SRI VASAVI ENGINEERING COLLEGE
(AUTONOMOUS)

(Sponsored by Sri Vasavi Educational Society)
Approved by AICTE, New Delhi and Permanently Affiliated to JNTUK, Kakinada
Pedatadepalli, **TADEPALLIGUDEM – 534 101,** W.G. Dist, (A.P.)

Department of Electrical and Electronics Engineering

Date: 06-06-2018

First meeting of Board of Studies in EEE along with external members is held on 2/6/2018 at 12.00 noon in the Computer Lab of EEE Department.

The following members are present.

S.No.	Name of the Staff
1.	Dr. Ch. Rambabu
2.	Dr. R. SrinivasaRao
3.	Dr. M. Sydulu
4.	Er. B.N.V.R.C. Suresh Kumar
5.	Er. Ch. Vinay Kumar
6.	Dr. P.V.V. Rama Rao
7.	Dr. D. Sudha Rani
8.	U. Chandra Rao
9.	N. Sri Harish
10.	Ch. V.S.R. Gopala Krishna
11.	K.V. Bhargav
12.	A. Jamalaiah
13.	K. Ramesh Babu
14.	G. Anand Kumar
15.	P.S.V.N. Sudhakar
16.	L. JanardhanaRao
17.	K. Suresh
18.	M.T.V.L. Ravi Kumar
19.	V. Rama Narayana
20.	Chandra BabuGuttikonda
21.	SudhirMallampati
22.	B. Prasad Reddy
23.	G. MadhuSagarBabu
24.	G. Govardhan
25.	P.K.S. Sarvesh
26.	A. Uma Siva Naga Prasad
27.	Ch. BhanuPrakash
28.	K. Venkata Reddy
29.	Y.V. Prashant
30.	B. Swamy
31.	G. Saveen
32.	D.V. Manikanta

The following are the minutes of the meeting

Item No. 1: Introducing members of Board Of Studies .
The HOD extended a formal welcome and introduced the members.

Item No. 2: Presentation of the profile of the department.
The HOD made a brief presentation of the profile of the Department for the information of the External Members.

Item No. 3:
Discussed about the Course structure for UG (B.Tech) Programme and following modification has done:

- Engineering Mechanics is moved to I-II (II Semester)
- ECA-I is moved to II-I (III Semester)
- ECA-II is moved to II-II (IV Semester)
- PS-I is moved to II-II (IV Semester)
- EC Lab is moved to II-II (IV Semester)
- Electrical Drives is moved to IV-I (VII Semester)
- UEE is moved to IV-II(VIII Semester)
- Renewable Energy Sources is placed in V Semester.
- AI and techniques course is included in – in PE-III
- Real time control of Power Systems is included in PE-V.

The details of the course structure for UG (B.Tech) Programme (EEE) are given in Annexure-I

Item No. 4:
Discussed about the Course structure for PG (M.Tech-PSC&A) Programme and following modification has done:

1. Power System Planning is replaced Advanced Computational Methods.
2. Combined HVDC & FACTS as one course.
3. EHVAC is made as separatecourse.
4. AI Techniques in Power Systems is placed in Elective-I.
5. Solar & Wind Energy is placed as compulsory course.
6. Seminar is placed I & II Semesters instead of III & IV Semesters.

The details of Course structure for PG (M.Tech-PSC&A) Programme is given in Annexure-II.

Item No. 5:
Discussed about the Syllabi for the courses offered by EEE department in I and II semesters of B.Tech Programme and following modification has done:

- In BEEE Course, time domain analysis is removed, introduction to DC Machines & classifications is included along with AC Machines.
- In BEEE Lab, experiment related to time response of first order system is removed.
- In BEE Course,Measurements Module is removed and Module related to AC Machines is added.

The detail syllabi for the courses offered by EEE department in I and II semesters of B.Tech Programme is given in Annexure-III.

Item No. 6:
Discussed about the Syllabi for the M.TechCourses and following modification has done:

- In PSOC, OPF topic is removed.
- In EDS, DG placement & modelling is added.
- In PSS, Unit-II& IV are revised.
- PSDS syllabus is condensed.
- In RTCPS, role of PMU in real time control in Unit-III is added.
- In PSD,Power System Operation in Deregulated Environment & Indian Electricity Act.– Li-Loibook is added in Test Books List.

The detail Syllabi for the M.Tech Courses is given in Annexure-IV.

BOS Chairman-EEE

Head of the Department
Electrical & Electronics Engineering
SRI VASAVI ENGINEERING COLLEGE
(Autonomous)

Annexure-I

PROPOSED COURSE STRUCTURE FOR UG-B.TECH (EEE) UNDER AUTONOMY

I Semester						
S.No	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1	V18ENT01	English – I	2	-	-	MNC
2	V18MAT01	Engineering Mathematics – I	3	1	-	4
3	V18CHT01	Engineering Chemistry	3	1	-	4
4	V18CST01	Programming for problem solving using "C"	3	-	-	3
5	V18MET02	Engineering Graphics	1	-	3	2.5
6	V18ENL01	English Communication Skills Lab – I	-	-	2	MNC
7	V18CSL01	Programming for problem solving using "C"Lab	-	-	3	1.5
8	V18CHL01	Engineering Chemistry Lab	-	-	3	1.5
Total Contact Hours			**25**			**16.5**

II Semester						
S.No	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1	V18ENT02	English – II	2	-	-	2
2	V18MAT02	Engineering Mathematics – II	3	1	-	4
3	V18PHT01	Applied Physics	3	1	-	4
4	V18MET03	Engineering Mechanics	3	1	-	4
5	V18CHT02	Environmental Studies	3	-	-	MNC
6	V18ENL02	English Communication Skills Lab – II	-	-	2	1
7	V18EEL01	Electrical Engineering Workshop	-	-	3	1.5
8	V18PHL01	Applied Physics Lab	-	-	3	1.5
9	V18MEL01	Engineering Workshop	-	-	3	1.5
Total Contact Hours			**28**			**19.5**

III Semester						
S.No	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1.	V18EET01	Electrical Circuit Analysis - I	3	1	-	4
2.	V18ECT05	Analog Electronics	3	-	-	3
3.	V18EET02	Electrical Machines – I	3	-	-	3
4.	V18EET03	Electro Magnetic Fields	3	1	-	4
5.	V18MET12	Thermal and Hydro Prime Movers	3	-	-	3
6.	V18EET04	Electrical and Electronic Measurements	3	-	-	3
7.	V18MEL06	Thermal and Hydro Prime Movers Lab	-	-	2	1
8.	V18ECL03	Analog Electronics Laboratory	-	-	2	1
9.	V18ENT07	Professional Ethics	2	-	-	MNC
10.	V18ENT03	Employability Skills– I	3	-	-	MNC
		Total Contact Hours	**29**			**22**

IV Semester						
S.No.	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1.	V18EET05	Electrical Circuit Analysis -II	3	1	-	4
2.	V18EET06	Digital Electronics	3	-	-	3
3.	V18EET07	Electrical Machines – II	3	1	-	4
4.	V18MAT04	Probability &Statistics	3	1	-	4
5.	V18EET08	Power Systems – I	3	-	-	3
6.	V18EEL02	Electrical Circuits Laboratory	-	-	2	1
7.	V18EEL03	Electrical Machines Laboratory - I	-	-	2	1
8.	V18EEL04	Electrical MeasurementsLaboratory	-	-	2	1
9.	V18EET09	Electrical Safety Awareness	2	-	-	MNC
10.	V18ENT04	Employability Skills– II	3	-	-	MNC
		Total Contact Hours	**29**			**21**

Internship/Industrial Training – Enrolment of Internship/Industrial Training will be initiated at the end of IV Semester.

V Semester						
S.No.	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1.	V18EET10	Power Systems – II	3	1	-	4
2.	V18EET11	Control Systems	3	1	-	4
3.	V18EET12	Power Electronics	3	1	-	4
4.	V18ECT03	Signals and Systems	3	1	-	4
5.	V18EET13	Renewable Energy Systems	3	-	-	3
6.	V18MBET51	Managerial Economics and Financial Analysis	3	-	-	3
7.	V18EEL05	Electrical Machines Laboratory - II	-	-	2	1
8.	V18EEL06	Control Systems Laboratory	-	-	2	1
9.	V18ENT08	Constitution of India	2	-	-	MNC
10.	V18ENT05	Employability Skills– III	3	-	-	MNC
		Total Contact Hours	**31**			**24**

Certification Course – Enrolment of Certification Course will be initiated during V Semester.

VI Semester						
S.No.	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1.	V18EET14	Power System Protection	3	1	-	4
2.	V18EET15	Power System Analysis	3	1	-	4
3.	V18ECT20	Microprocessors & Microcontrollers	3	1	-	4
4.		Professional Elective – I	3	-	-	3
5.		Open Elective – I	3	-	-	3
6.	V18ECL13	Microprocessors & Microcontrollers Laboratory	-	-	2	1
7.	V18EEL07	Power Electronics Laboratory	-	-	2	1
8.	V18EEL08	Power Systems Laboratory	-	-	2	1
9.	V18ENT06	Employability Skills– IV	3	-	-	MNC
10.	V18EES01	Technical Seminar	2	-	-	MNC
		Total Contact Hours	**29**			**21**

VII Semester						
S.No.	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1.	V18EET16	Power System Operation and Control	3	-	-	3
2.	V18EET17	Electrical Drives	3	-	-	3
3.		Professional Elective – II	3	-	-	3
4.		Professional Elective – III	3	-	-	3
5.		Open Elective – II	3	-	-	3
6.	V18EEL09	Circuit Design Laboratory	-	-	2	1
7.	V18EEL10	Electrical Simulation Laboratory	-	-	2	1
8.	V18EEP01	Project Part-A	-	-	4	2
		Total Contact Hours	**23**			**19**

- Internship/Industrial Training certificate must be submitted on or before last instruction day of VII Semester, otherwise his/her Semester End Examination results will not be declared.
- Certification Course certificate must be submitted on or before last instruction day of VII Semester, otherwise his/her Semester End Examination results will not be declared.

VIII Semester						
S.No.	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**
1.	V18EET18	Utilization of Electrical Energy	3	-	-	3
2.		Professional Elective – IV	3	-	-	3
3.		Professional Elective –V	3	-	-	3
4.	V18EEP02	Project Part-B	-	-	16	8
		Total Contact Hours	**25**			**17**

PROFESSIONAL ELECTIVE-I

- V18EET31 - Electrical Distribution Systems
- V18EET32 - Modern Control Theory
- V18EET33 - Switched Mode Power Converters
- V18EET34 - HVDC Transmission
- V18EET35 - Energy Audit, Conservation & Management

PROFESSIONAL ELECTIVE-II

- V18EET36 - Electrical Power Quality
- V18EET37 - Digital Control Systems
- V18EET38 -Special Electrical Machines
- V18EET39 – HVAC Transmission
- V18EET40– PLC &SCADA

PROFESSIONAL ELECTIVE-III

- V18EET41 - Power System Reforms
- V18EET42 - Advanced Control Systems
- V18EET43 - Electrical Machines Design
- V18EET44 - FACTS
- V18EET45 – AI & Meta-Heuristic Techniques

PROFESSIONAL ELECTIVE-IV

- V18EET46–Power System Dynamics & Control
- V18EET47 - Digital Signal Processing
- V18EET48 - Advanced Electrical Drives
- V18EET49 - High Voltage Engineering
- V18EET50–Smart Grid

PROFESSIONAL ELECTIVE-V

- V18EET51 - Real time control of power systems
- V18EET52 - Control System Design
- V18EET53 -Electrical & Hybrid Vehicles
- V18EET54 - Bio-Medical Instrumentation
- V18EET55 - Battery Management

OPEN ELECTIVES OFFERED BY EEE DEPARTMENT

- V18EET61 - Energy Audit, Conservation & Management
- V18EET62 - Renewable Energy Systems
- V18EET63 - Electrical Materials
- V18EET64 - Electrical & Hybrid Vehicles
- V18EET65 - Industrial Automation
- V18EET66 - PLC & Applications
- V18EET67 - Instrumentation
- V18EET68 - Optimization Techniques

Mandatory Courses

- V18ENT01 - English- 1
- V18ENL01 - ECS Lab – I
- V18CHT02 - Environmental Studies
- V18ENT03 to V18ENT06 - Employability Skills
- V18ENT08 - Constitution of India
- V18ENT07 - Professional Ethics
- V18EET53 - Electrical Safety Awareness
- V18EET55 - Technical Seminar

Annexure-II

PROPOSED COURSE STRUCTURE FOR PG-M.TECH (PSC&A) UNDER AUTONOMY

M. Tech - I Semester						
S.No.	**Course Code**	**Course Title**	**L**	**T**	**P**	**Credits**
1	V18PST01	Power System Operation & Control	3	-	-	3
2	V18PST02	Advanced Computer Methods in Power Systems	3	-	-	3
3	V18PST03	Advanced Power System Protection	3	-	-	3
4	V18PST04	Micro Controllers and Application	3	-	-	3
5	V18PST05 V18PST06 V18PST07 V18PST08	Elective – I: 1. Power System Reliability 2. AI Techniques in Power Systems 3. Electrical Distribution Systems 4. Power System Security	3	-	-	3
6	V18PST09 V18PST10 V18PST11 V18PST12	Elective – II: 1. Reactive Power Compensation & Management 2. Power Quality 3. Power System Transients 4. Voltage Stability	3	-	-	3
7	V18PSL01	Power Systems Lab-I	-	-	3	2
8	V18PSS01	Seminar-I	-	-	-	2

Annexure-III

COURSE OFFERED BY EEE DEPARTMENT FOR I/IV B.TECH UG (EEE) PROGRAMME

Course Code : V18EEL03

Course Name: Electrical Engineering Workshop

[L : 0; T:0; P : 2 (1 credits)]

Any 12 of the following modules are to be conducted

1. Wiring tools and Accessories
2. Electrical Wiring Joints
3. Lamp Circuits
4. Soldering Practice
5. AC and DC circuits
6. Resistance Measurement
7. Capacitance Measurement
8. Battery voltage measurement
9. Piping and Thread cutting skills
10. Special Lamp Connections
11. Wiring Practice for Power Loads
12. Motor Connections
13. Earthing
14. Testing and repair of Domestic appliances
15. Identification of terminals of DC motors
16. Overhauling of DC Machine
17. Overhauling of AC Machine
18. Practice on Motor winding

☏ +91-8818-284355, 284344, 284544 Ext: 337; Fax: +91-8818-284322 Visit us at: www.srivasaviengg.ac.in

Department of Electrical & Electronics Engineering

Date: 20.06.2018

COURSE OFFERED BY EEE DEPARTMENT FOR I/IV B.TECH UG (ECE)PROGRAMME

Course Code : V18EET02
Course Name : Basic Electrical Engineering

[L : 3; T:1; P : 0 (4 credits)]

Module 1 : DC Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

Module 2: AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Threephase balanced circuits, voltage and current relations in star and delta connections.

Module 3: Magnetic Circuits

Basic definitions - Analogy between electric and magnetic circuits -Faradays laws of electromagnetic induction-Types of induced e.m.f.'s- series, parallel magnetic circuits –Concept of Self, Mutual inductances - concept of co-efficient of coupling -Simple problems.

Module 4: DC Machines

Construction and working principle of DC generator–Magnetization characteristics,
Classification of DC motor, applications, speed control of DC motor: field and armature control – three point starter.

Module 5: Transformers

Classifications of transformers, construction and working principle of transformer, EMF equation of transformer, Ideal and Practical transformer, equivalent circuit, losses in transformers, OC and SC test of transformers regulation and efficiency. Auto-transformer

Module 6: AC Machines

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Construction and working of synchronous generators.

Text Books

1. T. K. Nagsarkar, M. S. Sukhija, “Basic Electrical Engineering”, Oxford University Press, 2005
2. D. P. Kothari and I. J. Nagrath, “Basic Electrical Engineering”, Tata McGraw Hill, 2010.
3. D. C. Kulshreshtha, “Basic Electrical Engineering”, McGraw Hill, 2009.
4. E. Hughes, “Electrical and Electronics Technology”, Pearson, 2010.

Reference Books

1. L. S. Bobrow, “Fundamentals of Electrical Engineering”, Oxford University Press, 2011.

Course Code : V18EEL02

Course Name : Basic Electrical Engineering Lab

[L : 0; T:0; P : 2 (1 credits)]

Any 10 of the following experiments are to be conducted

1. Verification of Superposition theorem.
2. Experimental determination of Thevenin's and Norton's equivalent circuits and verification by direct test.
3. Verification of maximum power transfer theorem.
4. Series and Parallel Resonance – Timing, Resonant frequency, Bandwidth and Q-factor determination for RLC network.
5. Time response of first order RC/RL network for periodic non-sinusoidal inputs – time constant and steady state error determination.
6. Measurement of coefficient of coupling.
7. Magnetization characteristics of D.C. Shunt generator. Determination of critical field resistance and speed.
8. Speed control of D.C. Shunt motor by Armature & flux control methods.
9. Brake test on DC shunt motor. Determination of performance characteristics.
10. OC & SC tests on Single-phase transformer (Predetermination of efficiency and regulation at given power factors and determination of equivalent circuit).
11. Brake test on 3-phase Induction motor (performance characteristics).
12. No load and blocked rotor test on 3-phase Induction motor.
13. Energy Bill calculation for Domestic loads.

COURSE OFFERED BY EEE DEPARTMENT FOR I/IV B.TECH UG (CSE, ME & CE) PROGRAMMES

Course Code : V18EET01
Course Name : Basic Electrical and Electronics Engineering

[L : 3; T:1; P : 0 (4 credits)]

Module 1 : DC Circuits

Electrical circuit elements (R, L and C), Kirchoff's current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Maximum Power Transfer, Thevenin and Norton Theorems.

Module 2: AC Circuits

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance.

Module 3:

DC Machines

Introduction-Working principle of DC generator–Magnetization characteristics of D.C. Shunt generator –Types of DC motors – applications – three point starter.

Transformers

Classification, working principle of ideal and practical transformer, losses in transformers, regulation and efficiency, OC& SC test on single phase transformer.

Module 4: AC Machines

Construction and working of a three-phase induction motor, torque-slip characteristics. Loss components and efficiency, starting and speed control of induction motor.Construction and Working principle of synchronous generators.

Module 5: ***Semiconductor Devices and Rectifiers***

Introduction– Classification – PN junction diode characteristics a) Forward bias b) Reverse bias - Diode acts as a switch - Half-wave and Full-wave rectifiers – Concepts of ripple factor, voltage regulation and efficiency - Simple problems.

Module 6: ***Transistors***

Types of Transistors - Transistor acts as an amplifier - CB, CE and CC configurations and characteristics-feedback amplifier.

12. Half wave rectifier with and without filters.
13. Full wave rectifier with and without filters.
14. CE amplifiers.

Annexure-IV

M.Tech - POWER SYSTEM CONTROL & AUTOMATION
SYLLABUS

I-SEMESTER

Course Code : V18PST01
Course Name : Power System Operation and Control

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Unit commitment: Introduction, Simple & numeration, Constraints in UCP, UC solutions. Methods-priority list method, Dynamic programming Approach.

UNIT-II

Single area Load Frequency Control: Necessity of keeping frequency constant. Definition of control area, single area control, Block diagram representation of an isolated Power System, Steady State analysis, Dynamic response-Uncontrolled case. Proportional plus Integral control of single area and its block diagram representation, steady state response, load frequency control, Role of AGC. State spare model of an isolated system, pole placement design, optimal control design.

UNIT-III

Two area Load Frequency Control, uncontrolled case and controlled case, tie-line bias control. Optimal two-area LF control-steady state representation, performance Index and optimal parameter adjustment. State space model for a two are system

UNIT-IV

Generation with limited Energy supply, Take-or-pay fuel supply contract, and composite generation production cost function. Solution by gradient search techniques, hard limits and slack variables, Fuel scheduling by linear programming.

UNIT-V

Interchange Evaluation and Power Pools Economy Interchange, Economy interchange Evaluation, Interchange Evaluation with unit commitment, Multiple Interchange contracts. After the-fact production costing, Transmission Losses in transaction Evaluation, other types of Interchange, power pools.

Text Books

1. Modern Power System Analysis - by I.J.Nagrath&D.P.Kothari, Tata McGraw-Hill Publishing Company ltd, 2nd edition.
2. Power system operation and control PSR Murthy B.S publication.
3. Power Generation, Operation and Control - by A.J.Wood and B.F.Wollenberg, Johnwiley& sons Inc. 1984.

Reference Books

1. Electrical Energy Systems Theory - by O.I.Elgerd, Tata McGraw-Hill Publishing Company Ltd, 2nd edition.
2. Reactive Power Control in Electric Systems - by TJE Miller, John Wiley & sons.

Course Code : V18PST02
Course Name : Advanced Computer Methods in Power Systems

3. **[L : 4; T:0; P : 0 (3 credits)]**

UNIT-I

Network modeling – Single phase and three phase modeling of alternators, transformers and transmission lines, Conditioning of Y Matrix –- Incidence matrix method, Method of successive elimination, Triangular factorization

UNIT-II

Load flow analysis - Newton Raphson method, Fast Decoupled method, AC-DC load flow – Single and three phase methods – Sequential solution techniques and extension to multiple and multi-terminal DC systems.

UNIT-III

Fault Studies -Analysis of balanced and unbalanced three phase faults – fault calculations – Short circuit faults – open circuit faults

UNIT-IV

System optimization - strategy for two generator systems – generalized strategies – effect of transmission losses - Sensitivity of the objective function - Formulation of optimal power flow-solution by Gradient method-Newton's method

UNIT-V

State Estimation – method of least squares – statistics – errors – estimates – test for bad data – structure and formation of Hessian matrix – power system state estimation

Test Books:

1. Grainger, J.J. and Stevenson, W.D. 'Power System Analysis' Tata McGraw hill, New Delhi, 2003.
2. G W Stagg and A H El Abiad, "Computer Methods in Power System Analysis", McGraw Hill, 1968
3. Pai, M.A., 'Computer Techniques in Power System Analysis', Tata McGraw Hill, New Delhi, 2006.

References:

1. HadiSaadat, 'Power System Analysis', Tata McGraw hill, New Delhi, 2002.
2. Arrillaga, J and Arnold, C.P., 'Computer analysis of power systems' John Wiley and Sons, New York, 1997.

Course Code : V18PST03
Course Name : Advanced Power System Protection

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Static Relays: Advantages of static relays-Basic construction of static relays-Level detectors-Replica impedance –Mixing circuits-General equation for two input phase and amplitude comparators-Duality between amplitude and phase comparators.

Amplitude Comparators: Circulating current type and opposed voltage type- rectifier bridge comparators, Direct and Instantaneous comparators, Static Over Current Relays**,**Differential Relays

UNIT-II

Static Distance Relays: Static impedance-reactance–MHO and angle impedance relay-sampling comparator –realization of reactance and MHO relay using sampling comparator.

Phase Comparators: Coincidence circuit type- block spike phase comparator, techniques to measure the period of coincidence-Integrating type-Rectifier and Vector product type- Phase comparators.

UNIT-III

Multi-Input Comparators: Conic section characteristics-Three input amplitude comparator –Hybrid comparator-switched distance schemes –Poly phase distance schemes- phase fault scheme –three phase scheme – combined and ground fault scheme. POWER SWINGS: Effect of power swings on the performance of distance relays –Power swing analysis-Principle of out of step tripping and blocking relays-effect of line and length and source impedance on distance relays.

UNIT-IV

Microprocessor Based Protective Relays (Block diagram and flowchart approach only)

Over current relays–impedance relays-directional relay-reactance relay .Generalized mathematical expressions for distance relays-measurement of resistance and reactance –MHO and offset MHO relays-Realization of MHO characteristics-Realization of offset MHO characteristics -Basic principle of Digital computer relaying.

UNIT-V

Digital Protection: Application of wavelet protection to power system protection- transmission line protection, transformer protection, synchronous generator protection. Numerical differential protection of generator and transformers.

Text Books

1. Badri Ram and D.N.Vishwakarma, “Power system protection and Switch gear”, TMH publication New Delhi 1995.
2.T.S. MadhavaRao, Power system protection Static relays, TMH 2nd edition 1981

Reference Books

1. Mason, The Art and Science of protective relaying, Wiley Eastern Ltd
2. C.L. Wadhwa, Electrical power systems, New age International (P) Limited
3. Sunil S. Rao, Switchgear and protection, Khanna Publications

Course Code : V18PST04
Course Name : Micro Controllers and Applications

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

INTRODUCTION TO MICROCONTROLLERS

Overview of 8 bit and 16 bit Microcontrollers, CISC & RISC Processors, Harvard & Von-Neumann architectures, features of 8051 Micro Controller, PIN diagram, architecture, Memory organization, Different modes of operation of timer/counters.

UNIT II

PROGRAMMING OF 8051

Instruction set, Addressing modes, sample programs, introduction to embedded C, simple programs, development tools.

UNIT III

REAL TIME CONTROL: INTERRUPTS

Interrupt handling structure of an MCU – Interrupt Latency and Interrupt deadline – Multiple sources of the interrupts – Non-maskable interrupt sources – Enabling or Disabling of the sources – Polling to determine the Interrupt source and assignment of the priorities among them –Interrupt structure in Intel 8051.

UNIT IV

INTERFACING

LEDs & switches interfacing, keypad interfacing, Seven Segment Display interfacing, ADC & DAC interfacing, 2X16 LCD interfacing, stepper motor interfacing, serial port interfacing, high power devices, simple calculator development.

MICROCONTROLLER BASED INDUSTRIAL APPLICATIONS

Optical motor shaft encoders – Industrial control – Industrial process control system – Prototype MCU based Measuring instruments

UNIT V

PIC MICROCONTROLLERS

Overview and features, architecture of PIC 16C6X/7X, PIC memory organization, PIC 16C6X/7X instructions, addressing modes, I/O ports, Interrupts in PIC 16C61/71, PIC 16C61/71 timers.

UNIT VI

ARM 32 Bit MCUs:

Introduction to 16/32 Bit processors–ARMarchitecture and organization – ARM / Thumb programming model – ARM / Thumb instruction set.

Text Books

1. The 8051Microcontrollers: Architecture, Programming & Applications by Kenneth J Ayala, Second Edition, Penram International Publishing (India).
2. A.V. Deshmukh, “Microcontrollers (Theory & Applications)”, 6th Reprint, TMH, 2007.

Reference Books

1. Raj Kamal, “Microcontrollers Architecture, Programming, Interfacing and System Design”, 2nd Edition, Pearson Education, 2005.
2. Mazidi and Mazidi, “The 8051 Microcontroller and Embedded Systems”, 4th impression, PHI, 2000.

Course Code : V18PST05
Course Name : Power System Reliability (Elective – I)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Basic probability theory – rules for combining probabilities of events – Bernoulli's trials – probability density and distribution functions – binomial- distributions – expected value and standard deviation ofbinomial distribution.

UNIT -II

Network Modelling and Reliability Analysis of Series, Parallel, Series- Parallel networks – complex networks – decomposition method Reliability functions f(t), F(t), R(t), h(t) and their relationship – exponential distributions – Expected value and standard deviation of exponential distribution – Bath tub curve – reliability analysis of series parallel networks using exponential distribution – reliability measures MTTF, MTTR, MTBF.

UNIT –III

Markov chains – concept of stochastic transitional probability Matrix, Evaluation of limiting state Probabilities – Markov processes one component repairable system – time dependent probability evaluation using Laplace transform approach – evaluation of limiting state probabilities using STPM – two component repairable models – Frequency and duration concept – Evaluation of frequency of encountering state, mean cycletime, for one, two component repairable models – evaluation of cumulative probability and cumulative frequency of encountering merged states.

UNIT-IV

Generation system reliability analysis – reliability model of a generation system – recursive relation for unit addition and removal – load modelling – merging of generation load model – evaluation of transition rates for merged state model – cumulative Probability, cumulative frequency of failure evaluation – LOLP, LOLE.

UNIT-V

Composite system reliability analysis decomposition method – distribution system reliability analysis – radial networks – weather effects on transmission lines – Evaluation of load and energy indices.

Text Books

1. Reliability Evaluation of Engg. System – R.Billinton, R.N.Allan, Plenum Press, New York.
2. Reliability Evaluation of Power System – R.Billinton, R.N.Allam, Plenum Press, New York

Reference Books

1. An Introduction to Realiability and Maintainability Engineering. Sharies E Ebeling, TATA McGraw Hill – Edition

Course Code : V18PST06
Course Name : AI Techniques in Power Systems (Elective – I)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Artificial Neural Networks:
Introduction Models of Neuron Network – Architectures – Knowledge representation – Artificial Intelligence and Neural networks–Learning process – Error correction learning – Hebbian learning – Competitive learning – Boltzman learning –Supervised learning – Unsupervised learning – Reinforcement learning – learning tasks.

UNIT-II

ANN Paradigms:
Multi – layer perceptron using Back propagation Algorithm (BPA) – Self – Organizing Map (SOM) – Radial Basis Function Network – Functional Link Network (FLN) – Hopfield Network.

UNIT-III

Fuzzy Logic:
Introduction – Fuzzy versus crisp – Fuzzy sets – Membership function – Basic Fuzzy set operations – Properties of Fuzzy sets – Fuzzy Cartesian Product – operations on Fuzzy relations – Fuzzy-logic – Fuzzy Quantifiers–Fuzzy Inference – Fuzzy Rule based system–Defuzzification methods.

UNIT-IV

Genetic Algorithms:
Introduction–Encoding – Fitness Function–Reproduction operators–Genetic Modeling – Genetic operators–Cross over – Single site cross over – Two point cross over – Multi point cross over – Uniform cross over – Matrix cross over–Cross over Rate –Inversion & Deletion – Mutation operator–Mutation – Mutation Rate–Bit–wise operators –Generational cycle – convergence of Genetic Algorithm.

UNIT-V

Applications of AI Techniques:
Load forecasting – Load flow studies – Economic load dispatch – Load frequency control – Single area system and two area system – Small Signal Stability (Dynamic stability) Reactive power control – speed control of DC and AC Motors.

Text books:

1. S.Rajasekaran and G.A.V.Pai Neural Networks, Fuzzy Logic & Genetic Algorithms, PHI, New Delhi, 2003.
2. Rober J. Schalkoff, Artificial Neural Networks, Tata McGraw Hill Edition, 2011

Reference Books:

Course Code : V18PST07
Course Name : Electrical Distribution Systems (Elective – I)

[L : 4; T:0; P : 0 (3 credits)]

UNIT- I

General : Introduction to Distribution systems, an overview of the role of computers in distribution system planning-Load modeling and characteristics: definition of basic terms like demand factor, utilization factor, load factor, plant factor, diversity factor, coincidence factor, contribution factor and loss factor-Relationship between the load factor and loss factor - Classification of loads (Residential, Commercial, Agricultural and Industrial) and their characteristics.

UNIT-II

Distribution Feeders and Substations

Design consideration of Distribution feeders: Radial and loop types of primary feeders, voltage levels, feeder-loading. Design practice of the secondary distribution system.

Location of Substations: Rating of a Distribution Substation, service area with primary feeders. Benefits derived through optimal location of substations. Distributed Generation placement and modelling.

UNIT -III

System Analysis: Voltage drop and power loss calculations - Derivation for volt-drop and power loss in lines, manual methods of solution for radial networks, three-phase balanced primary lines, non-three-phase primary lines.

UNIT- IV

Protective devices and coordination: Objectives of distribution system protection, types of common faults and procedure for fault calculation. Protective Devices: Principle of operation of fuses, circuit reclosers, line sectionalizer and circuit breakers. Coordination of protective devices General coordination procedure.

UNIT -V

Capacitive compensation for power factor control: Different types of power capacitors, shunt and series capacitors, effect of shunt capacitors (Fixed and Switched) power factor correction, capacitor location. Economic justification. Procedure to determine the best capacitor location. Voltage Control - Equipment for voltage control, effect of series capacitors, effect of AVB/AVR, line drop compensation.

Text Books:

1. "Electric Power Distribution System Engineering " byTuranGonen, Mc.Graw-Hill Book Company,1986.
2. Electric Power Distribution-by A.S.Pabla, Tata McGraw-Hill Publishing Company, 4th edition, 1997.

Reference Books:

1. Electrical Distribution V.Kamaraju-McGraw Hill
Handbook of Electrical Power Distribution – Gorti Ramamurthy- Universities press.

Course Code : V18PST08
Course Name : Power System Security (Elective – I)

[L : 3; T:0; P : 0 (3 credits)]

UNIT-I

Short circuit analysis techniques in AC power Systems- Simulation of short circuit and open circuit faults using network theorems- fixed impedance short circuit analysis techniques-time domain short circuit analysis in large scale power systems- analysis of time variation of AC and DC short circuit components.

UNIT-II

Fixed impedance Short circuit analysis of large scale power systems general analysis of balanced, unbalanced and open circuit faults- 3- phase short circuit analysis in large scale power systems, Network equivalents and practical short circuit current assessments in large scale Ac power systems - uncertainties in short circuit current calculations.

UNIT-III

Risk assessment and safety considerations-control and limitation of high short circuit currents-limitation of short circuit currents in power system operation, Types of short circuit fault current limiters and their applications.

UNIT-IV

Power System Security analysis- concept of security- security analysis and monitoring- factors affecting power system security- detection of network problems, contingency analysis for generator and line outages by ILPF method – fast decoupled inverse Lemma-based approach, network sensitivity factors.

UNIT-V

Computer control power systems – need for real time and computer control of power systems- operating states of power system – SCADA implementation considerations – software requirements for implementing above functions.

Reference Books

1. Allen J. Wood and Bruce Woolenberg: Power System Generation,Operation and Control, John Willey and sons,1996

2. John J.Grainger and William D Stevenson Jr.: Power System, analysis,McGraw Hill,ISE,1994.

Text Books

1.NasserD.Tleis: Power System Modelling and fault analysis, Elsevier, 2008.

2. Electrical Power Systems, Analysis, Security and deregulation: P. Venkatesh, BV Manikandan, S. Charles Raja, A. Srinivasan.

Course Code : V18PST09
Course Name : Reactive Power Compensation & Management (Elective – II)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Load Compensation Objectives and specifications – reactive power characteristics – inductive and capacitive approximate biasing – Load compensator as a voltage regulator – phase balancing and power factor correction of unsymmetrical loads- examples.

UNIT- II

Reactive power compensation in transmission system: Steady state - Uncompensated line – types of compensation – Passive shunt and series and dynamic shunt compensation – examples Transient state - Characteristic time periods – passive shunt compensation – static compensations- series capacitor compensation –compensation using synchronous condensers – examples

UNIT-III

Reactive power coordination: Objective – Mathematical modelling – Operation planning – transmission benefits – Basic concepts of quality of power supply – disturbances- steady –state variations – effects of under voltages – frequency – Harmonics, radio frequency and
Electromagnetic interferences

UNIT-IV

Distribution side Reactive power Management: System losses –loss reduction methods – examples – Reactive power planning – objectives – Economics Planning capacitor placement – retrofitting of capacitor banks User side reactive power management: KVAR requirements for domestic appliances – Purpose of using capacitors – selection of capacitors – deciding factors – types of available capacitor, characteristics and Limitations

UNIT-V

Reactive power management in electric traction systems and are furnaces: Typical layout of traction systems – reactive power control requirements – distribution transformers- Electric arc furnaces – basic operations-furnaces transformer –filter requirements – remedialmeasures –power factor of an arc furnace

Text / Reference Books

1. Reactive power control in Electric power systems by T.J.E.Miller, John Wiley and sons, 1982
2. Reactive power Management by D.M.Tagare,Tata McGraw Hill,

Course Code : V18PST10
Course Name : Power Quality(Elective – II)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I: Introduction

Overview of Power Quality - Concern about the Power Quality - General Classes of PowerQuality Problems – Transients -Long-Duration Voltage Variations - Short-Duration VoltageVariations - Voltage Unbalance - Waveform Distortion - Voltage fluctuation - Power FrequencyVariations - Power Quality Terms - Voltage Sags and Interruptions - Sources of Sags andInterruptions – Nonlinear loads.

UNIT-II: Transient Over Voltages

Source of Transient over Voltages - Principles of Over Voltage Protection - Devices for OverVoltage Protection - Utility Capacitor Switching Transients - Utility Lightning Protection – LoadSwitching Transient Problems - Computer Tools for Transient Analysis

UNIT-III: Harmonic Distortion and solutions

Voltage vs. Current Distortion - Harmonics vs. Transients - Power System Quantities underNonsinusoidal Conditions - Harmonic Indices – Sources of harmonics - Locating Sources ofHarmonics – System Response Characteristics - Effects of Harmonic Distortion – Interharmonics- Harmonic Solutions Harmonic Distortion Evaluation - Devices for Controlling HarmonicDistortion - Harmonic Filter Design - Standards on Harmonics

UNIT- IV: Long Duration Voltage Variations

Principles of Regulating the Voltage - Device for Voltage Regulation - Utility Voltage RegulatorApplication - Capacitor for Voltage Regulation - End-user Capacitor Application – RegulatingUtility Voltage with Distributed Resources – Flicker

UNIT-V: Distributed Generation and Power Quality

Resurgence of Distributed Generation - DG Technologies - Interface to the Utility System -Power Quality Issues - Operating Conflicts - DG on Low Voltage Distribution Networks -Interconnection standards - Wiring and Grounding - Typical Wiring and Grounding Problems -Solution to Wiring and grounding Problems

Text Books:

1. Electrical Power Systems Quality, Dugan R C, McGranaghan M F, Santoso S, and Beaty H W, Second Edition, McGraw-Hill, 2002.
2. Power Quality Primer, Kennedy B W, First Edition, McGraw-Hill, 2000.

Reference Books:

1. Power Quality, C. Shankaran, CRC Press, 2001
2. Harmonics and Power Systems , Franciso C.DE LA Rosa, CRC Press

Course Code : V18PST11
Course Name : Power System Transients (Elective – II)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Basic Concepts and Simple Switching Transients: Switching an RL,RC,RLC circuits

Transients Analysis of Three-Phase power Systems: Symmetrical components in Three-phase Systems, Sequence Components for Unbalanced Network Impedances, the Sequence Networks, analysis of Unsymmetrical Three-Phase Faults-single line-to-Ground Fault, Three phase-to-ground fault.

UNIT -II

Travelling Waves: Velocity of Travelling waves and Characteristic Impedance, Energy Contents of Travelling Waves, Attenuation and Distortion of Electromagnetic Waves, telegraph equations-lossless line, distortion less line, Reflection and Refraction of Travelling Waves, Reflection of Travelling Waves against Transformer-and-Generator windings, the Origin Transient Recovery voltages, bewley-lattice diagram. travelling waves and multi conductor system.

UNIT-III

Switching Transients: Arc interruption in circuit breaker, transient recovery voltage, arc-circuit interaction, interruption of capacitive currents, interruption of inverse currents, interruption of fault current in transmission line and transformers.

UNIT-IV

Power System Transient Recovery Voltages: Characteristics of the Transient Voltage- Short-circuit test duties based on IEC 60056 (1987),ANSI/IEEE Standards, the Harmonization between IEC and ANSI/ IEEE Standards with respect to Short-circuit Test duties, transient recovery voltage for Different types of faults.

UNIT-V

Lightning –Induced Transients: Mechanism of Lightning, wave shape of the lightning current, direct lighting Stroke to transmission line towers, direct lightening stroke to a line, lightning protection scheme. Numerical simulation of electrical transients, The Electromagnetic Transient Program, principles of numerical techniques used in transient simulation.

Text Books /Reference Books

1. Electrical Transients in Power System by Allen Greenwood, McGraw Hill 1990
2. Power system grounding & transients by A.P.SakisMeliopolous.
3. “Transients in power systems” by Lou Van Sluis

Course Code : V18PST12
Course Name : Voltage Stability(Elective – II)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Reactive Power flow and voltage stability in power systems: Physical relationship indicating dependency of voltage on reactive power flow - reactive power, transient stability; Q-V curve; definition of voltage stability, voltage collapse and voltage security. Voltage collapse phenomenon, Factors of voltage collapse, effects of voltage collapse, voltage collapse analysis.

UNIT-II

Power system loads: Load characteristics that influence voltage stability such as – Discharge lighting, Induction motor, Air conditioning and heat pumps, Electronic power supplies, Over Headlines and cables.

UNIT-III

Reactive Power compensation: Generation and absorption of reactive power – Reactive power compensators & voltage controllers: - shunt capacitors, synchronous phase modifier – static VAR system – on load tap changing transformer, booster transformers.

UNIT-IV

Voltage stability static indices : Development of voltage collapse index – power flow studies – singular value decomposition – minimum singular value of voltage collapse – condition number as voltage collapse index.

UNIT-V

Voltage stability margins & Improvement of voltage stability: Stability margins, voltage stability margin of uncompensated and compensated power system. Dynamic voltage stability – voltage security, Methods of improving voltage stability and its practical aspects.

Text Books / Reference Books

1. Performance operation and control of EHV power transmission Systems A. chakrabarti, D.P.Kothari, A.K. Mukhopadhyay, A.H. Wheeler publishing, 1995.
2. Power System Voltage Stability - C.W. Taylor , Mc. Graw Hill, 1994

Course Code : V18PSL01
Course Name : Power Systems Lab-I

[L :0; T:0; P : 3 (2 credits)]

Any 10 of the following experiments are to be conducted

1. Formation of Y- Bus by Direct-Inspection Method.
2. Load Flow Solution Using Gauss-Siedel Method
3. Load Flow Solution Using Newton Raphson Method
4. Formation of Z-Bus by Z-bus building algorithm
5. Unsymmetrical Fault analysis using Z-bus
6. Economic Load Dispatch with transmission losses
7. Economic Load Dispatch without transmission losses
8. Transient Stability Analysis Using Point By Point Method
9. Load Frequency Control of Single Area Control& with andwithout controllers.
10. Load Frequency Control of Two AreaControlsystem with andwithout controllers
11. Load Flow Solution Using Fast De-coupled Method.
12. Symmetrical Fault analysis using Z-bus

II-SEMESTER
Course Code : V18PST13
Course Name : Modern Control Theory

[L : 4; T:0; P : 0 (3 credits)]

UNIT –I

State Variable Analysis: The concept of state – State Equations for Dynamic systems – State diagram--- - Linear Continuous time model for physical systems – Existence and Uniqueness of Solutions toContinuous – Time State Equations – Solutions – Linear Time Invariant Continuous – Time State Equations – State transition matrix and it's properties

UNIT – II

State Variable Techniques: General concept of Controllability – General concept of Observability Controllability tests for Continuous &Time Invariant systems - Observability tests for Continuous &Time Invariant systems - Controllability and Observability of state model in Jordan Canonical form - Controllability and Observability Canonical forms of State model – State feedback controller design through pole assignment.

UNIT – III

Non Linear Systems – 1: Introduction – Non Linear Systems – Types of Non – Linarites – Saturation – Dead – Zone – Backlash – Jump Phenomenon etc. - Singular Points – Introduction to Linearization ofnonlinear systems, properties of Non Linear Systems – Describing function – describing function analysis of nonlinear systems- Stability analysis of Non – Linear systems through describing functions.

UNIT – IV

Non Linear Systems – 11: Introduction to phase – plane analysis, Method of Isoclines for Constructing Trajectories, singular points, phase – plane analysis of nonlinear control systems.

UNIT – V

Stability Analysis Stability in the sense of Lyapunov, Lyapunov's stability and Lyapunov's instability theorems – Stability Analysis of the Linear Continuous time invariant systems by Lyapunovsecondmethod – Generation of Lyapunov functions – Variable gradient method – Krasooviski's method.

Text Books

1. Modern Control System Theory by M. Gopal – New Age International – 1984
2. Modern Control Engineering by Ogata. K – Prentice Hall – 1997

Reference Books

3. Nonlinear systems, Hassan K. Klalil, Prentice Hall, 1996
4. Modern control systems, Richard C. Dorf and Robert H. Bishop, 11th Edition, Pearson Edu, India, 2009

Course Code : V18PST14
Course Name : Power System Dynamics and Stability

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I: System Dynamics
Synchronous machine model in state space: Synchronous Machine: Basic equations of a synchronous machine, dq0 Transformation and Park's transformation-
Computer representation for excitation and governor system – modeling of loads and induction machines.

UNIT-II: stability
Fundamental Concepts of Stability -Classification of Stability-
Steady state stability – steady state stability limit – Dynamics Stability limit – Dynamic stability analysis – State space representation of synchronous machine connected to infinite bus- time response – Stability by eign value approach.

UNIT-III:Simulation of Transient Stability
Equations of Motion: Swing Equation, calculation of inertia constant- Representation of loads – Alternate cycle solution method – Direct method of solution – Solution
Techniques: Modified Euler method – RungeKutta method – Concept of multi machine stability.

UNIT-IV: Excitation Systems
Excitation System Requirements, Elements of an Excitation System,
Types of Excitation System: Rotating Self-excited Exciter with direct acting Rheostatic type voltage regulator – Rotating main and Pilot Exciters with Indirect Acting Rheostatic Type Voltage Regulator – Rotating Main Exciter, Rotating Amplifier and Static Voltage Regulator – Static excitation scheme – Brushless excitation system - Effect of excitation on power system stability

UNIT-V: Speed Governing systems
Block diagram of speed governing system- Effect of governor action on power system stability- Effect of saturation, saliency & automatic voltage regulators on stability.

Text Books

1. Power System Dynamics Stability and Control By K R Padiyar, B S Publications
2. Power System Stability & Control, By- P.Kundur, Tata Mcgraw hill
3. Power Systems Analysis By Vijay Vittal, Bergen , Pearson Education

Reference Books

1. Electric machinery and Drive Systems By P C Crause, Viley IEEE Press .
2. P.M Anderson and A.A Fouad, "Power System Control and Stability", Iowa State University Press, Ames, Iowa, 1978.
3. R. Ramanujam, "Power System Dynamics, Analysis and Simulation", PHI Learning, New Delhi, January 2010.

Course Code : V18PST11
Course Name : SOLAR & WIND ENERGY(Elective – II)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

SOLAR RESOURCES : Solar Energy - Availability - Solar radiation data and measurement - Estimation of average solar radiation - Solar water heater types – Heat balance – Flat plate collector efficiency – Efficiency of heat removal - Thermo siphon flow calculation - Forced circulation calculation - Evacuated collectors - Basics of solar concentrators- Solar Energy Applications - Solar air heaters – Solar Chimney - Crop driers – Passive solar system - Active solar systems - Water desalination – Principle of solar ponds.

.

UNIT-II

SOLAR PHOTOVOLTAICS: The Photo Voltaic effect- p-n junction-different types of photovoltaic cells-PV cell characteristics- Effect of variation of temperature, insolation level & tilt angle on the characteristics-equivalent circuits- temperature effects on conversion efficiency- Fabrication and costs of PV cell.

PV SYSTEMS : Photovoltaic modules- module specifications- bypass diodes-PV arrays and PV systems-cabling, earthing and lightning protection- Battery storage: Lead and Nickel cadmium batteries- Charge regulators-LVD circuit-Voltage and current Source Inverters. Tracking Systems-Maximum power point tracking.

UNIT-III

WIND ENERGY-I: Nature of wind – Characteristics – Variation with height and time – Power in wind – Aerodynamics of Wind turbine – Momentum theory – Basics of aerodynamics – Aero foils and their characteristics– Wind turbine loads – Aerodynamic loads in steady operation – Yawed operation and tower shadow.

UNIT-IV

WIND ENERGY-II: Siting – Rotor selection –Annual energy output – Horizontal axis wind turbine (HAWT) – Vertical axis wind turbine (VAWT) – Rotor design considerations – Number of blades – Solidity - Blade profile – Upwind/Downwind – Yaw system – Tower – Braking system - Synchronous and asynchronous generators and loads – Integration of wind energy converters to electrical networks – Inverters – Control system – Requirement and strategies

UNIT-V

PV&WIND SYSTEM APPLICATIONS: Autonomous system; Grid Linked systems; Remote applications, System sizing; System Performance; Economics and future prospects.

Text Books

1. Renewable Energy Resources / John Twidell and Tony Weir / E &F.N.Spon
2. Renewable Energy Resources Basic Principles and Applications /G.N.Tiwari and M.K.Ghosal / Narosa

References Books

1. Solar Energy - Principles of thermal collection and storage/ S.P.Sukhatme / TMH
2. Solar Energy Thermal Processes,/Duffie& Beckman
3. Solar Heating and Cooling / Kreith&Kreider
4. Wind Energy Handbook / Tony Burton, David Sharpe, Nick Jenkins and Ervin Bossanyi / WileyWind Electrical Systems / S.N.Bhadra, D.Kastha and S.Banerjee / Oxford

Course Code : V18PST16
Course Name : Real Time Control of Power Systems

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

State Estimation. Operating states of power systems. Different types of State Estimations, Theory of WLS state estimation, sequential and non-sequential methods to process measurements. Bad data observability, Bad data detection, identification and elimination.

UNIT-II

Security and Contingency Evaluation-Security concept, Security Analysis and monitoring, Contingency Analysis for Generator and line outages by iterative linear power flow method, and network sensitivity methods.

UNIT-III

Computer Control of Power Systems-Need for real time and computer control of power systems, SCADA - Supervisory control and Data Acquisition systems implementation considerations, energy control centres. Role of PMU in real time control.

UNIT-IV

Voltage Stability, voltage collapse, and voltage security, relation of voltage stability to rotor angle stability. Voltage stability analysis Introduction to voltage stability analysis `P-V'curves and `Q-V' curves, voltage stability in mature power systems, long-term voltage stability, power flow analysis for voltage stability, voltage stability static indices and Research Areas.

UNIT-V

Application of AI and ANN in Power System: Basic concepts and definitions, algorithms for load flow, short term load forecasting, fault diagnosis and state estimation.

Text Books

1. Allen J. Wood and Bruce F. Wollenberg "Power Generation, Operation & Control" 2nd edition, John Wiley and Sons.
2. I.J. Nagarath& D. P. Kothari , "Modern power system analysis" 4th Edition, TMH

Reference Books

1. John J.Grainger and William D.Stevenson, Jr. : Power System Analysis, McGraw-Hill, 1994, International Edition
3. R.N.Dhar : Computer Aided Power Systems Operation and Analysis, Tata McGraw Hill, 1982
4. L.P.Singh : Advanced Power System Analysis and Dynamics, Wiley Eastern Ltd. 1986
5. PrabhaKundur : Power System Stability and Control -, McGraw Hill, 1994
6. P.D.Wasserman : `Neural Computing : Theory and Practice' Van Nostrand - Feinhold, New York.

Course Code :V18PST17

Course Name: Electric and Hybrid Vehicles (Elective-III)

Unit-I:

Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization & transmission characteristics.

Unit-II:

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.

Unit-III:

Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives

Unit-IV:

Energy Storage: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Hybridization of different energy storage devices

Unit-V:

Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems.

Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies.

Text Books:

1. Iqbal Hussein, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press, 2003.
2. James Larminie, “Electric Vehicle Technology Explained”, John Wiley & Sons, 2003.

Reference Books:

1. MehrdadEhsani, YimiGao, Sebastian E. Gay, Ali Emadi, Modern Electric, Hybrid Electricand Fuel Cell Vehicles: Fundamentals, Theory and Design, CRC Press, 2004.
2. SandeepDhameja, “Electric Vehicle Battery Systems”, Newnes, 2000.

(http://nptel.ac.in/courses/108103009/)

Course Code : V18PST18
Course Name : Power System Deregulation (Elective – III)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Need and conditions for deregulation. Introduction of Market structure, Market Architecture, Spot market, forward markets and settlements. Review of Concepts marginal cost of generation, least-cost operation, incremental cost of generation. Power System Operation ion deregulated environment and Indian Electricity act.

UNIT-II

Electricity sector structures and Ownership /management, the forms of Ownership and management. Different structure model like Monopoly model, Purchasing agency model, wholesale competition model, Retail competition model.

UNIT-III

FRAMEWORK and methods for the analysis of Bilateral and pool markets, LMP based markets, auction models and price formation, price based unit commitment, country practices.

UNIT-IV

Transmission network and market power. Power wheeling transactions and marginal costing, transmission costing. Congestion management methods- market splitting, counter-trading; Effect of congestion on LMPs-country practices

UNIT-V

Ancillary Services and System Security in Deregulation. Classifications and definitions, AS management in various markets- country practices. Technical, economic, & regulatory issues involved in the deregulation of the power industry.

Text Books

1. Power System Economics: Designing markets for electricity - S. Stoft
2. Power generation, operation and control, -J. Wood and B. F. Wollenberg
3. Operation of restructured power systems - K. Bhattacharya, M.H.J. Bollen and J.E. Daalder
4. Power system restructuring & Deregulation – LoiLeiLaiwilly publications.

Reference Books

1. Market operations in electric power systems - M. Shahidehpour, H. Yamin and Z. Li
2. Fundamentals of power system economics - S. Kirschen and G. Strbac
3. Optimization principles: Practical Applications to the Operation and Markets of the Electric Power Industry - N. S. Rau
4. Competition and Choice in Electricity - Sally Hunt and Graham Shuttleworth

Course Code : V18PST19
Course Name : Smart Grid (Elective – III)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Introduction to Smart Grid: Evolution of Electric Grid, Concept of Smart Grid, Definitions, Need of Smart Grid, Functions of Smart Grid, Opportunities & Barriers of Smart Grid, Difference between conventional & smart grid, Concept of Resilient & Self-Healing Grid, Present development& International policies on Smart Grid. Case study of Smart Grid.

UNIT-II

Smart Grid Technologies: Part 1: Introduction to Smart Meters, Real Time Prizing, Smart Appliances, Automatic Meter Reading (AMR), Outage Management System (OMS), Plug in Hybrid Electric Vehicles (PHEV), Vehicle to Grid, Smart Sensors, Home & Building Automation, Phase Shifting Transformers.

UNIT-III

Smart Grid Technologies: Part 2: Smart Substations, Substation Automation, Feeder Automation. Geographic Information System (GIS), Intelligent Electronic Devices (IED) & their application for monitoring & protection, Smart storage like Battery, SMES, Pumped Hydro, Compressed Air Energy Storage, Wide Area Measurement System (WAMS), Phase Measurement Unit (PMU).

UNIT-IV

Microgrids and Distributed Energy Resources: Concept of micro grid, need & applications of micro grid, formation of microgrid, Issues of interconnection, protection & control of microgrid. Plastic & Organic solar cells, Thin film solar cells, Variable speed wind generators, fuelcells, microturbines, Captive power plants, Integration of renewable energy sources.

UNIT-V

Power Quality Management in Smart Grid: Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.

Information and Communication Technology for Smart Grid: Advanced Metering Infrastructure (AMI), Home Area Network (HAN), Neighborhood Area Network (NAN), Wide Area Network (WAN).

Text Books:

1. Ali Keyhani, Mohammad N. Marwali, Min Dai "Integration of Green and Renewable Energy in Electric Power Systems", Wiley
2. Clark W. Gellings, "The Smart Grid: Enabling Energy Efficiency and Demand Response",CRC Press
3. JanakaEkanayake, Nick Jenkins, KithsiriLiyanage, Jianzhong Wu, Akihiko Yokoyama,"Smart Grid: Technology and Applications", Wiley
4. Jean Claude Sabonnadière, NouredineHadjsaïd, "Smart Grids", Wiley Blackwell 19
5. Peter S. Fox Penner, "Smart Power: Climate Changes, the Smart Grid, and the Futureof Electric Utilities", Island Press; 1 edition 8 Jun 2010
6. S. Chowdhury, S. P. Chowdhury, P. Crossley, "Microgrids and Active Distribution Networks." Institution of Engineering and Technology, 30 Jun 2009
7. Stuart Borlase, "Smart Grids (Power Engineering)", CRC Press

Reference Books:

2. James Northcote, Green, Robert G. Wilson “Control and Automation of Electric Power Distribution Systems (Power Engineering)”, CRC Press

3. MladenKezunovic, Mark G. Adamiak, Alexander P. Apostolov, Jeffrey George Gilbert “Substation Automation (Power Electronics and Power Systems)”, Springer

4. R. C. Dugan, Mark F. McGranghan, Surya Santoso, H. Wayne Beaty, “Electrical Power System Quality”, 2nd Edition, McGraw Hill Publication

5. Yang Xiao, “Communication and Networking in Smart Grids”, CRC Press

Course Code : V18PST20
Course Name : High Voltage Engineering (Elective – III)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Generation of High AC & DC Voltages: Direct Voltages: AC to DC conversion methods electrostatic generators-Cascaded Voltage Multipliers.

Alternating Voltages: Testing transformers-Resonant circuits and their applications, Tesla coil.

UNIT-II

Generation of Impulse Voltages: Impulse voltage specifications-Impulse generations circuits-Operation, construction and design of Impulse generators-Generation of switching and long duration impulses.

Impulse Currents: Generation of High impulse currents and high current pulses.

UNIT-III

Measurement of High AC & DC Voltages: Measurement of High D.C. Voltages: Series resistance meters, voltage dividers and generating voltmeters.

Measurement of High A.C. Voltages: Series impedance meters electrostatic voltmeters potential transformers and CVTS-voltage dividers and their applications.

Measurement of Peak Voltages: Chubb-Fortesque methods.

Measurement of Impulse Voltages &Currents: Voltage dividers and impulse measuring systems Faraday generators

UNIT-IV

High Voltage Testing of Power Apparatus: Need for testing standards– Standards for porcelain/Glass insulators-Classification of porcelain/glass insulator tests – Tests for cap and pin porcelain/Glass insulators.

UNIT-V

High voltage AC testing methods-Power frequency tests-Over voltage tests on insulators, Isolators, Circuit Breakers and power cables

Impulse Testing: Impulse testing of transformers, insulators, Surge diverters, Bushings, cables, circuit breakers.

Text Books

1. High Voltage Engineering – by E.Kuffel and W.S.Zaengl. Pergaman press Oxford, 1984.
2. High Voltage Engineering – by M.S.Naidu and V.Kamaraju, Mc.Graw-Hill Books Co., New Delhi, 2nd edition, 1995.

Reference Books

1. High Voltage Engineering – by E.KUFFEL and W.S.ZAENGL, Pergamon Press, Oxford 1984.
2. High Voltage Engineering – by M.S.Naidu and V.Kamaraju, Tata McGraw Hill Publishing Company Limited, New Delhi – 2001.
3. Discharge Detection in H.V. Equipment – by KREUGER, F.H. Haywood London – 1964.

Course Code : V18PST21
Course Name : Custom Power Devices (Elective – IV)

[L : 4; T:0; P : 0 (3 credits)]

UNIT- I

Introduction Custom Power and Custom Power Devices - power quality variations in distribution circuits – Voltage Sags, Swells, and Interruptions - System Faults – Over voltages and Under voltages - Voltage Flicker - Harmonic Distortion - Voltage Notching – Transient Disturbances - Characteristics of Voltage Sags.

UNIT-II

Overview of Custom Power Devices Reactive Power and Harmonic Compensation Devices Compensation Devices for Voltage Sags and Momentary Interruptions - Backup Energy Supply Devices – Battery UPS – Super Conducting Magnetic Energy Storage systems – Flywheel – Voltage Source Converter - Multi-level converters.

UNIT-III

Reactive Power and Harmonic Compensation Devices Var control devices - Static Var Compensator – Topologies - Direct Connected Static Var Compensation for Distribution Systems – Static Series Compensator - Static Shunt Compensator (DSTATCOM) – Interaction with Distribution Equipment and System - Installation Considerations.

UNIT- IV

High-Speed Source Transfer Switches, Solid State Limiting, And Breaking Devices: Source Transfer Switch - Static Source Transfer Switch (SSTS) - Hybrid source transfer switch – High-speed mechanical source transfer switch - Solid state current limiter - Solid state breaker.

UNIT-V

Application of Custom Power Devices in Power Systems P-Q theory – Control of P and Q – Dynamic Voltage Restorer (DVR) – Operation and control – Interline Power Flow Controller (IPFC) – Operation and control – Unified Power Quality Conditioner (UPQC) – Operation and control. Recent custom power devices.

Text Books

1. Guidebook on Custom Power Devices, Technical Report, Published by EPRI, Nov 2000
2. Power Quality Enhancement Using Custom Power Devices – Power Electronics and Power Systems, Gerard Ledwich, ArindamGhosh, Kluwer Academic Publishers, 2002.

Reference Books

1. Power Quality, C. Shankaran, CRC Press, 2001.
2. Instantaneous power theory and application to power conditioning, H. Akagiet.al., IEEE Press, 2007.
3. Custom Power Devices - An Introduction, ArindamGhosh and Gerard Ledwich, Springer, 2002.
4. A Review of Compensating Type Custom Power Devices for Power Quality Improvement, Yash Pal et.al., Joint International Conference on Power System Technology and IEEE Power India Conference, 2008.POWERCON 2008.

Course Code : V18PST22
Course Name : EHVAC Transmission (Elective – IV)

[L : 4; T:0; P : 0 (3 credits)]

Unit-1: E.H.V.A.C. Transmission line trends and preliminary aspect standard transmission voltages – Estimation at line and ground parameters - Bundle conductor systems inductance and capacitance of E.H.V. lines – positive, negative and zero sequence impedance.

Unit-2: Electrostatic field and voltage gradients – calculations of electrostatic field of AC lines – effect high electrostatic field on biological organisms and human beings surface voltage gradients and maximum gradients of actual transmission lines

Unit-3: Electrostatic induction in unenergised lines – measurements of field and voltage gradients for three phase single and double circuit lines – unenegised lines. Power Frequency Voltage control and over voltages in EHV lines: No load voltage – charging currents at power frequency - voltage control

Unit 4: shunt and series compensation – static VAR compensation. Corona in E.H.V. lines – Corona loss formulae attention of traveling waves due to Corona – Audio noise due to Corona, its generation, characteristic and limits

Unit 5: Measurements of audio noise radio interference due to Corona RF properties of radio noise – frequency spectrum of RI fields. Design of EHV lines based on steady state and transient limits.

REFERENCES:

2. EHV Transmission line reference Books – Edison Electric Institution (GEC 1968).

Course Code : V18PST23
Course Name : Demand Side Energy Management (Elective – IV)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I

Energy Audit and Energy management information systems: Energy audit: Definitions-Need-concepts-Types of energy audit;

Energy Economics: Introduction-Cost benefit risk analysis-Payback period-Straight line depreciation-Sinking fund depreciation—Reducing balance depreciation-Net present value method-Internal rate of return method.

UNIT-II

Energy Conservation in Electric utilities and Industry: Electrical load management: Energy and load management devices-Conservation strategies; conservation in electric utilities and industry: Introduction-Energy conservation in utilities by improving load factor-Utility voltage regulation-Energy conservation in Industries.

UNIT-III

Energy –efficient electric motors: Energy efficient motors-construction and technical features-performance characteristics; Economics of EEMs and system: life cycle-direct savings and payback analysis-efficiency factor.

UNIT-IV

Electric Lighting: Introduction-Need for an energy management program-Building analysis-Modification of existing systems- Replacement of existing systems-priorities

Illumination requirement: Task lighting requirements-lighting levels system modifications-non illumination modifications-lighting for non-task areas-reflectance-space geometry; System elements: light sources - characteristics of families of lamps-lamp substitution in an existing systems-selection of Higher efficiency lamps for a new system- Luminaries-ballasts-energy conservation in lighting.

UNIT-V

Space Heating, Ventilation, Air-Conditioning (HVAC) and Water Heating: Introduction-Heating of buildings-Transfer of Heat-Space heating methods-Ventilation and air-conditioning-Insulation-Cooling load- Electric water heating systems-Energy conservation methods.

Co-generation and storage: Combined cycle cogeneration-energy storage: pumped hydro schemes-compressed air energy storage (CAES)-storage batteries-superconducting magnetic energy storage (SMES)

Text Books

1. Energy management Hand book by Wayne C.Turner,John Wiley and sons publications
2. Electric Energy Utilization and Conservation by S C Tripathy,Tata McGraw hill publishing company ltd. New Delhi
3. Energy efficient electric motors selection and application by John C.Andreas

Reference Books

1. Hand book on Energy Audit and Management by Amit Kumar Tyagi, published by TERI (Tata energy research Institute)
2. Energy management by Paul W.O' Callaghan McGraw hill book company
3. Energy conversion systems by Rakosh Das Begamudre New age international publishers

Course Code : V18PST22
Course Name : H.V.D.C and FACTS (Elective – IV)

[L : 4; T:0; P : 0 (3 credits)]

UNIT-I:H.V.DC Transmission: General consideration, Power Handling Capabilities of HVDC lines, static converter configuration. Static Power Converters: 3 pulse, 6 pulse & 12 pulse converters, converter station and terminal equipment communication process, Rectifier and inverter operation
UNIT-II: Control of HVDC converter and systems: constant current, constant extinction angle and constant ignition angle control. Individual phase control and equidistant firing angle control. Harmonics in HVDC systems, Characteristic and uncharacteristic harmonics-troubles due to harmonics-harmonic filters.
UNIT-III: Converter faults and protection in HVDC systems: Converter faults, over current protection-valve group and DC line protection. Over voltage protection of converters.
UNIT-IV: FACTS concepts, importance of controllable parameters, basic types of FACTS controllers**,** Objectives of shunt compensation, midpoint voltage regulation, voltage instability prevention, improvement of transient stability, methods of controllable var generation, variable impedance type static var generators, switching converter type var generators.
UNIT-V: Concept of series capacitive compensation, improvement of transient stability, power oscillation damping, functional requirements. GTO thyristor controlled series capacitor (GSC), thyristor switched series capacitor (TSSC), and thyristor controlled series capacitor (TCSC), control schemes for GSC, TSSC and TCSC.

Course Code : V18PSL02
Course Name : Power Systems Lab-II

[L : 0; T:0; P : 3 (2 credits)]

Any 10 of the following experiments are to be conducted

1. Determination of Sequence Impedance of an Alternator by direct method.
2. Determination of break down strength of Transformer oil Testing.
3. Measurement of sequence impedance of a three phase transformer by application of sequence voltage.
4. Power angle characteristics of a salient pole Synchronous Machine.
5. Scott connection of transformer.
6. Determination of equivalent circuit of 3-winding Transformer.
7. Measurement of ABCD parameters on transmission line model.
8. Optimal power flow.
9. Reactive power compensation Br minimization of power loss using PSO
10. State estimation of power systems.
