods of depreciation. (Simple Problems)

Unit-III:

Financial Statement Analysis: Comparative - Common size, Trend Analysis, Ratio Analysis – Funds Flow Statement Analysis – Cash Flow Statement Analysis (Simple problems)

Unit-IV:

Cost Accounting for Managerial Decisions: Meaning of Cost, Costing, cost accounting, Classification of Costs, Elements of Cost and Preparation of Cost Sheet. Marginal Costing: Break Even Analysis (Simple problems)

Unit–V:

Contemporary Developments in Accounting: Window Dressing, Methods of Window dressing, **Ethical issues in preparation of accounts.** Human Resource

Accounting - Responsibility Accounting – Reporting to Management (Theory) – Automation of accounting function

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester
V21MBT04: LEGAL AND BUSINESS ENVIRONMENT
(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Describe the basic concept of Business & its influencing factors. (K2)
2. Understand the implications of various policies and Acts pertaining to Business . (K2)
3. Recognize various sections under IC and NI ACT. (K2)
4. Identify various sections under sale of goods Act. (K2)
5. Understand the insights related to company and Partnership Act. (K2)
6. Interpret problems related to Business by studying practical cases. (K3)

****

Unit-I:
Introduction: Concept of Business Environment-Definition-Characteristics- Micro and Macro Environmental factors. Role of WTO, World Bank and IMF in world trade.

Unit-II:
Economic & Business Environment: Industrial Policy, 1991; Liberalisation, Privatisation and Globalisation- Foreign Trade policy – Consumer Protection Act; Consumer Rights and redressal Mechanism; Disinvestment and privatization of PSUs, Industrial sickness in India .

Unit-III:
Legal Environment: Indian Contract Act, 1872 – Classification of contracts - Essentials of valid contract – Breach of contract and remedies. Negotiable Instruments Act, 1881 – Kinds of Negotiable Instruments – Presentation and discharge of Negotiable Instruments.

Unit-IV:
Sales of Goods Act: Distinction between Sales and Agreement to Sell – Conditions and Warranties – Performance of Contract of Sale –Transfer of Ownership – Rights of an Unpaid Seller..

Unit-V:
Company and Partnership Act: Company Act 2013: Nature and Types of Companies – Formation – Memorandum of Association-Articles of Association –Kinds of Shares –Duties of Directors-Winding up. Indian partnership Act 1932 – Duties and Rights of partners – Dissolution.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBT05: BUSINESS COMMUNICATION

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the communication process, importance and its classification. (K2)
2. Classify among various organizational communication models. (K2)
3. Identify various influencing factors of interpersonal communication. (K2)
4. Apply various business writing skills. (K3)
5. Prepare reports for different occasions. (K3)
6. Interpret problems related to Communication by studying practical cases. (K3)

****

UNIT 1:
Role of Communication in Business: Objective of Communication – The Process of Human Communication – Media of Communication - Written Communication - Oral Communication – Visual Communication - Audio Visual Communication – Silence - Developing Listening Skills – Improving Non-verbal communication skills – Cross Cultural Communication – problems and challenges.

UNIT 2:
Managing Organization Communication: Formal and Informal Communication - intrapersonal
Communication – Models for Inter Personal Communication - Exchange Theory, Johari Window and Transactional Analysis.

UNIT 3:
Motivational factors to influence Interpersonal Communication: Inter-Personal communication – Role of Emotion in Inter Personal Communication – Communication Styles – Barriers to Communication – gateways to Effective Interpersonal Communication.

UNIT 4:
Business Writing Skills: Significance of Business Correspondence – Preparing agenda for meetings, recording minutes of meeting, Letter Writing (Employment related correspondence, Correspondence with Govt./Authorities, Office Orders, Enquiries and Replies), Press release, Writing CV - Telephone Communication – email and SMS etiquette.

UNIT 5:
Report Writing – Meaning and Significance-Structure of Reports - Negative, Persuasive and Special Reporting: Informal Report – Proposals, Formal Reports. Techniques of Presentation – Types of Presentation.
Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBT06: QUANTITATIVE ANALYSIS FOR BUSINESS DECISIONS

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Recall their basic knowledge of statistics, probability and probability distributions. (K1)
2. Interpret decisions making process and familiar with various supporting tools for decision making. (K2)
3. Apply Linear Programming models for various managerial problems. (K3)
4. Employ organizational resources using Transportation and Assignment models. Formulate strategies using Game theory. (K3)
5. Apply project management techniques like PERT and CPM. (K3)
6. Interpret problems related to practical assignments. (K3)

****

UNIT 1:
Basic Measures of Central Tendency – Measures of Dispersion –Simple Correlation and Regression analysis - Concept of Probability- Probability Rules – Joint and Marginal Probability – Baye'sTheorem- Probability Distributions- Binomial, Poisson, Normal and Probability Distributions.

UNIT 2:
Introduction to Operations Research. Decision Theory: Steps involved in Decision Making, different environments in which decisions are made, Criteria for Decision Making, Decision making under uncertainty, Decision making under conditions of Risk-Utility as a decision criterion, Decision trees, Graphic displays of the decision making process.

UNIT 3:
Linear Programming: Formation of mathematical modeling, Graphical method, the Simplex Method; Justification, interpretation of Significance of All Elements in the Simplex Tableau. (Simple problems).

UNIT 4:
Transportation, Assignment Models & Game theory: Definition and application of the transportation model, solution of the transportation problem, the Assignment Model, Traveling Salesman Problem. Game Theory: Introduction – Two Person Zero-Sum Games, Pure Strategies, Games with Saddle Point, Mixed strategies, Rules of Dominance, Solution Methods of Games without Saddle point – Algebraic, matrix and arithmetic methods.

UNIT 5:

Network Analysis: Concepts of PERT & CPM.- Importance and Differences – Procedure for Drawing networks – identifying critical path – probability of completing the project within given time - project crashing –optimum cost and optimum duration..

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester
V21MBL01: BUSINESS COMMUNICATION AND SOFT SKILLS LAB
(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
0	0	4	2

Course Outcomes:

Students are able to....

1. Infer the core functioning of a Team and basic flow of communication. (K2)
2. Identify the key gestures and postures of an Individual. (K2)
3. Prepare Business correspondence letters and can prepare reports. (K3)
4. Present a topic before gatherings. (K1)
5. Interpret the importance of basic soft skills in practical context. (K3)

Unit – I

Communication and Team work: Objectives of Communication-Process of Communication- Types of communication; Team work – stages of team formation

LAB: LISTENING AND SPEAKING SKILLS- Conversational skills (formal and informal) – group discussion. Listening to lectures, discussions, talk shows, news programmes, dialogues from TV/radio/Ted talk/Podcast – watching videos on interesting events on YouTube.(Presenting before the class). Team games.

Unit – II

Non verbal communication and Body Language: Kinesics, Proxemics, handshakes, appropriate body language and mannerisms for interviews: business etiquettes- across different cultures.

LAB: Understanding Body Language Aspects and presenting oneself to an interviewer, Proper handshakes.

Unit – III

Written communication: mechanics of writing, report writing- business correspondence-business letter format- Meetings and managing meetings- Resume writing-Formats and Skills.

LAB: Writing job applications – cover letter – resume – emails – letters – memos – reports – blogs – writing for publications.

Unit- IV

Presentation skills: prerequisites of effective presentation, format of presentation; Assertiveness –strategies of assertive behavior; Communication skills for group discussion and interviews, Interview Techniques.

LAB: Designing presentations and enhancing presentation skills.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT07: FINANCIAL MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understood the fundamental concepts of financial Management. (K2)
2. Construct optimal capital structure by identification of financial sources and evaluating cost of capital. (K2)
3. Identify long term investment projects by applying capital budgeting techniques. (K2)
4. Understood the concept of dividend decisions and able to measure the dividend. (K2)
5. Apply the concepts of working capital, cash, and receivables management. (K3)
6. Interpret problems related to Business Finance by studying practical cases.(K3)

****

UNIT 1:
Financial Management: Concept - Nature and Scope - Evolution of financial Management objectives of financial Management - Profit maximization- Wealth maximization and EPS maximization – Major decisions of financial manager Challenges of Financial manager in contemporary scenario.

UNIT-II
Financing Decisions: Sources of finance - Concept of leverages - Operating, Financial and combined leverages - financial effects of leverages –EBIT – EPS analysis. Cost of Capital: Marginal vs Weighted Average Cost of Capital – Theories of Capital Structure.

UNIT -III
Investment Decisions: Concept and Techniques of Time Value of Money – Nature and Significance of Investment Decision – Estimation of Cash flows – Capital Budgeting Process – Techniques of Investment Appraisal – Discounting and Non Discounting Methods.

UNIT-IV
Dividend Decisions: Meaning and Significance – Major forms of dividends – Theories of Dividends – Determinants of Dividend – Dividend Policy and Models of Dividend valuation (Walter & Gordon models) – Bonus Shares –Stock Splits – Dividend policies of Indian Corporate.

UNIT-V

Liquidity Decisions: Meaning - Classification and Significance of Working Capital – Components of Working Capital – Factors determining the Working Capital – Estimating Working Capital requirement – Cash Management Models – Accounts Receivables –Credit Policies.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT08: HUMAN RESOURCE MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the fundamentals of HRM with a global perspective. (K2)
2. Estimate the type and number of personnel required to the organization in future by considering the demand and supply of manpower. (K2)
3. Apply various methods of performance evaluation to assess the performance of employees. (K3)
4. Identify the compensation system that conforms to the legal framework. (K2)
5. Understand the functionality of trade unions and also have ability to balance between work and life. (K2)
6. Interpret problems related to Human Resources by studying practical cases. (K3)

****

UNIT 1:
HRM: Significance - Definition and Functions – evolution of HRM- Principles - Ethical Aspects
of HRM- - HR policies, Strategies to increase firm performance - Role and position of HR department - HRM at global perspective challenges – cross-cultural problems – emerging trends in HRM.

UNIT 2:
Investment perspectives of HRM: HR Planning – Demand and Supply forecasting- Recruitment and Selection- Sources of recruitment - Tests and Interview Techniques – Training and Development – Methods and techniques – Training evaluation - retention - Job Analysis –job description and specifications - Management development - HRD concepts.

UNIT 3:
Performance Evaluation: Importance – Methods – Traditional and Modern methods – Latest trends in performance appraisal - Career Development and Counseling- Compensation, Concepts and Principles- Influencing Factors-.

UNIT 4:

Wage and Salary Administration: Concept- Wage Structure- Wage and Salary Policies- Legal
Frame Work- Determinants of Payment of Wages- Wage Differentials - Job Evaluation- Incentive Payment Systems. Welfare management: Nature and concepts – statutory and non-statutory welfare measures – incentive mechanisms-Fringe Benefits-ESOPs - Current Trends in Compensation- Methods of Payments - compensation mechanisms at international level

UNIT 5:

Managing Industrial Relations: Trade Unions - Employee Participation Schemes-Collective Bargaining–Grievances and disputes resolution mechanisms – Safety at work – nature and importance – work hazards – safety mechanisms- Quality of Work Life (QWL).

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT09: MARKETING MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the Basic marketing concepts. (K1)
2. Classify between the market Segmentation and Positioning strategies. (K2)
3. Identify various pricing methods and pricing strategies.(K2)
4. Demonstrate the various communication tools in marketing.(K3)
5. Estimate the distribution Strategies required for effective marketing chain.(K2)
6. Apply marketing concepts in solving marketing problems of organizations. (K3)

****

UNIT -I

Introduction to Marketing: Needs - Wants – Demands - Products - Exchange - Transactions - Concept of Market and Marketing and Marketing Mix - Production Concept- Product Concept - Sales and Marketing Concept - Societal Marketing Concept-Green Marketing concept - Indian Marketing Environment.

UNIT -II

Market Segmentation, Targeting and Positioning: Identification of Market Segments - Consumer and Institutional/corporate Clientele - Segmenting Consumer Markets - Segmentation Basis – Evaluation and Selection of Target Markets – Positioning significance - Developing and Communicating a Positioning Strategy.

UNIT -III

Product and Pricing Aspects: Product – Product Mix - Product Life cycle - Branding- Pricing- Objectives of Pricing - Methods of Pricing - Selecting the Final price - Adopting price - Initiating the price cuts - Imitating price increases-Responding to Competitor's price changes.

UNIT -IV

Marketing Communication: Communication Process – Communication Mix – Integrated Marketing Communication - Managing Advertising Sales Promotion - Public relations and Direct Marketing - Sales force– Determining the Sales Force Size - Sales force Compensation.

UNIT -V

Distribution, Marketing Organization and Control: Channels of Distribution- Intensive, Selective and Exclusive Distribution- Organizing the Marketing Department - Marketing Implementation - Control of Marketing Performance - Annual Plan Control - Profitability Control - Efficiency Control - Strategic Control.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

V21MBT10: PRODUCTION & OPERATIONS MANAGEMENT

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1) Understand the evolution and fundamental concepts of production and operations management. (K2)
2) Understand the production planning and control strategies. (K2)
3) Assess the concepts of Waste Management, Quality Assurance, Quality Circles and application of various Statistical Quality Control techniques. (K3)
4) Understand basic concepts of Quality Improvement tools like six sigma, ISO 9000-2000 clauses and coverage and factors effecting Productivity. (K2)
5) Apply various stores management and Inventory Control techniques. (K3)
6) Interpret problems related to Operations Management by studying practical cases. (K3)

****

UNIT 1:
Introduction: Overview & Definition of Production and Operations Management- Nature and Scope of Production and Operations Management-Historical Evolution – Role & responsibilities of the production manager - Types of Manufacturing Processes.

UNIT 2:
Production Planning and Control: Stages in PPC – Gantt – PPC in Mass, Batch, and Job Order
Manufacturing- Aggregate planning and Master Scheduling, MRP, CRP. Maintenance management & Industrial Safety. Plant Location & Layout Planning- Factors influencing location - types of layouts. Capacity Planning – Optimal Production Strategies: Scheduling and Sequencing of Operations. Work Design: Method Study and Work Measurement – Work Sampling.

UNIT 3:
Managing of Work Environment: –Automation --Technology Management – Waste Management. Quality Assurance and Quality Circles – Statistical Quality Control – Control Charts for Variables- Average, Range and Control charts for Attributes. Acceptance Sampling Plans.

UNIT 4:

Quality Improvement: Basic concepts of quality, dimensions of quality, Juran's quality trilogy,
Deming's 14 principles, Quality improvement and cost reduction, ISO 9000-2000 clauses & coverage. Six Sigma, Productivity –factors affecting productivity, measurement & improvements
in productivity - new product development and design - stages & techniques. Total Productive Maintenance (TPM).

UNIT 5:

Stores Management: Purchase functions and Procedure - Objectives of Stores Management – Requirements for efficient-Management of Stores – safety stock-Different Systems of Inventory Control -Inventory control techniques- EOQ, ABC, VED and FNSD analysis- JIT, VMI

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - Second semester

V21MBT11: BUSINESS RESEARCH & STATSTICAL ANALYSIS

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

Course Outcomes:

Students are able to....

1. Understand the concept of research, research process in detail. (K1)
2. Understand various scaling techniques and research report preparation process. (K2)
3. Apply various statistical tools to test hypothesis. (K3)
4. Describe Bivariate and Multivariate analysis concepts. (K2)
5. Apply SPSS for Hypothesis testing. (K3)
6. Interpret problems related to Business Research by studying practical cases. (K3)

****

UNIT 1:
Introduction: Nature and Importance of research, the role of business research, Research process, types of research, Defining Research Problem. Research Design – Types of Research design-Sampling and Sampling Design – Sampling Methods – Probability and Non probability sampling. Discussion on primary data and secondary data, tools and techniques of collecting data. Methods of collecting data-Designing of Questionnaire.

UNIT 2:
Measurement and Scaling – Nominal Scale – Ordinal Scale –Interval Scale – Ratio Scale – Guttman Scale – Likert Scale – Schematic Differential Scale. Editing – Coding – Classification of Data – Tabulation and Graphic representation of data.

UNIT 3:
Data Analysis: Formulation of hypothesis-types of hypothesis- Null and Alternate - Type I and Type II errors, Large Sample Vs Small Sample; Procedure for testing of Hypothesis –parametric tests ; Z tests – One mean – Two mean – one Proportion – Two Proportion tests, t- distribution tests – One mean, Two mean & paired tests.

UNIT 4:
F- test and ANOVA – Calculation of F Value - one way (Completely Randomized Design) and two ways tests (Randomized Block Design) - Chi - Square tests - Goodness of fit- test for Independence of attributes – Concepts of Bivariate and Multivariate analysis.

UNIT 5:

Research Report Writing: Structure and components of Research reports, Types of reports, characteristics of good report. Format & common content's in reports. Preparation & Presentation of reports. Introduction to basics of SPSS

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - Second semester

V21MBT12: BUSINESS ETHICS & CORPORATE GOVERNANCE

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

Students are able to....

1. Understand the importance of ethics and ethical practices at work place. (K2)
2. Recall various factors influencing Business ethics in India. Also get understanding of various scams. (K1)
3. Understand the ethical practices in functional areas such as Marketing, Hrm & Finance. (K2)
4. Understand the overview of corporate governance in India. (K2)
5. Report various governance issues related to Directors and Auditors. (K2)
6. Interpret problems related to Business Ethics by studying practical cases. (K3)

****

UNIT 1:
Importance of Business Ethics: Values and Ethics- Business Ethics and Law – Ethics in Work Place – Ethical Decision Making- Theories of Business Ethics – Management and Ethics- Indian Ethical Traditions.

UNIT 2:
Impact of Globalization on Indian Business Ethics: Reasons for Unethical Practices among Indian companies – Development of Indian Capital Markets – Various studies on Ethical Attitudes of Managers Major Indian Scams.

UNIT 3:
Ethics in Marketing, HRM and Finance: Product safety and Pricing-Ethical responsibility in Product- Advertising and Target Marketing Ethics of sales, advertising and product placement and Consumer Autonomy. Ethics in HRM & Finance – HR related ethical issues - Institutional Culture – Frauds in Banks - Measures against Bank Frauds – Frauds in Insurance sector.

UNIT 4:
Corporate Governance: An overview – Theory and Practice of Governance- Indian model of Governance- Good Corporate Governance – Land marks in emergence of Governance OECD Principles – Sarbanes-Oxley Act 2002- SEBI Initiatives.

UNIT 5:
Corporate Governance Indian Scenario: Role of Government in Ensuring Corporate Governance – Governance issues relating to Board of Directors – Duties and responsibilities of Auditors – Governance under limited competition – Role of Media – Corporate Governance in Developing and Transiting Economies.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - Second semester
V21MBT13: ENTREPRENEURSHIP DEVELOPMENT
(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

CO1: Understand the foundations of Entrepreneurship and its importance. (K1)

CO2: Develop viable business ideas and understand entrepreneurial eco system. (K3)

CO3: Develop new projects and preparation of detailed project report. (K3)

CO4: Understand the importance of MSME's in the economic development of a nation. (K2)

CO5: Identify various sources of Entrepreneurial support organizations. (K2)

CO6: Interpret problems related to Entrepreneurs by studying practical cases. (K3)

UNIT 1

Entrepreneurship: Importance and growth - Characteristics and Qualities of Entrepreneur- Role of Entrepreneurship, Ethics and Social Responsibilities. Women Entrepreneurship: Role & Importance, Problems of Women Entrepreneurs, Opportunities for women entrepreneurs – corporate entrepreneurship – mobility of entrepreneur – entrepreneurial motivation.

UNIT2

Innovation: Sources of business idea-Idea generation- Ideal validation- idea screening process- market sizing techniques- innovation and creativity for aspiring entrepreneurs- incubation- startup eco system

UNIT 3

Planning and Evaluation of Projects: Growth of Firm – Project identification and selection - Factors inducing growth- - Project Feasibility Study – Elements of a project report- preparation of DPR. Post Planning of Project-Project Planning and Control.

UNIT 4

Small and Micro Enterprises: Importance, definition of Tiny, Micro, Small and medium scale units – policies and their support to MSMEs - growth and growth strategies – registration process of MSME- MSMED Act 2006.

UNIT 5

Institutional Support to Entrepreneur and MSMEs: Role of Government - Role of SIDBI, - Central Government Institutions – SIDO, NSIC, EDII, AISSIB, DST. State Government Institutions - DIC, TCOs, Commercial Banks.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: First Year - First semester

V21MBL02: INFORMATION TECHNOLOGY LAB (100% Lab)

(Effective for the students admitted into first year from the Academic Year 2021-2022)

L	T	P	C
0	0	4	2

Course Outcomes:

Students are able to...

1. **P**repare various office reports using MS-Office. (K3)
2. **U**nderstand the basics of SPSS and descriptive and inferential Statistical techniques using SPSS (K2)
3. Employ math and simulation in R (K3

UNIT-I:

Introduction to MS-Office: Introduction to various softwares used in business & their significance in the current business environment. Introduction to MS Office and its application in preparation of reports.

UNIT-II:

Introduction to SPSS: Overview of SPSS: Mouse and keyboard processing, frequently used dialog boxes, Editing output, Printing results, Creating and editing a data file. Managing Data: Listing cases, replacing missing values, computing new variables, recording variables, exploring data, selecting cases, sorting cases, Merging files.

Graphs & Frequencies: Creating and editing graphs and charts - Frequencies, bar charts, histograms, percentiles.

Descriptive Statistics: Measures of central tendency, variability, deviation from normality, size and stability. Cross Tabulation and chi-square analysis, The means Procedure. Bivariate Correlation: Bivariate Correlation, Partial Correlations and the correlation matrix.

UNIT-III:

R Programming:

1. Demonstrate Vector, Matrix & Array operations in R, Demonstrate Data frames and Lists in R
