Annexure-MBA- III

V20MBT51: MANAGERIAL ECONOMICS & FINANCIAL ANALYSIS

(Effective for the students admitted into first year from the Academic Year 2020-2021)
(Common to all Engineering Branches under V20 Regulations)

L	T	P	C
3	0	0	3

COURSE OUTCOMES:

CO1: Understand the basic concepts of managerial economics, demand, elasticity of demand and methods of demand forecasting. (K2)

CO2: Interpret production concept, least cost combinations and various costs concepts in decision making. (K3)

CO3: Differentiate various Markets and Pricing methods along with Business Cycles (K2)

CO4: Prepare financial statements and its analysis. (K3)

CO5: Assess various investment project proposals with the help of Capital Budgeting techniques for decision making. (K3)

Unit-I

Introduction to Managerial Economics and demand Analysis: Definition of Managerial Economics and Scope-Managerial Economics and its relation with other subjects-Concept of Demand-Types-Determinants-Law of Demand its Exceptions-Elasticity of Demand-Types and Measurement- Demand forecasting and its Measuring Methods.

Unit-II

Production and Cost Analysis: Production function-Iso-quants and Iso-cost-Law of Variable proportions- Cobb-Douglas Production function-Economies of Scale-Cost Concepts-Opportunity Cost-Fixed vs Variable Costs-Explicit Costs vs Implicit Costs- Cost Volume Profit analysis- Determination of Break-Even Point- BEP Chart (Simple Problems).

Unit-III

Introduction To Markets, Pricing Policies & forms of Organizations and Business Cycles: Market Structures: Perfect Competition, Monopoly, Monopolistic and Oligopoly – Features – Price, Out-put Determination – Methods of Pricing: Evolution of Business Forms - Features of Sole Trader – Partnership – Joint Stock Company – State/Public Enterprises. Business Cycles – Meaning and Features – Phases of Business Cycle.

Unit-IV

Introduction to Accounting & Financing Analysis: Introduction to Double Entry System – Preparation of Financial Statements- Trading Account, Profit & Loss Account and Balance Sheet - Ratio Analysis – (Simple Problems).

Unit-V

Capital and Capital Budgeting: Capital Budgeting: Meaning of Capital-Capitalization-Meaning of Capital Budgeting-Need for Capital Budgeting-Techniques of Capital Budgeting-Traditional and Modern Methods.

Annexure-MBA- IV

Pre-requisite: MEFA & Management Science

Course Outcomes: At the end of the course, students should be able to

- Understand the cost management process and various costs involved in a project (K2)
- Understand various aspects of a project and related processes. (K2)
- Analyze the concepts of Break even and CVP analysis. (K3)
- Demonstrate quality management techniques besides budgeting strategies (K2)
- Apply quantitative techniques for cost management (K4)

Unit 1: Introduction and Overview of the Strategic Cost Management Process: Cost concepts in decision-making; relevant cost, Differential cost, Marginal cost, Incremental cost and Opportunity cost. Objectives of Costing System; Creation of a Database for operational control; Provision of data for Decision-Making.

Unit 2 : Project Management: Meaning, Different types of projects. **Various stages of projectexecution**: conception to commissioning, Project execution as a conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution, main clearances and documents. **Project team**: Role of each member, Importance of Project site. Project contracts: Types and its contents. CPM & PERT Techniques.

Unit 3: Cost Behavior and Profit Planning: Marginal Costing, Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis, Standard Costing and Variance Analysis.

Unit 4:Quality management and Budgeting strategies: Pareto Analysis, Target costing, Life Cycle Costing, Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. **Budgetary Control**; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitabilitypricing & decisions including transfer pricing.

Unit 5: Quantitative techniques for cost management, Linear Programming, Transportation problems, Assignment problems, Simulation, Learning Curve Theory

Reference Books:

6. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
7. Charles T. Horngren and George Foster, Advanced Management Accounting
8. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
9. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher
10. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

I-I	Research Methodology and IPR	Course Code: V21MBT55	L	T	P	C
			2	0	0	2

Course Outcomes: After completion of course, students would be able to

CO1: Discuss different methodologies and techniques used in research work. (K2)
CO2: Explain basic computer skills necessary for the conduct of research. (K2)
CO3: Assess the basic function and working of analytical instruments used in research. (K3)
CO4: Practice the required numerical skills necessary to carry out research. (K3)
CO5: Demonstrate a capacity to identify, apply and assess ownership rights and marketing protection under intellectual property law as applicable to information, ideas, new products and product marketing. (K3)

UNIT 1: Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

UNIT 2: Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technicalwriting, how to write report, Paper Developing a Research Proposal, Format of research proposal,a presentation and assessment by a review committee

UNIT 3: Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting andDevelopment: technological research, innovation, patenting, development. International Scenario:International cooperation on Intellectual Property. Procedure for grants of patents, Patentingunder PCT.

UNIT 4: Patent Rights: Scope of Patent Rights. Licensing and transfer of technology.Patent informationand databases.Geographical Indications.

UNIT 5: New Developments in IPR: Administration of Patent System. New developments in IPR; IPR ofBiological Systems, Computer Software etc.Traditional knowledge Case Studies, IPR and IITs.

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 20-09-2021 at 4:00 PM through online mode using Zoom application.

Link: https://us02web.zoom.us/j/81705930843

The following members were present in the meeting.

S.No	Name	Designation	Member Role
1.	Dr.GuduruVNSRRatnakara Rao	Principal	Chairman
2.	Dr. K. Venkata Reddy	Controller of Examinations-JNTU Kakinada	University Nominee
3.	Dr.M.Thamarai	Prof./ECE- SVEC(A8)	Member
4.	Mr.Ch.V.S.R.Gopala Krishna	Deputy CoE; SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1 : B.Tech I Semester results for the ac. year 2020-21.

The summary of the results

a. Branch Wise Performance Analysis

S.No	Branch	Registered	Passed	Fail	Pass %
1	CE	45	10	35	22.22
2	ECT	62	48	14	77.42
3	EEE	93	54	39	58.06
4	ME	90	20	70	22.22
5	ECE	192	154	38	80.21
6	CSE	257	196	61	76.26
7	CST	65	51	14	78.46
Overall		**804**	**533**	**271**	**66.29**

b. Course Wise Performance Analysis

S. No	Course Code	Course Name	Appeared	Passed	Fail	Pass Percentage
1.	V20CST01	PROGRAMMING IN C FOR PROBLEM SOLVING	550	370	180	67.27
2.	V20MET01	ENGINEERING GRAPHICS	389	316	73	81.23

5.	Mr. G.V. Subrahmanyam	Dy. CoE; SVEC(A8)	Member	

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 16-11-2021 at 3:00 PM through online mode using Zoom application.

Link: https://us02web.zoom.us/j/84779132453

The following members were present in the meeting.

S.No	Name	Designation	Member Role
1.	Dr.Guduru VNSR Ratnakara Rao	Principal	Chairman
2.	Dr. R Madhu	Addl.Controller of Examinations-JNTU Kakinada	University Nominee
3.	Dr.M.Thamarai	Prof./ECE- SVEC(A8)	Member
4.	Mr V.S.R.Gopala Krishna Ch	CoE; SVEC(A8)	Member
5.	Mr G V Subrahmanyam	Deputy CoE; SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1: B.Tech V Semester (V18) Supplementary results September 2021 for the ac. year 2020-21.

The summary of the results

a. Branch Wise Performance Analysis

S. No	Branch	No of Students Registered	No. of Courses			Course Wise Pass %
			Registered	Passed	Fail	
1.	CE	33	85	43	42	50.59

15.	V18SET05	SUB-STRUCTURE DESIGN	1	0	1	0

Details enclosed in annexure-III

Item#4: MBA IV Semester (V18) Supplementary examinations – November-2021 for the ac. year 2020-21.

The summary of the results

a. Program Wise Performance Analysis

S. No	Program	No. of Courses			Course Wise Pass %
		Registered	Passed	Fail	
1.	MBA	8	8	0	**100**

b. Course Wise Performance Analysis

S. No	Course Code	Course Name	Registered	Pass	Fail	Pass %
1.	V18MAT08	EMPLOYABILITY SKILLS-IV (APTITUDE-2)	6	6	0	100
2.	V18MBT29	LOGISTICS & SUPPLY CHAIN MANAGEMENT	1	1	0	100
3.	V18MBT35	FINANCIAL DERIVATIVES	1	1	0	100

Details enclosed in annexure-IV

Item#5: Revaluation results of B Tech III Semester (V18) Supplementary examinations – September-2021 for the ac. year 2020-21.

The summary of the results

a. Branch Wise Performance Analysis

S. No.	Branch	Revaluation(No of Courses)			
		Applied	Change	No Change	Pass %
1.	CE	3	0	3	---
2.	EEE	3	0	3	---
3.	ME	4	1	3	25.0
4.	ECE	17	1	16	5.88
5.	CSE	9	0	9	---
6.	CST	5	0	5	---
7.	ECT	2	0	2	---

b. Course Wise Performance Analysis

S.No	Course Code	Course Name	Applied	Change	No Change
1.	V18CET04	Strength Of Materials-I	2	---	2
2.	V18CST02	Data Structures And Algorithms	2	---	2
3.	V18CST04	Object Oriented Programming For Problem Solving	9	---	9

Annexure-XII

Amendments to UG V18 Academic regulations

1. **As per V18 regulations vide item no:7.3 & 7.4:**

   A student shall be promoted from II year (IV Semester) to III year (V Semester) if he/she earns 50% of the total credits specified up to and including IV semester examinations.

   A student shall be promoted from III year(VI semester) to IV year(VII semester) only if he earns 50 % of the credits specified up to and including III year I semester

   This is amended as follows

   If the number of credits required to promote is not a whole number, the credits are rounded to next higher digit / whole number

   No minimum credits required for promotion from IV semester to V semester, for the academic year 2021-2022 only, as a special case due to COVID-19.

   No minimum credits required for promotion from VI semester to VII semester, for the academic year 2021-2022 only, as a special case due to COVID-19.

2. **Proposed changes for internal evaluations of IV semester and VI semester UG students during academic year 2020-2021.**

   Comprehensive Test: The Comprehensive examination is conducted for 60 marks and scaled down to 10 marks covering the total syllabus.

   Comprehensive marks will be awarded based up on the performance in Mid-I & Mid-II examinations-Best out of two mid exams will be scaled down to 10 marks.

Annexure-XIII

List of BOS members for AI & ML B.Tech Course

S.No.	Name of the BOS Member	Role	Details
1.	**Dr. D. Haritha,** Professor of CSE, UCEK, JNTUK	University Nominee	Email : harithadasari9@yahoo.com Phone : 9440810901
2.	**Dr. Nagesh Bhattu Sristy,** Assistant Professor, Department of CSE, NIT-AP.	Academic Expert	Email : nageshbhattu@nitandhra.ac.in Phone : 9441955120
3.	**Dr. K. Venkata Rao**, Professor Department of CS&SE, AU College of Engineering, Visakhapatnam	Academic Expert	Email : professor_venkat@yahoo.com Phone :8008683906
4.	**Mr. Mbm Raju**	Industry Expert1	Email: raju.mbm@tcs.com
5.	**Mr.Vinay Kumar** Director XpertBridge, Hyderabad	Industry Expert2	Email : vinaykumarvk@gmail.com Phone : 9885313991
6.	**Mr. M Jnana Surya Prakasha Rao** BI Technical Consultant Pragmasys consulting LLP Gurgaon	Alumni	Email : surya.prakash@pragmasys.in,sprakash.jspl@gmail.com Phone :9948888340

List of above BOS members Sl No. 2 to 6 is already communicated to members of Academic Council on 11th November 2021.

Sl.no. 1 is nominated by affiliating university (JNTUK) wide reference
Lr. No. JNTUK/DAP/Sri Vasavi EC(A8)/ Nominees / 2021, dated 21/12/2021

Annexure-XIV

Minutes of the First Board of Studies of CSE (AI) and AIML

The First Meeting of BOS, B.Tech in CSE(AI) and B.Tech in AI&ML is held at 11:00 AM Through online mode on 31.12.2021(Friday) using the following link:

https://us02web.zoom.us/j/81026816076

The following members attended the meeting:

S.No.	Name of the Member	Designation	Role
1.	Dr. D Jaya Kumari	Professor, HoD-CSE, SVEC	Chairperson
2.	Dr.Dasari Haritha	Professor &HOD, UCEK, Kakinada	University Nominee
3.	Dr Nagesh Bhattu Sristy	Asst.Professor, Department of CSE, NIT- AP	Academic Expert
4.	Dr. K. Venkata Rao	Professor, Department of CS&SE,Andhra University, Vishakapatnam	Academic Expert
5.	Sri. Vinay Kumar	Director,XpertBridge, Hyderabad.	Industry Expert
6.	Sri. M Jnana Surya Prakasha Rao	Pragmasys consulting LLP, Gurgaon	Alumni
7.	Dr. G Loshma	Professor	Member
8.	Dr. V S Naresh	Professor	Member
9.	Ch. Raja Ramesh	Associate Professor	Member
10.	Dr.K. ShirinBhanu	Associate Professor	Member
11.	Dr.P Laxmikanth	Associate Professor	Member
12.	A. Leelavathi	Sr. Assistant Professor	Member
13.	D Anjani Suputhri Devi	Sr. Assistant Professor	Member
14.	B.SriRamya	Assistant Professor	Member
15.	G.Sriram Ganesh	Assistant Professor	Member
16.	M S Kumar Reddy	Assistant Professor	Member
17.	M Sree Radha Mangamani	Assistant Professor	Member

Members Absent:

S.No.	Name of the Member	Designation	Role
1.	Mbm Raju	Head, Strategic Initiatives And Isu / Branch OperationsTata Consultancy Services	Industry Expert

Item No. 1: Introducing members of BOS.

The HOD extended a formal welcome and introduced the members.

Item No. 2: Approval of Course Structure and Syllabus for I and II Semesters of B.Tech inCSE(AI) and B.Tech in AI&ML Programmes under V20 Regulation.

Approved the Course Structure and Syllabus for I and II Semesters of B.Tech in CSE(AI) andB.Tech in AI&ML Programmes under V20 Regulation and suggested the following changes:

SEM	Course Code	Suggestions	Inclusions / Modifications
II	V20CSL04	In Data Structures Lab course it was suggested that include Stacks using Linked List	Included as an Add on Experiment

The Approved and Modified Course Structure and Syllabus is given in **Annexure-CAI-I**

Chairperson of BOS
(Dr.D Jaya Kumari)

Head of the Department
Dept. of Computer Science & Engineering
Sri Vasavi Engineering College
TADEPALLIGUDEM-534 101

Annexure-CAI-I

SYLLABUS

Semester	I Sem	L	T	P	C	COURSE CODE
Regulation	V20	1	-	4	3	V20AIL01
Name of the Course	Computer Engineering Workshop					
Branch	Common to B.Tech CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Identify, assemble and update the components of a computer. **(K2)**
CO2: Practice disassembling and assembling components and execution ofcomputer applications, services and systems. **(K3)**
CO3: Make use of tools for converting pdf to word and vice versa. **(K6)**
CO4: Develop presentation, documents and small applications using productivity tools such as word processor, presentation tools, spreadsheets, HTML, LaTex**.** **(K3)**

LIST OF EXPERIMENTS

Note: Faculty to consolidate the workshop manuals using the textbook and references

Task 1: Identification of the peripherals of a computer - Prepare a report containing the block diagram of the computer along with the configuration of each component and its functionality. Describe about various I/O Devices and its usage.

Task 2: Practicing disassembling and assembling components of a PC

Task 3: Installation of Device Drivers, MS Windows, Linux Operating systems and Disk Partitioning, dual boating with Windows and Linux

Task 4: Introduction to Memory and Storage Devices, I/O Port, Assemblers, Compilers, Interpreters, Linkers and Loaders.

Task 5: Demonstration of Hardware and Software Troubleshooting

Task 6: Surfing the Web using Web Browsers, Awareness of various threats on the Internet and its solutions, Search engines and usage of various search engines, Need of anti-virus, Installation of anti-virus, configuring personal firewall and windows update.(Students should get connected to their Local Area Network and access the Internet. In the process they should configure the TCP/IP setting and demonstrate how to access the websites and email. Students customize their web browsers using bookmarks, search toolbars and pop up blockers) Productivity Tools:

Task 7: basic HTML tags, Introduction to HTML5 and its tags, Introduction to CSS3 and its properties. Preparation of a simple website/ homepage,

Assignment: Develop your home page using HTML Consisting of your photo, name, address and education details as a table and your skill set as a list.
Features to be covered:- Layouts, Inserting text objects, Editing text objects, Inserting Tables, Working with menu objects, Inserting pages, Hyper linking, Renaming, deleting, modifying pages, etc.,

Task 8: Demonstration and Practice of various features of Microsoft Word
Assignment: 1. Create a project certificate.
2. Creating a news letter
Features to be covered:-Formatting Fonts, Paragraphs, Text effects, Spacing, Borders and Colors, Header and Footer, Date and Time option, tables, Images, Bullets and Numbering, Table of Content, Newspaper columns, Drawing toolbar and Word Art and Mail Merge in word etc.,
Task 9: Demonstration and Practice of various features
Microsoft Excel Assignment:
1. Creating a scheduler
2. Calculating GPA
3. Calculating Total, average of marks in various subjects and ranks of students based on marks.

Features to be covered:- Format Cells, Summation, auto fill, Formatting Text, Cell Referencing, Formulae in excel, Charts, Renaming and Inserting worksheets, etc.,
Task 10: Demonstration and Practice of various features Microsoft Power Point
Features to be covered:- Slide Layouts, Inserting Text, Word Art, Formatting Text, Bullets and Numbering, Auto Shapes, Hyperlinks Tables and Charts, Master Layouts, Types of views, Inserting – Background, textures, Design Templates, etc.,
Task 11: Demonstration and Practice of various features LaTeX – document preparation, presentation (Features covered in Task 9 and Task 11 need to be explored in LaTex)
Task 12: Tools for converting word to pdf and pdf to word

Task 13: Internet of Things (IoT): IoT fundamentals, applications, protocols, communication models, architecture, IoT devices.

Reference Books:

1 Computer Fundamentals, Anita Goel, Pearson India Education, 2017
2 PC Hardware Trouble Shooting Made Easy, TMH
3 Upgrading and Repairing PCs, 18th Edition, Scott Mueller, QUE, Pearson, 2008
4 LaTeX Companion – Leslie Lamport, PHI/Pearson
5 Introducing HTML5, Bruce Lawson, Remy Sharp, 2nd Edition, Pearson, 2012
6 Teach yourself HTML in 24 hours, By Techmedia
7 HTML 5 and CSS 3.0 to the Real World by Alexis Goldstein, Sitepoint publication.
8 Internet of Things, Technologies, Applications, Challenges and Solutions, B K Tripathy, J Anuradha, CRC Press
9 Comdex Information Technology Course Tool Kit, Vikas Gupta, Wiley Dreamtech.
10 IT Essentials PC Hardware and Software Companion Guide Third Edition by David Anfinson and Ken Quamme, CISCO Press, Pearson Education.
11 Essential Computer and IT Fundamentals for Engineering and Science Students, Dr. N. B. Venkateswarlu, S. Chand Publishers.

Semester	**I Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	-	-	3	V20CST01
Name of the Course	**Programming in 'C' for problem Solving**					
Branch	Common to B.Tech CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe various problem solving strategies such as Algorithms and Flowcharts.**(K2)** **CO2:** Develop various programming constructs using Control Structures. **(K3)**
CO3: Construct Programs using modular programming approach. **(K3)**
CO4: Illustrate the usage of Arrays, String and pointers. **(K3)**
CO5: Construct Programs using Structures, Unions and Files. **(K3)**

UNIT-I: Problem solving concepts: Algorithms, Flow-charts, Types of Programming Languages, Compiler, Assembler and Linker, Testing and Debugging a program. **Introduction to C Programming:** Overview and importance of C, C Program Structure, Creation and Compilation of C Programs, Identifiers, Variables, Data types, Constants, Declarations, **Input and output statements:** Input and output functions..

UNIT-II: Operators: Arithmetic, relational and logical operators, increment and decrement operators, conditional operator, assignment operator, bitwise operators, special operators, expressions, Precedence, Associatively, Order of evaluation, Type conversion, Programming Examples. **Control Structures:** Conditional statements - If-else, Switch-case constructs, Loops - while, do-while, for.

UNIT-III: Functions: Top down approach of problem solving, standard library functions, user defined functions, parameter passing - call by value, call by reference, return statement, passing arrays as parameters to functions, recursion. **Storage Classes:** Scope and extent, Storage Classes - auto, extern, static and register.
Understanding pointers: Accessing the address of a variable, declaring pointer variables, initialization of pointer variables, accessing a variable through its pointer, pointer arithmetic.

UNIT-IV: Arrays: Single-Dimensional Arrays, multi-Dimensional Arrays, initialization and accessing individual elements. **Strings** in C- Concepts, string handling functions. Pointer and arrays, pointers and character strings, array of pointers. **Dynamic Memory Allocation**: calloc(), malloc() and free()

UNIT-V: Structures: Defining, declaring, initialization, accessing, comparing, operations on individual members, array of structures, structures within structures, structures and functions, bit fields, Programming Examples. **Unions:** Definition – difference between structures and unions – declaring and accessing unions. Pointers and structures – self-referential structures.

File Processing: Creating and Opening a file, file opening modes, closing a file, input/output operations on files, error handling during I/O operations, random access to files, Command line arguments. Programming Examples.

Text Books:

1. Programming in ANSI C by E Balagursamy, McGraw Hill, 8th Edition.

Reference Books:

1. Let Us C, YashavantKanetkar, BPB Publications, 15th Edition
2. Programming in C, ReemaThareja, Oxford.
3. Programming with C, Second edition, Byron S Gottfried, Tata McGrawhill
4. Problem Solving and Programm design in C, Hanly J R &Koffman E.B, Pearson Education, 2009.
5. Programming in C, PradipDey, ManasGhosh, Oxford University Press, 2007.
6. Problem Solving Using C: Structured Programming Techniques, YukselUckan.
7. C Programming, A Problem Solving Approach, Forouzan, Gilberg, Prasad, CENGAGE.
8. Computer Programming in C – Kerninghan& Ritchie, PHI
9. C: The Complete Reference: Herbert Schildt, Osborne/Mcgraw Hill, Inc.

Semester	**I Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	-	-	3	1.5	V20AIL02
Name of the Course	**Statistical Visualization using R Lab**					
Branch	Common to B.Tech CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: At the end of the Course student will be able to:

CO1: Employ math and simulation in R.**(K2)**

CO2: Demonstrate various types of data structures in R. **(K3)**

CO3: Apply appropriate control structures to solve a particular Programming problem. (**K3)**

CO4: Use R to graphically visualize data and results of statistical calculations. **(K3)**

LIST OF EXPERIMENTS

1. Demonstrate the basic math functions in R
2. Demonstrate Vector operations in R
3. Demonstrate Matrix operations in R
4. Demonstrate Array operations in R
5. Demonstrate Data frames in R
6. Demonstrate Lists in R
7. Illustrate the following controls statements in R
   a. if and else   b. ifelse   c. switch
8. Demonstrate for and while loops in R
9. Demonstrate importing and exporting data using R
10. Illustrate the descriptive statistics using summary() in R
11. Demonstrate the following statistical distribution functions in R:
    a. Normal Distribution
    b. Binomial Distribution
    c. Poisson Distribution
    d. Chi Square Distribution
12. Illustrate the following basic graphics in R:
    a. Bar plots
    b. Pie Charts
    c. Histograms
    d. Kernel density plots
    e. Boxplots
    f. Dotplots

13. Illustrate the Correlation and Covariance analysis using R
14. Illustrate the different types of t-tests using R
15. Illustrate the ANOVA test using R

Text Books:

1. R for Everyone, Jared P Lander, Pearson
2. R in Action,Rob I Kabacoff, Manning

Reference Book:

1. The Art of R Programming, Norman Matloff, No Starch Press

Semester	I Sem	L	T	P	C	COURSE CODE
Regulation	V20	-	-	3	1.5	V20CSL01
Name of the Course	Programming Lab in 'C' for problem Solving					
Branch	Common to All					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate problem solving techniques using Control Structures.**(K3)**

CO2: Construct Programmes using the concepts of Arrays, Strings and Pointers. **(K3)**

CO3: Apply the concepts of Functions, Structures and Unions.**(K3)**

CO4: Use various file processing operations to develop real-time applications. **(K4)**

LIST OF EXPERIMENTS

Tutorial 1: Problem solving using computers.

Lab1: Familiarization with programming environment.

Tutorial 2: Variable types and type conversions.

Lab 2: Simple computational problems using arithmetic expressions.

Tutorial 3: Branching and logical expressions.

Lab 3: Problems involving if-then-else structures switch – case.

Tutorial 4: Loops, while and for loops.

Lab 4: Iterative problems e.g. sum of series.

Tutorial 5: Functions call by value, call by reference

Lab 5: Simple functions.

Tutorial 6: Recursion, structure of recursive calls.

Lab 6: Recursive functions.

Tutorial 7: Pointers.

Lab 7: Programming with pointers.

Tutorial 8: 1D Arrays: searching, sorting.

Lab 8: 1D Array manipulation.

Tutorial 9: 2D arrays.

Lab 9: Matrix problems.

Tutorial 10: String handling.

Lab 10: String handling functions.

Tutorial 11: Structures, unions and dynamic memory allocation.

Lab 11: Structures & unions.

Tutorial 12: File handling, command line arguments.

Lab 12: File operations.

Branch	Common to B.Tech CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: Upon completion of the course, students will be able to

CO1: Illustrate basic concepts of Python Programming. **(K2)**

CO2: Describe control structures in python. **(K2)**

CO3: Construct python programs using structured data types. **(K3)**

CO4: Demonstrate functions and packages (**K3)**

CO5: Develop programs on Files, Exception handling and OOPs concepts. **(K3)**

UNIT-I: Introduction to Python, Data Types & Operators: Basics of python programming: Features of python – History of Python - Python installation and execution - Data types – Identifiers - variables – type conversions- Literals, Constants – Numbers – Strings. I/O statements.Operators and expressions, operator precedence – expression evaluation.

UNIT-II: Control Structures: Decision Control statements: conditional (if), alternative (if- else), chained conditional (if-elif-else); **Iteration:** while loop, for loop, nested for loop, range function, break, continue and pass statements.

UNIT-III: Structured Data Types: Lists: list operations, list slices, list methods, cloning lists, list parameters. **Tuples**: tuple assignment, tuple as return value. **Set:** Set Creation, Set Operations. **Dictionaries**: Creation, operations; comprehension, operations on strings.

UNIT-IV:Functions& modules: Introduction - Function Declaration &Definition - Function Call – Variable Scope and Lifetime - The return statement-More on Defining Functions - Lambda Functions or Anonymous Functions - Documentation Strings- Modules – Packages.

UNIT-V: Files & Exception Handling: Introduction - Types of files - Text files - reading andwriting files; Errors and exceptions handling.

OOPS concepts Classes, Methods, Constructor, Inheritance, Overriding Methods, Data hiding,TKINTER.

Text Books:

1. "Python Programming using problem solving Approach" ReemaThareja, Oxford University Press – 2017.
2. Python with Machine Learning by "A.Krishna Mohan, Karunakar&T.Murali Mohan" by S. Chand Publisher-2018.

Reference Books:

1. Allen B. Downey, "Think Python: How to Think Like a Computer Scientist„„, 2nd edition, Updated for Python 3, Shroff /O„Reilly Publishers, 2016 (http://greenteapress.com/wp/think- python)
2. Guido van Rossum and Fred L. Drake Jr, ―An Introduction to Python – Revised and updated for Python 3.2, Network Theory Ltd., 2011.
3. John V Guttag, ―Introduction to Computation and Programming Using Python„„, Revised and expanded Edition, MIT Press , 2013.

Semester	II Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	-	-	3	V20CST04
Name of the Course	Data Structures					
Branch	Common to B.Tech CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the time and space complexities for searching and sorting algorithms. **(K2)**
CO2: Demonstrate linked lists and their applications. **(K3)**
CO3: Demonstrate linear data structure. . **(K3)**
CO4: Illustrate basic operations on binary trees. **(K3)**
CO5: Demonstrate Graphs and their applications. **(K3)**

Unit-I: Introduction, searching and sorting: Introduction to Data Structures, Types of Data Structures, Performance Analysis: Space complexity, time complexity, asymptotic notation. **Searching:** Linear, Binary and Fibonacci search. **Sorting**: Bubble sort, Selection sort, Insertion sort, radix sort, quick sort, and merge sort.
Hashing: Introduction, Key Terms and Issues, Hash Functions, Collision Resolution Strategies.

Unit-II: Single linked list: Representation of node, operations on single linked list, **Double linked list:** Representation of node, operations on double linked list. **Circular linked List:** Representation of node and its operations.

Unit-III: Stacks: Definition, Stack ADT, array representation, linked list representation, Towers of Hanoi, infix to postfix conversion, expression evaluation. **Queues:** Definition, Queue ADT, Array representation, linked list representation, operations on queues, Applications of Queues, Circular Queue.

Unit-IV: Trees: Introduction: Terminology, representation of trees, **Binary Trees:** abstract data type, Properties of binary trees, binary tree representation, **Tree Traversals:** Inorder, Preorder, Postorder. **Binary search trees:** Definition, searching BST, insert into BST, delete from a BST, Height of a BST, Introduction to Binary Heaps.

Unit-V: Graph: Introduction, definition, types of Graphs, Graph Representation, operations. **Graph Traversal Techniques:** Breadth First Search, Depth First Search. **Spanning Trees:** minimum cost spanning tree, Prim"s and Kruskal"s algorithms, Single source shortest Path and all pair shortest path algorithms.

Text Books:

1. Data Structures, algorithms and applications in C, SartajSahni, Universities press, Second Edition.
2. Fundamentals of Data Structures in C, Ellis Horowitz, SartajSahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. Hashing: Data Structures using C++ by Varsha H Patil, Oxford publications.
2. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
3. Fundamentals of Data Structures and algorithms by C V Sastry, RakeshNayak, Ch. Raja Ramesh, IK Publications, new Delhi.
4. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
5. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

Semester	**II Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	-	-	3	V20AIT01
Name of the Course	**Introduction to Artificial Intelligence**					
Branch	Common to B.Tech CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the concepts of AI Foundation. **(K2)**
CO2: Illustrate the basics of Machine Learning. **(K2)**
CO3: Explain various Classification Techniques. **(K2)**
CO4: Illustrate the working of Recommendation System. **(K2)**
CO5: Describe the applications of AI and ML. **(K2)**

UNIT-I: Introduction: What is AI? Foundations of AI: Philosophy, Mathematics, Economics, Neuroscience, Psychology, Computer Engineering; The History of AI, The State of the Art, Agents and Environments.

UNIT-II: Machine learning: Introduction, Learning: Machine Learning, Types of Machine Learning, Supervised Learning: Classification, Regression, The Machine Learning Process, Testing Machine LearningAlgorithms, Some Basic Statistics.

UNIT-III: Classification: General Approach to Classification, Probabilistic Classifier: Bayes Classifier, Non-Probabilistic Classifier: KNN Classifier, Decision Tree, Accessing Performance of a Classifier: Accuracy, Loss, Confusion Matrix.

UNIT-IV: Recommendation Systems: A Model for recommendation Systems: The utility matrix, long tail, Applications if Recommendation Systems; Content-Based Recommendations: Item Profiles, Discovering Features of Documents, Obtaining Item Features from Tags, Representing Item Profiles, User Profiles, Recommending Items Users based on Content.

UNIT-V: Applications of AI and ML: Anomaly Detection, Bio Medical Applications, Natural Language Processing, Chatbots, Computer Vision.

Textbooks:

1. Artificial Intelligence: A Modern Approach, Stuart Russell and Peter Norvig, 3rd Ed., Pearson Education. *(Unit I)*
2. Machine Learning: An Algorithmic Perspective, Stephen Marsland, 2nd Ed., CRC Press. *(Unit II,III)*
3. Mining Massive Datasets, Jure Leskovec, Anand Rajaraman, Jeff Ullman, 3rd Ed., Stanford University. *(Unit IV)*
4. Machine Learning and its Applications, Peter Wlodarczak, CRC Press. *(Unit V)*
5. Getting Started with Artificial Intelligence: A Practical Guide to Building Enterprise Applications, Tom Markiewicz and Josh Zheng, 1st Ed., O‟Reilly. *(Unit V).*

Semester	**II Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	-	-	3	1.5	V20CSL02
Name of the Course	**Python Programming Lab**					
Branch	Common to CSE,CST,CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Basic Python Programs. **(K3)**

CO2: Construct control structures in python **(K3)**
CO3: Demonstrate functions and packages. **(K3)**
CO4: Construct python programs using structured data types. **(K3)**
CO5: Construct programs using Text Files and exception handling. **(K3)**

LIST OF EXPERIMENTS

Exercise 1 - Basics

a) A sample Python Script using command prompt, Python Command Line and IDLE

b) A program to purposefully raise an Indentation Error and correct it

Exercise 2 - Operations

a) A program to compute distance between two points taking input from the user (PythagoreanTheorem)

b) A program on add.py that takes 2 numbers as command line arguments and prints its sum.

Exercise - 3 Control Flow

a) A Program to implement for checking whether the given number is a even number or not.

b) A program to construct reverse the digits of a given number and add it to the original, If the sum isnot a palindrome repeat this procedure.

c) A program using a while loop that asks the user for a number, and prints a countdown from thatnumber to zero.

Exercise 4 - Control Flow – Continued

a) A program to construct the following pattern, using a nested for loop.

```
    *
   * *
  * * *
 * * * *
* * * * *
 * * * *
  * * *
   * *
    *
```

b) By considering the terms in the Fibonacci sequence whose values do not exceed four million,findthe sum of the even-valued terms.

Exercise - 5 Structured Data types

a) A program to count the number of strings where the string length is 2 or more and the first and lastcharacter are same from a given list of strings.

b) a program to develop unzip a list of tuples into individual lists and convert them into dictionary.

Exercise – 6Structured Data types Continued

a) A program to count the numbers of characters in the string and store them in a dictionary data structure

b) A program to use split and join methods in the string and trace a birthday with a dictionary datastructure.

Exercise - 7 – Problem Solving using Functions

a) Find mean, median, mode for the given set of numbers passed as arguments to a function

b) Develop a function nearly_equal to test whether two strings are nearly equal. Two strings a and b arenearly equal when a can be generated by a single mutation on b.

c) Develop a Recursive Function to find the Factorial of a given number.

d) Develop function to compute gcd, lcm of two numbers. Each function shouldn"t exceed one line.

Exercise - 8– Modules

a) Install packages requests, flask and explore themusing (pip)

b) A program to implement a script that imports requests and fetch content from the page. Eg. (Wiki)

c) Develop a simple script that serves a simple HTTPResponse and a simple HTML Page

Exercise - 9 Files

a) A program to count frequency of characters in a given file. Can you use character frequency to tellwhether the given file is a Python program file, C program file or a text file?

b) A program to compute the number of characters, words and lines in a file.

Exercise - 10 OOP

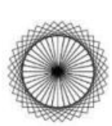
a) Class variables and instance variable and illustration of self-variable

i) Robot

ii) ATM Machine

Exercise - 11 GUI, Graphics

1. Develop a GUI for an Expression
2. A program to implement the following figures using turtle



Text Books:

1. "Python Programming using problem solving Approach" ReemaThareja, Oxford University Press– 2017.
2. Python with Machine Learning by "A.Krishna Mohan, Karunakar&T.Murali Mohan" by S. ChandPublisher-2018.

Semester	II Sem	L	T	P	C	COURSE CODE

Branch	Common to CSE,CST,CSE(AI) and B.Tech(AI & ML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Construct Programs on Sorting and Searching Techniques. **(K3)**

CO2: Illustrate various operations on Linked Lists. **(K3)**

CO3: Develop Programs on Stacks, Queues and their Applications. **(K3)**

CO4: Develop various operations on Trees and Graphs **(K3)**

LIST OF EXPERIMENTS

1. Practice following Sorting Techniques
   (A) Selection Sort (B) Quick Sort (C) Merge Sort
2. Practice following Searching Methods
   (A) Linear Search (B) Binary Search.
3. Develop program for Single Linked List and its Operations.(Create, Insert, Delete, Display)
4. Develop program for Double Linked List and its Operations.
5. Construct Stack along with their operations using Arrays.
6. Construct Queue along with their operations using Arrays.
7. Develop Circular Queue using Arrays.
8. Construct Queue along with their operations using Single Linked List.
9. Construct Binary Search Tree and Its Operations using double linked list.
10. Demonstrate Depth First Search and Breadth First Search Algorithm.
11. Develop Minimum Spanning Tree using Prim‟s Algorithm.
12. Develop Minimum Spanning Tree Kruskal‟s Algorithm.

Add on Experiments:

1. Construct stack along with their operations using Single Linked List.

2. Implement Topological Sort.

Text books:

1. Data Structures, algorithms and applications in C++, SartajSahni, Universities press, Second Edition.
2. Fundamentals of Data Structures in C++, Ellis Horowitz, SartajSahni and Dinesh Mehta, 2nd Edition, Universities Press (India) Pvt. Ltd.

Reference Books:

1. An Introduction to Data Structures with Application, Jean-Paul Tremblay , Paul Sorenson, Second Edition.
2. Fundamentals of Data Structures and algorithms by C V Sastry, RakeshNayak, Ch. RajaRamesh, IK Publications, new Delhi.
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

Seventh Meeting of the College Academic Council

Agenda

Item No.1: Welcoming the members.

Item No.2: To review the progress of the institute

Item No.3: To approve the minutes of the previous meeting.
(The details are given in **Annexure-I** Page No. 2)

Item No.4: To approve the minutes of the meeting of BOS of various departments.

- **a.** Minutes of 5th BOS meeting of Civil Engineering Department.
  (Details are given in **Annexure-II** Page No. 4)
- **b.** Minutes of 6th BOS meeting of Electrical & Electronics Engineering.
  (Details are given in **Annexure-III** Page No. 108)
- **c.** Minutes of 6th BOS meeting of Mechanical Engineering.
  (Details are given in **Annexure-IV** Page No. 202)
- **d.** Minutes of 6th BOS meeting of Electronics & Communiction Engineering.
  (Details are given in **Annexure-V** Page No. 286)
- **e.** Minutes of 6th BOS meeting Computer Science and Engineering.
  (Details are given in **Annexure-VI** Page No.386)
- **f.** Minutes of 2nd BOS meeting CSE(AI) and AI & ML
  (Details are given in **Annexure-VII** Page No. 471)
- **g.** Minutes of 5th BOS meeting of MBA.
  (Details are given in **Annexure-VIII** Page No.507)

Item No.5: To approve the minutes Results committee. (Details are given in **Annexure-IX** Page No.552)

Item No.6: To Aprove the list of students' eligible to award B Tech degree admitted in 2018 (detais are given in **Annexure-X** Page No.663)

Item No.7: To approve the academic calendars for A.Y.2022-2023 (detais are given in **Annexure-XI** Page No.710)

Item No.8: Any other item permission of the chair.

Annexure-I

Action taken report on the Minutes of the sixth Academic Council Meeting held on 05/02/2022.

Item No.1: Welcoming the members.

Principal **Prof.Guduru VNSR Ratnakara Rao** welcomed the members and chaired the meeting.

Item No.2: Review the progress of the institute

Principal presented the progress of the institute since last council meeting and appreciated by all the members of the committee.

Ite m No.3: Approve the minutes of the previous meeting.

To council approve the action taken report presented.

Item No.4:

a. Approve V21 regulations for the award of M.Tech degree.
The approved V21 regulations for M.Tech students admitted from 2021-22 academic year.

b. Approve course structure for Various Specializations of M.Tech programme under V21 Regulations.

c. Approve V21 regulations & course structure for the award of MBA degree.
The council approved V21 regulations for M.Tech and MBA and their course structures. The institute following the same.

Item No.5: Approve the minutes of the meeting of BOS of various departments.

The council approved the minutes of the meeting of BOS of various department.

Item No.6: Approve the minutes of Results committee.

The committee reviewed the minutes of result committee meetings held from last council meeting and approved.

Item No.7: Amendments to **UG V18 Academic Regulations**

The proposed ammendments are approved by the council.

Item No.8: Nominate BOS members for **AI & ML.**

The council approved the BOS members.

Item No.9: Minutes of 1st meeting **CSE (AI) and AI&ML.**

The committee approved the minutes of BOS of CSE (AI) and AI&ML.

Item No.10: Any other item with the permission of the chair.

a. List of eligible students to award MBA degree admitted in 2018 and 2019. The council approved the students eligible to to award MBA degree admitted in 2018 & 2019.

b. List of eligible students to award M.Tech degree admitted in 2018 and 2019.
The council approved the students eligible to award M.Tech degree admitted in 2018 & 2019.

The meeting concluded with vote of thanks by the member secretary.

Dtd: 20.08.2022

Minutes of the BOS Meeting

Fifth BOS Meeting of Civil Engineering Department was held in online mode through Zoom platform (Meeting ID: 847 3592 7977) on 18.08.2022 at 10:30 AM in the presence of the following members.

Sl.No	Name	Designation	Role
1	Dr. G. Radhakrishnan	Professor, Head, Dept. of CE, SVEC, Pedatadepalli	Chairperson
2	Dr. P. Subba Rao	Professor and Director of Faculty Development Centre, JNTUK, Kakinada	Member and Subject Expert
3	Dr. C. B. Kameswara Rao	Professor of CE, NIT Warangal	Member and Subject Expert
4	Dr. M. Kumar	Professor of CE, Osmania University	Member and Subject Expert
5	Mr. Nagareddayya Subbagari	General Manager, Corporate QA/QC, M/S My Home Construction Pvt. Ltd., Hyderabad	Member and Industry Expert
6	Mr. T. Raj kumar	Research Scholar, Dept. of CE, NIT, Andhra Pradesh	Member and Alumni
7	Dr. CH. Rambabu	Professor of EEE and Dean, Student Affairs, SVEC, Pedatadepalli	Dean, Student Affairs
8	Mr. V. L. D. Prasad Reddy	Asst. Professor, Dept. of CE, SVEC	Member and Faculty of Civil Engineering
9	Mr. T Naga Seshu Babu	Asst. Professor, Dept. of CE, SVEC	Member and Faculty of Civil Engineering
10	Mr. B Hema Sundar	Asst. Professor, Dept. of CE, SVEC	Member and Faculty of Civil Engineering
11	Mr. K. Gowtham Kumar	Asst. Professor, Dept. of CE, SVEC	Member and Faculty of Civil Engineering

Following are the minutes of the BOS Meeting:

1. The proposed course structure and syllabus of V, VI, VII & VIII semesters V20 Regulation is approved and the same have to be followed for the academic years 2022-23 and 2023-24.
2. Basic core courses should not be included in list of professional elective courses. Each professional Elective Course should contain advanced courses of all specializations.
3. Course Structure of V semester
    - Course related to Geotechnical Engineering specialization have to be included in the list of Professional Elective Course I
4. Course Structure of VI semester
    - Course related to Geotechnical Engineering specialization have to be included in the list of Professional Elective Course II
5. Course Structure of VII semester
    - The core course i) Estimation Specification and Contracts and ii) Construction Project Planning and Systems have to be excluded from the list of Professional Elective Courses arranged as a single Professional Core Course or Professional Core Course Lab.
    - Courses like i) PRECAST AND PREFABRICATED STRUCTURES ii) METRO SYSTEMS ENGINEERING iii) QUALITY ASSURANCE AND QUALITY CONTROL have to be included in the list of Professional Elective Courses
6. Course Structure of VIII semester
    - Project should contain practical hours of 24 to accommodate the allotted 12 credits.
    - To the possible extent project should carried from the field activity.
7. Syllabus have to designed keeping in view of GATE, IES and Public Service Commission exams
8. Knowledge Levels of higher order have to be maintained in the syllabuses of all courses.
9. Volume and Year of Publication of references and textbooks have to be included in syllabuses
10. NPTEL courses may also be included in Profession Elective Courses

11. Syllabus of V semester
    - Concept of MATRIX METHODS has to be included in the syllabus of Structural Analysis – II.
    - Concept of Green Concrete could be included in the syllabus of Advanced Concrete Technology
    - Rapid Chloride Permeability, Water Penetration Depth Test, Initial surface absorption, water, chloride and sulphate absorption tests could be included in Advanced Concrete Technology
    - Pedestrian paths, bicycle paths studies, sky walk planning and parking management could be included in Unit II of Traffic Engineering & Management course.
    - Level of service concept, Flexible Progressive System, Rotary Planning and Design as per IRC to be included in Unit IV of Traffic Engineering & Management course.
12. As a matter of completeness minor degree courses have to be announced.
13. Dept should contain licensed software's of courses mentioned under Skill Oriented Courses.

CHAIRPERSON OF BOS

5th MEETING BOARD OF STUDIES

Agenda:

1. **Opening remarks by BOS Chairperson**
2. **Review of course structure for V,VI,VII & VIII semesters of B. Tech V20 Regulation**
   The proposed course structure of V,VI,VII & VIII semesters B.Tech under V20 Regulation is given in Annexure I.
3. **Approval of syllabi for the courses offered in** V,VI,VII & VIII **semesters**
   The syllabi for various courses offered in V,VI,VII & VIII semesters B.Tech under V20 Regulation are given in Annexure II.
4. **Approval of list of courses offering under Open Elective & Mandatory Courses in** V,VI,VII & VIII **Semesters to other branches and the approval of their detailed syllabi.**
   The details are given in Annexure III.
5. **Any other item with the permission of chair.**

CHAIRPERSON OF BOS

ANNEXURE - I

COURSE STRUCTURE APPROVED IN 2ND JOINT BOS MEETING (28/12/2020)

(For 2020 – 2021 Admitted Batch) – V20 Regulation

I SEMESTER

ANNEXURE – II

SYLLABI OF V to VIII SEMESTERS OF B.TECH COURSES FOR THE ACADEMIC YEAR 2022-23 & 2023-24

V SEMESTER – SYLLABUS

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET09
Name of the Course	STRUCTURAL ANALYSIS – II					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to
- Compute the moments and reactions for two hinged and three hinged arches (K3)
- Analyze the continuous beams using Moment distribution and Kani's methods (K4)
- Assess the load distribution in different components of Suspension bridges (K3)
- Analyze the structure for Lateral loads using different methods (K4)
- Compute the moments and forces using matrix methods (K3)

SYLLABUS

UNIT I
Three Hinged Arches: Elastic theory of arches – Eddy's theorem – Determination of horizontal thrust, bending moment, normal thrust and radial shear – effect of temperature, Hinges with support at different levels.
Two Hinged Arches: Determination of horizontal thrust, bending moment, normal thrust and radial shear – Rib shortening and temperature stresses.

UNIT II
Moment Distribution Method: Introduction Stiffness and carry over factors – Distribution factors – Analysis of continuous beams with and without sinking of supports.
Kani's Method: Introduction – Rotational factor, Analysis of continuous beams – including settlement of supports.

UNIT III
Cable Structures and Suspension Bridges: Introduction, characteristics of cable, analysis of cables subjected to concentrated and uniformly distributed loads, anchor cable, temperature stresses, analysis of simple suspension bridge.

UNIT IV
Lateral Load Analysis on Frames: Approximate Methods, Portal Method and Cantilever Method, Computational techniques, algorithms.

UNIT V

Introduction to Matrix Methods: Flexibility methods: Introduction, application to continuous beams (maximum of two unknowns). Stiffness method: Introduction, application to continuous beams (maximum of two unknowns).

Text Books:

1. Structural Analysis, T. S. Thandavamoorthy, Oxford university press, India.
2. Structural Analysis, R.C. Hibbeler, Pearson Education, India
3. Theory of Structures – II, B. C. Punmia, Jain & Jain, Laxmi Publications, India.
4. Structural Analysis, C.S. Reddy, Tata Mc-Graw hill, New Delhi.
5. Structural Analysis - Vol. I and II,S.S.Bhavikatti,Vikas Publishing House,New Delhi.

References:

1. Intermediate Structural Analysis, C. K. Wang, Tata McGraw Hill, India
2. Theory of structures, Ramamuratam, Dhanpatrai Publications.
3. Analysis of structures, Vazrani & Ratwani – Khanna Publications.
4. Comprehensive Structural Analysis-Vol. I & 2, R. Vaidyanathan & P. Perumal- Laxmi Publications Pvt. Ltd., New Delhi
5. Structural Analysis I, P.N. Chandramouli. Yesdee Publishing Pvt Limited
6. Structural Analysis, Aslam Kassimali, Cengage Learning
7. Matrix Methods of Structural Analysis, P.N. Godbole, R. S. Sonaparote, PHI Learning Pvt Limited

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET10
Name of the Course	GEOTECHNICAL ENGINEERING					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Develop the inter-relationships between various parameters of the soils (K3)
- Assess the permeability of soils having different properties (K3)
- Employ different methods to know the stress distribution in soils (K3)
- Interpret different parameters related to compaction and consolidation of soils (K3)
- Examine the stress strain behavior of soils under various drainage conditions (K3)

SYLLABUS

UNIT I
Soil Properties and Classification: Soil formation – soil structure and clay mineralogy – Adsorbed water – Mass- volume relationship –Relative density, Index Properties of Soils, Grain size analysis – Sieve and Hydrometer methods – consistency limits and indices – Various Types of soil Classifications – Unified soil classification and I.S. Soil classification.

UNIT II
Permeability: Soil water – capillary rise – One dimensioned flow of water through soils – Darcy's law- permeability – Factors affecting –laboratory determination of coefficient of permeability –Permeability of layered systems. Total, neutral and effective stresses – quick sand condition – 2-D flow and Laplace's equation - Seepage through soils – Flow nets: Characteristics and Uses.

UNIT III
Stress Distribution in Soils: Stresses induced by applied loads - Boussinesq's and Westergaard's theories for point loads and areas of different shapes– Newmark'sinfluence chart – 2:1 stress distribution method.

UNIT IV
Compaction: Mechanism of compaction – factors affecting – effects of compaction on soil properties - compaction control.
Consolidation: Compressibility of soils – e-p and e-log p curves – Stress history – Concept of consolidation - Spring Analogy - Terzaghi's theory of one-dimensional Consolidation – Time rate of consolidation and degree of consolidation – Determination of coefficient of consolidation (cv) - Over consolidated and normally consolidated clays.

UNIT V
Shear Strength of Soils: Basic mechanism of shear strength - Mohr – Coulomb Failure theories – Stress-Strain behavior of Sands - Critical Void Ratio – Stress-

Strain behavior of clays – Shear Strength determination- various drainage conditions.

Text Books:

1. "Basic and Applied Soil Mechanics", Gopal Ranjan and A. S. R. Rao, New Age International Publishers.
2. "Soil Mechanics and Foundation Engineering", V. N. S. Murthy, CBS publishers.
3. "Soil Mechanics and Foundations", B.C. Punmia, Laxmi Publications.

References:

1. "Fundamentals of Soil Mechanics", D. W. Taylor, Wiley.
2. "An introduction to Geotechnical Engineering", Holtz and Kovacs; Prentice Hall.
3. "Fundamentals of Geotechnical Engineering", B M Das, Cengage Learning, New Delhi.

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET11
Name of the Course	DESIGN OF REINFORCED CONCRETE STRUCTURES					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Design the beams in working stress and limit state methods (K5)
- Design the doubly reinforced and flanged (T and L) beam sections for flexure (K5)
- Design the continuous beams for shear and bond (K5)
- Design the one way, two way slabs and stair case of buildings (K5)
- Design the columns and footings of the structures (K5)

SYLLABUS

UNIT I
Introduction of Reinforced concrete: Structural elements- Loads on structures- Strength and serviceability - Methods of design - Working stress method- design constants - neutral axis - moment of resistance for different sections- Design of singly beams- Concepts of limit state design - Partial load and safety factors - stress-strain curves for cold worked deformed bars and mild steel bars. Assumptions in limit state design – stress - block parameters – limiting moment of Resistance. Codes of practice.

UNIT II
Design for Flexure: Limit state analysis and design of singly reinforced sections- effective depth- Moment of Resistance- Doubly reinforced and flanged (T and L) beam sections- Minimum depth for a given capacity- Limiting Percentage of Steel- Minimum Tension Reinforcement-Maximum Flexural Steel- Design of Flanged Sections (T&L)- Effective width of flange –Behavior- Analysis and Design.

UNIT III
Design for Shear and Bond and continuous beams: Limit state analysis and design of section for shear – concept of bond, anchorage and development length, I.S. code provisions.
Design examples in simply supported and continuous beams, detailing. Limit state design for serviceability: Deflection, cracking and code provision.

UNIT IV
Slabs: Classification of slabs, design of one - way slabs, one way continuous slab using IS Coefficients (Conventional) – Design of two - way slabs-simply supported and various edge conditions using IS Coefficients, Design of Stair Case.

UNIT V

Design of Compression members and footings: Effective length of a column, Design of short and long columns – under axial loads, uniaxial bending and biaxial bending – IS Code provisions.

Footings: Different types of footings – Design of isolated footings – square, rectangular.

NOTE:

All units i.e. from unit II to unit VI are to be taught in Limit State Design.
Following sheets should be prepared by the students.

Sheets-1 Reinforcement detailing of T-beams, L-beams and continuous beams.
Sheets-2 Reinforcement detailing of beam with all details.
Sheets-3 Detailing of one-way, two-way and continuous slabs.
Sheets-4 Reinforcement detailing of columns.
Sheets-5 Reinforcement detailing of isolated footings.

Examination Pattern:

Internal Examination Pattern:

The total internal marks are distributed in three components as follows:
Descriptive (subjective type) examination : 15 marks
Detailing sheets(For above) : 10 marks
Assignment : 05 marks

Text Books:

1. "Limit State Design", A. K. Jain
2. "Design of Reinforced concrete Structures", N. Subrahmanyian.
3. "Reinforced concrete", Vol.1., H. J. Shah, Charotar publishing house Pvt. Ltd.

References:

1. "R C C Design", B.C Punmia, A. K. Jain and A. K Jain. Lakshmi Publications
2. "Reinforced Concrete Structures", N. Krishna Raju and R. N. Pranesh, New Age Publications.
3. "Reinforced Concrete Structures", S. Unnikrishna Pillai and Devdas Menon, Tata Mc.Graw Hill, New Delhi.
4. IS 456-2000, Code of practice for Reinforced Concrete Structures.
5. IS 875, Code of Practice for Design Loads.
6. SP-16, Design Aids for Reinforced Concrete.

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET12
Name of the Course	**ADVANCED CONCRETE TECHNOLOGY (Professional Elective -1)**					
Branch	CIVIL ENGINEERING					

Course Outcomes

Upon successful completion of course the students will be able to

- Relate the material characteristics and their influence on concrete (K3)
- Predict concrete behavior based on its durability properties (K3)
- Illustrate mix proportioning of different types of concretes and their testing (K3)
- Select the suitable concrete based on their specific application (K3)
- Employ suitable concreting methods to place the concrete based on requirement (K3)

SYLLABUS

UNIT I

Ingredients of Concrete: Cement –chemical composition and their importance, hydration of cement, types of cement, testing of cement.

Fine aggregate: Functions, requirement, Alternatives to River sand, M-sand introduction and manufacturing.

Coarse aggregate: Importance of size, shape and texture. Grading and blending of aggregate, testing on aggregate, requirement, Recycled aggregates Water – qualities of water.

Chemical admixtures: Plasticizers, accelerators, retarders and air entraining agents.

Mineral admixtures: Pozzolanic and cementitious materials, Fly ash, GGBS, silica fumes, Metakaolin and rice husk ash, Green concrete.

UNIT II

Durability of Concrete: Durability, Transport mechanism of fluids and gases in concrete, cracking in concrete - corrosion and carbonation induced cracking, Alkali Aggregate Reaction, degradation by freeze and thaw, chloride attack, sulphate and sea water attack (marine conditions). Hot and cold weather concreting, water penetration and rapid curing tests.

UNIT III

Concrete Mix Design: Design of concrete mixes by IS code method - ACI method Design of high strength concrete mixes, design of fly-ash cement concrete mixes, design of high density concrete mixes.

Testing of Concrete: Test methods: Analysis of fresh concrete, Accelerated testing methods, Tests on hardened concrete, Core cutting and testing, partially destructive testing, Non-destructive testing of concrete structure

UNIT IV

Special Concrete: Lightweight concrete, autoclaved aerated concrete, no-fines concrete, lightweight aggregate concrete and foamed concrete, High strength concrete, refractory concrete, high density and radiation-shielding concrete, polymer concrete, fibre-reinforced concrete, mortars, renders, recycled concrete, Ferro Cement, Self Compacting Concrete.

UNIT V

Special processes and technology for particular types of structure: Sprayed concrete, underwater concrete, grouts, grouting and grouted concrete, mass concrete, slip form construction, pumped concrete, concrete for liquid retaining structures, vacuum process

Text Books:

1. Neville, A.M., Properties of Concrete, Pearson Education Asia (P) Ltd, England, 2000.
2. Concrete Technology, Gambhir M.L, Tata McGraw Hill
3. Concrete Technology, M.S.Shetty, S.Chand& Company New Delhi
4. Concrete microstructure, properties & materials, P.Kumar Mehata, Paulo & J.M. Monteiro,
5. Light Weight Concrete, Short & Kenniburg, Asia Publishing House, Bombay

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET13
Name of the Course	IRRIGATION ENGINEERING (Professional Elective -1)					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of the course, the student will be able to**:**

- Interpret the quality of irrigation water and water requirements (K2)
- Design the erodible and non-erodible canals using different theories (K5)
- Asses different irrigation canal structures (K3)
- Relate the diversion head works and their components (K3)
- Analyze the stability of Gravity and Earth dams (K3)

SYLLABUS

UNIT I

Irrigation & Water Requirements: Definition – Importance of Irrigation in India – Advantages and Dis advantages – Types of Irrigation – Quality of Irrigation water - Different types of crops and crop seasons- Soil, water and plant relationship-Irrigation efficiencies -Crop water requirement-Duty and Delta-Factors affecting duty-Depth and Frequency of Irrigation-crop rotation.

UNIT II

Canals: Classification-Alluvial and Non Alluvial canals-Design of non-erodible canals-Different command areas-Methods of economic section and maximum permissible velocity-Design of erodible canals-Kennedy's silt theory and Lacey's regime theory.

UNIT III

Canal structures: Falls-Types and location- Design principle of Sarda type wall and straight glacis wall

Regulators: Head and cross regulators –design principles

Cross Drainage works: Design principles of aqueduct- siphon aqueduct-super passage

UNIT IV

Diversion Head Works: Types of diversion head works-Weirs and Barrages-Layout of diversion head works-components- causes and failures of weirs on permeable foundations-Bligh's creep theory-Khosla's theory-exit gradient.

UNIT V

Reservoir planning: Site selection-Types of dams- selection of type of dam-selection of site for a dam.

Gravity Dams: Forces acting on gravity dam-causes of failure of gravity dam-elementary profile and practical profile of gravity dam-limiting height of dam-stability analysis-drainage galleries.

Earthen Dams: Types of earthen dams-causes of failure-criteria for safe design-seepage-measures of control of seepage filters.

Text Books:

1. Irrigation Engineering and Hydraulic structures, Santosh Kumar Garg, Khanna Publishers.
2. Irrigation and Water power Engineering, B.C. Punmia, Pande B.B. Lal, Ashok Kumar Jain, Arun Kumar Jain, Lakshmi Publications Ltd.
3. Water resources and Irrigation engineering by Sri Krishna publications.

References:

1. Irrigation and Water Resources Engineering, Asawa G L (2013), New Age International Publishers.
2. Irrigation Water Resources and Water Power Engineering, Modi P N (2011), Standard book House, New Delhi.
3. Irrigation and Drainage Engineering" by Peter Waller and Muluneh Yitayew

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET14
Name of the Course	TRAFFIC ENGINEERING AND MANAGEMENT (Professional Elective –I)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of the course the student will be able to:

- Understand basics principles of Traffic Engineering (K2)
- Analyze parking data and model accidents (K3)
- Determine traffic capacity and level of service (K3)
- Design of Signalized systems and Rotary Intersections (K5)
- Employ engineering techniques to achieve safe and efficient movement of people and goods on roadways (K3)

SYLLABUS

UNIT I
Traffic Studies (Part- I) : Basic principles of Traffic, Volume, Speed and Density; Definitions and their interrelationships; Traffic Volume studies - Objectives, Methods of Volume counts, Presentation of Volume Data; Speed studies- Types of Speeds, Objectives, Methods of speed studies, Presentation of speed data. Delay Studies; Head ways and Gap Studies - Headway and Gap acceptance, Origin and Destination Studies.

UNIT II
Traffic Studies (Part-II) : Parking Studies: parameters of parking, definitions, Parking inventory study, Parking survey by Patrolling method; Analysis of Parking Survey data; Parking Management
Accident studies - Causative factors of Road accidents, Accident data collection: Road Safety Auditing, Measures to increase Road safety. Pedestrian studies, Bicycle path studies, sky walk planning.

UNIT III
Capacity and LOS Analysis: Introduction to Traffic capacity, Analysis concepts, Level of Service, Basic definitions, Factors affecting Capacity and LOS as per Indo-HCM,Capacity of Urban/Rural Highway, With or without access control, Basic freeway segments-Service flow rate of LOS, Lane width or Lateral clearance adjustment; Heavy vehicle adjustment; Driver population adjustment.

UNIT IV
Design of Signal and Intersections: Fixed Time signals, Determination of Optimum Cycle length and Signalsetting for Fixed Time signals, Flexible progressive system, Warrants for Signals, Signal Coordination.
Rotary planning , Rotary Design as per IRC:65, Weaving angles, Entry width, Exit Radius, Capacity of Rotary, Types of interchanges, Implementation.

UNIT V

Transportation System Management: Measures for Improving vehicular flow – one way Streets, Signal Improvement, Transit Stop Relocation, Reversible lanes - Reducing Peak Period Traffic - Strategies for working hours, Congestion Pricing, Differential Toll Policies.

Text Books:

1. Traffic Engineering and Transportation Planning – L.R. Kadiyali, Khanna Publishers
2. Principles of Highways Engineering and Traffic Analysis - Fred Mannering & Walter Kilareski, John Wiley & Sons Publication.
3. Transportation Engineering - An Introduction - C. Jotin Khisty, Prentice Hall Publication.

References:

1. Fundamentals of Transportation Engineering - C. S. Papacostas, Prentice Hall India.
2. Traffic Engineering - Theory & Practice - Louis J. Pignataro, Prentice Hall Publication.
3. Traffic Engineering by Roger P. Roess, William R. Mc. Shane, Elena S. Prassas , Prentice Hall, 1977.
4. IRC-65-2017: Guidelines for Planning and Design of Roundabouts (First Revision)
5. IRC-93-1985: Guidelines for design and installation of road traffic signals
6. Indian Highway capacity manual (Indo-HCM) – 2017, Published by CSIR-CRRI, New Delhi.

Sem	**V Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CET15
Name of the Course	**AIR POLLUTION AND CONTROL (Professional Elective –I)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to:
- Asses the pollutants and ambient quality of air (K3)
- Illustrate the plume behavior in a prevailing environmental condition (K3)
- Examine carbon credits for various day to day activities(K3)
- Select proper technique to control the air particulates (K3
- Choose appropriate in plant control measures for different emissions (K3)

SYLLABUS:

UNIT I
Air Pollution: Sampling and analysis of air pollutants, conversion of ppm into µg/m3. Definition of terms related to air pollution and control - secondary pollutants – Indoor air pollution – Ozone holes and Climate Change and its impact - Carbon Trade.

UNIT II
Meteorology and Air Pollution: Properties of atmosphere: Heat, Pressure, Wind forces, Moisture and relative Humidity, Lapse Rates - Influence of Terrain and Meteorological phenomena on plume behaviour and Air Quality - Wind rose diagrams and Isopleths Plume Rise Models

UNIT III
Ambient Air Quality Management: Monitoring of SPM - RPM SO2; NOx and CO - Stack Monitoring for flue gases - Micro-meteorological monitoring – Noise Monitoring - Weather Station. Emission Standards- Gaussian Model for Plume Dispersion

UNIT IV
Air Pollution Control: Control of particulates – Control at Sources, Process Changes, Equipment modifications, Design and operation of control Equipments – Settling Chambers, Cyclone separators –Fabric filters–Scrubbers, Electrostatic precipitators

UNIT V
Air Pollution Control Methods: Control of NOx and SOx emissions – Environmental friendly fuels - In-plant Control Measures, process changes, methods of removal and recycling. Environmental criteria for setting industries and green belts.

Text Books:
1. Air Pollution and Control, K.V.S.G. Murali Krishna, Laxmi Publications, New Delhi, 2015

Sem	V Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET16
Name of the Course	GEO-ENVIRONMENTAL ENGINEERING (Professional Elective –I)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Identify the Geo-environmental pollutants and their governing factors (K2)
- Employ the techniques for safe disposal of waste (K3)
- Relate the sub surface contamination transport (K3)
- Practice the utilization of solid waste for soil stabilization (K3)
- Select different remediation techniques to improve contaminated soil (K3)

SYLLABUS
UNIT I
Introduction to Geo Environmental Engineering: Environmental cycle – Sources, production and classification of waste – Causes of soil pollution – Factors governing soil pollution interaction clay minerals - Failures of foundation due to waste movement.

UNIT II
Safe Disposal of Waste: Site selection for landfills – Characterization of land fill sites and waste – Risk assessment – Stability of landfills – Current practice of waste disposal – Monitoring facilities – Passive containment system – Application of geosynthetics in solid waste management – Rigid or flexible liners.

UNIT III
Transport Of Contaminants : Contaminant transport in sub surface - Advection, Diffusion, Dispersion – Governing equations – Contaminant transformation – Sorption – Biodegradation – Ion exchange – Precipitation – Hydrological consideration in land fill design – Ground water pollution.

UNIT IV
Stabilization: Solidification of wastes – Micro and macro encapsulation – Absorption, Adsorption, Precipitation – Detoxification – Mechanism of stabilization – Organic and inorganic stabilization – Utilization of solid waste for soil improvement – case studies.

UNIT V
Remediation of Contaminated Soils: Exsitu and Insitu remediation- Solidification, bio-remediation, incineration, soil washing, phyto remediation, soil heating, vetrification, bio-venting.

Text Books:

1. Hari D. Sharma and Krishna R. Reddy, "Geo-Environmental Engineering" – John Wiley and Sons, INC, USA, 2004.

Name of the Course	GEOTECHNICAL ENGINEERING LAB					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Employ index properties required for classification of soils (K3)
- Find the permeability of different soils using different tests (K3)
- Predict the compaction, consolidation and swelling characteristics of the soils (K3)
- Compute the strength properties of soils (K3)

List of Experiments

1. Specific gravity, G
2. Atterberg's Limits.
3. Field density-Core cutter and Sand replacement methods
4. Grain size analysis by sieving
5. Hydrometer Analysis Test
6. Permeability of soil - Constant and Variable head tests
7. Compaction test
8. Consolidation test (to be demonstrated)
9. Direct Shear test
10. Triaxial Compression test (UU Test)
11. Unconfined Compression test
12. Vane Shear test
13. Differential free swell (DFS)
14. CBR Test

List Of Equipments

1. Casagrande's liquid limit apparatus.
2. Apparatus for plastic and shrinkage limits
3. Field density apparatus for
   a) Core cutter method
   b) Sand replacement method
4. Set of sieves: 4.75 mm, 2 mm, 1 mm, 0.6 mm, 0.42 mm, 0.3 mm, 0.15 mm, and 0.075 mm.
5. Hydrometer
6. Permeability apparatus for
   a) Constant head test
   b) Variable head test
7. Universal auto compactor for I.S light and heavy compaction tests.
8. Shaking table, funnel for sand raining technique.
9. Apparatus for CBR test

10. 10 tons loading frame with proving rings of 0.5 tons and 5 tons capacity
11. One dimensional consolation test apparatus with all accessories.
12. Triaxial cell with provision for accommodating 38 mm dia specimens.
13. Box shear test apparatus
14. Laboratory vane shear apparatus.
15. Hot air ovens (range of temperature 500 - 1500C

Name of the Course	**STRUCTURAL DETAILING USING AUTO CAD**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Employ detailing of different building components (K3)
- Employ detailing of retaining walls (K3)
- Employ detailing of water tanks (K3)
- Employ detailing of septic tank (K3)

AutoCAD (2 Drafting)

1. Detailing of slab (One way & two way slabs)
2. Detailing of stair case (dog legged stair case)
3. Detailing of foundation (isolated, combined foundation)
4. Detailing of beams and columns in frame
5. Detailing of retaining wall (gravity)
6. Detailing of column base
7. Detailing of roof truss (king and queen post)
8. Detailing of box culvert
9. Detailing of water tank
10. Detailing of septic tank

VI SEMESTER – SYLLABUS

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET17
Name of the Course	DESIGN OF STEEL STRUCURES					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Design the riveted, bolted and welded connection (K5)
- Design the beams against deflection, shear, buckling, and bearing (K5)
- Design of tension, compression and roof trusses for different loading conditions (K5)
- Design the compression members and column foundations (K5)
- Design the plate girder and gantry girder (K5)

SYLLABUS

UNIT I

Connections: Introduction - Properties of structural steel - IS Rolled sections - I.S Specifications - Lap and Butt connections (Revited and Bolted connections) - Eccentric connections.

Welded connections: Introduction - Advantages and disadvantages of welding- Strength of welds - Butt and fillet welds - Permissible stresses - IS Code requirements - Design of Butt and fillet weld subjected to moment acting in the plane and at right angles to the plane of the joints.

UNIT II

Beams: Allowable stresses - Design requirements as per IS Code-Design of simple and compound beams - Curtailment of flange plates - Beam to beam connection - check for deflection, shear, buckling, and bearing - Design of laterally unsupported beams.

UNIT III

Tension Members: Introduction to different modes of failures - gross section yielding - Net Section rupture and block shear failure - Determine the design strength due to yielding of gross section - rupture of critical section and block shear - Design of tension members.

Compression Members: Effective length of columns - Slenderness ratio - permissible stresses - Design of compression members, Design of Struts.

Roof Trusses: Different types of trusses – Design loads – Load combinations as per IS Code recommendations, structural details –Design of simple roof trusses involving the design of purlins, members and joints.

UNIT IV

Built up compression members: Design of lacings and battens. Design Splicing of columns.

Design of Column Foundations: Introduction - Design of slab base - Design of gusset base- Column bases subjected to moment.

UNIT V

Design of Plate Girder: Introduction - Design consideration - IS Code recommendations - Design of plate girder - Welded -curtailment of flange plates and stiffeners - splicing and connections.

Design of Gantry Girder: Introduction - Impact factors - longitudinal forces- Design of Gantry girders.

NOTE:

All units i.e. from unit II to unit-VI to be taught in Limit State method only. Welding Connections should be used from Unit II – Unit V.

The students should prepare the following sheets.

Sheets-1 Detailing of steel members Connection.
Sheets-2 Detailing of beams including curtailment of flange plates.
Sheets-3 Detailing of Column including lacing and battens.
Sheets-4 Detailing of Column bases, slab base and gusseted base.
Sheets-5 Detailing of Plate girder including curtailment, splicing and stiffeners.

EXAMINATION PATTERN:

Internal Examination Pattern:

The total internal marks are distributed in three components as follows:

Descriptive (subjective type) examination : 15 marks
Detailing sheets(For above) : 10 marks
Assignment : 05 marks

Text Books:

1. Design of steel structures, S.K. Duggal, Tata McGraw Hill, and New Delhi.
2. Design of steel structures, S.S.Bavakatti, I.K.International Publishing House Pvt. Ltd.
3. Steel Structures Design and Practice, N.Subramanian, Oxford University Press.
4. Design of Steel Structures, Ramachandra, Scientific Publishers Journals Dept.

References:

1. Structural Design in Steel, Sarwar Alam Raz, New Age International Publishers, New Delhi.
2. Design of Steel Structures, P. Dayaratnam, S. Chand Publishers.
3. Design of Steel Structures, M.Raghupathi, Tata Mc. Graw-Hill.
4. Structural Design and Drawing, N. Krishna Raju, University Press.
5. IS: 800- 2007, General construction in steel-Code of practice.
6. IS: 875-1987, Code of Practice for Design Loads.
7. Steel Tables

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET18
Name of the Course	FOUNDATION ENGINEERING					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Employ the soil exploration and carryout the field testing (K3)
- Examine the slope stability and earth pressures using different theories (K3)
- Determine the bearing capacity of shallow foundations using bearing capacity criteria (K4)
- Determine the bearing capacity of shallow foundations using settlement criteria (K4)
- Design the deep foundations for different loading and soil conditions (K5)

SYLLABUS

UNIT I
Soil Exploration: Need, Methods of soil exploration – Boring and Sampling methods, Field tests, Penetration Tests, Pressure meter, planning of programme and preparation of soil investigation report.

UNIT II
Slope Stability: Infinite and finite earth slopes in sand and clay, types of failures, factor of safety of infinite slopes, stability analysis by Swedish arc method, standard method of slices ,Taylor's Stability Number, Stability of slopes of dams and embankments – different conditions.
Earth-Pressure theories: Rankine's& Coulomb's theory of earth pressure, Culmann's graphical method, earth pressures in layered soils.

UNIT III
Shallow Foundations – Bearing Capacity Criteria: Types of foundations and factors to be considered in their location , Bearing capacity – criteria for determination of bearing capacity – factors influencing bearing capacity, analytical methods to determine bearing capacity – Terzaghi's theory ,IS Methods.

UNIT IV
Shallow Foundations – Settlement Criteria: Safe bearing pressure based on N-value, allowable bearing pressure; safe bearing capacity and settlement from plate load test – Types of foundation settlements and their determination - allowable settlements of structures.

UNIT V
Deep Foundations: Pile foundation, Types of piles, Load carrying capacity of piles based on static pile formulae, Dynamic pile formulae, Pile load tests, Load carrying capacity of pile groups in sands and clays.

Well Foundations: Types, Different shapes of well, Components of well–functions, forces acting on well foundations, Design Criteria –Determination of staining thickness and plug - construction and Sinking of wells, Tilt and shift.

Text Books:

1. Principles of Foundation Engineering, Das, B.M., (2011), 6th edition Cengage learning.
2. Basic and Applied Soil Mechanics, Gopal Ranjan& A.S.R. Rao, New Age International Pvt. Ltd, (2004).
3. Soil Mechanics and Foundations, B.C.Punmia, Laxmi Publictions.

References:

1. Foundation Analysis and Design, Bowles, J.E., McGraw-Hill Publishing Company, Newyork.
2. Theory and Practice of Foundation Design, N.N.SOM & S.C.DAS PHI Learning Private limited.

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET19
Name of the Course	ENVIRONMENTAL ENGINEERING					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course, the students will be able to:

- Clarify the protected water supply systems and their importance (K2)
- Assess different sources of water and proper intake structures (K3)
- Select suitable primary treatment process based on the quality of raw water (K3)
- Select suitable secondary treatment process (K3)
- Employ proper distribution system (K3)

UNIT I

Protected Water Supply systems: Importance and Necessity, Water borne diseases, Flow chart of public water supply system, Role of Environmental Engineer, Agency activities. Water Demand and Quantity Estimation: Estimation of water demand for a town or city, Per capita Demand and factors influencing it - Types of water demands and its variations- factors affecting water demand, Design Period, Factors affecting the Design period, Population Forecasting

UNIT II

Sources of Water: Lakes, Rivers, Impounding Reservoirs, comparison of sources with reference to quality, quantity and other considerations- Capacity of storage reservoirs, Mass curve analysis. Groundwater sources of water: Types of water bearing formations, springs, Wells and Infiltration galleries, Yields from infiltration galleries. Collection and Conveyance of Water: Factors governing the selection of the intake structure, Types of Intakes. Conveyance of Water: Gravity and Pressure conduits.

UNIT III

Quality Analysis and Primary Treatment of Water: Characteristics of water– Physical, Chemical and Biological- Analysis of Water – Physical, Chemical and Biological characteristics.
Flowchart of water treatment plant, Primary Treatment methods - Theory and Design of Sedimentation, Coagulation, Sedimentation with Coagulation

UNIT IV

Secondary Treatment of Water: Filtration – types of filters – Design and working principles; Theory of disinfection-Chlorination and other Disinfection methods, Softening of Water, Removal of color and odours - Iron and Manganese removal –

Adsorption-fluoridation and deflouridation–aeration– Reverse Osmosis-Iron exchange–Ultra filtration.

UNIT V

Distribution of Water: Requirements- Methods of Distribution system, Layouts of Distribution networks, Pressures in the distribution layouts, Analysis of Distribution networks: Hardy Cross and equivalent pipe methods -Components of Distribution system: valves such as sluice valves, air valves, scour valves and check valves, hydrants, water meters and Pipes –Laying and testing of pipe lines-selection of pipe materials, pipe joints.

Text Books:

1. Elements of Environmental Engineering by K.N. Duggal, S. Chand Company Ltd., New Delhi, 2012.
2. Water Supply Engineering by Dr. P.N. Modi, Standard book house, 4th edition (2015)
3. Water Supply Engineering by B.C. Punmia, Laxmi publications, volume-I
4. Water supply and sanitary engineering by S. C. Rangwala, Charotar publishing house, 29th edition (2016)

References:

1. Water supply engineering by S. K. Garg , Khanna publishers, ,33rd edition (2010)
2. Environmental Engineering by Howard S. Peavy, Donald R. Rowe (2017) Mc-Graw-Hill Book Company, New Delhi, 1985.
3. IS 10500:2012, Drinking water specification.
4. IS: 3052 (Part-08), Methods of sampling and Test (physical and chemical) for water and wastewater.

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET20
Name of the Course	BRIDGE ENGINEERING (Professional Elective - II)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion the course the student will be able to

- Generalize different types of bridges, loading standards and end conditions (K2)
- Assess different reactions and moments in the T beam bridge (K3)
- Design of pier and abutment caps of bridges (K5)
- Design of well foundation with different parameters of sub soil (K5)
- Outline the effectiveness of different bearings of a bridge (K4)

UNIT I
Introduction: Bridges- Types- Slab bridges, T Beam, Arch bridges, Cable Stayed bridges, prestressed concrete bridges, Truss Bridges, Culverts, - Nomenclature- Selection of Bridge Site- Economical span- Abutments pier and end connections- types of foundations- Open, Pile, Well Foundations, Bearings – Types- Introduction to Loading standards- Railway and IRC Loading

UNIT II
T-Beam Bridge: Pigeaud's method for computation of slab moments; Courbon's method for computation of moments in girders; Design of simply supported T-beam bridge.

UNIT III
Sub Structure for Bridges: Pier and abutment caps; Materials for piers and abutments, Design of pier; Design of abutment; Backfill behind abutment; approach slab.

UNIT IV
Foundations for Bridges: scour at abutments and piers; Grip length; Types of foundations; Design of well foundation.
Box Culverts: Loading – Analysis and Design- Reinforcement detailing

UNIT V
Bearings for Bridges: Importance of bearings; bearings for slab bridge; bearings for girder bridges; Expansion bearings; Fixed bearings; Design of elastomeric pad bearing.

Text Books:

1. Essentials of Bridge Engineering by Dr. Johnson Victor; Oxford & IBH publishing Co. Pvt.Ltd
2. Cable supported bridges, concepts and design by N J Gimsing. John Willey and Sons

3. Design of Bridges, N. Krishna Raju, Tata McGraw Hill

References:

1. Design of Bridge Structures by T. R Jagadeesh, M.A Jayaram, Prentice Hall of India Pvt. Ltd.
2. Design of Concrete Bridges, Aswini, Vazirani, Ratwani
3. Bridge Engineering by S.Ponnuswamy

Regulation	V20	3	0	0	3	V20CET21
Name of the Course	**EARTH RETAINING STRUCTURES (Professional Elective – II)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Compute the lateral earth pressures associated with different earth systems (K3)
- Assess the failure criterion and stability requirements of retaining wall (K3)
- Analyze the sheet pile structure for both external and internal stability (K4)
- Apply the knowledge of reinforced earth in designing earth retaining systems (K3)
- Relate different methods for the stability of braced cuts and cofferdams (K3)

SYLLABUS

UNIT I
Earth pressures: Different types and their coefficients; Classical Theories of Earth pressure – Rankine's and Coulomb's Theories for Active and Passive earth pressure; Computation of Lateral Earth Pressure in Homogeneous and Layered soils; Graphical solutions for Coulomb's Theory in active and passive conditions.

UNIT II
Retaining walls: Types, Type of Failures of Retaining Walls – Stability requirements –Drainage behind Retaining walls – Provision of Joints – Relief Shells.

UNIT III
Sheet Pile Structures: Types of Sheet piles – Cantilever sheet piles in sands and clays – Anchored sheet piles – Free earth and Fixed earth support methods – Rowe's moment reduction method – Location of anchors and Design of Anchorage system.

UNIT IV
Soil reinforcement: Reinforced earth - Different components – their functions – Design principles of reinforced earth retaining walls.

UNIT V
Braced cuts and Cofferdams: Lateral Pressure in Braced cuts – Design of Various Components of a Braced cut – Stability of Braced cuts – Bottom Heave in cuts. – Types of cofferdam, suitability, merits and demerits – Design of single – wall cofferdams and their stability aspects – TVA method and Cummins' methods.

Text Books:

1. Principles of Foundation Engineering by Braja M Das, Cengage Learning

Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Develop the drainage systems corresponding to the trends in urbanization (K3)
- Assess the urban drainage flow pattern (K3)
- Select suitable elements of drainage system (K3)
- Relate the detention and retention facilities of storm water (K3)
- Prepare typical drainage master plan for an urbanized area (K3)

SYLLABUS

UNIT I
Introduction: Urbanization and its effect on water cycle – urban hydrologic cycle – Trends in urbanization – Effect of urbanization on hydrology
Precipitation Analysis: Importance of short duration of rainfall and runoff data, methods of estimation of time of concentration for design of urban drainage systems, design storms for urban drainage systems.

UNIT II
Approaches to urban drainage: Time of concentration, peak flow estimation approaches, rational method, NRCS curve number approach, runoff quantity and quality, wastewater and storm water reuse, major and minor systems.

UNIT III
Elements of drainage systems: Open channel, underground drains, appurtenances, pumping, source control.

UNIT IV
Analysis and Management: Storm water drainage structures, design of storm water network- Best Management Practices–detention and retention facilities, swales, constructed wetlands, models available for storm water management.

UNIT V
Master drainage plans: Issues to be concentrated upon – typical urban drainage master plan, interrelation between water resources investigation and urban planning processes, planning objectives, comprehensive planning, use of models in planning.

Text Books:
1. Manual on Drainage in Urbanised area, Geiger W. F., J Marsalek, W. J. Rawls and F.C. Zuidema, (1987 - 2 volumes), UNESCO,
2. Urban Hydrology, Hall M J (1984), Elsevier Applied Science Publisher.
3. Hydrology – Quantity and Quality Analysis, Wanielista M P and Eaglin (1997), Wiley and Sons

4. Urban Hydrology, Hydraulics and Storm water Quality: Engineering Applications and Computer Modelling, Akan A.O and R.L. Houghtalen (2006), Wiley International.

References:

1. Storm water Detention for Drainage, Stahre P and Urbonas B (1990), Water Quality and CSO Management, Prentice Hall.
2. Urban water cycle processes and interactions, Marsalek et. al. (2006), Publication No. 78, UNESCO, Paris(http://www.bvsde.paho.org/bvsacd/cd63/149460E.pdf)
3. Frontiers in Urban Water Management – Deadlock or Hope, by Maksimovic C and J A Tejada-Guibert (2001), IWA Publishing

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET23
Name of the Course	PAVEMENT ANALYSIS AND DESIGN (Professional Elective – II)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Employ different factors influencing the flexible pavement design (K3)
- Employ different factors influencing the rigid pavement design (K3)
- Analyze stresses and strains in flexible and rigid pavement using different theories (K3)
- Design a flexible pavement using Asphalt Institute, and AASHTO methods (K5)
- Design a rigid pavement using AASHTO methods (K5)

SYLLABUS
UNIT I
Factors Affecting Flexible Pavement Design: Variables Considered in Pavement Design, Types of Pavements, Functions of Individual Layers, EAL and ESWL Concepts, Traffic Analysis: ADT, AADT, Truck Factor, Growth Factor, Lane Distributions & Vehicle Damage Factors, Effect of Transient & Moving Loads.

UNIT II
Factors Affecting Rigid Pavement Design: Rigid pavement layers**,** Classification of Axle Types of Rigid Chassis and Articulated Commercial Vehicles, Legal Axle and Gross Weights on Single and Multiple Units, Tire Pressure, Contact Pressure,

UNIT III
Stresses in Flexible and Rigid Pavement: Visco-Elastic Theory and Assumptions, Layered Systems Concepts, Stress Solutions for One, Two and Three Layered Systems, Fundamental Design Concepts, Westergaard's Theory and Assumptions, Stresses due to Curling, Stresses and Deflections due to Loading, Frictional Stresses, and Stresses in Dowel Bars & Tie Bars

UNIT IV
Design of Flexible Pavements: Factors effecting Design. Deflection studies in Flexible Pavements. Present Serviceability Index, Pavement Performance and methods- AASHTO and Asphalt Institute Method.

UNIT V
Design of Rigid Pavements: Factors effecting Design – Wheel load & its repetition, subgrade strength & proportion, strength of concrete- modulus of elasticity, Reinforcement in slab, Design of joints. Design of Dowel bars, Design of Tie bars. AASHTO methods of Rigid Pavement design.

Text Books:

1. Principles of Pavement Design, Yoder.J. &Witzorac Mathew, W. John Wiley & Sons Inc
2. Pavement Analysis & Design, Yang H. Huang, Prentice Hall Inc.

3. AASHTO Pavement Design Guide (1993)

References:

1. Design of Functional Pavements, Nai C. Yang, McGraw Hill Publications
2. Concrete Pavements, AF Stock, Elsevier, Applied Science Publishers.
3. Pavement and Surfacing for Highway & Airports, Micheal Sargious, Applied Science Publishers Limited.
4. IRC: 37 & 58 Codes for Flexible and Rigid Pavements Design.

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET24
Name of the Course	**REMOTE SENSING AND GEOGRAPHICAL INFORMATION SYSTEM (Professional Elective – II)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Generalize the basic principles of Remote Sensing and GIS, including ground, air and satellite based sensor platforms (K2)
- Interpret the aerial photographs and satellite imageries (K2)
- Relate the process of data entry and preparation (K3)
- Examine the Spatial Data for a variety of applications (K3)
- Employ RS and GIS for diverse applications (K3)

SYLLABUS

UNIT I

Introduction to Remote Sensing: Basic concepts of remote sensing, electromagnetic radiation, electromagnetic spectrum, interaction with atmosphere, energy interaction with the earth surfaces, Characteristics of remote sensing systems.

Sensors and platforms: Introduction, types of sensors, airborne remote sensing, space borne remote sensing, image data characteristics, digital image data formats-band interleaved by pixel, band interleaved by line, band sequential, IRS, LANDSAT, SPOT, MODIS, ASTER,RISAT and CARTOSAT.

UNIT II

Image analysis: Introduction, elements of visual interpretations, digital image processing- image preprocessing, image enhancement, image classification, supervised classification, unsupervised classification.

UNIT III

Geographic Information System: Introduction, key components, application areas of GIS, map projections.

Data entry and preparation: spatial data input, raster data models, vector data models.

UNIT IV

Spatial data analysis: Introduction, overlay function-vector overlay operations, raster overlay operations, arithmetic operators, comparison and logical operators, conditional expressions, overlay using a decision table, network analysis-optimal path finding, network allocation, network tracing and buffer analysis.

UNIT V

RS and GIS Applications: Land cover and land use, agriculture, forestry, geology, geomorphology, urban applications.

Applications of Hydrology, Water Resources and Disaster Management: Food zoning and mapping, groundwater prospects and potential recharge zones, watershed management and disaster management with case studies.

Text Books:

1. "Remote sensing and GIS", Bhatta, B., Oxford University Press, 2008.
2. "Remote Sensing and Geographical Information Systems", Anji Reddy, M., B S Publications, 2008.
3. "Basics of Remote Sensing and GIS" Kumar. S., Laxmi Publications,

References:

1. "Fundamentals of Remote Sensing", George Joseph, Universities Press, 2013.
2. "Concepts and Techniques of Geographical Information System", Chor Pang Lo and Yeung, A.K.W., Prentice Hall, India, 2006.
3. "Remote Sensing and its Applications", Narayan L.R.A, Universities Press, 2012.
4. "Introduction to Geographic Information Systems", Kand Tsung Chang, McGraw Hill Higher Education, 2009.
5. "Basics of Remote sensing & GIS", Kumar, S., Laxmi Publications, New Delhi, 2005.

7. "Remote Sensing", Schowenger, R. A., Elsevier publishers, 2006.
8. "Remote Sensing and Image Interpretation", Lillesand, T.M, Kiefer, R.W. and Chipman, J.W., Wiley India Pvt. Ltd., New Delhi, 2013.
9. "Fundamentals of Geographic Information Systems", Demers, M.N, Wiley India Pvt. Ltd, 2013

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	0	0	3	1.5	V20CEL09
Name of the Course	ENVIRONMENTAL ENGINEERING LAB					
Branch	CIVIL ENGINEERING					

Course outcomes:

Upon successful completion of this course the student will be able to

- Illustrate the characteristics of water and waste water (K3)
- Predict the portability of water (K3)
- Examine the condition of water based on the tested parameters (K3)
- Determine the dissolved oxygen, BOD and COD of water (K4)

List of Experiments:

1. Sampling of water for testing (Demonstration)
2. Determination of alkalinity or acidity
3. Determination of chlorides in water and soil
4. Determination and estimation of total solids, organic and inorganic solids, settle able solids
5. Determination of Iron
6. Determination of pH and Electrical Conductivity of water and soil
7. Determination of Optimum coagulant dose
8. Determination of Chlorine demand
9. Determination and estimation of total hardness – calcium and magnesium
10. Determination of N, P, K values in solid waste
11. Physical parameters – Temperature, colour, odour, turbidity, taste.
12. Presumptive Coliform test
13. Determination of Dissolved Oxygen and BOD
14. Determination of COD

List of Equipments:

1. pH Meter
2. Turbidity Meter
3. Conductivity Meter
4. Hot Air Oven
5. Muffle Furnace
6. Dissolved Oxygen Meter
7. U-V Visible Spectrophotometer
8. COD Reflux Apparatus
9. Jar Test Apparatus
10. BOD Incubator
11. Autoclave
12. Hazens Apparatus
13. Imhoff Cone

2. “Chemical analysis of water and soil”, Murali Krishna, KVSG., Reem publications, New Delhi.

Sem	VI Sem	L	T	P	C	COURSE CODE
Regulation	V20	0	0	3	1.5	V20CEL10
Name of the Course	CAD & GIS LAB					
Branch	CIVIL ENGINEERING					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Design 2D and 3D frames using STAAD PRO (K3)
- Design the retaining wall and simple towers using STAAD PRO (K3)
- Create thematic maps with relevant features (K5)
- Develop digital elevation models using GIS software (K3)

Note: Conduct any 10 experiments, 5 each from CADD software and GIS software.

COMPUTER AIDED DESIGN AND DRAWING SOFTWARE:

- STAAD PRO
- STRAAP
- STUDDS

List Of Experiments

- 2-D Frame Analysis and Design
- Steel Tabular Truss Analysis and Design
- 3-D Frame Analysis and Design
- Retaining Wall Analysis and Design
- Simple Tower Analysis and Design.
- Analysis of beam with different end conditions
- Analysis of multistoried building design
- Analysis of space stress
- Wind analysis of tall structure
- Analysis and design of elevated water tank

GEOGRAPHICAL INFORMATION SYSTEM SOFTWARE:

- Arc GIS 9.0
- ERDAS 8.7
- Mapinfo 6.5

List Of Experiments

- Georeferencing-toposheet
- Georeferencing-satellite image
- Creating a layer stack
- Extracting features-digitizing
- Map layout and analysis
- Raster supervised classification
- Raster unsupervised classification
- Raster Analysis- Urban Development
- Raster Analysis- Water bodies

- Creation of thematic maps.
- Estimation of features and interpretation
- Vector Analysis – Route Map
- Vector Analysis – village/ place/ point identification
- Creation of DEM (Digital Elevation Model)

References:

1. Computer aided design lab (Civil) Engineering by shesha Prakash and suresh S.
2. Concept and Techniques of GIS' by C.P.L.O. Albert, K.W. Yong, Printice Hall Publishers.

Name of the Course	**ESTIMATION, CONTRACTS & CONSTRUCTION MANAGEMENT LAB**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Estimate the quantities of different items of construction work (K2)
- Analyze the cost of different items of construction work (K3)
- Compute the quantities for earth work of roads, canals (K3)
- Relate the specification of different works and make contract documents (K3)
- Employ different techniques in the process of construction planning and management (K3)

List of Work Practices

- Estimation of building using Individual Wall Method (two or more rooms)
- Estimation of building using Center Line Method (two or more rooms)
- Schedule of bar bending for beams and slab
- Earthwork estimation using different methods
  - Mid-sectional area method,
  - Mean sectional area method,
  - Trapezoidal rule,
  - Prismoidal rule
- Valuation of various items of work
- Preparation of Contract Document
- Project Network Techniques
  - Bar Chart
  - Programme Evaluation and Review Technique
  - Critical Path Method
- Detailed study on Earth Work, Hoisting and Concreting Equipment's

Sem	**VI Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	2	0	0	0	V20CEMC01
Name of the Course	**INTELLECTUAL PROPERTY RIGHTS & PATENTS**					
Branch	**CIVIL ENGINEERING**					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Describe the need of Intellectual Property Rights (K2)
- Generalize different issues regarding Copy Rights (K2)
- Employ the procedure for Patent registration and granting (K3)
- Discuss the importance of Trademark and its related issues (K2)
- Recognize the significance of Trade Secrets in Industry (K2)

.

SYLLABUS

UNIT I
Introduction to Intellectual Property Rights (IPR): Introduction to IPR, Evolutionary Past, Concept of IPR – Purpose of IPR, Types of IPR, WIPO -TRIPS, Nature of IPR, Patents, Trademarks, Copyrights, Neighboring Rights, Agencies responsible for IPR - Infringement, Use and Misuse of Intellectual Property Rights.

UNIT II
Copyrights: Introduction to Copyrights – Principles of Copyright Protection – Law Relating to Copyrights - Copyright Ownership – Transfer and Duration – Copyright Registration – Limitations – Infringement of Copyright – Relief and Remedy – Semiconductor Chip Protection Act.

UNIT III
Patents: Introduction to Patents - Laws Relating to Patents in India – Patent Requirements – Product Patent and Process Patent - Patent Registration and Granting of Patent -Exclusive Rights – Limitations - Ownership and Transfer — Revocation of Patent – Patent Appellate Board - Infringement of Patent – Compulsory Licensing – Software Protection and Computer related Innovations.

UNIT IV
Trademarks: Introduction to Trademarks – Laws Relating to Trademarks – Functions of Trademark – – Trade Mark Registration – Trade Mark Maintenance – Transfer of rights – Deceptive Similarities - Likelihood of Confusion - Dilution of Ownership – Trademarks Claims and Infringement – Remedies – Passing Off Action.

UNIT V
Trade Secrets: Introduction to Trade Secrets – General Principles - Laws Relating to Trade Secrets - Maintaining Trade Secret – Physical Security – Employee Access Limitation – Employee Confidentiality Agreements – Breach of Contract –Law of

Unfair Competition – Trade Secret Litigation – Applying State Law, Cyber Law and Cyber Crime

Text Books:

1. Intellectual Property Rights (Patents & Cyber Law), Dr. A. Srinivas. Oxford University Press, New Delhi.
2. PrabhuddhaGanguli: Intellectual Property Rights, Tata Mc-Graw –Hill, New Delhi
3. R.Radha Krishnan, S.Balasubramanian: Intellectual Property Rights, Excel Books. New Delhi.

References:

2. Richard Stim: Intellectual Property, Cengage Learning, New Delhi.
3. Kompal Bansal &Parishit Bansal Fundamentals of IPR for Engineers, B. S. Publications (Press).
4. Cyber Law - Texts & Cases, South-Western's Special Topics Collections.
5. M.Ashok Kumar and MohdIqbal Ali: Intellectual Property Rights, Serials Pub.

VII SEMESTER – SYLLABUS

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET25
Name of the Course	PRESTRESSED CONCRETE (Professional Elective – III)					
Branch	CIVIL ENGINEERING					

COURSE OUTCOMES:
Upon the successful completion of course students will be able to

- Discuss the basic concepts of prestressing system (K2)
- Analyze the effective prestress and bending stresses (K4)
- Analyze the deflections and flexural strength of prestressed concrete beams (K4)
- Analyze the prestressed concrete beams under Shear and torsion (K4)
- Design the end zone of prestressed concrete members (K5)

UNIT I
Introduction: Basic concepts of prestressing; Need for High strength steel and High strength concrete. Terminology; Advantages and Applications of Prestressed Concretes, Materials for prestressed Concrete: High strength concrete; High tensile steel.
Prestressing Systems: Prestressing Systems- Introduction, Tensioning devices, Pre-tensioning Systems, Post tensioning Systems

UNIT II
Analysis of Prestress and Bending Stresses: Basic assumptions; Analysis of prestress; Resultant stresses at a section; Pressure (Thrust) line and internal resisting couple; Concept of Load balancing.
Losses of Prestress: Nature of losses of prestress; Loss due to elastic deformation of concrete, shrinkage of concrete, creep of concrete, relaxation of stress in steel, friction and anchorage slip; Total losses allowed for in design.

UNIT III
Deflections of Prestressed Concrete Members: Importance of control of deflections; Factors influencing deflections; Short term deflections of un-cracked members; Effect of tendon profile on deflections.
Limit State of Collapse: Flexural Strength of Prestressed Concrete Sections: Ultimate flexural strength of rectangular sections and T-sections using simplified IS code recommendations.

UNIT IV
Limit State of Collapse: Shear Resistance of Prestressed Concrete Members: Shear and principal stresses; Shear- IS Code recommendations: Ultimate shear resistance of prestressed concrete members; Design of shear reinforcement.
Torsional Resistance of Prestressed Concrete Members: Design of reinforcements for torsion, shear and bending.

UNIT V

Design of End Blocks: Transmission of prestress in pretensioned members; Transmission length; Anchorage stress in post tensioned members; Bearing stress and bursting tensile force stresses in end blocks-Methods. IS Code provision for the design of end block reinforcement.

Text Books: (supplemented with IS: 1343)

1. Prestressed Concrete by N. Krishna Raju; Tata Mc.Graw - Hill Publishing Company Limited, New Delhi.
2. Pre-stressed Concrete- P. Dayarathnam: Oxford and IBH Publishing Co.
3. Prestressed Concrete, S. Ramamrutham

References:

1. Prestressed concrete by N. Rajagopalan; Narosa Publishing House.
2. Design of pre-stressed concrete structures- T.Y. Lin and Ned H. Burns - John Wiley & Sons, New York.
3. Fundamental of pre-stressed concrete- N.C. Sinha & S.K. Roy
4. Prestressed Concrete, T. Y. Lin & Burns, Wiley Publications

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET26
Name of the Course	ADVANCED FOUNDATION ENGINEERING (Professional Elective – III)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the student will be able to

- Illustrate the safe bearing capacity and settlement of footings subjected to different types of loading (K3)
- Employ suitable techniques for proportioning the foundations laid on different soils strata (K3)
- Assess the forces acting on Earth Retaining Structures using different earth pressure theories (K3)
- Predict the load carrying capacity, pull-out capacity, negative skin friction of piles and their settlements (K3)
- Interpret different foundation practices in expansive soils (K3)

SYLLABUS

UNIT I
Bearing capacity of Foundation: using general bearing capacity equation–Meyerhof's, Brinch Hansen's and Vesic's methods-Bearing capacity of Layered Soils: Strong layer over weak layer, Weak layer on strong layer.
Settlement analysis: Immediate settlement, consolidate settlement, corrections, settlement of footings resting on granular soils and clay soils – Schmertmann & Hartman method – Janbu's method.

UNIT II
Mat foundations: Purpose and types of isolated and combined footings – Mats/Rafts – Proportioning of footings – Ultimate bearing capacity of mat foundations – allowable bearing capacity of mats founded in clays and granular soils– compensated rafts.

UNIT III
Earth-retaining structures: cantilever sheet piles – anchored bulkheads – fixed and free earth support methods – design of anchors – braced excavations – function of different components– forces in ties – stability against bottom heave.

UNIT IV
Pile foundations: single pile versus group of piles – load-carrying capacity of pile groups – negative skin friction (NSF) -settlement of pile groups in sands and clays – laterally loaded piles in granular soils – Reese and Matlock method – laterally loaded piles in cohesive soils– Davisson and Gill method – Broms'analysis.

UNIT V

Foundations in expansive soils: definitions of swell potential and swelling pressure – determination of free swell index – factors affecting swell potential and swelling pressure – foundation practices – sand cushion method – CNS layer - drilled piers and belled piers– under-reamed piles – moisture control methods.

Text Books:

1. Principles of Foundation Engineering, B M Das, CENTAG Learning
2. Soil Mechanics and Foundation Engineering, V N S Murthy, CBS Publishers
3. Basic and applied soil mechanics by Gopal Ranjan and ASR Rao, New Age Publishers

References:

1. Foundation Analysis and Design, J.E.Bowles, JohnWiley
2. Foundation Design, W.C.Teng, Prentice Hall Publishers
3. Analysis and Design of Foundations and Retaining Structures by Prakash S edited by Saritha Prakashan

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET27
Name of the Course	**GROUND WATER DEVELOPMENT (Professional Elective – III)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Estimate aquifer parameters and its yield (K2)
- Design the wells and its associated components (K5)
- Generalize the well construction, development and its maintenance (K3)
- Organize the process of artificial recharge for increasing ground water potential (K3)
- Interpret geophysical exploration data for aquifers and their sources (K3)

SYLLABUS

UNIT I
Ground water and Well Hydraulics: Hydrologic Cycle -Groundwater in the hydrologic cycle, groundwater occurrence, aquifer parameters and their determination, general groundwater flow equation - Steady radial flow and unsteady radial flow to a well in confined and unconfined aquifers, Theis solution, Jocob and Chow's methods, Leaky aquifers.

UNIT II
Well Design: Water well design-well diameter, well depth, well screen-screen length, slot size, screen diameter and screen selection, design of collector wells, infiltration gallery.

UNIT III
Well Construction and Development: Water wells, drilling methods-rotary drilling, percussion drilling, well construction-installation of well screens-pull-back method, open- hole, bail-down and wash-down methods, well development-mechanical surging using compressed air, high velocity jetting of water, over pumping and backwashing, well completion, well disinfection, well maintenance.

UNIT IV
Artificial Recharge: Concept of artificial recharge of groundwater, recharge methods-basin, Stream-channel, ditch and furrow, flooding and recharge well methods, recharge mounds and induced recharge.
Saline Water Intrusion: Occurrence of saline water intrusion, Ghyben- Herzberg relation, Shape of interface, control of saline water intrusion.

UNIT V
Geophysics: Surface methods of exploration of groundwater – Electrical resistivity and Seismic refraction methods, Sub-surface methods – Geophysical logging and resistivity logging, Aerial Photogrammetry applications.

Text Books:

1. 'Ground water' by Raghunath H M, New Age International Publishers, 2005.
2. 'Ground water Hydrology' by Todd D.K., Wiley India Pvt Ltd., 2014.
3. 'Ground water Hydrology' by Todd D K and L W Mays, CBSPublications, 2005.

References:

4. 'Groundwater Resources Evaluation' by Walton W C, McGraw Hill Book Company, 1978.

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET28
Name of the Course	HIGHWAY CONSTRUCTION AND MANAGEMENT (Professional Elective – III)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon the successful completion of course students will be able to
- Employ techniques in the planning of Base, Subbase and Shoulders of pavement (K2)
- Prepare a methodology in the laying of bituminous pavements (K3)
- Relate different concepts in the construction of Cement Concrete Pavements (K3)
- Prepare a procedure for the maintenance of Cement Concrete Pavements(K3)
- Develop proper Pavement Management Systems (K3)

SYLLABUS

UNIT I
Construction of Base, Subbase and Shoulders: Roadway and Drain Excavation, Excavation and Blasting, Embankment Construction, Construction of Gravel Base, Cement Stabilized Sub- Bases, WBM Bases, Wet Mix Construction; Crushed Cement Bases, Shoulder Construction.

UNIT II
Bituminous Construction: Preparation and Laying of Tack Coat; Bituminous Macadam, Penetration Macadam, Built up Spray Grout, Open Graded Premix, Mix Seal, Semi-Dense Asphalt Concrete-Interface Treatments and Overlay Construction, IRC Specifications.

UNIT III
Cement Concrete pavement Construction: Cement Concrete Pavement Analysis - Construction of Cement Roads, Manual, and Mechanical Methods, Joints in Concrete and Reinforced Concrete Pavement and Overlay Construction.

UNIT IV
Bituminous and Cement Concrete pavement Maintenance: Repair of surface layer, Base layer, sub base layer, Sub grade, Maintenance of Concrete slab, Dry Lean concrete sub base layer and Subgrade in concrete pavement.

UNIT V
Pavement Management Systems: Pavement Management Systems- Components, structure, data requirements, Project level and Network level needs, Pavement performance prediction – concepts, modelling techniques, Budget forecasting for maintenance and rehabilitation.

Text Books :
1. Highway Engineering, Khanna S. K., Justo C. E. G and Veeraragavan A, Nem Chand Bros., Roorkee.

2. Ralph C.G. Haas, W. Ronald Hudson and Zanieswki “Modern Pavement Management”, Mc Graw Hill and Co,1994
3. Principles of Highway Engineering, Kadiyali L. R, Khanna Publishers, New Delhi.
4. MORTH - Specifications.

References:

1. Principles of Transportation Engineering, Partha Chakroborthy and Animesh Das, PHI Learning Private Limited, Delhi.
2. Transportation Engineering - An Introduction, Jotin Khisty C, Prentice Hall, Englewood Cliffs, New Jersey.

Sem	**VII Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CET29
Name of the Course	**ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT (Professional Elective – III)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of the course, the student will be able to

- Prepare different reports related to EMP, EIS, and EIA (K3)
- Select an appropriate EIA methodology (K2)
- Assess the Impact of development activities and land use (K3)
- Employ in procuring the natural resources and assessment of Eco system (K3)
- Develop the EIA notifications and reports (K3)

SYLLABUS

UNIT I
Basic concept of EIA: Elements of EIA-factors affecting EIA-Initial environmental Examination-life cycle analysis preparation of Environmental Base map-Classification of environmental parameters role of stakeholders in the EIA preparation stages in EIA

UNIT II
E I A Methodologies: introduction, Criteria for the selection of EIA Methodology, E I A methods, Ad-hoc methods, matrix methods, Network method Environmental Media Quality Index method, overlay methods, cost/benefit Analysis – EIS and EMP

UNIT III
Impact of Developmental Activities and Land use: Introduction and Methodology for the assessment of soil and ground water, Delineation of study area, Identification of actives- application of remote sensing and GIS for EIA.

UNIT IV
Procurement of natural resources and assessment of eco system: Procurement of relevant soil quality, Impact prediction, Assessment of Impact significance, Identification and Incorporation of mitigation measures - E I A with reference to surface water, Air and Biological environment – wild life - deforestation
Environmental Risk Assessment and management: Risk assessment and treatment of uncertainty-key stages

UNIT V

EIA notification: EIA notification by Ministry of Environment and Forest (Govt. of India): Provisions in the EIA notification, procedure for environmental clearance, and procedure for conducting environmental impact assessment report- evaluation of EIA report. Environmental legislation objectives, evaluation of Audit data and preparation of Audit report. Post Audit activities, Concept of ISO and ISO 14000, Case studies and preparation of Environmental Impact assessment statement for various Industries.

Text Books:

1. Environmental Impact Assessment, Canter Larry W., McGraw-Hill education Edi (1996)
2. Environmental Impact Assessment Methodologies, Y.Anjaneyulu, B. S. Publication, Sultan Bazar, Hyderabad.
3. Environmental Impact Assessment and Management, B B Hosetti, A.Kumar, Daya Publishing House (2014)

Regulation	V20	3	0	0	3	V20CET30
Name of the Course	**FINITE ELEMENT METHOD (Professional Elective – IV)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of the course, the student will be able to

- Generalize the concept of Finite Element Method (K2)
- Employ different formulation techniques of FEM to the engineering problems (K3)
- Assess one dimensional solid elements of various practical problems (K3)
- Analyze different components of framed structure (K4)
- Analyze the two and three dimensional solids using FEM (K4)

SYLLABUS

UNIT I
Introduction to Finite Element Analysis: Basic Concepts of Finite Element Analysis - Introduction to Elasticity -Steps in Finite Element Analysis

UNIT II
Finite Element Formulation Techniques: Virtual Work and Variational Principle - Galerkin Method- Finite Element Method: Displacement Approach -Stiffness Matrix and Boundary Conditions

UNIT III
Element Properties: Natural Coordinates -Triangular Elements - Rectangular Elements - Lagrange and Serendipity Elements -Solid Elements - Isoparametric Formulation -Stiffness Matrix of Isoparametric Elements - Numerical Integration: One Dimensional - Numerical Integration: Two and Three Dimensional- Worked out Examples

UNIT IV
Analysis of Frame Structures: Stiffness of Truss Members -Analysis of Truss - Stiffness of Beam Members - Finite Element Analysis of Continuous Beam -Plane Frame Analysis - Analysis of Grid and Space Frame

UNIT V
FEM for Two and Three Dimensional Solids: Constant Strain Triangle - Linear Strain Triangle - Rectangular Elements - Numerical Evaluation of Element Stiffness - Computation of Stresses, Geometric Nonlinearity and Static Condensation - Axisymmetric Element - Finite Element Formulation of Axisymmetric Element - Finite Element Formulation for 3 Dimensional- Elements Worked out Examples

Text Books:

1. Introduction to Finite Elements in Engineering, Tirupati R. Chandrupatla, Ashok D. Belgundu, PHI publications.
2. A first course in the Finite Element Method, Dary L. Logan, Thomson Publications.
3. The Finite Element Method- Zinkiewicz, O.C. and Taylor, R.L , Oxford .

Regulation	V20	3	0	0	3	V20CET31
Name of the Course	**ENGINEERING WITH GEO-SYNTHETICS (Professional Elective – IV)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Relate the need and demand of geo-synthetic materials in the field of geotechnical related works (K3)
- Apply the geotextiles and geogrids to practical problems (K3)
- Interpret the functions and applications of Geomembranes and Geocomposites (K3)
- Assess the internal and external stability of Reinforced Earth Retaining Wall (K3)
- Examine the applications of geo-synthetics in road construction (K3)

SYLLABUS

UNIT I
Geosynthetics: Introduction to Geosynthetics – Basic description – Polymeric materials– Uses and Applications, Properties of Geotextiles – Geogrids – Geomembranes – Geocomposites.

UNIT-II
Geotextiles: Design criteria for Separation – Reinforcement – Stabilization – Filtration – Drainage and Moisture barriers.
Natural Geotextiles: Natural fibres as geotextiles- factors governing the use jute fibres-coir geotextiles-bamboo/timber-combination of geotextiles.
Geogrids: Designing for Reinforcement – Stabilization – Designing Gabions – Construction methods.

UNIT-III
Geomembranes: Pond Liners – Covers for Reservoirs – Canal Liners – Landfill Liners– Caps and closures, moisture barriers.
Geocomposites: An added advantage – Geocomposites in Separation – Reinforcement – Filtration – Geocomposites as Geowebs and Geocells.

UNIT-IV
Reinforced Earth Retaining Walls: Components - External stability – Internal stability - Design of reinforced earth walls with strip, sheet and grid reinforcement.

UNIT-V
Use of Geosynthetics in Roads: Geosynthetics in road ways- applications role of subgrade conditions-design criteria-survivability-application in paved roads.

Text Books:

1. Designing with Geosynthetics by Robert M. Koerner, Prantice Hall, Eaglewood Cliffs, NJ.
2. An Introduction to Soil Reinforcement and Geosynthetics' by G.L.Sivakumar Babu (2009), Universities Press (India) Pvt. Ltd.
3. Engineering with Geosynthetics', by G. Venkatappa Rao and GVS Suryanarayana Raju – Tata McGraw Hill Publishing Company Limited – New Delhi.

References:

1. 'Construction and Geotechnical Engineering using Synthetic Fabries' by Robert M. Koerner and Josoph P. Welsh. John Willey and Sons, New York.
2. 'Foundation Analysis and Design' by J.E. Bowles McGraw Hill Publications.

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET32
Name of the Course	URBAN TRANSPORTATION PLANNING (Professional Elective – IV)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Employ the Urban Transportation Problems & Travel Demand (K3)
- Relate the techniques in the data collection for planning the network (K3)
- Develop various models for trip generation, trip distribution and traffic assignment (K3)
- Prepare various alternative transportation proposals (K3)
- Solve the traffic assignment for transport network (K5)

SYLLABUS

UNIT I
Urban Transportation Problems & Travel Demand: Urban Issues, Travel Characteristics, Evolution of Planning Process, Supply and Demand – Systems approach; Trends, Overall Planning process, Long term Vs Short term planning, Demand Function, Independent Variables, Travel Attributes, Assumptions in Demand Estimation, Sequential, and Simultaneous Approaches, Aggregate and Disaggregate Techniques.

UNIT II
Data Collection and Inventories: Collection of data – Organisation of surveys and Analysis, Study Area, Zoning, Types and Sources of Data, Road Side Interviews, Home Interview Surveys, Commercial Vehicle Surveys, Sampling Techniques, Expansion Factors, Accuracy Checks, Use of Secondary Sources, Economic data – Income – Population – Employment – Vehicle Owner Ship.

UNIT III
Trip Generation & Distribution: UTPS Approach, Trip Generation Analysis: Zonal Models, Category Analysis, Household Models, Trip Attraction models, Commercial Trip Rates; Trip Distribution: Growth Factor Methods, Gravity Models, Opportunity Models, Time Function Iteration Models.

UNIT IV
Mode Choice Analysis: Mode Choice Behaviour, Competing Modes, Mode Split Curves, Aggregate and Disaggregate Approaches; Discrete Choice Analysis, Choice sets, Maximum Utility, Probabilistic Models: Binary Logit, Multinomial Logit Model – IIA property; Aggregation

UNIT V
Traffic Assignment: Diversion Curves; Basic Elements of Transport Networks, Coding, Route Properties, Path Building Criteria, Skimming Tree, All-or-Nothing Assignment, Capacity Restraint Techniques, Reallocation of Assigned Volumes, Equilibrium Assignment.

Corridor Identification, Plan Preparation & Evaluation: Master plans, Selection of Corridor, Corridor Identification, Corridor deficiency Analysis; Travel Forecasts to Evaluate Alternative Improvements, Impacts of New Development on Transportation Facilities. Pivot Point Analysis, Environmental and Energy Analysis; Case studies

Text Books:

1. Introduction to Urban System Planning, Hutchinson, B.G., McGraw Hill.
2. Transportation Engineering - An Introduction, Khisty C.J., Prentice Hall

References:

1. Introduction to Transportation Planning, Bruton M.J., Hutchinson of London.
2. Fundamentals of Transportation Planning, Papacostas, Tata McGraw Hill
3. Urban Transportation Planning: A decision oriented Approach, Mayer M and Miller E, McGraw Hill
4. Traffic Engineering and Transportation Planning, Kadiyali.L.R., Khanna Publishers, New Delhi.
5. Metropolitan Transportation Planning, Dicky, J.W., Tata McGraw Hill

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET33
Name of the Course	SOLID WASTE MANAGEMENT (Professional Elective – IV)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Relate the factors influencing generation of solid waste and its management (K3)
- Assess the basic elements for managing the Solid Waste (K3)
- Develop different methods for transportation and transformation of solid waste (K3)
- Prepare different methods for processing and treatment of municipal solid waste (K3)
- Find suitable disposal methods with respect to solid waste (K3)

SYLLABUS

UNIT I
Introduction to Solid Waste Management: Goals and objectives of solid waste management, Classification of Solid Waste – Factors Influencing generation of solid waste – sampling and characterization –Future changes in waste composition, major legislation, monitoring responsibilities.

UNIT II
Basic Elements In Solid Waste Management: Elements and their inter relationship – principles of solid waste management- onsite handling, storage and processing of solid waste Collection of Solid Waste: Types and methods of waste collection systems, analysis of collection system – optimization of collection routes.

UNIT III
Transportation and Transformation of Solid Waste: Need for transfer operation, compaction of solid waste – transport means and methods, transfer station types and design requirements.
Unit operations used for separation and transformation: shredding – materials separation and recovery, source reduction and waste minimization.

UNIT IV
Processing and Treatment: Processing of solid waste – Waste transformation through combustion and composting, anaerobic methods for materials recovery and treatment – Energy recovery – biogas generation and cleaning– Incinerators.

UNIT V
Disposal of Solid Waste: Methods of Disposal, Landfills: Site selection, design and operation, drainage and leachate collection systems –designated waste landfill remediation.

Text Books:

1. “Integrated Solid Waste Management”, George Techobanoglous, McGraw Hill Publication, 1993
2. “Environmental Engineering”, Gerard Kiely, McGraw Hill Publication, 2007
3. “Environmental Science and Engineering”, J Glynn Henry,. Gary W.Heinke, Prentice-Hall of India Pvt Ltd, 1996

References:

1. “Solid Waste Engineering”, Vesilind, P.A., Worrell, W., Reinhart, D., Cenage learning, New Delhi, 2004
2. “Hazardous Waste Management”, Charles A. Wentz., McGraw Hill Publication, 1995.
3. “Introduction to Environmental Engineering” Mackenzie L Davis, David A.Cornwell, McGraw Hill Publication, 2017

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET34
Name of the Course	**PREFABIRCATED STURCTURES (Professional Elective – IV)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Relate the principles of prefabrication, production and erection processes (K3)
- Practice different ways to utilize prefabricated components (K3)
- Design the prefabricated components to mount on the precast concrete system (K5)
- Prepare types of joints and connections to accommodate in precast system (K3)
- Use codal provisions to avoid progressive collapse to abnormal loads (K3)

SYLLABUS

UNIT I
Introduction: Need for prefabrication – Principles of prefabrication – Modular coordination – Standardization – Materials – Systems – Production – Transportation – Erection.

UNIT II
Prefabricated Components: Behavior and types of structural components – Large panel systems – roof and floor slabs – Walls panels - Beams - Columns - Shear walls

UNIT III
Design Principles: Design philosophy- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation - Demountable precast concrete systems.

UNIT IV
Joints and Connections in Structural Members: Types of Joints – based on action of forces - compression joints - shear joints - tension joints - based on function - construction, contraction, expansion, Design of expansion joints - Dimensions and detailing - Types of sealants - Types of structural connections - Beam to Column - Column to Column - Beam to Beam - Column to foundation.

UNIT V
Design for Abnormal Loads: Progressive collapse – Codal provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

Text Books:

1. "Prefabrication with Concrete", Bruggeling A.S. G and Huyghe G.F., A.A. Balkema Publishers, USA,1991.
2. "Precast Concrete- Materials, Manufacture, Properties And Usage", Lewitt,M., Applied Science Publishers, London and New Jersey, 1982.
3. "Precast Concrete Structures", Bachmann, H. and Steinle, A., Ernst &Sohn, Berlin, 2011.

References:

1. "Manual of precast concrete construction", Koncz T., Vol. I, II and III, Bauverlag, GMBH, 1976.
2. "Handbook on Precast Concrete Buildings", Indian Concrete Institute, 2016.
3. "Structural design manual", Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland BetorVerlag, 2009

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET35
Name of the Course	EARTHQUAKE ENGINEERING (Professional Elective – V)					
Branch	CIVIL ENGINEERING					

Course Outcomes
At the end of the course the student will be able to

- Discuss the basic concept and characteristics of earth quakes (K2)
- Examine the ground motion and seismic hazard (K3)
- Assess the frequency of wave propagation in different mediums (K3)
- Illustrate the behavior and resistive forces generated in the structure during earthquake (K3)
- Relate the possibility of liquefaction and ground improvement for remediation of seismic hazards (K3)

SYLLABUS

UNIT I
Introduction to Dynamic Loads: Static Load v/s Dynamic Load, Types of Dynamic forces, Force Control and Displacement Control.
Seismology and Earthquakes: Introduction, Seismic Hazards, seismic waves, internal structure of earth, Continental drift and plate tectonics, faults, elastics rebound theory, geometric notations, location of earthquakes, size of earthquakes.

UNIT II
Strong Ground Motion: Strong ground motion measurement, ground motion parameters, estimation of ground motion parameters.
Seismic Hazard Analysis: Identification and Evaluation of Earthquake Sources, deterministic seismic hazard analysis, probabilistic seismic hazard analysis.

UNIT III
Wave Propagation: Waves in unbounded media, waves in a semi – infinite body, waves in a layered media, attenuation of stress waves.
Artificial Ground Motion Generation: Modification of actual ground motion records, time –domain generation, frequency domain generation.

UNIT IV
Behavior of Structures: During Earthquake and Earthquake Resistant Features of Structure Inertia forces in structures, Behavior of Masonry Structures, Behavior of RC Structures

UNIT V

Liquefaction: Flow liquefaction, cyclic mobility, evaluation of liquefaction hazards, liquefaction susceptibility, initiation of liquefaction, effects of liquefaction.

Soil Improvement for Remediation of Seismic Hazards: Densification techniques, Reinforcement Techniques, Grouting and Mixing techniques, Drainage techniques.

Text Books:

1. Earthquake Resistant Design of Structures By Pankaj Agarwal & Manish Shrikhande, PHI Publications
2. S. K. Duggal; Earthquake Resistance Design of Structures; Oxford University Press, New Delhi.
3. K. Chopra; Dynamics of Structures, Pearson, New Delhi
4. Park & Pauly; Behavior of R.C Structures
5. Geotechnical Earthquake Engineering by Steven L. Kramer, prentice Hall

Reference Books:

1. IS: 1893 (Part-I) 2002, Criteria for Earthquake Resistant Design General Provision to Building.
2. S: 13920 (1993), Code of Practice for Ductile Detailing of RC Structures
3. IS: 4326 (1993), Code of Practice for Earthquake Resistant Design and Construction of Buildings
4. IS: 13827 (1993), Improving Earthquake Resistance of Earthen Buildings
5. IS: 13828 (1993), Guide lines for Improving Earthquake Resistance of low Strength Masonry Buildings.
6. S S Rao; Mechanical Vibration; Pearson, New Delhi.

Sem	VII	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET36
Name of the Course	GROUND IMPROVEMENT TECHNIQUES (Professional Elective – V)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Employ the in-situ densification methods at ground surface and at depth (K3)
- Relate the importance of dewatering and different methods of stabilization (K3)
- Illustrate the reinforced earth technology and soil nailing to obviate the problems posed by conventional retaining walls (K3)
- Use the geosynthetics to improve the engineering performance of soils (K3)
- Select different techniques of grouting to solve the ground problems (K3)

SYLLABUS

UNIT I
In situ densification methods: In situ densification of granular soils-vibration at ground surface and at depth, impact at ground and at depth – in situ densification of cohesive soils – pre loading – vertical drains – sand drains and geo drains – stone columns.

UNIT II
Dewatering: Sumps and interceptor ditches – single and multi stage well points – vacuum well points – horizontal wells– electro osmosis
Stabilization of soils: Methods of soil stabilization – mechanical – cement – lime – bitumen and polymer stabilization – use of industrial wastes like fly ash and granulated blast furnace slag.

UNIT III
Reinforced earth: Principles – components of reinforced earth –stability checks – soil nailing

UNIT IV
Geosynthetics: Geotextiles – types – functions, properties and applications – geogrids, geomembranes and gabions – properties and applications.

UNIT V
Grouting: Objectives of grouting – grouts and their applications – methods of grouting – stage of grouting.

Text Books:

1. Ground Improvement Techniques, Purushotham Raj, Laxmi Publications, New Delhi.
2. Ground Improvement Techniques, Nihar Ranjan Patro, Vikas Publishing House (p) limited , New Delhi.
3. An introduction to Soil Reinforcement and Geosynthetics, G. L. Siva Kumar Babu, Universities Press.

References:

1. Ground Improvement, M.P.Moseley, Blackie Academic and Professional, USA
2. Designing with Geosynethetics, R. M Koerner, Prentice Hall
3. Engineering Principles of Ground Modification by Manfred R. Hausmann,McGraw-Hill Inc.,

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET37
Name of the Course	**RURAL WATER SUPPLY AND ONSITE SANITATION SYSTEMS (Professional Elective – V)**					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon the successful completion of course students will be able to

- Generalize the concept and scope of sanitation in rural areas (K2)
- Apply suitable methods of water treatment for rural areas (K3)
- Develop the water distribution system in rural areas (K3)
- Relate the different public sanitation methods in rural areas and industrial zones (K3)
- Relate different methods of solid waste management in rural areas (K3)

SYLLABUS

UNIT I
Concept of environmental and scope of sanitation in rural areas: Magnitude of problem of water supply and sanitation – population to be covered and difficulties National policy, Various approaches for planning of water supply systems in rural areas, Selection and development of preferred sources of water, springs, wells and infiltration galleries, collection of raw water from surface source.

UNIT II
Specific problems: Specific problems in rural water supply and treatment e.g. iron, manganese, fluorides etc., Low cost treatment, appropriate technology for water supply and sanitation, Improvised method and compact system of treatment of surface and ground waters such as MB settlers, slow and sand filter, chlorine diffusion cartridge etc., Water supply through spot sources, hand pumps, open dug –well.

UNIT III
Planning of distribution system in rural areas: Water supply during fairs, festivals and emergencies, Treatment and disposal of wastewater/sewage, various method of collection and disposal of night soil

UNIT IV
Rural sanitation and industrial hygiene: Simple wastewater treatment system for rural areas and small communities such as stabilization ponds, septic tanks, soakage pits etc., Occupational Hazards- Schools- Public Buildings- Hospitals- Eating establishments- Swimming pools – cleanliness and maintenance and comfort- Industrial plant sanitation

UNIT V
Solids Waste: Collection, Transfer, Transport and deposit of solid waste management, composting, land filling.

Text Books:

1. "Water Supply and Sanitary Engineering" by Rangwala, Charotar Publishing House Pvt Ltd.,
2. "Water Supply and Sanitary Engineering" by G.S.Birdie and J.S.Birdie, Dhanpat Rai Publishing Company

References:

1. "Manual of water supply and treatment", 3rd edition, CPHEEO, GOI, New Delhi.
2. "Solid Waste Engineering", Vesilind, P.A., Worrell, W., Reinhart, D., Cenage learning, New Delhi, 2004

Name of the Course	METRO SYSTEMS AND ENGINEERING (Professional Elective – V)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Generalize different Metro Systems and their planning (K2)
- Relate construction methods of elevated and under ground stations (K3)
- Employ the construction quality and safety systems (K3)
- Illustrate the methods to utilize electronic signaling systems and automatic fare collection systems (K3)
- Organize the mechanical and electrical work of different systems (K3)

SYLLABUS

UNIT I
General: Overview of Metro Systems; Need for Metros; Routing studies; Basic Planning and
Financials

UNIT II
Construction Methods: Civil Engineering- Overview and construction methods for elevated and underground stations; Viaduct spans and bridges; Underground tunnels; Depots; Commercial and Service buildings, Initial Surveys & Investigations;

UNIT III
Quality & Safety Systems: Basics of Construction Planning & Management, Construction Quality & Safety Systems, Traffic integration, multimodal transfers and pedestrian facilities; Environmental and social safe guards; Track systems-permanent way. Facilities Management

UNIT IV
Operation Control Center: Electronics and Communication Engineering- Signaling systems; Automatic fare collection; Operation Control Centre (OCC and BCC); SCADA and other control systems; Platform Screen Doors.

UNIT V
Mechanical & Rolling Stock: Mechanical & TVS, AC: Rolling stock, vehicle dynamics and structure; Tunnel Ventilation systems; Air conditioning for stations and buildings; Fire control systems; Lifts and Escalators.
Electrical: OHE, Traction Power; Substations- TSS and ASS; Power SCADA; Standby and Back - up systems; Green buildings, Carbon credits and clear air mechanics.

Text Books:

1. "Metro Rail in India for Urban Mobility", by MM Agarwal, Sudhir Chandra and KK Miglani – Prabha& Co, 2021
2. "World Metro Systems", Paul Garbutt, Capital Transport Pub; 2nd Edition, 1997.

References:

1. General & Technical information of Hyderabad Metro
2. General & Technical information of Delhi Metro

Sem	VII Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CET39
Name of the Course	ARCHITECTURE AND TOWN PLANNING (Professional Elective – V)					
Branch	CIVIL ENGINEERING					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Distinguish architectural styles of eastern and western world (K2)
- Understand the importance of Orders of architecture (K2)
- Develop spaces of buildings using design concepts, planning principles (K3)
- Relate the present town planning from ancient times to modern times.
- Interpret the town planning standards, landscaping features and regulations controlling expansion of the towns and the cities (K3)

SYLLABUS:

UNIT I
History of Architecture: Western Architecture: Egyptian, Greek, Roman Architectures- Orders. Indian Architecture: Vedic age, Indus valley civilization– Buddhist period: Stambas, Stupa, Toranas, Chaityas, Viharas – Hindu temples: Dravidian and Indo Aryan Styles-Temple of Aihole, Madurai, Bhuvaneshwar, Mount Abu. Indo Sarsanic (Islamic) Architecture: Mosque - Palace - Fort - Tomb.

UNIT II
Architectural Design: Principles of designing – Composition of Plan – relationship between plan and elevation- building elements, form, surface texture, mass, line, color, tone- Principles of Composition: Unity, contrast, proportion, scale, balance, circulation, rhythm, character, expression.

UNIT III
Principles of Planning: Principles of planning a residence- site selection, site orientation- aspect, prospect, grouping, circulation, privacy, furniture requirements, services and other factors. Post-classic Architecture: Introduction of post-classic architecture contribution of eminent architects to modern period-Edward Lutyens, Le Corbusier, Frank Lloyd Wrigt, Walter Groping.

UNIT IV
Historical Back Ground of Town Planning: Town planning in India – Town plans of mythological Manasa - Town plans of ancient towns: Harappa, Mohenjodaro, Pataliputra, Delhi, Acropolis (Greece), Jerusalem, Mecca, Rome, London.

UNIT V
Modern Town Planning: Zoning- Roads and road traffic- Housing- Slums, Parks, Play grounds- Public Utility Services- Surveys and maps for planning Neighborhood Planning. Standards of Town planning: Planning new towns, planning standards and specifications, national and regional planning, town planning and legislation planning regulations and limitations.
Land Scaping and Expansion of Towns: Land scaping for the towns, horizontal and vertical expansion of towns- garden cities, satellite towns floating towns- sky scrapers-pyramidal cities.

Text Books:

1. 'The great ages of World Architecture' by G.K. Hiraskar.
2. 'Planning and Design of Buildings by Section of Architecture' by Y. S. Sane., Civil Engineering 142
3. 'Professional Practice' by G.K. Krishnamurthy, S.V. Ravindra, PHI Learning, New Delhi.
4. 'Indian Architecture – Vol. I & II' by Percy Brown, Taraporevala Publications, Bombay.
5. 'Fundamentals of Town Planning' by G.K. Haraskar.

References:

1. 'Drafting and Design for Architecture' by Hepler, Cengage Learning
2. 'Architect's Portable Handbook' by John Patten Guthrie – Mc Graw Hill International Publications.
3. 'Modern Ideal Homes for India' by R. S. Deshpande.
4. 'Town and County Planning' by A.J.Brown and H.M.Sherrard.
5. 'Town Design' by Federik Glbbard, Architectural press, London.

5. Remote Sensing and GIS	V20CEOE05
6. Solid Waste Management	V20CEOE06
7. Disaster Management	V20CEOE07
8. Water Quality and Conservation Systems	V20CEOE08

COURSES OFFERED UNDER MANDATORY COURSES IN V, VI & VII SEMESTER TO OTHER BRANCHES

Name of the Course	Course code
1. Intellectual Property Rights & Patents	V20CEMC01
2. Professional Ethics & Human Values	V20CEMC02

Open Elective -I

Sem	**V/VI/VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CEOE01
Name of the Course	**REPAIR AND REHABILITATION OF STRUCTURES**					
Branch	EXCEPT CE					

Course Outcomes:
Upon the successful completion of course students will be able to

- Develop various maintenance and repair strategies (K2)
- Evaluate the existing buildings through field investigations (K2)
- Understand and use the different techniques for structural rehabilitation and various techniques of repair (K2)
- Understand the importance of advanced concretes mixes(K2)
- Understand the importance of high performance concretes(K2)

SYLLABUS

UNIT I
Deterioration of Structures and diagnosis: Distress in Structures – Causes and Prevention. Mechanism of Damage – Types of Damage, Non Destructive Testing, Corrosion of Steel Reinforcement – Causes – Mechanism and Prevention. Damage of Structures due to Fire – Fire Rating of Structures – Inspection and Testing – Symptoms and Diagnosis of Distress – Damage assessment –

UNIT II
Materials for repair and rehabilitation: Admixtures- types of admixtures - purposes of using admixtures- chemical composition- Natural admixtures - Fibres- wraps- Glass and Carbon fibre wraps- Steel Plates

UNIT III
Strengthening and stabilization: Techniques- design considerations-Beam shear capacity strengthening - Shear Transfer strengthening-stress reduction techniques- Column strengthening-flexural strengthening - Connection stabilization and strengthening, Crack stabilization

UNIT IV
Special Concretes: Fibre reinforced concrete: Properties of constituent materials- Mechanical properties of fiber reinforced concrete- applications of fibre reinforced concretes-Light weight concrete- properties of light weight concrete- No fines concrete- design of light weight concrete- Flyash concrete - classification of flyash- Properties of flyash concrete

UNIT V
High performance concretes: Introduction- Development of high performance concretes- Materials of high performance concretes- Properties of high performance concretes- Self Consolidating concrete-properties-qualifications.

Text Books:
1. Maintenance and Repair of Civil Structures, B.L. Gupta and Amit Gupta, Standard Publications.
2. Concrete Technology by A.R. Santa Kumar, Oxford University press
3. Concrete technology by Neville and J J Brooks, Pearson publications, 2nd edition

Course Outcomes:
Upon successful completion of this course the student will be able to

- Employ the in-situ densification methods at ground surface and at depth (K3)
- Relate the importance of dewatering and different methods of stabilization (K3)
- Illustrate the reinforced earth technology and soil nailing to obviate the problems posed by conventional retaining walls (K3)
- Use the geosynthetics to improve the engineering performance of soils (K3)
- Select different techniques of grouting to solve the ground problems (K3)

SYLLABUS

UNIT I
In situ densification methods: In situ densification of granular soils- vibration at ground surface and at depth, impact at ground and at depth – in situ densification of cohesive soils – pre loading – vertical drains – sand drains and geo drains – stone columns.

UNIT II
Dewatering: Sumps and interceptor ditches – single and multi stage well points – vacuum well points – horizontal wells– electro osmosis
Stabilization of soils: Methods of soil stabilization – mechanical – cement – lime – bitumen and polymer stabilization – use of industrial wastes like fly ash and granulated blast furnace slag.

UNIT III
Reinforced earth: Principles – components of reinforced earth –stability checks – soil nailing

UNIT IV
Geosynthetics: Geotextiles – types – functions, properties and applications – geogrids , geomembranes and gabions – properties and applications.

UNIT V
Grouting: Objectives of grouting – grouts and their applications – methods of grouting – stage of grouting.

Text Books:

1. Ground Improvement Techniques, Purushotham Raj, Laxmi Publications, New Delhi.
2. Ground Improvement Techniques, Nihar Ranjan Patro, Vikas Publishing House (p) limited , New Delhi.
3. An introduction to Soil Reinforcement and Geosynthetics, G. L. Siva Kumar Babu, Universities Press.

Name of the Course	**ENVIRONMENTAL POLLUTION AND CONTROL**					
Branch	EXCEPT CE NG					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Describe the air pollution and its control methods (K2)
- Explain industrial waste water and ways to control it (K3)
- Generalize the solid, hazardous waste and control methods (K2)
- Illustrate the importance of Environmental sanitation methods (K2)
- Illustrate the importance of Sustainable development (K3)

SYLLABUS

UNIT I
Air Pollution: Air pollution Control Methods–Particulate control devices – Methods of Controlling Gaseous Emissions – Air quality standards.Noise Pollution: Noise standards, Measurement and control methods

UNIT II
Industrial wastewater Management: Strategies for pollution control – Volume and Strength reduction-Recirculation of industrial waste water – Effluent standards.

UNIT III
Solid Waste Management: Solid waste characteristics –on-site handling and collection – separation and processing -Solid waste disposal method
Hazardous Waste: Characterization – Nuclear waste – Biomedical wastes – Electronic wastes – Chemical wastes – Treatment and management of hazardous waste-Disposal methods.

UNIT IV
Environmental Sanitation: Environmental Sanitation Methods for Hostels and Hotels, Hospitals, Swimming pools and public bathing places, social gatherings (melas and fares), Schools and Institutions, Rural Sanitation-low cost waste disposal methods.

UNIT V
Sustainable Development: Definition- elements of sustainable developments-Indicators of sustainable development- Sustainability Strategies- sustainable development.

Text Books:

1. Environmental Engineering, by Ruth F. Weiner and Robin Matthews – 4th Edition Elesevier, 2003.
2. Environmental Science and Engineering by J.G. Henry and G.W. Heinke – Pearson Education.
3. Environmental Engineering by Mackenzie L Davis & David A Cornwell. McGraw Hill Publishing.

References:

1. Solid Waste Engineering, Vesilind, P.A., Worrell, W., Reinhart, D., Cenage learning, New Delhi, 2004
2. Hazardous Waste Management, Charles A. Wentz, McGraw Hill Publication, 1995.

Sem	**V/VI/VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CEOE04
Name of the Course	**BUILDING MATERIALS AND CONSTRUCTION**					
Branch	EXCEPT CE					

Course Outcomes:
After successful completion of the course, the student will be able to:

- Describe different building materials and their importance in building construction (K2)
- Relate various components of cement and lime (K3)
- Generalize the brick and stone masonry in construction (K2)
- Interpret different aggregates and their specifications (K2)
- Describe the importance of different building components (K2)

SYLLABUS

UNIT I
Stones, Bricks and Tiles: Building stones – classifications and quarrying – properties –structural requirements and dressing. Bricks – Composition of Brick earth – manufacture and structural requirements, Fly ash, Ceramics, Timber, Aluminum, Glass, Paints and Plastics: Wood - structure – types and properties– seasoning – defects; alternate materials for Timber–GI/ fibre – reinforced glass bricks, steel & aluminum, Plastics.

UNIT II
Cement & Admixtures: Ingredients of cement – manufacture – Chemical composition – Hydration - field & lab tests, Admixtures – mineral & chemical admixtures – uses, Various ingredients of lime – Constituents of lime stone – classification of lime – various methods of manufacture of lime

UNIT III
Mortars: Lime and Cement Mortars.
Masonry: Brick masonry – types – bonds; Stone masonry – types; Composite masonry – Brick- stone composite; Concrete, Reinforced brick. Cavity and partition walls, Finishing‘s, Plastering, Pointing, Painting, Claddings – Types – Tiles – ACP.

UNIT IV
Aggregates: Classification of aggregate – Coarse and fine aggregates- particle shape and texture – Bond and Strength of aggregate – Specific gravity – Bulk Density, porosity and absorption – Moisture content of Aggregate- Bulking of sand – Sieve analysis.
Miscellaneous materials: Bitumen and asphaltic materials, structural steel and other metals, geo textiles, carbon composites including properties and uses.

UNIT V
Building Components: Lintels, Arches, walls, vaults – stair cases – types of floors, types of roofs – flat, curved, trussed. Foundations – types; Damp Proof Course; Joinery – doors – windows – materials – types.
Form work: Types: Requirements – Standards – Scaffolding.

Sem	**V/VI/VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CEOE05
Name of the Course	**REMOTE SENSING AND GEOGRAPHICAL INFORMATION SYSTEM**					
Branch	EXCEPT CE					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Generalize the basic principles of Remote Sensing and GIS, including ground, air and satellite based sensor platforms (K2)
- Interpret the aerial photographs and satellite imageries (K2)
- Relate the process of data entry and preparation (K3)
- Examine the Spatial Data for a variety of applications (K3)
- Employ RS and GIS for diverse applications (K3)

SYLLABUS

UNIT I

Introduction to Remote Sensing: Basic concepts of remote sensing, electromagnetic radiation, electromagnetic spectrum, interaction with atmosphere, energy interaction with the earth surfaces, Characteristics of remote sensing systems.

Sensors and platforms: Introduction, types of sensors, airborne remote sensing, space borne remote sensing, image data characteristics, digital image data formats-band interleaved by pixel, band interleaved by line, band sequential, IRS, LANDSAT, SPOT, MODIS, ASTER,RISAT and CARTOSAT.

UNIT II

Image analysis: Introduction, elements of visual interpretations, digital image processing- image preprocessing, image enhancement, image classification, supervised classification, unsupervised classification.

UNIT III

Geographic Information System: Introduction, key components, application areas of GIS, map projections.

Data entry and preparation: spatial data input, raster data models, vector data models.

UNIT IV

Spatial data analysis: Introduction, overlay function-vector overlay operations, raster overlay operations, arithmetic operators, comparison and logical operators, conditional expressions, overlay using a decision table, network analysis-optimal path finding, network allocation, network tracing and buffer analysis.

UNIT V

RS and GIS Applications: Land cover and land use, agriculture, forestry, geology, geomorphology, urban applications.

Applications of Hydrology, Water Resources and Disaster Management: Food zoning and mapping, groundwater prospects and potential recharge zones, watershed management and disaster management with case studies.

Sem	V/VI/VII	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CEOE06
Name of the Course	SOLID WASTE MANAGEMENT					
Branch	EXCEPT CE					

Course Outcomes:
Upon successful completion of this course, the students will be able to

- Generalize Solid Waste and its management (K2)
- Assess different elements for managing Solid Waste (K3)
- Employ different methods for transportation and transformation of solid waste (K3)
- Organize different methods for processing and treatment of municipal solid waste (K3)
- Practice suitable disposal methods with respect to solid waste (K3)

SYLLABUS

UNIT I
Introduction to Solid Waste Management: Goals and objectives of solid waste management, Classification of Solid Waste – Factors Influencing generation of solid waste – sampling and characterization –Future changes in waste composition, major legislation, monitoring responsibilities.

UNIT II
Basic Elements In Solid Waste Management: Elements and their inter relationship – principles of solid waste management- onsite handling, storage and processing of solid waste Collection of Solid Waste: Types and methods of waste collection systems, analysis of collection system – optimization of collection routes.

UNIT III
Transportation and Transformation of Solid Waste: Need for transfer operation, compaction of solid waste – transport means and methods, transfer station types and design requirements.
Unit operations used for separation and transformation: shredding – materials separation and recovery, source reduction and waste minimization.

UNIT IV
Processing and Treatment: Processing of solid waste – Waste transformation through combustion and composting, anaerobic methods for materials recovery and treatment – Energy recovery – biogas generation and cleaning– Incinerators.

UNIT V

Disposal of Solid Waste: Methods of Disposal, Landfills: Site selection, design and operation, drainage and leachate collection systems –designated waste landfill remediation.

Text Books:

4. “Integrated Solid Waste Management”, George Techobanoglous, McGraw Hill Publication, 1993

Sem	V/VI/VII	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CEOE07
Name of the Course	DISASTER MANAGEMENT					
Branch	EXCEPT CE					

Course Outcomes:
Upon successful completion of this course the student will be able to

- Describe different natural hazards and disaster management (K2)
- Generalize the risk and vulnerability of disaster (K2)
- Illustrate the role of technology in disaster management (K3)
- Relate the importance of education and community preparedness to disaster recovery (K3)
- Organize the multi-sectional issues created by disaster (K2)

UNIT I
Natural Hazards and Disaster Management: Introduction of DM Disaster Management cycle – Five priorities for action- Case study methods of the following: floods, droughts – Earthquakes – global warming, cyclones & Tsunamis – Post Tsunami hazards along the Indian coast – landslides. Fire hazards – transport hazard dynamics – solid waste management – post disaster – bio terrotirism - rail and air craft's accidents-Management of these disasters

UNIT II
Risk and Vulnerability: – Building codes and land use planning – social vulnerability – environmental vulnerability -Financial management of disaster.

UNIT III
Role of Technology in Disaster Managements: Disaster management for infra structures, taxonomy of infra structure - mitigation programme for earth quakes –geospatial information in agriculture drought assessment-multimedia technology in disaster risk management and training-transformable indigenous knowledge in disaster reduction.

UNIT IV
Education and Community Preparedness: Education in disaster risk reduction-Essentials of school disaster education-Community capacity and disaster resilience-Community based disaster recovery -Community based disaster management and social capital-Designing resilience- building.

UNIT V
Multi-sectional Issues: Impact of disaster on poverty and deprivation-Climate change adaptation and human health -Exposure , health hazards and environmental risk-Forest management and disaster risk reduction - The Red cross and red crescent movement.

Name of the Course	**WATER QUALITY AND CONSERVATION SYSTEMS**					
Branch	EXCEPT CE					

Course Outcomes:
Upon successful completion of the course, the student will be able to

- Describe different parameters of Engineering Hydrology (K2)
- Relate different sources of surface and ground water (K3)
- Assess the importance of water supply systems and quality of water in reference to IS and WHO standards (K3)
- Develop different systems of plumbing (K3)
- Employ different conservation techniques (K3)

SYLLABUS

UNIT I
Introduction to Hydrology: Engineering hydrology, applications, Hydrologic cycle, evaporation, evapotranspiration, precipitation, run off, infiltration, hydrological data-sources

UNIT II
Sources of Water: Surface water, Lakes, Rivers, Reservoirs, comparison of sources with reference to quality, quantity and other considerations.
Groundwater, types of water bearing formations, springs, Wells and Infiltration galleries, Yields from infiltration galleries.

UNIT III
Importance of Protected Water: Supply systems, Flow chart of public water supply system, Water borne diseases, Estimation of water usages in different purpose.

Quality and Analysis of Water: Characteristics of water–Physical, Chemical and Biological-Analysis of Water – Physical, Chemical and Biological characteristics, Comparison of sources with reference to quality- I.S. Drinking water quality standards and WHO guidelines for drinking water.

UNIT IV
Plumbing Systems: Systems of plumbing-types of pipes and sanitary fittings and other accessories–one pipe and two pipe systems – Design parameters and factors.

UNIT V
Water conservation: importance and necessity, objectives, systems-rainwater harvesting, recharge pits, watershed.

Text Books:
1. Environmental Engineering – Howard S. Peavy, Donald R. Rowe, Teorge George Tchobanoglus – Mc-Graw-Hill Book Company, New Delhi, 1985
2. Elements of Environmental Engineering, K. N. Duggal, S. Chand & Company Ltd. New Delhi, 2012.

Regulation	V20	2	0	0	0	V20CEMC01
Name of the Course	INTELLECTUAL PROPERTY RIGHTS & PATENTS					
Branch	Common to All Branches					

Course Outcomes:
Upon successful completion of this course the student will be able to
- Describe the need of Intellectual Property Rights (K2)
- Generalize different issues regarding Copy Rights (K2)
- Employ the procedure for Patent registration and granting (K3)
- Discuss the importance of Trademark and its related issues (K2)
- Recognize the significance of Trade Secrets in Industry (K2)

SYLLABUS

UNIT I
Introduction to Intellectual Property Rights (IPR): Introduction to IPR, Evolutionary Past, Concept of IPR – Purpose of IPR, Types of IPR, WIPO - TRIPS, Nature of IPR, Patents, Trademarks, Copyrights, Neighboring Rights, Agencies responsible for IPR - Infringement, Use and Misuse of Intellectual Property Rights.

UNIT II
Copyrights: Introduction to Copyrights – Principles of Copyright Protection – Law Relating to Copyrights - Copyright Ownership – Transfer and Duration – Copyright Registration – Limitations – Infringement of Copyright – Relief and Remedy – Semiconductor Chip Protection Act.

UNIT III
Patents: Introduction to Patents - Laws Relating to Patents in India – Patent Requirements – Product Patent and Process Patent - Patent Registration and Granting of Patent -Exclusive Rights – Limitations - Ownership and Transfer – – Revocation of Patent – Patent Appellate Board - Infringement of Patent – Compulsory Licensing – Software Protection and Computer related Innovations.

UNIT IV
Trademarks: Introduction to Trademarks – Laws Relating to Trademarks – Functions of Trademark – – Trade Mark Registration – Trade Mark Maintenance – Transfer of rights – Deceptive Similarities - Likelihood of Confusion - Dilution of Ownership – Trademarks Claims and Infringement – Remedies – Passing Off Action.

UNIT V

Trade Secrets: Introduction to Trade Secrets – General Principles - Laws Relating to Trade Secrets - Maintaining Trade Secret – Physical Security – Employee Access Limitation – Employee Confidentiality Agreements – Breach of Contract –Law of Unfair Competition – Trade Secret Litigation – Applying State Law, Cyber Law and Cyber Crime

Text Books:

1. Intellectual Property Rights (Patents & Cyber Law), Dr. A. Srinivas. Oxford University Press, New Delhi.
2. PrabhuddhaGanguli: Intellectual Property Rights, Tata Mc-Graw – Hill, New Delhi
3. R.Radha Krishnan, S.Balasubramanian: Intellectual Property Rights, Excel Books. New Delhi.

Regulation	V20	2	0	0	0	V20CEMC02
Name of the Course	**PROFESSIONAL ETHICS AND HUMAN VALUES**					
Branch	**Common to All Branches**					

Course Outcomes:

Upon successful completion of this course the student will be able to

- Discuss the importance of human values and their context (K2)
- Generalize the professional ethics and norms of engineering practice (K2)
- Review the contextual knowledge of engineering as social experimentation (K2)
- Identify the engineer's responsibility for Safety & Risks (K2)
- Clarify the professional rights & responsibilities at global level (K2)

.

UNIT I

Human Values: Morals, Values and Ethics – Integrity – Work Ethics – Service Learning –Civic Virtue – Respect for others – Living Peacefully – Caring – Sharing –Honesty –Courage – Value time – Co-operation – Commitment – Empathy –Self-confidence–Spirituality-Character.

UNIT II

Engineering Ethics: The History of Ethics, Purposes for Engineering Ethics, Consensus and Controversy, Professional and Professionalism, Professional Roles to be played by an Engineer –Self Interest, Customs and Religion, Uses of Ethical Theories, Professional Ethics, Types of Inquiry in Engineering Ethics.

UNIT III

Engineering as Social Experimentation: Comparison with Standard Experiments –now ledge gained–Conscientiousness–Relevant Information–Learning from the Past–Engineers as Managers, Consultants, and Leaders – Accountability – Role of Codes– odes and Experimental Nature of Engineering.

UNIT IV

Engineers' Responsibility for Safety and Risk: Safety and Risk, Concept of Safety – Types of Risks – Voluntary v/s Involuntary Risk- Short term v/s long term Consequences, Delayed v/s Immediate Risk- Safety and the Engineer – Designing for Safety – Risk-Benefit Analysis-Accidents.

UNIT V

Engineers' Responsibilities, Rights & Global Issues: Collegiality, Senses of Loyalty, professionalism and Loyalty, Professional Rights & Responsibilities– confidential and proprietary information, Bribes/Gifts, Whistle Blowing. Globalization- Cross-culture Issues, Environmental Ethics, Computer Ethics, Weapons Development Ethics and Research Ethics, Intellectual Property Rights.

Text Books:

1. "Engineering Ethics and Human Values" by M. Govindarajan, S.Natarajan and V.S.Senthil Kumar- PHILearningPvt.Ltd-2009.

Department of Electrical & Electronics Engineering

Dt: 08.08.2022

The sixth meeting of Board of Studies in Department of Electrical and Electronics Engineering was held at 12.00 PM on 28-07-2022 though online mode using Zoom meetings (Meeting ID: 81475413157).

The following members are attended the meeting.

S.No.	Name	Designation	Role
1.	Dr. Sudha Rani Donepudi	Professor, Head, Dept. of EEE, SVEC, Pedatadepalli.	Chairperson
2.	Dr. R. SrinivasaRao	Professor, Dept. of EEE, UCEK, JNTUK, Kakinada	Subject Expert Nominated By V.C.
3.	Dr. Y.P. Obulesu	Professor, School of EE, VIT, Vellore	Subject Expert Nominated By A.C.
4.	Er. B.N.V.R.C. Suresh Kumar	Retired AGM, PGCI, Hyderabad	Industry Expert Nominated By A.C
5.	Er. Narayana Murthy Vella	Engineer, PGCI, Vijayawada	Alumni
6.	Dr. Ch. Rambabu	Professor	Member
7.	Mr. U. Chandra Rao	Sr. Asst. Professor	Member
8.	Mr. N. Sri Harish	Sr. Asst. Professor	Member
9.	Mr. Ch. V.S.R. Gopala Krishna	Sr. Asst. Professor	Member
10.	Mr. K. Ramesh Babu	Asst. Professor	Member
11.	Mr. M.T.V.L. Ravi Kumar	Asst. Professor	Member
12.	Mr. V. Rama Narayana	Asst. Professor	Member
13.	Mr. G. Chandra Babu	Asst. Professor	Member
14.	Mr. G. Madhu Sagar Babu	Asst. Professor	Member
15.	Mr. G. Govardhan	Asst. Professor	Member
16.	Mr. A. Uma Siva Naga Prasad	Asst. Professor	Member
17.	Mr. Ch. Srinivas	Asst. Professor	Member
18.	Mr. M. M. Swami Naidu	Asst. Professor	Member
19.	Dr. Anilkumar Chappa	Asst. Professor	Member
20.	Mr. Durga R Ch Nookesh	Asst. Professor	Member
21.	Mr. SK. Moulali	Asst. Professor	Member
22.	Dr. E. Naga Venkata Durga Vara Prasad	Asst. Professor	Member

The following are the minutes of the meeting

Item No. 1: Welcome note by the Chairperson BOS

The HOD extended a formal welcome and introduced the members.

Item No. 2: Approval of course structure for V to VIII semesters of B. Tech EEE under V20 Regulation.

Approved the course structure of V to VIII semesters of B. Tech Programme -EEE under V20 Regulation.

The details of the approved course structure for V to VIII semesters of UG (B. Tech) Programme (EEE) under V20 Regulation are given in Annexure-I.

Item No. 3: Approval of syllabi for the courses offered in V to VIII semesters B. Tech EEE under V20 Regulation.

Approved the syllabi for the courses offered in V to VIII semesters B. Tech EEE under V20 Regulation.

The approved syllabi for the courses offered in V to VIII semesters of B. Tech EEE of under V20 Regulation is attached in Annexure-II.

Item No. 4: Approval of list of courses offering for Open Elective- I to IV for all other branches under V20 Regulation and the approval of their detailed syllabi.

Approved the list of courses offering for Open Elective- I to IV for all other branches under V20 Regulation and their detailed syllabi.

The approved courses offering by EEE Department for Open Elective- I to IV under V20 Regulation and their syllabi is attached in Annexure-III.

Item No. 5: Approval for offering Honors in Electrical and Electronics Engineering under V20 Regulation.

Approved to offer Honors in Electrical and Electronics Engineering under V20 Regulation. The details are given in Annexure IV.

Item No. 6: Approval for offering minor degree in Electrical Engineering for all branches except Electrical and Electronics Engineering under V20 Regulation.

Approved to offer Minor Degree in Electrical Engineering for all other Engineering Department students with the rules and regulations which will be approved by Academic Council. The details are given in Annexure V.

Item No. 7: Approval for offering minor degree offered by all other Departments for B. Tech Electrical and Electronics Engineering students under V20 Regulation.

Approved to opt for minor degree by B. Tech Electrical and Electronics Engineering Students offered by all other departments under V20 regulation.

CHAIRPERSON OF BOS
DR. SUDHA RANI DONEPUDI

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the arc interruption phenomenon in oil, air, vacuum, SF6 gas type circuit breakers.	(K2)
CO2	Extract the constructional features and working of different types of electromagnetic relays.	(K2)
CO3	Choose suitable relay for different type of protective schemes.	(K3)
CO4	Apply suitable protective scheme for generators and transformers against different faults.	(K3)
CO5	Choose suitable protective scheme for the protection of feeders & bus bars, digital relays and the concept of grounding.	(K3)

UNIT–I: CIRCUIT BREAKERS

Miniature Circuit Breaker(MCB)– Elementary principles of arc interruption– Restriking Voltage and Recovery voltages– Restriking phenomenon - RRRV– Average and Max. RRRV– Current chopping and Resistance switching– Introduction to oil circuit breakers– Description and operation of Air Blast– Vacuum and SF6 circuit breakers– CB ratings and specifications– Concept of Auto reclosing.

UNIT–II:

ELECTROMAGNETIC PROTECTION Relay connection – Balanced beam type attracted armature relay - induction disc and induction cup relays–Torque equation - Relays classification–Instantaneous– DMT and IDMT types.

UNIT-III: APPLICATIONS OF RELAYS

Over current and under voltage relays– Directional relays– Differential relays and percentage differential relays– Universal torque equation– Distance relays: Impedance–Reactance– Mho Characteristics of distance relays and comparison.

UNIT–IV:

GENERATOR PROTECTION

Protection of generators against stator faults – Rotor faults and abnormal conditions – Numerical examples.

TRANSFORMER PROTECTION

Percentage differential protection – Design of CT's ratio– Buchholz relay protection–Numerical examples.

UNIT–V: FEEDER AND BUS BAR PROTECTION

Protection of lines: Over current Protection schemes – PSM,TMS - Numerical examples - Carrier current and three zone distance relay using impedance relays–Protection of bus bars by using Differential protection.

DIGITAL RELAYS

Micro Processor based digital relays.

NEUTRAL GROUNDING

Effects of ungrounded neutral on system performance– Methods of neutral grounding: Solid–resistance–Reactance–Arcing grounds and grounding Practices.

TEXT BOOKS:

1. Power System Protection and Switchgear by Badri Ram and D. N Viswakarma, TMH Publications, 2007
2. Power System Protection and Switchgear by B. Ravindranath, M. Chander, New Age International, 1977

3. Power system protection- Static Relays with microprocessor applications by T. S. Madhava Rao, TMH, 2017

Semester	**V SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET13
Name of the Course	Power Electronics					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Illustrate the characteristics of various power semiconductor devices and different firing circuits of SCR.	(K3)
CO2	Operate various 1- φ AC-DC Controlled rectifiers for R and RL Loads and compare their performance.	(K3)
CO3	Explain the operation of 3-φ full converter and dual converter.	(K2)
CO4	Explain the operation of AC voltage controller, 1- φ cyclo-converter and high frequency dc-dc converters.	(K2)
CO5	Apply PWM techniques for voltage control and harmonic mitigation.	(K3)

UNIT - I: Power Semi-Conductor Devices

Power transistors- Basic structure and working of power MOSFET and power IGBT. Characteristics of power MOSFET and power IGBT-Silicon controlled rectifiers (SCR's)- Basic theory of operation of SCR-Static & Dynamic characteristics of SCR- Turn on and turn off methods of SCR-Snubber circuit Design.

UNIT - II: **Single Phase - Phase Controlled Rectifiers and Harmonic Analysis**

Half wave converters with R, RL and RLE loads- Derivation of average output voltage and output current- Effect of freewheeling diode for RL load. Fully controlled converters with R, RL and RLE loads-Derivation of output voltage and current - Effect of source Inductance. Semi Converters (Half Controlled) operation with R, RL and RLE loads - Harmonic analysis for input/source current waveform in a system with a large load inductance -Calculation of input power factor.

UNIT-III: Three Phase - Phase Controlled Rectifiers

Three Phase Half wave and Full wave converters with R and RL loads-Semi converter (Half Controlled) with R and RL loads- Derivation of average and rms output voltages-Line commutated Inverter operation-Dual converters with non-circulating and circulating currents.

UNIT - IV: AC-AC and DC-DC Converters

Single phase AC voltage controller with R and RL load- Single phase Bridge type Cyclo converter with R and RL load (Principle of operation) -High frequency DC-DC converters: Buck Converter operation, Time ratio control and current limit control strategies-Voltage and current waveforms-Derivation of output voltage-Boost converter operation-Voltage and current waveforms-Derivation of output voltage - Buck-Boost converter operation - Voltage and current waveforms.

UNIT - V: DC-AC Inverters

Single phase half bridge and full bridge inverters - Three phase Inverters (1200 and 1800 modes of operation) - PWM techniques- Single Pulse, Multiple Pulse and Sinusoidal PWM, amplitude and frequency modulation Indices -Harmonic analysis.

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET14
Name of the Course	Utilization of Electrical Energy (Professional Elective –I)					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Choose a suitable motor for electric drives and industrial applications	(K3)
CO2	Select appropriate heating and welding techniques for different applications	(K2)
CO3	Recognise lightning system for particular inputs and constraints.	(K2)
CO4	Illustrate the speed-time characteristics of traction motors.	(K3)
CO5	Estimate the energy consumption levels at various modes of operation.	(K2)

UNIT – I: SELECTION OF MOTORS

Choice of motor, type of electric drives, starting and running characteristics – Speed control – Temperature rise – Applications of electric drives – Types of industrial loads – Continuous, Intermittent and variable loads – Load equalization.

UNIT – II: ELECTRIC HEATING AND WELDING

Advantages and methods of electric heating and welding –Resistance heating, induction heating and dielectric heating. Classification - Resistance welding and types - Arc welding and types–Electric welding equipment–Comparison between AC and DC Welding

UNIT – III: ILLUMINATION

Basic terms used in illumination – Laws of illumination – MHCP and MSCP– Sources of light: Working of Filament lamps, Arc lamps and Discharge lamps.

Basic principles of light control – Types of lighting schemes – Street, Flood and LED lighting – Lumen or flux method of lighting calculation – Numerical Examples.

UNIT – IV: ELECTRIC TRACTION – I

Review of existing electric traction systems in India – System of electric traction and track electrification– Special features of traction motor – Mechanics of train movement – Speed-time curves for different services – Trapezoidal and quadrilateral speed time curves.

UNIT – V: ELECTRIC TRACTION – II

Calculations of tractive effort– power –Specific energy consumption for given run–Effect of varying acceleration and braking retardation–Adhesive weight and braking, retardation adhesive weight and coefficient of adhesion.

TEXT BOOKS:

1. Utilization of Electric Energy by E. Openshaw Taylor, SI Edition, Orient Longman, 1971.

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET15
Name of the Course	Renewable Energy Systems (Professional Elective –I)					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the solar radiation and calculate geometric angle.	(K2)
CO2	Understand the working of solar thermal collectors.	(K2)
CO3	Understand the working of solar photo voltaic systems and develop the maximum power point techniques.	(K2)
CO4	Understand the wind energy conversion systems, Betz coefficient and tip speed ratio.	(K2)
CO5	Understand the basic principle and working of tidal, fuel cell and geothermal energy systems.	(K2)

UNIT–I: FUNDAMENTALS OF ENERGY SYSTEMS AND SOLAR ENERGY CONSERVATION PRINCIPLE

Energy scenario (world and India) – various forms of renewable energy - Solar radiation: Outside earth's atmosphere – Earth surface – Analysis of solar radiation data – Geometry – Radiation on tilted surfaces – Numerical problems.

UNIT–II: SOLAR THERMAL SYSTEMS

Liquid flat plate collectors: Performance analysis –Transmissivity– Absorptivity product collector efficiency factor – Numerical problems. Introduction to solar air heaters – Concentrating collectors, solar pond and solar still – solar thermal plants.

UNIT–III: SOLAR PHOTOVOLTAIC SYSTEMS

Solar photovoltaic cell, module, array – construction – Efficiency of solar cells – Developing technologies – Cell I-V characteristics – Equivalent circuit of solar cell – Series resistance – Shunt resistance – Applications and systems - System design: storage sizing –

PV system sizing – Maximum power point techniques: Perturb and observe (P&O) technique.

UNIT–IV: WIND ENERGY

Sources of wind energy - Wind patterns – Types of turbines –Horizontal axis and vertical axis machines - Kinetic energy of wind – Betz coefficient – Tip–speed ratio – Efficiency – Power output of wind turbine – Selection of generator (synchronous, induction) – Maximum power point tracking – wind farms.

UNIT–V: TIDAL, FUEL CELL AND GEOTHERMAL ENERGY SYSTEMS

Tidal power – Basics – Kinetic energy equation – Turbines for tidal power - Numerical problems – Wave power – Basics – Kinetic energy equation – Wave power devices. Fuel classification, Fuel cell: Classification of fuel for fuel cells – Fuel cell voltage– Efficiency – V-I characteristics. Geothermal: Classification – Dry rock and hot acquifer – Energy analysis – Geothermal based electric power generation.

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET16
Name of the Course	**INSTRUMENTATION** (Professional Elective –I)					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Illustrate various types of signals and their characteristics.	(K3)
CO2	Explain different types of transducers with applications.	(K2)
CO3	Compute various parameters of non-electrical quantities.	(K3)
CO4	Understand the principles of digital voltmeters and CRO.	(K2)
CO5	Explain various types of signal analyzers.	(K2)

UNIT–I:

Signals and their representation

Measuring Systems, Performance Characteristics, – Static characteristics – Dynamic Characteristics – Errors in Measurement – Gross Errors – Systematic Errors – Statistical analysis of random errors – Signal and their representation – Standard test, periodic, aperiodic, modulated signal – Sampled data pulse modulation and pulse code modulation.

UNIT–II:

Transducers

Definition of transducers – Classification of transducers – Advantages of Electrical transducers – Characteristics and choice of transducers – Principle operation of resistor, inductor, LVDT and capacitor transducers – LVDT Applications – Strain gauge and its principle of operation – Guage factor – Thermistors – Thermocouples – Synchros – Piezoelectric transducers – Photo diodes.

UNIT–III:

Measurement of Non–Electrical Quantities

Measurement of strain – Gauge Sensitivity – Displacement – Velocity – Angular Velocity – Acceleration – Force – Torque – Measurement of Temperature, Pressure, Vacuum, Flow, Liquid level.

UNIT–IV:
Digital Voltmeters and Oscilloscopes
Digital voltmeters –dual–Slope integration continuous balance type – Microprocessor based ramp type, Cathode ray oscilloscope – Time base generator – Horizontal amplifier and vertical amplifier – Sampling oscilloscope – Analog and digital type data logger – Transient recorder.

UNIT–V:
Signal Analyzers
Wave Analyzers – Frequency selective analyzers – Heterodyne – Application of Wave analyzers – Harmonic Analyzers – Total Harmonic distortion – Spectrum analyzers – Basic spectrum analyzers – Spectral displays – Vector impedance meter – Q meter – Peak reading and RMS voltmeters.

Text Books:
1. Electronic Instrumentation–by H.S.Kalsi Tata MCGraw–Hill Edition, 1995.

4. Modern Electronic Instrumentation and Measurement techniques – by A.DHelfrickandW.D.Cooper, Pearson/Prentice Hall of Indi, 2015
5. Transducers and Instrumentation by D.V.S Murthy, Prentice Hall of India, 2nd edition, October-2011.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET17
Name of the Course	Energy Audit & Demand Side Management (Professional Elective –I)					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Describe the concepts and procedures for Energy Audit & Management.	(K2)
CO2	Understand the necessity of Energy efficient lighting systems.	(K2)
CO3	Understand the operation of Energy instruments and their use in energy audit.	(K2)
CO4	Explain Energy Conservation measures in HVAC system	(K2)
CO5	Apply various economic aspects of Energy systems and life cycle costing analysis for various system	(K3)

UNIT–I:

BASIC PRINCIPLES OF ENERGY AUDIT AND MANAGEMENT ENERGY AUDIT

Definitions – Concept – Types of audit – Energy index – Cost index – Pie charts –Sankey diagrams – Load profiles – Energy conservation schemes and energy saving potential – Numerical problems – Principles of energy management – Initiating, planning, controlling, promoting, monitoring, reporting – Energy manager – Qualities and functions – Language.

UNIT–II:

LIGHTING MODIFICATION OF EXISTING SYSTEMS – REPLACEMENT OF EXISTING SYSTEMS – PRIORITIES:

Definition of terms and units – Luminous efficiency – Polar curve – Calculation of illumination level – Illumination of inclined surface to beam – Luminance or brightness – Types of lamps – Electric lighting fittings (luminaries) –Flood lighting – White light LED – Energy conservation measures.

UNIT–III:

POWER FACTOR IMPROVEMENT AND ENERGY INSTRUMENTS

Power factor – Methods of improvement – Location of capacitors – Power factor with non linear loads – Effect of harmonics on Power factor – Numerical problems. Energy Instruments – Watt–hour meter – Data loggers – Thermocouples – Pyrometers – Lux meters – Tong testers – Power analyzer.

UNIT–IV:

SPACE HEATING AND VENTILATION

Ventilation – Air–Conditioning (HVAC) and Water Heating: Introduction – Heating of buildings – Transfer of Heat–Space heating methods – Ventilation and air–conditioning – Insulation–Electric water heating systems – Energy conservation methods.

UNIT–V:

FINANCIAL ANALYSIS AND COMPUTATION OF ECONOMIC ASPECTS

Economics Analysis – Depreciation Methods – Time value of money – Rate of return – Present worth method – Replacement analysis – Life cycle costing analysis – Energy efficient motors (basic concepts) – Economics of energy efficient motors and systems. Need of investment, appraisal and criteria - Calculation of simple payback period–Return on investment – Net present value -Numerical examples.

TEXT BOOKS:

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	-	-	3	1.5	V20EEL07
Name of the Course	Electrical Machines Lab - II					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Pre-determine the performance parameters and sketch the performance characteristics of 3-phase induction motor by conducting different tests.	(K3)
CO2	Pre-determine the performance parameters of cylindrical pole synchronous machine by conducting OC and SC tests.	(K3)
CO3	Determine the direct and quadrature axis reactance by conducting slip test.	(K3)
CO4	Determine V and inverted V curves through synchronization of synchronous machine to mains.	(K3)
CO5	Calculate the equivalent circuit parameters of a 1-phase transformer by conducting OC and SC Tests.	(K3)

The following experiments are required to be conducted as compulsory experiments:

1. Brake test on three phase Induction Motor
2. No–load & Blocked rotor tests on three phase Squirrel Cage Induction motor
3. Load test on three phase slip ring induction motor
4. No–load & Blocked rotor tests on three phase Slip Ring Induction motor
5. Regulation of a three –phase alternator by synchronous impedance &m.m.f. Methods
6. Regulation of three–phase alternator by Potier triangle method
7. V and Inverted V curves of a three—phase synchronous motor.
8. Determination of X_d and X_q of a salient pole synchronous machine
9. Equivalent circuit of single phase induction motor
10. Speed control of induction motor by V/f method.
11. Determination of efficiency of three phase alternator by loading with three phase induction motor.
12. Power factor improvement of single phase induction motor by using capacitors and load test on single phase induction motor.
13. Heat run test on a bank of 3 Nos. of single phase Delta connected transformers.

Semester	**V SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	-	-	3	1.5	V20EEL08
Name of the Course	Control Systems Lab					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Find time response of given control system model.	(K3)
CO2	Analyze the performance and working of Magnetic amplifier, D.C. servo motors, A.C. Servo motors and synchronous motors.	(K4)
CO3	Analyze PID controllers for given control system model.	(K4)
CO4	Analyze lead, lag and lead-lag systems in control system	(K4)
CO5	Determine the transfer function of D.C. motor and D.C Generator.	(K4)

Any 10 of the following experiments are to be conducted:

1. Time response of Second order system
2. Characteristics of Synchros
3. Programmable logic controller – characteristics of stepper motor
4. Effect of feedback on DC servo motor
5. Effect of P, PD, PI, PID Controller on a second order systems
6. Lag and lead compensation – Magnitude and phase plot
7. DC position control system
8. Transfer function of DC motor
9. Temperature controller using PID
10. Characteristics of magnetic amplifiers
11. Characteristics of AC servo motor

12. Characteristics of DC servo motor

13. Potentiometer as an error detector

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	1	-	3	V20EET18
Name of the Course	Power System Analysis					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Compute Y_{BUS} matrix for a power system network.	(K3)
CO2	Find the load flow solution of a power system network using load flow methods.	(K3)
CO3	Develop the Z_{BUS} for a power system network and calculate the fault currents for symmetrical faults.	(K3)
CO4	Compute the sequence components of currents for unbalanced power system network.	(K3)
CO5	Understand the concepts of power system stability.	(K2)

UNIT –I: PER UNIT REPRESENTATION & TOPOLOGY

Per Unit Quantities–Single line diagram– Impedance diagram of a power system–Graph theory definition – Formation of element node incidence and bus incidence matrices – Primitive network representation – Formation of Y_{BUS} matrix by singular transformation and direct inspection methods.

UNIT –II: POWER FLOW STUDIES

Necessity of power flow studies – Derivation of static power flow equations – Power flow solution using Gauss-Seidel Method – Newton Raphson Method (Rectangular and polar coordinates form) –Decoupled and Fast Decoupled methods – Algorithmic approach – Problems on 3–bus system only.

UNIT –III: Z_{BUS} FORMULATION and SYMMETRICAL FAULT ANALYSIS

Z_{BUS} FORMULATION

Formation of Z_{BUS}: Partial network– Algorithm for the Modification of Z_{BUS} Matrix for addition element for the following cases: Addition of element from a new bus to reference– Addition of element from a new bus to an old bus– Addition of element between an old bus to reference and Addition of element between two old busses (Derivations and Numerical Problems).

SYMMETRICAL FAULT ANALYSIS

Transients on a Transmission line-Short circuit of synchronous machine (on no-load) - 3–Phase short circuit currents and reactance of synchronous machine–Short circuit MVA calculations -Series reactors – selection of reactors.

UNIT –IV: SYMMETRICAL COMPONENTS & FAULT ANALYSIS

Definition of symmetrical components - symmetrical components of unbalanced three phase systems – Power in symmetrical components – Sequence impedances – Synchronous generator – Transmission line and transformers – Sequence networks – Various types of faults LG– LL– LLG and LLL on unloaded alternator–unsymmetrical faults on power system.

UNIT – V: POWER SYSTEM STABILITY ANALYSIS

Elementary concepts of Steady state– Dynamic and Transient Stabilities– Description of Steady State Stability Power Limit–Transfer Reactance–Synchronizing Power Coefficient – Power Angle Curve and Determination of Steady State Stability –Derivation of Swing Equation–Determination of Transient Stability by Equal Area Criterion–Applications of Equal Area Criterion–Methods to improve steady state and transient stability.

TEXT BOOKS:

1. Power System Analysis by Grainger and Stevenson, Tata McGraw Hill, 1994.
2. Modern Power system Analysis – by I. J. Nagrath& D. P. Kothari: Tata McGraw–Hill Publishing Company, 2nd edition,2011.

REFERENCE BOOKS:

1. Power System Analysis – by A.R.Bergen, Prentice Hall, Inc, 1999.
2. Power System Analysis by HadiSaadat – TMH Edition, 2002.
3. Power System Analysis by B.R.Gupta, Wheeler Publications, 1998.
4. Power System Analysis and Design by J.Duncan Glover, M.S.Sarma, T.J.Overbye – Cengage Learning publications, 2017.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET19
Name of the Course	Electrical Drives					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the fundamentals concepts of an electric drive and different electric braking methods.	(K2)
CO2	Operate Chopper fed DC motor drives in various quadrants.	(K4)
CO3	Understand the closed loop operation of chopper fed dc motor drive.	(K2)
CO4	Compute the change in speed of 3-φ induction motor with variable voltage and v/f control	(K3)
CO5	Illustrate the speed control mechanism of synchronous motors	(K3)

UNIT - I: Fundamentals of Electric Drives

Electric drive – Fundamental torque equation – Load torque components – Nature and classification of load torques – Steady state stability – Load equalization– Four quadrant operation of drive (hoist control) – Braking methods: Dynamic – Plugging – Regenerative methods.

UNIT - II: Controlled Converter Fed DC Motor Drives

Single phase half and fully controlled converter fed separately and self-excited DC motor drive – three phase fully controlled converter fed separately excited DC motor drive- Output voltage and current waveforms – Speed-torque expressions – Speed-torque characteristics — Principle of operation of dual converters and dual converter fed DC motor drives -Numerical problems.

UNIT - III: DC–DC Converters Fed DC Motor Drives

Single quadrant – Two quadrant and four quadrant DC-DC converter fed separately excited and self-excited DC motors – Continuous current operation– Output voltage and current waveforms – Speed–torque expressions – Speed–torque characteristics –Four quadrant operation – Closed loop operation (qualitative treatment only).

UNIT - IV: Control of Induction Motor Drives

Stator side control: Stator voltage control using 3-phase AC voltage regulators – Waveforms –Speed torque characteristics– Variable Voltage Variable Frequency control of induction motor by PWM voltage source inverter – Closed loop v/f control of induction motor drives (qualitative treatment only).

Rotor side control: Static rotor resistance control – Slip power recovery schemes – Static Scherbius drive – Static Kramer drive – Performance and speed torque characteristics – Advantages –Applications.

UNIT - V: Control of Synchronous Motor Drives

Separate control & self-control of synchronous motors – Operation of self-controlled synchronous motors byVSI– Closed Loop control operation of synchronous motor drives (qualitative treatment only).–Variable frequency control–Pulse width modulation.

TEXT BOOKS

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	4	-	-	3	V20EET20
Name of the Course	Microprocessors and Microcontrollers					
Branch	EEE					

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand the microprocessor capability in general.	(K2)
CO2	Explain the addressing modes of microprocessor.	(K2)
CO3	Understand the microcontroller capability.	(K2)
CO4	Develop microprocessor and microcontroller programmes.	(K3)
CO5	Connect microprocessor and microcontroller with other electronic devices.	(K4)

UNIT–I: Introduction to Microprocessor Architecture
Introduction and evolution of Microprocessors – Architecture of 8086–Register Organization of 8086–Memory organization of 8086–General bus operation of 8086–Introduction to80286–80386 and 80486 and Pentium.

UNIT–II: Minimum and Maximum Mode Operations
Instruction set, Addressing modes– Minimum and Maximum mode operations of 8086–8086Control signal interfacing–Read and write cycle timing diagrams.

UNIT–III:I/O Interface
8255 PPI– Architecture of 8255–Modes of operation– Interfacing I/O devices to 8086 using8255–Interfacing A to D converters– Interfacing D to A converters– Stepper motor interfacing– Static memory interfacing with 8086–DMA controller (8257)–Architecture–Interfacing 8257 DMA controller– Programmable Interrupt Controller (8259)–Command words and operating modes of 8259– Interfacing of 8259–Keyboard/display controller(8279)–Architecture–Modes of operation–Command words of 8279– Interfacing of 8279.

UNIT–IV: Introduction to 8051 Micro Controller
Overview of 8051 Micro Controller– Architecture– Register set–I/O ports and Memory Organization– Interrupts–Timers and Counters–Serial Communication.

UNIT– V: PIC Architecture
Block diagram of basic PIC 18 micro controller, registers I/O ports.

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EET21
Name of the Course	Smart Grid Technologies (Professional Elective –II)					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand concept of smart grid and its advantages over conventional grid.	K2
CO2	Explain the architecture of smart Grid.	K2
CO3	Illustrate the concept of Micro Grid and its integration.	K2
CO4	Understand the smart metering and measuring techniques.	K2
CO5	Illustrate different communication technologies and power quality problems associated with smart grid.	K2

UNIT –I: INTRODUCTION TO SMART GRID

Introduction to Smart Grid - Need of Smart Grid, Working definitions of Smart Grid and Associated Concepts – Smart Grid Functions – Traditional Power Grid and Smart Grid – New Technologies for Smart Grid – Advantages — Key Challenges for Smart Grid.

UNIT—II: SMART GRID ARCHITECTURE

Components and Architecture of Smart Grid Design – Review of the proposed architectures for Smart Grid-Geographic Information System(GIS)-The fundamental components of Smart Grid designs – Transmission Automation – Sub-Station Automation -Distribution Automation – Feeder Automation, Renewable Integration.

UNIT-III: DISTRIBUTION GENERATION

Introduction-necessity of DG– Concept of micro grid-Issues of interconnection-protection & control of micro grid – Storage Technologies – Smart Storages, Battery, SMES– Economic Issues.

UNIT-IV: SMART METERS

Introduction to smart Meters-Phasor Measurement Unit (PMU)-Wide Area Measurement Systems (WAMS). Intelligent Electronic Devices (IED) & their application for monitoring & protection.

UNIT-V: COMMUNICATION TECHNOLOGY AND POWER QUALITY MANAGEMENT IN SMART GRID

Advanced Metering infrastructure (AMI) drivers and benefits-AMI protocols-Standards and initiatives-AMI needs in the smart grid, Home Area Network (HAN), Wide Area Network (WAN). Introduction to Power Quality, Power Quality Issues of Grid Connected Renewable Energy Sources, Voltage Control in Micro Grid System – Reactive Power Control in Smart Grid- Web based Power Quality Monitoring-Power Quality Audit.

TEXT BOOKS:

1. James Momoh, “Smart Grid :Fundamentals of Design and Analysis”-Wiley, IEEE Press,2012
2. Ali Keyhani, Mohammad N. Marwali, Min Dai ―Integration of Green and Renewable Energy in Electric Power Systems, Wiley, 2019
3. JanakaEkanayake, KithsiriLiyanage, Jianzhong.Wu, AkihikoYokoyama, Nick Jenkins,“Smart Grid: Technology and Applications”- Wiley, 2012.
4. A.G. Phadke and J.S. Thorp, “Synchronized Phasor Measurements and their Applications”, Springer Edition, 2010

REFERENCE BOOKS:

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET22
Name of the Course	**Power Quality & Custom Power Devices** (Professional Elective –II)					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Identify the issue related to power quality in power systems	K2
CO2	Describe the problems of transient voltage variations in power systems	K2
CO3	Analyze the effects of harmonics and understand different mitigation techniques	K4
CO4	Identify the importance of custom power devices and their applications	K2
CO5	Choose suitable custom power device to mitigate power quality problem	K2

Unit–I: INTRODUCTION TO POWER QUALITY
Overview of power quality, Concern about the power quality, General classes of power quality problems, Voltage unbalance, Waveform distortion, Voltage fluctuation, Power frequency variations, power quality terms, voltage sags, swells, flicker and Interruptions-sources of voltage and current interruptions, Nonlinear loads.

Unit–II: TRANSIENT VOLTAGE VARIATIONS
Sources of transient over voltages- principles of overvoltage protection, devices for over voltage protection, utility capacitor switching transients, utility lightning protection, load switching transient problems.

Unit– III: HARMONIC DISTORTION AND SOLUTIONS
Voltage distortion vs. Current distortion, Harmonics vs. Transients – power system quantities under non-sinusoidal conditions, Harmonic indices – Sources of harmonics, locating sources of harmonics, system response characteristics, Effect of harmonic distortion, inter harmonics, harmonic solutions.

Unit–IV: CUSTOM POWER DEVICES
Custom power and custom power devices, voltage source inverters, reactive power harmonic compensation devices, compensation of voltage interruptions and current interruptions, static series and shunt compensators, compensation in distribution systems, interaction with distribution equipment, installation considerations.

Unit–V: APPLICATION OF CUSTOM POWER DEVICES IN POWER SYSTEMS
Static and hybrid source transfer switches, solid state current limiter-solid state breaker. P-Q theory- control of P and Q, dynamic voltage restorer (DVR): operation and control-interline power flow controller (IPFC): operation and control of unified power quality conditioner (UPQC); generalized power quality conditioner.

TEXTBOOKS:

1. Electrical Power Systems Quality, Dugan R C, McGranaghan M F, Santoso S, and Beaty H W, Second Edition, McGraw-Hill, 2002.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET23
Name of the Course	**Modern Control Theory** (Professional Elective –II)					
Branch	EEE					

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand the concepts of State Space Analysis.	(K2)
CO2	Find the concepts of Controllability, Observability and development of pole placement techniques.	(K3)
CO3	Demonstrate the non-linear systems behaviour by describing function analysis.	(K3)
CO4	Demonstrate the non-linear systems behaviour by phase-plane.	(K3)
CO5	Compute the stability of linear and non-linear systems by Lypunov's Method.	(K3)

UNIT –I

State Variable Analysis: The concept of state – State Equations for Dynamic systems – State diagram--- - Linear Continuous time model for physical systems – Existence and Uniqueness of Solutions to Continuous – Time State Equations – Solutions – Linear Time Invariant Continuous – Time State Equations – State transition matrix and it's properties

UNIT – II

State Variable Techniques: General concept of Controllability – General concept of Observability Controllability tests for Continuous &Time Invariant systems - Observability tests for Continuous &Time Invariant systems - Controllability and Observability of state model in Jordan Canonical form - Controllability and Observability Canonical forms of State model – State feedback controller design through pole assignment.

UNIT – III

Non Linear Systems – I: Introduction – Non Linear Systems – Types of Non – Linarites – Saturation – Dead – Zone – Backlash – Jump Phenomenon etc. - Singular Points – Introduction to Linearization of nonlinear systems, properties of Non Linear Systems – Describing function – describing function analysis of nonlinear systems- Stability analysis of Non – Linear systems through describing functions.

UNIT – IV

Non Linear Systems – II: Introduction to phase – plane analysis, Method of Isoclines for Constructing Trajectories, singular points, phase – plane analysis of nonlinear control systems.

UNIT – V

Stability Analysis Stability in the sense of Lyapunov, Lyapunov's stability and Lyapunov's instability theorems – Stability Analysis of the Linear Continuous time invariant systems by Lyapunov second method – Generation of Lyapunov functions – Variable gradient method – Krasooviski's method.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET24
Name of the Course	**IoT Applications In Electrical Engineering** (Professional Elective –II)					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand various fundamentals, architectures and technologies of Internet of Things.	(K2)
CO2	Discuss about various communication technologies used in the Internet of Things.	(K2)
CO3	Acquire knowledge on the various device connectivity methods using web and internet in the IoT environment.	(K2)
CO4	Explore various data acquisition methods, data handling using cloud for IoT applications.	(K3)
CO5	Apply IoT to design Smart Home, Smart cities, and agriculture practices.	(K3)

UNIT-I: The Internet of Things
An Overview of Internet of Things (IoT) – IoT framework –Architecture – Technology behind IoT – Sources of the IoT – M2M Communication – Examples of IoT.

UNIT-II: Design Principles for Connected Devices
Introduction –IoT/M2M systems, Layers and Designs Standardization – Communication Technologies – Data Enrichment, Consolidation and Device Management at Gateway – Ease of designing and affordability.

UNIT-III: Design Principles for the Web Connectivity
Introduction – Web Communication protocols for Connected Devices - Message Communication protocols for Connected Devices – Web Connectivity for connected devices network.
Introduction to Internet Connectivity Principles, Internet connectivity, Internet based communication – IPaddressing in the IoT – Application Layer Protocols: HTTP, HTTPS, FTP, Telnet, WAP (Wireless Application Protocol).

UNIT-IV:

Data Acquiring, Organizing, Processing and Analytics: Introduction – Data Acquiring and Storage –Organizing the Data – Analytics.

Data Collection, Storage and Computing Using a Cloud Platform: Introduction – Cloud computing paradigm for data collection, storage and computing – IoTas a service and Cloud Service Models – IoTcloudbased services using the Xively (Pachube/COSM), Nimbits and other platforms.

UNIT-V: Sensor Technology:

Actuator, Sensor data communication protocols, Radio Frequency Identification technology, Wireless Sensor Network Technology.

IoT application case studies: Smart Home, Smart Cities, Environment monitoring and Agriculture practices.

TEXT BOOKS:

1. Internet of Things: Architecture, Design Principles, Raj Kamal, McGraw Hill Education (India) Pvt. Limited, 2017.

Semester	VI SEM	L	T	P	C	COURSE CODE
Regulation	V20	-	-	3	1.5	V20EEL09
Name of the Course	Power Systems Lab					
Branch	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Calculate the sequence impedances of 3-φ Transformer.	K4
CO2	Determine the power Angle Characteristics of 3-φ Alternator with infinite bus bars.	K4
CO3	Calculate the dielectric strength of Transformer oil.	K4
CO4	Explain load flow studies using G-S & N-R method.	K5
CO5	Assess load frequency control with & without controller and Evaluate economic load dispatch with & without losses.	K5

Any 10 of the Following experiments are to be conducted:

1. Sequence impedances of 3 phase Transformer.
2. Sequence impedances of 3 phase Alternator by Fault Analysis.
3. Sequence impedances of 3 phase Alternator by Direct method.
4. ABCD parameters of Transmission line.
5. Power Angle Characteristics of 3phase Alternator with infinite bus bars.
6. Dielectric strength of Transformer oil.
7. Calibration of Tong Tester.
8. Load flow studies using Gauss-Seidel method
9. Load flow studies using N-R method
10. Transient Stability Analysis
11. Load frequency control without controller
12. Load frequency control with controller
13. Economic load dispatch without losses
14. Economic load dispatch with losses.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	-	-	3	1.5	V20EEL10
Name of the Course	**Power Electronics & Simulation Lab**					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Sketch the characteristics of various power electronics devices and analyse the firing circuits.	(K4)
CO2	Analyze the performance of 1-φ and 3-phase full converter and 1-φ dual converter for resistive and inductive loads.	(K4)
CO3	Experiment the 1-φ AC voltage controller and cyclo-converter with resistive and inductive loads.	(K4)
CO4	Operate the DC-DC buck converter and boost converter.	(K3)
CO5	Analyze the performance of the 1-φ bridge and PWM inverter	(K4)

Any 10 of the Following Experiments are to be conducted

1. Study of Characteristics of Thyristor, MOSFET & IGBT.
2. Design and development of a firing circuit for Thyristor.
3. Single -Phase Half controlled converter with R and RL load
4. Single -Phase fully controlled bridge converter with R and RL loads
5. Single -Phase AC Voltage Regulator with R and RL Loads
6. Single -Phase square wave bridge inverter with R and RL Loads
7. Design and verification of voltages gain of Boost converter in Continuous Conduction Mode (CCM).
8. Simulation of transient response of RLC circuits a. Response to pulse input b. Response to step input C. Response to sinusoidal input.
9. Simulation of single-phase full converter using RLE loads, Experiment of single phase AC voltage controller using RL loads.
10. Simulation of Boost and Buck converters.
11. Integrator and Differentiator circuits using op-amp.

12. Simulation of single phase inverter with PWM control.
13. Simulation of three phase full converter using MOSEFET and IGBTs.

Reference Books:

1. Simulation of power electronic circuit by MB patil, V. ramanarayan, V.T. Ranganathan Narosha, 2009.
2. Pspice for circuits and electronics using PSPICE-by M.H. Rashid, M/s PHI Publications.
3. Pspice A/D user's manual-Microsim, USA.

Semester	VI SEM	L	T	P	C	Course Code
Regulation	V20	-	-	3	1.5	V20EEL11
Name of the Course	**Microprocessors and Microcontrollers Lab**					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand assembly language program using 8086 based on arithmetic, logical, and shift operations.	(K2)
CO2	Connect 8086 with I/O and other devices.	(K3)
CO3	Operate Stepper motor control using microcontroller.	(K3)
CO4	Understand the serial and parallel communication using 8051 microcontroller.	(K2)
CO5	Connect PIC18 with a DC motor.	(K3)

Any 10 of the following experiments are to be conducted:
Microprocessor 8086 & Microcontroller 8051
Introduction to MASM/TASM.

1. Arithmetic operation – Multi byte addition and subtraction, multiplication and division – Signed and unsigned arithmetic operation, ASCII – Arithmetic operation.
2. Logic operations – Shift and rotate – Converting packed BCD to unpacked BCD, BCD to ASCII conversion.
3. By using string operation and Instruction prefix: Move block, Reverse string Sorting,
4. Inserting, Deleting, Length of the string, String comparison.
5. Interfacing 8255–PPI
6. Interfacing 8259 – Interrupt Controller.
7. Interfacing 8279 – Keyboard Display.
8. Stepper motor control using 8253/8255.
9. Reading and Writing on a parallel port using 8051
10. Timer in different modes using 8051
11. Serial communication implementation using 8051
12. Understanding three memory areas of 00– FF Using 8051 external interrupts.
13. Interface PIC 18 with an opto-isolator
14. Interface PIC 18 with a DC motor

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET25
Name of the Course	**Extra High Voltage AC Transmission** (Professional Elective –III)					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Calculate the parameters of EHV line modeling.	(K3)
CO2	Find electric field and interference characteristics of	(K3)
CO3	Understand the corona loss formulation and radio interference to 3-φ Induction machines.	(K2)
CO4	Understand the Lightning phenomenon and methods of Lightning Protection	(K2)
CO5	Understand the over-voltage phenomenon and methods to limit over-voltage EHVAC systems.	(K2)

UNIT-I: Introduction to EHV AC Transmission:
Calculations of line and ground parameters: Properties of bundled conductors, inductance and capacitance calculations line parameters for modes of propagation resistance and inductance of ground returns, equivalent circuit of line model.

UNIT-II: Voltage Gradients of Conductors:
Electrostatics, Field of Sphere, Field of Line Charges and their Charge-Potential Relations for Multi-Conductor, Surface Voltage Gradient on Conductors, Examples of Conductors and Maximum Gradients on Actual Lines, Gradient Factors and Their Use, Distribution of Voltage Gradient on Sub-conductors of Bundle.

UNIT-III: Corona and Radio interference:
Corona loss formula factors affecting corona. Audible noise, its characteristics, limits for audio noise, relation between 1-φ and 3-φ AN level, radio interference, limits for radio interference fields, CIGRE formula.

UNIT-IV: Lightning Protection
Lightning Strokes to Lines, Mechanism, General Principles of the Lightning Protection Problem, Tower Footing Resistance, Insulator Flashover and Withstand Voltages, Lightning Arresters, Insulation Coordination Based on Lightning

UNIT-V: Over Voltage in EHV Systems:
Switching surges, causes of switching surge over voltages, recovery voltage, restriking transients, over voltages caused by interruption of low inductance currents, line energization transients, Ferro-resonance over voltages, lightning over voltages, protection against switching surges, VFTO in GIS, insulation coordination, design example

TEXT BOOKS:
1. Rakesh Das Begamudre, "Extra High Voltage AC Transmission Engineering", Fourth Edition,New Age International publishers, 2014.
2. Allen J Wood & Bruce Wollenberg, "Power Generation Operation & Control, Third Edition,2016.

REFERENCEBOOKS:
1. Turan Gonen, "Electric Power Transmission System Engineering Analysis and Design", CRCPress, Third Edition, 2014
2. Md. Abdus Salam, Quazi M. Rahman "Power Systems Grounding" Springer publishers, 2016
3. A Chakraborti, D.P. Kothari and A.K. Mukhopadyay: Performance, Operation and Control ofEHV Power Transmission Systems, T.M.H. (Pub) 1992.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET26
Name of the Course	**Power System Operation and Control** (Professional Elective –III)					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Analyze the optimal scheduling of power generating thermal units.	K4
CO2	Compute optimal hydro and thermal scheduling and predict the optimal unit commitment problem.	K3
CO3	Calculate the transfer function of single area and two area load frequency control.	K4
CO4	Evaluate the steady state response of single area load control with PI controller.	K5
CO5	Assess the reactive power control and compensation of transmission lines.	K3

UNIT–I:
ECONOMIC OPERATION OF POWER SYSTEMS
Optimal operation of Generators in Thermal power stations, Heat rate curve, Cost Curve, Incremental fuel and Production costs, Input–output characteristics, Optimum generation allocation with line losses neglected, Optimum generation allocation including the effect of transmission line losses, Loss Coefficients, General transmission line loss formula.

UNIT–II:
HYDROTHERMAL SCHEDULING
Optimal scheduling of Hydrothermal System**:** Hydroelectric power plant models, Scheduling problems, Short term hydrothermal scheduling problem.
UNIT COMMITMENT
Optimal unit commitment problem, Need for unit commitment, Constraints in unit commitment, Cost function formulation, Solution methods, Priority ordering, Dynamic programming.

UNIT–III:
LOAD FREQUENCY CONTROL-I

Modeling of steam turbine, Generator, Mathematical modeling of speed governing system–Transfer function – Modeling of Hydro turbine –Necessity of keeping frequency constant–

Definitions of Control area – Single area control system – Block diagram representation of an isolated power system – Steady state analysis – Dynamic response – Uncontrolled case. Proportional plus Integral control of single area and its block diagram representation – Steady state response.

UNIT–IV:

LOAD FREQUENCY CONTROL-II

Block diagram development of Load Frequency Control of two area system uncontrolled case and controlled case. Tie-line bias control. Load Frequency Control and Economic dispatch control.

UNIT–V:

REACTIVE POWER CONTROL

Overview of Reactive Power control – Reactive Power compensation in transmission systems– Advantages and disadvantages of different types of compensating equipment for transmission systems – Load compensation – Specifications of load compensator – Uncompensated and compensated transmission lines**:** Shunt and series compensation – Need for FACTS controllers.

TEXT BOOKS:

1. Electric Energy systems Theory – by O.I.Elgerd, Tata McGraw–hill Publishing Company Ltd., Second edition, 2016
2. Power System stability & control, Prabha Kundur,TMH, 2011
3. Modern Power System Analysis – by I.J.Nagrath & D.P.Kothari Tata Mc Graw – Hill Publishing Company Ltd, 2nd editionEnergy management by Paul o' Callaghan, Mc–Graw Hill Bookcompany–1st edition, 1998.

REFERENCE BOOKS:

1. Power System Analysis and Design by J.Duncan Glover and M.S.Sarma, THOMPSON, 3rd Edition.
2. Power System Analysis by Grainger and Stevenson, Tata McGraw Hill 2003
3. Power System Analysis by Hadi Saadat – TMH Edition.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET27
Name of the Course	**Digital Control Systems** (Professional Elective –III)					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Solve difference equations and determine pulse transfer functions.	K3
CO2	Analyse a discrete time system using state space model.	K3
CO3	Determine the stability of a discrete time system.	K4
CO4	Design a controller for discrete time system using conventional methods.	K4
CO5	Design a controller for discrete time system using state feedback.	K4

UNIT– I: SIGNAL PROCESSING AND Z-TRANSFORMS
Introduction to analog and digital control systems – Advantages of digital systems – Typical examples – Signals and processing – Sample and hold devices – Sampling theorem and data reconstruction – Digital to Analog conversion and Analog to Digital conversion Frequency domain characteristics of zero order hold.
Z-Transform and theorems, finding inverse and method for solving difference equations; Pulse transforms function, block diagram analysis of sampled – data systems.

UNIT–II: STATE SPACE ANALYSIS
State Space Representation of discrete time systems, Pulse Transfer Function Matrix solving discrete time state space equations, State transition matrix and it's Properties, Methods for Computation of State Transition Matrix, Discretization of continuous time state – space equations- Concepts of controllability and observability-Tests (without-proof).

UNIT–III: STABILITY ANALYSIS
Mapping between the S-Plane and the Z-Plane – Primary strips and Complementary Strips – Constant frequency loci, Constant damping ratio loci, Stability Analysis of closed loop systems in the Z-Plane. Jury stability test – Stability Analysis by use of the Bilinear Transformation and Routh Stability criterion.

UNIT – IV: DESIGN OF DISCRETE TIME CONTROL SYSTEM BY CONVENTIONAL METHODS

Transient and steady – State response Analysis – Design based on the frequency response method –Bilinear Transformation and Design using frequency response in the w–plane for lag and led compensators and digital PID controllers.

UNIT–V: STATE FEEDBACK CONTROLLERS AND OBSERVERS

Design of state feedback controller through pole placement – Necessary and sufficient conditions, Ackerman'sformula.

TEXT BOOKS:

1. K. Ogata, "Discrete–Time Control systems", Pearson Education/PHI, 2nd Edition.
2. M.Gopal, "Digital Control and State Variable Methods", TMH, 4th Edition.

REFERENCE BOOKS:

1. Kuo, "Digital Control Systems", Oxford University Press, 2nd Edition, 2003.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET28
Name of the Course	**Electrical Machine Modeling & Analysis** (Professional Elective –III)					
Branch	**EEE**					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Analyze Kron's primitive Machine.	(K4)
CO2	Develop modeling of dc machine.	(K3)
CO3	Explain Linear transformation and mathematical modeling concepts to 3-phase Induction machines.	(K5)
CO4	Develop control strategies based on dynamic modeling of 3-ph Induction machines and 3-phase synchronous	(K3)
CO5	Analyze BLDC Machine and switched reluctance machine based on mathematical modeling of BLDCM and SRM.	(K4)

UNIT – I:
BASIC CONCEPTS OF MODELING
Basic Two-pole Machine representation of Commutator machines, 3-phase synchronous machine with and without damper bars and 3-phase induction machine, Kron's primitive Machine-voltage, current and Torque equations.

UNIT – II:
DC MACHINE MODELING
Mathematical model of separately excited D.C motor – Steady State analysis-Transient State analysis-Sudden application of Inertia Load-Transfer function of Separately excited D.C Motor- Mathematical model of D.C Series motor, Shunt motor.

UNIT- III:
REFERENCE FRAME THEORY & MODELING OF THREE PHASE INDUCTION MACHINE
Linear transformation, Power equivalence, generalized model in arbitrary reference frame - Electromagnetic torque-Derivation of commonly used Induction machine models- Stator reference frame model-Rotor reference frame model-Synchronously rotating reference frame model-state space model with flux linkages as variables.

UNIT –IV:

MODELING OF SYNCHRONOUS MACHINE

Synchronous machine inductances–voltage equations in the rotor's dq0 reference frame electromagnetic torque-current in terms of flux linkages-three synchronous machine model.

UNIT –V:

MODELING OF SPECIAL MACHINES

Modeling of PM Synchronous motor, modeling of BLDC motor, modeling of Switched Reluctance motor.

TEXT BOOKS:

1. Generalized theory of Electrical Machinery–P.S. Bimbra-Khanna Publishers.
2. Electric Motor Drives-Modeling, Analysis &control-R. Krishnan-Pearson Publications-1st edition- 2002.

REFERENCEBOOKS:

1. Analysis of Electrical Machinery and Drive systems– P.C. Krause, Oleg Wasynczuk, Scott D. Sudh off – Second Edition-IEEE Press.
2. Dynamic simulation of Electric machinery using Matlab / Simulink–Chee Mun Ong -PHl.
3. Modern Power Electronics and AC Drives-B.K.Bose –PHI- 2005

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET29
Name of the Course	**High Voltage Engineering** (Professional Elective –IV)					
Branch	EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the performance of high voltages with regard to different configurations of electrode systems.	K2
CO2	Understand the theory of breakdown and withstand phenomena of all types of dielectric materials.	K2
CO3	Explain various methods available for generation and measurement of high DC, AC and Impulse voltages and currents.	K2
CO4	Choose suitable method for measuring the dielectric property of a material used for HV equipment.	K3
CO5	Illustrate the testing techniques for various equipments used in HV engineering.	K2

UNIT–I
INTRODUCTION TO HIGH VOLTAGE TECHNOLOGY
Electric Field Stresses – Uniform and non–uniform field configuration of electrodes – Estimation and control of electric Stress – Numerical methods for electric field computation.

UNIT–II
BREAK DOWN PHENOMENON IN GASEOUS, LIQUID AND SOLID INSULATION
Gases as insulating media – Collision process – Ionization process – Townsend's criteria of breakdown in gases – Paschen's law – Liquid as Insulator – Pure and commercial liquids – Breakdown in pure and commercial liquid – Intrinsic breakdown – Electromechanical breakdown – Thermal breakdown –Breakdown of solid dielectrics, composite dielectrics used in practice.

UNIT–III

GENERATION OF HIGH VOLTAGES AND HIGH CURRENTS

Generation of high DC voltages – Generation of high alternating voltages – Generation of impulse voltages and currents – Tripping and control of impulse generators.

MEASUREMENT OF HIGH VOLTAGES AND HIGH CURRENTS

Measurement of high AC, DC and Impulse voltages – Voltages and measurement of high currents – Direct, alternating and Impulse.

UNIT–IV

NON–DESTRUCTIVE TESTING OF MATERIAL AND ELECTRICAL APPARATUS

Measurement of DC resistivity – Measurement of dielectric constant and loss factor – Partial discharge measurements.

UNIT–V

HIGH VOLTAGE TESTING OF ELECTRICAL APPARATUS

Testing of insulators and bushings – Testing of isolators and circuit breakers – Testing of cables – Testing of transformers – Testing of surge arresters – Radio interference measurements.

Text Books:

1. High Voltage Engineering: Fundamentals by E.Kuffel, W.S.Zaengl, J.Kuffel by Elsevier, 2nd Edition, 2000

Reference Books:

1. High Voltage Engineering by M.S.Naidu and V. Kamaraju – TMH Publications, 3rd Edition, 2013
2. High Voltage Engineering by C.L.Wadhwa, New Age Internationals (P) Limited, 1997.
3. High Voltage Insulation Engineering by RavindraArora, Wolfgang Mosch, New Age International (P)Limited,1995

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET30
Name of the Course	**Electrical Distribution Systems** (Professional Elective – IV)					
Branch	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand various factors of distribution system	K2
CO2	Construct the distribution substation and feeders	K3
CO3	Calculate the voltage drop and power loss calculations on Distribution System	K3
CO4	Understand the distribution system protection and its coordination.	K2
CO5	Understand the effect of compensation for power factor improvement, voltage control on distribution system.	K2

UNIT I:
GENERAL CONCEPTS
Introduction to distribution systems, Load modeling and characteristics, Coincidence factor, Contribution factor loss factor, Relationship between the load factor and loss factor, Classification of loads (Residential, commercial, Agricultural and Industrial).

UNIT II:
SUBSTATIONS
Location of substations**:** Rating of distribution substation, Service area with ‘n’ primary feeders, Benefits and methods of optimal location of substations.
DISTRIBUTION FEEDERS
Design Considerations of distribution feeders**:** Radial and loop types of primary feeders, Voltage levels, Feeder loading, Basic design practice of the secondary distribution system.

UNIT III:
SYSTEM ANALYSIS
Voltage drops and power–loss calculations**:** Derivation for voltage drop and power loss in lines, uniformly distributed loads and non-uniformly distributed loads, Numerical problems, three phase balanced primary lines.

UNIT IV:
PROTECTION
Objectives of distribution system protection, Types of common faults and procedure for fault calculations for distribution system, Protective devices**:** Principle of operation of fuses, Circuit reclosures, Line sectionalizes and circuit breakers.

CO-ORDINATION
Co-ordination of protective devices**:** General coordination procedure, Various types of coordinated operation of protective devices, Residual Current Circuit Breaker.

UNIT V:
COMPENSATION FOR POWER FACTOR IMPROVEMENT
Capacitive compensation for power factor control, Different types of power capacitors, shunt and series capacitors, Effect of shunt capacitors (Fixed and switched), Power factor correction, Capacitor allocation, Economic justification, Procedure to determine the best capacitor location, Numerical problems.
VOLTAGE CONTROL
Equipment for voltage control, Effect of series capacitors, Effect of AVB/AVR, Line drop compensation

TEXT BOOK:
1. "Electric Power Distribution system, Engineering" – by Turan Gonen, McGraw–hill Book Company, 2007.

REFERENCE BOOKS:
1. Electrical Distribution Systems by Dale R.Patrick and Stephen W.Fardo, CRC press, 2021
2. Electric Power Distribution – by A.S. Pabla, Tata McGraw–hill Publishing company, 4th edition, 1997.
3. Electrical Power Distribution Systems by V.Kamaraju, Right Publishers, 2017

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET31
Name of the Course	**Power System Reforms** (Professional Elective –IV)					
Branch	EEE					

Course Outcomes:
After successful completion of course the student will able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand fundamentals of power system deregulation and restructuring.	K2
CO2	Compute Available Transfer Capability (ATC).	K3
CO3	Apply methods to reduce congestion.	K3
CO4	Compute electricity pricing in deregulated environment.	K3
CO5	Understand importance of ancillary services.	K2

UNIT-I: Basic Issues in Electric Utilities
Introduction – Restructuring models – Independent system operator (ISO) – Power Exchange – Market operations – Market Power – Stranded cost – Transmission Pricing – Congestion Pricing.

UNIT-II: Overview of OASIS
Structure of OASIS – Posting of Information – Transfer capability on OASIS – Definitions of Transfer capability – Transfer Capability Issues – ATC calculations – TTC calculations – TRM calculations – CBM calculations – Methods to calculate ATC.

UNIT-III: Congestion Management
Introduction to congestion management –Effects of congestion – Methods to relieve congestion – Non market methods –Market Based methods –Management of Inter zonal/Intra zonal Congestion

UNIT-IV: Pricing of Electricity
Introduction – Electricity price volatility – Factors effecting volatility – Measuring Volatility – electricity price indexes– Construction of forward price curves – Short–time price forecasting – Factors impacting electricity prices – Forecasting Methods – Analysing forecasting errors – Impact of data pre-processing – Impact of training vectors.

UNIT-V: Ancillary Services:
Introduction – Types of ancillary services – Reactive power as an ancillary service – Synchronous generators as ancillary service providers.

Text Books

1. Mohammad Shahidehpour, and Muwaffaqalomoush, – "Restructured electrical Power systems" Marcel Dekker, Inc. 2001
2. Kankar Bhattacharya, Math H.J. Boller, JaapE.Daalder, 'Operation of Restructured Power System' Kluver Academic Publisher – 2001

Reference Books

1. Loi Lei Lai; "Power system Restructuring and Deregulation", Jhon Wiley & Sons Ltd., England, 2001.
2. Electrical Power Distribution Case studies from Distribution reform, upgrades and Management (DRUM) Program, by USAID/India, TMH, 2012.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET32
Name of the Course	**Advanced Power Electronics** (Professional Elective –IV)					
Branch	EEE					

Course Outcomes

After Successful completion of this course, students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Analyze and design power converter configurations for specific applications	(K3)
CO2	Design power electronic converters to improve power quality	(K3)
CO3	Analyze and design resonant converters	(K3)
CO4	Develop power converter models under steady state and small signal conditions	(K3)
CO5	Understand the designing of magnetic components for power converters	(K2moder)

UNIT-I: DC-DC CONVERTERS

Non-isolated DC-DC converters: buck, boost, buck-boost, CUK converters under continuous and discontinuous conduction operation - Isolated DC-DC converters: forward, fly-back, push-pull, half-bridge and full-bridge converters - Relationship between I/P and O/P voltages – design of filter inductor and capacitors.

UNIT-II: FRONT-END (AC-DC) CONVERTERS

Conventional methods of power factor improvements: Semi converter, extinction angle control, symmetrical angle control – active front-end converters-Single phase: Boost, voltage doubler and PWM rectifiers –voltage and current controlled three-phase PWM rectifiers

UNIT-III: RESONANT CONVERTERS

Introduction, Basic resonant circuit concepts, Classification - Load resonant converters, resonant switch converters, Zero voltage switching clamped voltage converters, Resonant DC link inverters High frequency link integral half cycle converters, Phase modulated resonant converters, Dual active bridge converters, High gain converters.

UNIT-IV: MODELLING OF DC-DC CONVERTERS

Basic ac modeling approach, State space averaging, Circuit averaging and averaged switch modeling, Canonical circuit modeling, Converter transfer functions for buck, boost and buck-boost topologies.

UNIT-V: DESIGN OF POWER CONVERTERS COMPONENTS

Design of magnetic components - design of transformer, design of inductor and current transformer - Selection of filter capacitors, Selection of ratings for devices, input filter design, Thermal design.

TEXT BOOKS:

1. Power Electronics-Circuits, Devices & Applications by M.H. Rashid, Pearson, 4thedition, 2013.
2. Power Electronics: Converters, Applications & Design by N. Mohan, T.M. Undeland, W.P. Robbins, J.Wiley& Sons, 3rd Edition, 2003.
3. Power Electronics by Daniel W. Hart, McGraw-Hill, 2011.

REFERENCES BOOKS:

2. Fundamentals of Power Electronics by R.W. Erickson and Dragan Maksimonic, Springer, 2nd Edition, 2001.
3. Power Electronics: Essentials and Applications by Umanand. L, John Wiley India, 1st Edition, 2009.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET33
Name of the Course	**Special Electrical Machines** (Professional Elective –V)					
Branch	EEE					

Course Outcomes:

After Successful completion of this course, students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Describe the operation and characteristics of permanent magnet dc motor	**(K2)**
CO2	Understand the operation and control of stepper motors	**(K2)**
CO3	Understand the operation and control of switched reluctance motor	**(K2)**
CO4	Describe the operation and characteristics of brush less dc Motor	**(K2)**
CO5	Understand the construction and operation of linear induction motors	**(K2)**

UNIT I: PERMANENT MAGNET MATERIALS AND PMDC MOTORS

Introduction-classification of permanent magnet materials used in electrical machines-minor hysteresis loop and recoil line-Stator frames of conventional dc machines-Development of electronically commutated dc motor from conventional dc motor-Permanent-magnet materials and characteristics-B-H loop and demagnetization characteristics-Temperature effects: reversible and irreversible losses-high temperature effects-reversible losses Irreversible losses recoverable by magnetization-Mechanical properties, handling and magnetization-Application of permanent magnets in motors-power density-operating temperature range-severity of operation duty.

UNIT II: STEPPER MOTORS

Classification of stepper motors – Hybrid and Variable Reluctance Motor (VRM) - Construction and principle of hybrid type synchronous stepper motor – Different configuration for switching the phase windings control circuits for stepper motors – Open loop and closed loop control of 2-phase hybrid stepping motor. Construction and principle of operation of Variable Reluctance Motor (VRM) – Single stack and multiple stack – Open loop control of 3- phase VR Stepper Motor- Applications.

UNIT III: SWITCHED RELUCTANCE MOTORS

Construction – Comparison of conventional and switched reluctance motors – Design of stator and rotor pole arcs – Torque producing principle and torque expression – Different converter configurations for SRM – Drive and power circuits for SRM – Position sensing of rotor – Applications of SRM.

UNIT IV: PERMANENT MAGNET BRUSHLESS DC MOTOR

Types of constructions – Surface mounted and interior type permanent magnet – Principle of operation of BLDC motor. Torque and EMF equations – Torque speed characteristics – Performance and efficiency- Phasor Diagram – Comparison between square wave and sine wave permanent magnet motors - Applications.

UNIT V: LINEAR INDUCTION MOTORS (LIM)

Construction– principle of operation–Double sided LIM from rotating type Induction Motor – Schematic of LIM drive for traction – Development of one sided LIM with back iron equivalent circuit of LIM.

TEXT BOOKS:

1. Brushless Permanent Magnet and Reluctance Motor Drives, T.J.E. Miller, 1989, Oxford University press.
2. Special Electrical Machines, K. Venkataratnam, University press, 2009, New Delhi.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET34
Name of the Course	**AI Techniques for Power Systems** (Professional Elective –V)					
Branch	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Understand fundamentals concepts of artificial neural networks.	K2
CO2	Understand concepts of different algorithms ANN paradigms.	K2
CO3	Understand fundamentals of fuzzy set properties and membership functions, concept of evolutionary techniques	K2
CO4	Understand fundamentals of optimization techniques.	K2
CO5	Apply optimization techniques to power system applications.	K4

UNIT-I: ARTIFICIAL INTELLIGENCE
Artificial Neural Networks (ANN) – definition and fundamental concepts – Biological neural networks – Artificial neuron – typical architectures – biases and thresholds – learning/training laws and algorithms.

UNIT-II: ANN PARADIGMS
ADALINE – feed forward networks – Back Propagation algorithm-Radial Basis Function (RBF) network- Hopfield Neural Network.

UNIT- III: CLASSICAL AND FUZZY SETS
Introduction to classical sets- properties, Operations and relations; Fuzzy sets, Membership, Operations, Properties, Fuzzy relations, Membership functions.

EVOLUTIONARY TECHNIQUES
Introduction-concepts of genetic algorithms: Initialization-Selection-Genetic operators, Mutation- Evolutionary programming-Evolutionary techniques.

UNIT- IV: FUNDMENTALS OF OPTIMIZATION
Classification of optimization problems-Unconstrained and Constrained optimization-Particle swarm optimization.

UNIT- V: APPLICATIONS OF AI
PSO based Economic load dispatch without losses, Load flow, and Load frequency control: Single area system using ANN.

TEXT BOOKS:

1. Neural Networks, Fuzzy logic, Genetic algorithms: synthesis and applications by Rajasekharan and pai – PHI Publication, 2011.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET35
Name of the Course	**Energy Storage and Battery Management** (Professional Elective – V)					
Branch	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	**Course Outcome**	**Knowledge Level**
CO1	Use suitable energy storage system in real time applications.	K3
CO2	Understand the role of electrical energy storage technologies in various aspects.	K2
CO3	Interpret the role of battery management system.	K3
CO4	Illustrate the requirements of Battery Management System.	K3
CO5	Understand the concepts of battery state of charge and state of health estimations.	K2

UNIT-I: INTRODUCTION TO ENERGY STORAGE

Necessity of energy storage system; classification of electrical energy storage (EES) systems; **mechanical:** pumped hydro storage (PHS), compressed air energy storage (CAES), flywheel energy storage (FES); **chemical:** hydrogen (H_2), synthetic natural gas (SNG); **electrical:** capacitor, super capacitor; **electrochemical:** secondary batteries, flow batteries; **electromagnetic:** superconducting magnetic energy storage (SMES); **thermal:** sensible heat, latent heat, cryogenic liquid air energy storage system, Carnot battery.

UNIT-II: NEEDSFOR ELECTRICAL ENERGY STORAGE

Emerging needs for EES, More renewable energy, less fossil fuel, Smart Grid uses, the roles of electrical energy storage technologies, the roles from the viewpoint of a utility, the roles from the viewpoint of consumers, the roles from the viewpoint of generators of renewable energy.

UNIT- III: INTRODUCTION TO BATTERY MANAGEMENT SYSTEM

Introduction to Battery Management System, Cells & Batteries, Nominal voltage and capacity, C rate, Energy and power, Cells connected in series, Cells connected in parallel, Electrochemical and lithium-ion cells, Rechargeable cell, Charging and Discharging Process, Overcharge and Undercharge, Modes of Charging.

UNIT- IV: BATTERY MANAGEMENT SYSTEM REQUIREMENT

Introduction and BMS functionality, Battery pack topology, BMS Functionality, Voltage Sensing, Temperature Sensing, Current Sensing, BMS Functionality, High-voltage contactor control, Isolation sensing, Thermal control, Protection, Communication Interface, Range estimation, State-of charge estimation, Cell total energy and cell total power.

UNIT- V: BATTERY STATE OF CHARGE AND STATE OF HEALTH ESTIMATION, CELL BALANCING

Battery state of charge estimation (SOC), voltage-based methods to estimate SOC, Model-based state estimation, Battery Health Estimation, Lithium-ion aging: Negative electrode, Lithium ion aging: Positive electrode, Cell Balancing, Causes of imbalance, Circuits for balancing

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EET36
Name of the Course	**Hybrid Electric Vehicles** (Professional Elective – V)					
Branch	EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Differentiate between Electric vehicles and Hybrid Electric Vehicles	K2
CO2	Discriminate between various Drive-Train Topologies	K2
CO3	Identify different motors used for hybrid electric vehicles.	K2
CO4	Explain the Sizing of Drive Train	K2
CO5	Illustrate different batteries and other energy storage systems.	K3

UNIT– I: Introduction

Fundamentals of vehicles, components of conventional vehicle and propulsion load; Drive cycles and drive terrain; Concept of electric vehicle and hybrid electric vehicle; History of hybrid vehicles, advantages and applications of Electric and Hybrid Electric Vehicles, principle of magnetic levitation, different Motors suitable for of Electric and Hybrid Electric Vehicles.

UNIT–II: Hybridization of Automobile

Architectures of HEVs, series and parallel HEVs, complex HEVs. Plug-in hybrid vehicle, constituents of PHEV, comparison of HEV and PHEV; Fuel Cell vehicles and its constituents.

UNIT–III: Plug-in Hybrid Electric Vehicle

PHEVs and EREVs blended PHEVs, PHEV Architectures, equivalent electric range of blended PHEVs; Fuel economy of PHEVs, power management of PHEVs, end-of-life battery for electric power grid support, vehicle to grid technology, PHEV battery charging.

UNIT–IV: Power Converters in HEVs

Rectifiers used in HEVs, voltage ripples; Buck converter used in HEVs, non-isolated bidirectional DC-DC converter, voltage source inverter, current source inverter, isolated bidirectional DC-DC converter, PWM rectifier in HEVs, EV and PHEV battery chargers.

UNIT– V: Battery and Storage Systems

Energy Storage Parameters; Lead–Acid Batteries; Lithium-ion batteries-Ultra capacitors; Flywheels - Superconducting Magnetic Storage System; Pumped Hydroelectric Energy Storage; Compressed Air Energy Storage - Storage Heat; Energy Storage as an Economic Resource.

Semester	VII	L	T	P	C	Course Code
Regulation	V20	0	0	6	3	V20EEL12
Name of the Course	Advanced Electrical Simulation Lab					
Branch	EEE					

Course Outcomes:
After successful completion of the course, the student will be able to:

CO No.	Course Outcome	Knowledge Level
CO1	Construct the Electrical circuits using MultiSim & LT Spice.	K2
CO2	Analyze the LTI systems & State space model using MATLAB.	K4
CO3	Construct the Inverters, Series RLC circuits, Op-amp circuits using Or CAD.	K2
CO4	Design the power electronic converters using PLECS.	K4
CO5	Operate Electrical Drives using different controllers.	K3

Any 20 of the following experiments are to be conducted:
MultiSim & LT Spice:

1. Verification of KVL and KCL.
2. Verification of Thevenin‘s and Norton‘s Theorems.
3. Verification of Superposition and Reciprocity Theorem.
4. Verification of Compensation and Millmann‘s Theorems.
5. Verification of Maximum Power Transfer Theorem.

MATLAB:

6. Stability analysis (Bode) of Linear Time Invariant system.
7. Stability analysis (Root Locus) of Linear Time Invariant System.
8. Stability analysis (Nyquist) of Linear Time Invariant system.
9. State space model for classical transfer function.
10. Simulation of DC separately excited motor using transfer function.
11. Speed control of BLDC based electric drive using MATLAB/Simulink.

ORCAD:

12. Transient Analysis of Series RLC circuits.
13. Simulate an Op-amp based Integrator and Differentiator circuits.
14. Modelling of transformer and Lossy Transmission Line.

15. Analysis of Single Phase inverter with PWM control.
16. Analysis of Three Phase inverter with PWM control.

PLECS:

17. Analysis of RC circuits.
18. Design the small signal transfer functions for a buck converter.
19. Simulation of diode-clamped inverter.
20. Calculation of losses for a unipolar PWM inverter.
21. Design of PID controller for converter.

Hardware Implementation:

22. Operation of Buck converter using Aurdino.
23. Operation of Single-Phase H-Bridge Inverter using FPGA and Xilinx.

Annexure III

List courses offered under Open Elective -I to IV under V20 Regulation for all other branches:

Open Electives(Offered to the other Departments)						
S.No.	**Course Code**	**Name of the Course**	**L**	**T**	**P**	**Credits**
1.	V20EEOE01	Non-Conventional Energy Sources	3	-	-	3
2.	V20EEOE02	Basics of Control systems	3	-	-	3
3.	V20EEOE03	Principles of Electric Power Conversion	3	-	-	3
4.	V20EEOE04	Programmable Logic Controller and Applications	3	-	-	3
5.	V20EEOE05	Energy Storage Systems	3	-	-	3
6.	V20EEOE06	Soft Computing Techniques	3	-	-	3
7.	V20EEOE07	Electric Vehicles	3	-	-	3
8.	V20EEOE08	Indian Electricity Act, 2003.	3	-	-	3
9.	V20EEOE09	Power Systems for Data Centers	3	-	-	3
10.	V20EEOE10	Concepts of Power System Engineering	3	-	-	3
11.	V20EEOE11	Fundamentals of Smart Grid Technologies	3	-	-	3
12.	V20EEOE12	Distribution Automation	3	-	-	3

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE01
Name of the Course	**Non-Conventional Energy Sources** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the concepts of solar radiation data, extraterrestrial radiation, and radiation on earth's surface.	**K2**
CO2	Understand the operation of various solar thermal Systems.	**K2**
CO3	Choose suitable maximum power point tracking technique in solar PV and wind applications.	**K3**
CO4	Explain basic principle and working of hydro and tidal power systems.	**K2**
CO5	Explain the basic principle of biomass, fuel cell and geothermal systems.	**K2**

UNIT–I:
Fundamentals of Energy Systems
Energy conservation principle, Energy scenario (world and India), Solar radiation**:** Outside earth's atmosphere, Earth surface – Analysis of solar radiation data – Geometry – Radiation on tilted surface, Numerical problems.
UNIT–II:
Solar Thermal Systems
Liquid flat plate collections**:** Performance analysis, Transmissivity, Absorptivity, Product collector efficiency factor, Collector heat removal factor, Numerical problems, Introduction to solar air heaters, Concentrating collectors and solar pond.
UNIT–III:
Solar Photovoltaic Systems
Balance of systems, I-V & P-V characteristics, System design**,** Storage sizing, PV system sizing, Maximum power point techniques**,** Perturb and observe (P&O) technique, Incremental Conductance (INC), Hill climbing technique.
Wind Energy
Wind patterns, Types of turbines, Kinetic energy of wind, Betz coefficient, Tip–speed ratio, efficiency, Power output of wind turbine, Selection of generator (synchronous, induction), Maximum power point tracking.

UNIT–IV:

Hydro and Tidal power systems

Basic working principle, Classification of hydro systems: large, small, micro, Measurement of head and flow, Energy equation, Types of turbines, Numerical problems.

Tidal power-Basics, Kinetic energy equation, Numerical problems, Wave power-basics, Kinetic energy equation.

UNIT–V:

Biomass, fuel cells and geothermal systems

Biomass Energy: Fuel classification – Pyrolysis – Direct combustion of heat– Different digesters and sizing, Fuel cell: classification – Efficiency – V-I characteristics–Geothermal: classification – Dry rock and acquifer –Energy analysis.

TEXT BOOKS:

1. Solar Energy: Principles of Thermal Collection and Storage, S. P. Sukhatme and J. K. Nayak, TMH, New Delhi, 3rd Edition, 2013.
2. Renewable Energy Resources, John Twidell and Tony Weir, Taylor and Francis - second edition, 2013.

REFERENCE BOOKS:

1. Energy Science: Principles, Technologies and Impacts, John Andrews and Nick Jelly, Oxford University Press, 2nd edition, 2013.
2. Renewable Energy- Edited by Godfrey Boyle-oxford university.press,3rd edition, 2013.
3. Handbook of renewable technology Ahmed and Zobaa, Ramesh C Bansal, World scientific, Singapore, 2011.
4. Renewable Energy Technologies /Ramesh & Kumar /Narosa.
5. Renewable energy technologies – A practical guide for beginners – Chetong Singh Solanki, PHI, 2008.
6. Non-conventional energy source –B.H.khan- TMH-2nd edition, 2017.

Semester	V TO VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE02
Name of the Course	**Basics of Control systems** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Construct the transfer function of various mechanical and electrical systems using block diagram algebra and signal flow graphs.	**K2**
CO2	Find the time response specifications of second order systems and absolute, relative stability of LTI systems using routh's stability criterion and the root locus method.	**K3**
CO3	Assess the stability of LTI systems using frequency response methods.	**K3**
CO4	Construct the lag, lead, lag-lead compensators from bode diagrams to improve the system performance.	**K2**
CO5	Understand the concepts in state space representation of LTI systems, controllability and observability.	**K2**

UNIT – I: Mathematical modeling of control systems
Classification of control systems, open loop and closed loop control systems and their differences, Feedback characteristics, transfer function of linear system, differential equations of electrical networks, translational and rotational mechanical systems, transfer function of DC servo motor – AC servo motor – synchro, transmitter and receiver – block diagram algebra – representation by signal flow graph – reduction using Mason's gain formula.

UNIT-II: Time response analysis
Standard test signals – time response of first and second order systems – time domain specifications, steady state errors and error constants, effects of proportional (P), proportional-integral (PI),proportional-integral derivative(PID) systems.

Stability and root locus technique
The concept of stability – Routh's stability criterion – limitations of Routh's stability, root locus concept –construction of root loci (simple problems), Effect of addition of Poles and zeros to the transfer function.

UNIT–III: Frequency response analysis
Introduction to frequency domain specifications – Bode diagrams – transfer function from the Bode diagram –phase margin and gain margin – stability analysis from Bode plots, Polar plots, Nyquist stability criterion.
UNIT–IV: Classical control design techniques
Lag, lead, lag-lead compensators, design of compensators using Bode plots.
UNIT–V: State space analysis of LTI systems
Concepts of state, state variables and state model, state space representation of transfer function, diagonalization, solving the time invariant state equations, State Transition Matrix and it's Properties, concepts of controllability and observability.

Text Books:

1. Control Systems principles and design, M. Gopal, Tata McGraw Hill education Pvt Ltd., 4th Edition, 2014.
2. Automatic control systems, Benjamin C. Kuo, Prentice Hall of India,2ndEdition, 2014.

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE03
Name of the Course	**Principles of Electric Power Conversion** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic operation of various power electronic devices and converters.	K2
CO2	Apply the suitable power electronic converter for different electrical machines.	K3
CO3	Understand the operation of various renewable energy sources.	K2
CO4	Understand the operation of different energy storage systems and their applications.	K2
CO5	Choose the suitable heating and welding method for different domestic and industrial applications.	K3

UNIT-I: POWER ELECTRONIC DEVICES AND CONVERTERS
V-I Characteristics of SCR, MOSFET and IGBT. Phase controlled rectifiers, DC-DC converters and Inverters.

UNIT-II: APPLICATION OF CONVERTERS TO ELECTRICALMACHINES
Speed control of DC motor, Induction motors, PMSM and BLDC drives

UNIT-III: RENEWABLE ENERGY SOURCES AND THEIR INTEGRATION TO GRID
Introduction to solar cell, solar panels, MPPT, wind and other renewable energy sources, Integration of renewable energy sources to the grid.

UNIT-IV: ENERGY STORAGE SYSTEMS
Study of automotive batteries, SMF, pumped storage systems, super-capacitors; fly wheels – applications, Li-ion batteries and applications to electric vehicles.

UNIT-V: DOMESTIC AND INDUSTRIAL APPLICATIONS
Induction heating, welding, melting, hardening, lighting applications and their control, UPS, battery chargers.

Text Books:

1. M.H.Rashid: Power Electronics-circuits, Devices and applications, Prentice Hall India, NewDelhi,2009
2. P.S.Bhimbra: Power Electronics, Khanna publishers, New Delhi,2012
3. Ned Mohan, Undeland and Robbin: Power electronics converters, applications and design, JohnWilley & Sons, Inc. NewYork, 2006.
4. Utilization of Electrical Energy and Traction, J.B.Gupta, Rajeev Manglik, RohithManglik, KATSONBooks, 2012

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE04
Name of the Course	**Programmable Logic Controller and Applications** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic concepts of PLCs and their I/O modules.	**K2**
CO2	Construct the control algorithms to PLC using ladder logic.	**K2**
CO3	Illustrate the PLC registers for effective utilization in different applications.	**K2**
CO4	Understand the function of various program control instructions.	**K2**
CO5	Apply the suitable controller in real time applications.	**K3**

Unit I: Introduction
PLC Basics: PLC system, I/O modules and interfacing, CPU processor, programming equipment, programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

Unit II: PLC Programming
PLC Programming: Input instructions, outputs, operational procedures, programming examples using contacts and coils. Digital logic gates, programming in the Boolean algebra system, conversion examples. Ladder diagrams and sequence listings, ladder diagram construction.

Unit III: Programmable Timers and Counters
Timer instructions – On delay time instruction – Off delay timer instruction – Retentive timer – Counter instructions – Up counter – Down counter – Cascading counters – Incremental encoder – Counter applications– Combining counter and timer functions.

Unit IV: Program Control Instructions

Master control reset instruction – Jump instructions and sub routines – Immediate input and output instructions.-Data manipulation – Data transfer operation – Data compare instruction – Data manipulation programs –

Numerical data I/O interfaces – Math instructions – Addition, subtraction, multiplication & division instruction– Sequential instructions – Sequence programs – Shift registers – Word shift registers.

Unit V: Applications

Control of water level indicator – Alarm monitor - Conveyor motor control – Parking garage – Ladder diagram for process control – PID controller.

Text Books:

1. Programmable logic controllers by Frank D. Petruzella- McGraw Hill – 3rd Edition.
2. Programmable Logic Controllers – Principle and Applications by John W. Webb and Ronald A. Reiss, Fifth Edition, PHI

Reference Books:

1. Programmable Logic Controllers – Programming Method and Applications by JR. Hackworth and F.D Hackworth Jr. – Pearson, 2004.
2. Introduction to Programmable Logic Controllers- Gary Dunning- Cengage Learning. Programmable Logic Controllers –W. Bolton-Elsevier publisher, 2005.

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE05
Name of the Course	**Energy Storage Systems** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Classify different energy storage systems.	**K2**
CO2	Understand the operation of different energy storage systems.	**K2**
CO3	Illustrate the role of electrical energy storage systems in various aspects.	**K2**
CO4	Understand the operation of different Electrical Energy Storage (EES) systems.	**K2**
CO5	Apply suitable EES system to various applications.	**K3**

UNIT - I: Introduction:
Necessity of energy storage, different types of energy storage, mechanical, chemical, electrical, electrochemical, biological, magnetic, electromagnetic, thermal, comparison of energy storage technologies

UNIT - II: Energy Storage Systems:
Thermal Energy storage-sensible and latent heat, phase change materials, Energy and exergy analysis of thermal energy storage, Electrical Energy storage-super-capacitors, Magnetic Energy storage-Superconducting systems, Mechanical-Pumped hydro, flywheels and pressurized air energy storage, Chemical-Hydrogen production and storage, Principle of direct energy conversion using fuel cells, thermodynamics of fuel cells, Types of fuel cells, Fuel cell performance, Electrochemical Energy Storage- Battery, primary, secondary and flow batteries.

UNIT - III Needs for Electrical Energy Storage:
Emerging needs for EES, More renewable energy-less fossil fuel, Smart Grid uses - the roles of electrical energy storage technologies-the roles from the viewpoint of a utility-the roles from the viewpoint of consumers-the roles from the viewpoint of generators of renewable energy.

UNIT - IV: Types of Electrical Energy Storage systems:
Electrical storage systems, Double-layer capacitors (DLC), Superconducting magnetic energy storage (SMES),super charging stations, Thermal storage systems, Standards for EES, Technical comparison of EES technologies.

UNIT - V: Applications of Electrical Energy Storage:
Renewable energy storage-Battery sizing and stand-alone applications, stationary (Power Grid application),Small scale application-Portable storage systems and medical devices, Mobile storage Applications- Electric vehicles (EVs), types of EVs, batteries and fuel cells, future technologies, hybrid systems for energy storage.

Text Books:

1. Energy Storage - Technologies and Applications by Ahmed Faheem Zobaa, InTech, 2013.
2. Fundamentals of Energy Storage by J. Jensen and B. Sorenson, Wiley-Interscience, New York, 984
3. Energy Storage: Fundamentals, Materials and Applications, by Huggins R. A., Springer, 2019.

Reference Books:

1. Thermal energy storage: Systems and Applications by Dincer I. and Rosen M. A., Wiley pub, 2011.
2. Electric & Hybrid Vehicles by G. Pistoia, Elsevier, 2010.
3. Fuel cell Fundamentals by R. O'Hayre, S. Cha, W. Colella and F. B. Prinz, Wiley Pub, 2016.

Semester	**V to VII SEMESTERS**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EEOE06
Name of the Course	**Soft Computing Techniques** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic concepts of different soft computing techniques like fuzzy, GA and neural network.	**K2**
CO2	Understand the fundamental concepts of artificial neural networks.	**K2**
CO3	Explain the basic concepts & convergence of GA.	**K2**
CO4	Explain the basic concepts of fuzzy systems and its applications.	**K2**
CO5	Apply different evolutionary algorithms to various applications.	**K3**

Unit I: Introduction to AI
Artificial Intelligence – a Brief Review – Pitfalls of Traditional AI – Need for Computational Intelligence –Importance of Tolerance of Imprecision and Uncertainty - Constituent Techniques – Overview of Artificial Neural Networks - Fuzzy Logic - Evolutionary Computation.

Unit II: Artificial Neural Networks
Supervised Learning: Introduction and how brain works, Neuron as a simple computing element, The perceptron, Back propagation networks: architecture, multilayer perceptron, back propagation learning-input layer, accelerated learning in multilayer perceptron, The Hopfield network, Bidirectional associative memories(BAM), RBF Neural Network.
Unsupervised Learning: Hebbian Learning, Generalized Hebbian learning algorithm, Competitive learning, Self- Organizing Computational Maps: Kohonen Network.

Unit III: Genetic algorithms
Genetic algorithms basic concepts, encoding, fitness function, reproduction-Roulette wheel, Boltzmann, tournament, rank, and steady state selections, Convergence of GA, Applications of GA-case studies.

Unit IV: Fuzzy Logic
Fuzzy Sets – Properties – Membership Functions - Fuzzy Operations. Fuzzy Logic and Fuzzy Inference System

Unit V: Evolutionary Computation
Evolutionary Computation - Overview of other Bio-inspired Algorithms - Swarm Intelligence Algorithms

Textbooks:

1. R. Rajasekaran and G. A and Vijayalakshmi Pai, Neural Networks, Fuzzy Logic, and Genetic, 2013.
2. Algorithms: Synthesis and Applications, Prentice Hall of India,2008
3. D. E. Goldberg, Genetic Algorithms in Search, Optimization, and Machine Learning, Addison-Wesley
4. T. Ross, Fuzzy Logic with Engineering Applications, Tata McGraw Hill, 2003

Reference books

1. L. Fausett, Fundamentals of Neural Networks, Prentice Hall, 2004

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE07
Name of the Course	**Electric Vehicles** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the fundamentals of an electric vehicle.	**K2**
CO2	Explain the technical characteristics and properties of batteries.	**K2**
CO3	Estimate the ratings and requirements of electrical machines.	**K2**
CO4	Illustrate the regenerative braking system of an electric vehicle.	**K3**
CO5	Estimate the sizing of components of hybrid electric vehicles.	**K2**

UNIT I ELECTRIC VEHICLES
Introduction, Components, vehicle mechanics – Roadway fundamentals, vehicle kinetics, Dynamics of vehicle motion - Propulsion System Design.

UNIT II BATTERY
Basics – Types, Parameters – Capacity, Discharge rate, State of charge, state of Discharge, Depth of Discharge, Technical characteristics, Battery pack Design, Properties of Batteries.

UNIT III DC & AC ELECTRICAL MACHINES
Motor and Engine rating, Requirements, DC machines, Three phase A.C machines, Induction machines, permanent magnet machines, switched reluctance machines.

UNIT IV ELECTRIC VEHICLE DRIVE TRAIN
Transmission configuration, Components – gears, differential, clutch, brakes regenerative braking, motor sizing.

UNIT V HYBRID ELECTRIC VEHICLES
Types – series, parallel and series, parallel configuration – Design – Drive train, sizing of components.

Text book(s) and/or required materials

1. Iqbal Hussain, “Electric & Hybrid Vehicles – Design Fundamentals”, Second Edition, CRC Press,2011.
2. James Larminie, “Electric Vehicle Technology Explained”, John Wiley & Sons, 2003.

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE08
Name of the Course	**Indian Electricity Act, 2003**. (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the national policy, plan and the joint responsibilities of state and central governments.	**K2**
CO2	Illustrate the process of licensing and the provisions related to transmission and distribution of electricity.	**K2**
CO3	Understand the regulatory commissions and Central Electricity Authority (CEA).	**K2**
CO4	Illustrate the Appellate Tribunal, Reorganization of boards, offences and penalty.	**K2**
CO5	Understand the constitution procedures of special courts and dispute resolution	**K2**

UNIT - I: National electricity policy and plan, generation of electricity
Electricity Act: commencement, definitions, comments; national policy on standalone systems, non-conventional energy systems, electrification and local distribution for rural areas; joint responsibilities of state and central governments in rural electrification, requirement for setting up of generating station, hydro-electric generation, captive generation; duties of generating companies.

UNIT - II: Licensing, transmission and distribution of electricity
Licensing: powers, procedures, conditions, amendments, revocation, provisions, directions, suspension and sale; inter-state and intra-state transmission; other provisions relating to transmission; provisions with respect to distribution licenses, electricity traders, supply -consumer protection: standard performance.

UNIT - III: Tariff, works, CEA and Regulatory commissions
Works of licenses, provisions relating to overhead lines; Constitution and functions of Central Electricity Authority (CEA), directions and certain powers; Constitution, powers and functions of state and central commissions, other provisions, proceedings and powers of appropriate commission, Grants, Fund, Accounts Audit and Report.

UNIT - IV: Appellate Tribunal, Reorganization of boards, offences and penalty
Appellate Tribunal for electricity; investigation and assessment; reorganization of boards; Offences and penalties.

UNIT - V: Special courts, Dispute resolution, other provisions and Miscellaneous
Constitution of special courts, procedures, powers, appeal, revision; arbitration; protective clauses; miscellaneous and enactments.

Text Books:

1. The Electricity Act, 2003 {Act 36 of 2003, dt.2-6-2003, w.e.f. 10-6-2003 vide S.O. No. 669(E), dt. 10-6-2003} published by Commercial Law Publishers (I) Pvt. Ltd

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE09
Name of the Course	**Power Systems for Data Centers** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basics of power in the data centre.	K2
CO2	Illustrate the uninterrupted power supply.	K2
CO3	Illustrate the operation of generators and various power devices.	K2
CO4	Estimate the power required in the data centre.	K2
CO5	Describe the different methods to improve data centre energy efficiency.	K2

UNIT -I: Fundamentals of Power
Power basics and key terms, Power calculations, Grounding Power problems, Power protection system equipment.

UNIT -II: Uninterruptible Power Supply (UPS)
UPS basics, UPS topologies, UPS redundancy and efficiency, Modular UPS, UPS batteries
Flywheel UPS.

UNIT –III: Generators and Other Power Devices
Generators, Automatic and static transfer switches, Power distribution units, Circuit Breakers, Circuit Breaker Coordination, Circuit Breaker Protection, Circuit Breaker Sizing.

UNIT –IV: Power Distribution in the Rack
Rack power redundancy, Server power calculations, Power cabling, calculating power requirements, Power consumption in the data centre, Reducing Wasted Power in the Data Centre: reducing server power

UNIT –V: Data Center Energy Efficiency and practices
Data centre power growth, Barriers to data centre energy efficiency, Power consumption in the data centre, Power Usage effectiveness (PUE), Measuring PUE, Other data centre efficiency metrics

Energy Efficiency Best Practices
Reducing the support infrastructure load, Systematic approach to improving energy efficiency.

Text Books:
1. Data Center Handbook, by Hwaiyu Geng, Publisher(s): Wiley ISBN: 9781118436639, 2014

Reference Books:
1. Designing Data Centers - Book 1: Power: Specifying the requirements, power generation, power distribution, power efficiency, and fault tolerance for data centers, by by B.A.Ayomaya, ISBN-13 : 979-8695727715
2. Guide to Data Centre Power Systems, Publication Year: 2021, Pages: 278 ISBN-13: 978-1-78561-828-4

Semester	**V to VII SEMESTERS**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EEOE10
Name of the Course	**Concepts of Power System Engineering** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:
After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the working of thermal and nuclear power generating stations.	**K2**
CO2	Estimate the R,L and C parameters of transmission lines (Nominal T and π models).	**K2**
CO3	Find the parameters of DC and AC distribution systems along with voltage drop.	**K3**
CO4	Understand the operation of fuses and circuit breakers.	**K2**
CO5	Illustrate the speed/time characteristics of different types of traction motors.	**K2**

UNIT – I: Introduction to the Sources of Energy

Thermal Power Stations Selection of site, general layout of a thermal power plant showing paths of coal, steam, water, air, ash and flue gasses, ash handling system & operation of thermal plant

Nuclear Power Stations: Location of nuclear power plant, Working principle, Nuclear fission, Nuclear fuels, Nuclear chain reaction, nuclear reactor Components: Moderators, Control rods, Reflectors and Coolants.

UNIT – II: Parameters of Transmission line

Types of conductors - calculation of resistance for solid conductors - Calculation of inductance for single phase and three phase, concept of GMR & GMD- Calculation of capacitance for 2 wire and 3 wire systems, effect of ground on capacitance. Classification of Transmission Lines and their model representations -Nominal-T, Nominal-π, Ferranti effect - Numerical Problems.

UNIT – III: Distribution Systems

Classification of distribution systems, design features of distribution systems, radial distribution, ring main distribution, voltage drop calculations: DC distributors for following cases - radial DC distributor fed at one end and at both ends (equal / unequal voltages), ring main distributor.

UNIT-IV: Protective devices

Principle of operation of HRC fuses – SF6, oil circuit breakers, circuit reclosures and Line sectionalizes.

UNIT–V: Electric Traction

System of electric traction and track electrification– Review of existing electric traction systems in India–Special features of traction motor–Mechanics of train movement–Speed–time curves for different services –Trapezoidal and quadrilateral speed time curves.

Text Books:

1. Generation, Distribution and Utilization of Electric Energy by C.L.Wadhawa New age International (P) Limited, Publishers, 2015.
2. A Text Book on Power System Engineering by M.L.Soni, P.V.Gupta, U.S.Bhatnagar and A.Chakrabarti, Dhanpat Rai & Co. Pvt. Ltd., 2008
3. Utilization of Electric Energy – by E. Openshaw Taylor, Orient Longman,1971.

Reference Books:

1. Electrical Power Systems by P.S.R. Murthy, B.S. Publications, 2017.
2. Art & Science of Utilization of electrical Energy – by Partab, DhanpatRai & Sons, 2017

Semester	**V to VII SEMESTERS**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	-	-	3	V20EEOE11
Name of the Course	**Fundamentals of Smart Grid Technologies** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic structure of an electricity marketing conditions.	**K2**
CO2	Illustrate the developing technologies in DC distribution and smart grid.	**K2**
CO3	Understand the concepts of dynamic energy systems.	**K2**
CO4	Illustrate the development of smart domestic system.	**K2**
CO5	Illustrate the development of intelligent domestic system.	**K2**

UNIT - I: Introduction to Smart Grid & evolving it to a Perfect Power System:
Introduction: Introduction to smart grid- Electricity network-Local energy networks- Electric transportation-Low carbon central generation-Attributes of the smart grid- Alternate views of a smart grid. Smart Grid to Evolve a Perfect Power System: Introduction- Overview of the perfect power system configurations- Device level power system- Building integrated power systems- Distributed power systems-Fully integrated power system-Nodes of innovation.

UNIT - II: DC Distribution and Smart Grid
AC vs DC sources-Benefits of DC power delivery systems-Powering equipment and appliances with DC-Data centers and information technology loads-Future neighborhood-Potential future work and research.
Intelligrid Architecture for the Smart grid: Introduction- Launching intelligrid-Intelligrid today- Smart grid vision based on the intelligrid architecture-Barriers and enabling technologies. SCADA, synchro phasors (WAMS)

UNIT – III: Dynamic Energy Systems Concept
Smart energy efficient end use devices-Smart distributed energy resources-Advanced whole building control systems- Integrated communications architecture-Energy Management-Role of technology in demand response-Current limitations to dynamic energy management-Distributed energy resources-Overview of a dynamic energy management-Key characteristics of smart devices- Key

characteristics of advanced whole building control systems-Key characteristics of dynamic energy management system.

UNIT - IV: Energy Port as a Part of the Smart Grid & Market Implementation
Energy Port as Part of The Smart Grid: Concept of energy -Port, generic features of the energy port. Policies and Programs to Encourage End – Use Energy Efficiency: Policies and programs in action -multinational -national-state-city and corporate levels.
Market Implementation: Framework-factors influencing customer acceptance and response- program planning-monitoring and evaluation.

UNIT - V: Efficient Electric End – Use Technology Alternatives
Existing technologies – lighting - Space conditioning - Indoor air quality - Domestic water heating – hyper efficient appliances - Ductless residential heat pumps and air conditioners - Variable refrigerant flow air conditioning-Heat pump water heating - Hyper efficient residential appliances - Data center energy efficiency-LED street and area lighting - Industrial motors and drives - Equipment retrofit and replacement – Process heating - Cogeneration, Thermal energy storage - Industrial energy management programs – Manufacturing process-Electro-technologies, Residential, Commercial and industrial sectors.

Text Books:

1. The Smart Grid, Enabling Energy Efficiency and Demand Side Response, Clark W Gellings,CRC Press, 2009.
2. Smart Grids, Jean Claude Sabonnadiere, Nouredine Hadjsaid, Wiley-ISTE, IEEE Press,May 2012.
3. SMART GRID Fundamentals of Design and Analysis, James Momoh, IEEE press, A John Wiley &Sons, Inc., Publication, 2012.

Reference Books:

1. Smart Grid: Technology and Applications, Janaka Ekanayake, Kithsiri Liyanage, Jianzhong.Wu, Akihiko Yokoyama, Nick Jenkins, Wiley, 2012.
2. Smart Grid: Fundamentals of Design and Analysis, James Momoh, Wiley, IEEEPress,2012

Semester	V to VII SEMESTERS	L	T	P	C	Course Code
Regulation	V20	3	-	-	3	V20EEOE12
Name of the Course	**Distribution Automation** (Open Elective)					
Branch	EXCEPT EEE					

Course Outcomes:

After successful completion of this course, the students will be able to

CO No.	Course Outcome	Knowledge Level
CO1	Understand the basic principles of distribution and automation.	**K2**
CO2	Describe the working functions of distribution automation.	**K2**
CO3	Select appropriate Communication Technology for various parts of Distribution System for their automation.	**K2**
CO4	Illustrate the technical benefits of Distribution Automation (DA).	**K2**
CO5	Select an appropriate method for Economic Evaluation of DA plans.	**K2**

UNIT-I: DISTRIBUTION AUTOMATION AND THE UTILITY SYSTEM
Introduction to Distribution Automation (DA), Control System Interfaces, Control and Data Requirements, Centralized (Vs) Decentralized Control, DA System (DAS), DA Hardware, DAS Software.

UNIT-II: DISTRIBUTION AUTOMATION FUNCTIONS
DA Capabilities, Automation System Computer Facilities, Management Processes, Information Management, System Reliability Management, System Efficiency Management, Voltage Management, Load Management, Management Process (Function) Interaction, Operating and Objective Priorities.

UNIT-III: COMMUNICATION SYSTEMS FOR DA
DA Communication Requirements - Communication Reliability, Cost Effectiveness, Data Rate Requirements, Two Way Capability, Ability to communicate during outages and faults, Ease of Operation and Maintenance, Conforming to the Architecture of Data Flow. Communication Systems used in DA - Distribution Line Carrier (Power line carrier), Ripple Control, Zero Crossing Technique, Telephone, Cable TV, Radio, AM Broadcast, FM SCA, VHF Radio, UHF Radio, Microwave, Satellite, Fibre Optics, Hybrid Communication Systems, Communication Systems used in Field Tests.

UNIT-IV TECHNICAL BENEFITS
DA Benefit Categories, Capital Deferred Savings, Operation and Maintenance Savings, Interruption Related Savings, Customer-related Savings, Operational Savings, Improved Operation, Function Benefits, Potential Benefits for Functions, Function-shared Benefits, Guidelines for Formulation of Estimating Equations, Parameters Required, Economic Impact Areas, Resources for determining benefits, Integration of System Benefits into Economic Evaluation, Impact of DA on Distribution System.

UNIT-V: ECONOMIC EVALUATION METHODS
Development and Evaluation of Alternate Plans, Select Study Area, Select Study Period, Project Load Growth, Develop Alternatives, Calculate Operation and Maintenance Costs, Evaluate Alternatives. Economic Comparison of Alternate Plans: Classification of Expenses and Capital Expenditures, Comparison of Revenue Requirements of Alternative Plans, Book Life and Continuing Plant Analysis, Year-by- Year Revenue Requirement Analysis, Short Term Analysis, End of Study Adjustment, Break-Even Analysis, Sensitivity Analysis, Major Steps in Utility Economic Evaluation of DA (Flow-Chart) Computational Aids.

Text Books:

2. D. Bassett, K. Clinard, J. Grainger, S. Purucker, and D. Ward, "Tutorial Course: DistributionAutomation", IEEE Tutorial Publication 88EH0280-8-PWR, 1988.

Reference Books:
1. James Northcote-Green, Robert Wilson "Control and Automation of Electrical Power DistributionSystems" CRC Press, Taylor and Francis Group, 2007.
2. James A. Momoh "Electric Power Distribution, Automation, Protection, and Control", CRC Press,Taylor and Francis Group, 2017.

Annexure IV

List of courses for B.Tech (Honors)

S.No.	Course name	Number of Weeks	Credits	
1.	Advance power electronics and Control(IITR)	8	2	Students have to acquire a minimum of 16 credits by completing MOOC/NPTEL course from the Pool
2.	Advanced IOT Applications (IISc)	8	2	
3.	Advances in UHV Transmission and Distribution (IISC)	8	2	
4.	Control and Tuning Methods in Switched Mode Power Converters (IITKGP)	12	3	
5.	Dc Microgrid and control systems(IITR)	8	2	
6.	Design of photovoltaic systems (IISc)	12	3	
7.	Design of Power Electronic Converters	8	2	
8.	Digital Control in Switched Mode Power Converters and FPGA-based Prototyping (IITKGP)	12	3	
9.	Digital Protection of Power System	8	2	
10.	Electric Vehicles - Part 1	4	1	
	or Electric vehicles and Renewable energy,(IITM)	12	3	
11.	Electrical Distribution System Analysis, (IITR)	8	2	
12.	Electricity & safety measures, (IGNOU)	12	3	
13.	High Power Multilevel Converters- Analysis, design and operational issues, (IITD)	12	3	
14.	Introduction to Smart Grid, (IITR)	8	2	
15.	Linear Systems Theory, (IITM)	12	3	
16.	Power Management Integrated Circuits, (IITM)	12	3	
17.	Power Quality Improvement Technique, (IITR)	8	2	
	or Power Quality,(IITD)	12	3	
18.	Power System Dynamics, Control and Monitoring, (IIT Kharagpur)	12	3	
19.	Real-Time Digital Signal Processing, (IISc)	12	3	
Project Work			4	4
Total				20 Credits

NOTE: However the list is not exhaustive. Before registering the course, take the approval from HOD.

Annexure V

List of Courses for Minors Degree in Electrical Engineering

S.No.	Course name	Number of Weeks	Credits	
1.	Basic Electric Circuits (IITK)	12	3	Students have to acquire a minimum of 16 credits by completing MOOC/NPTEL course from the Pool
	or Basic Electrical Circuits (IIT Hyderabad)	12	3	
	or Introduction to Electrical Engineering (IITD)	12	3	
	or Fundamentals Of Electrical Engineering (IITKGP)	12	3	
2.	Network Analysis (IITKGP)	12	3	
3.	Electrical Machines – I (IITKGP)	12	3	
4.	Electrical Machines - II (IIT KGP)	12	3	
5.	Control Engineering (IITM)	12	3	
6.	Electrical Measurement And Electronic Instruments (IITKGP)	12	3	
7.	Electricity & Safety Measures (IGNOU)	12	3	
8.	Electromagnetic Theory (IITK)	12	3	
9.	Digital Circuits (IITKGP)	12	3	
10.	Power System Engineering (IITKGP)	12	3	
11.	Fundamental of Power Electronics (IISc)	12	3	
12.	Fundamentals of Electric Drives (IITK)	8	2	
13.	Design of photovoltaic systems (IISc)	12	3	
14.	Power System Protection (IITKGP)	12	3	
15.	Power Quality Improvement Technique (IITR)	8	2	
16.	Introduction to Smart Grid (IITR)	8	2	
17.	Power System Dynamics, Control and Monitoring (IIT Kharagpur)	12	3	
18.	Power Management Integrated Circuits (IITM)	12	3	
19.	Electric Vehicles - Part 1	4	1	
	Electric vehicles and Renewable energy,(IITM)	12	3	
Project Work			4	4
Total				20 Credits

NOTE: However the list is not exhaustive. Before registering the course, take the approval from HOD.

Sri Vasavi Engineering College

(Autonomous)
(Sponsored by Sri Vasavi Educational Society)
(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)
(Accredited by NBA & NAAC with 'A' Grade, Recognized by UGC Under Section 2(f) & 12(B))
Pedatadepalli, Tadepalligudem, W.G.Dt, A.P-534101

Department of Mechanical Engineering

Agenda of the 6th BOS meeting of the department on 19-07-2022

Item No.1

Approval of course structure and syllabi for V, VI, VII & VIII semesters of B.Tech under V20 Regulations.

Item No.2

Approval of courses offered in Open Electives V, VI & VII Semester B.Tech., under V20 Regulations to the students of the other departments.

Item No.3

Approval of list of courses offering under Minors / honours of Engineering in B.Tech under V20 Regulations.

Sri Vasavi Engineering College (Autonomous)
(Sponsored by Sri Vasavi Educational Society)
(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)
(Accredited by NBA & NAAC with 'A' Grade, Recognized by UGC Under Section 2(f) & 12(B))
Pedatadepalli, Tadepalligudem, W.G.Dt, A.P-534101

Department of Mechanical Engineering

Date: 19-07-2022

Sixth meeting of BOS in Mechanical Engineering Department along with external members is held on 19/07/2022 at 02.00 PM in online mode through ZOOM meeting app.

The following members are present.

S. No	Name of the BOS Members
1.	Dr.N. Mohan Rao, Professor & Director (IIIPT & SDC),JNTUK.
2.	Dr. R.V. Chalam, Professor,NIT,Warangal
3.	Dr. A. Krishnaiah, Professor, Osmania University, Hyderabad
4.	Sri S.S. Subramanya Sastry, Head of Practice QMS Veave Technologies, Banglore, India.
5.	Sri A.Sai Krishna, Alumni, Renault Nissan Technology and business India Pvt. Ltd. Chennai.
6.	Dr. Ch.Rambabu, Professor & I/C Principal, SVEC
7.	Dr. M.V. Ramesh, Chairman & HOD, SVEC
8.	All the BOS internal members

Minutes of meeting

Chairman welcomed all the BOS members and introduced to all the BOS internal members.

Item No. 1: Approval of course structure and syllabi for V, VI, VII & VIII semesters of B.Tech under V20 Regulations.

- The approved course structure and syllabi for V, VI, VII & VIII semesters of B.Tech under V20 Regulations are attached in **Annexure-I.**

Item No. 2 : Approval of courses offered in Open Electives V, VI & VII Semester B.Tech., under V20 Regulations to the students of the other departments.

- The approved list of courses offered in Open Electives V, VI & VII Semester B.Tech., under V20 Regulations to the students of the other departments are attached in **Annexure-II.**

Item No. 3 : Approval of list of courses offering under Minors in Mechanical Engineering offering for other departments & honours of Mechanical Engineering in B.Tech under V20 Regulations.

- The approved list of courses offering under Minors in Mechanical Engineering offering for other departments & honours of Mechanical Engineering in B.Tech under V20 Regulations are attached in **Annexure-III.**

Chairman (Head –ME)

Head of the Department
Mechanical Engineering
Sri Vasavi Engineering College
TADEPALLIGUDEM-53410

Annexure - I

Course structure Approved in previous BOS under V20 Regulations

(For 2020 – 2021 Admitted Batch)

Professional Elective – III V20MEPE7 – Finite Element Methods V20MEPE8 – Tribology V20MEPE9 – Micro Electro Mechanical Systems	**Professional Elective – IV** V20MEPE10 – Automobile Engineering V20MEPE11 – Cryogenics V20MEPE12 – Design for Manufacturing & Assembly
Professional Elective – V V20MEPE13 – Power plant Engineering V20MEPE14 – Non Destructive Testing & Evaluation V20MEPE15 – Gas dynamics & Jet Propulsion	

Job Oriented Courses:	**Open Electives:**
V20MEJO1 – CAD/CAM V20MEJO2 – Refrigeration and Air conditioning V20MEJO3 – Integration of AI & ML in Mechanical Engineering V20MEJO4 – Industrial Safety & Management V20MEJO5 – Industrial Hydraulics & Pneumatics V20MEJO6 – Automation in Manufacturing	V20MEOE1 – Basic Mechanical Engineering V20MEOE2 – Green Engineering Systems V20MEOE3 – Computational Fluid Dynamics V20MEOE4 – Rapid Prototyping V20MEOE5- Computer Aided Design V20MEOE6 - Mechatronics

Syllabi for the courses offered in V semester B. Tech under V20 Regulation for the Academic Year 2022-2023
V Semester

Semester	V	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET11
Name of the Course	Dynamics of machinery					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Apply gyroscopic effect for stabilization of sea vehicles, aircrafts and automobile Vehicles etc.,	K3
CO2	Apply friction for torque transmission of mechanical systems	K3
CO3	Interpret dynamic force analysis of slider crank mechanism in design of flywheel and different types of Governors for stability	K3
CO4	Understand balancing of reciprocating and rotary masses.	K2
CO5	Understand how to determine the natural frequencies of continuous systems starting from the general equation of displacement.	K2

UNIT – I
PRECESSION: Gyroscopes, effect of precession motion on the stability of moving vehicles such as motor car, motor cycle, aero planes and ships.

UNIT – II
FRICTION: Inclined plane, friction of screw and nuts, pivot and collar, uniform pressure, uniform wear, friction circle and friction axis.
CLUTCHES: Friction clutches- single disc or plate clutch, multiple disc clutch, cone clutch, centrifugal clutch.
BRAKES AND DYNAMOMETERS: Simple block brakes, internal expanding brake, band brake of vehicle. General description and operation of dynamometers: Prony, Rope brake, Epicyclic, Bevis Gibson and belt transmission.

UNIT – III
TURNING MOMENT DIAGRAMS: Dynamic force analysis of slider crank mechanism, inertia torque, angular velocity and acceleration of connecting rod,

crank effort and turning moment diagrams, fluctuation of energy, fly wheels and their design.

GOVERNERS: Watt, porter, proell and Hartnell governors, sensitiveness, isochronisms and hunting.

UNIT – IV

BALANCING: Balancing of rotating masses single and multiple, single and different planes, use analytical and graphical methods. Primary and secondary balancing of reciprocating masses. analytical and graphical methods, unbalanced forces and couples, examination of "V" multi cylinder in line and radial engines for primary and secondary balancing, locomotive balancing, hammer blow, swaying couple, variation of tractive effort.

UNIT – V

VIBRATIONS: Free Vibration of spring mass system, oscillation of pendulums, centers of oscillation and suspension. Transverse loads, Natural frequency, types of damping, damped free vibration. vibrations of beams with concentrated and distributed loads. Dunkerly's methods, Raleigh's method, whirling of shafts, critical speeds, torsional vibrations, two and three rotor systems, Simple problems on forced damped vibration, vibration isolation and transmissibility.

TEXT BOOKS:

1. Theory of Machines / S.S Rattan/ Mc. Graw Hill Publ.
2. Mechanism and machine theory by Ashok G. Ambedkar, PHI Publications.

REFERENCE BOOKS:

1. Mechanism and Machine Theory / JS Rao and RV Dukkipati / New Age.
2. Theory of Machines / Shiegly / MGH
3. Theory of Machines / Thomas Bevan / CBS Publishers
4. Theory of machines / Khurmi / S.Chand.

Semester	V	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET12
Name of the Course	Metal Cutting & Machine Tools					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Describe the mechanism of chip formation and forces involved while machining	K2
CO2	Describe various types of lathe, shaper, slotter, planar and drilling machines and their operations.	K2
CO3	Explain the construction and working of various milling and grinding machines.	K2
CO4	Discuss the basic principle and working of Ultrasonic machining, Abrasive jet machining and Electrochemical machining.	K2
CO5	Explain the basic principle and working of Electric discharge machining, electron beam machining, Laser beam machining.	K2

UNIT – I

FUNDAMENTALS OF MACHINING: Elementary treatment of metal cutting theory – element of cutting process –geometry of single point tool angles, chip formation and types of chips – built up edge and its effects chip breakers, mechanics of orthogonal cutting –Merchant's force diagram, cutting forces, cutting speeds, feed, depth of cut, tool life, coolants, tool materials.

UNIT – II

LATHE: Engine lathe, principle of working, specification of lathe, types of lathe, work holders tool holders, operations.

SHAPING, SLOTTING AND PLANNING MACHINES: Principles of working – principal parts – specifications, operations performed.

DRILLING: Principles of working, specifications, types, operations performed, tool, work holding devices

UNIT – III

MILLING MACHINES: Principles of working, specifications, classification of Milling Machines, Principle features of horizontal, vertical and universal Milling Machine, machining operations, types of cutters, methods of indexing.

FINISHING PROCESSES: Theory of grinding, classification of grinding machines, cylindrical and surface grinding machines, tool and cutter grinding machines, different types of abrasives, bonds, specification and selection of a grinding wheel.

UNIT – IV

Need for non-traditional machining -Ultrasonic machining (USM), Abrasive jet machining (AJM), Electro-chemical machining (ECM)-Basic principle, equipment, applications, advantages and limitations.

UNIT – V

Electric Discharge Machining (EDM), Electron Beam Machining (EBM), Laser Beam Machining (LBM)-Basic principle, equipment, applications, advantages and limitations.

TEXT BOOKS:

1. Production Technology by R.K. Jain and S.C. Gupta.
2. Workshop Technology – B.S. Raghuwanshi – Vol II/DhanpatRai& Co. (P) Ltd
4. Elements of Workshop Technology Vol 2- S K Hajrachoudhury/Asia Publishing House
3. Advanced machining processes/ VK Jain/ Allied publishers.

REFERENCE BOOKS:

1. Metal cutting Principles by M.C. Shaw
2. Metal cutting and machine tools by Boothroyd
3. Manufacturing technology II, P.N Rao
4. Production Technology by H.M.T. (Hindustan Machine Tools).

Semester	V	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MET13
Name of the Course	Design of Machine Members – I					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the stresses on design of machine elements.	K2
CO2	Apply the varying loads on machine elements	K3
CO3	Solve problems in bolted, welded and riveted joints	K3
CO4	Illustrate various types of Keys and cotter joints	K3
CO5	Apply the different type of loads on shafts and couplings	K3

UNIT – I

Design Methods: The art and science of machine design, types of design methods, stages in machine design, selection of materials, types of loads, factor of safety, Design for strength and rigidity, preferred numbers.

Theories of Failure: Maximum Principal stress theory, Maximum shear stress theory, Maximum principal strain theory, Maximum strain energy theory, Maximum distortion energy theory, impact loads, problems.

UNIT – II

Strength of Machine Elements: Stress Concentration, theoretical stress concentration factor, fatigue stress concentration factor, notch sensitivity, design for fluctuating stresses, endurance limit, Estimation of endurance strength, S-N curves, Goodman's line, soderberg's line, modified Goodman's line, Gerber parabola, related problems.

UNIT – III

Bolted Joints: Advantages , types of Bolted joints, stresses in bolts, bolts of uniforms strength bolted joints under eccentric loading, , locking devices.

Riveted Joints: Types of riveted joints, modes of failure, strength and efficiency of riveted joints, pitch of the rivets, design stresses, boiler joints, diamond joints, and riveted joints under eccentric loading.

Welded Joints: Types of welded joints, strength of welds, Design of simple welded joints.

UNIT – IV
Keys, Cotters and Knuckle Joints: Types of Keys, stresses in Keys, design of rectangular, square and taper Keys, design of spigot and socket, sleeve and cotter, jib and cotter joints and knuckle joints.

UNIT – V
SHAFTS: Design of solid and hollow shafts for strength and rigidity – design of shafts for combined bending and axial loads – shaft sizes – BIS code.
SHAFT COUPLING: Rigid couplings – muff, split muff and flange couplings, flexible couplings – flange coupling (modified).

Note: Design data book is NOT Permitted for examination

TEXT BOOKS:
1. R.K. Jain ,Machine Design, Khanna Publishers, New Delhi.
2. V.B.Bhandari ,Design of Machine Elements , TMH Publishers, New Delhi.

REFERENCE BOOKS :
1. Schaum"sseries ,Machine Design, TMH Publishers, New Delhi.
2. Sadhu Singh, Machine Design, Khanna Publishers, New Delhi.
3. Joseph E. Shigely, Mechanical Engineering Design, TMH Publishers, New Delhi.
4. M.F. Spotts, Design of Machine Elements, PHI Publishers, New Delhi.
5. Pandya and Shah ,Machine Design, Charotar Publishers, Anand.

Data Hand Book :1. Mahadevan and Balaveera Reddy [1996], Machine Design Data Hand Book, CBS Publishers, New Delhi.

Semester	V	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL08
Name of the Course	Metal Cutting & Machine Tools Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understanding various mechanism used in different machine tools	K2
CO2	Apply desired work holders and tool holder for specific work	K3
CO3	Operate different machine tools	K3

DETAILED SYLLABUS:

1. Introduction of general purpose machines -lathe, drilling machine, milling machine, shaper, planing machine, slotting machine, cylindrical grinder, surface grinder and tool and cutter grinder.
2. Step turning and taper turning on lathe machine
3. Thread cutting and knurling on -lathe machine.
4. Drilling and tapping
5. Shaping and planning
6. Slotting
7. Milling
8. Cylindrical surface grinding
9. Grinding of tool angles.

TEXT BOOKS:

Lab Manual

Semester	**V**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	0	0	3	1.5	V20MEL09
Name of the Course	Theory of Machines Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the concepts on various machine elements such as governors, springs, flywheel and cam & follower	K2
CO2	Examine the motion of gyroscope and static & dynamic balancing of masses	K3
CO3	Understand the principles of various power transmission systems such as shafts, gears and belt & pulley	K2

LIST OF EXPERIMENTS:

1. To determine whirling speed of shaft theoretically and experimentally.
2. To determine the position of sleeve against controlling force and speed of a Hartnell governor and to plot the characteristic curve of radius of rotation.
3. To analyse the motion of a motorized gyroscope when the couple is applied along its spin axis.
4. To determine the frequency of undamped free vibration of an equivalent spring mass system.
5. To determine the frequency of damped force vibration of a spring mass system.
6. To study the static and dynamic balancing using rigid blocks.
7. To find the moment of inertia of a flywheel.
8. To plot follower displacement vs cam rotation for various Cam Follower systems.
9. To find coefficient of friction between belt and pulley.
10. To study simple and compound screw jack and determine the mechanical advantage , velocity ratio and efficiency.

11. To study various types of gears- Spur, Helical, Worm and Bevel Gears.

Semester	**V**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE1
Name of the Course	Internal Combustion Engines and Air Compressors **Professional Elective – I**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the affects of various losses that occur in the actual engine operation and the working principles of I.C. Engines.	K2
CO2	Illustrate the function of fuel supply, ignition, lubrication and cooling systems of I.C. Engines.	K2
CO3	Interpret the combustion phenomena in S.I. and C.I. Engines and effect of various engine operating parameters on it.	K3
CO4	Calculate the performance parameters of I.C. Engines.	K3
CO5	Understand the classification and basic principles of compressors.	K2

UNIT – I

Air standard and actual cycles: Comparison of cycles, Time Loss Factor, Heat Loss Factor, Exhaust Blow down, Loss due to gas exchange process, Loss due to Rubbing Friction.

Basics of IC Engines: Classification, working principles of two stroke and four stroke S.I. and C.I. Engines, Valve timing and port timing diagrams.

UNIT – II

Engine systems: Requirements of fuel supply system, components and working of simple carburettor, types of diesel injection system, requirements of ignition system, types of ignition systems, types of lubrication systems, types of cooling system.

UNIT – III

Combustion in S.I. Engines and C.I. Engines: Normal Combustion and abnormal combustion, Stages of combustion in S.I. Engine, Types of Abnormal combustion, Pre-ignition and knocking , Fuel requirements, fuel rating, Anti knock additives, Detonation and its Control.

Stages of combustion in C.I. Engines: Four stages of combustion, Delay period, Factors influencing delay period, Diesel knock, Control of diesel knock, types of combustion chamber, Fuel requirements and fuel rating.

UNIT – IV

Measurement, Testing and Performance of IC Engines: Engine performance Parameters, Measurement of engine power, determination of IP,BP, FP, IMEP, BMEP, various efficiencies, engine performance characteristics and affecting variables, preparation of the Heat balance sheet.

UNIT – V

Compressors:

Reciprocating Compressors : Principle of operation, work required, Isothermal efficiency, volumetric efficiency and effect of clearance, multi stage compression, saving of work, minimum work condition for two stage compression.

Rotary Compressors: Roots Blower, vane sealed compressor, Lysholm compressor – mechanical details and principle of working – efficiency considerations.

TEXT BOOKS:

1. Internal Combustion Engines, Ganesan.V, Tata McGraw Hill Publishing Company.
2. Thermal Engineering- Mahesh Rathore, Tata McGrawHill
3. I.C. Engines Fundamentals, Heywood J.McGraw Hill publications.

REFERENCE BOOKS:

1. Thermal Engineering, R.K.Rajput, Lakshmi Publications.
2. Heat engines, Vasandani, Kumar Publications.
3. Thermal Engineering, P.L.Ballany, Khanna Publications.

Semester	**V**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE2
Name of the Course	Nanotechnology **Professional Elective – I**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the essential concepts used in nanotechnology	K2
CO2	Identify the various nano materials properties	K2
CO3	Describe the syntheses and fabrication methods	K2
CO4	Explain the various characterization Techniques	K2
CO5	Use of the various applications of nanotechnology	K3

UNIT – I

INTRODUCTION: History of nano science, definition of nano meter, nano materials, nanotechnology. Classification of nano materials. Crystal symmetries, crystal directions, crystal planes. Band structure.

UNIT – II

PROPERTIES OF MATERIALS: Mechanical properties, electrical properties, dielectric properties, thermal properties, magnetic properties, opto electronic properties. Effect of size reduction on properties, electronic structure of nano materials.

UNIT – III

SYNTHESIS AND FABRICATION: Synthesis of bulk polycrystalline samples, growth of single crystals. Synthesis techniques for preparation of nano particle – Bottom Up Approach – sol gel synthesis, hydro thermal growth, thin film growth, PVD and CVD; Top Down Approach – Ball milling, micro fabrication, lithography. Requirements for realizing semiconductor nano structures, growth techniques for nano structures.

UNIT – IV

CHARECTERIZATION TECHNIQUES:X-Ray diffraction and Scherrer method, scanning electron microscopy, transmission electron microscopy, scanning probe microscopy, atomic force microscopy, piezoresponse microscopy, X-ray photoelectron spectroscopy, XANES and XAFS, angle resolved photoemission spectroscopy, diffuse reflectance spectra, photoluminescence spectra, Raman spectroscopy.

UNIT –V

APPLICATIONS OF NANO TECHNOLOGY: Applications in material science, biology and medicine, surface science, energy and environment. Applications of nano structured thin fins, applications of quantum dots.

TEXT BOOKS:

1. Nano science and nanotechnology by M.S Rama Chandra Rao, Shubra Singh, Wiley publishers.

REFERENCE BOOKS:

1. Introduction to Nano Technology by Charles P. Poole, Jr., Frank J.Owens, Wiley publishers.
2. Nanotechnology by Jermy J Ramsden, Elsevier publishers.
3. Nano Materials- A.K.Bandyopadhyay/ New Age Introdu.
4. Nano Essentials- T.Pradeep/TMH.
5. Nanotechnology the Science of Small by M.A Shah, K.A Shah, Wiley Publishers.

Semester	**V**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE3
Name of the Course	Composite Materials **Professional Elective – I**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Classify the composites, explain the required properties, reinforcements and uses of composites.	K2
CO2	Explain how common fibers are produced and how the properties of the fibers are related to the internal structure and the interfaces obtained.	K2
CO3	Illustrate the processing techniques for polymer matrix, ceramic matrix and metal matrix composites and list out their properties and applications	K3
CO4	Construct different ceramic composite materials	K3
CO5	Examine the processing of ceramic matrix composites and Calculate mechanical properties of composite materials	K3

UNIT – I

Introduction, Classification of Composite materials based on structure and matrix and reinforcements, Advantages and applications of composites, Functional requirements of reinforcement and matrix materials. Difference between composites and metals &alloys, Properties of composites in comparison with standard materials

UNIT – II

Types of reinforcements and their properties: Glass, Carbon, Boron, Aramid, Al_2O_3 and SiC fibers. Nature and manufacture of glass, carbon and aramid fibers.
Role of interfaces: Wettability and Bonding, the interface in Composites, Interactions and Types of bonding at the Interface.

UNIT – III

Fabrication of Polymeric Matrix Composites, Structure and properties of Polymeric Matrix Composites, Interface in Polymeric Matrix Composites, Applications.
Fabrication of Metal Matrix Composites (MMC): Solid state fabrication, Liquid state fabrication and In-situ fabrication techniques. Interface in Metal Matrix Composites. Mechanical bonding, Chemical bonding and Interfaces in In-situ Composites. MMC: Properties and Applications.

UNIT – IV

Fabrication of Ceramic Matrix Composites (CMC): Processing of CMCs: Cold Pressing and Sintering, Hot Pressing, Reaction Bonding Processes, Infiltration, Sol–Gel process. Interface in CMCs. Properties of CMCs, Applications of CMCs.

UNIT – V

Mechanical Testing of Composites and Their Constituents: Measurement of Constituent Material Properties Fiber Tests, Neat Resin Matrix Tests, Constituent Volume Fraction Measurement. Measurement of Basic Composite Properties: Tensile Tests, Compressive Tests, Shear Tests, Flexure Tests, Fiber/Matrix Interface Tests.

TEXT BOOKS:

1. Composite Materials – Science & Engineering, K.K. Chawla, Springer-Verlag, New York,1987.
2. Principles of Composite Material Mechanics, Ronald F. Gibson
3. An Introduction to Composite Materials, Hull, Cambridge, 2nd Edt.1997.

REFERENCE BOOKS:

1. Composites, Engineered Materials Handbook, Vol.1, ASM International, Ohio, 1988.
2. Structure and Properties of Composites, Materials Science and Technology, Vol. 13, VCH, Weinheim, Germany, 1993
3. Composite Materials: Engineering and Science, F.L. Matthews and R.D. Rawlings, Chapman & Hall, London, 1994.

Syllabi for the courses offered in VI semester B. Tech under V20 Regulation for the Academic Year 2023-2024

VI Semester

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MET14
Name of the Course	Heat Transfer with Artificial Intelligence					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Illustrate the basic modes of heat transfer, basic laws of heat transfer and to develop solution for one dimensional steady state heat conduction problems.	K3
CO2	Interpret the heat transfer through extended surfaces, to find solution for one dimensional extended surfaces and unsteady state heat conduction problems.	K3
CO3	Illustrate convective heat transfer and to apply Dimensional analysis concept to convective heat transfer and Apply empirical correlations for phase change process to calculate values for the convection heat transfer coefficient	K3
CO4	Illustrate Heat Exchangers and concepts of Artificial Intelligence.	K3
CO5	Employ the principles of radiation heat transfer, to find the shape factor and heat transfer rate through radiation.	K3

UNIT – I

Introduction: Different Modes of Heat Transfer, Governing Laws of Heat Transfer, Applications of Heat Transfer.

Conduction heat transfer: General Heat Conduction Equation: Derivation of the equation in (i) Cartesian, (ii) Polar and (iii) Spherical Co-ordinate Systems.

Steady-state one-dimensional heat conduction in Cartesian System: Steady-state one-dimensional heat conduction problems (i) without heat generation and (ii) without variable thermal conductivity, Thermal Resistances in Series and in Parallel and Numerical Problems.

Steady-state radial heat conduction in Polar and spherical Systems: Steady-state one-dimensional heat conduction problems (i) without heat generation and (ii)

without varying thermal conductivity, Thermal Resistances in Series and Numerical Problems.
Critical Thickness of Insulation: Concept, Derivation and Numerical Problems.

UNIT – II

Extended Surfaces (Fins): Classification, Applications, Straight Rectangular Fins - long fin, fin with insulated tip and short fin, Temperature Distribution and Heat Transfer Calculations, Fin Efficiency and Effectiveness and Numerical Problems.
One dimensional Transient (Unsteady-state) conduction heat transfer: Definition, Systems with negligible internal resistance, Numerical Problems, Heisler and Gober charts: Solutions to various one-dimensional problems using the charts, Numerical problems.

UNIT – III

Convective heat transfer: Classification of convective heat transfer, dimensional analysis – application of Buckingham Pi Theorem for forced and free convection, Significance of non-dimensional numbers, concepts of continuity, momentum and Energy Equations, boundary layer theory.

Heat transfer with phase change: Boiling: Definition, types, regimes of Pool boiling - Numerical Problems on nucleate boiling, critical heat flux and film boiling using empirical correlations.
Condensation: Definition, Film wise and drop wise condensation, Numerical Problems on film condensation over vertical and horizontal cylinders using empirical correlations.

UNIT –IV

Radiation heat transfer: Fundamental principles - Gray, White, Opaque, Transparent and Black bodies, Emissivity, Planck's distribution law, Wien's displacement law, Kirchoff's law, Lambert's cosine law and the Stefan-Boltzmann law, Irradiation, total and monochromatic quantities, concepts of shape factor, heat exchange between two black bodies, heat exchange between grey bodies, radiation shields, electrical analogy for radiation networks and Numerical problems.

UNIT – V

Heat Exchangers: Definition, Classification, LMTD method, Effectiveness - NTU method, overall heat transfer coefficient, fouling factor and Numerical Problems.
Chart Solution Procedures for solving Heat Exchanger problems: Correction Factor Charts and Effectiveness-NTU Charts and Numerical Problems.
Artificial Intelligence: Introduction, Biological and Artificial Neuron, Artificial Neural Network, Training of Artificial Neural Network, Perceptron learning rule, Convergence Theorem, Activation Functions, Delta Rule, Generalised Delta Rule, Back Propagation Algorithm, Genetic Algorithm – Terminology, Working.

TEXT BOOKS:

1. Heat Transfer, JP HOLMAN, Tata McGraw Hill Publications, Special Indian edition.
2. Heat Transfer, P.K.Nag, Tata McGraw Hill Publications.
3. Fundamentals of Engineering Heat and Mass Transfer, R.C.Sachdeva, New Age International Publications.
4. Artificial Intelligence, Saroj Kaushik, 1st Edition, Cengage Learning
5. Artificial Intelligence – A modern Approach, 3rd Edition, Stuart Russel, Peter Norvig, Pearson Education

REFERENCE BOOKS:

1. Heat and Mass Transfer, Cengel, McGraw Hill Publications.
2. Principles of Heat Transfer, Frank Kreith, R. M. Manglik& M. S. Bohn, Cengage learning publishers.
3.Heat and Mass Transfer /D.S.Kumar / S.K.Kataria& Sons
4. Heat and mass transfer, R.K. Rajput, S. Chand Publications, Revised edition
5.Artificial Intelligence, Elaine Rich, Kevin Knight, Shivashankar B Nair, 3rd Edition, Tata McGraw Hill
   Education Private Limited., 2009

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MET15
Name of the Course	Design of Machine Elements – II					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Apply the concepts of different types of Bearings for design	K3
CO2	Illustrate the design concept of IC Engine Parts	K3
CO3	Employ the design concepts to curved beams	K3
CO4	Examine different Transmissions Systems and mechanical springs	K2
CO5	Analyze the design of Spur & Helical Gears	K4

UNIT – I

Design of Bearings: Applications and types of Journal bearings, Lubrication, Bearing Modulus, clearance ratio, bearing materials, journal bearing design, Ball and roller bearings, Static loading of ball & roller bearings, bearing life, Failure of bearings. Selection of Anti-friction bearings

UNIT – II

Design of Engine Parts: Design of piston, forces acting on piston. Design of Cylinder, Cylinder block.

Design of Connecting Rod, stress due to whipping action on connecting rod ends. Design of Cranks and Crank shafts-Centre and over hung cranks.

UNIT – III

Design of Curved Beams: Introduction, Stresses in curved beams, Expression for radius of neutral axis for rectangular, circular, trapezoidal and T-Section. Design of crane hooks, C –clamps, problems.

UNIT – IV

Power Transmissions Systems, Pulleys: Transmission of power by belt and rope drives, transmission efficiencies, belts – flat and V types, ropes, pulleys for belt and rope drives, materials, chain drives, problems. Selection of V-Belts.

Mechanical Springs: Stress and deflections of helical Springs, Compression springs, Springs for fatigue loading, Natural frequency of helical springs, Energy storage capacity. Shear stress multiplication Factor, Wahl correction factor and design of helical springs under static and dynamic loads. Design of leaf springs, co-axial springs, related problems.

UNIT – V

Spur & Helical Gear drives: Spur gears, Helical gears, Load concentration factor, Dynamic load factor, Surface compressive strength, Bending strength, Design analysis of spur and Helical gears, Estimation of centre distance, module and face width, Check for dynamic and wear considerations, problems.

Note: Design data book is permitted for examination

TEXT BOOKS:

1. Machine Design/V.Bandari/TMH Publishers
2. Machine Design/ NC Pandya & CS Shaw/ Charotar publishers
3. Design data book.

REFERENCE BOOKS:

1. Machine Design: An integrated Approach / R.L. Norton / Pearson Education
2. Mech. Engg. Design / JE Shigley/Tata McGraw Hill education
3. Design of machine elements- spots/Pearson Publications
4. Machine Design-Norton/Pearson Publications

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	0	0	3	1.5	V20MEL10
Name of the Course	Heat Transfer Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Evaluate the amount of heat exchange in various modes of heat transfer for several geometries.	K4
CO2	Evaluate the amount of heat exchange in condensation & boiling processes and for heat exchangers.	K4

List of experiments:

1. Determination of overall heat transfer co-efficient of a composites lab.
2. Determination of efficiency of a pin-fin.
3. Determination of heat transfer rate through a lagged pipe.
4. Determination of thermal conductivity of a metal rod.
5. Determination of Thermal conductivity of liquid sand gases.
6. Determination of heat transfer rate through a concentric sphere.
7. Determination of heat transfer coefficient in natural and forced convection
8. Determination of emissivity of a given surface.
9. Determination of Stefan Boltzman constant.
10. Determination of effectiveness of parallel and counter flow heat exchangers.
11. Determination of heat transfer rate in drop and film wise condensation.
12. Determination of critical heat flux.

Add-on experiments: Heat transfer modeling of a simple component used in a heat exchanger using Ansysin the lab(Virtual lab)

Semester	VI	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL11
Name of the Course	Simulation of Mechanical Systems Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Examine the stress analysis of trusses.	K3
CO2	Interpret the deflection analysis of different type of loads.	K3
CO3	Illustrate the stress analysis of different components.	K3
CO4	Develop the modal analysis of beams.	K3
CO5	Practice the basics of simulation using MATLAB	K3

Introduction to software

Introduction to SOLIDWORKS

List of Experiments:

SOLIDWORKS

1. Part design of different components using Solid works
2. Assembly of given parts using Solid works
3. Thermal analysis of a rectangular plate with circular hole (steady state)
4. Thermal analysis of a rectangular plate with circular hole (transient)
5. Stress analysis of the corner angle bracket
6. Stress analysis of an axis-symmetric component
7. Thermal stress analysis within the rectangular plate
8. Model analysis of cantilever beam without load
9. Model analysis of cantilever beam with load

FEMAP

1. Force and stress analysis using four link elements in trusses
2. Stress and deflection analysis in simply supported beam with point load
3. Stress and deflection analysis in simply supported beam with uniformly varying load
4. Stress and deflection analysis in simply supported beam with uniformly distributed load

Semester	VI	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20MEL12
Name of the Course	Computer Numerical Control Programming Lab					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Describe the features of CNC Machine Tool.	K2
CO2	Examine the applications of various CNC machines like CNC lathe, CNC Vertical	K3
CO3	Interpret CNC Programmes for turning applications	K3
CO4	Prepare CNC programmes for milling applications	K3
CO5	Review modern control systems	K2

CNC LATHE OPERATIONS

1. FACING CYCLE
2. TURNING CYCLE
3. STEP TURNING
4. TAPER TURNING
5. TURNING - CIRCULAR INTERPOLATION
6. THREADING

CNC MILLING OPERATIONS

1. LINEAR AND CIRCULAR INTERPOLATION
2. ENGRAVING
3. MIRRORING
4. ROTATION
5. CIRCULAR POCKETING
6. RECTANGULAR POCKETING

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE4
Name of the Course	Tool and Die Design **Professional Elective – II**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Describe various tool materials and their applications.	K2
CO2	Construct cutting die with required specifications	K3
CO3	Construct non-cutting die with required specifications	K3
CO4	Explain various types of jigs and fixtures with design data	K2
CO5	Discuss various components and types of die casting dies	K2

UNIT – I

Tool Materials properties and applications of Carbon steels – plain carbon steels, plain carbon spring steels, plain carbon free cutting steels.
Case hardening steels – Case hardening alloy steels, Nitriding steels.
Tool steels-Cold work water hardening steel, cold work oil/air hardening steel, hot work tool steel

UNIT – II

PRESS TOOLS (Cutting dies)

Introduction, components of simple die, press features, types of dies, clearance between die and punch, dowels and screws, punch holder and die holder, press work operations, cutting force, die block design, punch design, stripper plate, die springs, stock strip stops, strip payout, design procedure of cutting dies, design calculations.

UNIT – III

PRESS TOOLS (Non-Cutting dies)

Bending dies-Introduction, types of bending, bending force, bend allowance, spring back
Forming-Introduction, types of forming dies
Drawing-Introduction, drawing dies, factors effecting drawing, blank size calculation, clearance between punch and die, draw ratio, thickness ratio, drawing force, blank holder pressure, redrawing, ironing, calculation of number of draws, lubricants for drawing, design procedure for drawing die, design calculations for drawing die

UNIT – IV
JIGS AND FIXTURES
Introduction, advantages, design principles, design factors, design steps, location, rules for location, degrees of freedom, 3-2-1 principle of location, locating methods and devices, diamond pin locator, fool proofing, jig bushes, clamping devices, types of clamping devices, box jig, leaf jig, milling fixture, grinding fixture

UNIT – V
DIE CASTING DIE
Introduction, steps of die casting process, types of die casting processes, die casting alloys, advantages, limitations, applications of die casting, hot chamber and cold chamber machines.

TEXT BOOKS:
1. Industrial steel reference book by S N Bagchi, kuldipprakash by New age international Publishers.
2. Press Tools Design and Construction by Joshi P. H. by S Chand & Co Ltd
3. Jigs and fixtures Design manual by P H Joshi by McGraw-Hill companies

REFERENCE BOOKS:
1. Tool Engineering, jigs and fixtures by Albert A. Dowd and Frank W. Curtis by McGraw-Hill companies.
2. ASM Hand book Vol14 Forming and forging by ASM International

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE5
Name of the Course	Industrial Automation and Robotics **Professional Elective – II**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Describe various robot configuration and components.	K2
CO2	Select appropriate actuator sand sensors for a robot based on specific application.	K3
CO3	Apply kinematic and dynamic analysis for simple serial kinematic chains.	K3
CO4	Explain trajectory planning for a manipulator	K2
CO5	Understand the Robot Actuators And Feed Back Components	K2

UNIT – I

INTRODUCTION TO INDUSTRIAL AUTOMATION: Importance of the automation of an industrial system. Basic concepts: plant, control, operator, sensors, drives, open loop control, closed loop control, continuous processes, discrete processes, mixed processes, batch processing. Functional and physical architecture of the control of a system. Automation pyramid. Function of each level. Technological elements of each level: sensor networks, field buses, controllers (PLCs), instrumentation, drives, robots, plant buses, RTUs, local area networks and control centers. OSI communications model. Control types: centralized, distributed. Real time control.

UNIT – II

INTRODUCTION TO ROBOTICS: Automation principle in Robotics, CAD/CAM and Robotics–An overview of Robotics–present and future applications, classification by coordinate system.

COMPONENTS OF THE INDUSTRIAL ROBOTICS: Function line diagram representation of simple Robot, Components. Degrees of freedom –Requirements and challenges of end effectors. Mechanical, Electrical and hydraulic grippers.

UNIT– III

MOTION ANALYSIS: Homogeneous transformations as applicable to rotation and translation – problems. MANIPULATOR KINEMATICS: Specifications of matrices, D-H notation joint coordinates and world coordinates Forward and inverse kinematics – problems. Differential transformation and manipulators, Jacobians– problems.

UNIT– IV

GENERAL CONSIDERATIONS IN PATH DESCRIPTION AND GENERATION : Trajectory planning and avoidance of obstacles, path planning, Skew motion, joint integrated motion –straight line motion – Robot programming, languages, and software packages-description of paths with a robot programming language.

ROBOT ACTUATORS AND FEED BACK COMPONENTS: Actuators: Pneumatic, Hydraulic actuators, electric & step per motors.

UNIT– V

FEEDBACK COMPONENTS: Position sensors –potentiometers, resolvers, encoders and Velocity, proximity sensors.

ROBOT APPLICATIONS IN MANUFACTURING: Material Transfer–Material handling, loading, and unloading – Processing– spot and continuous arc welding & spray painting –Assembly and Inspection.

TEXT BOOKS:

1. Industrial Robotics/ Groover MP/ Pearson Edu.
2. Robotics and Control/Mittal RK & Nagrath IJ /TMH.

REFERENCE BOOKS:

1. Robotics/ FuK S/McGraw Hill.
2. Robotic Engineering/ Richard D.Kl after, Prentice Hall
3. Robot Analysis and Intelligence/ Asada and Slow time/ Wiley Inter-Science.
4. Introduction to Robotics /John JCraig / Pearson Edu.

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE6
Name of the Course	Product Design and Development **Professional Elective – II**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Discuss proto typing of a product that meets established requirements.	K2
CO2	Describe product development, manufacturing and management.	K2
CO3	Investigate risk and identify corrective action.	K4
CO4	Experiment different tests and assess data.	K3
CO5	Illustrate maintenance concepts and product standardization.	K3

UNIT – I

Product Design Process: Design Process Steps, Morphology of Design. Problem Solving and Decision Making: Problem-Solving Process, Creative Problem Solving, Invention, Brainstorming, Morphological Analysis, Behavioral Aspects of Decision Making, Decision Theory, Decision Matrix, Decision Trees.

Modeling and Simulation: Triz, Role of Models in Engineering Design, Mathematical Modeling, Similitude and Scale Models, Computer Simulation, Geometric Modeling on Computer, Finite- Element Analysis.

UNIT – II

Product management: The operation of product management: Customer focus of product management , product planning process, Levels of strategic planning, Wedge analysis, Opportunity search, Product life cycle Life cycle theory and practice.

Product development: Managing new products, Generating ideas, Sources of product innovation, Selecting the best ideas, The political dimension of product design, Managing the product launch and customer feedback.

Product managers and manufacturing: The need for effective relationships, The impact of manufacturing processes on product decisions, Prototype planning,, Productivity potentials, Management of product quality, Customer service levels.

UNIT – III

Risk and Reliability: Risk and Society, Hazard Analysis, Fault Tree Analysis. Failure Analysis and Quality: Causes of Failures, Failure Modes, Failure Mode and Effect Analysis, FMEA Procedure, Classification of Severity, Computation of Criticality Index, Determination of Corrective Action, Sources of Information, Copyright and Copying. Patent Literature.

UNIT – IV

Product Testing: thermal, vibration, electrical, and combined environments, temperature testing, vibration testing, test effectiveness. Accelerated testing and data analysis, accelerated factors. Weibull probability plotting, testing with censored data.

UNIT – V

Design For Maintainability: Maintenance Concepts and Procedures, Component Reliability, Maintainability and Availability, Fault Isolation in design and Self-Diagnostics. Product Design for Safety, Product Safety and User Safety Concepts, Examples of Safe Designs. Design Standardization and Cost Reduction: Standardization Methodology, Benefits of Product Standardization; International, National, Association and Company Level Standards; Parts Modularization

TEXT BOOKS:

1. Engineering Design , George E. Dieter, McGRAW-HILL
2. Product Integrity and Reliability in Design, John W. Evans and Jillian Y. Evans, Springer Verlag

REFERENCE BOOKS:

1. The Product Management Handbook, Richard S. Handscombe, McGRAW-HILL
2. New Product Design, Ulrich Eppinger,
3. Product Design, Kevin Otto.

Syllabi for the courses offered in VII semester B. Tech under V20 Regulation
for the Academic Year 2023-2024
VII Semester

Semester	**VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE7
Name of the Course	Finite Element Methods **Professional Elective – III**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Use the concepts of variational methods and weighted residual methods in FEM.	K3
CO2	Use Finite Element Formulation for solving the problems.	K3
CO3	Solve the problems of Truss elements and Beam elements by FEM.	K3
CO4	Use FEM to solve 2D CST problems.	K3
CO5	Apply finite element method for problems involving dynamics and heat transfer.	K3

UNIT – I
INTRODUCTION TO FINITE ELEMENT METHOD: stress and equilibrium, strain – displacement relations, stress-strain relations, plane stress and plane strain conditions, variational and weighted residual methods, the concept of potential energy, one-dimensional problems.

UNIT – II
FINITE ELEMENT FORMULATION: Discretization of the domain, element shapes, discretization procedures, assembly of stiffness matrix, bandwidth, node numbering, mesh generation, interpolation functions, convergence requirements, Treatment of Boundary conditions, Derivation of element stiffness matrix for Bar elements and problems

UNIT – III
ANALYSIS OF TRUSSES: Finite element modelling, coordinates and shape functions, assembly of global stiffness matrix and load vector, finite element equations, treatment of boundary conditions, stress, strain and support reaction calculations.

ANALYSIS OF BEAMS: Derivation of Element stiffness matrix for beam element, derivation of load vector for concentrated and UDL, Problems on Cantilever, simply supported beams with point and uniformly distributed loads.

UNIT – IV

Finite element modelling of two-dimensional stress analysis with constant strain triangles and treatment of boundary conditions, formulation of axisymmetric problems,

HIGHER ORDER AND ISOPARAMETRIC ELEMENTS: One dimensional quadratic and cubic elements in natural coordinates, two dimensional four node disoparametric elements, numerical integration.

UNIT-V

STEADY STATE HEAT TRANSFER ANALYSIS: one dimensional analysis of a fin and two dimensional analysis of thin plate, analysis of a uniform shaft subjected to torsion.

DYNAMIC ANALYSIS: Formulation of finite element model, element consistent and lumped mass matrices, evaluation of eigen values and eigen vectors, free vibration analysis.

TEXT BOOKS:

1. The Finite Element Methods in Engineering / S. S Rao / Pergamon.

REFERENCE BOOKS:

1. Finite Element Method with applications in Engineering / YM Desai, Eldho& Shah /Pearson publishers
2. An introduction to Finite Element Method / JN Reddy / McGraw Hill
3. The Finite Element Method for Engineers – Kenneth H. Huebner, Donald L. Dewhirst, Douglas E. Smithand Ted G. Byrom / John Wiley &Sons (ASIA) Pte Ltd.
4. Finite Element Analysis/ P.Seshu
5. Finite Element Methods: Basic Concepts and Applications ByChennakesava R. Alavala
6. Finite Element Analysis: for students & Practicing Engineers / G.LakshmiNarasaiah / BSP Books Pvt. Ltd.

Semester	**VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE8
Name of the Course	Tribology **Professional Elective – III**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the fundamentals of tribology and associated parameters.	K2
CO2	Apply concepts of tribology for the performance analysis and design of components experiencing relative motion.	K3
CO3	Analyse the requirements and design hydrodynamic journal and plane slider bearings for a given application.	K4
CO4	Select proper bearing materials and lubricants for a given tribological application.	K3
CO5	Apply the principles of surface engineering for different applications of tribology.	K3

UNIT – I

Introduction to tribology: Friction, Wear and Lubrication, practical importance. Lubricants: Types and specific field of applications. Properties of lubricants, viscosity, its measurement, effect of temperature and pressure on viscosity, lubrication types, standard grades of lubricants, and selection of lubricants.

UNIT – II

Friction: Origin, friction theories, measurement methods, friction of metals and non-metals.

Wear: Classification and mechanisms of wear, delamination theory, debris analysis, testing methods and standards. Related case studies.

UNIT – III

Hydrodynamic journal bearings: Friction forces and power loss in a lightly loaded journal bearing, Petroff's equation, mechanism of pressure development in an oil film, and Reynold's equation in 2D.

Introduction to idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's number and it's significance; partial bearings, end leakages in journal bearing, numerical examples on full journal bearings only.

UNIT – IV

Plane slider bearings with fixed/pivoted shoe: Pressure distribution, Load carrying capacity, coefficient of friction, frictional resistance in a fixed/pivoted shoe bearing, center of pressure, numerical examples.
Hydrostatic Lubrication: Introduction to hydrostatic lubrication, hydrostatic step bearings, load carrying capacity and oil flow through the hydrostatic step bearing, numerical examples.

UNIT – V
Bearing Materials: Commonly used bearings materials, and properties of typical bearing materials. Advantages and disadvantages of bearing materials.
Introduction to Surface engineering: Concept and scope of surface engineering. Surface modification – transformation hardening, surface melting, thermo chemical processes. Surface Coating – plating, fusion processes, vapor phase processes. Selection of coating for wear and corrosion resistance.

TEXT BOOKS:
1.”Introduction to Tribology”, B. Bhushan, John Wiley & Sons, Inc., New York, 2002
2. “Engineering Tribology”, Prasanta Sahoo, PHI Learning Private Ltd, New Delhi, 2011.
3.“Engineering Tribology”, J. A. Williams, Oxford Univ. Press, 2005.

REFERENCE BOOKS:
1. “Introduction to Tribology in bearings”, B. C. Majumdar, Wheeler Publishing.
2. “Tribology, Friction and Wear of Engineering Material”, I. M.Hutchings, Edward Arnold, London,1992.
3. “Engineering Tribology”, G. W. Stachowiak and A. W. Batchelor, Butterworth-Heinemann,1992.
4. “Friction and Wear of Materials”, Ernest Rabinowicz, John Wiley & sons,1995.
5. “Basic Lubrication Theory”, A. Cameron, Ellis Hardwoods Ltd., UK.
6. “Handbook of tribology: materials, coatings and surface treatments”, B.Bhushan, B.K. Gupta, McGraw-Hill,1997.

Semester	VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEPE9
Name of the Course	Micro Electro Mechanical Systems (MEMS) **Professional Elective – III**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand about the basics of MEMS, Methods of Micro machining.	K2
CO2	Interpret various Mechanical and Thermal sensors & Actuators	K3
CO3	Differentiate between different types of MOEMS devices	K2
CO4	Illustrate and explain various Magnetic sensors and Actuators & its applications	K3
CO5	Illustrate and explain various micro-fluidic devices & its applications	K3

UNIT – I

INTRODUCTION: Definition of MEMS, MEMS history and development, micro machining, lithography principles & methods, structural and sacrificial materials, thin film deposition, surface micro machining, Bulk micro machining , wafer bonding, LIGA.

UNIT – II

MECHANICAL SENSORS AND ACTUATORS: Principles of sensing and actuation: beam and cantilever, capacitive, piezo electric, pressure, shear mode piezo actuator, gripping piezo actuator, Inchworm technology.

THERMAL SENSORS AND ACTUATORS Thermal energy basics and heat transfer processes, thermo couple, micro hot plate gas sensors, pyro electricity, shape memory alloys (SMA).

UNIT – III

MICRO-OPTO-ELECTRO MECHANICAL SYSTEMS: Principle of MOEMS technology, properties of light, light modulators, beam splitter, micro lens, micro mirrors, digital micro mirror device (DMD), light detectors, grating light valve (GLV), optical switch.

UNIT – IV

MAGNETIC SENSORS AND ACTUATORS: Magnetic materials for MEMS and properties, magnetic sensing and detection, magneto resistive sensor, more on hall effect, magneto diodes, magneto transistor, MEMS magnetic sensor.

UNIT – V

MICRO FLUIDIC SYSTEMS: Applications, considerations on micro scale fluid, fluid actuation methods, dielectro phoresis (DEP), electro wetting, electro thermal flow, thermo capillary effect, electro osmosis flow, opto electro wetting (OEW), micro fluid dispenser, micro needle, micro pumps.

TEXT BOOKS:

1.MEMS, Nitaigour Premchand Mahalik, TMH Publishing co.

REFERENCE BOOKS:

1. Foundation of MEMS, Chang Liu, Prentice Hall Ltd.
2. MEMS and NEMS, Sergey Edwrd Lyshevski, CRC Press, Indian Edition.
3. MEMS and Micro Systems: Design and Manufacture, Tai-Ran Hsu, TMH Publishers.
4. Introductory MEMS, Thomas M Adams, Richard A Layton, Springer International Publishers.

Semester	VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEPE10
Name of the Course	Automobile Engineering **Professional Elective – IV**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand various components in four wheel automobile.	K2
CO2	Differentiate between different types of transmission systems used in automobile.	K4
CO3	Examine steering geometry and steering systems used in automobile and Interpret suspension systems in automobile	K3
CO4	Interpret breaking and electrical systems in automobile.	K3
CO5	Use various safety systems used in automobile and Practice engine service for different components in automobile.	K3

UNIT – I

INTRODUCTION: Components of four wheeler automobile – chassis and body – power unit – power transmission – rear wheel drive, front wheel drive, 4 wheel drive – types of automobile engines, engine construction, no. of cylinders and arrangement, turbo charging and super charging – engine lubrication, splash and pressure lubrication systems, oil filters, oil pumps – crank case ventilation – engine service, reboring, decarbonisation, Nitriding of crankshaft.

UNIT – II

TRANSMISSION SYSTEM: Clutches, principle, types, cone clutch, single plate clutch, multi plate clutch, magnetic and centrifugal clutches, fluid fly wheel – gear boxes, types, sliding mesh, construct mesh, synchro mesh gear boxes, epicyclic gear box, over drive torque converter. propeller shaft– Hotch – Kiss drive, Torque tube drive, universal joint, differential rear axles–types–wheels and tyres.

UNIT – III

STEERING SYSTEM: Steering geometry – camber, castor, king pin rake, combined angle toe in, center point steering. Types of steering mechanism – Ackerman steering mechanism, Davis steering mechanism, steering gears– types, steering linkages.

SUSPENSION SYSTEM: Objects of suspension systems – rigid axle suspension system, torsion bar, shock absorber, Independent suspension system.

UNIT –IV

BRAKING SYSTEM: Mechanical brake system, hydraulic brake system, master cylinder, wheel cylinder tandem master cylinder requirement of brake fluid, pneumatic and vacuum brakes.
ELECTRICAL SYSTEM: Charging circuit, generator, current – voltage regulator – starting system, bendix drive mechanism solenoid switch, lighting systems, horn, wiper, fuel gauge – oil pressure gauge, engine temperature indicator etc.
UNIT – V
SAFETYSYSTEMS: Introduction, safety systems - seatbelt, airbags, bumper, antilock brake system (ABS), wind shield, suspension sensors, traction control, mirrors, central locking and electric windows, speed control.
ENGINE SERVICE: Introduction, service details of engine cylinder head, valves and valve mechanism, piston connecting rod assembly, cylinder block, cranks haft and main bearings, engineer assembly-precautions.

TEXT BOOKS:
1. Automotive Mechanics –Vol.1&Vol.2/Kirpal Singh/standard publishers
2. Automobile Engineering/William Crouse/TMHD istributors
3. Automobile Engineering/P.SGill/S.K.Kataria & Sons/ New Delhi.

REFERENCE BOOKS:
1. Automotive Engines Theory and Servicing/James D. Halderman and Chase D. Mitchell Jr.,/ Pearson educationinc.
2. Automotive Engineering/K Newton,W.Steeds & TKGarrett/SAE
3. AutomotiveMechanics:PrinciplesandPractices/JosephHeitner/VanNostrandReinhold
4. Automobile Engineering/CSrinivasan/ McGrawHill

Semester	**VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	1	0	4	V20MEPE11
Name of the Course	Cryogenics **Professional Elective – IV**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Illustrate the basics for evolution of low temperature science, Understand properties of materials at cryogenic temperatures.	K3
CO2	Illustrate various liquefaction systems.	K3
CO3	Illustrate gas liquefaction systems.	K3
CO4	Illustrate Cryogenic Refrigeration systems.	K3
CO5	Illustrate Cryogenic fluid storage and transfer system.	K3

UNIT – I

Introduction to Cryogenic Systems, Historical development, Low Temperature properties of Engineering Materials, Mechanical properties- Thermal properties- Electric and magnetic properties – Cryogenic fluids and their properties.

Applications of Cryogenics: Applications in space, Food Processing, super conductivity, Electrical Power, Biology, Medicine, Electronics and Cutting Tool Industry. Low temperature properties of engineering materials.

UNIT – II

Liquefaction systems ideal system, Joule Thoms on expansion, Adiabatic expansion, Linde Hampson Cycle, Claude & Cascaded System, Magnetic Cooling, Stirling Cycle Cryo Coolers.

UNIT – III

Gas liquefaction systems: Introduction - Production of low temperatures - General Liquefaction systems - Liquefaction systems for Neon. Hydrogen and Helium – Critical components of Liquefaction systems.

UNIT –IV

Cryogenic Refrigeration systems: Ideal Refrigeration systems - Refrigeration using liquids and gases as refrigerant- Refrigerators using solids as working media.

UNIT – V

Cryogenic fluid storage and transfer systems: Cryogenic Storage vessels and Transportation, Thermal insulation and their performance at cryogenic temperatures, Super Insulations, Vacuum insulation, Powder insulation, Cryogenic fluid transfer systems.

TEXT BOOKS:

1.R.B.Scott,CryogenicEngineering,VanNostrandCo., 1959
2.RandalF.Barron,Cryogenicsystems,McGraw Hill,1986

REFERENCE BOOKS:

1. Klaus D.Timmerhaus and Thomas M.Flynn, Cryogenic Process Engineering, Plenum Press, New York, 1989.

Semester	**VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEPE12
Name of the Course	Design for Manufacturing and Assembly **Professional Elective – IV**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Explain how a design can be made suitable for various manufacturing and assembly processes.	K2
CO2	Express various factors influencing the manufacturability of components.	K2
CO3	Illustrate various metal casting, extrusion and sheet metal work.	K2
CO4	Apply different factors to joining processes.	K3
CO5	Explain various assembly systems and assembly lines.	K2

UNIT – I

Introduction to DFM, DFMA: How Does DFMA Work? Reasons for Not Implementing DFMA, What Are the Advantages of Applying DFMA During Product Design?, Typical DFMA Case Studies, Overall Impact of DFMA on Industry.

Design for Manual Assembly: General Design Guidelines for Manual Assembly, Development of the Systematic DFA Methodology, Assembly Efficiency, Effect of Part Symmetry, Thickness, Weight on Handling Time, Effects of Combinations of Factors, Application of the DFA Methodology.

UNIT – II

Machining processes: Overview of various machining processes-general design rules for machining-dimensional tolerance and surface roughness-Design for machining – ease – redesigning of components for machining ease with suitable examples. General design recommendations for machined parts.

UNIT – III

Metal casting: Appraisal of various casting processes, selection of casting process,-general design considerations for casting-casting tolerance-use of solidification, simulation in casting design-product design rules for sand casting.

Extrusion & Sheet metal work: Design guide lines extruded sections-design principles for punching, blanking, bending, deep drawing-Keeler Goodman forging line diagram – component design for blanking.

UNIT – IV

Metal joining: Appraisal of various welding processes, factors in design of weldments – general design guidelines-pre and post treatment of welds-effects of thermal stresses in weld joints-design of brazed joints. Forging: Design factors for forging – closed die forging design – parting lines of dies – drop forging die design – general design recommendations.

UNIT – V

Design for Assembly Automation: Fundamentals of automated assembly systems, System configurations, parts delivery system at workstations, various escapement and placement devices used in automated assembly systems, Quantitative analysis of Assembly systems, Multi station assembly systems, single station assembly lines.

TEXTBOOKS:

1. Design for manufacture, John cobert,AdissonWesley.1995
2. Design for Manufacture and assembly by Boothroyd,3rd edition CRC press
3. Design for manufacture, James Bralla, 2nd edition Mc Graw Hill

REFERENCES BOOK:

1. ASM Hand book Vol.20, Taylor & Francis 1997

Semester	VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEPE13
Name of the Course	Power Plant Engineering **Professional Elective – V**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Explain the working and layout of steam power plant and the different systems comprising the plant.	K2
CO2	Describe the basic components and working principle of hydroelectric power plant.	K2
CO3	Explain the working principles, layouts of diesel power plant and gas turbine power plants.	K2
CO4	Describe the basic components and working principle of different reactors of nuclear power plant.	K2
CO5	Compute the power plant economics.	K3

UNIT – I

Introduction to the Sources of Energy.

Steam Power Plant: Plant layout, working of different circuits, coal handling equipment, ash handling systems, overfeed and underfeed fuel beds, types of stokers, dust collectors, cooling towers and feed water treatment.

UNIT – II

Hydro Electric Power Plant: Water power, hydrological cycle, hydrographs, classification of dams and spill ways.

Hydro Projects and Plant: Classification – typical layouts – plant auxiliaries – plant operation pumped storage plants.

UNIT – III

Diesel power Plant: IC Engines, types, Plant layout with auxiliaries – fuel supply system, air starting equipment, lubrication and cooling system, super charging.

Gas Turbine Plant: Introduction, classification, construction, Layout with auxiliaries, Principles of working of closed and open cycle gas turbines, combined cycle power plants and comparison.

UNIT – IV

Nuclear Power Station: Nuclear fuel – breeding and fertile materials, nuclear reactor – reactor operation. Types of reactors and their operation - Pressurized water reactor, boiling water reactor, sodium-graphite reactor, fast breeder reactor. Radiation hazards and shielding, radioactive waste disposal.

UNIT – V

Power Plant Economics: Capital cost, investment of fixed charges, operating costs, general arrangement of power distribution, load curves, load duration curve, definitions of connected load, maximum demand, demand factor, average load, load factor, diversity factor – related exercises.

TEXT BOOKS:

1. A course in Power Plant Engineering /Arora and Domkundwar/Dhanpatrai& Co.
2. Power Plant Engineering /P.C.Sharma / S.K.Kataria Pub

REFERENCE BOOKS:

1. Power Plant Engineering: P.K.Nag/ TMH.

Regulation	V20	3	0	0	3	V20MEPE14
Name of the Course	Non Destructive Testing and Evaluation **Professional Elective – V**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Identify the flaws in manufacturing process through radiographic inspection	K2
CO2	Explain the theory of wave propagation and inspect the components using ultrasonic test	K2
CO3	Identify various surface, subsurface flaws with LPT and ECT	K2
CO4	Explain the principle of magnetic particle test system, flaw detection and evolution	K2
CO5	Explain the industrial applications in railways, nuclear, aerospace	K2

UNIT – I
Introduction to non-destructive testing, Radiographic test, Sources of X and Gamma Rays and their interaction with Matter, Radiographic equipment, Radiographic Techniques, Safety Aspects of Industrial Radiography.

UNIT – II
Ultrasonic test: Principle of Wave Propagation, Reflection, Refraction, Diffraction, Mode Conversion and Attenuation, Sound Field, Piezo-electric Effect, Ultrasonic Transducers and their Characteristics, Ultrasonic Equipment and Variables Affecting Ultrasonic Test, Ultrasonic Testing, Interpretations and Guidelines for Acceptance, Rejection, Effectiveness and Limitations of Ultrasonic Testing.

UNIT – III
Liquid Penetrant Test: Liquid Penetrant Test, Basic Concepts, Liquid Penetrant System, Test Procedure, Effectiveness and Limitations of Liquid Penetrant Testing.
Eddy Current Test: Principle of Eddy Current, Eddy Current Test System, Applications of Eddy Current Testing Effectiveness of Eddy Current Testing.

UNIT – IV
Magnetic Particle Test: Magnetic Materials, Magnetization of Materials, Demagnetization of Materials, Principle of Magnetic Particle Test, Magnetic

Particle Test Equipment, Magnetic Particle Test Procedure, Standardization and Calibration, Interpretation and Evaluation, Effective Applications and Limitations of the Magnetic Particle Test.

UNIT – V

Industrial Applications of NDE: Span of NDE Activities Railways, Nuclear, Non-nuclear and Chemical Industries, Aircraft and Aerospace Industries, Automotive Industries, Offshore Gas and Petroleum Projects, Coal Mining Industry, NDE of pressure vessels, castings, welded constructions.

TEXT BOOKS:

1. Non destructive test and evaluation of Materials/J Prasad, GCK Nair/TMH Publishers
2. Ultrasonic testing of materials/ H Krautkramer/Springer
3. Non destructive testing/Warren, J Mc Gonnagle / Godan and Breach Science publishers
4. Non destructive evaluation of materials by infrared thermography / X. P. V. Maldague, Springer-Verlag,
   1st edition, (1993)

REFERENCE BOOKS:
1. Ultrasonic inspection training for NDT/ E. A. Gingel/Prometheus Press,
2. ASTM Standards, Vol 3.01, Metals and alloys
3. Non-destructive, Hand Book – R. Hamchand

Semester	VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEPE15
Name of the Course	Gas Dynamics and Jet Propulsion **Professional Elective – V**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the basic principles of Gas Dynamics.	K2
CO2	Apply governing equations of Isentropic Flow.	K3
CO3	Illustrate governing equations of Fanno Flow, Rayleigh Flow.	K3
CO4	Develop governing equations of Normal Shock.	K3
CO5	Examine jet engines, rocket engines and associated parameters.	K3

UNIT – I

Introduction to gas dynamics: control volume and system approaches acoustic waves and sonic velocity, mach number, classification of fluid flow based on mach number, mach cone, compressibility factor, general features of one dimensional flow of a compressible fluid, continuity and momentum equations for a control volume.

UNIT – II

Isentropic flow of an ideal gas: basic equation, stag nation enthalpy, temperature, pressure and density, acoustic speed, critical speed of sound, maximum fluid velocity, mach number M*, area ratio as function of mach number, dimensionless velocity, governing equations for isentropic flow of a perfect gas, critical flow area, stream thrust an dimpulse function.

Steady one dimensional is entropic flow with area change, effect of area change on flow parameters, chocking, convergent nozzle, performance of a nozzle under decreasing backpressure, De lavelnozzle, optimum area ratioeffect of back pressure, nozzle discharge coefficients, nozzle efficiencies.

UNIT – III

Simple frictional flow: adiabatic flow with friction in a constant area duct, governing equations, fanno line limiting conditions, effect of wall friction on flow properties in an Isothermal flow with friction in a constant are a duct, governing equations, limiting conditions.

Steady one dimensional flow with heat transfer in constant area duct, governing equations, Rayleigh line entropy change caused by heat transfer, conditions of maximum enthalpy and entropy.

UNIT – IV

Effect of heat transfer on flow parameters: Intersection of Fanno and Rayleigh lines, Shock waves in perfect gas, properties of flow across a normal shock, governing equations, Rankine Hugoniat equations, Prandtl's velocity relationship, converging diverging nozzle flow with shock thickness, shock strength.

UNIT – V

Propulsion: Air craft propulsion: types of jet engines, energy flow through jet engines, thrust, thrust power and propulsive efficiency, turbojet components - diffuser, compressor, combustion chamber, turbines, exhaust systems.
Performance of turbo propeller engines, ramjet and pulse jet, scram jet engines.
Rocket propulsion-rocket engines, Basic theory of equations - thrust equation, effective jet velocity, specific impulse, rocket engine performance, solid and liquid propellant rockets, comparison of various propulsion systems.

TEXT BOOKS:

1. Compressible fluid flow/A.H.Shapiro/Ronald Press Co.,1953
2. Fundamentals of compressible flow with air craft and rocket propulsion / S.M.Yahya / New Age international Publishers
3. Fundamental of Gasdynamics-2nd edition/MJZucker/Wiley publishers

REFERENCE BOOKS:

1. Elements of gas dynamics/HW Liepman & ARoshko /Wiley
2. Air craft & Missile propulsion/MJ Zucrow/Wiley
3. Gas dynamics/M.J.Zucrow & Joe D.Holfman / Krieger Publishers

		L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEJO1
Name of the Course	CAD / CAM **Job Oriented Course**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the basics of CAD/CAM and different representations of curves	K2
CO2	Identify the basic components to solve different surface models	K2
CO3	Interpret the functionality of numerical control systems to write the programming	K3
CO4	Illustrate part families and group technology models	K3
CO5	Apply appropriate process strategy to achieve FMS	K3

UNIT – I

Fundamentals of CAD/ CAM, Application of computers for Design and Manufacturing, Benefits of CAD/ CAM - Computer peripherals for CAD/ CAM, Design workstation, Graphic terminal, CAD/ CAM software- definition of system software and application software, CAD/ CAM database and structure.

Geometric Modeling: Wire frame modeling, wire frame entities, Interpolation and approximation of curves, Concept of parametric and non-parametric representation of curves, Curve fitting techniques, definitions of cubic spline, Bezier, and B-spline.

UNIT – II

Surface Modeling: Algebraic and geometric form, Parametric space of surface, Blending functions, parameterization of surface patch, Subdividing, Cylindrical surface, Ruled surface, Surface of revolution Spherical surface, Composite surface, Bezier surface. B-spline surface, Regenerative surface and pathological conditions.

Solid Modeling: Definition of cell composition and spatial occupancy enumeration, Sweep representation, Constructive solid geometry, Boundary representations.

UNIT – III

NC Control Production Systems: Numerical control, Elements of NC system, NC part programming: Methods of NC part programming, manual part programming, Computer assisted part programming, Post Processor, Computerized part program, SPPL (A Simple Programming Language). CNC, DNC and Adaptive Control Systems.

UNIT – IV

Group Technology: Part families, Parts classification and coding. Production flow analysis, Machine cell design. Computer aided process planning: Difficulties in traditional process planning, Computer aided process planning: retrieval type and generative type, Machinability data systems.

Computer Aided Manufacturing Resource Planning: Material resource planning, inputs to MRP, MRP output records, Benefits of MRP, Enterprise resource planning, Capacity requirements planning

UNIT – V

Flexible Manufacturing System: F.M.S equipment, FMS layouts, Analysis methods for FMS benefits of FMS.

Computer Aided Quality Control: Automated inspection- Off-line, On-line, contact, Non-contact; Coordinate measuring machines, Machine vision.

Computer Integrated Manufacturing: CIM system, Benefits of CIM

TEXT BOOKS:

1. CAD/CAM Concepts and Applications/ Alavala / PHI
2. CAD/CAM Principles and Applications/P.N. Rao/Mc Graw Hill
3. CAD/CAM/ GrooverM.P/ Pearson
4. CAD/CAM/CIM/Radha Krishnan and Subramanian/New Age

		L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEJO2
Name of the Course	Refrigeration and Air conditioning **Job Oriented Course**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Apply the concept of refrigeration to various systems.	K3
CO2	Employ the methods to improve performance of vapor compression systems.	K3
CO3	Identify eco-friendly refrigerants and understanding various VCR System Components.	K2
CO4	Analyze cooling and heating loads in an air conditioning system.	K4
CO5	Explain various air conditioning systems.	K2

UNIT – I

INTRODUCTION TO REFRIGERATION: Necessity and applications – Unit of refrigeration and C.O.P. –Mechanical refrigeration – Types of ideal cycles of refrigeration.

Air refrigeration: Bell Coleman cycle - Open and Dense air systems – Refrigeration needs of Air crafts-Refrigeration systems used in air crafts and Problems.

UNIT – II

VAPOUR COMPRESSION REFRIGERATION: Working principle and essential components of the plant –simple vapour compression refrigeration cycle – COP – Representation of cycle on T-S and p-h charts – Effect of sub cooling and super heating – Cycle analysis – Actual cycle influence of various parameters on system performance – Use of p-h charts – Problems.

UNIT – III

Refrigerants – Classification – Desirable properties of an ideal refrigerant – Common refrigerants used – Nomenclature of refrigerants .

VCR System Components: Compressors – General classification – comparison – Advantages and Disadvantages. Condensers – Classification – Working Principles. Evaporators – Classification – Working Principles. Expansion devices – Types – Working Principles.

UNIT – IV
VAPOR ABSORPTION SYSTEM: Calculation of maximum COP – description and working of Water-Ammonia Systems, Water-Lithium Bromide System. Principle of operation three fluid absorption system, salient features.
INTRODUCTION TO AIR CONDITIONING: Psychometric properties & Processes – Characterization of sensible and latent heat loads — Need for ventilation, Consideration of infiltration – Load concepts of RSHF, GSHF- Problems, concept of ESHF and ADP temperature.

UNIT – V
AIR CONDITIONING SYSTEMS: Classification of equipment, Components related to Air- Conditioning Systems- filters, grills and registers, fans and blowers.

TEXT BOOKS:

1. A Course in Refrigeration and Air conditioning , SC Arora & Domkundwar, Dhanpatrai
2. Refrigeration and Air Conditioning , CP Arora, TMH.
3. Refrigeration and Air Conditioning / Manohar Prasad / New Age

REFERENCE BOOKS:
1. Principles of Refrigeration /Dossat / Pearson Education.
2. Basic Refrigeration and Air-Conditioning / Ananthanarayanan / TMH
3. Stoecker, W. F., and Jones, J. W., Refrigeration and Air-Conditioning, McGraw - Hill, New Delhi.
4. Data Book: Refrigerant and Psychrometric Properties - Tables and Charts [SI Units], MathurM. L.,and Mehta F. S., Jain Brothers.

		L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEJO3
Name of the Course	Integration of AI & ML in Mechanical Engineering **Job Oriented Course**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Apply ML models in design of mechanical materials	K3
CO2	Apply AI technologies for development of Robotics	K3
CO3	Apply AI to represent manufacturing problems	K3
CO4	Apply ML for engineering design	K3
CO5	Apply AI for thermal comfort systems	K3

UNIT – I

AI and ML in design of mechanical materials: Introduction – summary of ML models – data collection, generation and pre-processing – Applications – perspectives.

UNIT – II

Robotics and AI: Introduction – History – current state of the art – the seasons of AI and robotics – technologies and disciplines – limitations – weak and strong AI and robotics – the impact of government – major technological firms – programming languages – risks and fears

UNIT – III

Artificial intelligence in advanced manufacturing: Introduction to Artificial intelligence in advanced manufacturing – Evolution – Opportunities – Hierarchical approach to manufacturing systems – Manufacturing system optimization – AI for manufacturing applications of human robot collaboration – AI for condition based maintenance – AI for process monitoring, diagnostics and prognostics – AI for manufacturing process control – challenges and opportunities

UNIT – IV

Machine learning approach for engineering design: Introduction – model formation and use – Adaptive and interactive Modelling systems(AIMS) – Apply AIMS to engine design: engine design simulator, simulation and example generation – AIMS as support tool.

UNIT – V

AI for efficient thermal comfort systems: Introduction – thermal comfort: Air conditioning and personal thermal comfort system – AI for thermal comfort requirements – current applications and requirements of AI for thermal comfort in buildings – future directions for enabling autonomous personalized thermal comfort systems

		L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEJO4
Name of the Course	Industrial Safety and Management **Job Oriented Course**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the basic principles of Industrial Safety	K2
CO2	Discuss the principles of Directing for Safety	K2
CO3	Explain the principles of Safety Management	K2
CO4	Describe the role of Safety Committee	K2
CO5	Apply the knowledge for Accident Prevention	K3

UNIT – I

Henrichs Axioms Of Industrial Safety, Concepts Of Safety, Organization For Safety, Organization, Definition, Need & Principles Organizing For Health, and, Environmental, Activities, Organization Structure, Function & Responsibilities.

UNIT-II

Directing For Safety, Direction, Definition, Process, Principles and Techniques Leadership, Role, Function and, Attributes of a Leader.

UNIT-III

Safety Management System, Objectives of Health, Safety and Environment Policy, Responsibility for Implementation of HSE Policy.

UNIT-IV

Role of Occupier and Factory Manager, Factory Safety Committee, Structure and Functions and Working Tenure details etc.

UNIT-V

ACCIDENT PREVENTION :Definition : Incident, Accident, Injury , Dangerous occurrence ,Unsafe Act, Unsafe, Conditions, Hazards, Error, Oversight, Mistake ,Near Miss ,Electricity & Hazards ,Of Electricity, Explosives and Transportation Safety.

TEXT BOOKS:

1. Fundamentals of Industrial safety & health by K.U. Mistry.
2. Factories Act 1948.

		L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEJO5
Name of the Course	Industrial Hydraulics and Pneumatics **Job Oriented Course**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Identify the fundamentals of Fluid Power Systems found in industry today.	K2
CO2	Discuss various types of Fluid Power Actuators	K2
CO3	Illustrate various Hydraulic elements in the design of circuits	K3
CO4	Describe the operations of Accumulators & intensifiers typically used in industry.	K2
CO5	Illustrate various Pneumatic systems and their operations	K3

UNIT – I

Fundamentals of Fluid Power Systems – Introduction-types advantages, disadvantages & applications-fluid characteristics-terminologies used in fluid power-hydraulic symbols-hydraulic systems and components-sources pumping theory-gear, vane & piston pumps.

UNIT – II

Fluid Power Actuators: Introduction-hydraulic actuators-hydraulic cylinders types, construction, specifications and special types. Hydraulic motors working principle-selection criteria for various types-hydraulic motors in circuits

UNIT – III

Hydraulic elements in the design of circuits – Introduction-control elements direction control valve-check valve-pressure control valve-relief valve throttle valve-temperature & pressure compensation-locations of flow control valve.

UNIT – IV

Accumulators & intensifiers-types, size & function of accumulators application & circuits of accumulators – intensifiers – circuit & applications. Design & drawing of hydraulic circuits-Introduction-case study & specifications-method of drawing a hydraulic circuit-hydraulic cylinder – quick return of a hydraulic cylinder.

UNIT –V

Pneumatic systems-Introduction-symbols used-concepts & components comparison- types & specifications of compressors-arrangement of a complete pneumatic system-compressed air behaviour- understanding pneumatic circuits-direction control valves. Electro pneumatics- Introduction-Pilot operated solenoid valve-electrical connections to solenoids-electro pneumatic circuit switches-relays-solenoids- P.E converter-concept of latching.

TEXT BOOKS:
1.Introduction to Hydraulics and Pneumatics by S. Ilango and V. Soundararajan, PHI , New Delhi.
2.Applied hydraulics and pneumatics-T. Sunder Selwyn & R. Jayendiran, Anuradha Publications.

REFERENCE BOOKS:
1.Oil Hydraulic Systems, S.R .Majumdar, McGrawHill Companies.
2.Pneumatic Systems : Principles and Maintenance, Majumdar, Mc Graw Hill.

Semester	**VI**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEJO6
Name of the Course	Automation in Manufacturing **Job Oriented Course**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Explain Automation and types of Automations in the industries.	K2
CO2	Examine different Automated flow lines in the Industries.	K3
CO3	Asses and perform one or more processing and/or assembly operations on a starting raw material, part, or set of parts.	K3
CO4	Produce a sequence of automated or mechanized assembly operations Flexible manufacturing system (FMS)—a highly automated machine cell that produces part.	K3
CO5	Interpret logic controls, sensor, actuators and software configuration	K2

UNIT – I
Introduction: Types and strategies of automation, pneumatic and hydraulic components circuits, Automation in machine tools, Mechanical Feeding and to changing and machine tool control transfer the automation

UNIT – II
Automated flow lines: Methods or work part transport transfer Mechanical buffer storage control function, design and fabrication consideration. Analysis of Automated flow lines: General terminology and analysis of transfer lines without and with buffer storage, partial automation, implementation of automated flow lines .

UNIT – III
Assembly system and line balancing: Assembly process and systems assembly line, line balancing methods, ways of improving line balance, flexible assembly lines.

UNIT – IV
Automated material handling: Types of equipment, functions, analysis and design of material handling systems conveyor systems, automated guided vehicle systems. Automated storage systems: Automated storage and retrieval systems; work in process storage, interfacing handling and storage with manufacturing.

UNIT – V

Fundamentals of Industrial controls: Review of control theory, logic controls, sensors and actuators, Data communication and LAN in manufacturing. Business process Re-engineering: Introduction to BPE logistics, ERP, Software configuration of BPE.

TEXT BOOKS:

1. Automation, production systems and computer integrated manufacturing/ Mikell. P Groover
2. CAD/CAM/CIM/ P. Radha Krishnan & S. Subrahamanyarn and Raju/New Age International Publishers
3. System Approach to Computer Integrated Design and Manufacturing/ Singh/John Wiley

REFERENCE BOOKS:

1. Computer Aided Manufacturing/Tien-Chien Chang, Richard A. Wysk and Hsu-Pin Wang/ Pearson
2. Manufacturing and Automation Technology / R Thomas Wright and Michael Berkeihiser / Good Heart/Willcox Publishers

Annexure - II

Courses offered in OPEN ELECTIVES V, VI & VII Semester B.Tech., under V20 Regulations to the students of the other departments

Semester	**V /VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEOE1
Name of the Course	Basic Mechanical Engineering **Open Elective**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Discuss different types of materials, their properties and testing with applications.	K2
CO2	Interpret concepts of thermodynamics, Refrigeration, air conditioning and working of IC engines and air conditioners.	K2
CO3	Illustrate different manufacturing, joining, machining processes and machines with applications.	K2
CO4	Explain concepts of force, power transmission and power plants.	K2
CO5	Discuss the classification and working of pumps, turbines and gas turbines.	K2

UNIT – I
ENGINEERING MATERIALS AND PROCESSES:
ENGINEERING MATERIALS: Ferrous metals (Mild steel, Cast iron and its types, Stainless steel, High carbon steel), Non ferrous metals and alloys (Copper, Zinc, Aluminium, Tin, Nickel and their alloys).
Properties- Strength, Hardness, Toughness, Brittleness, Creep, Fatigue, Stiffness, Ductility, Malleability, Elasticity, Plasticity, Specific gravity, Viscosity, Thermal conductivity, Specific heat, Corrosion resistance.

UNIT – II
THERMAL SCIENCE:
THERMODYNAMICS: System, Surroundings, Thermodynamic equilibrium, Property, State, Path, Process, Cyclic process, Work, Heat, Energy, Enthalpy, Entropy, Internal energy, Laws of thermodynamics (Description only), Scales of temperature.

IC ENGINES: Classification, Carnot, Otto, Diesel Cycles with P-V and T-S diagrams, 2 and 4 stroke C.I and S.I engines, working, Hybrid engines, Indicated power, Brake power, efficiencies.
REFRIGERATION AND AIRCONDITIONING: Refrigerant and its types with applications, Unit of refrigeration, COP, working of vapour compression refrigeration.

UNIT – III
MANUFACTURING SCIENCE: Basic description of manufacturing processes-Casting, Forging, Rolling, Extrusion, Hot and cold working processes with applications.
METAL JOINING PROCESSES: Basic description with sketches-Rivetting, Arc welding, Gas welding, Soldering and Brazing with applications.

UNIT – IV

FORCE AND POWER TRANSMISSION:

FORCE SYSTEM AND ANALYSIS: Concepts of- Laws of motion, Free body diagrams, Resultant force, Equilibrium, Friction, laws of friction, Stress, types of stress, Strain, Poisson's ratio, Elastic constants, Moment, Moment of inertia, centroid, Torque.
POWER TRANSMISSION: Description of working with sketches-Belt, Chain drives, Gear trains with applications, Single plate clutches. Basic concepts of hydraulic and pneumatic power transmission.

UNIT – V
PUMPS AND PRIME MOVERS:
PUMPS: Classification of pumps, Description and working of- Reciprocating and centrifugal pumps with applications, priming, Multistage pumps., Discharge and coefficient of discharge.
PRIME MOVERS: Classification of hydraulic turbines, steam turbines, description and working of Pelton wheel and governing. Types of gas turbines and working of gas turbines with applications.

TEXT BOOKS:
1. Thermal Engineering –Rajput RK, Laxmi publications.
2. Elements of Mechanical Engineering-Sadhu singh, S.chand publications.
3. Basic Mechanical Engineering –Pravin kumar, Pearson publications.
4. Elements of Mechanical Engineering-N.M. Bhatt and J.R.Mehta, Mahajan publishing house.

REFERENCE BOOKS:
1. Production Technology-P.C.Sharma
2. Thermal Engineering-PL Ballaney
3. Power Plant Engineering-Nagpal
4. Workshop Technology-Hajra choudhury

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEOE2
Name of the Course	Green Engineering Systems **Open Elective**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Illustrate the concept of Solar Radiation, Collection, Storage and Applications	K2
CO2	Discuss the construction and working of wind energy and bio-energy conversion systems.	K2
CO3	Describe the construction and working of Geothermal and Ocean Energy conversion systems.	K2
CO4	Illustrate the principles of environmental impact of current manufacturing practices.	K2
CO5	Discuss the features and benefits of green building materials and its applications.	K2

UNIT – I

INTRODUCTION: SOLAR RADIATION: Role and potential of new and renewable sources, the solar energy option, Environmental impact of solar power, structure of the sun, the solar constant, sun-earth relationships, instruments for measuring solar radiation and sun shine, Flat plate and concentrating collectors.
SOLAR ENERGY STORAGE AND APPLICATIONS: Different Storage methods, solar ponds, solar applications- solar heating/cooling technique, solar distillation and drying, solar cookers, central power tower concept and solar chimney.

UNIT – II

WIND ENERGY: Sources and potentials, horizontal and vertical axis windmills, performance characteristics, types of winds.
BIO-MASS: Principles of bio-conversion, anaerobic/aerobic digestion, types of bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, bio fuels, I.C. engine operation.

UNIT – III

GEOTHERMAL ENERGY: Resources, types of wells, methods of harnessing the energy, potential in India.
OCEAN ENERGY: OTEC, Principles of utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics.

UNIT – IV

ENERGY EFFICIENT PROCESSES: Environmental impact of the current manufacturing practices and systems, benefits of green manufacturing systems, selection of recyclable and environment friendly materials in manufacturing, design and implementation of efficient and sustainable green production systems with examples like environmental friendly machining, vegetable based cutting fluids, zero waste manufacturing.

UNIT – V

GREEN BUILDINGS: Definition, features and benefits. Sustainable site selection and planning of buildings for maximum comfort. Environmental friendly building materials like bamboo, timber, rammed earth, hollow blocks, lime & lime pozzolana cement, agro materials and industrial waste, Ferro cement and Ferro-concrete, alternate roofing systems, paints to reduce heat gain of the buildings.

TEXT BOOKS:

1. Sukhatme S.P. and J.K.Nayak, Solar Energy – Principles of Thermal Collection and Storage,TMH.
2. Khan B.H., Non-Conventional Energy Resources, Tata McGraw Hill, New Delhi, 2006.
3. Green Manufacturing Processes and Systems, Edited by J. Paulo Davim, Springer 2013.

REFERENCE BOOKS

1. Alternative Building Materials and Technologies / K.S Jagadeesh, B.V Venkata Rama Reddy and K.S Nanjunda Ra.
2. Principles of Solar Energy / Frank Krieth & John F Kreider.
3. Non-Conventional Energy / Ashok V Desai /Wiley Eastern.
4. Renewable Energy Technologies /Ramesh & Kumar /Narosa
5. Renewable Energy Technologies/ G.D Roy

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEOE3
Name of the Course	Computational Fluid Dynamics **Open Elective**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Apply techniques in the numerical solution of fluid equations	K3
CO2	Apply numerical modeling and its role in the field of heat transfer and fluid flow.	K3
CO3	Develop methodologies used in CFD	K3
CO4	Compare various discretization methods and solving methodologies.	K4
CO5	Apply skills in the actual implementation of CFD methods (e.g. boundary conditions, different numerical schemes etc., Finite element methods in the application of CFD analysis to real life engineering designs.	K3

UNIT – I

ELEMENTARY DETAILS IN NUMERICAL TECHNIQUES: Number system and errors, representation of integers, fractions, floating point arithmetic, loss of significance and error propagation, condition and instability, computational methods for error estimation, convergence of sequences.

UNIT – II

APPLIED NUMERICAL METHODS: Solution of a system of simultaneous linear algebraic equations, iterative schemes of matrix inversion, direct methods for matrix inversion, direct methods for banded matrices.

EQUATIONS GOVERNING FLUID FLOW AND HEAT TRANSFER: Introduction, conservation of mass, Newton's second law of motion, expanded forms of Navier-stokes equations, conservation of energy principle, special forms of the Navier – stokes equations.

UNIT– III

Steady flow, dimensionless form of momentum and energy equations, stokes equation, conservative body force fields, stream function - vorticity formulation. Finite difference applications in heat conduction and convention – heat conduction, steady heat conduction in a rectangular geometry, transient eat conduction, finite difference application in convective heat transfer, closure.

UNIT – IV

Finite differences, discretization, consistency, stability, and fundamentals of fluid flow modelling: introduction, elementary finite difference quotients, implementation aspects of finite-difference equations, consistency, explicit and implicit methods.

UNIT – V

Introduction to first order wave equation, stability of hyperbolic and elliptic equations, fundamentals of fluid flow modelling, conservative property, the up wind scheme.

FINITEVOLUMEMETHOD: Approximation of surface integrals, volume integrals, interpolation and differentiation practices, upwind interpolation, linear interpolation and quadratic interpolation.

TEXTBOOKS:

1. Numerical heat transfer and fluid flow/Suhas V.Patankar- Butter –worth Publishers.
2.Computational fluid dynamics – Basics with applications -John. D.Anderson /McGraw Hill.

REFERENCEBOOKS:

1. Computational Fluid Flow and Heat Transfer/Niyogi, Pearson Publications.
2. Fundamentals of Computational Fluid Dynamics–Tapan K.Sengupta / Universities Press.
3. Computational fluid dynamics, 3rd edition/Wendt/Springer publishers

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEOE4
Name of the Course	Rapid Prototyping **Open Elective**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand virtual prototyping and testing of technology	K2
CO2	Construct CAD modelling for rapid prototyping	K3
CO3	Examine different types of process in rapid prototyping	K3
CO4	Explain Rapid Manufacturing errors	K2
CO5	Express the applications of rapid prototyping	K2

UNIT – I

Introduction: Introduction to Prototyping, Traditional Prototyping Vs. Rapid Prototyping (RP), Classification of Rapid Manufacturing Processes: Additive, Subtractive, Formative, Generic RP process.

UNIT – II

CAD Modelling and Data Processing for RP: CAD model preparation, Data interfacing: formats (STL, SLC, CLI, RPI, LEAF, IGES, HP/GL, CT, STEP), conversation, validity checks, repair procedures; Part orientation and support generation, Support structure design, Model Slicing algorithms and contour data organization, direct and adaptive slicing, Tool path generation.

UNIT – III

RP Processes: Process Physics, Tooling, Process Analysis, Material and technological aspects, Applications, limitations and comparison of various rapid manufacturing processes. Photo polymerization (Stereo lithography (SL), Micro stereo lithography), Powder Bed Fusion (Selective laser Sintering (SLS), Electron Beam melting (EBM)), Extrusion-Based RP Systems (Fused Deposition Modelling (FDM)), 3D Printing, Sheet Lamination (Laminated Object Manufacturing (LOM), Ultrasonic Consolidation (UC)), Beam Deposition (Laser Engineered Net Shaping (LENS), Direct Metal Deposition (DMD)).

UNIT – IV

Errors in RP Processes: Pre-processing, processing, post-processing errors, Part building errors in SLA, SLS.

UNIT – V

Application of Rapid Prototyping and Technology: Functional models, pattern for investment and Vacuum casting, medical models, Art models, Engineering analysis models.

REFERENCE BOOKS:

1. Rapid Prototyping: Principles and Applications in Manufacturing. Chua C.K., Leong K.F., Chu S. L., World Scientific.
2. Additive Manufacturing Technologies: Rapid Prototyping to Direct Digital Manufacturing. Gibson, Ian, Rosen, David, Stucker, Brent, Pearson
3. Rapid Prototyping: Principles and Applications in Manufacturing. Noorani R, John Wiley & Sons.
4. Rapid Prototyping and Engineering applications: A tool box for prototype development. Liou W.L., Liou F. W., CRC Press
5. Rapid Prototyping: Theory and practice. Kamrani A. K., Nasr E. A., Springer

SEMESTER	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20MEOE5
Name of the Course	Computer Aided Design **Open Elective**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Explain the basic fundamentals of CAD tools	K2
CO2	Find the characteristics of curves, Representation and continuity requirements	K3
CO3	Illustrate the Geometric Transformations and demonstrate various types of surfaces and Representation.	K3
CO4	Differentiate between the methods of representing Solid Modelling**.**	K4
CO5	Apply the local and global properties for product development	K3

UNIT – I
CAD Introduction: Need of machine design, use of computer, computer fundamentals, computer aided design process, CAD configuration, and CAD tools, positive and negative points of CAD, CAD and CAM integration.
UNIT – II
DESIGN OF CURVES: Fundamental of Curve Design, Parametric Space of a Curve, Representation, Parametric cubic curve, Blending functions, Truncation, extension, and subdivision, composite curve: continuity requirements .
UNIT – III
GEOMETRIC TRANSFORMATIONS: Translation, Rotation, Scaling Symmetry and Reflection, Homogeneous Transformations. Orthographic Projections, Axonometric Projections, Oblique Projections, Perspective Transformation.
DESIGN OF SURFACES: Fundamental of Surface Design, Parametric Space of a Surface, Representation of a Surface patch, sixteen point form, Four Curve Form, Plane.
UNIT – IV
SOLID MODELLING: Solid Modelling fundamentals, topology and geometry. Geometric Modelling Method, Constructive Solid Geometry (CSG), Boundary Representation (Brep), Introduction to Wireframe, surface and solid modelling techniques. Introduction CAD data exchange format IGES, STEP

UNIT – V

GEOMETRIC PROPERTIES: Local and global properties of a curve, Local and global properties of a surface, Global properties of complex solids, Relational properties, intersections. Applications in Product Development and other areas.

7. Lectures on Classical Differential Geometry, Dirk J. Struick, Addison Wesley, 1980.

SEMESTER	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20MEOE6
Name of the Course	Mechatronics **Open Elective**					
Branch	Mechanical Engineering					

Course Outcomes:

	After successful completion of the course, the student will be able to:	Knowledge Level
CO1	Understand the elements of Mechatronics & levels and explain various types of sensors , transducers and Mechatronics design process	K2
CO2	Sketch and explain various types of solid state devices like Diode, BJT, MOSFET, etc.,	K3
CO3	Illustrate and explain basic principles of Hydraulic, pneumatic, electro hydraulic, electro hydraulic servo actuating systems.	K3
CO4	Illustrate and explain microprocessors, microcontrollers and PLC	K3
CO5	Sketch and explain System interfacing and data acquisition systems.	K3

UNIT – I

MECHATRONICS SYSTEMS – elements & levels of mechatronics system, Mechatronics design process, system, measurement systems, control systems, advantages and disadvantages of mechatronics systems. Sensors and transducers, types, displacement,velocity, force, acceleration, liquid flow, liquid level, temperature and light sensors.

UNIT– II

SOLID STATE ELECTRONIC DEVICES - PN junction diode, BJT, FET, Analog signal conditioning, operational amplifiers, filters.

UNIT– III

HYDRAULIC AND PNEUMATIC ACTUATING SYSTEMS - Fluid systems, Hydraulic systems, and pneumatic systems, components, control valves, electro-pneumatic, hydro-pneumatic, electro-hydraulic servo systems.

UNIT– IV

DIGITAL ELECTRONICS AND SYSTEMS - Digital logic control, micro processors and micro controllers, programming, programmable logic controllers, PLCs versus computers, application of PLCs for control.

UNIT– V

SYSTEM AND INTERFACING AND DATA ACQUISITION – Data Acquisition Systems, Analog to Digital and Digital to Analog conversions; Digital Signal Processing.

Department of Electronics and Communication Engineering

Date: 27.07.2022

Minutes of the 6th meeting of BOS
(Held on 25.07.2022)

The ECE Department 6th meeting of Board of Studies (BOS) was conducted through online mode on 25.7.2022 at 02.00 P.M using ZOOM Application with following given link address.
https://us02web.zoom.us/j/89973827779

Following external members have attended the meeting along with internal faculty members. The ECE HOD, Dr E. Kusuma Kumari, BOS Chairperson headed the meeting.

S.No.	Name of the BOS Member	Position	Address
1.	Dr.E. KusumaKumari	Chair person	Professor & Head, ECE, SVEC
2.	Prof. B.T. Krishna	University Nominee	Prof.& HoD in ECE Dept., University College of Engg., JNTUK, Kakinada
3.	Prof. NVSN. Sarma	Subject Expert	Director, IIIT Trichy Tiruchirapalli, Tamilnadu.
4.	Prof. M. VenugopalaRao	Subject Expert	Prof., ECE Dept., K.L.University, Vijayawada.
5.	Sri.Sunkavalli Siva Kumar	Alumni Nominee	Sr.Engineer,Qualcomm, Bangalore.
6.	All Faculty Members in Dept.	Members	ECE Dept., SVEC

The following are the key points discussed in the meeting.

- **Item No.1: Chairperson, BOS has welcomed all the members and given the Opening Remarks.**
- **Item No.2: Approval of Proposed course structure and Syllabi for V, VI, VII & VIII semesters of B. Tech ECE & ECT under V20 Regulations.**

BOS members Reviewed the Course Structure and given Following Suggestions

Prof. NVSN. Sarma (Academic Expert)		
Regulation	**Suggestions Given**	**Remarks**
B. Tech V20-Regulation	Microwave and Optical Communication Course should be separated	This course is separated as Microwave Engg and Optical Communication Networks
	Revise the Antenna and Wave Propagation Course syllabus	Sky wave Propagation concepts were removed. Space wave Propagation was included.
	Include the PIN Diode and Schotky Diode concepts in Microwave Engg course.	Mentioned Topics were included
	Embedded Systems & IOT Lab : Change the Lab name to IOT lab only	Lab name was changed.
	Include courses like wireless Sensor Networks, computer Networks, Optical Networks, Industrial IOT.	Suggested Courses were added in the Syllabus.

Dr. B. T. Krishna (University Nominee)		
Regulation	**Suggestions Given**	**Remarks**
B. Tech V20-Regulation	Reference books in VLSI Design course (V20ECT10) to be added	Reference books were Added
	Analog Circuits (V20ECT12) Syllabus is to be Revised	Syllabus was revised
	For Every Course no. of. Text Books and no. of Reference books are to be same.	No. of Books kept same.
	Text book Titles should be in same format	Kept in Same format.
	Radar Engg (V20ECT24) Text book and Reference book is to be interchanged	Books Interchanged

Prof. M. Venu Gopala Rao, (Academic Expert)		
Regulation	**Suggestions Given**	**Remarks**
B. Tech V20-Regulation	Ensure the Courses CO levels and Blooms Taxonomy Levels are to be properly defined	Made the necessary Changes and COs & BTL Levels are Properly Defined.
	Make the Analog Circuits (V20ECT12) course as compulsory course	Analog Circuits course was made as Compulsory course and AWP course was kept in Professional Elective course.
	Reduce the Digital signal Processing Course (V20ECT15) Syllabus.	DSP Processors topics are removed.
	DSP Lab (V20ECL08)Part-B , DIP experiments are included, which the students are not studied DIP	While doing the DIP experiments, a complete DEMO will be given to students though DIP Course was in VII Sem. DIP Experiments are essential while students are doing their Final Yr Projects.
	Reduce the Digital Image Processing (V20ECT20) Course Syllabus	Syllabus was reduced.
	In the course of VLSI Design, Design concepts should be include with revised Knowledge levels	Design concepts included with revised Knowledge levels

BOS members Approved course structure and Syllabi for V, VI, VII & VIII semesters of B. Tech ECE & ECT under V20 Regulations was given in **Annexure-1**

- **Item No.3: Approval of list of courses and Syllabi offered under Job Oriented courses for B. Tech ECE & ECT under V20 Regulation.**
  BOS Members reviewed the list of courses and syllabi and suggested to include CSE relevant courses in the pool of Job Oriented Elective Courses. Hence, we included the courses Deep Learning & Machine Learning in Job Oriented Elective Courses.
  Approved list of course and syllabi given in **Annexure-2**

- **Item No.4: Approval of Course structure & List of Courses for Honors Degree in B. Tech ECE in two streams ie., Communication & Signal Processing, VLSI & Embedded Systems & Minors Degree in ECE (VLSI & ES).**

BOS Members reviewed the list of courses and syllabi and suggested that At least minimum three course should be taught in conventional mode for Honors/Minors Degree and approved the same.
Details given in **Annexure-3**

Item No.5: Approval of list of courses and Syllabi offered under Open Elective courses for B. Tech under V20 Regulation for all other branches.

BOS Members reviewed the list of courses and syllabi and approved list of Open Elective Courses are given in **Annexure-4**

Finally, the chairperson thanked all the BOS members and faculty. The meeting was ended at 3.00 P.M

Dr. E. Kusuma Kumari,
Chairperson, BOS

Name of the Course	VLSI Design					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Understand different IC technologies. **(K2)**
CO-2: Explain basic electrical properties of MOS, CMOS and Bi-CMOS Circuits. **(K2)**
CO-3: Develop layouts for MOS & Bi-CMOS circuits using design rules. **(K3)**
CO-4: Compute the parameters of MOS circuits and assess the effects of scaling **(K3)**
CO-5: Design Combinational circuits and Subsystems. **(K4)**

UNIT-I:
Review of Microelectronics and An Introduction to MOS technology: Introduction to IC technology, Basic MOS transistors, Enhancement mode MOS transistor Action, Depletion mode MOS transistor Action, NMOS, PMOS fabrication, CMOS fabrication and Bi-CMOS technology, Comparison between CMOS and Bi-CMOS technology.

UNIT-II:
Basic Electrical Properties of MOS and BICMOS Circuits: Ids versus Vds relationships, Aspects of MOS transistor threshold voltage Vt, Trans conductance gm, Output conductance gds and Figure of merit, NMOS inverter, Pull-up to pulldown ratio for NMOS inverter driven by another NMOS inverter and through one or more pass transistors, Alternative forms of pull-up, CMOS inverter, BICMOS inverters, Latch-up in CMOS circuits.

UNIT-III:
MOS and Bi-CMOS Circuit Design Processes: MOS Layers, Stick Diagrams, Design Rules and Layout, General observations on the Design rules, 2μm Double Metal, Double Poly, CMOS/Bi-CMOS rules, 1.2μm Double Metal, Double Poly CMOS rules, Layout Diagrams of NAND and NOR gates and CMOS inverter, Symbolic Diagrams-Translation to Mask Form.

UNIT-IV:

Basic Circuit Concepts: Sheet Resistance, Sheet Resistance concept applied to MOS transistors and Inverters, Area Capacitance of Layers, Standard unit of capacitance, some area Capacitance Calculations, The Delay Unit, Inverter Delays, driving large capacitive loads, Propagation Delays, Wiring Capacitances, Choice of layers. Scaling of MOS Circuits: Scaling models and scaling factors, Scaling factors for device parameters, Limitations of scaling.

UNIT-V:

Subsystem Design and Layout: Architectural issues, Switch logic, Gate Logic Examples of Structured Design (Combinational Logic): A Parity Generator, Bus Arbitration Logic for n-line-Bus an Illustration of Design Process: Multiplier, Design of an ALU Subsystem, Ripple Carry Adder, and Carry look ahead adder.

Text Books:

1. Essentials of VLSI Circuits and Systems by Kamran Eshraghian, Douglas and A. Pucknell and Sholeh Eshraghian, Prentice-Hall of India Private Limited, 2005Edition.

References:

2. "VLSI Technology", S.M. Sze, 2nd edition, Tata McGraw Hill, 2003.

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT11
Name of the Course	Microprocessors & Microcontrollers					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Describe the basic architecture and Modes of 8086 microprocessor (**K2)**
CO-2: Construct assembly language programs for arithmetic and Logical Operations (**K3).**
CO-3: Describe the basic peripherals inter facing and its programming techniques

(K2)

CO-4: Illustrate the Architecture and features of Intel 8051 Microcontroller **(K3)**

CO-5: Explain the Architecture and features of PIC microcontroller **(K2)**

UNIT-1: **Introduction to Microprocessors**: Evolution of Microprocessors, features, Intel Microprocessor families, Architecture of 8086 microprocessor, pin/signal description, Physical address formation, Description of Minimum and maximum mode pins, Timing diagrams.
Interrupts, Available interrupts, Interrupt Cycle, ISR (Interrupt service Routine).

UNIT-II: **Programming with 8086 Microprocessor**: Various addressing modes of 8086, Instruction set and Classification, Assembler Directives of 8086, writing Assembly language programs using various types of instructions.

UNIT – III: **Interfacing with Basic Peripherals**: Semiconductor memories interfacing (RAM, ROM), Interfacing Microprocessor to keyboards, interfacing to ADC/DAC, Interfacing, 8255(PPI-Parallel I/O port), 8259(Programmable interrupt controller), 8251(serial communication UART), Stepper motor interfacing and programming.

UNIT – IV: **8051 Microcontroller**: Intel 8051 Microcontroller, Microprocessor vs. Microcontroller, 8051 Microcontroller Architecture, Microcontroller 8051 pin diagram, Internal and External Memory, Counters and Timers, Serial Communication in 8051, interrupts in 8051, Addressing Modes, Instruction set, simple programs using microcontroller 8051.

UNIT – V: PIC Microcontroller: Introduction, characteristics of PIC microcontroller, memory organization, parallel and serial input and output, timers, Interrupts, PIC 16F877 architecture, instruction set of the PIC 16F877.

TEXT BOOKS:

1. Advanced microprocessor and Peripherals by A.K.Ray and K.M.Bhurchandi, TMH, 2000.
2. Microprocessors and Interfacing by Programming and Hardware by Douglas V Hall, SSSP Rao, Tata McGrawHill Education Private Limited, 3rd Edition.

REFERENCE BOOKS:

1. The Intel Microprocessors-Architecture, Programming, and Interfacing by Barry B.Brey,Pearson, Eighth Edition-2012.

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT12
Name of the Course	Analog Circuits					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Demonstrate Linear wave shaping circuits for various applications. **(K2)**
CO-2: Explain Non-Linear wave shaping circuits for various applications. **(K2)**
CO-3: Explain the operation of non sinusoidal oscillators & Illustrate Op-Amp Characteristics **(K2)**
CO-4: Demonstrate circuits for different applications using ICs. **(K2)**
CO-5: Discuss the operation of Active filters and Data Converters. **(K2)**

Unit I
Linear Wave shaping circuits: Response of high pass and low pass RC circuits to step, pulse inputs. High pass RC circuit as differentiator, low pass RC circuit as integrator.

Unit II
Non Linear Wave Shaping Circuits: Introduction to Clippers, Series and Shunt Clippers, Clippers with reference voltages, Clipping at two independent levels, Series and Shunt Noise Clippers, Positive and Negative Clampers, Clamping Circuits, Clamping Circuit Theorem.

Unit III
Non-sinusoidal oscillators & Introduction to Op-amp: Bistable, Monostable and Astable Multivibrators using BJT . Op-amp Block Diagram, Ideal Op-amp, Equivalent Circuit, Op Amp Characteristics.

Unit IV
Integrated Circuits and applications: open loop op-amp configurations. Inverting and non-inverting amplifier, OP Amp Applicationsr, 555 IC functional block diagram, 555 IC as Astable and Monostable multivibrators.

Unit V
Active filters and Data Converters: First order Low pass, high pass, band pass and band stop filters, All pass filter design guidelines. Weighted resistor DAC, R-2R ladder DAC. Dual slope ADC, Successive approximation ADC, flash ADC.

Text Books:
1. Integrated Electronics- J. Millman and C.C. Halkias, TMH

2. Electronic Devices and Circuits- Salivahanan, N.Suresh Kumar, A. Vallavaraj, TMH

2. Pulse, Digital and Switching Waveforms - J. Millman and H. Taub, TMH

References :

1. Pulse and Digital Circuits – A. Anand Kumar, PHI

2. Linear Integrated Circuits – D. Roy Choudhury, 4th edition, New Age International (p) Ltd.

3. Op-Amps & Linear Integrated Circuits - Ramakanth A. Gayakwad,3rd edition, PHI.

Semester	**V SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT13
Name of the Course	Antenna & Wave Propagation (Professional Elective -I)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Understand the radiation mechanism and fundamental parameters of antenna **(K2)**
CO-2: Solve the field components of dipole (or quarter monopole), loop antenna and their characteristics. **(K3)**
CO-3: Solve array factor for N element linear array and directivity & Design the Microwave antennas. **(K3)**
CO-4: Demonstrate the measurement procedure for antenna parameters, develop the rectangular Microstrip antenna and understand the concepts of modern antennas. **(K3)**
CO-5: Explain the concept of propagation methods and fading in wave propagation. **(K2)**

UNIT I
ANTENNA FUNDAMENTALS: Introduction, Radiation Mechanism – single wire, two wires, Dipoles, Current Distribution on a thin wire antenna. Antenna Parameters – Near and far field regions, Radiation Patterns, Patterns in Principal Planes, Main Lobe and Side Lobes, Beam width, Polarization, Beam Area, Radiation Intensity, Beam Efficiency, Directivity, Gain and Resolution, Antenna Apertures, Aperture Efficiency, Effective Height, Reciprocity Theorem applicable to antennas, Simple Problems.

UNIT II
WIRE ANTENNAS: Retarded Potentials, Radiation from Small Electric Dipole, Quarter wave Monopole and Half wave Dipole – Current Distributions, Evaluation of Electric and magnetic Field Components, Radiation Resistance, Beam-width, Directivity.
Loop Antennas: Small Loops - Concept of short magnetic dipole - Field Components, Comparison of far fields of small loop and short dipole, Helical Antennas – Significance, Geometry, basic properties.

UNIT III

ANTENNA ARRAYS: Two element arrays, N element Uniform Linear Arrays – Broadside Array, End-fire Array, Array factor, Derivation of their characteristics and comparison, Principle of Pattern Multiplication, Non Uniform arrays- Binomial arrays, Phased Arrays concept - Beam scanning, Applications.

MICROWAVE ANTENNAS: Parabolic Reflectors – Geometry, characteristics, types of feeds, F/D Ratio, Spill Over, Back Lobes, Aperture Blocking, Off-set Feeds & Cassegrain Feeds. Horn Antennas – Types, design Characteristics of Pyramidal Horns.

UNIT IV

ANTENNA MEASUREMENTS – Block diagram of radiation pattern measurement setup and measurement procedure, Distance Criterion, Indoor and outdoor measurement- Far field measurement, Advantages. Gain Measurements and measurement procedure (Comparison of Absolute and 3-Antenna Methods).

MODERN ANTENNAS: Microstrip Antennas - Geometry, Features, Advantages and Limitations, Rectangular MSA Design, Radiation mechanism, Simple design problems. Smart antennas - Block diagram, concept, switched beam and adaptive array concept & MIMO antennas.

UNIT V

WAVE PROPAGATION AND TRENDS IN WIRELESS COMMUNICATION: Concepts of Propagation - frequency ranges and types of propagations. Ground Wave-Propagation characteristics, Fundamental Equation for Free - Space Propagation, Basic Transmission Loss Calculations, Space Wave Propagation - Mechanism, LOS and Radio Horizon, Tropospheric Wave Propagation – Radius of Curvature of path, Effective Earth's Radius, Effect of Earth's Curvature, Field Strength Calculations. Fading - Types of fading, Multipath propagation.

TEXT BOOKS

1. Antennas for All Applications by John D. Kraus and Ronald J. Marhefka, 3rd Edition, TMH, 2003.
2. Electromagnetic Waves and Radiating Systems by E.C. Jordan and K.G. Balmain, PHI, 2nd Edition, 2000.
3. Broadband Microstrip Antenna by Girish Kumar, Artech house Publishers

REFERENCES

1. Antenna Theory by C.A. Balanis, John Wiley and Sons, 2nd Edition, 2001.
2. Antennas and Wave Propagation by K.D. Prasad, Satya Prakashan, Tech India Publications, New Delhi, 2001.
3. Antennas and Wave Propagation by Sisir K Das and Annapurna Das – Tata McGraw Hill.

Semester	**V SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT14
Name of the Course	Information Theory & Coding (Professional Elective -I)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Analyze the properties of Information theory **[K4]**
CO2. Evaluate Source coding efficiencies for different discrete sources **[K4]**
CO3. Apply various source coding techniques for data compression **[K3]**
CO4. Analyze linear block code encoding and decoding techniques **[K4]**
CO5. Analyze cyclic and convolutional code encoding and decoding techniques **[K4]**

UNIT I

INFORMATION THEORY : Introduction, Types of Information sources, Discrete messages, Concept of amount of information and its properties, Average information, Entropy and its properties, Information rate, Mutual information and its properties, Classification of Channels-Binary symmetric Channel, Binary Erasure Channel, Channel Matrices for different Channels.

UNIT II

CHANNEL CAPACITY & SOURCE CODING : Shannon-Hartley Theorem, Channel capacity of analog and discrete Channels, Capacity of a Gaussian channels, bandwidth –S/N trade off, Introduction to source coding, Shannon's source coding theorem, Prefix, Variable, & Fixed-Length Codes, Shanon-Fano coding, Huffman coding, Non-binary Huffman coding, Coding efficiency calculations.

UNIT III

DATA COMPRESSION : Basic Concepts of data compression, Run Length Coding, Block Sorting Compression, Dictionary Coding- Lempel Ziv algorithm, Statistical Compression, Prediction by Partial Matching, Arithmetic Coding, Adaptive Huffman Coding, Comparison of Huffman coding and Adaptive Huffman Coding.

UNIT IV

LINEAR BLOCK CODES : Introduction to channel coding, Classification of channel coding techniques-Error detection and correction codes, Systematic and Nonsystematic codes, Matrix description of Linear Block codes, Encoding using Generator Matrix, Syndrome Calculation, Decoding of linear block codes, Error detection and error correction capabilities of linear block codes.

UNIT V

BINARY CYCLIC CODES: Introduction, Polynomial Representation of Code words, Generator Polynomial, Systematic cyclic codes, Encoder design, Syndrome Calculation, Error Detection, Decoder design, and Limitations of Cyclic Codes.

CONVOLUTIONAL CODES: Introduction, Encoder Design, Encoding-Time Domain, Graphical approach: state, tree and trellis diagram, Decoding of Convolutional Codes-Viterbi algorithm, Sequential Decoding, Advantages and Limitations of Convolutional codes.

TEXT BOOKS:

T1. John G Proakis, “Digital Communications”, Mc Graw-Hill, 4th ed, 2000.

T2. Carlson A. Bruce, “Communication Systems”, 4th Edition, Mc. Graw Hill Publishers, 2002.

REFERENCES:

Semester	V SEM	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20ECL06
Name of the Course	VLSI Design Lab					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Explain the VLSI Design Methodologies using Mentor Graphics Tools **(K2)**
CO-2: Demonstrate significance of various CMOS Analog and Digital circuits in Full-custom IC Design flow **(K2)**
CO-3: Explain the Physical Verification in Layout Design **(K2)**
CO-4: Design and analyse of Analog and mixed signal simulation **(K3)**
CO-5: Analyse the Significance of Pre-Layout Simulation and Post-Layout Simulation. **(K4)**

PART-A List of Experiments: Design the following experiments using 250nm CMOS technology and extract parasitic.

1. CMOS Inverter
2. Universal Logic gates
3. Full Adder
4. RS-Latch & D- latch
5. JK-Flip Flop
6. Ripple Carry Adder
7. Asynchronous Counter
8. Ring Oscillator
9. R-2R Ladder Type DAC
10. Differential Amplifier
11. 2–3-week Mini Project. Lab Requirements: Software: Mentor Graphics – Pyxis Schematic, IC Station, Calibre, ELDO Simulator

Semester	**V SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	0	0	3	1.5	V20ECL07
Name of the Course	Microprocessors & Microcontrollers Lab					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Develop algorithm and logic for different operations using 8086 Instructions. **(K3)**
CO-2: Construct simple programs for 8086 using Assembler directives (MASM)/Machine control Instructions. **(K3)**
CO-3: Develop ALP to perform arithmetic and logical operations using various instructions. **(K3)**
CO-4: Develop ALP to perform conversions, finding squares of a numbers by using Loop, Jump instructions. **(K3)**
CO-5: Develop Assembly language programs for 8051 Micro controller. **(K3)**

LIST OF EXPERIMENTS

PART- A:
8086 Assembly Language Programming using Assembler Directives
Introduction to MASM/TASM

1. Basic Arithmetical operations – Unsigned Addition, Subtraction, Multiplication and Division.
2. Multi byte addition/subtraction
3. Sorting of given array of elements (Ascending order /descending order)
4. Sum of squares/cubes of a given n-numbers
5. Shift and rotate operations for given number.

PART- B: 8051 Assembly Language Programming

6. Assembly Language program to find average of n numbers by 8051 Micro controllers.
7. Assembly Language program to find the no of 1’s and 0’s in a given number by 8051 Microcontroller.

8. Assembly language program in 8051 micro controllers for Counter 0 in Mode 2 to count the number of pulses and display the count value on port P2 and external memory location 0FFC1H.

9. Assembly language program for serial transmission and serial reception with a baud rate of 9600bps.

10. Assembly Language program to interface stepper motor to 8051 microcontroller (Both directions)

VI-Semester

Syllabus

(V20 Regulation)

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	1	0	3	V20ECT15
Name of the Course	Digital Signal Processing					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Classify Discrete Time Signals & systems, Compute DFT for discrete Time signals. **(K3)**
CO-2: Compute DFT for discrete Time signals using FFT Algorithm **(K3)**
CO-3: Describe the various implementations of digital filter structures **(K2)**
CO-4: Analyze and design a Digital filter (FIR&IIR) from the given specifications **(K4)**
CO-5: Use the Multi-rate Processing concepts in various applications **(K3)**

UNIT I INTRODUCTION & DISCRETE FOURIER TRANSFORMS: Classification of Discrete time signals & Systems, stability of LTI systems. Introduction to DTFT**,** Discrete Fourier transforms, Properties of DFT.

UNIT II INTRODUCTION & FAST FOURIER TRANSFORMS Fast Fourier transforms (FFT) - Radix-2 decimation in time and decimation in frequency FFT Algorithms, Inverse FFT.

UNIT III REALIZATION OF DIGITAL FILTER: Review of Z-transform, digital filters, Block diagram representation of linear constant coefficient difference equations, Basic structures of IIR systems, Transposed forms. Basic structures of FIR systems.

UNIT IV DESIGN OF IIR and FIR DIGITAL FILTERS: Analog filter approximations – Butterworth and Chebyshev, Design of IIR Digital filters from Analog filters, Characteristics of FIR Digital Filters, frequency response. Design of FIR Digital Filters using Window Techniques and Frequency Sampling technique, Comparison of IIR & FIR filters.

UNIT V MULTIRATE DIGITAL SIGNAL PROCESSING: Introduction, Decimation, Interpolation Sampling rate conversion, Implementation of sampling rate converters, Applications – Sub-band Coding of Speech Signals, Introduction to architecture of TMS320C5X DSP processors.

TEXT BOOKS:

1. Digital Signal Processing, Principles, Algorithms, and Applications by John G. Proakis, Dimitris G.Manolakis, Pearson Education / PHI, 2007.
2. Discrete Time Signal Processing by A.V.Oppenheim and R.W. Schaffer, PHI
3. Digital Signal Processing by Ramesh babu, Sci Tech publications

Reference Books:

1. Digital Signal Processing by MH Hayes, Schaum's Outlines, TATA Mc-Graw Hill, 2007.
2. Digital Signal Processing by Alan V. Oppenheim, Ronald W. Schafer, PHI Ed., 2006
3. Digital Signal Processing by A.Nagoor Kani, RBA Publications.

Semester	VI SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT16
Name of the Course	Microwave Engineering					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Solve the TE/TM modes and characteristics of Rectangular waveguide **(K2)**
CO2: Illustrate the construction, operation, Power output and efficiency of two cavity Klystron Amplifier and Reflex klystron Oscillator **(K3)**
CO3: Examine the construction, operational details of travelling wave tube Amplifier & cylindrical cavity Magnetron Oscillator **(K4)**
CO4: Construct the various passive waveguide components based on the Scattering matrix **(K3)**
CO5: Explain the operation of Microwave Solid State Devices & the procedure for measuring various microwave parameters using a Microwave test bench **(K2)**

UNIT I
MICROWAVE TRANSMISSION LINES: Introduction, Microwave Spectrum and Bands, Applications of Microwaves. Rectangular Waveguides (RWG) – Solution of TE and TM wave equation in RWG - Characteristic Equation and Cut-off Frequencies, Filter Characteristics, Dominant and Degenerate Modes, Mode Characteristics – Phase and Group Velocities, Wavelengths and Impedance Relations & Characteristics, Cavity resonators – Rectangular cavity resonator – Dominant mode – Resonant frequency – related problems.

UNIT II
MICROWAVE TUBES (O type): Limitations and Losses of conventional tubes at microwave frequencies. Re-entrant cavities, Microwave tubes – O type and M type classifications. O-type tubes: 2 Cavity Klystrons – Structure, Velocity Modulation Process and Applegate Diagram, Bunching Process and Small Signal Theory – Expressions for o/p Power and Efficiency, Applications, Reflex Klystrons – Structure, Applegate Diagram and Principle of working, Bunching Process, Power Output, Efficiency, Applications, Related Problems.

UNIT III

HELIX TWTS: Significance, Types and Characteristics of Slow Wave Structures; Structure of TWT and Suppression of Oscillations, Nature of the four Propagation Constants.

M-type Tubes Introduction, Cross-field effects, Magnetrons – Different Types, 8-Cavity Cylindrical Travelling Wave Magnetron – operation, Modes of Resonance and PI-Mode Operation, Separation of PI-Mode, o/p characteristics.

UNIT IV MICROWAVE PASSIVE COMPONENTS: Waveguide Attenuators-Waveguide phase shifters. Scattering Matrix – Significance - Formulation and Properties. E plane Tee - H plane Tee – Magic Tee - Directional coupler operation and Scattering Matrix Calculation. Ferrite Components- Faraday rotation - Isolator and Circulator.

UNIT V

MICROWAVE SOLID STATE DEVICES: TEDs – Introduction, Gunn Diode – Principle - RWH Theory – Characteristics - Basic Modes of Operation - Oscillation Modes. Avalanche Transit Time Devices – IMPATT Diode – Principle of Operation and characteristics. Detector Diode, PIN Diode characteristics and applications.

MICROWAVE MEASUREMENTS: Description of Microwave Bench – Different Blocks and their Features, Precautions. Microwave Power Measurement using Bolometer Method. Measurement of Attenuation, VSWR and Impedance.

TEXT BOOKS:

1. Microwave Devices and Circuits by Samuel Y. Liao, PHI, 3rd Edition, 1994.
2. Foundations for Microwave Engineering by R.E. Collin, IEEE Press, John Wiley, 2nd Edition, 2002.
3. “Microwave Engineering” by David M.Pozar, Fourth Edition, Wiley, India 2012.

REFERENCES:

1. Microwave and Radar Engineering by M.Kulkarni, Umesh Publications, 3rd Edition.

3. Microwave and Radar Engineering by G Sasibhushan Rao Pearson

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT17
Name of the Course	Internet of Things: Use Cases					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe M2M and IOT Technologies. **[K2]**
CO2: Explain the layers and protocols in IOT. **[K2]**
CO3: Describe various communication technologies used in IOT. **[K2]**
CO4: Illustrate various hardware components required for IOT applications. **[K2]**
CO5: Discuss the cloud technologies and their services and explain the IoT Applications. **[K2]**

UNIT I – INTRODUCTION [1]
Introduction from M2M to IoT - An Architectural Overview, building architecture, Main design principles and needed capabilities, An IoT architecture outline, M2M and IoT Technology Fundamentals - Devices and gateways.

UNIT II – IOT PROTOCOLS [2]
Functionality of Layers in IoT –Study of protocols - Wireless HART, Z-Wave, 6LoWPAN, RPL, CoAP, MQTT.

UNIT III - COMMUNICATION TECHNOLOGIES IN IOT [2, 4]
IoT Connectivity – IEEE 802.15.4, Zigbee, LPWAN, Wi-Fi, Bluetooth, 5G Era.

UNIT IV - SYSTEM HARDWARE [3, 4]
Sensors, Actuators, Radio Frequency Identification, Introduction to Embedded Devices for IoT - RASPBERRY PI, Beaglebone black.

UNIT V – Cloud Computing [3, 4]
Data Collection, Storage and Computing Using a Cloud Platform for IoT Applications/ Services. Use Cases - Smart and Connected Cities, Agriculture, and Healthcare.

TEXTBOOKS:

1. “From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence”, Jan Holler, VlasiosTsiatsis, Catherine Mulligan, Stefan Avesand, Stamatis Karnouskos, David Boyle, 1st Edition, Academic Press, 2014.
2. IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things, David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry, Cisco Press 800 East 96th Street Indianapolis, Indiana 46240 USA.
3. “Internet of Things (A Hands-on- Approach)”, Vijay Madisetti and ArshdeepBahga, 1st Edition, VPT, 2014.

Internet of Things - By Raj Kamal, McGraw-Hill Education. Copyright.

REFERENCE BOOKS:

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT18
Name of the Course	Embedded Systems (Professional Elective -II)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the Basic Concepts of Embedded Systems- **(K2).**
CO2: Describe the characteristics of Application & Domain-Specific Embedded Systems – **(K2)**
CO3: Discuss various hardware design approaches in embedded environment- **(K2)**
CO4: Describe various Embedded firmware design approaches on Embedded environment. **(K2)**
CO5: Illustrate the development, implementation & testing of Embedded System. **(K3)**

UNIT-I:
INTRODUCTION: Embedded System -Definition, history of embedded systems, classification of embedded systems, major application areas of embedded systems, purpose of embedded systems, the typical embedded system-core of the embedded system, Memory, Sensors and Actuators, List of Communication Interface.

UNIT-II:
Characteristics of an embedded system: Quality attributes of embedded systems, Application-specific and Domain-Specific examples of an embedded system.

UNIT-III:
EMBEDDED HARDWARE DESIGN: Analog and digital electronic components, I/O types and examples, Serial communication devices, Parallel device ports, Wireless devices, Timer and counting devices, Watchdog timer, Real time clock.

UNIT-IV:
EMBEDDED FIRMWARE DESIGN: Embedded Firmware design approaches, Embedded Firmware development languages, ISR concept, Interrupt sources, Interrupt servicing mechanism, Multiple interrupts, DMA, Device driver programming, Concepts of C versus Embedded C and Compiler versus Cross-compiler.

UNIT-V:

EMBEDDED SYSTEM DEVELOPMENT, IMPLEMENTATION AND TESTING: The integrated development environment, Types of files generated on cross-compilation, Deassembler/De-compiler, Simulators, Emulators and Debugging, Target hardware debugging, Embedded Software development process and tools, Interpreters, Compilers and Linkers, debugging tools, Quality assurance and testing of the design, Testing on host machine, Simulators, Laboratory Tools.

Semester	VI SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT19
Name of the Course	SYSTEM DESIGN THROUGH VERILOG (Professional Elective -II)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Outline basic concepts, constructs and conventions of VERILOG. **(K2)**
CO2: Develop Verilog codes for combinational and sequential logic circuits at gate and data flow level. **(K3)**
CO3: Develop Verilog codes for combinational and sequential logic circuits at behavioral level. **(K3)**
CO4: Develop Verilog codes for CMOS circuits at switch level and outline the concepts of task, function and complier directives. **(K3)**
CO5: Explain Synthesize of Combinational and Sequential Circuits. **(K2)**

UNIT-I
INTRODUCTION TO VERILOG:
Verilog as HDL, Levels of design description, concurrency, module, simulation and synthesis, test bench, functional verification, programming language interface (PLI), simulation and synthesis tools.
LANGUAGE CONSTRUCTS AND CONVENTIONS:
Introduction, keywords, identifiers, whitespace characters, comments, numbers, strings, logic values, data types, scalars and vectors, parameters, memory, operators.

UNIT-II
GATE LEVEL MODELLING:
Introduction, AND gate primitive, module structure, other gate primitives, illustrative examples, tristate gates, array of instances of primitives, design of Flip flops with gate primitives, delays, strengths and contention resolution, net types, design of basic circuits.
DATA FLOW LEVEL MODELLING
Introduction, continuous assignment structures, delays and continuous assignments, assignment to vectors, design of basic circuits.

UNIT-III
BEHAVIORAL MODELLING:

Introduction, operations and assignments, initial construct, always construct, examples, assignments with delays, wait construct, multiple always blocks, blocking and non-blocking assignments, the case statement, if and if else constructs, assign-De assign construct, repeat construct, FOR loop, the disable construct, While loop, Forever loop, parallel blocks, force-release construct, event.

UNIT-IV
SWITCH LEVEL MODELLING
Basic transistor switches, CMOS switch, Bidirectional gates and time delays with switch primitives, instantiations with strengths and delays, strength contention with trireg nets, switch level modeling for NAND, NOR and XOR.

SYSTEM TASKS, FUNCTIONS, AND COMPILER DIRECTIVES:
Introduction, System Tasks and Functions, File based Tasks and Functions, Compiler Directives, Hierarchical Directives, User-defined Primitives (UDP).

UNIT-V
SYNTHESIS OF COMBINATIONAL AND SEQUENTIAL LOGIC USING VERILOG:
Synthesis of combinational logic: Net list of structured primitives, a set of continuous assignment statements and level sensitive cyclic behavior with examples, Synthesis of priority structures, Exploiting logic don’t care conditions. Synthesis of sequential logic with latches: Accidental synthesis of latches and Intentional synthesis of latches, Synthesis of sequential logic with flip-flops, Synthesis of explicit state machines.

TEXT BOOKS:
1. Design through Verilog HDL — T.R. Padmanabhan and B. Bala Tripura Sundari, WSE, IEEE Press, 2004.
2. Advanced Digital Design with Verilog HDL — Michael D. Ciletti, PHI, 2005.

REFERENCES:
1. Fundamentals of Logic Design with Verilog — Stephen. Brown and Zvonko Vranesic, TMH, 2005.
2. A Verilog Primier — J. Bhasker, BSP, 2003.

Semester	VI SEM	L	T	P	C	Course Code
Regulation	V20	0	0	3	1.5	V20ECL08
Name of the Course	Digital Signal Processing Lab					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Describe the generation and convolution of discrete time signals **(K2)**
CO-2: Compute the DFT using FFT **(K3)**
CO-3: Design Digital IIR and FIR filter **(K4)**
CO-4: Develop Interpolator and Decimator **(K3)**
CO-5: Apply DSP algorithms for audio and Image processing applications **(K3)**
CO-6: Develop DSP algorithms on TMS320C6713 DSP processor Kit **(K3)**

List of Experiments (Any 6 Experiment from PART-A and PART-B):

PART – A

1. Generate the varies discrete time signals.
2. Perform linear & circular convolution of given sequences
3. Obtain a 4-point and 8-point DFT of a givensequence.
4. Determine the 4-point and 8-point DFT using FFT.
5. Design and Simulate Infinite Impulse Response (IIR) filters using butter worth and Chebyshev filters.
6. Design and simulate Finite Impulse Response (FIR) filters using windowing techniques.
7. Compute Interpolation and Decimation of given signal and find their spectrum.

PART – B (DSP Applications)

1. Read a .wav file and plot time domain waveform of a speech signal
2. Compute the histogram of the given image.
3. Compute the edge of an image using spatial filters.
4. Compute the two-level Decomposition of Discrete Wavelet transforms and Reconstruct image using inverse Discrete Wavelet transform
5. Obtain linear & circular convolution of two signals using TMS320C6713 DSP processor.
6. Obtain Power Spectral Density of a periodic signal using TMS320C6713 DSP processor.

7. Design and simulate Finite Impulse Response (FIR) and Infinite Impulse Response
(IIR) filters using TMS320C6713 DSP processor.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	0	0	3	1.5	V20ECL09
Name of the Course	IoT lab					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:
CO1: Develop Embedded C Program to interface sensors & actuators. **(K3)**
CO2: Develop Embedded C Program to send the sensor data to cloud. **(K3)**
CO3: Develop Wireless Module Interface with Embedded device. **(K3)**
CO4: Develop street light control system, security system, home automation system. **(K4)**
CO5: Develop mobile application to interface with Embedded device. **(K3)**

List of Experiments (any 10 Experiments)

1. Write an Embedded C Program to interface the following with Arduino Uno with IR Sensor, Temperature Sensor, Ultrasonic Sensor
2. Write an Embedded C Program to Interface DC Motor, Servo/stepper Motor with Arduino Uno.
3. Write an Embedded C Program to Interface LCD with Arduino Uno.
4. Develop an Application to Interface GPS with Arduino and Identify Latitude and Longitude
5. Wireless Module Interface – Bluetooth with Arduino Uno.
6. Wireless Module Interface – Zigbee with Arduino Uno as transceiver.
7. Write an Embedded C Program to monitor temperature and humidity and store in cloud using Wi-Fi Module.
8. Read data from sensor and send it to a requesting client using socket communication. Note: The client and server should be connected to same local area network.
9. Home security System using Raspberry-pi and PIR Sensor.
10. LED Control and LDR interfacing with Raspberry-pi.
11. Uploading sensor Data to cloud With MQTT protocol.
12. Interfacing Raspberry-pi with the smart phone for enabling home automation.

Semester	**VI SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	0	0	3	1.5	V20ECL10
Name of the Course	Microwave Engineering Lab					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Sketch the characteristics of various Microwave & Optical sources **(K3)**

CO2: Compute the various Parameters of Microwave & Optical Components **(K3)**

CO3: Measure the radiation pattern of Horn antenna and reflector antenna. **(K5)**

CO4: Analyze a rectangular micro strip patch antenna using HFSS software **(K4)**

Minimum Twelve Experiments to be conducted:

Part – A (Any 7 Experiments):

1. Reflex Klystron Characteristics.
2. Gunn-Diode Characteristics.
3. Attenuation Measurement.
4. Directional Coupler Characteristics.
5. Frequency and Waveguide Parameters Measurement.
6. Impedance and Measurement.
7. Scattering parameters of Magic Tee.
8. Scattering parameters of Circulator.
9. Radiation Pattern of Horn and Parabolic Antennas.
10. Synthesis of Microstrip antennas (Rectangular Structure) Using HFSS.

Part – B (Any 5 Experiments):

11. Characterization of LED.
12. Characterization of Laser Diode.
13. Intensity modulation of Laser output through an optical fiber.
14. Measurement of Data rate for Digital Optical link.
15. Measurement of NA.

16. Measurement of losses for Analog Optical link.

VII-Semester

Syllabus

(V20 Regulation)

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT20
Name of the Course	Digital Image Processing (Professional Elective -III)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1. Explain image fundaments and the different image Transforms Techniques **(K2)**
CO2. Describe Spatial and frequency domain filtering like smoothing and sharpening operations on Images **(K2)**
CO3. Describe Restoration operations/techniques on Images **(K3)**
CO4. Describe the Image compression Techniques and Image segmentation **(K3)**
CO5. Explain the different color models and color image processing techniques **(K2)**

UNIT-I
Introduction: Introduction to Image Processing, Fundamental steps in digital image processing, components of an image processing system, some basic relationships between pixels, an introduction to the mathematical tools used in digital image processing.
Image Transforms: Need for image transforms, Discrete Fourier transform (DFT) of two variables, Walsh Transform. Hadamard transform, Haar Transform, Slant transform, Discrete Cosine transform.

UNIT-II
Intensity Transformations and Spatial Filtering: Some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters, and sharpening spatial filters.
Filtering in the Frequency Domain:, image smoothing using frequency domain filters, Image Sharpening using frequency domain filters and Selective filtering.

UNIT-III
Image Restoration and Reconstruction: A model of the image degradation / Restoration process, Noise models, restoration in the presence of noise only-Spatial Filtering, Periodic Noise Reduction by frequency domain filtering, Estimating the image degradation function, Inverse filtering, Minimum mean square error (Wiener) filtering, geometric mean filter.

UNIT-IV

Image compression : Fundamentals, Basic compression methods: Huffman coding, Arithmetic coding, LZW coding, Run-Length coding, Symbol-Based coding, Bit-Plane coding, Block Transform coding,Image pyramids and subband coding.

Image segmentation: Fundamentals, point, line, edge detection, thresholding, region based segmentation and .simple morphological operations Erosion and dilation,opening and closing.

UNIT-V

Color image processing: color fundamentals, color models, pseudo color image processing, basics of full color image processing, color transformations, smoothing and sharpening. Image segmentation based on color.

Text Books

1. R. C. Gonzalez and R. E. Woods, Digital Image Processing, 3rd edition, Prentice Hall, 2008.
2. Jayaraman, S. Esakkirajan, and T. Veerakumar," Digital Image Processing", Tata McGraw-Hill Education, 2011.

Reference Books

1. Anil K.Jain, "Fundamentals of Digital Image Processing", Prentice Hall of India, 9th Edition, Indian Reprint, 2002.
2. B.Chanda, D.Dutta Majumder, "Digital Image Processing and Analysis", PHI, 2009.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT21
Name of the Course	Computer networks (Professional Elective -III)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1: Discuss fundamentals of network concepts, Reference Models and physical layer. **(K2)**
CO2: Demonstrate Error control and protocols. **(K3)**
CO3: Apply Routing algorithms and congestion control algorithms. **(K3)**
CO4: Discuss Transport layer services and protocols. **(K2)**
CO5: Describe Application layer protocols. **(K2)**

UNIT-I:

Introduction: Reference models: The OSI Reference Model- the TCP/IP Reference Model, Examples of Networks: Novell Networks, Arpanet, Internet, Network Topologies WAN, LAN, MAN.

Physical Layer: Transmission Media, Multiplexing: FDM, WDM and TDM- LAN Technologies, introduction to switching: Circuit Switched Networks, Datagram Networks, and Virtual Circuit Networks.

UNIT–II:

Data link layer: Design issues, Framing, Flow control, error control, error detection and correction, CRC, Checksum: idea, one's complement internet checksum, MAC: ALOHA, CSMA. Elementary Data Link Layer protocols: simplex protocol, Simplex stop and wait, Simplex protocol for Noisy Channel. Sliding window protocol: One bit, go back N, Selective repeat-Stop and wait protocol, HDLC, point to point protocol (PPP).Piggybacking.

UNIT-III:

Network Layer : Network layer design issues- Algorithm shortest path routing, Flooding, Hierarchical routing, Broad cast, Multi cast Routing algorithms Congestion control and algorithms, Internet Protocol (IP) Addresses, Subnet masking

UNIT–IV:

Transport Layer: Services, Primitives and sockets, Elements of transport protocols, Internet Transport protocols(TCP,UDP,RPC,RTTP/RTP,RTCP) Segment headers, Primitives, Control, Congestion control, Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.

UNIT–V:

Application Layer: DNS, SMTP, POP, & FTP HTTP Presentation formatting. Network security: Introduction to Cryptography, Authentication, Basics of Public key and private key cryptography, digital signatures and certificates firewalls and wireless security.

TEXT BOOKS:

1. Computer Networks by Andrew S Tanenbaum, 4th Edition. Pearson Education/PHI
2. Data Communications and Networks by Behrouz A. Forouzan.Third Edition TMH

REFERENCES:

1. An Engineering Approach to Computer Networks by S.Keshav, 2nd Edition, Pearson Education
2. Understanding Communications and Networks, 3rd Edition by W.A. Shay, Thomson

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT22
Name of the Course	Cellular Mobile Communication (Professional Elective -IV)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1: Demonstrate the limitations of conventional mobile telephone systems; Understand the concepts of cellular systems. **[K2]**
CO2: Illustrate the concept of frequency Reuse channels, deduce Co- channel Interference reduction factor **[K2]**
CO3: Understand the frequency management, channel assignment strategies and Antennas in cellular systems.**[K2]**
CO4: Discuss the concepts of Handoff, dropped calls and cell splitting, Intersystem Handoff. **[K2]**
CO5: Explain the knowledge about different multiple acess schemes, GSM architecture and higher generation cellular standards,.**[K2]**

UNIT-I
CELLULAR MOBILE RADIO SYSTEMS: Introduction to Cellular Mobile System, uniqueness of mobile radio environment, operation of cellular systems, consideration of the components of Cellular system, Hexagonal shaped cells, Analog and Digital Cellular systems.
CELLULAR CONCEPTS: Evolution of Cellular systems, Concept of frequency reuse, frequency reuse ratio, Number of channels in a cellular system, Cellular traffic: trunking and blocking, Grade of Service; Cellular structures: macro, micro, pico and femto cells; Cell splitting, Cell sectoring.

UNIT-II
INTERFERENCE: Types of interferences, Introduction to Co-Channel Interference, real time Co-Channel interference, Co-Channel measurement, Co-channel Interference Reduction Factor, desired C/I from a normal case in a Omni directional Antenna system, design of Antenna system, antenna parameters and their effects, diversity receiver, non-cochannel interference-different types.

UNIT-III
FREQUENCY MANAGEMENT AND CHANNEL ASSIGNMENT: Numbering and grouping, setup access and paging channels, channel assignments to cell sites and mobile units: fixed channel and non-fixed channel assignment, channel sharing and borrowing, overlaid cells. CELL COVERAGE FOR SIGNAL AND TRAFFIC: Signal reflections in flat and hilly terrain, effect of human made structures, phase difference between direct and reflected paths, straight line path loss slope, and

general formula for mobile propagation over water and flat open area, near and long distance propagation, antenna height gain, form of a point to point model.

UNIT-IV

HANDOFF STRATEGIES Concept of Handoff, types of handoff, handoff initiation, delaying handoff, forced handoff, mobile assigned handoff, intersystem handoff, vehicle locating methods, dropped call rates and their evaluation.

UNIT-V

DIGITAL CELLULAR NETWORKS: GSM architecture, GSM channels, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;
HIGHER GENERATION CELLULAR STANDARDS: 3G System architecture (UMTS) enhancements in 4G standard, Architecture and representative protocols, introduction to 5G.

TEXTBOOKS:

1. Mobile Cellular Telecommunications – W.C.Y. Lee, Tata McGraw Hill, 2rd Edn,2006.
2. Principles of Mobile Communications – Gordon L. Stuber, Springer International 2nd Edition, 2007.

REFERENCES:

1. Wireless Communications – Theodore. S. Rapport, Pearson education, 2nd Edn, 2002.
2. Wireless and Mobile Communications – Lee McGraw Hills, 3rd Edition, 2006. 3. Mobile Cellular Communication – G Sasibhushana Rao Pearson
3. Wireless Communication and Networking – Jon W. Mark and WeihuaZhqung, PHI, 2005.

.

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT23
Name of the Course	Low Power VLSI Design (Professional Elective -IV)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1: Illustrate the importance of low power design, sources of power dissipation and the factors affecting them. **[K3]**
CO2: Describe various power reduction techniques possible for Low-Power Design at different levels. **[K2]**
CO3: Analyze various adder structures for low power applications. **[K4]**
CO4: Analyze various multipliers and multiplication algorithms for low voltage and low power environment. **[K4]**
CO5: Discuss the techniques for attaining the low power consumption in memories. **[K2]**

UNIT-I:
Fundamentals of Low Power VLSI Design: Need for Low Power Circuit Design, Sources of Power Dissipation – Switching Power Dissipation, Short Circuit Power Dissipation, Leakage Power Dissipation, Glitching Power Dissipation, Short Channel Effects –Drain Induced Barrier Lowering and Punch Through, Surface Scattering, Velocity Saturation, Impact Ionization, Hot Electron Effect.

UNIT-II:
Low-Power Design Approaches:
Low-Power Design through Voltage Scaling: VTCMOS circuits, MTCMOS circuits, Architectural Level Approach –Pipelining and Parallel Processing Approaches.
Switched Capacitance Minimization Approaches: System Level Measures, Circuit Level Measures, Mask level Measures.

UNIT-III:
Low-Voltage Low-Power Adders: Introduction, Standard Adder Cells, CMOS Adder's Architectures – Ripple Carry Adders, Carry Look-Ahead Adders, Carry Select Adders, Carry Save Adders, Low-Voltage Low-Power Design Techniques –Trends of Technology and Power Supply Voltage, Low-Voltage Low-Power Logic Styles.

UNIT-IV:
Low-Voltage Low-Power Multipliers Introduction, Overview of Multiplication, Types of Multiplier Architectures, Braun Multiplier, Baugh-Wooley Multiplier, Booth Multiplier, Introduction to Wallace Tree Multiplier.
UNIT-V:

Low-Voltage Low-Power Memories: Basics of ROM, Low-Power ROM Technology, Future Trend and Development of ROMs, Basics of SRAM, Memory Cell, Precharge and Equalization Circuit, Low-Power SRAM Technologies, Basics of DRAM, Self-Refresh Circuit, Future Trend and Development of DRAM.

Text Books:
1. Low-Voltage, Low-Power VLSI Subsystems – Kiat-Seng Yeo, Kaushik Roy, TMH Professional Engineering.

Reference Books:
1. Low Power CMOS VLSI Circuit Design – Kaushik Roy, Sharat C. Prasad, John Wiley & Sons, 2000.
2. CMOS Digital Integrated Circuits – Analysis and Design – Sung-Mo Kang, Yusuf Leblebici, TMH, 2011.

Semester	**VII SEM**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECT24
Name of the Course	Radar Engineering (Professional Elective -V)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1: Demonstrate the factors which affecting the radar performance using Radar Equation. **[K2]**

CO2: Describe the operation of CW and FMCW Radar systems. **[K2]**

CO3: Illustrate the principle of each and every block of MTI Radar **[K2]**

CO4: Distinguish the different methods used for tracking targets. **[K2]**

CO5: Illustrate the basic principle and the importance of Matched Filter Receivers in Radars **[K2]**

UNIT–I:

Basics of Radar: Introduction, Maximum Unambiguous Range, simple Radar range Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications.

Radar Equation : Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise, Modified Radar Range Equation, SNR, Probability of Detection, Probability of False Alarm, Integration of Radar Pulses, Radar Cross Section of Targets, Transmitter Power, PRF and Range Ambiguities, System Losses.

UNIT–II:

CW and Frequency Modulated Radar: Doppler Effect, CW Radar – Block Diagram, Isolation between Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirements, Applications of CW radar.

FM-CW Radar: Range and Doppler Measurement, Block Diagram and Characteristics, FMCW altimeter, Multiple Frequency CW Radar.

UNIT-III:

MTI Radar: Introduction, Principle, MTI Radar with - Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers – Filter Characteristics, Blind Speeds, Double Cancellation and Staggered PRFs. Range Gated Doppler Filters. MTI Radar Parameters, Limitations to MTI Performance.

UNIT –IV:

Tracking Radar: Tracking with Radar, Sequential Lobing, Conical Scan, Mono pulse Tracking Radar – Amplitude Comparison Mono pulse (one- and two- coordinates), Phase Comparison Mono pulse, Tracking in Range, Acquisition and Scanning Patterns.

UNIT –V:

Detection of Radar Signals in Noise: Introduction, Matched Filter Receiver – Response Characteristics and Derivation, Correlation Detection and Cross-correlation Receiver, Matched Filter with Non-white Noise, Noise Figure and Noise Temperature.

Radar Receivers: Displays – types. Duplexers – Branch type and Balanced type, Circulators as Duplexers.

TEXT BOOKS:

1. Introduction to Radar Systems – Merrill I. Skolnik, TMH Special Indian Edition, 2ndEdition,2007.
2. Radar Principles – Peebles, Jr., P.Z., Wiley, New York, 1998.
3. Radar Engineering – GSN Raju, IK International.

REFERENCE BOOKS:

1. Introduction to Radar Systems, 3rd edition – M.I. Skolnik, TMH Ed., 2005.
2. Microwave & Radar Engineering – M. Kulkarni, Umesh Publications, 3rd edition
3. Microwave & Radar Engineering – G. SasibhushanaRao, Pearson Publications

Semester	VII SEM	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECT25
Name of the Course	CMOS DIGITAL IC DESIGN (Professional Elective -V)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1: Analyze the concepts of MOS Design. **[K2]**
CO2: Design and analysis of Combinational MOS Circuits. **[K2]**
CO3: Design and analysis of Sequential MOS Circuits. **[K2]**
CO4: Construct Dynamic Logic Circuits Using Various Logic Styles. **[K2]**
CO5: Describe the Concepts of Semiconductor Memories, Flash Memory, RAM array organization **[K2]**

UNIT-I
MOS Design:
Pseudo NMOS Logic – Inverter, Inverter threshold voltage, Output high voltage, Output Low voltage, Gain at gate threshold voltage, Transient response, Rise time, Fall time, Pseudo NMOS logic gates, Transistor equivalency, CMOS Inverter logic.

UNIT-II
Combinational MOS Logic Circuits:
MOS logic circuits with NMOS loads, Primitive CMOS logic gates NOR & NAND gate, Complex Logic circuits design – Realizing Boolean expressions using NMOS gates and CMOS gates , AOI and OIA gates, CMOS full adder, CMOS transmission gates, Designing with Transmission gates.

UNIT-III
Sequential MOS Logic Circuits:
Behaviour of bistable elements, SR Latch, Clocked latch and flip flop circuits, CMOS D latch and edge triggered flip-flop.

UNIT-IV
Dynamic Logic Circuits:

Basic principle, Voltage Bootstrapping, Synchronous dynamic pass transistor circuits, Dynamic CMOS transmission gate logic, High performance Dynamic CMOS circuits.

UNIT-V

Semiconductor Memories:

Types, RAM array organization, DRAM – Types, Operation, Leakage currents in DRAM cell and refresh operation, SRAM operation Leakage currents in SRAM cells, Flash Memory, NOR flash and NAND flash.

TEXT BOOKS:

1. Digital Integrated Circuit Design – Ken Martin, Oxford University Press, 2011.
2. CMOS Digital Integrated Circuits Analysis and Design – Sung-Mo Kang, Yusuf Leblebici, TMH, 3rd Ed., 2011.

REFERENCE BOOKS:

1. Introduction to VLSI Systems: A Logic, Circuit and System Perspective – Ming-Bo Lin, CRC Press, 2011
2. Digital Integrated Circuits – A Design Perspective, Jan M. Rabaey, Anantha Chandrakasan, Borivoje Nikolic, 2nd Ed., PHI.

Annexure-II

Job Oriented
Elective Courses
(V20 Regulation)

List of Advanced/ Job Oriented Elective Courses for ECE Students

S. No	Course Code	Name of the Course	Department Offered
1	V20ECTJO01	FPGA Architecture	Electronics & Communication Engineering
2	V20ECTJO02	Optical Communications & Networks	
3	V20ECTJO03	Industrial IOT	
4	V20ECTJO04	Modern Satellite Communication	
5	V20ECTJO05	Wireless Sensor & Networks	
6	V20ECTJO06	Digital Signal Processors and Applications	
7	V20ECTJO07	Modern Wireless Communication Systems	
8	V20ECTJO08	CMOS Analog IC Design	
9	V20ECTJO09	Bio Medical Instrumentation	
10	V20ECTJO10	Speech Signal Processing	
11	V20ECTJO11	Electronic Instrumentation	
12	V20ECTJO12	Sensors & Applications	
13	V20ECTJO13	Deep Learning	
14	V20ECTJO14	Machine learning	

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	2	0	2	3	V20ECTJO01
Name of the Course	FPGA Architecture (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1 Describe Low end programmable devices and FPGA basics. **[K2]**
CO-2 Describe Spartan 6 basics. **[K2]**
CO-3 Use Virtex 5 clock sources and FIFO. Comprehend various I/O standards. **[K3]**
CO-4 Use Memory, DSP blocks in complex designs. Comprehend SerDes. **[K3]**
CO-5 Distinguish RISC based Soft processors from Xilinx, Aletra. **[K3]**

UNIT-I
DESIGNING WITH PROGRAMMABLE LOGIC DEVICES:
Read only Memories, Programmable logic Arrays (PLA), Programmable Array logic (PAL), Programmable logic Devices (PLD). Skew, setup, hold time.
DESIGNING WITH FPGA:
Logic implementation options, Technology trends, Simple SRAM programmable FPGA architecture, Xilinx 3000 series FPGAs, Programmable interconnects, Xilinx 4000 series FPGAs, Programming the FPGA.

UNIT-II
SPARTAN 6 ARCHITECUTUTE:
Spartan 6 Device features- 6 input LUT, Slice, Single Port RAM, Dual Port RAM, ROM, Distributed RAM, 32 x 6, 64 x 1, 128 x 1, Distributed RAM timings, Shift Registers, Multiplexers, Interconnect, PLL, DCM, DSP Slice.

UNIT-III
VIRTEX 5 ARCHITECTURE:
Clock resources-Global clocks, regional clocks, Clock buffer, Clock Gating. Clock Tree, Clock De-skew, True Dual port RAM. Write modes, FIFO architecture, empty

flags, almost empty flags, almost fill flags, full flag, cascading FIFOS, connecting FIFOs in parallel, designing Large multiplexer 4xl, 8xl, 16xl. Control impedance, I/O primitives. I/O supported standards, LVDS.

UNIT-IV

STARATIX V ARCHITECTURE:

ALM Block diagram, ALM operating modes, ALM in Arithmetic mode, Types of embedded memory, Control clocking, Memory features, Memory modes, DSP block features, operational modes, DSP block architecture in 27 X 27 mode, independent complex multiplier mode, I/O features mixing voltage referenced and non-voltage referenced standard I/O features standards. Dynamic OCT.LVDS Serdes block diagram and features, Differential Receiver Block diagram and features.

UNIT-V

SOFT PROCESSORS:

JTAG, programming through JTAG, IEEE 1149.1 Boundary scan testing, programmable power technology, Features of Soft processors, Nios-II, Microblaze.

TEXT BOOKS:

1. Charles H Roth Jr“ Digital System Design using VHDL”, second edition, 2008.
2. Spartan 6 family overview.
3. Virtex 5- User Guide.

REFERENCES:

1. J. Old Field,R.Dorf, “Field Programmable Gate Arrays”, John Wiley & Sons, New York, 1995.
2. S. Trimberger, Edr.“Field Programmable Gate Arrays Technology”, Kluwer Academic Publications, 1994.
3. Bob Zeidman, “ Designing with FPGAs & CPLDs”, CMP Books, 2002.

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	2	0	2	3	V20ECTJO02
Name of the Course	Optical Communication & Networks (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:
CO1. Describe the overview of optical fiber communication, ray theory transmission and concepts of modes. **[K2]**
CO2. Explain the Transmission characteristics of fiber and optical fiber Connectors. **[K2]**
CO3. Describe the operation of optical sources, photo detectors and optical Receiver. **[K2]**
CO4. Explain WDM Concepts and Components. **[K2]**
CO5. Explain the Optical switching networks. **[K2]**

UNIT I
Optical fiber Communications: Historical development, The general system, Advantages of optical fiber communication, Optical fiber wave guides: Ray theory transmission, Modes in planar guide, Phase and group velocity, Cylindrical fiber: Modes, Step index fibers, Graded index fibers, Single mode fibers, Cut-off wavelength, Mode field diameter, effective refractive index. Fiber Materials, Photonic crystal fibers.**(Text 2)**

UNIT II
Transmission characteristics of optical fiber: Attenuation, Material absorption losses, Linear scattering losses, Nonlinear scattering losses, Fiber bend loss, Dispersion, Chromatic dispersion, Intermodal dispersion: Multimode step index fiber.
Optical Fiber Connectors: Fiber alignment and joint loss, Fiber splices: Fusion Splices, Mechanical splices, Fiber connectors: Cylindrical ferrule connectors, Duplex and Multiple fiber connectors, Fiber couplers: three and four port couplers, star couplers, Optical Isolators and Circulators**.(Text 2)**

UNIT III
Optical sources: Light emitting diodes: LED Structures, Light Source Materials, Quantum Efficiency and LED Power, Modulation. Laser Diodes: Modes and Threshold conditions, Rate equation, External Quantum Efficiency, Resonant Frequencies.
Photodetectors: Physical principles of Photodiodes, Photo detector noise, Detector responsetime.

Optical Receiver: Optical Receiver Operation: Error sources, Front End Amplifiers,Receiver sensitivity, Quantum Limit.**(Text1)**

UNIT IV
WDM Concepts and Components: Overview of WDM: Operational Principles of WDM, WDM standards, Mach-Zehnder Interferometer, Multiplexers, Isolators and Circulators, Fiber grating filters, Dielectric Thin-Film Filters, Diffraction Gratings. Introduction to Optical amplifiers: Basic application and Types. **(Text 1)**

UNIT V
Optical Networks: Optical network evolution and concepts: Optical networking terminology, Optical network node and switching elements, Wavelength division multiplexed networks, Optical network transmission modes, layers and protocols: Synchronous networks, Asynchronous transfer mode, OSI reference model, Optical transport network, Internet protocol, Wavelength routing networks: Routing and wavelength assignment

Optical switching networks: Optical circuit switched networks, packet switched networks,Multiprotocol Label Switching, Optical burst switching networks.**(Text 2)**

TEXT BOOKS:
1. Optical Fiber Communications – Gerd Keiser, McGraw-Hill International edition, 5th Edition, 2015.
2. Optical Fiber Communications – John M. Senior, PHI, 3rd Edition, 2010.

RERFERENCES :
1. Fiber Optic Communication Systems – Govind P. Agarwal , John Wiley, 3rd Ediition, 2004.
2. Fiber Optic Communications – Joseph C. Palais, 4th Edition, Pearson Education, 2004.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTJO03
Name of the Course	Industrial IoT (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the key techniques and theory behind Industrial Internet of Things **[K2]**
CO2: Explain the key techniques and theory behind Industrial Internet of Things **[K2]**
CO3: Explain the integration of Cloud and IoT, Edge and Fog Computing **[K2]**
CO4: Apply effectively the various enabling technologies (both hardware and software) for IIoT **[K3]**
CO5: Illustrate and build IIoT system for different Use cases **[K3]**

Unit – 1 – Introduction to IoT

Overview of Internet of Things, Introduction, IoT Architecture, Application-based IoT Protocols - Infrastructure-based protocols, Data protocols, Transport protocols; Cloud Computing - Types of cloud, Business aspects of cloud, Virtualization: Key aspect of cloud computing, Mobile cloud computing; Fog Computing - Applications of Fog computing; Sensor Cloud - Applications of Sensor Cloud; Big Data.

Unit -2 - Introduction to IIoT

Industry 4.0, Introduction IIoT, Design requirement of Industry 4.0, Drivers of Industry 4.0, Sustainability Assessment of Industry, Smart Business perspective, Cybersecurity, Impacts of Industry 4.0, Industrial Internet Systems, Industrial Sensing, Industrial Process.

Unit – 3- IIoT Technologies

Business Model of IIoT, Reference Architecture of IIoT, Off-site Technologies – cloud computing & Fog Computing, On-site Technologies –Augmented Reality, Virtual Reality, Big Data & Advance Analytics, Smart factories.

Unit -4 Sensors, Actuators & Data Transmission

Sensors – Thermal, Mechanical, Electrical, optical; Actuators – Thermal, Hydraulic, Electromechanical; Industrial Data Transmission – Profibus, Modbus, CAN, NB-IoT, IEEE 802.11AH.

Unit – 5 Case Studies

Introduction, Manufacturing Industry; Automotive Industry; Mining Industry.

Textbooks:

1. SudipMisra, Chandana Roy, Anandarup Mukherjee, "Introduction to Industrial Internet of Things and Industry 4.0".
2. Alasdair Gilchrist, "Industry 4.0: The Industrial Internet of Things".

References:

1. Antonio Capasso, GiacomoVeneri, "Hands-On Industrial Internet of Things", Packt Publishing.
2.Chen, Fulong, Luo, Yonglong, "Industrial IoT Technologies and Applications", LNICST Series.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECTJO04
Name of the Course	Modern Satellite Communication (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of this course, the students will be able to:

CO1: Describe the basic concepts and orbit mechanics of satellite communication. **[K2]**

CO2: Discuss the major subsystems of a satellite and satellite link design. **[K2]**

CO3: Describe the various sub-systems used in Earth stations and the different orbits. **[K2]**

CO4: Illustrate the various multiple access techniques. **[K2]**

CO5: Explain the Special purpose communication satellites and Global Positioning System. **[K2]**

UNIT I

INTRODUCTION: Origin of Satellite Communications, Basic Concepts of Satellite Communications, Frequency allocations for Satellite Services, Applications, Future Trends of Satellite Communications.

ORBITAL MECHANICS: Orbital Mechanics, Look Angle determination, Orbital perturbations, Orbital effects in communication systems performance. Advanced payload systems and launch vehicles.

UNIT II

SATELLITE SUB SYSTEMS: Attitude and orbit control system, telemetry, tracking, Command and monitoring, power systems, communication subsystems, Satellite antenna.

SATELLITE LINK DESIGN: General Link equation, system noise temperature and G/T ratio, Design of down links, up link design.

UNIT III

EARTH STATION TECHNOLOGY: Introduction, Transmitters, Receivers, Antennas, Tracking systems, Advanced ground sub systems.

LOW EARTH ORBIT AND GEO-STATIONARY SATELLITE SYSTEMS: Orbit consideration, coverage and frequency considerations, Delay & Throughput considerations, System considerations. Very high throughput satellites, Operational NGSO constellation Designs.

UNIT IV

Frequency division multiple access (FDMA), Intermodulation, Calculation of C/N. Time division Multiple Access (TDMA) Frame structure. Satellite Switched TDMA Onboard processing, Code Division Multiple access (CDMA), Spread spectrum transmission and reception.

UNIT V

Special Purpose Satellites: Earth observation satellite, Satellite Television, Direct Broadcast Satellite-TV receiver, Very Small Aperture Terminal(VSAT),Mobile Communication Satellite system(MSAT), Search and Rescue satellites(SARSAT),GPS Systems, Satellite signal acquisition, GPS Navigation Message, GPS signal levels, GPS receiver operation, Differential GPS. Satellite Internet of Things.

TEXT BOOKS:

1. Satellite Communications – Timothy Pratt, Charles Bostian and Jeremy Allnutt, WSE, Wiley Publications, 2ndEdition, 2003.

2. Satellite Communications Engineering – Wilbur L. Pritchard, Robert A Nelson and Henri G. Suyderhoud, 2ndEdition, Pearson Publications, 2003.

REFERENCES:

1. Satellite Communication - D.C Agarwal, Khanna Publications, 5th Ed.

2. Fundamentals of Satellite Communications – K.N. Raja Rao, PHI, 2004

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTJO05
Name of the Course	Wireless Sensors & Networks (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the concepts of Wireless Sensor Networks, it's Architecture. **[K2]**
CO2: Describe the Networking Technologies. **[K2]**
CO3: Explain the MAC Protocols. **[K2]**
CO4: Illustrate the Routing and Transport Layer Protocols. **[K2]**
CO5: Explain the Security Layer Protocols and Applications of WSN. **[K2]**

UNIT I - Overview of Wireless Sensor Networks:

Key definitions of sensor networks, Advantages of sensor Networks, Unique constraints and challenges, Driving Applications, Enabling Technologies for Wireless Sensor Networks.Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, OperatingSystems and Execution Environments, Network Architecture -Sensor Network Scenarios, Gateway Concepts.

UNIT II - Networking Technologies:

Physical Layer and Transceiver Design Considerations, Personal area networks (PANs), hiddennode and exposed node problem, Topologies of PANs, MANETs, WANETs.

UNIT-III - MAC Protocols for Wireless Sensor Networks:

Issues in Designing a MAC protocol for Ad Hoc Wireless Networks, Design goals of a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC Protocols - Contention - Based Protocols, with reservation Mechanisms, and with Scheduling Mechanisms.

UNIT-IV–Routing and Transport Layer Protocols:

Routing Protocols:, Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks,Classification of Routing Protocols, Table–Driven Routing Protocols, On – Demand Routing Protocols.

Transport Layer Protocols: Issues in Designing a Transport Layer Protocol for Ad Hoc Wireless Networks, Classification of Transport Layer Solutions, TCP Over Ad Hoc Wireless Networks.

UNIT- V - Security, Platforms & Applications:

Security in Ad Hoc Wireless Networks, Network Security Requirements, Issues and Challenges in Security Provisioning; Sensor Node Hardware – Berkeley Motes, Programming Challenges; Applications - Home Automation, Smart Metering.

TEXT BOOKS:

1. Ad Hoc Wireless Networks: Architectures and Protocols, C. Siva Ram Murthy and B.S.Manoj, 2004, PHI.
2. Wireless Adhoc and Sensor Networks: Protocols, Performance and Control, JagannathanSarangapani, CRC Press.
3. Holger Karl & Andreas Willig, “Protocols and Architectures for Wireless Sensor Networks", John Wiley, 2005.

REFERENCES:

1. Wireless Sensor Networks- Technology, Protocols, and Applications, KazemSohraby, Daniel Minoli, &TaiebZnati, John Wiley, 2007.
2. Wireless Sensor Networks- An Information Processing Approach,Feng Zhao & Leonidas J. Guibas, Elsevier, 2007.
3. Adhoc Mobile Wireless Networks: Protocols & Systems, C.K. Toh,1st Ed., PearsonEducation.
4. Wireless Sensor Networks - C. S. Raghavendra, Krishna M. Sivalingam, 2004, Springer.
5. Wireless Sensor Networks – S Anandamurugan, Lakshmi Publications.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTJO06
Name of the Course	Digital Signal Processors and Applications (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Describe the concepts of digital signal processing. **(K2)**
CO-2: Explain architectures used in programmable DSP's.**(K2)**
CO-3: Illustrate addressing modes and memory organization of TMS32OC54xx processor**. (K3)**
CO-4: Describe the Instruction set, peripheral devices and programming techniques**. (K2)**
CO-5: Illustrate the applications of DSP processor (**K3)**

UNIT I
INTRODUCTION TO DIGITAL SIGNAL PROCESSING:
A Digital Signal Processing System, The Sampling Process, Discrete Time Sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear Time-Invariant Systems, Digital Filters, Decimation and Interpolation, Number Formats for Signals and coefficients in DSP Systems.

UNIT II
ARCHITECTURES FOR PROGRAMMABLE DIGITAL SIGNAL-PROCESSORS:
Basic Architectural Features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Features for External Interfacing.

UNIT III
PROGRAMMABLE DIGITAL SIGNAL PROCESSORS:
Commercial digital Signal-processing Devices, Data Addressing Modes of TMS32OC54xx, Memory Space of TMS32OC54xx Processors, Program Control.

UNIT IV
INSTRUCTION SET AND PROGRAMMING: TMS320C54X & 54xx Instructions and Programming, On-Chip peripherals, Interrupts, Pipeline Operation of TMS32OC54xx Processor.
UNIT V

INTERFACING AND APPLICATIONS OF DSP PROCESSOR:
Synchronous Serial Interface, A CODEC Interface Circuit, DSP Based Bio-telemetry Receiver, A Speech Processing System, An Image Processing System.

TEXT BOOKS:
1. Digital Signal Processing, Avatar Singh and S. Srinivasan, Thomson Learning, 2004.
2. Digital Signal Processing, Principles, Algorithms, and Applications by John G. Proakis,
Dimitris G. Manolakis, Pearson Education / PHI, 2007.
3. Discrete Time Signal Processing by A.V.Oppenheim and R.W. Schaffer, PHI
Reference Books:
1. Digital Signal Processing by Andreas Antoniou, TATA McGraw Hill , 2006
2. Digital Signal Processing by MH Hayes, Schaum's Outlines, TATA Mc-Graw Hill, 2007.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTJO07
Name of the Course	Modern Wireless Communication Systems (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe how to measure the performance of wireless system, in multipath Environment **[K2]**

CO2: Summarize about Wireless Channel. **[K2]**

CO3: Explain Principle and properties of CDMA. **[K2]**

CO4: Discuss the working and advantages of MIMO wireless communication systems **[K2]**

CO5: Explain the principle and advantages of OFDM system and various modern wireless communication technologies **[K2]**

Unit I:

Introduction to Wireless Systems: Evolution of Wireless Communication Technologies, Modeling Wireless Channel, Wireless Fading Channel Model, Fading Channel Distribution , Rayleigh Fading Channel, Bit Error Rate (BER) Performance, Bit Error Rate (BER) of AWGN Channels.

Unit II:

Performance in Fading wireless channels: Bit Error Rate of Rayleigh Fading Wireless Channel, Exact BER Expression for Rayleigh Fading Wireless Channel, Deep Fade Analysis of Wireless Communication, Principle of Diversity, Multiple Antenna Diversity, BER of Multiple Antenna Wireless Systems.

Wireless Channel Characterization : Delay Spread and Doppler,RMS Delay Spread, Delay Spread and Inter Symbol Interference, Coherence Bandwidth of Wireless Channel,Impact of Doppler Effect on Wireless Channel

Unit III:

Principles of CDMA Wireless Communication: Introduction to Code Division Multiple Access (CDMA),Chip Time and Bandwidth Expansion in CDMA, Code Generation for CDMA,CDMA Codes: Properties of PN Sequences, BER of CDMA Systems

Unit IV:

Principles of CDMA and MIMO Wireless Communication: Analysis of Multi-user CDMA, Multipath Diversity in CDMA Systems, Near-Far Problem in CDMA, Multiple Input Multiple Output (MIMO) Systems, Examples of MIMO Systems, MIMO Receivers, BER Performance of ZF Receiver, Alamouti Code and Space-Time Block Codes, BER of Alamouti Coded System, Singular Value Decomposition (SVD), SVD in MIMO

Unit V: Principles of OFDM Wireless Communication: Capacity of MIMO Wireless Systems, SVD based MIMO Transmission, Orthogonal Frequency Division Multiplexing (OFDM), Transmission in Multicarrier Systems, FFT/IFFT Processing in OFDM, Cyclic Prefix in OFDM Systems, Schematic Representation of OFDM Transmitter and Receiver, BER Performance of OFDM Systems.

Text Books:

1. Aditya K. Jagannatham, ―Principle of Modern Wireless Communication Systems: Theory and practice‖ 1st Edition, McGrawHill Publication
2. Theodore S. Rappaport, ―Wireless Communications: Principles and Practice‖ Second Edition, Pearson Education

Reference Books:

1. Simon Haykin, MichaleMoher, ―Modern Wireless Communications‖, Pearson.

2. Xiaodong Wang, H. Vincent Poor, ―Wireless Communication Systems: Advanced Techniques for Signal Reception.

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	2	0	2	3	V20ECTJO08
Name of the Course	CMOS Analog IC Design (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Describe the concept of MOS device and modeling of MOS drain current for large and small signal analysis **(K2)**
CO-2: Design and analyze Analog CMOS Sub-Circuits **(K4)**
CO-3: Describe the large signal and small signal analysis of Inverters & differential amplifier **(K2)**
CO-4: Describe the large signal and small signal analysis of cascade amplifier & Current Amplifiers **(K2)**
CO-5: Illustrate the CMOS output Amplifiers **(K3)**

UNIT -I: MOS Devices and Modeling: The MOS Transistor, Passive Components-Capacitor & Resistor, Integrated circuit Layout, CMOS Device Modeling - Simple MOS Large-Signal Model, Other Model Parameters, Small Signal Model for the MOS Transistor, Computer Simulation Models, Sub-threshold MOS Model.

UNIT -II: Analog CMOS Sub-Circuits: MOS Switch, MOS Diode, MOS Active Resistor, Current Sinks and Sources, Current Mirrors Cascade current Mirror and Wilson Current Mirror, Current and Voltage References, Band gap Reference.

UNIT -III: CMOS Amplifiers-I: Inverters- Active load inverter, current source inverter, push-pull inverter, Differential Amplifiers- large signal analysis, small signal analysis, design of differential amplifier,

UNIT -IV: CMOS Amplifiers-II: Cascode Amplifiers- Large signal analysis, small signal analysis and frequency response, design of cascade amplifier, Current Amplifiers- single ended input current amplifier, differential input current amplifier,

UNIT-V: Output Amplifiers: class-a amplifier, source follower, push pull CS amplifier, High Gain Amplifiers Architectures.

TEXT BOOKS:

1. CMOS Analog Circuit Design - Philip E. Allen and Douglas R. Holberg, Oxford University Press, International Second Edition/Indian Edition, 2010.
2. Design of Analog CMOS Integrated Circuits- Behzad Razavi, TMH Edition.

REFERENCE BOOKS:

1. Analog Integrated Circuit Design- David A.Johns, Ken Martin, Wiley Student Edn, 2016.
2. Analysis and Design of Analog Integrated Circuits- Paul R. Gray, Paul J. Hurst, S. Lewisand R. G. Meyer, Wiley India, Fifth Edition, 2010.
3. CMOS: Circuit Design, Layout and Simulation- Baker, Li and Boyce, PHI

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTJO09
Name of the Course	Bio Medical Instrumentation (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basics concepts of Bio-Medical Instrumentation **(K2)**
CO2: Explain the concepts of electrode theory, classification of Electrodes and Transducers used in Bio-Medical Applications **(K2)**
CO3: Explain the Anatomy and Physiology of Cardiovascular system and Illustrate the application of Bio-Medical Instruments to measure the Physiological parameters of Cardiovascular System **(K2)**
CO4: Discuss the processing methods in elements used for Patient's Health care & monitoring.
CO5: Classify different types of monitors, discuss the principals of recorders and Illustrate the methods of accident preventions i.e. Shock Hazards from different Electrical Equipment. **(K2)**

UNIT-I:

INTRODUCTION TO BIOMEDICAL INSTRUMENTATION: Age of Biomedical Engineering, Development of Biomedical Instrumentation, Man Instrumentation System, Components of the Man-Instrument System, Physiological System of the Body, Problems Encountered in Measuring a Living System, Sources of Bioelectric Potentials, Muscle, Bioelectric Potentials, Sources of Bioelectric Potentials, Resting and ActionPotentials,BioelectricPotentials-ECG,EEGandEMG,EnvokedResponses.

UNIT-II:

ELECTRODES AND TRANSDUCERS: Introduction, Electrode Theory, Bio potential Electrodes, Examples of Electrodes, Basic Transducer Principles ,The Transducer and Transduction Principles, Active Transducers, Passive Transducers, Transducers for Biomedical Applications, Pulse Sensors, Respiration Sensor, Transducers with Digital Output.

UNIT-III:

CARDIOVASCULAR SYSTEM AND MEASUREMENTS: The Heart and Cardiovascular System, Electro Cardiography, Blood Pressure Measurement,

Measurement of Blood Flow and Cardiac Output, Measurement of Heart Sounds, Plethysmography.

MEASUREMENTS IN THE RESPIRATORYSYSTEM: The Physiology of The Respiratory System, Tests and Instrumentation for the Mechanics of Breathing, Respiratory Therapy Equipment.

UNIT-IV:

PATIENT CARE AND MONITORING: Elements of Intensive-Care Monitoring, Patient Monitoring Displays, Diagnosis, Calibration and Repair ability of Patient-Monitoring Equipment, Other Instrumentation for Monitoring Patients, Organization of the Hospital for Patient-Care Monitoring, Pacemakers, Defibrillators.

UNIT-V:

MONITORS, RECORDERS AND SHOCK HAZARDS: Bio potential Amplifiers, Monitors, Recorders, Shock Hazards and Prevention, Physiological Effects and Electrical Current, Shock Hazards from Electrical Equipment, Methods of Accident Prevention, Isolated Power Distribution System.

Text Books:

1.“Bio-Medical Electronics and Instrumentation”, Onkar N. Pandey, Rakesh Kumar, Katson Books.
2.“Bio-Medical Instrumentation”, Cromewell, Wiebell, Pfeiffer

References:

1. “Hand Book of Bio-Medical Instrumentation”, Khandapur. McGrawHill
2. “Introduction to Bio-Medical Equipment Technology”, 4thEdition, Joseph J.Carr, John M.Brown, Pearson Publications.

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECTJO10
Name of the Course	SPEECH SIGNAL PROCESSING (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO 1 Outline the basic characteristics of speech signal in relation to speech production **and** model the speech production system.**(K2)**
CO 2 List different speech parameters. **(K2)**
CO 3 Apply various algorithms for speech enhancement and speech coding. **(K3)**
CO 4 Design a simple system for speech recognition. **(K3)**
CO 5 Make use of different Speaker Recognition Techniques. **(K3)**

UNIT I Speech Production: Speech signal; Speech Production process: Lungs, Larynx and Vocal folds, Vocal tract; Acoustic Phonetics: Vowels, Diphthongs, Semi vowels, Nasals, Unvoiced fricatives, Voiced fricatives, Voiced and unvoiced stops; Acoustic theory of speech production; Digital models for speech signals.

UNIT II Speech Analysis: Time-Dependent processing of speech; Short-Time energy and average magnitude; Speech vs. Silence discrimination using energy and zero crossings; Short-Time autocorrelation; Short-Time average magnitude difference function; Pitch period estimation using autocorrelation function; Linear Predictive Coding (LPC) Analysis; Cepstral Analysis.

UNIT III Speech Enhancement: Nature of Interfering Sounds; Speech Enhancement (SE) Techniques: Basic principles of Spectral Subtraction; Wiener Filtering; Wiener filtering for noise reduction; Statistical-Model-based method: Maximum-likelihood estimator for speech enhancement; Applications of speech enhancement.

UNIT IV Speech Coding: Quantization; Speech redundancies; Time-Domain waveform coding: Basic Time-Adaptive Waveform Coding, Exploiting Properties of the Spectral Envelope; Linear predictive coding (LPC)-based coders: Adaptive delta modulation, Adaptive differential pulse code modulation, Code-excited linear prediction;

UNIT V Automatic Speech and Speaker Recognition: Introduction: ASR Search, Variability in Speech Signals, Speech recognition approaches - using HMMs and

Deep Neural Networks, Speaker recognition using GMMs, I-Vector and Deep Learning

Text books:

1. Douglas O Shaughnessy, "Speech Communications Human and Machine" 2 nd Edition, IEEE Press, 2000.
2. Dr Shaila D Apte, " Speech and Audio Processing , Wiley India, 1ST Edition 2012

Reference Books:

1. Philipos C. Loizou, "Speech Enhancement" 2 ndEdition, CRC Press, Taylor & Francis Group, 2013
2. Thomas F. Quatieri, "Discrete -Time Speech Signal Processing: Principles and Practice", Pearson Education, 2002

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECTJO11
Name of the Course	Electronic Instrumentation (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Select the instrument to be used based on the requirements. **[K2]**
CO2. Understand the design of oscilloscopes for different applications. **[K2]**
CO3. Explain different signal generators and analyzers. **[K2]**
CO4. Understand the design of different types of Bridge circuits for different Applications. **[K2]**
CO5. Explain and Design different types of transducers for different Applications and for measurement of Physical Parameters. **[K2]**

UNIT-I

Performance characteristics of instruments, Static characteristics, Accuracy, Resolution, Precision, Expected value, Error, Sensitivity. Errors in Measurement, Dynamic Characteristics-speed of response, Fidelity, Lag and Dynamic error. DC Voltmeters-Multi-range, Range extension/Solid state and differential voltmeters, AC voltmeters-multi range, range extension, shunt. Thermocouple type RF ammeter, Ohmmeters series type, and shunt type, Multi-meter for Voltage, Current and resistance measurements.

UNIT-II

Oscilloscopes CRT features, vertical amplifiers, horizontal deflection system, sweep, trigger pulse, delay line, sync selector circuits, simple CRO, triggered sweep CRO, Dual beam CRO, Dual trace oscilloscope, sampling oscilloscope, storage oscilloscope, digital readout oscilloscope, digital storage oscilloscope, Lissajous method of frequency measurement.

UNIT-III

Signal Generator- fixed and variable, AF oscillators, Standard and AF sine and square wave signal generators, Function Generators, Square pulse, Random noise, sweep, Arbitrary waveform. Wave Analyzers, Harmonic Distortion Analyzers, Spectrum Analyzers, Digital Fourier Analyzers.

UNIT-IV

DC Bridges: Measurement of Resistance-Wheatstone's Bridge, Kelvin's Bridge. AC Bridges: Measurement of inductance- Maxwell's bridge, Hay's bridge, Anderson Bridge. Measurement of capacitance-Schering's Bridge. Measurement of Frequency-Wien Bridge, Errors and precautions in using bridges.

UNIT-V

Transducers- active & passive transducers : Resistance, Capacitance, inductance; Strain gauges, LVDT, Piezo Electric transducers, Resistance Thermometers, Thermocouples, Thermistors, Sensistors.

Measurement of physical parameters- Force, Pressure, Velocity, Humidity, Moisture. Data acquisition systems.

TEXTBOOKS:

1. Electronic Instrumentation, second edition -. S. Kalsi, Tata Mc Graw Hill, 2004.
2. Modern Electronic Instrumentation and Measurement Techniques – A.D. Helfrickand W.D.Cooper, PHI, 5th Edition,2002.

REFERENCES:

1. Electronic Instrumentation & Measurements- David A. Bell, PHI, 2nd Edition, 2003.
2. Electronic Test Instruments, Analog and Digital Measurements- Robert A. Witte, Pearson Education, 2ndEdition, 2004.
3. Electronic Measurements & Instrumentations by K. Lal Kishore, Pearson Education-2005.
4. Electronic Measurements & Instrumentation by Uday A.Bakshi & Ajay V. Bakshi Technical Publications.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECTJO12
Name of the Course	Sensors & Applications (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the sensors and theory behind **[K2]**
CO2: Explain the Sensors used in mechanical systems. **[K2]**
CO3: Explain the Thermal and electrical Sensors **[K2]**
CO4: Explain the Magnetic, Acoustic and High frequency sensors **[K2]**
CO5: Illustrate and build IoT or IIoT systems for different Use cases **[K3]**

UNIT – I
Introduction: transducer, Electrical sensor – need for sensors in the modern world. Different fields of sensors based on the stimuli - various schematics for active and passive sensors.General characteristics and specifications of sensors - Implications of specifications uses of sensors - measurement of stimuli - block diagram of sensor system. Brief description of each block.

UNIT– II
Sensors for mechanical systems or mechanical sensors - Displacement - acceleration and force - flow of fluids - level indicators - pressure in fluids - stress in solids. Typical sensors - wire and film strain gauges, anemometers, piezo electric, accelerometers, potentiometric sensors, LVDT.

UNIT– III
Thermal sensors – temperature – temperature difference – heat quantity. Thermometers for different situation – thermocouples thermistors – colorpyrometry.Optical sensors: light intensity – wavelength and color – light dependent resistors, photodiode, photo transistor, CCD, CMOS sensors.
Electrical sensors: conventional volt and ammeters, high current sensors, (current transformers), high voltage sensors, High power sensors.

UNIT – IV
Magnetic sensors: magnetic field, magnetic flux density – magneto resistors, Hall sensors, super conduction squids.

Acoustic or sonic sensors: Intensity of sound, frequency of sound in various media, various forms of microphones, piezo electric sensors.
High frequency sensors like microwave frequency sensors, wavelength measuring sensors. MEMs and MEM based sensors.

UNIT – V
Applications in IoT: Smart Cities and AgricultureApplications in IIoT: Manufacturing and Automotive Industries.

Textbooks:
1. Henry Bolte, “Sensors – A Comprehensive Sensors”, John Wiley
2. Doebelin, “Measurement Systems: Application and Design”, McGraw Hill.

3. Ramon Pallas-Areny, John G. Webster, “Sensors and signal conditioning” John Wiley & Sons.

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	3	0	0	3	V20ECTJO13
Name of the Course	Deep Learning (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the basics of learning algorithms. **(K2)**
CO2: Explain neural network and various parameters while training neural network. **(K2)**
CO3: Describe convolution neural network and its training. **(K2)**
CO4: Discuss various advanced neural network architectures. **(K2)**
CO5: Discuss various Deep Learning applications. **(K2)**

Unit-I
Introduction:
Introduction to Deep Learning, Bayesian Learning, Optimization Techniques, Gradient Descent, Batch Optimization. Bias and Variance, Maximum Likelihood Estimation,Supervised Learning Algorithms, Unsupervised Learning Algorithms.

Unit-II
Neural Networks
The Basic Architecture of Neural Networks**-** Single Computational Layer: The Perceptron, Multilayer Neural Networks; Training a Neural Network with Backpropagation, Practical Issues in Neural Network Training-The Problem of Overfitting, The Vanishing and Exploding Gradient Problems, Unsupervised Learning with Deep Network, Autoencoders.

Unit-III
Convolution neural network and training
Introduction, The Basic Structure of a Convolutional Network- Padding, Strides, Typical Settings, The ReLU Layer, Pooling, Fully Connected Layers, The Interleaving Between Layers, **,** Transfer Learning
Gradient Descent, Momentum Optimizer, RMSProp, Adam , Transfer Learning ,Effective training in Deep Net- early stopping, Dropout, Batch Normalization, Instance Normalization, Group Normalization

Unit-IV

Advanced Deep Learning Architectures Recent Trends in Deep Learning Architectures, Residual Network, Skip Connection Network, Fully Connected CNN, LSTM Networks, Generative Modeling with DL, Variational Autoencoder, Generative Adversarial Network.

Unit-V
Deep Learning applications
Applications of Convolutional Networks: Content-Based Image Retrieval, Object Localization, Object Detection, Natural Language and Sequence Learning; Application of Recurrent Neural Networks: Application to Automatic Image Captioning, Time-Series Forecasting and Prediction, End-to-End Speech Recognition, Handwriting Recognition.

Text Books
1. “Deep Learning”, Ian Goodfellow, Yoshua Bengio, Aaron Courville, The MIT Press, 2016.
2. ”Neural Networks and Deep Learning”,Charu C. AggarwalSpringer.

Reference Books
1. Raúl Rojas ” Neural Networks: A Systematic Introduction,,Springer.
2.Pattern Classification- Richard O. Duda, Peter E. Hart, David G. Stork, John Wiley & Sons Inc.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20ECTJO14
Name of the Course	Machine Learning (Job Oriented Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the principles and concepts of machine learning **(K2)**
CO2: Describe the different machine learning approaches and techniques **(K2)**
CO3: Explain the clustering techniques used in Data representation**. (K2)**
CO4: Explain the neural network concepts **(K2)**
CO5: Describe the regression and reinforcement learning and solve ML problems using Machine
learning tools **(K2)**

UNIT I
Introduction: Machine learning: What and why? , Types of Machine Learning Supervised Learning ,Unsupervised Learning , The Curse of dimensionality, Over and under fitting , Model selection , Error analysis and validation , Parametric vs. non,parametric models.

UNIT II
Machine learning Types of Machine Learning , Supervised Learning, Classification models , Naïve Bayes Classifier , Decision trees , Support Vector Machines , KNN model , Dimensionality reduction , PCA.

UNIT III

Clustering Clustering approaches , Mean Shift clustering , Clustering data points and features , Bi-clustering , Multi,view clustering , K-Means clustering , K-medians clustering , Expectation Maximization (EM).

UNIT IV
Neural Networks Neural networks , Biological motivation for Neural Network, Neural network Representation , Perceptron , Feed forward networks , Multilayer Networks and Back Propagation Algorithms , Hidden layer representation , Application of neural network.

UNIT V

Applications and Tools Linear models for regression , Reinforcement Learning , Machine Learning Tools , Engineering applications.

Text Books:

1. Kevin P. Murphy, "Machine Learning: A Probabilistic Perspective", MIT Press, 2012.

2. Ethem Alpaydin, "Introduction to Machine Learning", Second Edition, Prentice Hall of India, 2010.

Reference Books:

1. Laurene Fausett, "Fundamentals of Neural Networks, Architectures, Algorithms and Applications", Pearson Education, 2008.
2. Tom Mitchell, "Machine Learning", McGraw,Hill, 1997.

Annexure-III

Honors (For ECE) Students:

Track-I : Communication & Signal Processing

1. Modern Digital Communication Techniques
2. Communication for 5G and Beyond
3. Modern CDMA/ MIMO/ OFDM Wireless Communications
4. Signal Processing Techniques And Its Applications
5. Broadband Networks: Concepts And Technology
6. Bio medical Image Processing
7. Cognitive Radio

Track-II : VLSI & Embedded Systems

1. Analog & Mixed Signal ICs
2. ASIC Design
3. C- Based VLSI Design
4. Fabrication Techniques for MEMS Based Sensors
5. Embedded System Design with ARM
6. MEMS & Micro Systems
7. EMC in Design

NOTE : List of Courses will be updated in every semester as per the courses offered by NPTEL.

Course Structure for Minors in ECE (VLSI & ES) Degree for all other Branch Students

S. No	Name of the Course	Mode of Learning	No. of Weeks	Credits
1	Introduction to Semi Conductor Devices	NPTEL	12 weeks	3
2	Semiconductor Devices and Circuits	NPTEL	12 weeks	3
3	Digital Circuits	NPTEL	12 weeks	3
4	Digital IC Design	Conventional Teaching	8 weeks	2
5	Basics of VLSI Design	Conventional Teaching	12 weeks	3
6	System design through Verilog	NPTEL	8 weeks	2
7	CMOS Analog VLSI Design	Conventional Teaching	12 weeks	3
8	Introduction to Internet of Things	NPTEL	12 weeks	3
9	Microprocessors & Micro Controllers	NPTEL	8 weeks	2
10	Concepts of Embedded Systems	Conventional Teaching	8 weeks	2
11	Embedded system Design with ARM	NPTEL	8 weeks	2
12	Project work		16 weeks	4

Note: While registering for the course, the student have to take the approval from the department. Above list of courses is tentative.

Total Credits : 20

(16 Credits from the above list of courses + 4 Credits from Project work)

Annexure-04

Open Elective Courses
(V20 Regulation)

List of Open Elective Courses

Courses offfered to Other Branch Students

S. No	Course Code	Name of the Course	Department Offered

Branch	Except ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Describe M2M and IOT Technologies. **(K2)**

CO-2: Identify the layers and protocols in IOT. **(K2)**

CO-3: Describe various communication technologies used in IOT**. (K2)**

CO-4: Demonstrate various hardware components required for IOT applications. **(K2)**

CO-5: Identify the cloud technologies & explain the applications of IoT**. (K2**)

UNIT I – INTRODUCTION
Introduction from M2M to IoT - An Architectural Overview, building architecture, Main design principles and needed capabilities, An IoT architecture outline, M2M and IoT Technology Fundamentals - Devices and gateways

UNIT II – IOT PROTOCOLS
Functionality of Layers in IoT –Study of protocols - Wireless HART, Z-Wave, 6LoWPAN, RPL, CoAP, MQTT.

UNIT III - COMMUNICATION TECHNOLOGIES IN IOT
IoT Connectivity – IEEE 802.15.4, Wi-Fi, Bluetooth, Zigbee, LPWAN, 5G Era.

UNIT IV - SYSTEM HARDWARE
Sensors, Actuators, Radio Frequency Identification, Introduction to Embedded Devices for IoT - RASPBERRY PI.

UNIT V – Cloud Computing & Case Studies
Data Collection, Storage and Computing Using a Cloud Platform for IoT Applications/Services. Real-time applications of IoT - Smart and Connected Cities, Agriculture.

TEXTBOOKS:

1. "From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence" Jan Holler, VlasiosTsiatsis, Catherine Mulligan, Stefan Avesand, Stamatis Karnouskos, David Boyle , 1st Edition, Academic Press, 2014.
2. IOT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things, David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry, Cisco Press 800 East 96th Street Indianapolis, USA.
3. "Internet of Things (A Hands-on- Approach)", Vijay Madisetti and ArshdeepBahga, 1st Edition, VPT, 2014.

REFERENCE BOOKS:

1. From Internet of Things to Smart Cities: Enabling Technologies - edited by Hongjian Sun, Chao Wang, Bashar I. Ahmad, CRC Press -2018.

3. IOT (Internet of Things) Programming: A Simple and Fast Way of Learning IOT, David Etter.

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	2	0	2	3	V20ECTOE2
Name of the Course	Communication Systems (Open Elective)					
Branch	Except ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Demonstrate the fundamentals of communication systems **(K2)**
CO-2: Compare the various analog modulation and demodulation schemes **(K2)**
CO-3: Compare the various digital modulation and demodulation schemes **(K2)**
CO-4: Explain the wireless communication system concepts **(K2)**
CO-5: Outline the satellite & Optical communication system principles **(K2)**

Unit-I
Fundamentals of Communication systems: Block diagram of communication system; types of communications-analog and digital; Noise–types of noise, sources of noise, and noise figure.

Unit-II
Fundamentals of Analog Communication: Need for modulation; Types of analog modulation techniques (AM, FM & PM). Sampling theorem, Nyquist criteria, introduction to PAM, PWM and PPM.

Unit-III
Fundamentals of Digital Communication: Advantages; Working principle of PCM; introduction to digital modulation techniques-ASK, FSK, &PSK.

UNIT-IV:
Fundamentals of Wireless Communication: Evolution of mobile communications, Mobile Radio System around the world, Comparison of Common wireless system, Concepts of 1G, 2G, 3G, 4G. , Introduction to 5G.

Unit-V
Fundamentals of Satellite & Optical communication: Brief history of Satellite systems; Principles, architecture. Fundamentals of Optical Communication: Evolution of fiber optic system, Elements of an Optical Fiber Transmission link and Reception link.

Textbooks:

1. Principles of Communications by H. Taub and D. Schilling, TMH, 2003.
2. Wireless Networks: Applications and Protocols by T. S. Rappaport, Pearson Education
3. Satellite Communications by Timothy Pratt, Charles Bostian and Jeremy Allnutt, WSE, Wiley Publications, 2nd Edition, 2003.
4. Optical Fiber Communication by Gerd Kaiser (TMH)

References:

1. Electronic Communication Systems by Kennedy and Davis, TMH, 4th edition, 2004.
2. Wireless Communication and Networks: 3G and Beyond by I. SahaMisra, TMH Education.
3. Satellite Communications: Design Principles by M. Richharia, B S publications, 2nd Edition, 2003.

Semester	V/VI/VII	L	T	P	C	Course Code
Regulation	V20	2	0	2	3	V20ECTOE3
Name of the Course	Principles of Image Processing (Open Elective)					
Branch	Except ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Understand the different Transforms Techniques & their use in Image Processing Applications. **(K2)**
CO2. Describe Spatial and frequency domain filtering like smoothing and sharpening operations on Images. **(K2)**
CO3. Describe Restoration operations/techniques on Images. **(K2)**
CO4. Describe the Image compression Techniques and Image segmentation. **(K2)**
CO5. Explain the different color Image Processing Techniques. **(K2)**

UNIT-1 Introduction
Introduction: Introduction to Image Processing, Fundamental steps in digital image processing, components of an image processing system, some basic relationships between pixels, an introduction to the mathematical tools used in digital image processing.
Image Transforms: Discrete Fourier transform (DFT) and Discrete Cosine transform.

UNIT-2 Image Enhancement Techniques
Intensity Transformations and Spatial Filtering: Some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters and sharpening spatial filters.
Filtering in the Frequency Domain: image smoothing using frequency domain filters, Image Sharpening using frequency domain filters.

UNIT-3 Image Restoration
Image Restoration : A model of the image degradation / Restoration process, Noise models, restoration in the presence of noise only-Spatial Filtering. Estimating the image degradation function, Inverse filtering, Minimum mean square error (Wiener) filtering.

UNIT-4 Image compression and Segmentation

Image compression: Fundamentals, Basic compression methods: Huffman coding, Arithmetic coding, LZW coding and subband coding.

Image segmentation: Fundamentals, point, line, edge detection, thresholding, based segmentation and simple morphological operations :Erosion and dilation, opening and closing.

UNIT-5 Color image processing

Color image processing: color fundamentals, color models, pseudo color image processing, basics of full color image processing, color transformations, smoothing and sharpening.

Text Books

1. R. C. Gonzalez and R. E. Woods, Digital Image Processing, 3rd edition, Prentice Hall, 2008.
2. Jayaraman, S. Esakkirajan, and T. Veerakumar," Digital Image Processing", Tata McGraw Hill Education, 2011.

Reference Books

3. Anil K.Jain, "Fundamentals of Digital Image Processing", Prentice Hall of India, 9th Edition, Indian Reprint, 2002.
4. B.Chanda, D.Dutta Majumder, "Digital Image Processing and Analysis", PHI, 2009.

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basics concepts of Bio-Medical Instrumentation. **(K2)**
CO2: Explain the concepts of electrode theory, classification of Electrodes and Transducers used in Bio-Medical Applications. **(K2)**
CO3: Explain the Anatomy and Physiology of Cardiovascular system and Illustrate the application of Bio-Medical Instruments to measure the Physiological parameters of Cardiovascular System **(K2)**
CO4: Discuss the elements used for Patient's Health care &monitoring. **(K2)**
CO5: Classify different types of monitors, discuss the principals of recorders and Illustrate the methods of accident preventions **(K2)**

UNIT-I:

INTRODUCTIONTOBIOMEDICALINSTRUMENTATION: AgeofBiomedicalEngineering,Development of Biomedical Instrumentation, Man Instrumentation System, Components of the Man-Instrument System, Physiological System of the Body, Problems Encountered in Measuring a Living System, Sources of Bioelectric Potentials, Muscle, Bioelectric Potentials, Sources of Bioelectric Potentials, Resting and Action Potentials, Bioelectric Potentials-ECG, EEG and EMG,

UNIT-II:

ELECTRODES AND TRANSDUCERS: Introduction, Electrode Theory, Bio potential Electrodes, Examples of Electrodes, Basic Transducer Principles, Active Transducers, Passive Transducers, Transducers for Biomedical Applications, Pulse Sensors, Respiration Sensor, Transducers with Digital Output.

UNIT-III:

CARDIOVASCULAR SYSTEM AND MEASUREMENTS: The Heart and Cardiovascular System, Electrocardiography, Blood Pressure Measurement, Measurement of Blood Flow and Cardiac Output, Measurement of Heart Sounds, Plethysmography.

UNIT-IV:

PATIENTCAREANDMONITORING: ElementsofIntensive-CareMonitoring,PatientMonitoringDisplays, Diagnosis, Calibration and Repair ability of Patient-Monitoring Equipment, Other Instrumentation for Monitoring Patients, Organization of the Hospital for Patient-Care Monitoring, Pacemakers, Defibrillators.

UNIT-V:

DIAGNOSTIC TECHNIQUES AND BIO-TELEMETRY: Principles of Ultrasonic Measurement, Ultrasonic Imaging, Ultrasonic Applications of Therapeutic Uses, Ultrasonic Diagnosis, X-Rayand Radio-Isotope Instrumentations, CAT Scan, Emission Computerized Tomography, MRI, Introduction to Biotelemetry, Physiological Parameters Adaptable to Biotelemetry, The Components of Biotelemetry System, Implantable Units, Telemetry for ECG Measurements during Exercise, Telemetry for Emergency Patient Monitoring

Text Books:

1. Bio-Medical Electronics and Instrumentation, OnkarN.Pandey, RakeshKumar, KatsonBooks.

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the cellular system evolution of mobile radio systems **[K2]**
CO2: Illustrate the basic cellular concepts. **[K2]**
CO3: Explain the Various Propagation models. **[K2]**
CO4: Discuss the need of modulation, diversity and equalization in cellular & Mobile Communication. **[K2]**
CO5: Demonstrate the knowledge about GSM architecture, &upcoming technologies like 3G, 4G etc. **[K2]**

UNIT-I: Introduction of Wireless Communication History and evolution of mobile radio systems: Types of mobile wireless services/systems, WLL, Paging, Satellite systems.

UNIT-II: Cellular Concepts and System Design Fundamentals: Cellular concept and frequency reuse, channel assignment, handoff strategies, cell splitting,cell sectoring.

UNIT-III: Mobile radio Propagation Models: Radio wave propagation issues in personal wireless systems, Propagation models, Multipath fading.

UNIT-IV: Overview analog and digital modulation techniques Need For Modulation.

UNIT-V: Digital cellular networks: GSM architecture, GSM Services, multiple access schemes; FDMA, TDMA, CDMA, OFDMA;

Higher Generation Cellular Standards: 3G System architecture (UMTS), 4G System Architecture, Introduction to 5G.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTOE6
Name of the Course	Basic of VLSI Design (Open Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1. Identify the CMOS layout levels, and the design layers used in the process sequence. **(K2)**
CO2. Describe the general steps required for processing of CMOS integrated circuits. **(K2)**
CO3. Outline static CMOS combinational and sequential logic at the transistor level. **(K1)**
CO4. Demonstrate different logic styles such as complementary CMOS logic, pass-Transistor Logic, dynamic logic, etc. **(K3)**
CO5. Interpret the need for testability and testing methods in VLSI. **(K3)**

UNIT-I:

Moore's law, speed power performance, n-MOS fabrication, CMOS fabrication: n-well, well processes, Bi-CMOS, Comparison of bipolar and CMOS. Basic Electrical Properties of MOS And Bi-CMOS Circuits: Drain to source current versus voltage characteristics, threshold voltage, trans conductance.

UNIT-II:

Basic Electrical Properties of MOS And Bi-CMOS Circuits: n-MOS inverter, Determination of pull up to pull down ratio: n-MOS inverter driven through one or more pass transistors, alternative forms of pull up, CMOS inverter, Bi-CMOS inverters, latch up.
Basic Circuit Concepts: Sheet resistance, area capacitance calculation, Delay unit, inverter delay, estimation of CMOS inverter delay, super buffers, Bi-CMOS drivers.

UNIT-III:

MOS and Bi-CMOS Circuit Design Processes: MOS layers, stick diagrams, n-MOS design style, CMOS design style Design rules and layout & Scaling of MOS Circuits: λ - based design rules, scaling factors for device parameters

UNIT-IV:

Subsystem Design and Layout-1: Switch logic pass transistor, Gate logic inverter, NAND gates, NOR gates, pseudo n-MOS, Dynamic CMOS Examples of structured design: Parity generator, Bus arbitration, multiplexers, logic function block, code converter.

UNIT-V:

Subsystem Design and Layout-2: Clocked sequential circuits, dynamic shift registers, bus lines, General considerations, 4-bit arithmetic processes, 4-bit shifter, Regularity- Definition & Computation Practical aspects and testability: Some thoughts of performance, optimization and CAD tools for design and simulation.

Text Books:

1. "Basic VLSI Design", Douglas A Pucknell, Kamran Eshraghian, 3rd Edition, Prentice Hall of India publication, 2005.

References:

1. "CMOS Digital Integrated Circuits, Analysis And Design", Sung – Mo (Steve) Kang,Yusuf Leblebici, Tata McGraw Hill, 3rd Edition, 2003.
2. "VLSI Technology", S.M. Sze, 2nd edition, Tata McGraw Hill, 2003.

Semester	**V/VI/VII**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	2	0	2	3	V20ECTOE7
Name of the Course	Concepts of Embedded Systems (Open Elective)					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO-1: Describe the Basic Concepts of embedded systems- **(K2).**
CO-2: Describe the characteristics of Application & Domain-Specific Embedded Systems - **(K2)**
CO-3: Explain the various elements of embedded hardware and their design principles- **(K2)**
CO-4: Explain various software design approaches in embedded environment- **(K2)**
CO-5: Discuss various tools used for Embedded system implementation and testing - **(K2)**

UNIT I - INTRODUCTION TO EMBEDDED SYSTEMS:

Introduction to Embedded Systems, Classification of Embedded systems, Major application areas of embedded systems, Purpose of embedded Systems, The Typical embedded system - core of the embedded system, Difference between RISC and CISC, Types of Memories.

UNIT II - CHARACTERISTICS OF EMBEDDED SYSTEM:

Characteristics of an embedded system, Quality attributes of embedded systems, Application-specific and Domain-Specific examples of an embedded system.

UNIT III - EMBEDDED HARDWARE DESIGN:

Analog Electronic Components, Digital electronic components, I/O types and examples, Serial communication devices (I2C, SPI, USB), GPRS, Watchdog timer, Real time Clock, Sensors and Actuators.

UNIT IV - EMBEDDED FIRMWARE DESIGN:

Embedded Firmware design approaches, Embedded Firmware development languages: Assembly level and High-level Programming Language, Advantages and Drawbacks of development languages, Concepts of C versus Embedded C and Compiler versusCross-compiler.

UNIT V - EMBEDDED SYSTEM IMPLEMENTATION AND TESTING:
The main software utility tools - IDE and CAD, Translation tools - Pre-processors, Interpreters, Compilers and Linkers, Debugging tools, Quality assurance and testing of the design, Testing on host machine.

Text Books:

1. Embedded Systems Architecture- By Tammy Noergaard, ElsevierPublications,2013
2. Embedded Systems-By Shibu.K.V-Tata McGraw Hill Education Private Limited,2013.

References:

1. Embedded Systems: Architecture, Programming and Design by Raj Kamal, Tata McGraw-Hill Education, 2011.
2. Embedded System Design, Frank Vahid, Tony Givargis, John Wiley Publications,2013.
3. Embedded/Real Time Systems by KVKK Prasad by Dreamtech Publication

Sri Vasavi Engineering College

(Autonomous)

(Sponsored by Sri Vasavi Educational Society)

(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)

(Accredited by NBA & NAAC with 'A' Grade, Recognized by UGC Under Section 2(f) & 12(B))

Pedatadepalli, Tadepalligudem, W.G.Dt, A.P-534101

Department of Compter Science Engineering & Compter Science Technology

6th Meeting of Board of Studies

Agenda:

1. **Welcome note by the Chairperson BOS**
2. **Progress Report of the Department**
3. **Review and Approval of Course Structure for I to VIII Semesters of B.Tech(CSE) and B.Tech(CST) Programme under V20 Regulation**. The details are given in Annexure-I.
4. **Approval of Syllabi for the Proposed Courses offered in V to VIII Semesters of B.Tech(CSE) and B.Tech(CST) Programme under V20 Regulation.** The details are given in Annexure-II.
5. **Approval of list of Courses offering under Job Oriented Elective-I to Job Oriented Elective-IV in V to VII Semesters of B.Tech(CSE) and B.Tech(CST) Programme respectively under V20 Regulation and the approval of their Syllabi.** The details are given in Annexure-III.
6. **Approval of list of Courses offering under Open Elective-I to Open Elective-IV in V and VII Semesters respectively under V20 Regulation for all other branches and the approval of their Syllabi.** The details are given in Annexure-IV.
7. **Approval of B.Tech(Hons) & B.Tech(Minors) offered by CSE in line with the guidelines prescribed by APSCHE.** The details are given in Annexure-V.
8. **Any other item with the permission of chair.**

Dr.D Jaya Kumari
Chairperson of BOS

Annexure-I

SEMESTER – I (First Year)

S.No.	Code	Name of the Course		L	T	P	C
1	V20MAT01	Linear Algebra and Differential	BSC	3	0	0	3
2	V20CHT01	Engineering Chemistry	BSC	3	0	0	3
3	V20ENT01	English for Professional	HSS	3	0	0	3
4	V20MEL02	Engineering Workshop	ESC	1	0	4	3
5	V20CST01	Programming in 'C' for problem	ESC	3	0	0	3
6	V20ENL01	Hone Your Communication Skills Lab –I	HSS	0	0	3	1.5
7	V20CHL01	Engineering Chemistry Lab	BSC	0	0	3	1.5
8	V20CSL01	Programming Lab in 'C' for problem Solving	ESC	0	0	3	1.5
Total:				**13**	**0**	**13**	**19.5**

Total Contact Hours: 26 **Total Credits: 19.5**

SEMESTER – II (First Year)

S.No.	Code	Name of the Course		L	T	P	C
1	V20MAT02	Numerical Methods and Vector Calculus	BSC	3	0	0	3
2	V20PHT01	Engineering Physics	BSC	3	0	0	3
3	V20ECT01	Switching Theory and Logic Design	ESC	3	0	0	3

			Total:	**16/22**	0	**8/14**	**23**

Total Contact Hours: 30 **Total**
Credits: 23

VIII SEMESTER (FOURTH YEAR)

S.No.	Code	Name of the Course		L	T	P	C
1	V20CSP03	Internship/ Industrial Training /Practical training	PRO	0	0	4	2
2	V20CSP04	Major Project (6 Months)	PRO	0	0	20	10
			Total:	0	0	**24**	**12**

Total Contact Hours: 24 **Total Credits: 12**

SKILL ORIENTED COURSES

With reference to the Lr No: SVEC/Admn/Circular/2021-22/61 dated: 05/11/2021, regarding the V20 regulations in B.Tech III & IV Semesters about the offering of Skill Oriented Course in all branches, the course codes are as follows.

In III Semester: V20SOC01
In IV Semester: V20SOC02

If any proposed courses and course codes offered under Skill Oriented Course will be considered as Skill Oriented Course **(V20SOC01 or V20SOC02**) only.

S.No.	Name of the Course
1.	Mobile Application Development
2.	MEAN Stack Technologies
3.	Secure DevOps
4.	AWS Cloud Computing
5.	SDG -Web Development
6.	Web Development using Django
7.	Game Development using Buildbox
8.	Game Programming
9.	.NET Framework
10.	CCNA IT Essentials
11.	Augmented Reality and Virtual Reality
12.	Go Programming
13.	Applications of Python using NumPy & Pandas
14.	Ethical Hacking
Any advanced courses offered by industries / Professional bodies / APSSDC can be appended in future	

Annexure-II

Semester	**V**	**L**	**T**	**P**	**C**	**Course Code**
Regulation	V20	3	0	0	3	V20CST10
Name of the Course	Operating System					
Branch	ECE					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Operating System Services and System Calls. **(K2)**

CO2: Illustrate Process Management Concepts and CPU Scheduling Algorithms. **(K3)**

CO3: Demonstrate Process Synchronization primitives and Process Deadlocks. **(K3)**

CO4: Illustrate Memory Management Techniques and Page Replacement Algorithms. **(K3)**

CO5: Describe File System Concepts and Mass Storage Structures. **(K2)**

UNIT-I: Introduction: Operating-System Structure, Operating-System Services, User and Operating System Interface, System Calls, Types of System Calls.

UNIT-II: Process Management: Process Concept, Process Scheduling, Operations on Processes, Inter process Communication. **Threads:** Overview, Multithreading Models

CPU Scheduling: Basic Concepts**,** Scheduling Criteria**,** Scheduling Algorithms.

UNIT-III: Process Synchronization: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors. **Deadlocks:** System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.

UNIT-IV: Memory Management: Main Memory: Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table.

Virtual Memory: Introduction, Demand Paging, Page Replacement Algorithms, Allocation of Frames, Thrashing.

UNIT-V: Storage Management: Overview of Mass-Storage Structure, Disk Scheduling, File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Allocation Methods.

Text Book:

1. Operating System Concepts**,** Abraham Silberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012.

Reference Books:

1. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition,
   Prentice Hall, 2012 .
2. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,
   2007.

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CST11
Name of the Course	Data Mining					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the concept of Data Mining and its functionalities. **(K2)**

CO2: Discuss various Data Preprocessing Techniques. **(K3)**

CO3: Demonstrate Association Analysis Techniques. **(K3)**

CO4: Illustrate various Classification Techniques. **(K3)**

CO5: Use different Clustering techniques to cluster data. **(K3)**

UNIT-I: Introduction: Need for Data Mining, Knowledge Discovery from Data, Kinds of Data mined, Kinds of Patterns mined, Technologies used, Kinds of Applications targeted, Major Issues in Data Mining, Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Measuring Data Similarity and Dissimilarity.

UNIT-II: Data Preprocessing: Overview of Data Preprocessing, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization.

UNIT-III: Mining Frequent Patterns, Associations, and Correlations: Basic Concepts, Frequent Itemset Mining Methods- Apriori Algorithm: Finding Frequent Itemsets by Confined Candidate Generation, Generating Association Rules from Frequent Itemsets, Improving the Efficiency of Apriori, Pattern-Growth Approach for Mining Frequent Itemsets.

UNIT-IV: Classification: Basic Concepts, Decision Tree Induction, Attribute Selection Measures, Tree Pruning.
Bayes Classification Methods: Bayes' Theorem, Naive Bayesian Classification.
Bayesian Belief Networks: Concepts and Mechanisms.

UNIT-V: Cluster Analysis: Basic Concepts and Methods, Partitioning Methods, Hierarchical Methods, Density Based Method-DBSCAN.

Text Books:

1. Data Mining Concepts and Techniques, Jiawei Han, Micheline Kamber, Jian Pei,3rd Edition, Morgan Kaufmann Publishers.

.

Reference Books:

1. Introduction to Data Mining, Pang-Ning Tan, Michael Steinbach, Vipin Kumar, 1st Edition, Pearson Education Inc.
2. Data Mining and Analysis,Mohammed J Zaki, Wagner Meira JR, 1st Edition ,Cambridge University Press.

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CST12
Name of the Course	Web Technologies					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the basic concepts of HTML and CSS . **(K2)**

CO2: Illustrate Extensible markup language and XML parsers**.** **(K3)**

CO3: Develop web applications using JDBC. **(K3)**

CO4: Build database driven web applications using JSP. **(K3)**

CO5: Illustrate the basic concepts of Angular and NODE JS. **(K2)**

UNIT-I: HTML :Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Frames Forms.
CSS: Cascading style sheets, Levels of Style Sheets, Style Specification Formats, Selector Forms, Property value forms, Font Properties, List Properties, color, Alignment of Text

UNIT-II: Working with XML: Introduction, The syntax of XML, XML Document Structure, Document type Definition (DTD), Namespaces, XML schemas, XSLT, **XML Parsers** - DOM and SAX

UNIT-III: WORKING WITH DATABASE: Getting started with JDBC , Defining ODBC, Introduction to JDBC, Components of JDBC, JDBC Architecture, Types of Drivers, Working with JDBC APIs, Creating a Simple Application, Working with Prepared Statement.

UNIT IV: Introduction to Servlets & JSP: Introduction to servlets, Life cycle of Servlet, Limitations of servlets, Java Server Pages: JSP Overview, Components of a JSP Page: Directives, comments, Expressions, Scriptlets , Declarations, implicit objects, Database Access, session tracking.

UNIT V: Fundamentals of NODE JS and Angular : Understanding Node.js, Installing Node.js, Working with Node Packages, Creating a Node.js Application, Understanding Angular, Modules, Directives, Data Binding, Dependency Injection, Services, Creating a Basic Angular Application.

Text Books:

1. Programming the World Wide Web, 7th Edition, Robet W Sebesta, Pearson, 2013.
2. Node.js, MongoDB and Angular Web Development, 2nd Edition,Brad Dayley Brendan Dayley Caleb Dayley,Pearson Education,2018
3. JSP:The Complete reference,Phil Hanna,The McGraw-Hill Copanies,2001.
4. JDBC, Servlets, and JSP, New Edition, Santhosh Kumar K, Kogent Learning Solutions Inc Dreamtech Press, 2018.

Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.
2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning
3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CSTPE01
Name of the Course	Software Testing Methodologies (Professional Elective-I)					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software testing objectives and methodology **(K2)**

CO2: Apply various Software testing techniques. **(K3)**

CO3: Discuss Static testing techniques for software testing. **(K2)**

CO4: Distinguish Software testing and debugging process. **(K2)**

CO5: Explain modern Software testing tools to support software testing. **(K2)**

UNIT-I: Introduction to Software Testing: Evolution of software Testing, Myths and Facts, Goals of software Testing, Definitions of Testing, Model for Software Testing, Software Testing Terminology, Software Testing Life Cycle.

UNIT-II: Verification and Validation: Verification & Validation Activities, Verification, Verification of Requirements, Verification of High level and low level designs, How to verify code, Validation. **Dynamic Testing I:** Black Box testing techniques: Boundary Value Analysis, Equivalence Class Testing, Decision Table based Testing,

UNIT-III: Dynamic Testing II: White-Box Testing: Need of White-Box Testing, Logic coverage criteria, Basis path testing, Loop testing.
Static Testing: Inspections, Structured Walkthroughs, Technical reviews.

UNIT-VI: Regression Testing: Progressive Vs Regressive Testing, Regression testability, Objectives of regression testing, When is Regression Testing done? Regression Testing Types, Regression testing techniques.

Debugging: Debugging process, Techniques, correcting bugs.

UNIT-V: Software Quality Management: Software quality concept, Quality control and Quality Assurance, Software Quality metrics.
Automation and Testing Tools: Need for automation, categorization of Testing tools, selection of testing tools, Overview of some commercial testing tools.

Text Books:

1. Software Testing, Principles and Practices, Naresh Chauhan, 9th Edition, Oxford Publisher.

Reference Books:

1. Software testing techniques - Boris Beizer, 2nd Edition, Dreamtech publisher.
2. Foundations of Software testing, Aditya P Mathur, 2nd ed, Pearson.
3. Software Testing- Yogesh Singh, CAMBRIDGE.

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CSTPE02
Name of the Course	Principles of Programming Languages (Professional Elective-I)					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe syntax and semantics of programming languages. **(K2)**

CO2: Explain data types and basic statements of programming languages **(K2)**

CO3: Design and implement subprogram constructs **(K3)**

CO4: Discuss concurrency process using OOP. **(K2)**

CO5: Develop programs in Scheme, ML, and Prolog. **(K3)**

UNIT-I: Syntax and semantics: Evolution of programming languages, describing syntax, context, free grammars, attribute grammars, describing semantics, lexical analysis, parsing, recursive – decentbottom - up parsing

UNIT-II: Data, Data types, and basic statements: Names, variables, binding, type checking, scope, scope rules, lifetime and garbage collection, primitive data types, strings, array types, associative arrays, pointers and references, Arithmetic expressions, overloaded operators, type conversions, relational and boolean expressions , assignment statements , mixed mode assignments, control structures – selection, iterations, branching, guarded Statements

UNIT-III: Subprograms and implementations: Subprograms, design issues, local referencing, parameter passing, overloaded methods, generic methods, design issues for functions, semantics of call and return, implementing simple subprograms, stack and dynamic local variables, nested subprograms, blocks, dynamic scoping.

UNIT- IV: Object- orientation, concurrency, and event handling: Object – orientation, design issues for OOP languages, implementation of object, oriented constructs, concurrency, semaphores, Monitors, message passing, threads, statement level concurrency, exception handling.

UNIT- V: Functional programming languages: Introduction to lambda calculus, fundamentals of functional programming languages, Programming with Scheme, Programming with ML, Logic programming languages: Introduction to logic and logic programming, Programming with Prolog, multi - paradigm languages

Text Books:

1. Robert W. Sebesta, “Concepts of Programming Languages”, Tenth Edition, Addison Wesley, 2012.
2. Programming Languages, Principles & Paradigms, 2ed, Allen B Tucker, Robert E Noonan, TMH

Reference Books:

1. R. Kent Dybvig, “The Scheme programming language”, Fourth Edition, MIT Press, 2009.
2. Jeffrey D. Ullman, “Elements of ML programming”, Second Edition, Prentice Hall, 1998.
3. Richard A. O'Keefe, “The craft of Prolog”, MIT Press, 2009.
4. W. F. Clocksin and C. S. Mellish, “Programming in Prolog: Using the ISO Standard”,5th Edition, Springer, 2003

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CSTPE03
Name of the Course	Artificial Intelligence (Professional Elective-I)					
Branch	Common to CSE & CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the foundations of AI. **(K2)**

CO2: Identify Search Strategies for Problem Solving. **(K2)**

CO3: Illustrate Adversarial Search for Game Playing. **(K2)**

CO4: Discuss Reasoning approaches. **(K2)**

CO5: Illustrate Knowledge Representation approaches. **(K2)**

UNIT-I: Introduction: What is AI? The Foundations of Artificial Intelligence, History of Artificial Intelligence, The State of the Art Applications.
Intelligent Agents: Agents and Environments, Good Behaviour: The Concept of Rationality, The Nature of Environments, The Structure of Agents.

UNIT-II: Solving Problems by Searching: Problem-Solving Agents, Example Problems, Searching for Solutions, Uninformed Search Strategies, Informed (Heuristic) Search Strategies, Heuristic Functions, Local Search Algorithms and Optimization Problems.

UNIT-III: Adversarial Search : Games, Optimal Decisions in Games, Alpha–Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-of-the-Art Game Programs, Alternative Approaches.

UNIT-IV: Knowledge and Reasoning: Propositional Logic, Propositional Theorem Proving, Syntax and Semantics of First-Order Logic, Using First-Order Logic, Forward Chaining, Backward Chaining, Resolution.

UNIT-V: Knowledge Representation: Representations and Mappings, Approaches to Knowledge Representation-Simple Relational Knowledge, Inheritable Knowledge, Inferential Knowledge, Procedural Knowledge, Issues in Knowledge Representation, The Frame Problem.

Text Books:

1. Artificial Intelligence : A Modern Approach, Stuart J. Russell and Peter Norvig, 3rd Edition, Prentice Hall.
2. Artificial Intelligence, Elaine Rich,Kevin Knight, Shivashankar B Nair, 3rd Edition,Tata McGraw-Hill.

Reference Books:

1. Artificial Intelligence, George F Luger, Pearson Education Publications.
2. Artificial Intelligence, Saroj Kaushik, 1st Edition, Cengage Learning.

Regulation	V20	3	0	0	3	V20CSTPE04
Name of the Course	**Computer Graphics (Professional Elective-I)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the applications of computer graphics and learn basic algorithms. **(K2)**
CO2: Discuss the concepts of 2D graphics along with transformation techniques. **(K2)**
CO3: Demonstrate3D graphics and 3D object representation. **(K3)**
CO4: Discuss different visible surface detection methods and color models. **(K2)**
CO5: Illustrate different animation sequences . **(K2)**

UNIT-I: Introduction: Application of Computer Graphics, raster scan systems, random scan systems, raster scan display processors. Output Primitives : Points and lines, line drawing algorithms(Bresenham's and DDA Line derivations and algorithms), mid-point circle algorithms.
Filled area primitives: Boundary-fill and flood-fill algorithms.

UNIT-II: 2-D geometrical transforms: Translation, scaling, rotation, reflection and shear transformations, and homogeneous coordinates, composite transforms.
2-D viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland line clipping, Sutherland–Hodgeman polygon clipping algorithm.

UNIT-III: 3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations.
3-D object representation: Polygon surfaces, quadric surfaces, spline representation, Bezier curve and B-Spline curves.

UNIT-IV: Visible surface detection methods: Classification, back-face detection, depth-buffer, scan-line, BSP tree methods, area sub-division.
Color Models – RGB, YIQ, CMY, HSV.

UNIT-V: Computer Animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages, key frame systems**,** motion specifications.

Text Books:

1. Computer Graphics C version, Donald Hearn, M.Pauline Baker,Pearson
2. Computer Graphics, Schaum's outlines", Zhigandxiang,RoyPlastock, 2nd Edition,TataMc-Graw HillEdition.

Reference Books:

1. Computer Graphics Principles & practice, 2/e, Foley, VanDam, Feiner, Hughes,Pearson
2. Computer Graphics, Peter, Shirley, CENGAGE
3. Principles of Interactive Computer Graphics, Neuman ,Sproul,TMH.

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	0	0	3	1.5	V20CSL09
Name of the Course	Data Mining Lab					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Data Preprocessing techniques. **(K3)**

CO2: Demonstrate Association Rule Mining techniques. **(K3)**

CO3: Demonstrate Classification techniques. **(K3)**

CO4: Demonstrate the Clustering techniques. **(K3)**

List of Experiments (Weka Tool)

1. Demonstrate Data Preprocessing on predefined Weka dataset labor.arff
2. Create a student.arff dataset and Demonstrate Data Preprocessing on it
3. Demonstrate Association rule process on predefined Weka dataset contactlenses.arff using apriori algorithm.
4. Create an employee.arff dataset and demonstrate Association rule process on it using apriori algorithm
5. Demonstrate Classification process on student.arff dataset using j48 algorithm
6. Create a customer.arff dataset and demonstrate Classification process on it using j48 algorithm
7. Demonstrate Classification process on employee.arff dataset using id3 algorithm
8. Demonstrate Classification process on employee.arff dataset using Naïve Bayes algorithm
9. Demonstrate Clustering process on predefined Weka dataset iris.arff using simple k-means algorithm.
10. Demonstrate Clustering process on dataset student.arff using simple k-means algorithm.

Reference Books:

1. Data Mining: Practical Machine Learning Tools and Techniques, Ian H. Witten, Eibe Frank, Mark A. Hall, 3rd Edition, Morgan Kaufmann Publishers.
2. Data Mining Concepts and Techniques, Jiawei Han, Micheline Kamber, Jian Pei, 3rd Edition, Morgan Kaufmann Publishers.
3. Introduction to Data Mining, Pang-Ning Tan, Michael Steinbach, Vipin Kumar, 1st Edition, Pearson Education Inc.

Semester	**V**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	3	1.5	V20CSL10
Name of the Course	**Web Technologies Lab**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate the basic concepts of HTML and CSS. **(K2)**

CO2: Illustrate Extensible markup language and XML parsers . **(K3)**

CO3: Develop web applications using JDBC . **(K3)**

CO4: Build database driven web applications using JSP. **(K3)**

CO5: Illustrate the basic concepts of Angular and NODE JS. **(K2)**

List of Experiments

Exercise 1: Design HTML fundamental constructs.
(i) Headings (ii) Links (iii) Paragraph (iv) Images (v) Tables

Exercise 2: Design HTML fundamental constructs.
(i) Frames (ii) Forms and HTML controls

Exercise 3: Design Cascading style sheets
(i) Internal (ii) External (iii) Inline

Exercise 5: Write an XML file which will display the Book information which includes the following:
(i) Title of the book (ii) Author Name (iii) ISBN number (iv) Publisher name (v) Edition (vi) Price
(a) Write a Document Type Definition (DTD) to validate the above XML file.
(b) Write a XML Schema Definition (XSD)

Exercise 6: Create a simple JSP to print the current Date and Time.

Exercise 7: Develop JSP program calculates factorial values for an integer number, while the input is taken from an HTML form.

Exercise 8: Develop JSP program shows a Sample Order Form.

A Sample Order Form

Item	Price	Quantity	Total Price
DVD	19.99	2	39.98
CD	12.99	9	116.91
Diskette	1.99	24	47.76

Exercise 9: Create JSP to insert, delete, and update the details of student into the database using JDBC connectivity.
Exercise 10: Design a simple Angular JS form
Exercise 11: Design a simple Node JS application
Reference Books:

1. Web Technologies: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Black book, Dream Tech.
2. An Introduction to Web Design, Programming, Paul S Wang, Sanda S Katila, Cengage Learning
3. Web Technologies, 1st Edition 7th impression, Uttam K Roy, Oxford, 2012.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CST13
Name of the Course	**Computer Networks**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss fundamentals of network concepts and Reference Models. **(K2)**

CO2: Discuss Communication media and switching techniques. **(K2)**

CO3: Demonstrate Error control and Data link layer protocols. **(K3)**

CO4: Apply Routing algorithms and congestion control algorithms. **(K3)**

CO5: Discuss Transport layer protocols and Application layer protocols. **(K2)**

UNIT-I: Introduction: Reference models: The OSI Reference Model- the TCP/IP Reference Model, Examples of Networks: Novell Networks, Arpanet, Internet, Network Topologies WAN, LAN, MAN.

UNIT-II: Physical Layer: Transmission Media, Multiplexing: FDM, WDM and TDM- LAN Technologies, introduction to switching: Circuit Switched Networks, Datagram Networks, and Virtual Circuit Networks.

UNIT–III: Data link layer: Design issues, Framing, Flow control, error control, error detection - Parity bit, CRC, Checksum, error correction- Hamming code. MAC: ALOHA, CSMA. Elementary Data Link Layer protocols: simplex protocol, Simplex stop and wait, Simplex protocol for Noisy Channel. Sliding window protocol: One bit, Go back N, Selective repeat-Stop and wait protocol, HDLC, point to point protocol (PPP).Piggybacking.

UNIT-IV: Network Layer : Network layer design issues- Algorithm shortest path routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical routing, Broad cast, Multi cast Routing algorithms-Congestion control and algorithms, Internet Protocol (IP) Addresses, Subnet masking. Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.

UNIT–V:
Transport Layer: Services, Primitives and sockets, Elements of transport protocols, Internet Transport protocols(TCP,UDP,RPC,RTTP/RTP,RTCP) Segment headers, Primitives, Control, Congestion control.

Application layer: DNS, SMTP, POP,FTP HTTP Presentation formatting. Network security: Cryptography, DES Public key and RSA private key cryptography Algorithms.

Text Books:

1. Computer Networks — Andrew S Tanenbaum, 4th Edition. Pearson Education/PHI
2. Data Communications and Networks – Behrouz A. Forouzan.Third Edition TMH

Reference Books:

1. An Engineering Approach to Computer Networks-S.Keshav, 2nd Edition, Pearson Education
2. Understanding communications and Networks, 3rd Edition, W.A. Shay, Thomson

Semester	VI	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CST14
Name of the Course	Machine Learning					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the Basics of Machine Learning **(K2)**

CO2: Demonstrate Classification and Clustering Techniques. **(K3)**

CO3: Construct Decision Trees and Random Forest. **(K3)**

CO4: Illustrate the Working of Neuron and Perceptron Algorithm. **(K2)**

CO5: Demonstrate the working of Multi-Layer Perceptron algorithm. **(K3)**

UNIT-I: Introduction: Learning**:** Machine Learning, Types of Machine Learning, Supervised Learning: Classification & Regression, The Machine Learning Process, Weight Space, The Curse of Dimensionality, Overfitting, Training, Testing, Validation Sets, The Confusion Matrix, Accuracy, ROC Curve, Unbalanced Datasets, Measurement Precision, Thae Bias-Variance Tradeoff.

UNIT-II: Classification: The General Problem, Probabilistic Classifiers: The Bayes Classifier, Logistic Regression, Non-Probabilistic Classifiers: K-Nearest Neighbors, Support Vector Machines, Assessing Classification Performance: Accuracy-0/1 Loss, Sensitivity, Specificity. **Clustering**: The General Problem, K-Means Clustering.

UNIT-III: Learning With Trees: Using Decision Trees, Constructing Decision Trees: Entropy in Information Theory, ID3 Algorithm, CART-Gini Impurity. **Ensemble Learning:** Boosting: Adaboost, Stumping; Bagging, Random Forests.

UNIT-IV: Neuron & Neural Network: The Brain And The Neuron: Hebb's Rule, McCulloch and Pitts Neuron and Its Limitations, Neural Networks, The Perceptron: The Learning Rate, Bias Input, The Perceptron Learning Algorithm, Linear Separability, Linear Regression.

UNIT-V: Multi-Layer Perceptron: Going Forward: Biases, Back-Propagation and Error, The Multi-Layer Perceptron Algorithm, Initializing the Weights, Activation Functions, Sequential and Batch Training, Local Minima, Picking up momentum, Minibatches and Stochastic Gradient Descent, The Multi-Layer Perceptron In Practice: Amount of Training Data, Number of Hidden Layers, When to Stop Learning.

Text Books:

1. Machine Learning: An Algorithmic Perspective, Stephen Marsland, 2ndEdition, CRC Press.
2. A First Course in Machine Learning, Simon Rogers & Mark Girolami, 2nd Edition, CRC Press.

Reference Books:

1. Machine Learning, Tom Mirchel,Mcgraw Hill.
2. Machine Learning: The Art and Science of Algorithms that Make Sense of Data, Peter Flash, Cambridge University Press.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**

Regulation	V20	3	0	0	3	V20CST15
Name of the Course	**Automata and Compiler Design**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Construct Finite Automata and Regular Expressions. **(K3)**

CO2: Describe the Compilation Process and Lexical Analysis. **(K2)**

CO3: Construct Topdown and Bottom up Parsing Techniques. **(K3)**

CO4: Produce Intermediate Code Generation and Runtime Environments**.** **(K3)**

CO5: Explain Code Optimization and Code Generation. **(K2)**

UNIT I: Formal Language and Regular Expressions: Alphabet, Strings, Language, Finite Automaton- Design of DFA, Design of NFA, Equivalence between NFA and DFA, Finite Automata with ϵ-Transition, Equivalence between NFA and ϵ-NFA. **Regular Expression**: Regular expressions Equivalence between Regular Expressions and Finite Automata ,Chomsky Hierarchy.

UNIT II: Compiler: Definition, Structure of a compiler. **Lexical Analysis**: The Role of the Lexical Analyzer, Specification of Tokens, Recognition of Tokens and the Lexical-Analyzer Generator-Lex. **Context Free grammars**: Context free grammars, derivation, parse trees, Ambiguous Grammar, Writing a Grammar-Elimination of Left Recursion, Left Factoring.

UNIT III: Top Down Parsing: First and Follow, LL(1) Grammars, **Bottom-Up Parsing**: Bottom Up Parser Classification, Reductions, Handle Pruning, Shift-Reducing, Constructing SLR Parsing Tables, construction of CLR (1), LALR Parsing tables, Comparison of all Bottom Up approaches.

UNIT IV: Semantic Analysis: Syntax Directed Definitions, Evaluation Orders for SDD‘s

Intermediate Code Generation: Variants of Syntax Trees, Three-Address Code, Basic blocks and Flow graphs, Control Flow. **Run-Time Environments:** Storage Organization, Stack Allocation of Space, Heap Management

UNIT V: Code optimization: Machine Independent Optimization. The principle sources of Optimization, optimization of Basic blocks, peep hole Optimization, Introduction to Date flow Analysis.

Code generation: Issues in design of code generation, The target Language, Address in the target code, A Simple Code generation.

Text Books:

1) Introduction to AutomataTheory, Languages and Computation, J.E.Hopcroft, R.MotwaniandJ.D.Ullman, 3rdEdition, Pearson, 2008.

2) Compilers Principles, Techniques and Tools Aho, Ullman, Ravisethi, Pearson Education.

Reference Books:

1) Louden: "Compiler Construction, Principles & Practice", 1st Edition, Thomson Press, 2006.

2) Tremblay J P, Sorenson G P: "The Theory & Practice of Compiler writing", 1st Edition, BSP Publication, 2010.

3) Theory of Computation, V. Kulkarni, Oxford University Press, 2013.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE05
Name of the Course	**Object Oriented Software Engineering (Professional Elective-II)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software process and different life cycle models. **(K2)**

CO2: Discuss Project Planning, and organization. **(K2)**

CO3: Apply OO concepts along with their applicability contexts. **(K3)**

CO4: Demonstrate object oriented analysis and design. **(K3)**

CO5: Describe Implementation, Integration and Maintenance phases. **(K2)**

UNIT I: Introduction to Classical software Engineering: Introduction to OO Paradigm.Different phases in structured paradigm and OO Paradigm. Software Process and different life cycle models and corresponding strengths and weaknesses.

UNIT II: Planning and Estimation: Estimation of Duration and Cost, COCOMO components of software. Project Management plan. Planning Object-Oriented Projects.Project Organization & communication concepts and their activities.

UNIT III: Modules to objects: Cohesion and Coupling, Data Encapsulation and Information hiding aspects of Objects. Inheritance, Polymorphism and Dynamic Binding aspects.Cohesion and coupling of objects. Reusability, Portability and Interoperability aspects.

Introduction to testing, with focus on Utility, Reliability, Robustness, Performance, Correctness.

UNIT IV: Requirement phase: Rapid Prototyping method, Specification phase, Specification Document, Formal methods of developing specification document, Examples of other semi - formal methods of using Finite-State- Machines, Petri nets and E- Language.

Analysis phase: Use case Modeling, Class Modeling, Dynamic Modeling, Testing during OO Analysis.

UNIT V: Design phase: Data oriented design, Object Oriented design, and Formal techniques for detailed design. Challenges in design phase.**IIM Phases:** Implementation, Integration and maintenance phases, OOSE aspects in these phases.

Text Books:
1. Object oriented and Classical Software Engineering, **7/e**, Stephen R. Schach, TMH
2. Object oriented and classical software Engineering, Timothy Lethbridge, Robert Laganiere, TMH, **Second Edition**.

Reference Books:
1. Component-based software engineering: 7th international symposium, **CBSE 2004**, IvicaCrnkovic, Springer.

Semester	VI	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CSTPE06
Name of the Course	Advanced Data Structures (Professional Elective-II)					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain external sorting method. **(K2)**

CO2: Discuss pattern matching Algorithms. **(K2)**

CO3: Illustrate various hash functions with appropriate examples. **(K3)**

CO4: Illustrate various priority queues with appropriate examples. **(K3)**

CO5: Construct self-balanced tree with appropriate examples. **(K3)**

UNIT-I: Sorting: Introduction - External Sorting- K-way Merging - Buffer Handling for parallel Operation Run Generation- Optimal Merging of Runs.

UNIT-II: String Matching Algorithms: The Navi String matching algorithms – The Robin-Krap algorithm – String Matching algorithm using finite automata – The Knuth Morris Pratt algorithm.

UNIT-III: Hashing: Dictionaries –-Hash Table Representation: Ideal hashing – Hash functions and tables -Linear probing- Hashing with Chains
Priority Queues (HEAPS): Definition and Applications – ADT – Linear lists – Heaps : Definition – Max heap and Min heap operations, Applications – Heap Sort – Huffman Codes.

UNIT-IV: Efficient Binary Search Trees :ADT-Introduction to AVL Trees- Red-Black Trees- Definition Representation of a Red- Black Tree- Searching a Red-Black Tree- Inserting into a Red Black Tree- Deletion from a Red-Black Tree-Joining Red-Black Trees, Splitting a Red-Black tree – Splay Trees – Introduction – operation – Amortized complexity.

UNIT-V: Multiway Search Trees : ISAM - M-Way Search Trees, Definition and Properties Searching an M-Way Search Tree, B-Trees, Definition and Properties-search Elements in a B-tree-Insertion into B-Tree- Deletion from a B-Tree- Node Structure.

Text Books:

1. Data Structures, Algorithms and Applications in C++; SartajSahni; UniverstiyPress ; 2 nd Edition.
2. Introduction to Algorithms By Thomas H Cormen, Charless E leiserson, Ronald L Rivest and Cliford Stein PHI publication Third Edition (UNIT – II)

References:

1. Data Structures, a Pseudocode Approach, Richard F Gilberg, BehrouzAForouzan, Cengage.
2. An Introduction to Data Structures with applications By Jean Paul Trembly and Paul G Sorenson Tata McGraw Hill Second Edition
3. Fundamentals of Data Structures and algorithms by C V Sastry, RakeshNayak, Ch. Raja Ramesh, IK Publications, new Delhi.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE07
Name of the Course	**Data Science (Professional Elective-II)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the fundamental concepts of Data Science. **(K2)**

CO2: Illustrate Exploratory Data Analysis. **(K2)**

CO3: Explain the Concepts of Recommendation Engines. **(K2)**

CO4: Explain various Anomaly Detection Techniques. **(K2)**

CO5: Discuss Feature Selection techniques. **(K2)**

UNIT-I: Introduction: AI, Machine Learning and Data Science, What is Data Science? Case for Data Science, Data Science Classification, Data Science Algorithms.
Data Science Process: Prior Knowledge, Data Preparation, Modeling-Training and Testing Datasets, Learning Algorithms, Evaluation of the Model, Ensemble Modeling, Application, Knowledge.

UNIT-II: Data Exploration: Objectives of Data Exploration, Datasets- Types of Data, Descriptive Statistics-Univariate Exploration, Multivariate Exploration, Data Visualization, Roadmap for Data Exploration.

UNIT-III: Recommendation Engines: Need, Applications, Concepts, Types, Collaborative Filtering-Neighborhood-Based Methods, Matrix Factorization; Content-Based Filtering- Building an Item Profile, User Profile Computation, Implementation Steps,Hybrid Recommenders.

UNIT-IV: Anomaly Detection: Concepts - Causes of Outliers, Anomaly Detection Techniques; Distance-Based Outlier Detection- Working, Implementation Steps; Density-Based Outlier Detection- Working, Implementation Steps; Local Outlier Factor- Working, Implementation Steps.

UNIT-V: Feature Selection: Classifying Feature Selection Methods, Principal Component Analysis, Information Theory-Based Filtering, Chi-Square-Based Filtering, Wrapper-Type Feature Selection- Backward Elimination.

Textbook:

1. Data Science Concepts and Practice, Vijay Kotu, BalaDeshpande, 2nd Edition, Morgan Kaufmann Publishers.

Reference Books:

1. An Introduction to Data Science, Jeffrey S. Saltz,Jeffrey M. Stanton, Sage Publications.
2. The Art of Data Science, Roger D Peng, Elizabeth Matsui, Lean Publishing.
3. Data Science for Business, Foster Provost, Tom Fawcett,O'Reilly Media.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE08
Name of the Course	**Cryptography and Network Security (Professional Elective-II)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss fundamentals and mathematical support of Cryptography and Network Security. **(K2)**

CO2: Discuss symmetric and asymmetric cryptosystems. **(K2)**

CO3: Discuss about HASH functions & Digital Signatures to provide authentication and integrity. **(K2)**

CO4: Demonstrate various methods of Mutual trust and mail security. **(K3)**

CO5: Review the Network& Internet Security Scenarios. **(K2)**

UNIT-I: Overview: Security attacks, Services, Mechanisms, A model for network security, Symmetric cipher model.
Classical encryption techniques: Substitution Techniques, Transposition Techniques.
Number Theory: Prime numbers, Fermat's theorem, Euler's Theorem, the Chinese Remainder Theorem.

UNIT-II: Block Cipher: Principles, DES, Strength of DES, AES, Block cipher Modes of Operations.
Public Key Cryptography: Principles, Public Key Crypto system, RSA Algorithm, Diffie Hellman Key Exchange.

UNIT-III: Cryptographic Hash Functions: Application of Cryptographic Hash Functions, Requirements & Security, SHA-512, Message Authentication Functions, Requirements, HMAC.
Digital Signatures: Properties, Attacks and Forgeries, Requirements, Digital Signature Standards, NIST Digital Signature Algorithm.

UNIT-IV: Key Management and Distribution: Symmetric Key Distribution Using Symmetric Encryption, Asymmetric Key Distribution Using Symmetric Encryption, Distribution of Public Keys, X.509 Certificates.

User Authentication: Remote User Authentication Principles, Kerberos. **Electronic Mail Security:** Pretty Good Privacy (PGP) And S/MIME.

UNIT-V:

IP Security: Two modes, two security protocols Authentication Header, Encapsulating Security Payload.

Transport Level Security: Secure Socket Layer (SSL) and Transport Layer Security (TLS).

HTTPS: Connection Initiation Connection Closure.

Text Books:

1. William Stallings, "Cryptography and Network Security, Principles and Practices", Pearson Education, Sixth Edition.
2. Cryptography and Network Security, Behrouz A Forouzan, Debdeep Mukhopadhyay, (3e) Mc Graw Hill.

Reference Books:

1. Charlie Kaufman, Radia Perlman and Mike Speciner, "Network Security – Private Communication in a Public World" Pearson/PHI.

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Implement Error detection technique and Sliding window protocol. (**K3**)

CO2: Implement Routing and congestion control Algorithms. (**K3**)

CO3: Implement socket programming. (**K3**)

List of Experiments
(Implement using C/C++/Java/Python)

1. Study of basic network commands and Network configuration commands.
   a) Ping
   b) Tracert / Traceroute
   c) Ipconfig / ifconfig
   d) Hostname
   e) Nslookup
   f) Netstat
2. Construct Detecting error using CRC-CCITT.
3. Implementation of Bit Stuffing
4. Implementation of Character Stuffing
5. Implementation of stop and wait protocol.
6. Implementation of Dijkstra's algorithm
7. Implementation Distance vector algorithm
8. Implementation of Congestion control using leaky bucket algorithms
9. Implementation using Socket TCP both client and server programs.
10. Implementation using Socket UDP both client and server programs

Text Books:

1. Computer Networks — Andrew S Tanenbaum, 4th Edition. Pearson Education/PHI.
2. Data Communications and Networks – Behrouz A. Forouzan.Third Edition TMH.

Reference Books:

1. An Engineering Approach to Computer Networks-S.Keshav, 2nd Edition, Pearson Education.
2. Understanding communications and Networks, 3rd Edition, W.A. Shay, Thomson.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	3	1.5	V20CSL12
Name of the Course	**Machine Learning Lab using Python**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After successful completion of the course, the student will be able to:

CO1: Identify various Python libraries used in Machine Learning. **(K2)**
CO2: Implement probabilistic classifiers using Python Programming. **(K3)**
CO3: Construct non-probabilistic classifiers using Python Programming. **(K3)**
CO4: Demonstrate the process of clustering using the K-Means algorithm. **(K3)**
CO5: Illustrate the working of a Multi-layer perceptron network. **(K3)**

List of Experiments

1. Introduction to required python libraries such as Numpy, Pandas, Scipy, Matplotliband Scikit-learn.
2. Import, preprocess, and split the datasets using scikit-learn.
3. Construct a classification model using the Bayes classifier using Python Programming.
4. Implement a Logistic Regression algorithm for binary classification using Python Programming.
5. Implement the KNN algorithm for classification and demonstrate the process of finding out optimal "K" value using Python Programming.
6. Construct an SVM classifier using python programming.
7. Demonstrate the process of the Decision Tree construction for classification problems using python programming.
8. Implement an Ensemble Learner using Random Forest Algorithm using python programming.
9. Implement an Ensemble Learner using Adaboost Algorithm using Python programming.
10. Demonstrate the working of Multi-layer perceptron with MLPClassifier() using Python programming.
11. Demonstrate the K-Means algorithm for the given data set using Python programming.

Text Books:

1. Introduction to Machine Learning with Python, Andreas C. Muller and Sarah Guido, First Edition, O'Reilly.

Reference Books:

1. Practical Machine Learning with Python, Dipanjan Sarkar, Raghav Bali and Tushar Sharma, First Edition, A Press.

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop Class diagrams. **(K3)**
CO2: Develop Use case diagrams. **(K3)**
CO3: Construct Interaction diagrams. **(K3)**
CO4: Develop State chart, Activity diagrams. **(K3)**
CO5: Develop Component and Deployment diagrams. **(K3)**

List of Experiments

1. Draw basic class diagrams to identify and describe key concepts like classes, and their relationships.
2. Draw Use Case diagrams for capturing and representing requirements of the system.
3. Draw sequence diagrams OR communication diagrams with advanced notation for system to show objects and their message exchanges.
4. Draw activity diagrams to display either business flows or like flow charts.
5. Develop State chart diagrams.
6. Draw component diagrams assuming that build the system reusing existing components along with a few new ones.
7. Draw deployment diagrams to model the runtime architecture of system.
8. Design Case study on Library Management System.
9. Design Case Study on Hospital Management System.
10. Design Case study-Railway Reservation System.

Text Books:

1. The Unified Modeling Language User Guide, Grady Booch, James Rumbaugh, Ivar Jacobson, Pearson Education.

.

Reference Books:

1. UML 2 Toolkit, Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, WILEY-Dreamtech India Pvt. Ltd.
2. Fundamentals of Object Oriented Design in UML, Meilir Page-Jones, Pearson Education.
3. Modeling Software Systems Using UML2, Pascal Roques, WILEY- Dreamtech India Pvt. Ltd.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**

Name of the Course	**Advanced Computer Architecture (Professional Elective-III)**					
Branch	Common to CSE and CST					

<u>Syllabus Details</u>

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the different types of parallel computer models. **(K2)**
CO2: Describe various Processor and Memory organizations. **(K2)**
CO3: Illustrate Pipelining, Multiprocessors and Multicomputers concepts. **(K2)**
CO4: Explain Multivector, SIMD Computers and Multithreaded, Dataflow Architectures. **(K2)**
CO5: Illustrate the Parallel Programming models and instruction level parallelism. **(K2)**

UNIT-I: Parallel computer models: The state of computing, Multiprocessors and Multicomputers, Multivector and SIMD computers. **Program and network properties:** Conditions of parallelism, Program flow mechanisms.

UNIT-II: Processors: Advanced Processor Technology, Superscalar and Vector Processors, **Memory Hierarchy, Cache and Shared Memory:** Hierarchical Memory Technology, Virtual Memory Technology, Cache Memory Organizations, Shared-Memory Organizations.

UNIT-III: Pipelining: Linear Pipeline Processors, Nonlinear Pipeline Processors, Instruction Pipeline Design, Arithmetic Pipeline Design.
Multiprocessors and Multicomputers: Multiprocessor System Interconnects, Cache Coherence and Synchronization Mechanisms, Message Passing Mechanisms.

UNIT-IV: Multivector and SIMD Computers: Vector Processing Principles, Compound Vector Processing. **Scalable, Multithreaded, Dataflow Architectures:** Latency-Hiding Techniques, Principles of Multithreading.

UNIT-V: Parallel Models, Languages: Parallel Programming Models, Parallel Languages and Compilers.

Instruction Level Parallelism: Problem Definition, Model of a Typical Processor, Compiler- detected Instruction Level Parallelism, Operand Forwarding, Reorder Buffer, Register Renaming, Tomasulo's Algorithm, Branch Prediction.

Text Book:

1. Advanced Computer Architecture: Parallelism, Scalability, Programmability, Kai Hwang, Naresh Jotwani, 2nd Edition, Tata McGraw Hill Education

Reference Books:

1. Computer Organization and Design, David A. Patterson and John. L. Hennessy, 5th Edition, Morgan Kaufmann Series.
2. Computer Architecture and Organization, John P. Hayes, 3rd Edition, McGraw Hill Education.

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the challenges of Big Data using Hadoop. **(K2)**
CO2: Apply data modelling techniques to large data sets using map reduce programs. **(K3)**
CO3: Describe the Hadoop I/O classes. **(K2)**
CO4: Examine the use of Pig Framework to work with Big Data. **(K3)**
CO5: Develop a data analytical system using HIVE. **(K3)**

UNIT-I: Introduction to Big Data & Hadoop: What is Big Data, Why Big Data is Important, Data Storage and Analysis, Comparison with other systems. A brief history of Hadoop, Meet Hadoop Data, Apache Hadoop and the Hadoop Ecosystem.
Working with Big Data & HDFS: Google File System, Hadoop Distributed File System (HDFS) –Building blocks of Hadoop (Namenode, Datanode, Secondary Namenode, JobTracker, TaskTracker).

UNIT-II: Introducing and Configuring Hadoop cluster: Local distributed mode, Pseudo-distributed mode, Fully Distributed mode, Configuring XML files.
Writing Map Reduce Programs: Analyzing the Data with Hadoop-Map Reduce, Basic programs of Hadoop Map Reduce, Driver code, Mapper code, Reducer code, Record Reader, Combiner functions. Map Reduce Types, Input Format class Hierarchy.

UNIT-III: Hadoop I/O: The Writable Interface, Writable Comparable and Comparators.
Writable Classes: Writable wrappers for Java primitives, Text & Bytes Writable, Null Writable, Object Writable and Generic Writable, Writable collections.
Implementing a Custom Writable: Implementing a Raw Comparator for speed, Custom comparators

UNIT-IV: Pig - Hadoop Programming Made Easier: Admiring the Pig Architecture, Going with the Pig Latin Application Flow, Working through the ABCs of Pig Latin, Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.

UNIT-V: Applying Structure to Hadoop Data with Hive: Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive, Examining the Hive Clients, Working with Hive Data Types, Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.

Text Books:

1. Hadoop: The Definitive Guide, Tom White, O'Reilly, 3rd Edition, 2012.
2. Hadoop in Action, Chuck Lam, MANNING Publ., 2016.
3. Hadoop for Dummies, Dirk deRoos, Paul C.Zikopoulos, Roman B.Melnyk, Bruce Brown, Rafael Coss, 2014.

Reference Books:

1. Hadoop in Practice, Alex Holmes, MANNING Publ., 2014.
2. Hadoop Map Reduce Cookbook, Srinath Perera, Thilina Gunarathne, PACKT, 2013.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE11
Name of the Course	**Deep Learning (Professional Elective-III)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the fundamentals of deep learning. **(K2)**
CO2: Illustrate the working of deep feed forward neural networks. **(K2)**
CO3: Discuss regularization and optimization techniques used in deep neural networks. **(K2)**
CO4: Illustrate the working of convolution neural networks. **(K2)**
CO5: Explain about recurrent and recursive neural networks. **(K2)**

UNIT-I: Introduction: Historical Trends in Deep Learning**,** The Many Names and Changing Fortunes of Neural Networks, Increasing Dataset Sizes, Increasing Model Sizes, Increasing Accuracy, Complexity and Real-World Impact.

UNIT-II: Deep Feed forward Networks: Learning XOR, Gradient-Based Learning, Hidden Units, Architecture Design, Back Propagation and Other Differentiation Algorithms.

UNIT-III: Regularization for Deep Learning: Parameter Norm Penalties, Early Stopping, Dropout; **Optimization for Training Deep Models:** How Learning Differs from Pure Optimization, Challenges, Basic Algorithms, Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates, Optimization Strategies and Meta-Algorithms.

UNIT-VI: Convolution Networks: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely StrongPrior, Variants of Basic Convolution Functions, Structured Outputs, Data Types, Efficient Convolution Algorithms, Random or Unsupervised Features, The Neuroscientific Basis for Convolutional Networks, Convolutional Networks and the History of Deep Learning.

UNIT-V: Sequence Modeling- Recurrent and Recursive Nets: Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architectures, Deep Recurrent Networks, Recursive Neural Networks, The Challenge of Long-Term Dependencies, Echo State Networks, Leaky Units and Other Strategies for Multiple Time Scales, LSTM and Other Gated RNNs, Explicit Memory.

Textbooks:

1. Deep Learning, Ian Goodfellow, YoshuaBengio, and Aaron Courville, MIT Press.

Reference Books:

1. Neural Networks and Deep Learning, Charu C. Aggarwal, Springer.
2. Fundamentals of Deep Learning, Nikhil Buduma, 1st Edition, O'Reilly

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE12
Name of the Course	Human Computer Interaction **(Professional Elective-III)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the principles and characteristics of GUI. **(K2)**
CO2: Describe how a computer system may be modified to include human diversity. **(K2)**
CO3: Select an effective style and screen design for a specific business application. **(K2)**
CO4: Discuss System Menus & Navigation Schemes**.** **(K2)**
CO5: Select Device and Screen based controls. **(K2)**

UNIT I:The User Interface: Introduction, Importance of the User Interface, Importance and benefits of Good Design, Characteristics of Graphical and Web User Interface Graphical User Interface, popularity of graphics, concepts of Direct Manipulation, Graphical System advantage and disadvantage, Characteristics of GUI, Characteristics of Web Interface, Principles of User Interface Design.

UNITII:TheUserInterfaceDesignProcess:ObstaclesandPitfallinthedevelopmentProcess,Usability, The Design Team, Human Interaction with Computers, Important Human Characteristics in Design, Human Consideration in Design, Human Interaction Speeds, Performance versus Preference, Methods for Gaining and Understanding of Users.

UNIT III: Understanding Business Functions: Business Definitions& Requirement analysis, Determining Business Functions. **Principles of Good Screen Design:** Human considerations in screen Design, interface design goals, screen meaning and purpose, Technological considerations in Interface Design.

UNIT IV:
System Menus and Navigation Schemes: Structure, Functions, Context, Formatting, Phrasing and Selecting, Navigating of Menus, Kinds of Graphical Menus Windows Interface: Windows characteristic, Components of Window,

Windows Presentation Styles, Types of Windows, Window Management,

UNIT V: Device and Screen-Based Control: Device based controls, Operable Controls, Textentry/read-Only Controls, Section Controls, Combining Entry/Selection Controls Presentation Controls, Selecting proper controls.

Text Books:

1. "The Essential Guide to User Interface Design", Wilbert O. Galitz, 2nd edition,2002,Wiley India Edition.
2. Prece, Rogers, "Sharps Interaction Design", Wiley India.
3. "Designing the user interfaces". Ben Shneidermann 3rd Edition, Pearson Education Asia.

Reference Books:

1. "User Interface Design" , SorenLauesen, Pearson Education
2. "Essentials of Interaction Design", Alan Cooper, Robert Riemann, David Cronin, Wiley
3. "HumanComputer Interaction", Alan Dix, Janet Fincay, GreGoryd, Abowd, Russell, Bealg, Pearson Education.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE13
Name of the Course	**Design Patterns (Professional Elective-IV)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe the design patterns view and its applications. **(K2)**
CO2: Demonstrate Creational Patterns. **(K3)**
CO3: Construct Structural Patterns for a given Scenario. **(K3)**
CO4: Construct Behavioural Patterns for a given Scenario. **(K3)**
CO5: Examine various Case Studies in utilizing Software Architectures **(K3)**

UNIT I: Introduction: What Is a Design Pattern?, Design Patterns in Smalltalk MVC, Describing Design Patterns, The Catalog of Design Patterns, Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern

UNIT II: Creational Patterns: Abstract factory, Builder, Factory method, Prototype, Singleton.

UNIT III: Structural Patterns: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, and PROXY.

UNIT VI: Behavioural Patterns: Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.

UNIT V: Case Studies A-7E – A case study in utilizing architectural structures, The World Wide Web - a case study in Interoperability, Air Traffic Control – a case study in designing for high availability, Celsius Tech – a case study in product line development.

Text Books:

1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003.
2. Design Patterns, Erich Gamma, Pearson Education, 1995.

Reference Books:

1. Beyond Software architecture, Luke Hohmann, Addison wesley, 2003.
2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall PTR, 2001
3. Software Design, David Budgen, second edition, Pearson education, 2003
4. Head First Design patterns, Eric Freeman & Elisabeth Freeman, O'REILLY, 2007.
5. Design Patterns in Java, Steven John Metsker & William C. Wake, Pearson education, 2006.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE14
Name of the Course	**NOSQL Database (Professional Elective-IV)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss four types of NoSQL Databases (Document-oriented, KeyValue Pairs, Column oriented and Graph). **(K2)**

CO2: Illustrate Replication and sharding. **(K2)**

CO3: Explain NoSQL Key/Value databases using MongoDB. **(K2)**

CO4: Demonstrate Column- oriented NoSQL databases using Apache HBASE. **(K3)**

CO5: Explain Graph NoSQL databases using Neo4. **(K3)**

UNIT I: Introduction: Overview and History of NoSQL Databases Definition of the Four Types of NoSQL Database, The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, Impedance Mismatch, Application and Integration Databases, Attack of the Clusters, The Emergence of NoSQL, Key Points, Comparison of relational databases to new NoSQL stores, MongoDB, Cassandra, HBASE, Neo4j use and deployment, Application, RDBMS approach, Challenges NoSQL approach, Key-Value and Document Data Models, Column-Family Stores, Aggregate-Oriented Databases.

UNIT II: Replication and sharding, MapReduce on databases. Distribution Models, Single Server, Sharding, Master-Slave Replication, Peer-to-Peer Replication, Combining Sharding and Replication.

UNIT III: NoSQL Key/Value databases using MongoDB, Document Databases, What Is a Document Database? Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Web Analytics or Real-Time Analytics, E-Commerce Applications, When Not to Use, Complex Transactions Spanning Different Operations, Queries against Varying Aggregate Structure.

UNIT IV: Column- oriented NoSQL databases using Apache HBASE, Column-oriented NoSQL databases using Apache Cassandra, Architecture of HBASE, What Is a Column-Family Data Store? Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Counters, Expiring Usage, When Not to Use

UNIT V: Graph NoSQL databases using Neo4,NoSQL database development tools and programming languages, Graph Databases, What Is a Graph Database? Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Connected Data, Routing, Dispatch, and Location-Based Services, Recommendation Engines, When Not to Use

Textbooks:

1. NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence , **1st Edition, 2012.** Authors: Sadalage, P. & Fowler, Publication: Pearson Education.
2. The Definitive Guide to MongoDB: A complete guide to dealing with Big Data using MongoDB, **3rd Edition, December, 2015**. Authors: Eelco Plegge, David Hows, Peter Membrey, Tim Hawkins, Apress Publishers

Reference Books:

1. Redmond, E. ,Wilson, Perkins: Seven Databases in Seven Weeks: A Guide to Modern Databases and the NoSQL Movement Edition**: 2nd Edition,2018**, O'Reilly Publishers.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE15
Name of the Course	**Reinforcement Learning (Professional Elective-IV)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss Elements of Reinforcement Learning and Multi-armed Bandits. **(K2)**

CO2: Illustrate Finite Markov Decision Process and Dynamic Programming. **(K2)**

CO3: Explain Monte Carlo Methods and *n*-step Bootstrapping. **(K2)**

CO4: Explain Off-policy Methods with Approximation. **(K2)**

CO5: Discuss Policy Gradient Methods. **(K2)**

UNIT I: Introduction: Reinforcement Learning, Examples, Elements of Reinforcement Learning, Limitations and Scope. **Multi-armed Bandits:** A k-armed Bandit Problem, Action-value methods, The 10-armed Testbed, Incremental Implementation, Tracking a Non stationary Problem, Optimistic Initial Values, Upper –Confidence-Bound Action Selection, Gradient Bandit Algorithm.

UNIT II: Finite Markov Decision Process: The Agent-Environment Interface, Goals and Rewards, Returns and Episodes, Unified Notataion for Episodic and Continuing Tasks, Policies and Value Functions. **Dynamic Programming:** Policy Evaluation, Policy Improvement, Policy Iteration, Value Iteration, Asynchronous Dynamic Programming, Generalized Policy Iteration, Efficiency of Dynamic Programming.

UNIT III: Monte Carlo Methods: Monte Carlo Prediction, Monte Carlo Estimation of Action Values, Monte Carlo Control, Monte Carlo Control without Exploring Starts, Off-policy Prediction via Importance Sampling, Incremental Implementation, Discontinuing-aware Importance Sampling, Per-decision Importance Sampling. ***n*-step Bootstrapping:** *n*-step TD Prediction, *n*-step Sarsa, *n*-step Off-policy Learning, Per-decision methods with Control Variables, A Unifying Algorithm: *n*-step Q(σ).

UNIT IV:Off-policy Methods with Approximation:
Semi-gradient Methods, Examples of Off-policy Divergence, The Deadly Triad, Linear Value-function Geometry, Gradient Descent in the Bellman Error, The Bellman Error is not Learnable, Gradient-TD methods, Emphatic-TD methods, Reducing Variance.

Eligibility Traces: The λ-return, TD(λ), *n*-step Truncated λ-return methods, Online λ –return Algorithm, True Online TD(λ), Dutch Traces in Monte Carlo Learning, Sarsa(λ), Variable λ and γ, Off-policy Traces with Control Variables, Watkins's Q(λ) to Tree-Backup(λ).

UNIT V:
Policy Gradient Methods: Policy Approximation and its Advantages, The Policy Gradient Theorem, REINFOECE: Monte Carlo Policy Gradient, REINFORCE with Baseline, Actor-Critic Methods, Policy Gradient for Continuing Problems, Policy Parameterization fr Continuous Actions.

Text Books:

1. R. S. Sutton and A. G. Bart,. "Reinforcement Learning - An Introduction," MIT Press, 2018.

Reference Books:

1. Szepesvári, Csaba, "Algorithms for Reinforcement Learning," United States: Morgan & Claypool, 2010.
2. Puterman, Martin L., "Markov Decision Processes: Discrete Stochastic Dynamic Programming," Germany: Wiley, 2014.

Semester	**VI**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE16
Name of the Course	**Cloud Computing (Professional Elective-IV)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Explain the basic concepts of cloud computing. **(K2)**
CO2: Describe the Virtualization and Migration concepts of Cloud. **(K2)**
CO3: Explain the Cloud Application Design methodologies. **(K2)**
CO4: Illustrate the Security aspects of Cloud. **(K2)**
CO5: Illustrate the SLA Management aspects of Cloud. **(K2)**

UNIT-I: Introduction to Cloud Computing: Definition of Cloud Computing, Layers and Types Of Clouds, Desired Features of a Cloud, Infrastructure as a Service Providers, Platform as a Service Providers, Challenges and Risks.

UNIT-II: Cloud Concepts & Technologies: Virtualization, Load Balancing, Replication, Software Defined Networking, Network Function Virtualization (NFV).
Migrating into a Cloud: The Seven-Step Model of Migration into a Cloud, Migration Risks and Mitigation

UNIT-III: Cloud Application Design: Design Considerations for Cloud Applications, Reference Architectures for Cloud Applications, Cloud Application Design Methodologies: SOA, Cloud Component Model, MVC, Data Storage Approaches.

UNIT-IV: Cloud Security: Cloud Security Architecture (CSA), Authentication, Authorization, Identity, Access Management, Data Security, Key Management.

UNIT-V: SLA Management in Cloud Computing: Service Level Agreements (SLA), Traditional Approaches to SLO Management, Types of SLA, Life Cycle of SLA, SLA Management in Cloud.

Text Books:

1. Cloud Computing: Principles and Paradigms,RajkumarBuyya, James Broberg, Andrzej Goscinski, Wiley Publication.
2. Cloud Computing: A Hands-on Approach, ArshdeepBahga , Vijay Madisetti , Universities Press.

Reference Books:

1. Cloud Computing – Web-Based Applications That Change the way you Work and Collaborate Online, Michael Miller, PearsonEducation.
2. Cloud Computing: A Practical Approach , Anthony T. Velte, Toby J. Velte, Robert Elsenpeter, McGraw-Hill,(2010).

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE17
Name of the Course	**Software Project Management (Professional Elective-V)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Software Project Management Terminology. **(K2)**
CO2: Explain various Software development process Models and software Life cycle phases. (**K2)**
CO3: Illustrate various Effort Estimation Techniques and activity network models for Software Project Planning. **(K3)**
CO4: Demonstrate Risk Management Concepts and resource allocation. **(K3)**
CO5: Explain the importance of Project monitoring and control for accomplishing project goals and software Quality. **(K2)**

UNIT-I: Introduction to Software Project Management: Software Project versus other types of projects, Activities covered by Software Project Management, Categorizing projects ,Stakeholders, Objectives& goals, what is management. **Project Planning:** Step-wise planning, Identify Project Scope and objectives, Infrastructure, Project Products &deliverables, Project activities, Effort estimation.

UNIT-II: Project Approach: Build or buy, process models: waterfall model, Prototyping, Incremental delivery model.
Agile methods: Extreme Programming, Atern method, selecting an appropriate process model.
Lifecycle phases: Engineering and Production stages, Inception, Elaboration, Construction, Transition phases.

UNIT-III: Software effort estimation and Activity planning: Overview of Effort Estimation techniques, Function Point analysis, COCOMO.
Activity planning: Objectives, Network planning models, forward pass and backward pass, Identify Critical path and activities.

UNIT-IV: Risk Management and Resource Allocation: Introduction, Risk and its categories, Identification, Assessment, Risk Planning and management, applying PERT technique.

Resource Allocation: Types of Resources, Identifying resource requirements, Resource scheduling.

UNIT-V: Project Monitoring and Control: Creating framework for monitoring& control, Collecting Data, Visualizing Progress, Cost monitoring, Earned value Analysis.

Software Quality: Defining Quality, Importance of quality, ISO 9126, Product Quality Vs Process Quality management.

Process Capability Models: Capability Maturity Model, Enhancing software Quality.

Text Books:

1. Software Project Management, Bob Hughes & Mike Cotterell, 6 th edition, TATA Mcgraw-Hill 2. Software Project Management, WalkerRoyce 2nd edition, Pearson Education.

Reference Books:

1. Software Project Management in practice, PankajJalote, 9th edition, Pearson Education.
2. Software Project Management, Joel Henry, 3rd edition, Pearson Education.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE18
Name of the Course	**Scripting Languages (Professional Elective-V)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop dynamic webpages and validate with java Script. **(K3)**
CO2: Discuss fundamentals of PHP. **(K2)**
CO3: Develop web applications using PHP. **(K3)**
CO4: Demonstrate Perl Programming concepts. **(K3)**
CO5: Illustrate AngularJS frame work. **(K2)**

UNIT–I: JavaScript: Overview of JavaScript, General Syntactic Characteristics, Primitives Operations and Expressions, Screen output and Keyboard Input, Control Statements, Object creation and Modification, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions, Events and Event Handling.

DHTML: Positioning Moving and Changing Elements.

UNIT – II: PHP Basics- Features, Embedding PHP Code in your Web pages, Outputting the data to the browser, Data types, Variables, Constants, expressions, string interpolation, control structures, Function, Creating a Function, Function Libraries, Arrays, strings and Regular Expressions.

UNIT - III: Advanced PHP Programming: PHP and Web Forms, Files, PHP Authentication and Methodologies - Database Based, Login Administration, Uploading Files with PHP, Sending Email using PHP.

UNIT – IV: Introduction to PERL and Scripting: Scripts and Programs, Origin of Scripting , Scripting Today, Characteristics of Scripting Languages, Uses for Scripting Languages, Web Scripting, and the universe of Scripting Languages. PERL- Names and Values, Variables, Scalar Expressions, Control Structures, arrays, list, hashes, strings, pattern and regular expressions, subroutines.

UNIT- V: AngularJS - Overview, environment Setup, MVC Architecture, Creating AngularJS Application, Directives, Expressions, Controllers, Filters, Tables, HTML DOM, Modules, Forms.

Text Books:
1. The World of Scripting Languages, David Barron, Wiley Publications.
2. A Journey to Angular Development, by Sukesh Marla, bpb publisher

Reference Books:
1. Open Source Web Development with LAMP using Linux, Apache, MySQL, Perl and PHP, J.Lee and B.Ware (Addison Wesley) Pearson Education.
2. Perl by Example, E.Quigley, Pearson Education.
3. Programming Perl, Larry Wall T.Christiansen and J.Orwant, O'Reilly, SPD.
4. Tcl and the Tk Toolkit, Ousterhout, Pearson Education.
5. Pearl Power, J.P. Flynt, Cengage Learning.
6. Learn Angular in 24 Hours A Step-by-Step Approach, Lakshmi Kamala Thota.

Semester	VII	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20CSTPE19
Name of the Course	Natural Language Processing (Professional Elective-V)					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Natural Language Processing tasks in syntax, semantics, and pragmatics. **(K2)**
CO2: Classify Morphology and Finite State Transducers, Markov Models and Entropy Models. **(K2)**
CO3: Explain about Statistical parsing and probabilistic CFGs. **(K2)**
CO4: Demonstrate semantic analysis. **(K2)**
CO5: Explain Discourse Analysis and Lexical Resources. **(K2)**

UNIT-I : Introduction: Natural Language Processing tasks in syntax, semantics, and pragmatics–Issues–Applications- The role of machine learning - Probability Basics–Information theory–Collocations-N-gram Language Models - Estimating parameters and smoothing – Evaluating language models.

UNIT-II : Morphology And Part Of Speech Tagging: Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields.

UNIT-III : Syntax Parsing: Syntax Parsing - Grammar formalisms and treebanks - Parsing with Context Free Grammars ,Features and Unification-Statistical parsing and probabilistic CFGs(PCFGs)-Lexicalized PCFGs.

UNIT-IV : Semantic Analysis: Representing Meaning – Semantic Analysis - Lexical semantics –Word-sense disambiguation- Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing – Discourse Analysis.

UNIT-V : Discourse Analysis and Lexical Resources: Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brills Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC). NLP Applications**:** Named entity recognition and relation extraction- IE using sequence labeling-Machine Translation (MT) .

Text Books:

1. Daniel Jurafsky and James H. Martin Speech and Language Processing (2nd Edition), Prentice Hall; 2 edition,2008
2. FoundationsofStatisticalNaturalLanguageProcessingbyChristopherD. Manningand Hinrich Schuetze, MIT Press,1999
3. Steven Bird, Ewan Klein and Edward Loper Natural Language Processing with Python, O'Reilly Media; 1 edition,2009 Roland R. Hausser, Foundations of Computational Linguistics: Human-Computer Communication in Natural Language, Paperback, MIT Press,2011

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTPE20
Name of the Course	**Social Networks and Semantic Web (Professional Elective-V)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate knowledge by explaining the three different "named" generations of the web. **(K3)**
CO2: Construct a social network. **(K3)**
CO3: Relate knowledge representation methods for semantic web. **(K3)**
CO4: Describe web services and its Applications. **(K2)**
CO5: Develop "Linked Data" Applications using Semantic Web Technologies. **(K3)**

UNIT-I: The Semantic web: Limitations of the current Web, The semantic solution, Development of the Semantic Web, The emergence of the social web.

UNIT-II: Social Network Analysis: What is network analysis? Development of Social Network Analysis, Key concepts and measures in network analysis. Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities, Web-based networks.

UNIT-III: Knowledge Representation on the Semantic Web: Ontologies and their role in the Semantic Web, Ontology languages for the semantic Web.

Modeling and Aggregating Social Network Data: State of the art in network data representation, Ontological representation of Social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data.

UNIT-IV: Developing social semantic applications: Building Semantic Web applications with social network features, Flink- the social networks of the Semantic Web community, Open academia: distributed, semantic-based publication management.

UNIT-V: Evaluation of Web-Based Social Network Extraction: Differences between survey methods and electronic data extraction, context of the empirical study, Data collection, Preparing the data, optimizing goodness of fit, Comparison across methods and networks, Predicting the goodness of fit, Evaluation through analysis.

Text Books:

1. Social Networks and the Semantic Web, PeterMika, Springer,2007.
2. Semantic Web Technologies, Trends and Research in Ontology basedsystems, J.Davies,RudiStuder,PaulWarren,JohnWiley&Sons.

Reference Books:

1. Semantic Web and Semantic Web Services –Liyang Lu Chapman and Hall/CRC Publishers, (Taylor & Francis Group).
2. Information Sharing on the semantic Web – Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications.

Annexure-III

List of Job Oriented Elective Courses

S.No.	Course Code	Name of the Course
1.	V20CSTJE01	Master Coding and Competitive Programming - Part-1
2.	V20CSTJE02	Master Coding and Competitive Programming - Part-2
3.	V20CSTJE03	Full Stack Technologies
4.	V20CSTJE04	DevOps
5.	V20CSTJE05	Blockchain Technologies

NOTE: All the Job oriented can be theory / Lab Course

Semester	V	L	T	P	C	COURSE CODE
Regulation	V20	0	0	6	3	V20CSTJE01
Name of the Course	**Master Coding and Competitive Programming - Part-1 (Job Oriented Elective-I)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Apply Mathematical reasoning and number theory to solve real world problems in linear time. **(K3)**
CO2: Use of modular arithmetic, to solve complex problems in linear time , logarithmic. **(K3)**
CO3: Use of Prime Factorization and complex solve problems. **(K3)**
CO4: Analyse different techniques including sieve to find prime numbers and evaluate efficiency of these methods. **(K4)**
CO5: Experiment with Hashing and searching techniques to solve problems on Arrays in Linear time. **(K3)**

List of Experiments

1. Develop Programs to solve problems based on Mathematical logic, Reasoning and number theory
2. Develop programs using different techniques to find prime number
3. Develop programs using Sieve method and optimize Complexity of finding prime number
4. Develop Programs based on series, patterns
5. Develop programs on concept of Fibonacci series
6. Develop programs on strings including palindrome and anagram concepts
7. Develop programs to search pattern in a string
8. Develop programs for String Processing.

Text Books:

1. Java The Complete Reference - Eleventh Edition, Herbert Schildt, Oracle
2. Guide to Competitive Programming by Antti Laaksonen
3. Programming challenges by Steven S Skiena

CO1: Demonstrate IDE tolls Installation. **(K3)**
CO2: Develop programs using servlets. **(K3)**
CO3: Illustrate MVC architecture. **(K3)**
CO4: Demonstrate applications of Hibernate. **(K3)**
CO5: Illustrate Spring MVC Framework. **(K3)**

Exercise 1: Basic Installation of IDEs and Development Tools (use any one of the following IDEs).

The Student should know about installing IDEs (Integrated Development Environment) in the system such as IntelliJ, Eclipse, NetBeans, Macromedia Dream Viewer and Databases such as My-SQL, Oracle, SQL Server etc.

Additional Tasks:

- How we can import project files into IDEs.
- How we can import eclipse (Java IDE) projects.
- How to Create new project in IDEs.
- How to Save the Project using packages.
- How to Compile the Project or Program in IDE.
- How to Build the Project or Program in IDE.
- How to Debug the Errors in IDE.

Exercise 2: Understanding about Servlets: Create Example programs Using the below concepts

- Introduction to Servlets.
- Write Servlet application to print current date & time.
- Write Servlet program to link Html & Servlet Communication.
- Write Servlet program to Auto refresh a page.
- Demonstrate session tracking using small program.
- Write Servlet program to insert/delete/update the record into database.
- Write Servlet program to add cookie to selected value.

Exercise 3: Understanding about Model View Controller : Create Example programs Using the below concepts

- Introduction to MVC in java.
- Create sample program on Model Layer in MVC Using Java.
- Create sample program on View Layer in MVC Using Java

- Create sample program on Controller Layer in MVC Using Java
- Demonstrate MVC Deployment in java.
- Rules for MVC Mapping in Server Side.
- How to use Web Server for MVC Deployment.

Exercise 4: Understanding about Hibernate : Create Example programs Using the below concepts

- Introduction to Hibernate.
- What is ORM
- Demonstrate the components of Hibernate
- How to persist objects using Hibernate
- How to use map using XML and Annotations
- How to implement Inheritance in Hibernate
- Working with relationship between entities - association
- Transactions in Hibernate
- Querying with HQL (Hibernate Query Language)
- Various other forms of querying - Criteria, QBE etc.

Exercise 5: Understanding about Spring MVC Framework: Create Example programs Using the
Below concepts

- Introduction to Spring MVC.
- Demonstrate the usage of **Dispatcher Servlet** in Spring MVC.
- Load the spring jar files or add dependencies in the case of Maven
- Create the controller class.
- Provide the entry of controller in the web.xml file.
- Define the bean in the separate XML file.
- Display the message in the JSP page.
- Start the server and deploy the project.
- Execute the application on webserver using Spring MVC.

Exercise 6: Understanding Some Debugging Tools in Java : The Student should know about how to
debug the java codes using some debugging tools such as:

- NetBeans.
- Eclipse.
- IntelliJ IDEA.
- Visual Studio Code.

Reference Books:

1. Jeffrey C. Jackson, "Web Technologies--A Computer Science Perspective", Pearson Education, 2006.

2. Murach's Java Servlets and JSP, 3rd Edition by (Murach: Training & Reference) 3rd Edition.

3. Spring and Hibernate Paperback – 1 July 2017 by K. Santosh Kumar.

4. Full Stack Java Development with Spring MVC, Hibernate, jQuery, and Bootstrap by Mayur Ramgir,Wiley.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTJE04
Name of the Course	**DEVOPS (Job Oriented Elective)**					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the traditional software development. **(K2)**
CO2: Discuss the concepts of rise of agile methodologies. **(K2)**
CO3: Discuss the concept of DevOps and Agile. **(K2**)
CO4: Demonstrate the purpose of DevOps. **(K3)**
CO5: Illustrate the Operations of CAMS. **(K2)**

UNIT-I: Traditional Software Development: The Advent of Software Engineering - Waterfall method - Developers vs IT Operations conflict.

UNIT-II: Rise of Agile Methodologies: Agile movement in 2000 - Agile Vs Waterfall Method - Iterative Agile SoftwareDevelopment - Individual and team interactions over processes and tools – Workingsoftware over -comprehensive documentation - Customer collaboration over contract negotiation - Responding to change over following a plan.

UNIT-III: Definition of DevOps: Introduction to DevOps - DevOps and Agile.

UNIT-IV: Purpose of DevOps: Minimum Viable Product - Application Deployment - Continuous Integration -Continuous Delivery.

UNIT-V: **CAMS (Culture, Automation, Measurement And Sharing)**: CAMS – Culture - CAMS – Automation - CAMS – Measurement - CAMS – Sharing - Test-Driven Development - Configuration Management - Infrastructure Automation - Root Cause Analysis – Blamelessness - Organizational Learning.

Text Books:

1. The DevOps Handbook - Book by Gene Kim, Jez Humble, Patrick Debois, and Willis Willis.

Reference Books:

1. What is DevOps? - by Mike Loukides.

Semester	**VII**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20CSTJE05
Name of the Course	**Blockchain Technologies** (Job Oriented Elective)					
Branch	Common to CSE and CST					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss the Cryptographic primitives used in Blockchain. **(K2)**

CO2: Discuss about various technologies borrowed in Blockchain. **(K2)**

CO3: Illustrate various models for Blockchain. **(K2)**

CO4: Discuss about Ethereum. **(K2)**

CO5: Discuss about Hyperledger Fabric. **(K2)**

UNIT-I: Introduction: History of Bitcoin and origins of Blockchain, Fundamentals of Blockchain and key components, Permission and Permission-less platforms, Cryptography, SHA256 and ECDSA, Hashing and Encryption, Symmetric/ Asymmetric keys, Private and Public Keys.

UNIT-II: Technologies Borrowed in Blockchain: Technologies Borrowed in Blockchain–hash pointers--Digital cashetc.-Bitcoin Blockchain-Wallet–Blocks Merkley Tree - hardness of mining - Transaction verifiability - Anonymity -forks - Double spending - Mathematical analysis of properties of Bitcoin -Bitcoin-the challenges and solutions.

UNIT-III: Consensus Mechanisms: Consensus Algorithms: Proof of Work(PoW) as random oracle-Formal treatment of consistency-Liveness and Fairness-Proof of Stake(PoS)based Chains -Hybrid models (PoW + PoS), Byzantine Models of fault tolerance.

UNIT-IV: Ethereum: Ethereum- Ethereum Virtual Machine(EVM)-Wallets for Ethereum-Solidity-Smart Contracts-The Turing Completeness of Smart Contract Languages and verification challenges- Using smart contracts to enforce legal contracts-Comparing Bitcoin scripting vs. Ethereum Smart Contracts-Some attacks onsmart contracts.

UNIT-V: Hyperledger Fabric: Hyperledger fabric- the plug and play platform and mechanisms inpermissioned block chain - Beyond

Cryptocurrency – applications of blockchain in cyber security- integrity of information-E-Governance and other contract enforcement mechanisms-Limitations of blockchain as a technology and myths vs reality of Blockchain technology.

Honors Degree

List of Courses for B.Tech(Hons) in Computer Science

S.No.	Course Name	Number of Weeks	Credits	
1.	Data Science for Engineers	8	2	Students have to acquire a minimum of 16 credits by completing MOOC/NPTEL Courses from this Pool
2.	Big Data Computing	8	2	
3.	Introduction to Haskell Programming	8	2	
4.	Distributed Systems	8	2	
5.	Computer Graphics	8	2	
6.	Data Analytics With Python	12	3	
7.	Learning Analytics Tools	12	3	
8.	Introduction to Artificial Intelligence	12	3	
9.	Deep Learning	12	3	
10.	Natural Language Processing	12	3	
11.	Reinforcement Learning	12	3	
12.	Computer Vision	12	3	
13.	Deep Learning for Computer Vision	12	3	
14.	Cloud Computing	12	3	
15.	Advanced Distributed systems	12	3	
16.	Software Testing Methodologies	12	3	
17.	Privacy and Security in Online Social Media	12	3	
18.	Blockchain Architecture Design And Use Cases	12	3	
19.	Introduction To Internet Of Things	12	3	
20.	Introduction to Biomedical Imaging Systems	12	3	
21.	Digital Forensics	12	4	
22.	Web based Technologies and Multimedia Applications	12	4	
23.	Introduction to Information Technology	12	4	
Project Work			4	4
Total				**20 Credits**

NOTE: However the list is not exhaustive. Before registering the Course take the approval from HOD.

Minor Degree in Computer Science and Engineering

List of Courses for B.Tech(Minors) - Artificial Intelligence

S.No.	Course Name	Number of Weeks	Credits	
1	Data Science for Engineers	8	2	**Students have to acquire a minimum of 16 credits by completing MOOC/NPTEL Courses from this Pool**
2*	Introduction to Machine Learning (IITKGP)	8	2	
	Introduction to Machine Learning (IITM)	12	3	
3	Machine Learning for Earth System Sciences	8	2	
4	Scalable Data Science	8	2	
5*	Business Analytics and Text Mining Modeling using Python	8	2	
	Data Analytics With Python	12	3	
6	Introduction to Artificial Intelligence	12	3	
7	Essential Mathematics for Machine Learning	12	3	
8	Deep Learning	12	3	
9	Computer Vision	12	3	
10	Deep Learning for Computer Vision	12	3	
11	Natural Language Processing	12	3	
Project Work			4	4
Total				**20 Credits**

***Students can opt only one course from this set.**

NOTE: However the list is not exhaustive. Before registering the Course take the approval from HOD.

List of Courses for B.Tech(Minors) - Networks and Cyber Security

S.No.	Course Name	Number of Weeks	Credits	
1	Computer Networks and Internet Protocol	12	3	**Students have to acquire a minimum of 16 credits by completing MOOC/NPTEL Courses from this Pool**
2*	Cyber Security **(NPTEL)**	12	3	
	Cyber Security **(CEC)**	15	4	
	Cyber Security Tools, Techniques and Counter measures **(IGNOU)**	12	4	
3	Cryptography and Network Security	12	3	
4	Information Security and Cyber Forensics (CEC)	12	4	
5	Blockchain and its Applications	12	3	
6	Cloud Computing	12	3	
7	Introduction to Internet of Things	12	3	
8	Hardware Security	12	3	
9*	Digital Forensics **(IGNOU)**	12	4	
	Digital Forensics **(CEC)**	16	4	
Project Work			4	4
Total				**20 Credits**

***Students can opt only one course from this set.**

NOTE: However the list is not exhaustive. Before registering the Course take the approval from HOD.

Sri Vasavi Engineering College (Autonomous)

(Sponsored by Sri Vasavi Educational Society)
(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)
(Accreted by NBA & NAAC with 'A' Grade)
Pedatadepalli, Tadepalligudem, W.G.Dt, A.P-534101

Department of Compter Science Engineering (AI & ML)

Date: 26.07.2022

Minutes of the Second Board of Studies

The Second Meeting of BOS, B.Tech in CSE(AI) and B.Tech in AI&ML is held at 10:00AM through online mode on 25.07.2022(Monday) using the following link:
https://us02web.zoom.us/j/83338219367

The following members attended the meeting:

S.No.	Name of the Member	Designation	Role
1.	Dr. D Jaya Kumari	Professor, HoD-CSE, SVEC	Chairperson
2.	Dr.Dasari Haritha	Professor &HOD, UCEK, Kakinada	University Nominee
3.	Dr Nagesh Bhattu Sristy	Asst.Professor, Department of CSE, NIT- AP	Academic Expert
4.	Dr. K. Venkata Rao	Professor, Dept of CS&SE, Andhra University.	Academic Expert
5.	Sri. Seshagiri Telkapalli	Enterprise Architect, TCS Hyderabad.	Industry Expert
6.	Sri. M Jnana Surya Prakasha Rao	Pragmasys consulting LLP, Gurgaon	Alumni
7.	Sri Ch. Apparao	Technical Director	Invited Member
8.	Dr. V. Venkateswara Rao	Professor	Member
9.	Dr. G Loshma	Professor	Member
10.	Dr. V S Naresh	Professor	Member
11.	Dr. Ch. Raja Ramesh	Associate Professor	Member
12.	A. Leelavathi	Sr. Assistant Professor	Member
13.	R. LeelaPhani Kumar	Assistant Professor	Member
14.	D Sasi Rekha	Assistant Professor	Member
15.	B.SriRamya	Assistant Professor	Member
16.	G.Sriram Ganesh	Assistant Professor	Member
17.	N.V.Murali Krishna Raja	Assistant Professor	Member
18.	K Lakshmi Narayana	Assistant Professor	Member
19.	D.S L Manikanteswari	Assistant Professor	Member
20.	M Babu Rao	Assistant Professor	Member
21.	P Rajesh	Assistant Professor	Member
22.	M Sree Radha	Assistant Professor	Member

	Mangamani		
23.	Ch Hemanandh	Assistant Professor	Member
24.	M Chilaka Rao	Assistant Professor	Member
25.	A Nageswara Rao	Assistant Professor	Member
26.	A NagaJyothi	Assistant Professor	Member
27.	G Prashanthi	Assistant Professor	Member
28.	M Yesu Shekharam	Assistant Professor	Member
29.	G Jaya Raju	Assistant Professor	Member
30.	K Lakshmaji	Assistant Professor	Member

Members Absent:

S.No.	Name of the Member	Designation	Role
1.	Sri. Vinay Kumar	Director,XpertBridge, Hyderabad.	Industry Expert

Item No. 1: Welcome note by the Chairman BOS.
The HOD extended a formal welcome and introduced the members.

Item No. 2: Progress Report of the Department

Item No. 3: Review of Course Structure for I to II Semesters of B.Tech CSE(Artificial Intelligence) and Artificial Intelligence & Machine Learning Programmes under V20 Regulation.

The details are given in Annexure-I.

Item No. 4: Approval of Proposed Course Structure and Syllabus for III and IV Semesters of B.Tech CSE(Artificial Intelligence) and Artificial Intelligence & Machine Learning Programmes under V20 Regulation.

Approved the Course Structure and Syllabus for III and IV Semesters of B.Tech in CSE(AI) and B.Tech in AI&ML Programmes under V20 Regulation and suggested the following changes:

SEM	**Course Code**	**Course Name**	**Suggestions**	**Inclusions / Modifications**
III	V20AIT02	Advanced Python Programming	In Advanced Python Programming course it was suggested that include Database Connectivity	Included Database connectivity in Advanced Python Programming course.
III	V20AIL03	Advanced Python Programming Lab	In Advanced Python Programming Lab course it was suggested that include Database Connectivity Programs and also move pandas library programs to Pandas session.	Included Database Connectivity Programs in Advanced Python Programming Lab course and also moved the related programs to pandas.
III	V20AIL05	Database Management Systems Lab	In Database Management Systems Lab Course it was suggested that exclude Part-B (MongoDb)	Excluded Part-B (MongoDb).
IV	V20AIT06	Java Programming	In Java Programming Course it was suggested that replace Collections instead of swings	Included Collections
IV	V20AIL06	Java Programming Lab	In Java Programming Lab Course it was suggested that replace Collections Programs instead of swings	Included Collections Programs

IV	V20CST11 & V20CSL09	Data Mining & Data Mining Lab	It was suggested that replace Data Mining (T+L) course with Operating Systems (T+L)	**Added:** • V20AIT07: Operating Systems • V20AIL07: Operating Systems Lab

The Approved and Modified Course Structure and Syllabus is given in **Annexure-II**.

Chairperson of BOS
(Dr.D Jaya Kumari)

Semester	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20MBT51
Name of the Course	**Managerial Economics and Financial Analysis**					
Branches	Common to All Branches					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Understand the basic concepts of managerial economics, demand, elasticity of demand and methods of demand forecasting. **(K2)**

CO2: Interpret production concept, least cost combinations and various costs concepts in decision making. **(K3)**

CO3: Differentiate various Markets and Pricing methods along with Business Cycles. **(K2)**

CO4: Prepare financial statements and its analysis. **(K3)**

CO5: Assess various investment project proposals with the help of Capital Budgeting techniques for decision making. **(K3)**

UNIT-I: Introduction to Managerial Economics and demand Analysis: Definition of Managerial Economics and Scope-Managerial Economics and its relation with other subjects-Concept of Demand-Types-Determinants-Law of Demand its Exceptions-Elasticity of Demand-Types and Measurement- Demand forecasting and its Measuring Methods.

UNIT-II: Production and Cost Analysis: Production function-Iso-quants and Iso-cost-Law of Variable proportions- Cobb-Douglas Production function-Economies of Scale-Cost Concepts- Opportunity Cost-Fixed vs Variable Costs-Explicit Costs vs Implicit Costs- Cost Volume Profit analysis- Determination of Break-Even Point-BEP Chart (Simple Problems).

UNIT-III: Introduction To Markets, Pricing Policies & forms of Organizations and Business Cycles: Market Structures: Perfect Competition, Monopoly, Monopolistic and Oligopoly – Features – Price,Out-put Determination – Methods of Pricing: Evolution of Business Forms - Features of Sole Trader – Partnership – Joint Stock Company – State/Public Enterprises. Business Cycles – Meaning and Features – Phases of Business Cycle.

UNIT-IV: Introduction to Accounting & Financing Analysis: Introduction to Double Entry System – Preparation of Financial Statements- Trading Account, Profit & Loss Account and Balance Sheet - Ratio Analysis – (Simple Problems).

UNIT-V: Capital and Capital Budgeting: Capital Budgeting: Meaning of Capital-Capitalization-Meaning of Capital Budgeting-Need for Capital Budgeting-Techniques of Capital Budgeting-Traditional and Modern Methods.

Semester	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20MAT11
Name of the Course	Probability Theory					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Find the statistical parameters of given function. **(K3)**
CO2: Apply probability distribution to real time problems. **(K3)**
CO3: Create good estimators to various parameters **(K3)**
CO4: Apply the principles of Statistical Inference to practical problems on large samples. **(K3)**
CO5: Apply the principles of Statistical Inference to practical problems on small samples. **(K3)**

UNIT-I: Random Variables and expectation: Random Variables: Discrete and continuous - Probability function – density and distribution function, Expectation of a Random Variable, Moments, Chebychev's Inequality (Without proof).

UNIT -II: Probability Distributions: Probability distributions: Binomial, Poisson and Normal - Evaluation of statistical parameters: Mean, Variance and their properties, Introduction to Exponential, Gamma and Weibull distributions.

UNIT -III: Sampling Distribution and Estimation: Introduction **–**Sampling distribution of means with known and unknown standard deviation.
Estimation: Criteria of a good estimator, point and interval estimators for means and proportions.

UNIT -IV: Tests of Hypothesis: Introduction-Type-I, Type-II Errors, Maximum Error, one–tail, two-tail tests, **Test of significance:** Large sample test for single proportion, difference of proportions, single mean, difference of means.

UNIT -V: Tests of significance: Test of significance: Small sample test for single mean, difference of means and test of ratio of variances (F-Test) - Chi-square test for goodness of fit and independence of attributes.

Text Books:

1. **B. V. Ramana**, A text Book of Engineering Mathematics, Tata McGraw Hill.
2. **Miller & Freund's**, Probability & Statistics for Engineers – Eighth Edition, Richard. A.Johnson

References Books:

2. **Dr.T.S.R.Murthy**, Probability and Statistics for Engineers, BS Publications.
3. **T. Veerarajan**, "Engineering Mathematics", Tata McGraw-Hill, New Delhi, 2010.

Semester	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20MAT07
Name of the Course	**Mathematical Foundation of Computer Science**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the concepts associated with propositions and mathematical logic. **(K3)**
CO2: Demonstrate the basic concepts associated with relations, functions and their applications. **(K3)**
CO3: Solve recurrence relations using various methods. **(K3)**
CO4: Apply techniques of graphs for real-time problems. **(K3)**
CO5: Construct minimal spanning tree by using different algorithms. **(K3)**

UNIT-I : Mathematical Logic: Statements and Notation , Connectives, Well Formed Formulas ,Truth tables, Tautologies, Equivalence of formulas, Tautological Implications, Normal forms, Theory of inference for Statement Calculus, Indirect Method of Proof. Predicate calculus-Predicates, quantifiers, universe of discourse.

UNIT-II: Set Theory and Relations: Operations on Sets, Principle of Inclusion and Exclusion, Relations, Properties of Binary Relations in a set, Transitive Closure, Relation Matrix and Digraph, Equivalence, Partial Ordering Relations, Hasse Diagrams, Lattice and its Properties, Functions, Bijective Functions, Composition of Functions.

UNIT-III: Recurrence relations: Generating Function of Sequences, Calculating Coefficient of generating functions, Recurrence relations, solving recurrence relation by substitution and Generating functions, the method of Characteristic roots, Solution of Inhomogeneous Recurrence Relation.

UNIT-IV: Graph Theory: Basic Concepts of graph, Representing graphs, Sub graphs, Isomorphic graphs, Paths and Circuits, Eulerian and Hamiltonian Graphs, Planar graphs, Graph Coloring, Chromatic Number. (Theorems without proofs).

UNIT-V: Trees: Spanning Trees, minimal Spanning Trees, BFS, DFS, Kruskal's Algorithm, Prim's Algorithm, Binary trees, Planar Graphs.

Text Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J. P. Tremblay and P. Manohar, 1st Edition, Tata McGraw Hill.
2. Discrete Mathematics and its Applications with Combinatorics and Graph Theory, K. H.Rosen, 7thEdition, Tata McGraw Hill.
3. Discrete Mathematics for Computer Scientists and Mathematicians, J. L.

Mott, A. Kandel, T.P. Baker, 2nd Edition, Prentice Hall of India.

Reference Books:

1. Elements of Discrete Mathematics -A Computer Oriented Approach, C. L. Liu and D. P.Mohapatra, 3rd Edition, Tata McGraw Hill.
2. Discrete Mathematics with Combinatorics and Graph Theory , Santha , 1st Edition Cengage Learning.

Semester	**III**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	V20AIT02
Name of the Course	**Advanced Python Programming**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Regular Expressions and Database Connectivity. **(K2)**
CO2: Develop GUI interfaces using widgets. **(K3)**
CO3: Demostrate statistical analysis using Numpy. **(K3)**
CO4: Demonstrate data analysis using pandas. **(K3)**
CO5: Develop different types of charts using matplotlib. **(K3)**

UNIT-I: Regular Expressions: Sequence Characters, Quantifiers, Special Characters.
Database Connectivity: Advantages of a DBMS over files, Installation of MYSQL DB Software, using MYSQL from Python, retrieve, insert, delete, update operations on tables.

UNIT-II: Graphical User Interface: GUI in python, The root window, fonts and colors, working with containers, canvas, frame, widgets, Button widgets, Arranging widgets in the frame, Label widget, message widget, Text widget, scrollbar Widget, Check button Widget, Radio button widget, entry widget, listbox widget.

UNIT-III: Working with Arrays using Numpy : Introduction to Numpy, Functions for generating sequences , Aggregate functions , Generating Random Numbers using Numpy , Zeros, ones, eyes and Full , Indexing , Slicing , Scalar with an Array operations , Array with an Array Operations. Joining Arrays , Splitting arrays , Variance , covariance , correlation.

UNIT-IV: Data Analysis using Pandas: Introduction , Creating Pandas series , Indexing, iloc, slicing and Boolean index , sorting , statistical Analysis , and string functions , creating data frames , dealing with rows , iterating a pandas data frame- data frame methods (Head, tail and describe), Boolean index , sorting , statistical Analysis , and string functions , Reading of formatted files, Handling Missing values.

UNIT-V: Data visualization: Introduction , plot function , plotting lines and curves, Additional Arguments, The bar Chart ,box plot , frequency plots and Histogram , the pie chart.

Text Books:

1. Core Python Programming Dr.R Nageswara Rao Dreamtech publications.

2. Problem solving and python programming fundametals and application: Numpy, Pandas and Matplotlib. HarshaBhasin.

Semester	III Sem	L	T	P	C	COURSE CODE
Regulation	V20	3	0	0	3	V20AIT03
Name of the Course	**Database Management Systems**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1 : Describe Database systems, various Data models and Database architecture. **(K2)**

CO2 : Develop various real time applications using Relational algebra and Relational calculus. **(K3)**

CO3 : Apply various Normalization techniques to refine schema. **(K3)**

CO4 : Explain Transaction management and Concurrency control. **(K2)**

CO5 : Illustrate various Database indexing techniques. **(K2)**

UNIT-I:An Overview of Database Systems: Managing data, File systems verses DBMS, Advantages of DBMS, Data models, Levels of abstraction in a DBMS, Data independence, Structure of a DBMS, Client/Server Architecture, E.F.Codd Rules.

Database Design: Database design and ER Diagrams, Entities, Attributes, Entity sets, Relationships and Relationship sets, Conceptual design with ER Models.

UNIT-II: Relational Model: Integrity constraints over relations, Key constraints, Foreign key constraints, General constraints, Enforcing integrity constraints, Querying relational data

Relational Algebra: Selection and Projection, set operation, renaming, Joins, Division, Introduction to Views, destroying/altering Tables and Views.

Relational Calculus: Tuple Relational Calculus, Domain Relational Calculus.

UNIT-III: SQL Queries, Constraints and Triggers: The Form of Basic SQL Query, Union, Intersect, Except, Nested Queries, Aggregate Operators, Null Values, Complex Integrity Constraints in SQL, Triggers and active data bases. **Schema Refinement (Normalization):** Problems caused by redundancy, Decompositions, purpose of Normalizion, Schema refinement, Concept of functional dependency, Normal forms based on functional dependency (1NF, 2NF and 3NF), Concept of Surrogate key, Boyce-Codd Normal Form (BCNF), Lossless Join and Dependency preserving decomposition, Fourth Normal Form(4NF).

UNIT-IV: Transaction Management: Transaction, Properties of Transactions, Transaction Log, and Transaction management with SQL commit, rollback and save point.

Concurrency Control: ConcurrencyControl for Lost updates, Uncommitted data, Inconsistent retrievals and the Scheduler.

Concurrency Control with Locking Methods : Lock granularity, Lock types, Two phase locking for ensuring serializability, Deadlocks, Concurrency control with Time stamp ordering, Transaction recovery.

UNIT-V: Storage and Indexing: Overview of Storages and Indexing, Data on external storage, File organization and indexing, Clustered indexing, Primary and secondary indexes, Index data structures, Hash based indexing, Tree based indexing, Comparison of file organization

Text Books:

1. Database Management Systems, Raghu Ramakrishnan, Johannes Gehrke, 3rd Edition TATA McGraw Hill.
2. An Introduction to Database Systems, C.J Date , A.Kannan , S.J Swamynathan 8th Edition, Pearson Education

Reference Books:

1. Database Systems-Design, Implementation and Management, Peter Rob &Carlos Coronel 7th Edition, Course Technology Inc.
2. Fundamentals of Database Systems, RamezElmasri,Shamkant B. Navathe ,7th Edition, Pearson Education.
3. Database Systems - The Complete Book, Hector Garcia- Molina, Jeffry D Ullman, Jennifer Widom, 2nd Edition, Pearson.

Semester	**III SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	3	1.5	**V20AIL03**
Name of the Course	**Advanced Python Programming Lab**					
Branches	Common to CAI & AIM					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Develop Python Programs using regular expressions and Database. (**K3**)
CO2: Develop programs using GUI. (**K3**)
CO3: Construct programs using Numpy Arrays. (**K3**)
CO4: Develop python programs using pandas. (**K3**)
CO5: Develop charts using matplotlib. (**K3**)

LIST OF EXPERIMENTS

1. Regular expressions & Database:

a) Develop a python program to create regular expression to replace a string with a new string.
b) Develop a python program to create regular expression to retrieve all the words starting with 'a' in a given string and other create other regular expression to retrieve all the words with size 5.
c) Develop a Python Program to create a regular expression to search for string using search() , findall() , match().
d) Create a python program to connect MYSQL database and perform operations viz. retrieve, insert, delete and update.

2. GUI:

a) Develop a Python Program to draw different shapes on canvas.
b) Develop a Python Program to create a push button and bind it with an event handler function using command option.
c) Develop a Python Program to design a simple calculator.
d) Develop a Python Program to create check boxes and display the content of selected boxes.
e) Develop a Python Program using GUI to retrieve a row from a MYSQL database table.

3. Numpy

a. Develop a Python Program to split arrays using numpy module.
b. Develop a Python Program to test all aggregate functions in numpy module
c. Develop a Python Program to generate a matrix of random numbers within range and print its Transpose.
d. Develop a Python Program that calculates variance, co variance, correlation by taking a sample statistical data.
e. Develop a python program to find rank, determinant, and trace of an array.

f. Develop a python program to find eigenvalues of matrices.
g. Develop a python program to find matrix and vector products (dot, inner, outer, product), matrix exponentiation.
h. Develop a python program to solve a linear matrix equation, or system of linear scalar equations.

4. Pandas

a. Develop a python program to implement Pandas Series with labels, dictionary and Numpy.
b. Develop a program to creating a Pandas DataFrame using dictionary and two dimensional array.
c. Develop a program which make use of following Pandas methods
   i) describe()   ii) head()   iii) tail()
d. Develop a python program to perform insert, delete row operations on data frame.
e. Develop a python program of groupby() method.
f. Demonstrate pandas Merging, Joining and Concatenating.
g. Creating data frames from csv and excel files.

5. Pandas Library: Visualization

a. Develop a program which use pandas inbuilt visualization to plot following graphs:
   i. Bar plots
   ii. Histograms
   iii. Line plots
   iv. Scatter plots

Text Books:

1. Core Python Programming Dr. R Nageswara Rao Dreamtech publications.
2. Problem solving and python programming fundametals and application : Numpy,PandasandMatplotlib,HarshaBhasin.

Semester	**III SEM**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	0	1.5	**V20AIL04**
Name of the Course	**Linux Shell Scripting Lab**					
Branches	Common to CAI & AIM					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate the basic knowledge of Linux commands and utilities by using Linux shell environment. **(K3)**

CO2: Experiment with the Concept of shell Programming on Files and Directories. **(K3)**

CO3: Experiment with the Concept of shell Programming on File Permissions. **(K3)**

CO4: Experiment with the Concept of shell Programming on Conditional Statements. **(K3)**

CO5: Experiment with the Concept of shell Programming on Looping Statements. **(K3)**

LIST OF EXPERIMENTS

1. Experiment the following Unix Commands:
   a) **General Purpose Utilities:** cal, date,man,who.
   b) **Directory Handling Commands:** pwd,cd,mkdir,rmdir.
   c) **File Handling Utilities:** cat,cp,ls,rm,nl,wc
   d) **Displaying Commands:** head, tail
   e) **Filters:** cmp,comm.,diff,sort,uniq
   f) **Disk Utilities:** du,df
2. Develop a Shell Program to Display all the words which are entered as command line arguments.
3. Develop a shell script that Changes Permissions of files in PWD as rwx for users.
4. Develop a shell script to print the list of all sub directories in the current directory.
5. Develop a Shell Program which receives any year from the keyboard and determine whether the year is leap year or not. If no argument is supplied the current year should be assumed.
6. Develop a shell script which takes two file names as arguments-If their contents are same then delete the second file.
7. Develop a shell script to print the given number in the reversed order.
8. Develop a shell script to print first 25 Fibbonacci numbers.
9. Develop a shell script to print the Prime numbers between the specified range.
10. Develop a shell script to delete all lines containing the word ‘unix’ in the files supplied as arguments.
11. Develop a shell script Menu driven program which has the following

options.

i) contents of /etc/passwd ii) list of users who have currently logged in.

iii) present working directory. iv) exit.

Text Books:

1. UNIX and Shell Programming: A Textbook, Behrouz A. Forouzan | Richard F. Gilberg, Cengage Learning.
2. UNIX: Concepts and Applications, Sumithaba Das, 4th Edition, Tata McGrawHill.
3. Unix & Shell Programming, M.G.Venkatesh Murthy, Pearson Education.
4. UNIX shells by example, 4th Edition Ellie Quigley, Pearson Education.

Semester	**III Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	3	1.5	**V20AIL05**
Name of the Course	**Data Base Management System Lab**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Construct SQL queries to perform different database operations. (K3)
CO2: Experiment with various constraints and Database Indexing Techniques. (K3)
CO3: Construct PL/SQL Cursors and Exceptions (K3)
CO4: Develop PL/SQL Functions, Procedures and Packages (K3)
CO5: Apply basic operations on collections of Mongo DB database (K3)

LIST OF EXPERIMENTS

SQL:

1. Construct SQL queries to facilitate acquaintance of Built-In Functions, String Functions, Numeric Functions, Date Functions and Conversion Functions.
2. Construct SQL queries using Operators.
3. Construct SQL queries to Retrieve and Change Data: Select, Insert, Delete and Update
4. Construct SQL queries using Group By, Order By, and Having Clauses.
5. Construct SQL queries on Controlling data: commit, rollback and savepoint
6. Construct report using SQL*PLUS
7. Construct SQL queries for Creating, Dropping and Altering Tables, Views and Constraints
8. Construct SQL queries on Joins and Correlated Subqueries
9. Demonstrate Index, Sequence and Synonym.
10. Demonstrate Controlling access, locking rows for update and security features.

PL/SQL

11. Demonstrate Basic Variables , Anchored Declarations, and Usage of Assignment Operation Using PL SQL block
12. Demonstrate Bind and Substitution Variables using PL SQL block
13. Demonstrate Control Structures in PL SQL
14. Demonstrate Cursors, Exception and Composite Data Types in PL SQL.
15. Demonstrate Procedures, Functions, and Packages in PLSQL.

Textbooks:

1. OracleDatabase11gTheCompleteReferencebyOraclePress,Kevin Loney
2. DatabaseSystemsUsingOracle,NileshShah,2ndEdition, PHI.
3. IntroductiontoSQL,RickFVanderLans, 4thEdition, Pearson Education.

Reference Books:

1. OraclePL/SQLInteractiveWorkbook,B.RosenzweigandE.Silve strova,2ndEdition,Pearsoneducation.
2. SQL&PL/SQLforOracle10 g,BlackBook, Dr.P.S.Deshpande, DreamTech.

Semester	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	**V20AIT04**
Name of the Course	**Computer Organization and Architecture**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate Basic structure of Computers, Instruction types and their addressing modes. **(K2)**
CO2: Describe the different modes of Input / Output transfer. **(K2)**
CO3: Illustrate different types of Memory. **(K2)**
CO4: Describe the different types of Control Unit techniques. **(K2)**
CO5: Explain the Concepts of Pipelining and Parallel Processing **(K2)**

UNIT-I: Introduction: Functional Units, Basic Operational Concepts, Bus Structures.
Instruction Sequencing and Addressing Modes: Instructions and Instruction Sequencing, Addressing modes, Basic Input/output Operations.

UNIT-II: Input/output Organization: Accessing Input/output devices, Interrupts- Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Direct Memory Access, Buses- Synchronous and Asynchronous.

UNIT-III: Memory Organization: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative memory, Cache Memory. (Morris Mano)

UNIT-IV: Processing Unit: Fundamental Concepts, Execution of a Complete Instruction, Multiple-Bus Organization, Hardwired Control, Microprogrammed Control-Microinstructions, Microprogram Sequencing.

UNIT-V: Pipelining: Basic Concepts, Data Hazards, Instruction Hazards.
Parallelism: Parallel processing challenges – Flynn's classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

Text Books:

1. Computer Organization, Carl Hamacher, ZvonkoVranesic, SafwatZaky, 5th Edition, McGraw Hill Education. Computer System Architecture, M. Morris Mano, 3rd Edition, Pearson Education.
2. David A. Patterson and John L. Hennessy, Computer Organization and Design: The Hardware/Software Interface, Fifth Edition, Morgan Kaufmann / Elsevier, 2014.

Reference Books:
1.Computer Organization and Architecture, William Stallings, 10th Edition, Pearson Education.
2.Computer Architecture and Organization,John P. Hayes,3rd Edition , McGraw Hill Education.

Semester	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	**V20AIT05**
Name of the Course	**Design and Analysis of Algorithms**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate asymptotic notation and divide and conquer technique. **(K3)**
CO2: Use greedy technique to solve various problems. **(K3)**
CO3: Demonstrate dynamic programming technique to various problems. **(K3)**
CO4: Develop algorithms using backtracking technique. **(K3)**
CO5: Demonstrate branch and bound technique to various problems. **(K3)**

UNIT-I: Introduction: What is an Algorithm, Algorithm Specification-Pseudo code Conventions Recursive Algorithms, Performance Analysis-Space Complexity, Time Complexity, Asymptotic Notation, Practical Complexities, Performance Measurement.
Divide and Conquer: General Method, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quick Sort-Performance Measurement.

UNIT-II: The Greedy Method: The General Method, Knapsack Problem, Job Sequencing with Deadlines, Minimum-cost Spanning Trees-Prim's Algorithm, Kruskal's Algorithms, Optimal Merge Patterns, Single Source Shortest Paths.

UNIT-III: Dynamic Programming: All Pairs Shortest Paths, Single Source Shortest paths General Weights, Explain Optimal Binary Search Trees, String Edition, 0/1 Knapsack, Reliability Design.

UNIT-IV: Backtracking: The General Method, 8-Queens Problem, Sum of Subsets, Graph Coloring, and Hamiltonian Cycles.

UNIT-V: Branch and Bound: The Method-Least cost (LC) Search, The 15-Puzzle: an Example, Control Abstraction for LC-Search, Bounding, FIFO Branch-and-Bound, LC Branch and Bound, 0/1 Knapsack Problem-LC Branch-and Bound Solution, FIFO Branch-and-Bound Solution, Traveling Salesperson. Basic Concepts of NP-hard and NP-complete problems.

Text Books:

1. Fundamentals of computer algorithms E. Horowitz S. Sahni, University Press.

Reference Books:

1. Introduction to Algorithms Thomas H. Cormen, PHI Learning.

2. The Design and Analysis of Computer Algorithms, Alfred V. Aho, John E. Hopcroft, Jeffrey D.Ullman.
3.Fundamentals of Data Structures and algorithms by C V Sastry, Rakesh Nayak, Ch. Raja Ramesh, Distributed by WILEY publications, New Delhi.
4. Algorithm Design, Jon Kleinberg, Pearson.

Semester	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	**V20AIT06**
Name of the Course	**Java Programming**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Java Virtual Machine and Type casting. **(K2)**
CO2: Demonstrate Concepts like Constructors, Arrays, Nested Classes and Command Line Arguments. **(K3)**
CO3: Implement Concepts of Inheritance and Exception Handling. **(K3)**
CO4: Develop programs on Multi-Threading and Files. **(K3)**
CO5: Demonstrate java Collection Classes. **(K3)**

UNIT-I: Introduction to Java: Introduction to Object Oriented Paradigm, Concepts of OOP, Applications of OOP, History of Java, Java Features, JVM, Program Structure. Variables, Primitive Data Types, Constants, String class, Primitive type conversion and Casting, Control Structures.

UNIT-II: Classes and Objects: Classes and objects, Class declaration, Creating objects, Methods, Constructors and Constructor Overloading, Importance of Static Keyword and Examples, this Keyword, Arrays, Command Line Arguments, Nested Classes, Garbage Collector.

UNIT-III: Inheritance and Exception Handling: Inheritance, super Keyword, final Keyword, Method Overriding and Abstract Class. Interfaces, Creating Packages, Using Packages, Importance of Class path. Exception Handling, Importance of try, catch, throw, throws and finally Block.

UNIT-IV: Multithreading and Files: Introduction, Thread Lifecycle, Creation of Threads, Thread Priorities, Thread Synchronization, Communication between Threads. Reading Data from Files and Writing Data to Files, Random Access Files.

UNIT-V: Java Collections Framework: collections overview, collection classes: ArrayList, LinkedList, HashSet, LinkedHashSet, TreeSet,HashMap. Accessing a Collection: Iterator and for-each.

Text Books:

1. Java Programming, E. Balagurusamy, 4thEdition, TMH.
2. The complete Reference Java, 8thEdition, Herbert Schildt,TMH.
3. Introduction to java programming, Y Daniel Liang, 7 Edition,Pearson.

Reference books:

1. Core Java: An Integrated Approach , R Nageswara Rao, 7thEdition, Dream Tech.

2. Head First Java , Kathy Sierra and Bert Bates, 2nd Edition O'reilly.

Semester	**IV**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	**V20AIT07**
Name of the Course	**Operating Systems**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Describe Operating System Services and System Calls. **(K2)**
CO2: Illustrate Process Management Concepts and CPU Scheduling Algorithms. **(K3)**
CO3: Demonstrate Process Synchronization primitives and Process Deadlocks. **(K3)**
CO4: Illustrate Memory Management Techniques and Page Replacement Algorithms. **(K3)**
CO5: Describe File System Concepts and Mass Storage Structures. **(K2)**

UNIT-I: Introduction: Operating-System Structure, Operating-System Services, User and Operating System Interface, System Calls, Types of System Calls.

UNIT-II: Process Management: Process Concept, Process Scheduling, Operations on Processes, Inter process Communication. **Threads:** Overview, Multithreading Models
CPU Scheduling: Basic Concepts**,** Scheduling Criteria**,** Scheduling Algorithms.

UNIT-III: Process Synchronization: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors. **Deadlocks:** System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.
UNIT-IV: Memory Management: Main Memory: Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table.
Virtual Memory: Introduction, Demand Paging, Page Replacement Algorithms, Allocation of Frames, Thrashing.

UNIT-V: Storage Management: Overview of Mass-Storage Structure, Disk Scheduling, File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Allocation Methods.

Text Book:

1. Operating System Concepts**,** Abraham Silberschatz, ,Peter Baer Galvin,Greg Gagne, 9th Edition, John Wiley and Sons Inc., 2012.

Reference Books:

1. Operating Systems – Internals and Design Principles, William Stallings, 7th Edition,
   Prentice Hall, 2012 .

2. Modern Operating Systems, Andrew S. Tanenbaum, Third Edition, Addison Wesley,
 2007.

Semester	**IV**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	3	0	0	3	**V20AIT08**
Name of the Course	**Artificial Intelligence & its applications**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Discuss Problem Solving Agents and Environment. **(K2)**
CO2: Identify Search Strategies for Non Deterministic and Unknown Environments. **(K2)**
CO3: Illustrate Adversarial Search for Game Playing. **(K2)**
CO4: Discuss Reasoning approaches. **(K2)**
CO5: Illustrate Knowledge Representation approaches. **(K2)**

UNIT I: Intelligent Agents: Agents and Environments, Good Behavior: The Concept of Rationality, The Nature of Environments, The Structure of Agents
Solving Problems by Searching: Problem-Solving Agents, Example Problems, Searching for Solutions, Uninformed Search Strategies, Informed (Heuristic) Search Strategies, Heuristic Functions

UNIT II: Beyond Classical Search: Local Search Algorithms and Optimization Problems, Local Search in Continuous Spaces, Search with Non Deterministic Actions, Searching with Partial Observations, Online Search Agents and Unknown Environments

UNIT III: Adversarial Search : Games, Optimal Decisions in Games, Alpha–Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-of-the-Art Game Programs, Alternative Approaches

UNIT IV: Reasoning and Inference: Propositional Logic, Propositional Theorem Proving, Syntax and Semantics of First-Order Logic, Using First-Order Logic, Forward Chaining, Backward Chaining, Resolution

UNIT V: Knowledge Representation: Representations and Mappings, Approaches to Knowledge Representation-Simple Relational Knowledge, Inheritable Knowledge, Inferential Knowledge, Procedural Knowledge, Issues in Knowledge Representation, The Frame Problem

Text Books:

1. Artificial Intelligence : A Modern Approach, Stuart J. Russell and Peter Norvig, 3rdEdition, Prentice Hall

2. Artificial Intelligence, Elaine Rich,Kevin Knight, Shivashankar B Nair, 3rdEdition,Tata McGraw-Hill

Reference Books:

1. Artificial Intelligence, George F Luger, Pearson Education Publications
2. Artificial Intelligence, SarojKaushik, 1stEdition, Cengage Learning.

Semester	**IV Sem**	**L**	**T**	**P**	**C**	**COURSE CODE**
Regulation	V20	0	0	3	1.5	**V20AIL06**
Name of the Course	**Java Programming Lab**					
Branches	Common to CSE((AI) & AIML)					

Syllabus Details

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Demonstrate Programs on Classes, Objects, Constructors and Arrays. **(K3)**
CO2: Demonstrate Inheritance and Exception Handling **(K3)**
CO3: Implement programs on Multi-Threading and File Handling. **(K3)**
CO4: Implement programs using java collections. **(K3)**

LIST OF EXPERIMENTS

1. Develop programs on Control Structures and Type Conversions in java.
2. Develop programs using various String handling functions
3. Construct programs using the following concepts:
   (a) Classes & Objects b) Usage of static c)Constructors
4. Construct programs using the following concepts.
   (a) Arrays b)Nested Classes c) Command Line Arguments
5. Construct programs using the following concepts.
   (a)Inheritance b) Usage of super c)Method Overriding
6. Construct programs using the following concepts.
   (a)Usage of final b) Abstract class c)Interfaces
7. Implement the programs using the concepts
   (a)Packages b) Exception Handling.
8. Implement the programs on Multi-Threading.
   (a)Multiple Threads on Single Object b) Thread Deadlock
9. Construct a program that shows Inter-thread Communication
10. Construct programs to perform read and write operations on files.
    (a)Sequential Files b) Random Access files
11. Construct program using Array List and perform following operations
    a)Insert b) update c) search d) display
12. Construct program using Linked List and perform following operations
    a)Insert b) update c) search d) display
13. Construct a java program to iterate elements of HashSet using iterator and for Each.

Text Books:

1. The complete Reference Java, 8th Edition, Herbert Schildt, TMH.
2. Introduction to java programming, Y Daniel Liang, 7 Edition, Pearson.

Course Outcomes: After Successful completion of the Course, the student will be able to:

CO1: Illustrate CPU scheduling algorithms **(K3)**

CO2: Apply Bankers Algorithm for Deadlock Avoidance and Deadlock Prevention. **(K3)**

CO3: Use Page replacement algorithms for memory management **(K3)**

LIST OF EXPERIMENTS

1. Demonstrate the following CPU scheduling algorithms:
   a) FCFS
   b) SJF
   c) Round Robin
   d) Priority
2. Illustrate : fork (), wait (), exec() and exit () system calls.
3. Demonstrate Producer and Consumer problem using Semaphores.
4. Demonstrate Bankers Algorithm for Deadlock Avoidance.
5. Demonstrate Bankers Algorithm for Deadlock Detection.
6. Demonstrate the following page replacement algorithms:
   a) FIFO b) LRU c) LFU
7. Demonstrate the following File allocation strategies:
   a) Sequenced b) Indexed c) Linked

Reference Books:

Course Outcomes: After successful completion of the Course, the student will be able to:

CO1: Demonstrate uninformed search techniques. **(K3)**
CO2: Demonstrate heuristic search techniques. **(K3)**
CO3: Solve real world problems by searching. **(K3)**
CO4: Develop AI agent for Gaming and AI-powered chatbot. **(K3)**

List of Experiments (Using Python Programming)

1. Solve Water Jug problem using BFS algorithm.
2. Solve Water Jug problem using DFS algorithm.
3. Demonstrate Hill Climbing Algorithm.
4. Demonstrate A* Algorithm.
5. Solve the n-queens problem using backtracking.
6. Solve Travelling Salesman Problem using backtracking
7. Develop Tic-Tac-Toe game
8. Solve8-Puzzle problem
9. Develop a Simple Chatbot.

SRI VASAVI ENGINEERING COLLEGE (Autonomous)

(Sponsored by Sri Vasavi Educational Society; Regd. No: 898/2000)
(Approved by AICTE, New Delhi & Permanently affiliated to JNTUK, Kakinada)
(Accredited by NAAC with 'A' Grade, Recognized by UGC under section 2(f) & 12(B))
Pedatadepalli, TADEPALLIGUDEM – 534 101, W.G. Dist, (A.P.)

Department of Management Studies (MBA)

Minutes of the 5th Board of Studies meeting of Management Studies held on 29-07-2022

The following are the members who attended for the meeting.

S. No	Name of the member	Designation	Role
1	Dr.G.V.Subba Raju	Professor Sri Vasavi Engg.College	Chairman BOS
2	Prof. B. Amarnath	Former Professor, Department of Management Studies Sri Venkateswara University. Tirupathi.	Council Nominee
3	Prof.D.Suryachandra Rao	Professor, Department of Management Studies, Krishna University, Machilipatnam	University Nominee
4	Sri. P.S.Varma	Former D G M, Coromandel International Limited, Kakinada	Industry expert
5	Sri Satyanarayana Ruttala	Senior Manager, Ericsson India Global Services Pvt., Ltd., Bangalore	Alumni
Department of Management Studies, Sri Vasavi Engineering College members			
6	D. Naveen Kumar	Asst. Professor & HOD	Member
7	Dr. S. Krishna Murthy Naidu	Associate Professor	Member
8	D.Satyanarayana	Sr. Asst.Professor	Member
9	Dr.K.Rambabu	Asst. Professor	Member
10	K.Vinay Kumar	Asst. Professor	Member
11	T.Dileep	Asst. Professor	Member

12	K.Pavan Kumar	Asst. Professor	Member
13	K.Suji	Asst. Professor	Member
14	B Aruna	Asst. Professor	Member
15	P.Bharath Kumar	Asst. Professor	Member
16	K.Murali Krishna	Asst. Professor	Member
17	P.Devi	Asst. Professor	Member
18	Dr.K.Pulla Rao	Asst. Professor	Member
19	K.Lalitha Bhavani	Asst. Professor	Member

The Chairman of the BOS Extended a formal welcome to the members and handed over the proceedings to the Head of the Department.

Minutes of the 5th BOS Meeting

Item No.1:

- **Reviewed and approved the syllabi for the Courses offered in 3rd & 4th Semesters under V21 Regulations.**

  The Chairman of BOS proposed the New Syllabi under V21 Regulations for the Academic year 2022-23. After considering the suggestions made by all BOS members the Syllabi was modified accordingly and was approved by BOS. The approved Syllabi was enclosed under Annexure-1

Item No.2:

- **To design and approve the Syllabus for Management Science & Universal Human Values under V20 Regulations for Engineering Branches.**

  The Syllabi of Management Science & Universal Human Values under V20 Regulations has been approved by BOS. The approved Syllabi was enclosed under Annexure-2

MBA: III Semester
V21MBT14: BUSINESS POLICY AND CORPORATE STRATEGY

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

CO1: Understand the concept of business policy and strategic management in detail. (K2) **CO2:** Examine various models for appraising an organization's external environment. (K3) **CO3:** Analyze various strategies formulated at corporate, business and functional levels. (K4) **CO4:** Understand strategy implementation procedure in detail. (K2)

CO5: Analyze the performance of strategies designed and applied at various levels of business. (K4)

MBA: IV semester

V21MBT27: ADVERTISING & BRAND MANAGEMENT

	L	T	P	C
COURSE OUTCOMES: After successful completion of the course, the student will be able to:	4	0	0	4

CO1: Describe the importance of Advertising. (K2)

CO2: Explain the Advertising campaign development from organizational context. (K2)

CO3: Examine the Advertising effectiveness. (K3)

CO4: Identify the foundations of Branding (K1)

CO5: Illustrate the Brand Building Practices. (K2)

Unit – I

Advertising: Its importance and nature; Communication model; Persuasion Process –perception, learning and attitude change; Major advertising decisions and influencing factors;

Unit – II

Developing Advertising Campaign: Determining advertising Objectives and budget Determining advertising message and copy - Headline, body copy, logo, illustration and layout; Creative styles and advertising appeals; Media planning – media selection and scheduling Advertising through Internet.

Unit – III

Organisation and Evaluation of Advertising Efforts: In-house arrangements; Using advertising agencies – selection, compensation and appraisal of advertising agency; Evaluating Advertising

Effectiveness.

Unit – IV

Importance of branding; Basic Branding concepts –Brand personality, brand image, brand identify, brand equity and brand loyalty; Identifying and selecting brand name, Brand positioning and re-launch; Brand extension; Adjustments to Brand portfolio.

Unit – V

Brand Building in Different Sectors – Corporate Branding, Service branding challenges, B2B Branding. Leadership Capabilities for B2B Global Brand Leadership. Global Branding – Adaption and Brand Culture perspective

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: IV semester

V21MBT28: FINANCIAL DERIVATIVES

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

1. Understand the nature of derivatives and derivative markets. (K2)
2. Operate the trading of futures in BSE &NSE. (K3)
3. Develop fundamental knowledge of options market. (K3)
4. Apply pricing mechanism on various derivative options. (K4)
5. Understand swaps and economic functions of swap transactions. (K2)

UNIT– I:

Introduction to Financial Derivatives – Meaning and Need – Growth of Financial Derivatives in India – Derivative Markets – Participants – Functions – Types of Derivatives – Forwards – Futures – Options – Swaps – The Regulatory Framework of Derivatives Trading in India.

UNIT – II:

Features of Futures – Differences Between Forwards and Futures – Financial Futures – Trading –Currency Future – Interest Rate Futures – Pricing of Future Contracts – Value At Risk (VAR) – Hedging Strategies – Hedging with Stock Index Futures –Futures Trading on BSE & NSE.

UNIT – III:

Options Market – Meaning & Need – Options Vs futures – Types of Options Contracts – Call Options – Put Options – Trading Strategies Involving Options – Basic Option Positions – Margins – Options on stock Indices – Option Markets in India on NSE and BSE.

UNIT – IV:

Option Pricing – Intrinsic Value and Time Value - Pricing at Expiration – Factors Affecting Options pricing – Put-Call Parity Pricing Relationship – Pricing Models – Introduction to Binominal Option Pricing Model.

UNIT – V:

Swaps – Meaning – Overview – The Structure of Swaps – Interest Rate Swaps – Currency Swaps
– Commodity Swaps – Swap Variant – Swap Dealer Role – Equity Swaps – Economic Functions of Swap Transactions – FRAs and Swaps.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: IV semester

V21MBT29: FINANCIAL MARKETS & SERVICES

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

- Understand the structure of Indian financial system. (K2)
- Generalize the financial services and functions of merchant banker. (K2)
- Understand the function of venture capital business and lease financing. (K2)
- Describe the functions of various NBFCs. (K2)
- Understand the functions of security deposits and stock broking houses. (K2)

Unit I:

Indian Financial System , Financial Markets: Structure of Financial System – role of Financial System in Economic Development – Financial Markets :Capital Markets – Money Markets – Primary Market and Secondary Market – Role of SEBI – Secondary Market Operations – Regulation – Functions of Stock Exchanges – Listing – Formalities – Financial Services Sector- Problems and Reforms.

Unit –II:

Financial Services: Concept , Scope of Financial Services – Regulatory Frame Work of Financial Services – Growth of Financial Services in India – Merchant Banking – Meaning-Types – Responsibilities of Merchant Bankers – Role of Merchant Bankers in Issue Management – Regulation of Merchant Banking in India.

Unit III:

Venture Capital and Leasing: – Growth of Venture Capital in India – Financing Pattern under Venture Capital – Legal Aspects and Guidelines for Venture Capital, Leasing – types of Leases –Evaluation of Leasing Option Vs. Borrowing.

Unit IV:

NBFCs: Credit Rating – Meaning, Functions –Credit Rating Agencies in India, Factoring, Forfeiting and Bill Discounting – Types of Factoring Arrangements – Factoring in the Indian Context;

Unit V:

Stock Broking and Security Depository: Concept of Stock Broking, Evolution of stock brokingbusiness, functions of stock broking firm-Regulatory guidelines of SEBI on stock broking business- Debt Securitization – Concept and Application – De-mat Services-need and Operations-role of NSDL and CDSL.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: IV semester

V21MBT30: ADVANCED MANAGEMENT ACCOUNTING

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

1. Understand the nature, objectives and importance of advanced management accounting.(K2)
2. Experiment on optimum pricing, and various elements of marginal costing. (K3)
3. Assess the importance of standard costing and variance analysis. (K3)
4. Prepare different types of budgets. (K3)
5. Understand contemporary practices in the area of advanced management accounting. (K2)

Unit – 1: Introduction: Scope, objectives, importance and limitations of Employment of Management Accounting — Role, duties and responsibilities of Management Accountant. Essentials of reporting of management accounting.

Unit - 2: Marginal Costing: Significance of marginal costing. Cost volume profit-BEP analysis – Decision Situations-Sales Volume Decisions – Pricing and Special Order Pricing –Make / Buy Decisions – Product Mix Decisions-– Plant Shutdown Decision Profit Planning –planning of level of activity – Key factor – Foreign market offers.

Unit - 3: Standard Costing: Standard Costing and Absorption costing – Establishment of cost standards. Variance analysis: Material Variances – Labour Variances – Overhead Variances - Sales Variances

Unit- 4: Budgetary Control: – Objectives and advantages of Budgetary control. Types of various budgets. Preparation of Budgets – Purchase, Production, Sales and Cash Budget- Flexible Budget – Master Budget – Zero Based Budgeting.

Unit – 5: Contemporary issues in Management Accounting: Value analysis-Activity based costing-Social cost benefit analysis-Kaizen costing-Throughput costing-Target costing- Learning curve.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: IV semester
V21MBT31: HUMAN RESOURCE METRICS & ANALYTICS

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

1. Understand various approaches in designing HR Metrics. (K2)
2. Compute Metrics for different HR operations. (K3)
3. Understand the concept of HR Analytics using dashboards. (K2)
4. Assess diversity in various HR functions. (K3)
5. Evaluate the best practices in HR Analytics. (K5)

Unit 1

HR Metrics Overview--Concepts, Objectives-- Historical evolution of HR metrics. —Importance of HR Metrics. --Approaches for designing HR metrics--The Inside-Out Approach--The Outside-In Approach-- Align HR metrics with business strategy,goals and objectives.

Unit II

Creating levels of metrics measures—HR Efficiency measures—HR Effectiveness measures-- HR value / impact measures. Building HR functions metrics-- WorkforcePlanning Metrics-- Recruitment Metrics --Training & Development Metrics-- Compensation & Benefits Metrics -- Employee relations & Retention Metrics

Unit III

HR Analytics Overview -- What HR Analytics. -- Importance of HR Analytics. -- Translating HR metrics results into actionable business decisions for upper management (Using Excel Application exercises, HR dashboards)-- HR information systems and data sources-- HR Metrics and HR Analytics-- Intuition versus analytical thinking-- HRMS/HRIS and data sources-- Analytics frameworks like LAMP-- HCM:21(r)Model.

Unit IV

Diversity Analysis-- Equality, diversity and inclusion, measuring diversity and inclusion, Testing the impact of diversity, Workforce segmentation and search for

critical job roles.. Recruitment and Selection Analytics--Evaluating Reliability and validity of selection models, Finding out selection bias.Predicting the performance and turnover. Performance Analysis-- Predicting employee performance, Training requirements, evaluating training anddevelopment.

UNIT V:

Optimizing selection and promotion decisions. Monitoring impact of Interventions-- Tracking impact interventions-- Evaluating stress levels and value-change-- Formulating evidence based practices and responsible investment-- Evaluation mediation process, moderation and interaction analysis.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: IV semester
V21MBT32: MANAGEMENT OF INDUSTRIAL RELATIONS

L	T	P	C
4	0	0	4

COURSE OUTCOMES:

After successful completion of the course, the student will be able to:

CO1: Explain the factors influencing IR. (K2)

CO2: Describe the growth and functioning of trade unions. (K2)

CO3: Describe nature, importance and various forms of Workers' Participation in management. (K2)

CO4: Recall the Salient features of Workmen Compensation Act. (K1)

CO5: Analyze the Causes of Grievances and Design redressal mechanism. (K4)

UNIT 1

Industrial Relations Management: Concept- meaning- evaluation – Background of industrial Relations in India- Influencing factors of IR in enterprise and the consequences. Economic, Social and Political environments-Employment Structure –Social Partnership- Wider approaches to industrial relations- Labour Market.

UNIT 2

Trade Unions: Introduction-Definition and objectives-growth of Trade Unions in India- trade Unions Act , 1926, recent amendments. Legal framework-Union recognition-Union Problems-Employees Association-introduction ,Objective Membership, Financial Status.

UNIT 3

Workers' Participation in Management: Workers' Participation in Management - Worker's Participation in India, shop floor, Plant Level, Board Level- Workers' Welfare in Indian scenario- Collective bargaining concepts & Characteristics – Promoting peace.

UNIT 4

Social Security: Introduction and types –Social Security in India, Health and Occupational safety programs- Salient features of Workmen Compensation Act and Employees' State Insurance Act relating to social security – Workers' education objectives-Rewarding.

UNIT 5
Employee Grievances: Causes of Grievances –Conciliation, Arbitration and Adjudication procedural aspects for Settlement of Grievances –Standing Orders-Code Discipline. Industrial Disputes: Meaning, nature and scope of industrial disputes - Cases and Consequences of Industrial Disputes –Prevention and Settlement of industrial disputes in India.

Relevant cases have to be discussed in each unit and in examination case is compulsory from any unit.

MBA: IV semester
V21MBT33: INTERNATIONAL HUMAN RESOURCE MANAGEMENT

L	T	P	C
4	0	0	4

COURSE OUTCOMES:
After successful completion of the course, the student will be able to:

CO1: Describe HR applications in global perspective. (K2)

CO2: Explain problems involved in international assignments. (K2)

CO3: Describe the relevance of Cross Culture Communication in global context. (K2) CO4: Analyze the worth of a overseas assignment. (K3)

CO5: Analyze Global Strategic Advantages through HRD. (K3)

UNIT 1
Introduction: A Global HR Perspective in New Economy-Challenges of Globalization - Implications of Managing People and Leveraging Human Resource- - Conflicts - Strategic Role of International HRM – Global HR Planning – Staffing policy – Training and development – performance appraisal – International Labour relations – Industrial democracy.

UNIT 2
Managing International Assignments: Significance – Selection methods - Positioning Expatriate – Repatriate – factors of consideration - Strategies - International assignments for Women – gender issues.

UNIT 3
Cross Culture Management: Importance – Concepts and issues – theories-considerations - Problems – Skill building methods – Cross Culture Communication and Negotiation – Cross Culture Teams.

UNIT 4
Compensation Management: Importance – Concepts- Trends - Issues – Methods – Factors of Consideration – Models – incentive methods – global compensation implications on Indian systems - Performance Management.

UNIT 5

Global Strategic Advantages through HRD: Measures for creating global HRD Climate – Strategic Frame Work of HRD and Challenges - Globalization and Quality of Working Life and Productivity – Challenges in Creation of New Jobs through Globalization- New Corporate Culture

Relevant cases have to be discussed in each unit and in examination case iscompulsory from any unit.

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 30-06-2022 at 10:00 AM through online mode using Zoom application.

Link: https://us02web.zoom.us/j/89207815112

The following members were present in the meeting.

S.No	Name	Designation	Member Role
19.	Dr.Guduru VNSR Ratnakara Rao	Principal	Chairman
20.	Dr. P Vinay Kumar	Addl.Controller of Examinations-JNTU Kakinada	University Nominee
21.	Dr.M.Thamarai	Prof./ECE- SVEC(A8)	Member
22.	Mr V.S.R.Gopala Krishna Ch	CoE; SVEC(A8)	Member
23.	Mr G V Subrahmanyam	Dy. CoE; SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1: MBA III Semester (V18) regular and Supplementary results March- 2022 for the ac. year 2021-22.

The summary of the results

a. Program Wise Performance Analysis

S.No	Program	Registered	Passed	Fail	Pass
1	MBA	91	78	13	**85.71**

b. Course Wise Performance Analysis

S. No	Course Code	Course Name	Appeared	Pass	Fail	Pass %
1.	V18MBT14	BUSINESS POLICY & CORPORATE STRATEGY	91	91	0	100
2.	V18MBT15	ENTREPRENEURSHIP DEVELOPMENT	91	91	0	100

3.	V18MBT16	E-BUSINESS	91	91	0	100
4.	V18MBT17	CONSUMER BEHAVIOR	18	18	0	100
5.	V18MBT18	RETAIL MANAGEMENT	18	17	1	94.44
6.	V18MBT19	INTEGRATED MARKETING COMMUNICATION	18	18	0	100
7.	V18MBT20	PRODUCT & BRAND MANAGEMENT	18	18	0	100
8.	V18MBT21	SECURITY ANALYSIS & PORTFOLIO MANAGEMENT	39	39	0	100
9.	V18MBT22	ADVANCE MANAGEMENT ACCOUNTING	39	39	0	100
10.	V18MBT23	FINANCIAL MARKETS & SERVICES	39	39	0	100
11.	V18MBT24	BANKING & INSURANCE MANAGEMENT	39	39	0	100
12.	V18MBT25	HUMAN RESOURCE PLANNING & DEVELOPMENT	34	34	0	100
13.	V18MBT26	COMPENSATION AND REWARD MANAGEMENT	34	34	0	100
14.	V18MBT27	PERFORMANCE MANAGEMENT	34	33	1	97.05
15.	V18MBT28	STRATEGIC HUMAN RESOURCE MANAGEMENT	34	34	0	100
16.	V18MAT07	EMPLOYABILITY SKILLS III (APTITUDE-I)	91	78	13	85.71
17.	V18MBP01	MINI PROJECT	48	48	0	100
18.	V18MBM01	MOOCS	43	43	0	100

Details enclosed in annexure-I

Item#2: M Tech III Semester (V18) Regular and supplementary results March 2022 for the ac. year 2021-22.

The summary of the results

a. Specialization Wise Performance Analysis

S.No	Speclz	Registered	Passed	Fail	Pass
1	MD	5	3	2	**60.00**
2	PSC & AE	5	4	1	**80.00**
3	STE	4	1	3	**25.00**
4	VLSI & ES	14	14	0	**100.00**
5	CSE	8	8	0	**100**
Over All		36	30	6	**83.33**

b. Course Wise Performance Analysis

S. No	Specl	Course Code	Course Name	Appeared	Pass	Fail	Pass %
1.	MD	V18MDT43	MOOCS	5	3	2	60.00

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 30-06-2022 at 10:00 AM through online mode using Zoom application.
Link: https://us02web.zoom.us/j/89207815112

The following members were present in the meeting.

S.No	Name	Designation	Member Role
1.	Dr.Guduru VNSR Ratnakara Rao	Principal	Chairman
2.	Dr. P Vinay Kumar	Addl.Controller of Examinations-JNTU Kakinada	University Nominee
3.	Dr.M.Thamarai	Prof./ECE- SVEC(A8)	Member
4.	Mr V.S.R.Gopala Krishna Ch	CoE; SVEC(A8)	Member
5.	Mr G V Subrahmanyam	Dy. CoE; SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1: MBA III Semester (V18) regular and Supplementary results March- 2022 for the ac. year 2021-22.

The summary of the results

a. Program Wise Performance Analysis

S.No	Program	Registered	Passed	Fail	Pass
1	MBA	91	78	13	**85.71**

b. Course Wise Performance Analysis

S. No	Course Code	Course Name	Appeared	Pass	Fail	Pass %
1.	V18MBT14	BUSINESS POLICY & CORPORATE STRATEGY	91	91	0	100
2.	V18MBT15	ENTREPRENEURSHIP DEVELOPMENT	91	91	0	100

3.	V18MBT16	E-BUSINESS	91	91	0	100
4.	V18MBT17	CONSUMER BEHAVIOR	18	18	0	100
5.	V18MBT18	RETAIL MANAGEMENT	18	17	1	94.44
6.	V18MBT19	INTEGRATED MARKETING COMMUNICATION	18	18	0	100
7.	V18MBT20	PRODUCT & BRAND MANAGEMENT	18	18	0	100
8.	V18MBT21	SECURITY ANALYSIS & PORTFOLIO MANAGEMENT	39	39	0	100
9.	V18MBT22	ADVANCE MANAGEMENT ACCOUNTING	39	39	0	100
10.	V18MBT23	FINANCIAL MARKETS & SERVICES	39	39	0	100
11.	V18MBT24	BANKING & INSURANCE MANAGEMENT	39	39	0	100
12.	V18MBT25	HUMAN RESOURCE PLANNING & DEVELOPMENT	34	34	0	100
13.	V18MBT26	COMPENSATION AND REWARD MANAGEMENT	34	34	0	100
14.	V18MBT27	PERFORMANCE MANAGEMENT	34	33	1	97.05

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 13-09-2022 at 04:30 PM through online mode using Zoom application.

Link: https://us02web.zoom.us/j/85282185614

The following members were present in the meeting.

S.No	Name	Designation	Member Role
1.	Dr.Guduru VNSR Ratnakara Rao	Principal	Chairman
2.	Dr. P Vinay Kumar	Addl.Controller of Examinations-JNTU Kakinada	University Nominee
3.	Dr.M.Thamarai	Prof./ECE- SVEC(A8)	Member
4.	Mr V.S.R.Gopala Krishna Ch	CoE; SVEC(A8)	Member
5.	Mr G V Subrahmanyam	Dy. CoE; SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1: B Tech VI Semester (V18) Regular and Supplementary results July- 2022 for the ac. year 2021-22.

Dt: 11/10/2022

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 02-10-2022 at 11:30 AM through online mode using Zoom application.

Link: https://us02web.zoom.us/j/87561411442

The following members were present in the meeting.

S.No	Name	Designation	Member Role
1.	Dr.Guduru VNSR Ratnakara Rao	Principal	Chairman
2.	Dr. P Vinay Kumar	Addl.Controller of Examinations-JNTU Kakinada	University Nominee
3.	Mr V.S.R.Gopala Krishna Ch	CoE; SVEC(A8)	Member
4.	Mr G V Subrahmanyam	Dy. CoE; SVEC(A8)	Member

Members Absent

S.No	Name	Designation	Member Role
1.	Dr M Thamarai	Prof./ECE- SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1: B Tech II Semester (V18 & V20) Regular and Supplementary results September- 2022 for the ac. year 2021-22.

Details enclosed in annexure-II

Item#3: Revaluation Results of B.Tech VIII Semester (V18) Advanced Supplementary examinations August 2022 for the ac. year 2021-22.

The summary of the results

a. Branch Wise Performance Analysis

S. No.	Branch	Revaluation(No of Courses)			
		Applied	Change	No Change	Pass %
1.	CE	3	0	3	----
2.	ECE	3	0	3	----

b. Course Wise Performance Analysis

S. No	Course Code	Course Name	Applied	Change	No change
1.	V18CET43	PRE-STRESSED CONCRETE	3	0	3
2.	V18ECT31	ELECTRONICS MEASUREMENTS & INSTRUMENTATION	2	0	2
3.	V18ECT34	SATELLITE COMMUNICATION	1	0	1

Details enclosed in annexure-III

- The committee has approved the results and accorded the permission for publication of the same.

S.No	Name	Designation	Member Role	Signature
1.	Dr.Guduru VNSR Ratnakara Rao	Principal, SVEC(A8)	Chairman	
2.	Dr. P Vinay Kumar	Addl.Controller of Examinations-JNTU Kakinada	University Nominee	
3.	Dr.M.Thamarai	Professor/ECE, SVEC(A8)	Member	
4.	Mr.V.S.R.Gopala Krishna Ch	CoE, SVEC(A8)	Member	
5.	Mr G V Subrahmanyam	Dy. CoE; SVEC(A8)	Member	

Dt: 03/11/2022

Minutes of the Meeting of the Result Committee

The Sri Vasavi Engineering College (Autonomous) result committee meeting was held on 02-11-2022 at 05:00 PM through online mode using Zoom application.

Link: https://us02web.zoom.us/j/84638180822

The following members were present in the meeting.

S.No	Name	Designation	Member Role
1.	Dr.Guduru VNSR Ratnakara Rao	Principal	Chairman
2.	Dr. P Vinay Kumar	Addl.Controller of Examinations-JNTU Kakinada	University Nominee
3.	Dr M Thamarai	Prof./ECE- SVEC(A8)	Member
4.	Mr V.S.R.Gopala Krishna Ch	CoE; SVEC(A8)	Member
5.	Mr G V Subrahmanyam	Dy. CoE; SVEC(A8)	Member

The following are the minutes of the results committee meeting.

Item#1: B Tech I Semester (V18 & V20) Supplementary Revaluation results September- 2022 for the ac. year 2021-22.

The summary of the results

a. Branch Wise Performance Analysis

S. No.	Branch	Revaluation(No of Courses)			
		Applied	Change	No Change	Pass %
1.	CE	4	1	3	**25**
2.	EEE	2	0	2	----
3.	ME	3	2	1	**66.66**
4.	ECE	1	0	1	----
5.	CSE	6	1	5	**16.66**
6.	CST	2	0	2	---

b. Course Wise Performance Analysis

S. No	Course Code	Course Name	Applied	Change	No Change
1.	V18EET01	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING	6	1	5
2.	V20CHT01	ENGINEERING CHEMISTRY	1	0	1
3.	V20CHT02	ENVIRONMENTAL STUDIES	2	0	2
4.	V20CST01	PROGRAMMING IN C FOR PROBLEM SOLVING	8	3	5
5.	V20PHT01	ENGINEERING PHYSICS	1	0	1

Details enclosed in annexure-I

Item#2: B Tech II Semester (V18 & V20) Regular and Supplementary Revaluation results September- 2022 for the ac. year 2021-22.

The summary of the results

a. Branch Wise Performance Analysis

S. No.	Branch	Revaluation(No of Courses)

Vision
To be a premier technological institute striving for excellence with global perspective and commitment to the nation.

Mission
- To produce Engineering graduates of professional quality and global perspective through learner-centric education.
- To establish linkages with government, industry and Research laboratories to promote R&D activities and to disseminate innovations.
- To create an eco-system in the institute that leads to holistic development and ability for life-long learning.
